Proposed disposal and management of sewage For

204-210 Parramatta Road, Auburn, NSW 2144

AS per the Cumberland Local Environmental Plan 2021 section 6.4 (c) please see below design intent for the disposal and management of sewage (c).

The disposal and management of sewage.

As per the Dial before you dig Sydney water map the existing 150mm EW Sydney water sewer main line runs straight through the proposed development (all 4 blocks). The sewer discharge from the site will connect to the first existing sewer main junction directly after the sewer manhole. The remaining sewer line will be deceased.

Sydney Water Requirements

An application for notice of requirements (NOR) from Sydney water will be obtained after the DA approval. This will require a water service coordinator (WSC) to document the required changes to the deceased Sydney Water sewer main.

Kind regards

Assad Shuhaiber – Associate NER 925927
