Tree watering 1: 1st initial watering at the time of planting. Quantity of water will be adequate to saturate the root ball to its core. Tree watering 2: post planting, provide a minimum of 15 litres of water (for tree in a 45 litre pot) to the newly planted tree per 7 days. Water at a slow rate not to displace mulch. For trees in pot size larger than 45 litres, provide quantity of water on third of that pot size.

Note: it is the responsibility of the contractor to confirm the location of all underground services prior to commencement of any excavation or staking works.
Strong central leading trunk to be evident at time of planting

LANDSCAPE NOTES:

GENERAL
1. The Landscape drawings have been based on site survey and building layout information. Check boundaries, levels, dimensions and locate services on site prior to starting work.
2. Landscape plans are to be read in conjunction with all architectural and other project consultant's drawings and specifications and with such other written instructions as may be issued during the course of the contract.
3. Any discrepancies between landscape/architectural or other project consultant's drawings shall be reported to the landscape designer prior to any works being carried out.
4. All works are to be carried out in accordance with drawing notation and/or written specifications where applicable.
5. Works and supply of materials not covered by drawing notation or written pecification are to be carried out in accordance with AS Codes, LCA guidelines and the By-Laws and Ordinances of the relevant Building Authority and/or manufacturer's recommendations as applicable.
6. All dimensions and locations of works are to be checked on site and confirmed by the landscape/building site supervisor prior to the commencement of any works.
7. Dimensions shall not be obtained by scaling from structural drawings. Dimensions are indicated in millimeters unless otherwise specified.
8. The contractor shall at all times implement adequate erosion and sediment control measures where applicable, (details noted on the construction management plan)
9. The position of services indicated on drawings (when applicable), are approximate and must be confirmed on site prior to the commencement of any site works.
10. Refer to Architectural drawings for fence types, retaining walls, paving and decking details.

SERVICES
Before landscape work is commenced. The Landscape Contractor is to establish the position of all service lines and ensure tree planting is carried out at least 3 metres away from these services. Service lids, vents and hydrants shall be left exposed and not covered by any landscape finishes (turfing, paving, garden beds etc.) Finish adjoining surfaces flush with pit lids.

SITE PREPARATION
Clear site of any builders rubbish and set up erosion and sediment control as per councils requirements.
All existing trees and/or vegetation to be retained, is to be preserved and protected from any damage occurring during the execution of landscape works. The root systems of existing retained plants are not to be disturbed. Landscape operations carried out within the root zone is to be carefully carried out using hand tools. Storage of materials, Mixing of materials, vehicular parking, disposal of building materials and stockpiling shall not be carried out within 3m of the drip line of these trees/vegetation. Grade site to achieve proposed final grades. Stockpile soil if suitable for reuse or provide landscape soil that meets Australian Standards to replace site top soil.

SOIL PREPARATION
All proposed planting areas are to be deep ripped to a depth of 300mm and clay soils are to be treated with a clay breaker. 75mm depth of ANL Organic Garden Mix to be imported and combined with 25mm depth Greenlife compost or approved equivalent. Additive to be to a depth of 100mm, cultivated with existing garden bed soil to 250mm depth. Install 75mm of selected mulch.

NEW PLANTING
All plants shall be true to type and size, conform with those species listed in the Plant Schedule on the drawings, be vigorous, well established, of good form consistent with species or variety, not soft or forced, free from disease or insect pests with large healthy root systems and no evidence of having been restricted or damaged. Immediately reject dried out, damaged or unhealthy plant material before planting. All stock is to be container grown for a minimum of six (6) months prior to delivery to site.
Plants shall have been hardened off and suitable for planting in the climatic conditions prevailing at the site. Trees shall be of uniform appearance and have a single leading trunk and proportionate and balanced crown.
The Contractor shall be responsible for the health of plants from time of delivery, and no consideration will be given to any claim arising from the Contractors neglect or failure to observe any defects in the plants at time of delivery.
Remove plant from container without disturbing the root ball and place centrally and plumb in the hole with the top of the root-ball level with the surrounding surface level. Backfill root-ball with an Organic garden soil-mix, lightly tamp and water thoroughly to eliminate air pockets.
Install plant material as per plan. Keep planting areas moist, stake plants as required and 'water in'.
Refer to Tree Planting Detail when applicable.
Ensure soil-mix is not placed over the top of the root-ball and that the plant stem remains the same height above the ground as it was in the container. Soil-mix for backfilling of plants shall conform to AS4419-1998.
Install root barrier to site services as required. Weed matting (non-plastic type) to be provided under all private courtyard garden beds

PROTECTION OF EXISTING TREES
Protection of existing trees to be retained on site (as per the construction management plan), shall be adequately protected for the duration of the building contract. Storage of materials, mixing of material, vehicular parking, disposal of building materials and stockpiling shall not be carried out within the drip line of these trees.
Erect a star picket fence with four strand galv. Wire, tensioned at changes in direction, around the extremities of the tree or adjacent to the building works. Any roots damaged during the building operations shall be cleanly cut off inside the damaged or exposed area.
Trees are to be monitored for health during the building contract ensuring the root zone has not been damaged or has dried out.
Tree root pruning shall be undertaken by an experienced Arborist with a qualification in tree surgery.

MULCHING
On completion of planting, all areas are to be mulched using Cypress Mulch or similar to a depth of 75m. A water catchment dish is to be provided around the base of each plant. Keep mulch clear of all plant stems and rake to an even surface finishing 25mm below adjoining levels. Ensure mulch is watered in and tamped down during installation.

FERTILISER
MASS PLANTING AREAS: All newly planted areas are to be fertilised with an organic life, slow release fertiliser (Osmocote 8-9 month / Agriform (R) 21g) which is to be adequately watered in. Native plants with Osmocote zero Phosphorus 5-6 month slow release. Apply as per manufacturer's instructions.
ADVANCED TREES: Pellets shall be in the form intended to uniformly release plant food elements for a period of approximately nine months equal to Shirleys Kokei pellets, analysis 6.3:1.8:2.9. Kokei pellets shall be placed at the time of planting to the base of the plant, 50mm minimum from the root ball at a rate of two pellets per 300mm of top growth to a maximum of 8 pellets per tree.

BRICK EDGING
Lay a single course of paving bricks in a mortar haunch (200mm wide and 100mm deep) of 3 (sand) :1 (cement) and plasticiser to manufacturer's instructions. The edges are to be laid in even curves and straight lines as indicated on the plan. Where tight curves are shown use half bricks to achieve more even curves. The top of the edge is to finish flush with the adjacent turf and mulch levels. Finish joints flush struck on exposed surfaces. Bricks are to be approved standard clay face bricks, hard and well burnt, and free from through holes, chips and callows. Clean brick faces on completion.
