Attention: Sri Viswanathan

Dear Sri,

**RE: Proposed Carpark - Lot 2 & 3 DP1181268 Tamworth Hospital
Stage 1 & Stage 2 Site Contamination Assessment**

Regional Geotechnical Solutions Pty Ltd (RGS) has undertaken a Site Contamination Assessment at Lot 2 & 3 DP1181268 Tamworth Hospital. The results of the assessment are presented herein.

The assessment includes a desktop review, intrusive soil sampling and laboratory testing of recovered soil samples. Based on the assessment undertaken, it is considered that the site is suitable for the proposed development from a contamination viewpoint.

If you have any questions regarding this project, or require any further assistance with this project, please do not hesitate to contact the undersigned.

1 INTRODUCTION

This report presents the results of a Stage 1 and Stage 2 Site Contamination Assessment (SCA) undertaken by Regional Geotechnical Solutions Pty Ltd (RGS) at Lot 2 & 3 DP1181268 Tamworth Hospital.

The supplied diagram indicates the development will involve the construction of an on-grade carpark over the existing unofficial unsealed carpark located in the northeast portion of the hospital.

A drawing that illustrates the extent of the proposed works is reproduced below.

It is noted that the proposed carpark development will also encroach on the existing sealed carpark to the west, however, the assessment was limited to the unsealed portion of Lot 2 and Lot 3.

The purpose of the SCA presented herein was to provide an assessment regarding the suitability of the site for the proposed development from a site contamination perspective. The assessment included:

- Desktop Stage 1 SCA to assess the historical land use, the potential for contamination resulting from past land use and a general appraisal of the type and location of potential contamination on the site. Areas of environmental concern and chemicals of concern were identified; and

- Stage 2 SCA based on the above and also involving additional site assessment, soil sampling within the nominated areas of concern, and laboratory analysis of the recovered samples based on the nominated chemicals of concern.

2 METHODOLOGY

The site contamination assessment was undertaken in accordance with the relevant sections of the NSW EPA, *Guidelines for Consultants Reporting on Contaminated Land (2020)*, and involved the following process:

- Desktop study (to assess the historical land use, the potential for contamination resulting from past land use). The study included:
 - Review of local geology;
 - Review of government records of groundwater bores in the area;
 - Review of available recent and historical aerial photography for the last 50 years;
 - Land title search of the respective lots available from the Land Titles Office;
 - Search of Environmental Protection Authority (EPA) website for any contamination notices for the site; and
- Site walkover to assess visible surface conditions and identify potential evidence of contamination, or past activities that may cause contamination.

Using the above information, the site was characterised into Areas of Environmental Concern (AEC), in which the potential for contamination has been identified, and Chemicals of Concern (CoC) that might be associated with those activities were nominated. On completion of the Stage 1 assessment outlined above the following was undertaken.

- Excavation of shallow test pits with a shovel to assess the soil profile;
- Collection of samples from within the AECs identified and other areas deemed appropriate based on the site assessment; and
- Laboratory analysis of recovered samples for the identified CoC.

Samples were collected from the test pits and from surface soils within the AECs and across the site. The samples collected were analysed for a broad suite of common contaminants.

The results of the laboratory analysis were evaluated against the health-based investigation levels for a 'Commercial' D site as outlined in National Environmental Protection (Assessment of Site Contamination) Measure 2013 (NEPM) guidelines.

3 SITE CONDITIONS

3.1 Site Identification

General site information is provided below in Table 1. The site location and extent are shown in the satellite photograph in Section 3.2. The proposed development area within the site is shown in Figure 1.

Table 1: Summary of Site Details

Site Details	Description
Site Location:	Lot 2 & 3 DP1181268 Tamworth NSW
Approximate Site Area:	1,500m ²
Title Identification Details:	Unsealed carpark sections of Lot 2 and Lot 3.
Current Ownership:	Health Administration Corporation
Current Landuse:	Unofficial carpark
Proposed Landuse:	Carpark
Adjoining Site Uses:	<ul style="list-style-type: none">• Access road/existing bitumen carpark to the west.• Vacant land to the north.• Unseal carpark to the east and south.
Government Area:	Tamworth Regional Council

3.2 Surface Conditions

The site is located on a south facing slope. The carpark has been cut into the slope to create a flat area. 50mm to 100mm of gavel fill has been placed over the site to create a hardstand.

There is an undisturbed section within Lot 2 between the unsealed and sealed carparks that comprises maintained grass. Lot 2 extends up the hill into the natural profile where vegetation comprises grass and other small plants.

The satellite photograph below reproduced from Google Earth illustrates the site settling.

Site setting reproduced from Google Earth with the subject area outlined red.

The site photographs in Plate 1 illustrate the general site conditions at the time of the site assessment.

Plate 1: Site Photographs

Looking south over the site.

Undisturbed section upslope of the unsealed carpark.

Grassed section between sealed and unsealed carparks.

Southern extent of site is current entry into the unsealed carpark.

3.3 Subsurface Conditions

The 1:250,000 Geology sheet of Tamworth indicates the site is underlain by the Timor Limestone Member.

Based on the investigations undertaken for the A1 Banksia building located to the west of the proposed carpark (Ref. RGS32576.1 – AH dated 31 March 2021) the site is likely underlain by gravelly clay colluvial and residual soils. The shallow test pits excavated for this assessment encountered gravel fill overlying gravelly silty clay.

Groundwater was not encountered in this investigation or the previous investigation. Groundwater levels are expected to be about 3m below ground surface level.

No long-term groundwater monitoring was undertaken. Groundwater levels do fluctuate due to inclement weather, seasonal variations, or due to reasons that may not have been apparent at the time of the site investigation.

3.4 Hydrogeology

A groundwater bore search on the NSW Water Information website, <http://waterinfo.nsw.gov.au/gw/> indicates there is a licenced groundwater bore (GW057928) located within the hospital. The drill records indicate a water bearing zone of 26.2m to 26.5m. There is an additional bore (GW052834) located to the west that recorded a water bearing zone of 24.5m to 34m. The location of the shore is shown below.

Plate 2: Groundwater bore GW057928 located on the site to the south of the development area.

4 SITE HISTORY

4.1 Historical Aerial Photography

A selection of readily available aerial photographs of the site were reviewed to assist in identifying past land uses that may contribute to site contamination. The results of the review are summarised in Table 3.

Table 3 - Aerial Photograph Summary

Year	Site	Surrounding Land
1976 	Undeveloped land adjacent to hospital.	Hospital buildings located to the west and south. Area to the north and east is undeveloped.

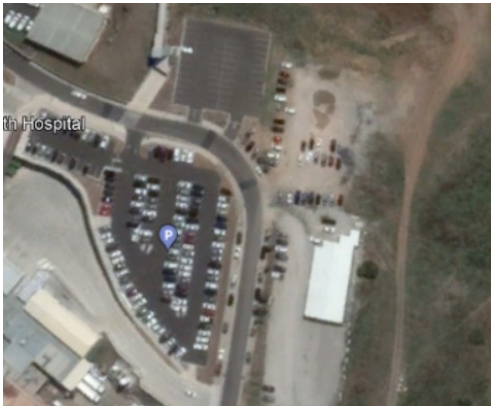

<p>1984</p> 	<p>Similar to previous.</p>	<p>New structure and road constructed about 70m to the west.</p>
<p>1989</p> 	<p>Similar to previous.</p>	<p>Similar to previous.</p>

<p>2013 Google Earth</p> 	<p>Area cleared, some construction materials stored.</p>	<p>Clearing and filling to the north and east. New carparks constructed to the west, and southwest.</p>
<p>2015</p> 	<p>Area used as laydown, appears to comprise shipping containers and building material.</p>	<p>Unsealed carpark developed to the south.</p>

<p>2017 Google Earth</p> 	<p>Building materials removed and area used as unsealed carpark.</p>	<p>Construction compound located to the south.</p>
<p>2021 Google Earth</p> 	<p>Similar to previous.</p>	<p>Construction compound removed.</p>

4.2 Site Observations

Field work was undertaken on 28 October 2021. Observations from a contamination perspective made during the site visit are summarised below:

- The existing carpark is unsealed;
- No signs of Asbestos Containing Materials (ACM) were observed;
- Gravel fill placed over site up to about 0.1m; and
- No odours or other signs of contamination such as oil staining were observed.

4.3 NSW EPA Records

A search of the NSW EPA website (<http://www.epa.nsw.gov.au/prpoeoapp/>) revealed that no notices have been issued on the site under the Contaminated Land Management Act (1997).

4.4 Land Title Search

A list of past registered proprietors and lessors of the site was obtained from the Land Titles Office. A summary of the title details is included in Appendix C.

The title history search revealed the following:

Lot 2 DP 1181268	
Prior to 2004	Crown Land (including Special Lease Tamworth City Council / State of New South Wales, and Reserved for Public Requirements)
2004 to 2013	State of New South Wales
2013 to present	Health Administration Corporation
Lot 3 DP 1181268	
Prior to 2012	Crown Land
2012 to 2013	State of New South Wales
2013 to present	Health Administration Corporation

4.5 Site History Summary

Based on available data the chronological development of the site is summarised below:

- Historically the site was crown land before being acquired by Health Administration Corporation;
- Both lots were acquired by Health Administration Corporation in 2013 and used as laydown/storage areas for construction material for on going hospital developments until about 2016; and

- The site was developed into an unsealed carpark and used as such from 2017 to present.

5 FIELD AND LABORATORY INVESTIGATIONS

5.1 Sampling Plan

The NSW EPA (1995) Sampling Design Guidelines recommend a minimum of 10 sampling locations to characterise a site of this size of the proposed development area (approximately 3,500m²).

Eight soil samples (CP1 to CP8) were collected from eight shallow test pits undertaken across the site. In addition, eight surface samples (CP-A1 to CP-A8) were collected to test for presence of asbestos fragments. The eight samples collected were composited into two composite samples at a rate of 4:1. These two composite samples (CP-C1 to CP-C2) were selected to be tested, additionally four discrete soil samples were selected to be tested as well as seven surface samples for the presence of asbestos fragments.

5.2 Field Work

Field work for the assessment was undertaken on 28 October 2021 included:

- Site walkover to assess visible surface conditions and identify evidence of contamination, or past activities that may cause contamination (if any);
- Excavation of eight shallow test pits using a shovel;
- Collection of soil samples from the test pits and surface samples by a Geotechnical Engineer as outlined in Section 5.1.

The locations of the sampling points are shown on Figure 2. They were obtained on site and located by measurement relative to existing site features.

Soil samples were taken from fill and natural soil using disposable gloves. Sampling equipment was decontaminated between sampling points using Decon90 detergent and deionised water. Soil samples were collected in acid-rinsed 250mL glass jars and surface samples were collected snap-lock bag. The samples were placed in an ice-chilled cooler box.

5.3 Laboratory Analysis

Samples were transported under chain-of-custody conditions to ALS Laboratory Group, a NATA accredited specialist chemical testing laboratory, to be analysed for the following suite of contaminants:

- Polycyclic Aromatic Hydrocarbons (PAH);
- Total Recoverable Hydrocarbons (TRH);
- Benzene, Toluene, Ethyl-benzene, Xylenes (BTEX);
- Organochlorine and Organophosphorus Pesticides (OC/OPs);
- Heavy metals (arsenic, cadmium, chromium, cobalt, copper, lead, mercury, and zinc);

- Polychlorinated Biphenyls (PCB); and
- Presence of asbestos.

The results are presented in Appendix B.

5.4 Data Quality Objectives

The Data Quality Objectives (DQOs) are presented in Table 4.

Table 4 – Data Quality Objectives

DQO	Details of Process
State the Problem	A Stage 1 and Stage 2 SCA is required to assess the suitability of the site for a carpark upgrade from a contamination perspective.
Identify the Decision	<p>The principal study questions are:</p> <ul style="list-style-type: none"> • What is the nature and extent of soil contamination on the subject land (if any)?; and • Is the land suitable for the proposed commercial development from a contamination viewpoint?
Identify Inputs to the Decision	<p>The primary inputs are:</p> <ul style="list-style-type: none"> • Site history study; • Site walkover assessment; • Chemical analysis and asbestos screening of selected soil samples; and • Results summary.
Define the Boundary of the Assessment	<ul style="list-style-type: none"> • The spatial boundaries are limited to the proposed development area as shown on Figure 1; and • The investigation and screening levels for a Commercial D land use scenario.
Develop a Decision Rule	<p>The decision rules for the investigation are:</p> <ul style="list-style-type: none"> • If concentrations of contaminants in soil exceed the adopted investigation and screening levels for a Commercial D land use scenario, then further assessment may be required; <p>Decision criteria for QA/QC measures are defined in Section 6.1. A decision on the acceptance of analytical data will be made on the basis of the data quality indicators (DQIs) in the context of precision, accuracy, representativeness, completeness and comparability (PARCC) parameters as follows:</p> <ul style="list-style-type: none"> • Precision: NATA registered laboratories were used following NATA endorsed methods. An appropriate number of intra-laboratory samples were collected and analysed (following ASC NEPM guidance), the results of which are considered to be satisfactory; • Accuracy: The laboratory limit or reporting (LOR) was appropriate for the screening criteria utilised. NATA registered laboratories were used following NATA endorsed methods including appropriate method

DQO	Details of Process
	<p>blanks, laboratory control samples, laboratory spikes and duplicates the results of which are considered to be satisfactory.</p> <ul style="list-style-type: none"> • Representativeness – The samples were received by the laboratories in good condition. The data obtained is considered to be representative of the soils present on site; • Completeness – Experienced field staff were utilised to undertake the sampling and keep appropriate documentation. Samples were in proper custody between the field and reaching the laboratory. The laboratories performed the tests requested. The data obtained from the field investigations is considered to be relevant and usable; and • Comparability – Sample holding times were met and samples were properly and adequately preserved. Field sampling and handling procedures were followed. The data collected is considered to be comparable.
Specify Acceptable Limits on Decision Errors	<ul style="list-style-type: none"> • Acceptable limits for QA/QC measures are defined in Section 6.1; • Acceptable investigation and screening levels are those for a Commercial D land use scenario; and • Specific limits are in accordance with the appropriate NSW EPA guidelines including indicators of data quality and standard procedures for field sampling and handling.
Optimise the Design for Obtaining Data	Based on the above steps of the DQO process. The design for obtaining the required data (i.e., proposed field and laboratory investigations) is presented in Section 5.1.

6 GUIDELINES AND ASSESSMENT CRITERIA

Assessment as outlined in NSW EPA *Guidelines for Consultants Reporting on Contaminated Land (2020)*.

To evaluate results, and for guidance on assessment requirements, the assessment will adopt the guidelines provided in the *National Environment Protection (Assessment of Site Contamination) Measure (ASC NEPM 2013)*. The ASC NEPM document provides a range of guidelines for assessment of contaminants for various land use scenarios. It is understood that the future land use for the site is an additional carpark for the hospital. As such, comparison with the ASC NEPM guideline Health Investigation Levels (HIL) for Commercial D land use is considered appropriate for the site. In accordance with the NEPM guideline the following criteria will be adopted for this assessment:

- Health Investigation Levels for Commercial D land use (HIL-D) were used to assess the potential human health impact of heavy metals and PAH;
- Health Screening Levels (HSL-D) for coarse textured soils on a commercial site were adopted as appropriate for the soils encountered to assess the potential human health impact of petroleum hydrocarbons and BTEX compounds;
- Ecological investigation levels (EIL) for commercial land use were used for evaluation of the potential ecological/environmental impact of heavy metals and PAH. No areas of ecological significance were noted to be present in the immediate vicinity;

- Ecological Screening Levels (ESL) for coarse textured soils on a commercial site were adopted as appropriate for the soils encountered, to assess the potential ecological/environmental impact of petroleum hydrocarbons and BTEX compounds.

In accordance with NEPM 2013, exceedance of the respective criteria does not necessarily deem that remediation or clean-up is required but is a trigger for further assessment of the extent of contamination and associated risks. The adopted criteria are presented in the results summary table in Appendix B.

6.1 Quality Assurance / Quality Control

Samples were obtained using industry accepted protocols for sample treatment, preservation, and equipment decontamination. Sampling equipment was decontaminated between sample locations and a clean pair of nitrile gloves used for the collection of each sample into laboratory supplied glass sampling jars.

Samples were placed on ice on-site and maintained on ice during transport to the testing laboratories. One duplicate soil sample identified as D1 (duplicate of primary sample CP5) was submitted to the laboratory for analysis for quality control purposes. Comparison between the primary and duplicate samples are presented in the results summary table in Appendix B.

The Relative Percent Differences (RPDs) were calculated for the duplicate sample and presented in the results summary table in Appendix B. The RPDs were within the control limit of 30% for concentrations above 10 times the laboratory Limit of Reporting (LOR) or 50% for concentrations below 10 times the laboratory Limit of Reporting (LOR) indicated good correlation between the primary and duplicate samples.

In addition to the field quality control procedures, the laboratory conducted internal quality control testing including surrogates, blanks, and laboratory duplicate samples. The results are presented with the laboratory test results in Appendix B.

All laboratory quality control data is within acceptable limits for the tests carried out. Therefore, on the basis of the results of the field and laboratory quality control procedures and testing, the data is considered to reasonably represent the concentrations of contaminants in the soils at the sample locations at the time of sampling and the results can be adopted for this assessment.

6.2 Results

6.2.1 Subsurface Conditions

The soil samples tested and the soil types recorded in surface samples are summarised below in Table 5.

Table 5: Summary of Subsurface Conditions

Sample ID	Sample Tested	Description
CP1/CP-A1	Asbestos Only	Residual CLAY
CP2/CP-A2	Asbestos Only	Residual CLAY
CP3/CP-A3	Yes	Residual Gravelly CLAY
CP4/CP-A4	Yes	Fill
CP5/CP-A5	Yes	Fill
D1	Yes	Duplicate of CP5
CP6/CP-A6	Asbestos Only	Fill
CP7/CP-A7	No	Fill
CP8/CP-A8	Yes	Residual Gravelly CLAY
C1	Yes	Composite of S1 to S4
C2	Yes	Composite of S5 to S8

6.2.2 Laboratory Results

An appraisal of the laboratory test results presented in Appendix B is provided below with reference to the adopted soil investigation and screening levels discussed in Section 6.

- Concentrations of heavy metals were either below the laboratory limit of reporting or below the adopted health investigation criteria for a Commercial D site in each of the samples analysed;
- Concentrations of TRH, PAH, BTEX, PCB and OC/OP pesticides were below the laboratory limit of reporting in each of the samples analysed; and
- Asbestos was not detected in the soil samples analysed.

6.3 Conceptual Site Model

Based on the site observations and knowledge obtained about site activities as outlined above, a conceptual site model (CSM) has been developed.

6.3.1 Potential Sources of Contamination

Potential Areas of Environmental Concern (AECs) and Chemicals of Concern (COCs) identified for the assessment are outlined in Table 6.

Table 6: Potential AECs and COCs

AEC	Mode of Potential Contamination	Potential COCs	Likelihood of Contamination
AEC1: Imported fill	Potential soil contamination associated with the importation of uncontrolled fill from unknown origins	Heavy Metals, TRH, BTEX, PAH, PCB, OC/OPP and asbestos	Low to moderate
AEC2: Building waste from various developments	Potentially hazardous building materials	Heavy Metals and asbestos	Low to moderate
AEC3: Vegetation control	Pesticides potentially used to control pests	OC/OPP and herbicides	Low
<i>Heavy Metals - Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel and Zinc</i> <i>BTEX - Benzene, Toluene, Ethylbenzene and Xylene</i> <i>TRH - Total Recoverable Hydrocarbons</i> <i>PAH - Polycyclic Aromatic Hydrocarbons</i> <i>PCB - Polychlorinated Biphenyls</i> <i>OC/OPP - Organochlorine and Organophosphorus Pesticides</i>			

The approximate locations of the AEC's are shown on Figure 2.

The risk of groundwater contamination at the site was considered low as the potential sources of contamination were typically of surface origin. Furthermore, groundwater levels are expected to be in excess of 3m below existing ground level. An assessment of groundwater assessment was therefore not undertaken as part of this preliminary contamination assessment. Assessment of soil vapours were not undertaken as it is also beyond the scope of this preliminary contamination assessment.

The presence of measurable concentrations of chemical substances does not automatically imply that the site will cause harm. In order for this to be the case, an exposure route must be present allowing a source to adversely affect a receptor.

6.3.2 Potential Exposure Pathways and Receptors

Based on the site observations and knowledge obtained about site activities as outlined above, potential exposure pathways and receptors identified for the assessment are summarised in Table 6.

Table 6: Potential Exposure Pathways and Receptors

Chemicals of Concern	Key Pathways	Key Receptors
Asbestos, heavy metals	Generation of dust during earthworks which is inhaled	Onsite - Construction and site workers Offsite - Adjacent sites
Asbestos, heavy metals, TPH, BTEX, PAH, PCB, OC/OPP, herbicides	Skin contact / ingestion, plant uptake, inhalation	Onsite - Construction and site workers, future site users, vegetation in landscaped areas
Heavy Metals, TPH, BTEX, PAH, PCB, OC/OPP, herbicides	Surface runoff and leaching of soils	Offsite - Surface water ecosystems and users
<i>Heavy Metals - Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel and Zinc BTEX - Benzene, Toluene, Ethylbenzene and Xylene TPH - Total Petroleum Hydrocarbons PAH - Polycyclic Aromatic Hydrocarbons PCB - Polychlorinated Biphenyls OC/OPP - Organochlorine and Organophosphorus Pesticides</i>		

6.4 Discussion

A Stage 1 and Stage 2 SCA was required to assess past and present potentially contaminating activities and contamination types with regard to the site's suitability for future commercial land use (carpark).

The site history study indicates that the site through its history has been utilised as a construction laydown, followed by an unsealed carpark.

Identified AEC's included imported fill of unknown origin, potential for building materials, and potential for the use of pesticides on the site.

The results of laboratory analysis of soil samples collected from targeted locations (AEC's outlined above), revealed concentrations of the chemicals of concern were either below the laboratory detection limit, or below the adopted health investigation criteria for a Commercial D site.

Asbestos was not detected in any of the soil samples submitted for analysis.

6.5 Site Assessment Conclusions and Recommendations

Based on the results obtained in this investigation, it is considered that the site is suitable for the proposed commercial land use with regard to the presence of soil contamination, and site preparation works are conducted in accordance with appropriate site management protocols and legislative requirements.

Should potential evidence of site contamination be identified during development activities, such as soil staining, buried materials, odours or possible ACM, then a site contamination specialist should be contacted for advice without delay.

7 LIMITATIONS

This report comprises the results of an investigation carried out for a specific purpose and client as defined in the document. The report should not be used by other parties or for purposes or projects other than those assumed and stated within the report, as it may not contain adequate or appropriate information for applications other than those assumed or advised at the time of its preparation. The contents of the report are for the sole use of the client and no responsibility or liability will be accepted to any third party. The report should not be reproduced either in part or in full, without the express permission of Regional Geotechnical Solutions Pty Ltd.

Contaminated site investigations are based on data collection, judgment, experience, and opinion. By nature, these investigations are less exact than other engineering disciplines. The findings presented in this report and used as the basis for the recommendations presented herein were obtained using normal, industry accepted practises and standards. To our knowledge, they represent a reasonable interpretation of the general condition of the site. Under no circumstances, however, can it be considered that these findings represent the actual state of the site at all points.

Recommendations regarding ground conditions referred to in this report are estimates based on the information available at the time of its writing. Estimates are influenced and limited by the fieldwork method and testing carried out in the site investigation, and other relevant information as has been made available. In cases where information has been provided to Regional Geotechnical Solutions for the purposes of preparing this report it has been assumed that the information is accurate and appropriate for such use. No responsibility is accepted by Regional Geotechnical Solutions for inaccuracies within any data supplied by others.

If site conditions encountered during construction vary significantly from those discussed in this report, Regional Geotechnical Solutions Pty Ltd should be contacted for further advice.

This report alone should not be used by contractors as the basis for preparation of tender documents or project estimates. Contractors using this report as a basis for preparation of tender documents should avail themselves of all relevant background information regarding the site before deciding on selection of construction materials and equipment.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a,h)anthracene (1.0), Benzo(g,h,i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
