Stormwater Design Report for Review of Environmental Factors (REF)

for

Moree Hospital Redevelopment

at

35 Alice St, Moree NSW 2400

Job No: NL231211

Revision: C

Date: 08/09/2023

	BY	DATE
Prepared	KB	08/09/2023
Checked	DH	08/09/2023
Admin	AJ	08/09/2023

1. INTRODUCTION

Northrop Consulting Engineers Pty Ltd has been engaged to undertake the drainage and stormwater assessment and management plan for the proposed development located at Moree Hospital.

The purpose of this report is to summarise the proposed design solutions for the stormwater management for a REF submission. The proposed design has been considered with regard to the Moree Plains DCP 2013 as well as common industry practice.

2. SITE DESCRIPTION

The subject site is located along the southern boundary of the existing Moree Hospital property, between Victoria Terrace and Alice Street, in the middle of Moree town centre. Moree Hospital is directly adjacent to the Mehi river, running along the northern edge of the property. The property has direct access gates to Victoria Terrace and Alice Street which connect the site to Balo street to the east. Balo street also serves as B76 highway access to the whole of Moree. Ultimately this connects the town to major populations hubs including Sydney and Brisbane. An aerial image of the property is shown below:

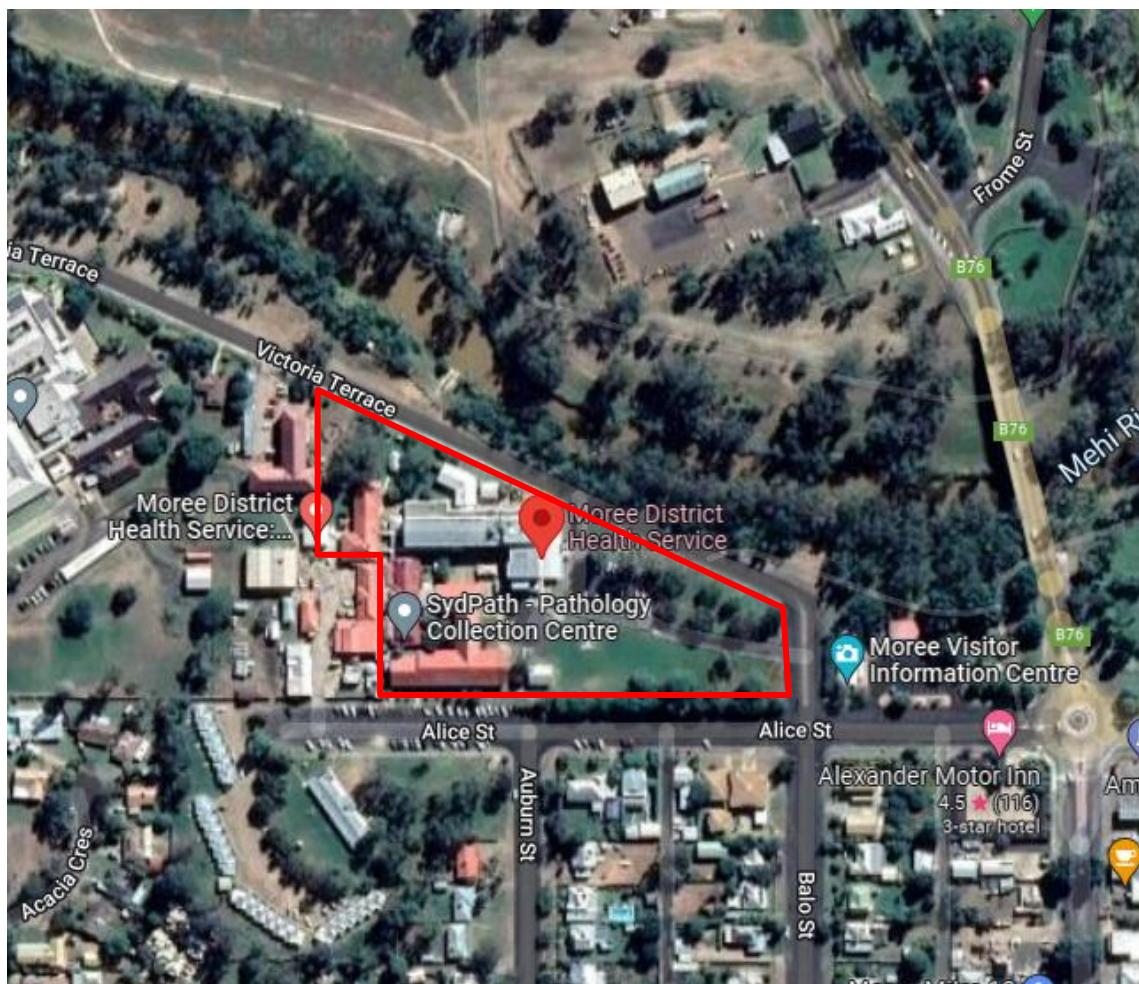

Figure 1 Site Aerial Image

3. PROPOSED DEVELOPMENT

The objective of the Moree Hospital Redevelopment (MHR) Project is to align the recommendations of the endorsed CSP with new contemporary patient care facilities to support the adoption of new and improved models of care. The primary focus of this Project is to provide asset replacement through consolidation of services into a new two-story Acute Services Building (ASB). The ASB will be located on the south section of the existing site along Alice Street and provide a new main access to the campus.

The Project scope to redevelop Moree Hospital, in line with the CSP, include the master planning and delivery of the following:

- Emergency care services
 - Overnight inpatient beds
 - Operating theatre
 - Imaging services
 - Birthing suites
 - Pathology shell space
 - Clinical support services

In addition to the above clinical services, the redevelopment will also incorporate associated works such as:

- A new hospital main entry and Front of House
 - Back of House services
 - Modifications to existing carparking
 - Landscaping
 - decommissioning & demolition of redundant existing facilities
 - A new substation, and
 - A new loading dock & services yard area

4. PROPOSED STORMWATER MANAGEMENT STRATEGY

The proposed stormwater management strategy is to utilise a pit and pipe system as well as maintaining overland flow paths. Through consultation with council, it has been determined that OSD would not be required as part of this development. Water quality measures have also been considered and are detailed in the following sections.

4.1 MAJOR/MINOR DRAINAGE SYSTEM

The major/minor approach to stormwater drainage is a recognised drainage concept for urban catchments.

The minor drainage system is comprised of below ground pit and pipe network and is designed to control nuisance flooding and enable effective stormwater management for the site. Typically, Council requires the minor drainage system to be designed for the critical 5% Annual Exceedance Probability (AEP) (1:20-year storm event) with overland flow safely catering for the 1% AEP (1:100-year storm event).

The major drainage system is designed to control and convey flows from the critical 1% AEP event (1:100-year). This is to incorporate suitably designed overland flow paths and drainage, to direct flows away from buildings towards Victoria Terrace and Alice Street, for flows which exceed the 5% Annual Exceedance Probability (AEP) (1:20-year storm event), up to the critical 1% AEP storm event (1:100-year).

Catchment and pipe network modelling with DRAINS software has been undertaken to suitably size the major/minor drainage network. Within the carpark, the drainage is connected to the existing pit to the north-east corner of the site. The existing carpark pavement that is being retained will also retain the existing stormwater system and not worsen the existing state. A pit and pipe system will also be utilised in the loading dock area and staff parking area so capture the minor storm event. These areas will have outlets to the back of kerb in Alice St. The proposed layout of this can be found in Appendix B.

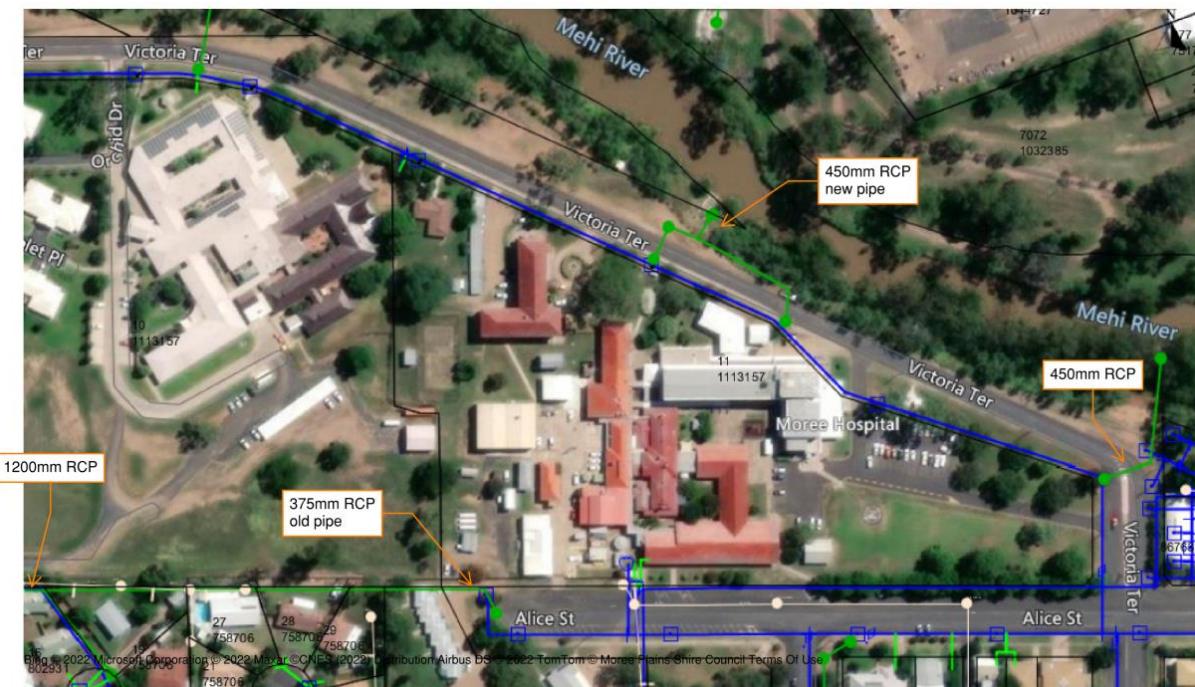

Figure 2 Existing Council Drainage Network

4.1 ON-SITE DETENTION

Due to the proximity of the site to the Mehi River, it is not recommended to provide On-site Stormwater Detention Facilities for the proposed development. Confirmation of this with Moree Plains Shire Council has been obtained.

4.1 STORMWATER QUALITY

There are no specific requirements for water quality treatment of stormwater in the Local Government Area based on previous discussion with Moree Plains Shire Council – other than there being no negative water quality outcomes as noted in the Moree Plains Development Control Plan 2013.

Considering the restrictions on site being the existing stormwater infrastructure in Victoria Terrace and Alice St, as well as the relatively flat nature of the site and sparatic rainfall patterns in Moree, the approach taken to Stormwater Quality is to provide pit insterts within the carpark pits as well as a proprietary treatment device (Jellyfish) for the north-eastern discharge point.

Jellyfish Treatment Device

A proprietary stormwater treatment device is proposed to be utilised to treat stormwater runoff prior to disposal to the north-east corner of the development. Below is a brief description of the operation of the device.

- Stormwater enters the Jellyfish through the inlet pipe, builds driving head, and traps floating pollutants behind the maintenance access wall and below the cartridge deck.
 - The upstream diversion pit produces driving head which pushes the stormwater below the cartridge deck where a separation skirt around the cartridges isolates oil, litter and debris outside the filtration zone, allowing sand-sized particles to settle in the sump.
 - The driving head causes the water to enter the filtration zone and up through the top of the cartridge into the backwash pool. Once the water has filled the backwash pool, clean water overflows where it exits via the outlet pipe
 - The membrane filters provide a very large surface area to effectively remove fine sand and silt-sized particles, and a high percentage of pollutants such as nitrogen, phosphorus, metals, and hydrocarbons while ensuring long-lasting treatment
 - As influent flow subsides, the filtered water in the backwash pool flows back through the high flow membrane cartridges into the lower chamber. This passive backwash extends cartridge life, keeping the membrane clean for future events
 - The drain down cartridge(s) located outside the backwash pool enables water levels to balance

Ocean Guard Pit Inserts

Surface Inlet Pits within the proposed carpark development are to be fitted with Ocean Guard Pit Inserts (or equivalent). The pit inserts sit beneath the stormwater pit grates and collect gross pollutants and larger sediments prior to treatment by other devices. Similarly, the Ocean Guards can be provided proposed at each rainwater tank connection to treat runoff from the new roofed areas prior to discharge to the site trunk pit and pipe network.

Due to the site restrictions as discussed above, we consider the approach outlined above to be appropriate for the proposed development.

4.6 LOCAL OVERLAND DRAINAGE

Local overland flow paths have been provided across the site with the proposed carpark having overland flow paths to the north and east towards Victoria Terrace. The proposed loading dock area and ambulance bay have overland flow paths directed towards Alice St. This arrangement can be seen on the concept engineering plans attached to the appendix of this report.

5. CONCLUSION

The proposed stormwater management design presented above has been prepared to comply with Moree Plains Council's DCP as well as industry best practice. The design philosophy is based on the principle of at source treatment, to reduce conveyance infrastructure and manage water quantity and quality aspects.

At a concept level the system has been designed to cater for frequent and infrequent storm events.

Based on the above, our investigation and concept designs indicate the proposed development can adequately manage and address all items surrounding stormwater runoff. Should you have any queries, please feel free to contact the undersigned on (02) 4365 1668.

GENERAL NOTES

REV DESCRIPTION DRN DATE
A FOR TENDER KT 18.10.23

REVISIONS
NOTES
REVISIONS
NOTES

CONSTRUCTION NOTES

1. CONSTRUCT SEDIMENT FENCES AS CLOSE AS POSSIBLE TO BEING PARALLEL TO THE CONTOURS OF THE SITE, BUT WITH SMALL RETURNS AS SHOWN IN THE DRAWING TO LIMIT THE CATCHMENT AREA OF ANY ONE SECTION. THE CATCHMENT AREA SHOULD BE SMALL ENOUGH TO LIMIT WATER FLOW IF CONCENTRATED AT ONE POINT TO 50 LITRES PER SECOND IN THE DESIGN STORM EVENT, USUALLY THE 10-YEAR EVENT.
2. CUT A 150mm DEEP TRENCH ALONG THE UPSLOPE LINE OF THE FENCE FOR THE BOTTOM OF THE FABRIC TO BE ENTRENCHED.
3. DRIVE 15 METRE LONG STAR PICKETS INTO GROUND AT 2.5 METRE INTERVALS (MAX) AT THE DOWNSLOPE EDGE OF THE TRENCH. ENSURE ANY STAR PICKETS ARE FITTED WITH SAFETY CAPS.
4. FIX SELF-SUPPORTING GEOTEXTILE TO THE UPSLOPE SIDE OF THE POSTS ENSURING IT GOES TO THE BASE OF THE TRENCH. FIX THE GEOTEXTILE WITH WIRE TIES OR AS RECOMMENDED BY THE MANUFACTURER. ONLY USE GEOTEXTILE SPECIFICALLY PRODUCED FOR SEDIMENT FENCING. THE USE OF SHADE CLOTH FOR THIS PURPOSE IS NOT SATISFACTORY.
5. JOIN SECTIONS OF FABRIC AT A SUPPORT POST WITH A 150mm OVERLAP.
6. BACKFILL THE TRENCH OVER THE BASE OF THE FABRIC AND COMPACT IT THOROUGHLY OVER THE GEOTEXTILE.

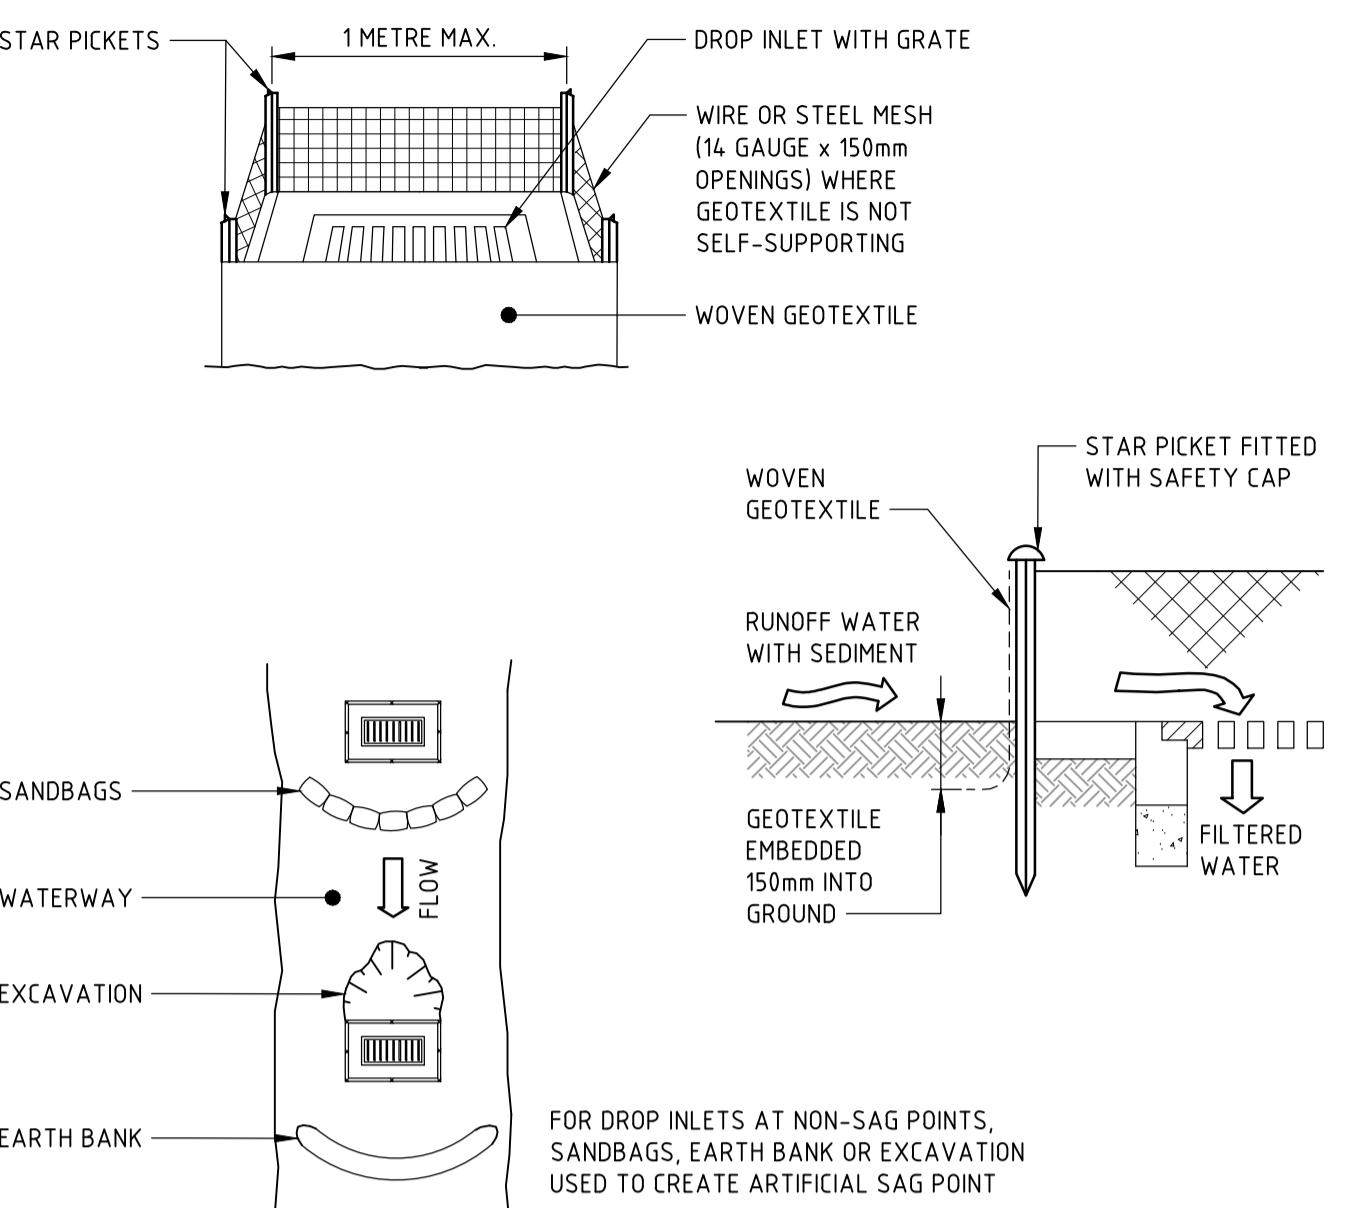

SEDIMENT FENCE (SD 6-8)

CONSTRUCTION NOTES

1. INSTALL FILTERS TO KERB INLETS ONLY AT SAG POINTS.
2. FABRICATE A SLEEVE MADE FROM GEOTEXTILE OR WIRE MESH LONGER THAN THE LENGTH OF THE INLET PIT AND FILL IT WITH 25mm TO 50mm GRAVEL.
3. FORM AN ELLIPTICAL CROSS-SECTION ABOUT 150mm HIGH X 400mm WIDE.
4. PLACE THE FILTER AT THE OPENING LEAVING AT LEAST A 100mm SPACE BETWEEN IT AND THE KERB INLET. MAINTAIN THE OPENING WITH SPACER BLOCKS.
5. FORM A SEAL WITH THE KERB TO PREVENT SEDIMENT BYPASSING THE FILTER.
6. SANDBAGS FILLED WITH GRAVEL CAN SUBSTITUTE FOR THE MESH OR GEOTEXTILE PROVIDED THEY ARE PLACED SO THAT THEY FIRMLY ABUT EACH OTHER AND SEDIMENT-LADEN WATERS CANNOT PASS BETWEEN.

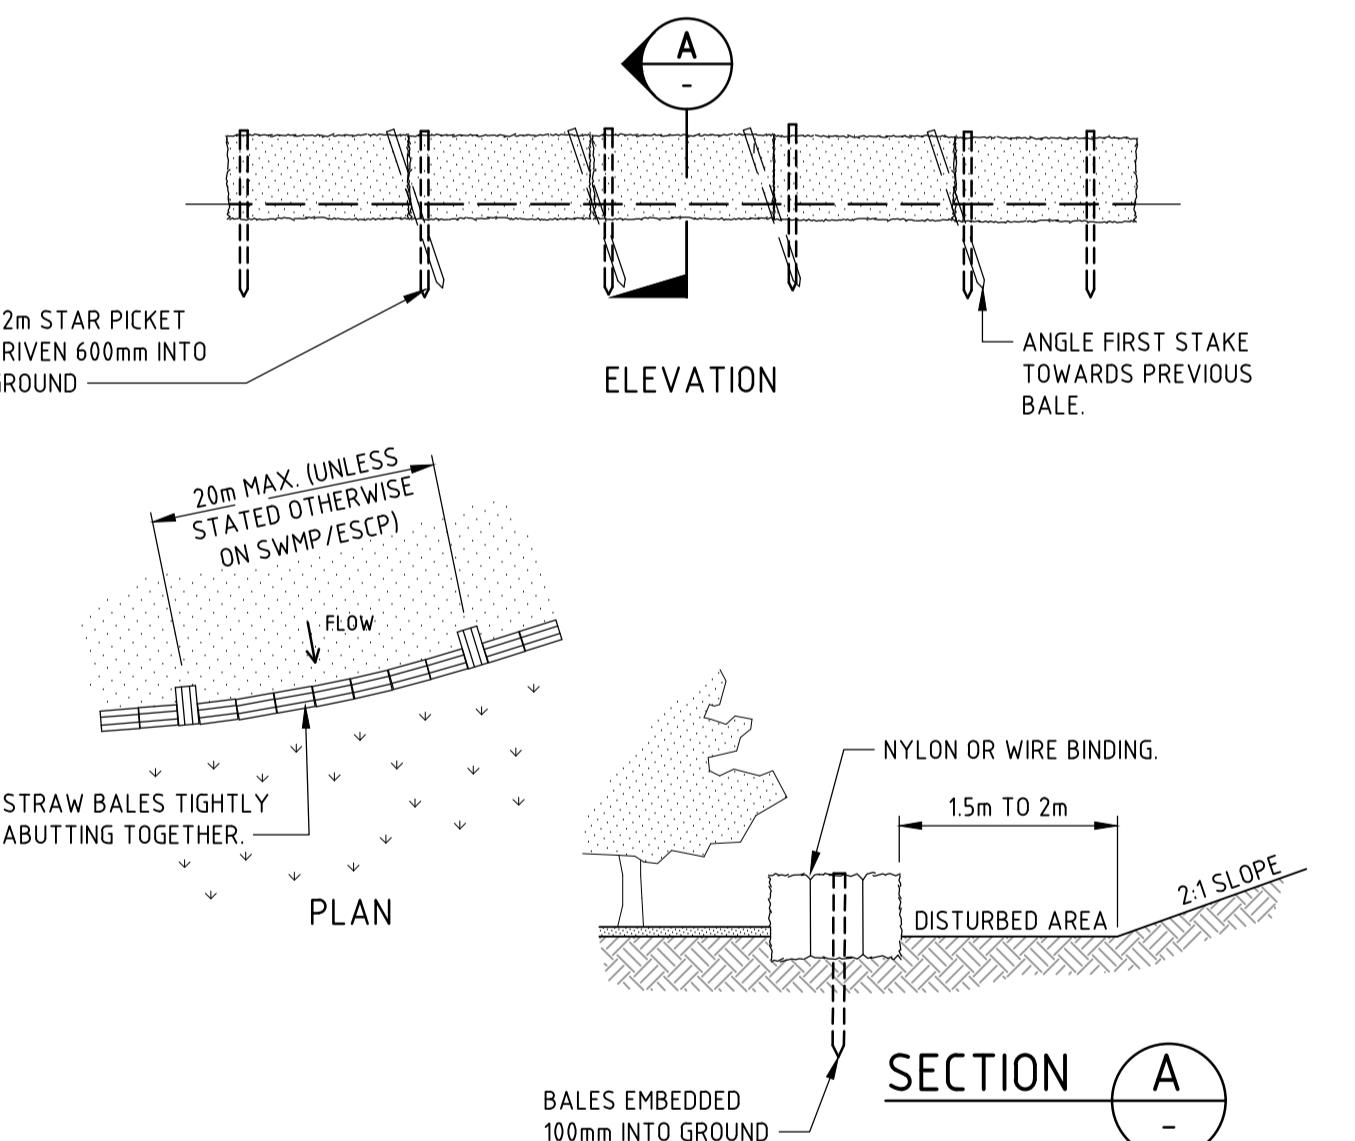

MESH AND GRAVEL INLET FILTER (SD 6-11)

CONSTRUCTION NOTES

1. FABRICATE A SEDIMENT BARRIER MADE FROM GEOTEXTILE OR STRAW BALES.
2. FOLLOW STANDARD DRAWING 6-7 AND STANDARD DRAWING 6-8 FOR INSTALLATION PROCEDURES FOR THE STRAW BALES OR GEOFABRIC. REDUCE THE PICKET SPACING TO 1METRE CENTRES.
3. IN WATERWAYS, ARTIFICIAL SAG POINTS CAN BE CREATED WITH SANDBAGS OR EARTH BANKS AS SHOWN IN THE DRAWING.
4. DO NOT COVER THE INLET WITH GEOTEXTILE UNLESS THE DESIGN IS ADEQUATE TO ALLOW FOR ALL WATERS TO BYPASS IT.

GEOTEXTILE INLET FILTER (SD 6-12)

CONSTRUCTION NOTES

1. CONSTRUCT THE STRAW BALE FILTER AS CLOSE AS POSSIBLE TO BEING PARALLEL TO THE CONTOURS OF THE SITE.
2. PLACE BALES LENGTHWISE IN A ROW WITH ENDS TIGHTLY ABUTTING. USE STRAW TO FILL ANY GAPS BETWEEN BALES. STRAWS ARE TO BE PLACED PARALLEL TO GROUND.
3. ENSURE THAT THE MAXIMUM HEIGHT OF THE FILTER IS ONE BALE.
4. EMBED EACH BALE IN THE GROUND 75mm TO 100mm AND ANCHOR WITH TWO 12 METRE STAR PICKETS OR STAKES. ANGLE THE FIRST STAR PICKET OR STAKE IN EACH BALE TOWARDS THE PREVIOUSLY LAID BALE. DRIVE THEM 600mm INTO THE GROUND AND, IF POSSIBLE, FLUSH WITH THE TOP OF THE BALES. WHERE STAR PICKETS ARE USED AND THEY PROTRUDE ABOVE THE BALES, ENSURE THEY ARE FITTED WITH SAFETY CAPS.
5. WHERE A STRAW BALE FILTER IS CONSTRUCTED DOWNSLOPE FROM A DISTURBED BATTER, ENSURE THE BALES ARE PLACED 1 TO 2 METRES DOWNSLOPE FROM THE TOE.
6. ESTABLISH A MAINTENANCE PROGRAM THAT ENSURES THE INTEGRITY OF THE BALES IS RETAINED - THEY COULD REQUIRE REPLACEMENT EACH TWO TO FOUR MONTHS.

STRAW BALE FILTER (SD 6-7)

CONSTRUCTION NOTES

1. STRIP THE TOPSOIL, LEVEL THE SITE AND COMPACT THE SUBGRADE.
2. COVER THE AREA WITH NEEDLE-PUNCHED GEOTEXTILE.
3. CONSTRUCT A 200mm THICK PAD OVER THE GEOTEXTILE USING ROAD BASE OR 30mm AGGREGATE.
4. ENSURE THE STRUCTURE IS AT LEAST 15 METRES LONG OR TO BUILDING ALIGNMENT AND AT LEAST 3 METRES WIDE.
5. WHERE A SEDIMENT FENCE JOINS ONTO THE STABILISED ACCESS, CONSTRUCT A HUMP IN THE STABILISED ACCESS TO DIVERT WATER TO THE SEDIMENT FENCE.

STABILISED SITE ACCESS (SD 6-14)

CONSTRUCTION NOTES

1. PLACE STOCKPILES MORE THAN 2m (PREFERABLY 5m) FROM EXISTING VEGETATION, CONCENTRATED WATER FLOW, ROADS AND HAZARD AREAS.
2. CONSTRUCT ON THE CONTOUR AS LOW, FLAT, ELONGATED MOUNDS.
3. WHERE THERE IS SUFFICIENT AREA, TOPSOIL STOCKPILES SHALL BE LESS THAN 2m IN HEIGHT.
4. WHERE THEY ARE TO BE IN PLACE FOR MORE THAN 10 DAYS, STABILISE FOLLOWING THE APPROVED ESCP OR SWMP TO REDUCE THE C-FACTOR TO LESS THAN 0.10.
5. CONSTRUCT EARTH BANKS (STANDARD DRAWING 5-5) ON THE UPSLOPE SIDE TO DIVERT WATER AROUND STOCKPILES AND SEDIMENT FENCES (STANDARD DRAWING 6-8) 1 TO 2m DOWNSLOPE.

STOCKPILES (SD 4-1)

14	Black	0.800	1.000			
GENERAL NOTES						
BULK EARTHWORKS NOTES						
1. BULK EARTHWORKS LEVELS SHOWN ARE BASED ON THE FOLLOWING PAVEMENTS THICKNESS AND ALLOWANCES:						
- TRAFFICABLE CONCRETE PAVEMENT 320mm						
- NON-TRAFFICABLE CONCRETE PAVEMENT 175mm						
- STRUCTURAL BUILDING SLAB 450mm min. / RL208.05m						
- LANDSCAPE TOPSOIL & TURF 175mm						
2. THE EXISTING SURFACE WAS NOT ADJUSTED TO ACCOUNT FOR THE REMOVAL OF VEGETATION, TOP SOIL OR UNSUITABLE/CONTAMINATED MATERIAL.						
3. BULKING FACTORS OF 1.0 WAS USED FOR BOTH CUT AND FILL MATERIAL.						
4. THE APPROXIMATE SITE EARTHWORKS VOLUMES BASED ON THE NOTED PAVEMENTS THICKNESS ARE OUTLINED BELOW:						
- CUT: 2983 ³						
- FILL: 1789 ³						
- NET: 2805 ³ (CUT)						
5. THE ABOVE VOLUMES ARE TO BE ASSESSED NOTING THE FOLLOWING:						
- NO ALLOWANCE HAS BEEN MADE FOR DETAILED EXCAVATIONS SUCH AS FOOTINGS, SET DOWNS, SERVICES TRENCHING, SEDIMENT BASIN ETC.						
- NO ALLOWANCE HAS BEEN MADE FOR TEMPORARY CONSTRUCTION PLATFORMS OR RETAINING WALL BACK FILL.						
- NO ALLOWANCE HAS BEEN MADE FOR THE REMOVAL OF CONTAMINATED OR UNSUITABLE MATERIAL.						
6. THIS PLAN HAS BEEN PREPARED FOR INFORMATION PURPOSES ONLY AND IS INDICATIVE IN NATURE. THE EARTHWORKS CONTRACTOR IS TO VERIFY ALL LEVELS AND QUANTITIES AND PERFORM THEIR OWN BULK EARTHWORKS ASSESSMENT.
