

Decision Statement

Project Details

Project Name Information Signage (1B) for Bradfield City Centre

Project Location

The Bradfield City Centre is situated at 215 Badgerys Creek Road, Bradfield and is legally identified as Lot 3101 in Deposited Plan 1282964.

The overall site is a 114.9-hectare parcel of land within the Liverpool City Council Local Government Area, with ownership vested in the Western Parkland City Authority trading as the Bradfield Development Authority (the Authority).

Specifically, the portion of the site subject to the proposed sign is land owned by the Authority, adjacent to the roundabout at the north-west boundary of the Site (the intersection of Badgerys Creek Road and the Bradfield City Centre). The sign is to be situated on the northern side of the Metro haul road, generally adjacent to an existing temporary sign installed in early 2025.

Activity Description

The temporary sign will be set back approximately 900mm from the boundary (fence line) and will comprise the following dimensions:

- A visual display area of 42.4 square metres (sqm)
- 12660mm (length) x 3350mm (width)
- A maximum height of 6.3m measured from the ground to the top of the sign.

Similar to the existing sign, this proposed sign will be temporary, installed for a period of approximately 2 years. The REF is accompanied by structural drawings and a range of supporting technical studies to support the proposal.

Division 5.1 of the *Environmental Planning and Assessment Act 1979* (EP&A Act) applies to the proposed activity. A Review of Environmental Factors (REF) has been prepared and considered against the requirements of sections 5.5 and 5.7 of the EP&A Act. This assessment is in accordance with the factors required to be considered under section 171 of the Environmental Planning and Assessment Regulation 2021 (EP&A Regulation).

The Western Parkland City Authority, trading as the Bradfield Development Authority (the Authority) is both the proponent and determining authority for the proposed works. The Authority has determined that the proposed activity detailed in the Review of Environmental Factors (REF) - Bradfield City Centre Information Signage (1B), may proceed, subject to the mitigation measures contained in Section 8 of the REF, for the following reasons:

1. No significant impact on the environment

The proposed activity is minor in nature and will have negligible environmental impacts which can be ameliorated satisfactorily through mitigation measures as described in Section 8 of the REF. The assessment has considered that these impacts are unlikely to be significant and therefore an environmental impact statement does not need to be prepared, examined and considered under s 5.7 of the EP&A Act, and approval for the proposal does not need to be sought under Division 5.2 of the EP&A Act (that is, the approval of more than one determining authority is not required).

2. No impact on NSW-listed biodiversity matters

The area of the proposed activity is wholly within areas mapped as certified land under the Growth Centres Biodiversity Certification Order. Under Part 5 of the EP&A Act, a determining authority is not required to further consider the effect on biodiversity of an activity to the extent that it is carried out on biodiversity certified land.

The area of the proposed activity is cleared and contains no native vegetation. No tree or vegetation removal is required to install the proposed sign.

The REF considers any potential impacts of the proposed activity on areas of outstanding biodiversity value and on threatened species, ecological communities or their habitats for both terrestrial and aquatic species as defined by the *Biodiversity Conservation Act 2016* (BC Act) and the *Fisheries Management Act 1994* (FM Act).

Therefore, as the proposed activity is not likely to significantly affect threatened species and is on biodiversity certified land, the following are not required:

- species impact statement under s 7.8 of the BC Act
- biodiversity development assessment report under s 7.8 of the BC Act
- concurrence of the Environment Agency Head under s 7.12 of the BC Act

Similarly, the REF concluded that it is unlikely that the proposed sign would have any adverse effect to any aquatic species and require any further approval under the FM Act.

3. No impact on nationally listed biodiversity matters and matters of national environmental significance

The site is biodiversity certified under Part 9 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) and therefore no referral for impacts to matters of national environmental significance is required.

The REF has considered the potential impacts of the proposed activity on threatened species, ecological communities and migratory species as defined in the EPBC Act, as well as matters of national environmental significance and any impacts on the environment of Commonwealth land, concluding the proposed sign and does not have the potential to have significant impact on the MNES or the environment.

Determination

As a delegate of the Western Parkland City Authority, trading as the Bradfield Development Authority, and, in accordance with section 5.5 of the *Environmental Planning and Assessment Act 1979*, having examined and taken into account to the fullest extent possible all matters affecting or likely to affect the environment by reason of the proposed activity, and having regard to the Review of Environmental Factors prepared File Planning and Development Services Pty Ltd Planning (20 May 2025) I hereby determine the proposed activity may proceed subject to the mitigation measures in Section 8 of the REF.
