On-going Management Stage 2

An area on site is barricaded during construction to store rubbish on site during construction.

On completion, rubbish is removed to various tips by contractors on site.

As our materials are pre-fabricated and pre-calculated, a minimal waste is built up during construction.

Contractors are encouraged to store waste in correct position to ensure a safe working site.

As Council provides bins on completion for occupants, the property owners are encouraged to use them correctly in accordance with Council's Policy.
