

Altitude – The Lodge Smiggins | APZ Plan

APZ Composition (within yellow boundary)

The entire allotment is to be maintained as an IPA. The APZ boundary is marked by the yellow boundary line

Maximum 10% of the APZ as understory (heath)

- Maximum 15% of the APZ as canopy (trees)
- Remainder APZ to have vegetation managed to a height of 100 mm.

Note: The maximum amount of native vegetation should be retained where possible (up to the 15 or 20%). Where APZ management works leads to bare ground then this area must be planted with native Poa and be maintained until an erosion resistant state is achieved

APZ Management

- Removal of fine fuels (leaves, branches, bark)
- Maintenance of grass
- Native shrubs can be retained as clumps or islands.
- Native vegetation removal should be restricted to a minimum in the areas of native vegetation, particularly wetter areas.
- Vegetation should not touch the building.
- Removal of weeds/exotic species and more flammable species first

Plan Name:

Altitude – The Lodge Smiggins APZ Management Plan

Plan Date: 27/08/2021

Drawn by: Owners

Site Address:

Lot 1 DP1195135

13 Plum Pine Road

Smiggin Holes NSW 2624

Other Notes:

Not to scale. This map is approximate only and all distances should be measured on ground prior to any works.
