WASTE MANAGEMENT PLAN

**19 PARK STREET,
CAMPSIE NSW 2194**

WASTE MINIMISATION & MANAGEMENT

Waste avoidance is a priority with this project, followed by reuse of waste products, and then recycling, with disposal of waste as a last resort.

The following control measures will be adopted to minimise and manage waste in the project:

- Wastes will be stored in a manner that does not pose harm to the environment.
- Skip bins will be provided to contain waste materials and spoil.
- Any contaminated soil will be classified and disposed off to legally operating waste management facility.
- Materials will be segregated for reuse or recycling and will not be mixed with other waste.
- Spoil material that cannot be reused on site, will be disposed to Rockdale Resource and Recovery Centre waste facility
- Vehicles used for transportation will be securely covered to prevent waste spillage during removal.
- Storage containers will be secured on vehicles.

- Only compatible wastes will be transported together.

- Recyclable waste will be taken to Rockdale Resource and Recovery Centre.
- Waste will be disposed to Rockdale Resource and Recovery Centre.

To reduce waste sent to landfill by reduction, redirection and management of waste materials. Waste can be avoided through design, reducing waste at the source, reusing waste both on and off site and to recycle waste on site through separation.

It will be the subcontractor's responsibilities to remove all rubbish from site however skip bins will be provided as per the construction management plan throughout the various stages of the project. Rubbish on site is only limited to off cuts of materials and general rubbish. All skips will be sent to a dedicated recycling centre where it will be separated with minimal or nill transported to landfills. (Rockdale Resource and Recovery Centre Waste Facility)

CONSTRUCTION NOISE, DUST & VIBRATION

All works will only be undertaken during the approved construction hours with an emphasis on all trades to keep noise levels down where possible. Dust will be suppressed and kept to a minimal and will be contained at all times to mitigate any neighbour complaints.

There will be no incinerating or open burning on site of waste materials. The Key objective target is to have No complaints relating to excessive noise and vibration during construction. Any incidents on the project will be recorded and communicated to the Certifying Authority.

STORM WATER & DRAINAGE

All works shall be in accordance with the Building Code of Australia AS3500.3, councils standard specification codes and the satisfaction of the Certifying Authority. Install sediment fences around the toe of any stockpile materials that may have the potential to move. All vehicles leaving the site shall be cleaned and inspected before leaving the driveway. Works shall limit as far as practical the disturbance to any drainage lines.

DEMOLITION & CONSTRUCTION WASTE DISPOSAL

All waste streams are to be stored separately on site, i.e.: Landfill waste; Recyclable Waste; Materials to be re-used on- site; and / or Excavation materials.

Materials that cannot be reused or recycled will be transported to Rockdale Resource and Recovery Centre waste facility.

HAZARDOUS MATERIALS

Asbestos and other hazardous materials must be removed, handled and disposed of according to the Occupational Health and Safety Regulation 2001 (made under the Occupational Health and Safety Act 2000).

If the building or structure being demolished or altered was built before 1987 it is likely to contain asbestos. Where asbestos is present, National Occupational Health & Safety Commission's: Code of Practice for the Safe Removal of Asbestos 2000 (1988) must be complied with.

DECONTAMINATION

When carrying out licensed asbestos removal work, the licensed asbestos removalist must ensure decontamination facilities are available for the asbestos removal work area, any plant used in that area and workers carrying out the asbestos removal work.

WASTE CONTAINMENT & DISPOSAL

When carrying out licensed asbestos removal work, the licensed asbestos removalist must ensure that asbestos waste is contained and labelled in accordance with the GHS before the waste is removed from the asbestos removal area. It must be disposed of as soon as is practicable at a site authorised to accept asbestos waste.

CLEARANCE INSPECTION

A person commissioning licensed asbestos removal work must ensure that, once the licensed asbestos removal work has been completed, a clearance inspection is carried out and a clearance certificate is issued before the workplace can be re-occupied.

NOTE: Refer to the Code of Practice | How to safely remove asbestos, located on the [safeworkaustralia](https://www.safeworkaustralia.gov.au) webpage for additional information.
