Table of Contents

- 1.0 Introduction and Methodology
- 2.0 Aim
- 3.0 Observations
- 4.0 Description of the Trees based upon the Observations
- 5.0 Conclusion

Appendix A: Map of tree locations.

DISCLAIMER

The Client acknowledges that this Report, and any opinions, advice or recommendations expressed or given, is based on the information supplied by the Client, data inspection, measurements and analysis carried out or obtained by Mitchell Marino. The Client should rely on this Report, and on its contents only to that extent.

Due care has been taken to obtain all information from reliable sources. Data has been verified as practicable. It should be noted that Mitchell Marino, as a Consulting Arborist cannot guarantee or be responsible for the accuracy of information supplied by others.

Unless stated otherwise:

- Information contained in this Report covers only the trees examined and reflects the health and structure of the trees at the time of inspection. The documented observations, results, recommendations and conclusions given may vary after the site visit due to environmental conditions.
- The inspections have been limited to visual examination from the base of the subject trees without dissection, excavation, probing or coring; and
- There is no warranty or guarantee, expressed or implied, that problems or deficiencies of the subject trees may not arise in the future.

1. Introduction and Methodology

- 1.1 This Arboricultural Assessment Report is an unbiased assessment of two-hundred and forty-nine (249) trees along the property boundaries at Golden Grove Road (Gate B8 off Bumborah Point Road), Port Botany, NSW
- 1.2 This report has been commissioned by Statewide Civil PTY LTD Operations Manager Rodney Sikulu. Mr. Sikulu organised the report and consultation through High Point Tree Management. The site is currently used as a freight container loading and distribution terminal. Initial consultation on site occurred on 2nd of November, 2022. At this time concern was raised about not having access to a drafted map for the purpose of tree plotting. Assessments and site work was then commenced on Monday 7th of December.
- 1.3 The Clients desire to move the kerbing at the site all the way to the boundary fencing in all areas of the property in an effort to gain more useable land onsite. For this to occur, all trees and other vegetation at the site would require removal.
- 1.4 The appears to be situated in the Randwick Council Local Government Area. Randwick Local Government Area regards vegetation above six (6) meters in height to be a prescribed tree. Prescribed trees will generally require a permit for their pruning or removal prior to the undertaking.
- 1.5 The Randwick Council Significant Tree Register has been consulted and there does not appear to be any listing for the property.
- 1.6 The instructions from the client were to include an identification of the trees, a visual description of the vegetation and a mapping document.
- 1.7 The scope has been to provide a very limited Visual Tree Assessment (VTA). To meet these ends the height, maturity level and species identification has been recorded for each tree. The trees have also been plotted roughly on the mapping document that was provided.
- 1.8 Statewide Civil PTY LTD provided a map of the site that has been used to map tree locations. A copy of this map has been included in Appendix A.
- 1.9 Only vegetation above three (3) meters tall has been included in this report.
- 1.10 No potential habitat hollows were identified (from the ground level only).
- 1.11 No risk assessment has been carried out. No advanced level of testing has been carried out to diagnose any tree maladies.

- 1.12 Trees have been identified to the binomial level. Common names have also been included.
- 1.13 Trees were not tagged on site.
- 1.14 The height of each tree is an estimation expressed in meters
- 1.15 Mitchell Marino composed this Report and has made all observations contained within.
- 1.16 Tree Live cannot be held liable for damages caused through hurricane winds, or faster. Further information in regards to extreme weather events can be found in The Beaufort Scale. No liability is assumed in the event of very heavy rain. Definitions for categories of rain can be found on the Bureau of Meteorology Website.
- 1.17 No person other than the intended receiver can rightly possess a copy of this report unless otherwise authorized. This report can be regarded as current for a period of one year only.

2. Aim

The aim of this Report is to provide identify the trees at the site and to provide a brief description of the trees.

3. Observations

3.1 Observations have been put into tables. The site has been put into two (2) tables. Table one contains the data taken from trees from the front boundary fencing on the left, extending all the way along the kerb and guttering on the left side of the property. Table 2 contains the data for trees on the right of the property from the boundary fencing at the front of the property, all the way along the kerb and guttering.

Table 1: Left side of driveway along property boundary – commencing upon entry into gate				
	Botanical name	Common name	Height	Maturity
1	<i>Casuarina glauca</i>	Swamp she-oak	10	Immature
2	<i>Casuarina glauca</i>	Swamp she-oak	15	Semi-mature
3	<i>Casuarina glauca</i>	Swamp she-oak	9	Immature
4	<i>Cupressus sempervirens</i>	Italian Cypress	3	Immature
5	<i>Casuarina glauca</i>	Swamp she-oak	12	Semi-mature
6	<i>Callistemon citrinus</i>	Crimson Bottlebrush	5	Immature
7	<i>Callistemon citrinus</i>	Crimson Bottlebrush	5	Immature
8	<i>Callistemon citrinus</i>	Crimson Bottlebrush	5	Immature

248	<i>Melia azedarach</i>	White Cedar	12	Semi-mature
249	<i>Acacia longifolia</i>	Long-leaved Wattle	8	Mature

4. Description of the Trees based upon the Observations

- 4.1 Most of the trees assessed (approximately 90%) are naturally occurring within the local area.
- 4.2 There appears to be a normal profile of maturity levels among the trees.
- 4.3 The trees have their growth restricted or regulated by available space above and below ground by the concrete and the fencing.
- 4.4 In places the trees are encroaching into the workable area of the concrete access/driveways at the property.
- 4.5 In some places there is weedy undergrowth – vines, Lantana etc.
- 4.6 The trees are causing minor damage to some boundary fencing.
- 4.7 There appears to be a lack of general maintenance regarding the trees
- 4.8 There were some dead trees on site – these were listed as (DEAD) in the observations.
- 4.9 No habitat was noticeable during the assessments.

5. Conclusion

5.1

This project has been enjoyable and fulfilling. I appreciate the opportunity and association. If there are any further requests please don't hesitate to contact me.

A handwritten signature in dark ink, reading "Mitchell Marino", with a stylized flourish extending to the right.
