Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

Refer to the attached checklist for detailed response to each item.

PART 3. Apartment Design Guide Checklist:

SEPP 65 APARTMENT DESIGN GUIL	T T T T T T T T T T T T T T T T T T T	T
CONTROLS	PROPOSED	COMPLIANCE
PART 3 - SITING THE DEVELOPMENT	T	
Objective 3A-1 Site analysis illustrates that design decisions have been based on opportunities and constraints of the site conditions and their relationship to the surrounding context.	Achieved. Refer to SITE ANALYSIS; FLOOR PLAN L1; L2; L3	YES
Design Guidance *Each element in the Site Analysis Checklist should be addressed (see Appendix 1)	*Achieved	
Objective 3B-1		
Building types and layouts respond to the streetscape and site while optimising solar access within the development.	The built form has been designed in response to the site, the way it slopes represented an opportunity for more generous POS to the southern units on L2. All the other units were optimized for natural lighting & cross ventilation to occur. Direct access has been incorporated into the street frontage to allow access for residents. Refer to FLOOR PLAN L1; L2; SEPP CONTROLS [GROUND - L1]; SEPP CONTROLS [L2]; SEPP CONTROLS [L3]	YES
Design Guidance *Buildings along the street frontage define the street, by facing it and incorporating direct access from the street.	*Achieved	
*Where the street frontage is to the east or west, rear buildings should be orientated to the north.	*N/A	
*Where the street frontage is to the north or south, overshadowing to the south should be minimised and buildings behind the street frontage should be orientated to the east and west.	*Achieved	
Objective 3B-2 Overshadowing of neighbouring properties is minimised during mid-winter.	The building was positioned in order to minimize the shadow on the neighbours and utilize the slope of the site. The height of the building is under the height limit and also helps to reduce overshadowing of neighbours. Refer to SHADOW DIAGRAMS; SECTIONS; SEPP CONTROLS	YES
Design Guidance *Living areas, private open space and communal open space should receive solar access in accordance with sections 3D Communal and public open space and 4A Solar and daylight access.	*Achieved	
*Solar access to living rooms, balconies and private open spaces of neighbours should be considered.	*Achieved	

*Where an adjoining property does not currently receive the required hours of solar access, the proposed building ensures	*N/A	
solar access to neighbouring properties is not reduced by more than 20%.		
*If the proposal will significantly reduce the solar access of neighbours, building separation should be increased beyond minimums contained in section 3F Visual privacy.	*N/A	
*Overshadowing should be minimised to the south or downhill by increased upper-level setbacks.	*Achieved where possible	
*It is optimal to orientate buildings at 90 degrees to the boundary with neighbouring properties to minimise overshadowing and privacy impacts, particularly where minimum setbacks are used and where buildings are higher than the adjoining development.	*Achieved where possible	
*A minimum of 4 hours of solar access should be retained to solar collectors on neighbouring buildings.	*Achieved	
Objective 3C-1 Transition between private and public domain is achieved without compromising safety and security.	Achieved. Refer to FLOOR PLAN L1; L2; L3	YES
Design Guidance *Terraces, balconies and courtyard apartments should have direct street entry, where appropriate	*N/A	
*Changes in level between private terraces, front gardens and dwelling entries above the street level provide surveillance and improve visual privacy for ground level dwellings (see figure 3C.1)	*N/A	
*Upper-level balconies and windows should overlook the public domain.	*Achieved. Balconies have been oriented to survey the public area.	
*Front fences and walls along street frontages should use visually permeable materials and treatments. The height of solid fences or walls should be limited to 1m.	*Achieved.	
*Length of solid walls should be limited along street frontages.	*Achieved.	
*Opportunities should be provided for casual interaction between residents and the public domain. Design solutions may include seating at building entries, near letter boxes and in private courtyards adjacent to streets.	*Achieved. Seating has been provided at the entry adjacent to the mailboxes.	
*In developments with multiple buildings and/or entries, pedestrian entries and spaces associated with individual buildings/entries should be differentiated to improve legibility for residents, using a number of the following design solutions:	*N/A	
 architectural detailing changes in materials plant species colours 		
*Opportunities for people to be concealed should be minimised.	*Achieved.	
Objective 3C-2 Amenity of the public domain is retained and enhanced.	Amenity has been retained and	YES

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

> enhanced through landscaping at the ground floor to minimise the overall impact of the built form.

The residents mailboxes have been integrated into the entry statement. Service areas have been located in relation to the car park area to minimise visual impact in order to retain the public amenity and not impact negatively from the street.

Refer to FLOOR PLAN L1

Design Guidance

*Planting softens the edges of any raised terraces to the street, for example above sub-basement car parking.

*Mailboxes should be located in lobbies, perpendicular to the street. Alignment or integrated into front fences were individual street. Entries are provided.

*The visual prominence of underground car park vents should be minimised and located at a low level where possible.

*Substations, pump rooms, garbage storage areas and other service requirements should be located in basement car parks or out of view

- * Ramping for accessibility should be minimised by building entry location and setting ground floor levels in relation to footpath levels Durable, graffiti resistant and easily cleanable materials should the following design solutions:
- street access, pedestrian paths and building entries which are clearly defined
- paths, low fences and planting that clearly delineate between communal/private open space and the adjoining public open space
- minimal use of blank walls, fences and ground level parking
- *On sloping sites protrusion of car parking above ground level should be minimised by using split levels to step underground car parking.

*Achieved

*Achieved

*N/A

*Achieved

*Achieved

*Achieved

Objective 3D-1

An adequate area of communal open space is provided to enhance residential amenity and to provide opportunities for landscaping.

Desian Criteria

1.Communal open space has a minimum area equal to 25% of the site (see figure 3D.3)

2. Developments achieve a minimum of 50% direct sunlight to the principal usable part of the communal open space for a minimum of 2 hours between 9 am and 3 pm on 21 June (mid winter) Open spaces have been created at the ground level and at Level 2, to enhance residential amenity, landscaping and deep soil zones. Refer to FLOOR PLAN L1; L2; LANDSCAPE PLAN

*Achieved. Communal Open Space, Deep Soil Zones + Landscaping have a total of 522.4m², which represents 28.6% of the site.

Achieved. At least 50% of the Ground Floor Lawns receive more than 2 hours sunlight between 9-3pm on 21 June YES

Pesign Guidance * Communal open space should be consolidated into a well designed, easily identified and usable area	*Achieved. The communal open space has been designed to be a central large landscaped area on Level 2 with integrated seating. The COS on Ground, which consists of landscaping, deep soil zones and lawns are off the street and highly visible. *Achieved	
*Communal open space should have a minimum dimension of 3m, and larger developments should consider greater dimensions		
*Communal open space should be co-located with deep soil areas.	*Achieved on Ground (L1)	
* Direct, equitable access should be provided to communal open space areas from common circulation areas, entries and lobbies	*Achieved	
*Where communal open space cannot be provided at	*Achieved	
* Where developments are unable to achieve the design	*Achieved	
criteria, such as on small lots, sites within business zones, or in a dense urban area, they should: •provide communal spaces elsewhere such as a landscaped roof top terrace or a common room •provide larger balconies or increased private open space for apartments		
•demonstrate good proximity to public open space and facilities and/or provide contributions to public open space		
Objective 3D-2 Communal open space is designed to allow for a range of activities, respond to site conditions and be attractive and inviting	Achieved. COS has been incorporated into the overall design at both Ground (L1) and Level 2 where a range of activities can be carried out. Refer to FLOOR PLAN L1; L2	YES
Design Guidance *Facilities are provided within communal open spaces and common spaces for a range of age groups (see also 4F	*Achieved. Integrated bench seating and lawns are provided	
Common circulation and spaces), incorporating some of the following elements: • seating for individuals or groups • barbecue areas • play equipment or play areas	for a range of activities.	
• swimming pools, gyms, tennis courts or common rooms		
*The location of facilities responds to microclimate and site conditions with access to sun in winter, shade in summer and shelter from strong winds and down drafts	*Achieved	
*Visual impacts of services should be minimised, including location of ventilation duct outlets from basement car parks, electrical substations and detention tanks	*Achieved. Visual impacts have been minimised.	
Objective 3D-3 Communal open space is designed to maximise safety	Security and safety for residents has been incorporated through creating a Communal Open Space at L2, where only residents and their guests have access. Refer to FLOOR PLAN L2	YES

Design Guidance * Communal open space and the public domain should be readily visible from habitable rooms and private open space areas while maintaining visual privacy. Design solutions may include: • bay windows • corner windows • balconies *Communal open space should be well lit.	*Achieved. Visibility has been achieved from units above through windows and balconies. Visibility to L2 COS has been achieved through kitchen windows. *Achieved. Lighting has been provided to ensure safety and visibility is maintained.	
*Where communal open space/facilities are provided for children and young people they are safe and contained	*N/A	
Objective 3D-4 Public open space, where provided, is responsive to the existing pattern and uses of the neighbourhood.	Achieved. Public open space has been provided in relation to existing uses within the area. Refer to FLOOR PLAN L1	YES
* The public open space should be well connected with public streets along at least one edge * The public open space should be well connected with public streets along at least one edge	*Achieved. Public open space has been situated along the boundaries in relation to both the streets	
*The public open space should be connected with nearby parks and other landscape elements	*Achieved. Connection to street provided via pedestrian access.	
*Public open space should be linked through view lines, pedestrian desire paths, termination points and the wider street grid	*Achieved.	
* Solar access should be provided year round along with protection from strong winds	* Achieved. Solar access to the communal spaces is achieved all year round.	
*Opportunities for a range of recreational activities should be provided for people of all ages	*Achieved.	
*A positive address and active frontages should be provided adjacent to public open space	*Achieved. Provided through the use of architectural and landscaping features.	
*Boundaries should be clearly defined between public open space and private areas	*Achieved. POS is located on ground level while all units are located from L2 to L3. Also fencing is provided with lockable doors and block walls to separate COS from car park.	
Objective 3E-1 Deep soil zones provide areas on the site that allow for and support healthy plant and tree growth. They improve residential amenity and promote management of water and air quality	Achieved. Refer to FLOOR PLAN GROUND FLOOR; L2; LANDSCAPE PLAN	YES
Design Criteria 1. Deep soil zones are to meet the following minimum requirements:	*Achieved. 276.1m² of deep soil zone has been provided (15.15% of site).	

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

Site area	Minimum dimensions	Deep soil zone (% of site area)	
less than 650m²	3.4	rit .	
650m² - 1,500m²	3m		
greater than 1,500m ³	6m	7%	
greater than 1,500m ³ with significant existing tree cover	6m		

- * On some sites it may be possible to provide larger deep soil zones, depending on the site area and context:
- \bullet 10% of the site as deep soil on sites with an area of 650 m^2 -1,500 m^2
- 15% of the site as deep soil on sites greater than 1,500m²
- * Deep soil zones should be located to retain existing significant trees and to allow for the development of healthy root systems, providing anchorage and stability for mature trees. Design solutions may include:
- basement and sub basement car park design that is consolidated beneath building footprints
- use of increased front and side setbacks
- adequate clearance around trees to ensure long term health
- co-location with other deep soil areas on adjacent sites to create larger contiguous areas of deep Soil
- * Achieving the design criteria may not be possible on some sites including where:
- the location and building typology have limited or no space for deep soil at ground level (e.g. central business district, constrained sites, high density areas, or in centres)
- there is 100% site coverage or non-residential uses at ground floor Level Where a proposal does not achieve deep soil requirements, acceptable stormwater management should be achieved and alternative forms of planting provided such as on structure

*Achieved. As above.

*Achieved. The deep soil zone(s) have been located to the front, both sides of the property and to the rear in the POS to visually enhance the street view and provide green space for viewing for residents and to provide more privacy with existing neighbours.

*N/A

Objective 3F-1

Adequate building separation distances are shared equitably between neighbouring sites, to achieve reasonable levels of external and internal visual privacy The separation from subject sites is appropriate. Deep soil was located along the boundaries to plant trees which will enrich privacy. Also, fixed screens located in POS are proposed. Refer to FLOOR PLAN L1; L2; L3; SECTIONS

YES

Design Criteria 1

Separation between windows and balconies is provided to ensure visual privacy is achieved. Minimum required separation distances from buildings to the side and rear boundaries are as follows:

Building height	Hubitable rooms and balconies	Non- habitable rooms
up to 12m (4 storeys)	6m	3m
up to 25m (5-8 storeys)	9m	4.5m
over 25m (9+ storeys)	12m	6m

Note: Separation distances between buildings on the same site should combine required building separations

The separation between the building and the neighbours is appropriate. Refer to floor plans.

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

screen panels to windows and/or balconies

depending on the type of room (see figure 3F.2) Gallery access circulation should be treated as habitable space when measuring privacy separation distances between neighbouring properties. * Generally one step in the built form as the height increases due to building separations is desirable. Additional steps *N/A should be careful not to cause a 'ziggurat' appearance. *For residential buildings next to commercial buildings, *N/A separation distances should be measured as follows: • for retail, office spaces and commercial balconies use the habitable room distances • for service and plant areas use the non-habitable room distances * New development should be located and oriented to maximise visual privacy between buildings on site and for *Visual separation provided neighbouring buildings. Design solutions include: through the use of deeper • site layout and building orientation to minimise privacy balconies, fixed vertical impacts (see also section 3B Orientation) screening and deep soil located • on sloping sites, apartments on different levels have along site boundaries for tree appropriate visual separation distances (see figure 3F.4) planting. *Apartment buildings should have an increased separation *N/A distance of 3m (in addition to the requirements set out in design criteria 1) when adjacent to a different zone that permits lower density residential development to provide for a transition in scale and increased landscaping (figure 3F.5) * Direct lines of sight should be avoided for windows and *Achieved balconies across corners *Achieved * No separation is required between blank walls. Objective 3F-2 Site and building design elements increase privacy without Visual separation provided YES compromising access to light and air and balance outlook through the use of deeper and views from habitable rooms and private open space balconies, fixed vertical screening and deep soil located along site boundary for tree planting. All units and POS are located from L2 to L3. Refer to **ELEVATIONS** Design Guidance * Communal open space, common areas and access paths *Achieved should be separated from private open space and windows to apartments, particularly habitable room windows. Design solutions may include: setbacks • solid or partially solid balustrades to balconies at lower • fencing and/or trees and vegetation to separate spaces screening devices • bay windows or pop out windows to provide privacy in one direction and outlook in another • raising apartments/private open space above the public domain or communal open space • planter boxes incorporated into walls and balustrades to increase visual separation • pergolas or shading devices to limit overlooking of lower apartments or private open space • on constrained sites where it can be demonstrated that building layout opportunities are limited, fixed louvres or

* Bedrooms, living spaces and other habitable rooms should be separated from gallery access and other open circulation space by the apartment's service areas	*Achieved	
*Balconies and private terraces should be located in front of living rooms to increase internal privacy	*Partially achieved. If possible, balconies are located in front of living rooms. If not, they are located adjacent to them and the living room window is screened to achieve privacy.	
* Windows should be offset from the windows of adjacent buildings.	*Achieved	
* Recessed balconies and/or vertical fins should be used between adjacent balconies.	*Achieved	
Objective 3G-1 Building entries and pedestrian access connects to and addresses the public domain.	Achieved. Refer to FLOOR PLAN	YES
Design Guidance * Multiple entries (including communal building entries and individual ground floor entries) should be provided to activate the street edge. Entry locations relate to the street and subdivision pattern and the existing pedestrian network	*One pedestrian access and one vehicular connect to and address to public domain.	
* Building entries should be clearly identifiable and communal entries should be clearly distinguishable from private entries.	*All entries (car and pedestrian) are clearly defined and identifiable.	
* Where street frontage is limited and multiple buildings are located on the site, a primary street address should be provided with clear sight lines and pathways to secondary building entries	*N/A	
Objective 3G-2 Access, entries and pathways are accessible and easy to identify.	Achieved. Refer to FLOOR PLAN GROUND (L1) and PERSPECTIVES	YES
Design Guidance * Building access areas including lift lobbies, stairwells and hallways should be clearly visible from the public domain and communal spaces.	*Achieved. Main entry to the building is off the street, enhanced by an entry statement, mailboxes area with seating and lighting. Stairs and ramps are provided for access.	
* The design of ground floors and underground car parks minimise level changes along pathways and entries.	*Achieved.	
* Steps and ramps should be integrated into the overall building and landscape design.	*Achieved.	
* For large developments 'way finding' maps should be provided to assist visitors and residents (see figure 4T.3)	*N/A	
* For large developments electronic access and audio/video intercom should be provided to manage access.	*N/A	
Objective 3G-3 Large sites provide pedestrian links for access to streets and connection to destinations	Pedestrian footpath extension is proposed to link existing streets	N/A

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

to the development and COS. It will also facilitate external connections between wider road systems. Design Guidance * Pedestrian links through sites facilitate direct connections *Achieved to open space, main streets, centres and public transport * Pedestrian links should be direct, have clear sight lines, be *Achieved overlooked by habitable rooms or private open spaces of dwellings, be well lit and contain active uses, where appropriate Objective 3H-1 YES Vehicle access points are designed and located to achieve Vehicle access does not safety, minimise conflicts between pedestrians and vehicles interfere with pedestrians. All and create high quality streetscapes. car park is separated from internal pedestrian circulation and COS and it's located on the same level of lift lobbies. **Refer** to FLOOR PLAN L1 Design Guidance * Car park access should be integrated with the building's *Car park access is integrated overall facade. Design solutions may include: to front facade in relation to • the materials and colour palette to minimise visibility from street and public domain the street through a ramp which takes • security doors or gates at entries that minimise voids in into the building. Visitors parking are provided within the the facade • where doors are not provided, the visible interior reflects car park. It is hidden from public the facade design and the building services, pipes and ducts domain by use of darker colours are concealed and landscaping, but properly identifiable to achieve safety. It is also permeable for an extra layer of passive surveillance. Refer to FLOOR PLAN GROUND (L1); ELEVATIONS * Car park entries should be located behind the building line. *Achieved *Not achieved due to the * Vehicle entries should be located at the lowest point of the site minimising ramp lengths, excavation and impacts on the sloping nature of the site. building form and layout. * Car park entry and access should be located on secondary *Vehicle entry is located on the streets or lanes where available. secondary street. * Vehicle standing areas that increase driveway width and *N/A encroach into setbacks should be avoided. * Access point locations should avoid headlight glare to *Achieved habitable rooms. * Adequate separation distances should be provided *Achieved between vehicle entries and street intersections. * The width and number of vehicle access points should be *Achieved. limited the minimum. * Visual impact of long driveways should be minimised *Achieved. Only one vehicle through changing alignments and screen planting. entry screened by landscaping. * The need for large vehicles to enter or turn around within *Achieved the site should be avoided.

* Garbage collection, loading and servicing areas are screened.	*Achieved	
* Clear sight lines should be provided at pedestrian and vehicle crossings.	*Achieved. Sight triangle shown on plan.	
* Traffic calming devices such as changes in paving material or textures should be used where appropriate.	*Provided	
* Pedestrian and vehicle access should be separated and distinguishable. Design solutions may include:	*Achieved	
 changes in surface materials level changes the use of landscaping for separation 	*They are independent one from another and easily distinguishable.	
Objective 3J-1 Car parking is provided based on proximity to public transport in metropolitan Sydney and centres in regional areas	Car parking needs have been achieved under the Infill Housing SEPP (0.5 carpark every 1 bed unit, 1 carpark	YES
 1. For development in the following locations: on sites that are within 800 metres of a railway station or light rail stop in the Sydney Metro Area, or on land zoned, and sites within 400 metres of land zoned, 	every 2 bed unit). Refer to DEVELOPMENT SUMMARY; FLOOR PLAN GROUND (L1)	
B3 Commercial Core, B4 Mixed Use or equivalent in a nominated regional centre the minimum car parking		
requirement for residents and visitors is set out in the Guide to Traffic Generating Developments, or the car parking requirement prescribed by the relevant council, whichever is less. The car parking needs for a development must be provided off street.		
Design Guidance		
* Where a car share scheme operates locally, provide car share parking spaces within the development. Car share spaces, when provided, should be on site	*N/A	
* Where less car parking is provided in a development, council should not provide on street resident parking permits.	*N/A	
Objective 3J-2		
Parking and facilities are provided for other modes of transport.	Achieved.10 bicycle and 2 accessible parking spaces are provided. Refer to FLOOR PLAN GROUND (L1)	YES
*Conveniently located and sufficient numbers of parking spaces should be provided for motorbikes and scooters	*N/A	
* Secure undercover bicycle parking should be provided that is easily accessible from both the public domain and common areas	*Partially Achieved	
* Conveniently located charging stations are provided for electric vehicles, where desirable	*N/A	
Objective 3J-3 Car park design and access is safe and secure.	Achieved. Refer to FLOOR PLAN GROUND (L1)	YES
Design Guidance * Supporting facilities within car parks, including garbage, plant and switch rooms, storage areas and car wash bays can be accessed without crossing car parking spaces	*Achieved. Car parking has been designed to allow unobstructed access.	

* Direct, clearly visible and well-lit access should be provided	*Achieved	
into common circulation areas.		
* A clearly defined and visible lobby or waiting area should be provided to lifts and stairs.	*Achieved. Lift lobbies have a different flooring finish and are provided with clear signage.	
* For larger car parks, safe pedestrian access should be clearly defined, and circulation areas have good lighting, colour, line marking and/or bollards	*Achieved	
Objective 3J-4		
Visual and environmental impacts of underground car parking are minimised	Car park excavation is to utilize the site slope, achieving a car park level but still maintaining the southern units on Level 2 on the natural ground to facilitate deep planting to fence line.	YES
Design Guidance * Excavation should be minimised through efficient car park layouts and ramp design	*Achieved despite excavation extent.	
* Car parking layout should be well organised, using a logical, efficient structural grid and double loaded aisles	*Achieved	
* Protrusion of car parks should not exceed 1m above ground level. Design solutions may include stepping car park levels or using split levels on sloping sites	*Achieved through split levels	
* Natural ventilation should be provided to basement and sub-basement car parking areas	*Achieved through permeable screening to carpark	
* Ventilation grills or screening devices for car parking openings should be integrated into the facade and landscape design	*Achieved	
Objective 3J-5 Visual and environmental impacts of on-grade car parking are minimised.	The portion of the car park that is on grade is away from both street frontages and is screened by landscape. The car park screen is permeable which facilitates the visual connectivity between the car park and the public domain and landscape.	N/A
Design Guidance * On-grade car parking should be avoided.	*It is minimized	
* Where on-grade car parking is unavoidable, the following	*Achieved	
design solutions are used:		
 parking is located on the side or rear of the lot away from the primary street frontage cars are screened from view of streets, buildings, communal and private open space areas 		
 safe and direct access to building entry points is provided parking is incorporated into the landscape design of the site, by extending planting and materials into the car park space 		
stormwater run-off is managed appropriately from car parking surfaces hip surfaces rain gardens or on site detention tanks are		
 bio-swales, rain gardens or on-site detention tanks are provided, where appropriate light coloured paving materials or permeable paving 		

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

systems are used, and shade trees are planted between		
every 4-5 parking spaces to reduce increased surface		
temperatures from large areas of paving		
Objective 3J-6	01/0	VEC
Visual and environmental impacts of above ground enclosed	N/A	YES
carparking are minimised		
Design Guidance		
* Exposed parking should not be located along primary		
street frontages the street frontage (see figure 3J.9)		
* Screening, landscaping and other design elements		
including public art should be used to integrate the above		
ground car parking with the facade. Design solutions may		
include:		
car parking that is concealed behind the facade, with windows integrated into the everall facade desire.		
windows integrated into the overall facade design (approach should be limited to developments where a larger		
floor plate podium is suitable at lower levels)		
• car parking that is 'wrapped' with other uses, such as		
retail, commercial or two storey Small Office/Home Office		
(SOHO) units along		
* Positive street address and active frontages should be		
provided at ground level		
PART 4 – DESIGNING THE BUILDING		
Objective 4A-1		
To optimise the number of apartments receiving sunlight to	The layout, location and	YES
habitable rooms, primary windows and private open space	orientation of the	
	development's buildings and the	
	design of the units were chosen	
	to optimize natural light and	
	cross ventilation where possible.	
	Refer to SEPP CONTROLS	
Design Criteria	PLANS.	
1. Living rooms and private open spaces of at least 70% of	N/A	
apartments in a building receive a minimum of 2 hours	7471	
direct sunlight between 9 am and 3 pm at mid-winter in the		
Sydney Metropolitan Area and in the Newcastle and		
Wollongong local government areas		
2. In all other areas, living rooms and private open spaces of	83% (15 of 18 units) of units	
at least 70% of apartments in a building receive a minimum	receive 3 or more hours of direct	
of 3 hours direct sunlight between 9 am and 3 pm at mid- winter	sunlight between 9am to 3pm at mid-winter. Skylights are	
winter	provided on roof for top level	
	units.	
2.4		
3. A maximum of 15% of apartments in a building receive no	Not Achieved. 16% (3 of 18	
direct sunlight between 9 am and 3 pm at mid-winter	units) don't receive direct	
	sunlight between 9am to 3pm	
	at mid-winter. The 3 units that	
	do not receive the above	
	mentioned sun light have	
	extended on grade terraces with deep soil zones.	
	400p 3011 201103.	
* Where courtyards are used :	*N/A	
use is restricted to kitchens, bathrooms and service areas half it is a service areas.		
 building services are concealed with appropriate detailing and materials to visible walls 		
	1	ı

 courtyards are fully open to the sky access is provided to the light well from a communal area for cleaning and maintenance acoustic privacy, fire safety and minimum privacy separation distances (see section 3F Visual privacy) are achieved *Opportunities for reflected light into apartments are optimised through: reflective exterior surfaces on buildings opposite south facing windows positioning windows to face other buildings or surfaces (on neighbouring sites or within the site) that will reflect light integrating light shelves into the design light coloured internal finishes 	*Achieved	
Objective 4A-3 Design incorporates shading and glare control, particularly for warmer months	Shading and glare control is provided through the use of deeper balconies, eaves, fixed vertical screening and sun hoods. Refer to ELEVATIONS and PERSPECTIVES	YES
Pesign Guidance *A number of the following design features are used: • balconies or sun shading that extend far enough to shade summer sun, but allow winter sun to penetrate living areas • shading devices such as eaves, awnings, balconies, pergolas, external louvres and planting • horizontal shading to north facing windows • vertical shading to east and particularly west facing windows • operable shading to allow adjustment and choice • high performance glass that minimises external glare off windows, with consideration given to reduced tint glass or glass with a reflectance level below 20% (reflective films are avoided)	*Achieved	
Objective 4B-1 All habitable rooms are naturally ventilated.	All habitable rooms are naturally ventilated. Refer to SEPP PLANS	YES
Pesign Guidance * The building's orientation maximises capture and use of prevailing breezes for natural ventilation in habitable rooms.	*Achieved	
* Depths of habitable rooms support natural ventilation	*Achieved. Depth rooms based on SEPP 65	
* The area of unobstructed window openings should be equal to at least 5% of the floor area served	*Achieved	
* Light wells are not the primary air source for habitable rooms.	*Achieve. All habitable rooms have wall windows to exterior	
* Doors and openable windows maximise natural ventilation opportunities by using the following design solutions: • adjustable windows with large effective openable areas • a variety of window types that provide safety and flexibility such as awnings and louvres • windows which the occupants can reconfigure to funnel breezes into the apartment such as vertical louvres, casement windows and externally opening doors	*Achieved	
Objective 4B-2 The layout and design of single aspect apartments	The layout and fenestration	YES

Design Guidance * Apartment depths are limited to maximise ventilation and airflow (see also figure 4D.3) * Natural ventilation to single aspect apartments is achieved with the following design solutions: • primary windows are augmented with plenums and light	within the single aspect units has been designed with inlets and outlets on opposite sides of the apartments to encourage cross ventilation. Refer to SEPP PLANS *Achieved *Achieved	
wells (generally not suitable for cross ventilation) • stack effect ventilation / solar chimneys or similar to naturally ventilate internal building areas or rooms such as bathrooms and laundries • courtyards or building indentations have a width to depth ratio of 2:1 or 3:1 to ensure effective air circulation and avoid trapped smells		
Objective 4B-3 The number of apartments with natural cross ventilation is maximised to create a comfortable indoor environment for residents	The layout, location and orientation of the development's buildings and the design of the units were chosen to optimize natural light and cross ventilation. Refer to SEPP PLANS	YES
Design Criteria 1. At least 60% of apartments are naturally cross ventilated in the first nine storeys of the building. Apartments at ten storeys or greater are deemed to be cross ventilated only if any enclosure of the balconies at these levels allows adequate natural ventilation and cannot be fully enclosed	*Achieved. 100% of units have natural cross ventilation	
2. Overall depth of a cross-over or cross-through apartment does not exceed 18m, measured glass line to glass line	*Achieved	
Design Guidance *The building should include dual aspect apartments, cross through apartments and corner apartments and limit apartment depths	*Achieved. Refer to Floor Plans L2 and L3.	
* In cross-through apartments external window and door opening sizes/areas on one side of an apartment (inlet side) are approximately equal to the external window and door opening sizes/areas on the other side of the apartment (outlet side) (see figure 4B.4)	*Not achieved. The sizes/areas are different.	
* Apartments are designed to minimise the number of corners, doors and rooms that might obstruct airflow	*Achieved	
* Apartment depths, combined with appropriate ceiling heights, maximise cross ventilation and airflow	*Achieved. Ceiling Heights are 2.7m. Refer Sections	
Objective 4C-1 Ceiling height achieves sufficient natural ventilation and daylight access.	2.7m ceiling height has been selected to all habitable rooms. Ceiling height has been selected to allow for ceiling lining with down lights and increased sound attenuation to the unit above. Refer to SECTIONS	YES

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

Design Criteria 1. Measured fro minimum ceilin	om finished floor level to finished ceiling level, g heights are:	*Achieved	
Minimum ceiling			
for apartment and in Habitable rooms	2.7m		
Non-habitable	2.4m		
For 2 storey	2.7m for main living area floor		
apartments	2.4m for second floor, where its area does not exceed 50% of the apartment area		
Attic spaces	1.8m at edge of room with a 30 degree minimum ceiling slope		
If located in mixed used areas	3.3m for ground and first floor to promote future flexibility of use		
These minimum	ns do not preclude higher ceilings if desired.		
Design Guidand *Ceiling height cooling and hed	can accommodate use of ceiling fans for	*Achieved	
	ncreases the sense of space in apartments r well-proportioned rooms	Ceiling height is 2700mm to habitable rooms, min 2400mm to non-habitable and bulkheads. Refer to SECTIONS	YES
 the hierarchy changes in ceilings, well-proportions smaller rooms for ceilings ceiling height. ensuring that be service rooms for 	the following design solutions can be used: of rooms in an apartment is defined using any heights and alternatives such as raked or or double height spaces and rooms are provided, for example, feel larger and more spacious with higher are maximised in habitable rooms by althheads do not intrude. The stacking of from floor to floor and coordination of on above non habitable areas, such as robes	*Achieved

Objective 4D-3 Apartment layouts are designed to accommodate a variety of household activities and needs. Achieved. Refer to UNIT TYPES PLAN; SEPP PLANS	Apartment layouts are	-	_	YES
Design Criteria 1. Master bedrooms have a minimum area of 10m2 and other bedrooms 9m2 (excluding wardrobe space) *Achieved	1. Master bedrooms h		*Achieved	
2. Bedrooms have a minimum dimension of 3m (excluding wardrobe space) *Achieved	2. Bedrooms have a m		*Achieved	
3. Living rooms or combined living/dining rooms have a minimum width of: • 3.6m for studio and 1-bedroom apartments	3. Living rooms or com minimum width of:		*Achieved	

Project: 1 Phillip Street, Goonellabah
Subject: Design Verification Statement

Subject: Design Verification Statement		
4m for 2- and 3-bedroom apartments 4. The width of cross-over or cross-through apartments are at least 4m internally to avoid deep narrow apartment layouts	*Achieved	
Design Guidance * Access to bedrooms, bathrooms and laundries is separated from living areas minimising direct openings between living and service areas	*Achieved	
* All bedrooms allow a minimum length of 1.5m for robes	*Achieved	
* The main bedroom of an apartment or a studio apartment should be provided with a wardrobe of a minimum 1.8m long, 0.6m deep and 2.1m high	*Achieved	
* Apartment layouts allow flexibility over time, design solutions may include: • dimensions that facilitate a variety of furniture arrangements and removal • spaces for a range of activities and privacy levels between different spaces within the apartment • dual master apartments • dual key apartments Note: dual key apartments which are separate but on the same title are regarded as two sole occupancy units for the purposes of the Building Code of Australia and for calculating the mix of apartments • room sizes and proportions or open plans (rectangular spaces (2:3) are more easily furnished than square spaces (1:1)) • efficient planning of circulation by stairs, corridors and through rooms to maximise the amount of usable floor space in rooms	*Achieved. Dual key apartments not provided.	
Objective 4E-1 Apartments provide appropriately sized private open space and balconies to enhance residential amenity	Achieved. Refer to UNIT TYPES PLAN;FLOOR PLANS GROUND (L1); L2;L3	YES
Design Criteria 1. All apartments are required to have primary balconies as follows	*Achieved	
Dwelling Minimum Minimum depth type area depth d		
to the balcony area is 1m	*N/A	
2. For apartments at ground level or on a podium or similar structure, a private open space is provided instead of a balcony. It must have a minimum area of 15m2 and a minimum depth of 3m.	*Achieved	
* Increased communal open space should be provided where the number or size of balconies are reduced.	*N/A	

*N/A

st Storage areas on balconies is additional to the minimum

balcony size.

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

	I	
* Balcony use may be limited in some proposals by: • consistently high wind speeds at 10 storeys and above • close proximity to road, rail or other noise sources • exposure to significant levels of aircraft noise • heritage and adaptive reuse of existing buildings In these situations, Juliet balconies, operable walls, enclosed wintergardens or bay windows may be appropriate, and other amenity benefits for occupants should also be provided in the apartments or in the development or both. Natural ventilation also needs to be demonstrated.		
Objective 4E-2 Primary private open space and balconies are appropriately located to enhance liveability for residents.	Achieved. Refer to UNIT TYPES PLAN;FLOOR PLANS GROUND (L1); L2;L3	YES
Design Guidance * Primary open space and balconies should be located adjacent to the living room, dining room or kitchen to extend the living space.	*Achieved	
* Private open spaces and balconies predominantly face north, east or west.	*Partially achieved (6 of 18 balconies face south)	
* Primary open space and balconies should be orientated with the longer side facing outwards or be open to the sky to optimise daylight access into adjacent rooms.	*Achieved	
Objective 4E-3 Private open space and balcony design is integrated into and contributes to the overall architectural form and detail of the building	Achieved. Refer to ELEVATIONS; PERSPECTIVES	YES
Pesign Guidance * Solid, partially solid or transparent fences and balustrades are selected to respond to the location. They are designed to allow views and passive surveillance of the street while maintaining visual privacy and allowing for a range of uses on the balcony. Solid and partially solid balustrades are preferred.	*Achieved	
* Full width full height glass balustrades alone are generally not desirable	*N/A	
* Projecting balconies should be integrated into the building design and the design of soffits considered	*Achieved	
* Operable screens, shutters, hoods and pergolas are used to control sunlight and wind.	*Provided	
* Balustrades are set back from the building or balcony edge where overlooking or safety is an issue.	*Achieved	
* Downpipes and balcony drainage are integrated with the overall facade and building design.	*Achieved	
* Air-conditioning units should be located on roofs, in basements, or fully integrated into the building design.	*Achieved.	
* Where clothes drying, storage or air conditioning units are located on balconies, they should be screened and integrated in the building design.	*Achieved	
* Ceilings of apartments below terraces should be insulated to avoid heat loss.	*Achieved	

* Water and gas outlets should be provided for primary balconies and private open space.	*Achieved	
Objective 4E-4		
Private open space and balcony design maximises safety.	Achieved. Refer to ELEVATIONS	YES
Design Guidance *Changes in ground levels or landscaping are minimised.	*Achieved	
*Design and detailing of balconies avoids opportunities for climbing and falls.	*Achieved	
Objective 4F-1		
Common circulation spaces achieve good amenity and properly service the number of apartments.	Not achieved but a high level of amenity for common lobbies, corridors and apartments was	YES
Design Criteria	demonstrated through sunlight and natural cross ventilation in	
1. The maximum number of apartments off a circulation core on a single level is eight	apartments, access to ample daylight and natural ventilation in common circulation spaces,	
2. For buildings of 10 storeys and over, the maximum number of apartments sharing a single lift is 40	common areas for seating and gathering, generous corridors with greater than minimum ceiling heights. Refer SEPP CONTROLS [CIRCULATION CORE]	
Design Guidance * Greater than minimum requirements for corridor widths and/or ceiling heights allow comfortable movement and access particularly in entry lobbies, outside lifts and at apartment entry door	*N/A	
* Daylight and natural ventilation should be provided to all common circulation spaces that are above ground	*N/A	
* Windows should be provided in common circulation spaces and should be adjacent to the stair or lift core or at the ends of corridors	*N/A	
* Longer corridors greater than 12m in length from the lift core should be articulated. Design solutions may include: • a series of foyer areas with windows and spaces for seating	*N/A	
wider areas at apartment entry doors and varied ceiling heights		
* Design common circulation spaces to maximise opportunities for dual aspect apartments, including multiple core apartment.	*N/A	
* Achieving the design criteria for the number of apartments off a circulation core may not be possible. Where a development is unable to achieve the design criteria, a high level of amenity for common lobbies, corridors and apartments should be demonstrated, including: • sunlight and natural cross ventilation in apartments • access to ample daylight and natural ventilation in common circulation spaces • common areas for seating and gathering • generous corridors with greater than minimum ceiling heights	*Achieved	
other innovative design solutions that provide high levels of amenity		

		ı
* Where design criteria 1 is not achieved, no more than 12 apartments should be provided off a circulation core on a single level.	*Achieved	
* Primary living room or bedroom windows should not open directly onto common circulation spaces, whether open or enclosed. Visual and acoustic privacy from common circulation spaces to any other rooms should be carefully controlled.	*N/A	
Objective 4F-2		
Common circulation spaces promote safety and provide for social interaction between residents Decign Guidance	The lift lobbies and circulation corridors were designed for resident safety and interaction. They are open and all look into the COS on Level 2.The balustrades on L3 are code compliant in height and do not pose any risk such as toe hold. Refer FLOOR PLANS L2; L3	YES
Pesign Guidance * Direct and legible access should be provided between vertical circulation points and apartment entries by minimising corridor or gallery length to give short, straight, clear sight lines	*Achieved	
* Tight corners and spaces are avoided	*Achieved	
* Circulation spaces should be well lit at night	*Achieved	
* Legible signage should be provided for apartment numbers, common areas and general way finding	*Achieved	
* Incidental spaces, for example space for seating in a corridor, at a stair landing, or near a window are provided	*Achieved	
* In larger developments, community rooms for activities such as owners corporation meetings or resident use should be provided and are ideally co-located with communal open space	*N/A	
* Where external galleries are provided, they are more open than closed above the balustrade along their length	*Achieved	
Objective 4G-1 Adequate, well designed storage is provided in each apartment.	Achieved. Refer to SEPP PLANS	YES
Design Criteria 1. In addition to storage in kitchens, bathrooms and bedrooms, the following storage is provided	*Achieved. Refer to SEPP Plans for all levels.	
Dwelling type Storage size volume		
Studio apartments 4m³		
1 bedroom apartments 6m³		
2 bedroom apartments 8m³		
3+ bedroom apartments 10m ^a		
At least 50% of the required storage is to be located within the apartment.	*Achieved	
Design Guidance * Storage is accessible from either circulation or living areas.	***	
2.1	*Achieved	

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

* Storage provided on balconies (in addition to the minimum balcony size) is integrated into the balcony design, weatherproof and screened from view from the street.	*N/A	
* Left over space such as under stairs is used for storage.	*N/A	
Objective 4G-2 Additional storage is conveniently located, accessible and nominated for individual apartments.	Additional storage is provided for each apartment individually and easily accessible through the carpark. Storage lockers are secure and allocated.	N/A
Design Guidance * Storage not located in apartments is secure and clearly allocated to specific apartments.	*Achieved	
* Storage is provided for larger and less frequently accessed items.	*Achieved	
* Storage space in internal or basement car parks is provided at the rear or side of car spaces or in cages so that allocated car parking remains accessible.	*Achieved	
* If communal storage rooms are provided, they should be accessible from common circulation areas of the building	*N/A	
* Storage not located in an apartment is integrated into the overall building design and is not visible from the public domain.	*Achieved	
Objective 4H 1		
Objective 4H-1 Noise transfer is minimised through the siting of buildings and building layout	Building is designed to follow the site slope, burying some of the carpark. Acoustically compliant walls and windows will be provided to units where necessary. Refer to FLOOR PLANS; ELEVATIONS; SECTIONS	YES
Design Guidance * Adequate building separation is provided within the development and from neighbouring buildings/adjacent uses (see also section 2F Building separation and section 3F Visual privacy)	*Refer to response in item 3F	
* Window and door openings are generally orientated away from noise sources	*Achieved	
* Noisy areas within buildings including building entries and corridors should be located next to or above each other and quieter areas next to or above quieter areas	*Achieved through building design	
* Storage, circulation areas and non-habitable rooms should be located to buffer noise from external sources	*Achieved through unit design	
* The number of party walls (walls shared with other apartments) are limited and are appropriately insulated.	*Achieved	
* Noise sources such as garage doors, driveways, service areas, plant rooms, building services, mechanical equipment, active communal open spaces and circulation areas should be located at least 3m away from bedrooms	*Achieved.	
Objective 4H-2		

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

Noise impacts are mitigated within apartments through Achieved. Storage/robes have YES layout and acoustic treatments. been utilised as a buffer to ensure noise impacts are kept to a minimum between apartments. BCA requirement for sound ratings between units, service spaces and communal spaces will be achieved. Refer to FLOOR PLANS L2; L3 Design Guidance *Achieved through unit design * Internal apartment layout separates noisy spaces from quiet spaces, using a number of the following design solutions: • rooms with similar noise requirements are grouped together • doors separate different use zones • wardrobes in bedrooms are co-located to act as sound *Achieved * Where physical separation cannot be achieved noise conflicts are resolved using the following design solutions: • double or acoustic glazing acoustic seals • use of materials with low noise penetration properties • continuous walls to ground level courtyards where they do not conflict with streetscape or other amenity requirements Objective 4J-1 In noisy or hostile environments, the impacts of external N/A N/A noise and pollution are minimised through the careful siting and layout of buildings. Design Guidance * To minimise impacts the following design solutions may be used: • physical separation between buildings and the noise or pollution source • residential uses are located perpendicular to the noise source and where possible buffered by other uses • non-residential buildings are sited to be parallel with the noise source to provide a continuous building that shields residential uses and communal open spaces • non-residential uses are located at lower levels vertically separating the residential component from the noise or pollution source. Setbacks to the underside of residential floor levels should increase relative to traffic volumes and other noise sources. • buildings should respond to both solar access and noise. Where solar access is away from the noise source, nonhabitable rooms can provide a buffer • where solar access is in the same direction as the noise source, dual aspect apartments with shallow building depths are preferable (see figure 4J.4) • landscape design reduces the perception of noise and acts as a filter for air pollution generated by traffic and industry * Achieving the design criteria in this Apartment Design Guide may not be possible in some situations due to noise and pollution. Where developments are unable to achieve the design criteria, alternatives may be considered in the following areas: • solar and daylight access private open space and balconies • natural cross ventilation

Objective 41.2		
Objective 4J-2 Appropriate noise shielding or attenuation techniques for the building design, construction and choice of materials are used to mitigate noise transmission. Design Guidance * Design solutions to mitigate noise include: • limiting the number and size of openings facing noise sources • providing seals to prevent noise transfer through gaps • using double or acoustic glazing, acoustic louvers or enclosed balconies (wintergardens) • using materials with mass and/or sound insulation or absorption properties e.g. solid balcony balustrades, external screens and soffits	Achieved through material choice and selection. Development footprint avoids the direct relationship with the loudest sources and turns to the opposite direction. Refer to FLOOR PLAN L2; L3; MATERIALITY *Achieved	YES
Objective 4K-1		
A range of apartment types and sizes is provided to cater for different household types now and into the future. Design Guidance * A variety of apartment types is provided.	A mix of apartment types has been designed to accommodate varied demographics within the area and to supply a demand for social housing: 6 1bed, and 12 2bed. Refer to DEVELOPMENT SUMMARY *Achieved	YES
* Th	*A alata and	
* The apartment mix is appropriate, taking into consideration: • the distance to public transport, employment and education centres • the current market demands and projected future demographic trends • the demand for social and affordable housing • different cultural and socioeconomic groups * Flexible apartment configurations are provided to support diverse household types and stages of life including single person households, families, multi-generational families and group households.	*Achieved *Achieved	

Project: 1 Phillip Street, Goonellabah Subject: Design Verification Statement

Objective 4K-2 The apartment mix is distributed to suitable locations within the building. Design Guidance * Different apartment types are located to achieve successful facade composition and to optimise solar access (see figure 4K.3)	Achieved. 3 1bed and 6 2 bed per floor. Refer to DEVELOPMENT SUMMARY; FLOOR PLAN L2; L3 *Achieved	YES
* Larger apartment types are located on the ground or roof level where there is potential for more open space and on corners where more building frontage is available.	*Partially achieved. 2bed units at corners	
Objective 4L-1 Street frontage activity is maximised where ground floor apartments are located.	Fencing for on grade L2 apartments has a mix of materials and textures to enhance the façade interest whilst facilitating both passive surveillance and safety.	PARTIAL
Pesign Guidance * Direct street access should be provided to ground floor apartments.	*Not achieved by design. Refer to floor plans	
* Activity is achieved through front gardens, terraces and the façade of the building. Design solutions may include: • both street, foyer and other common internal circulation entrances to ground floor apartments. • private open space is next to the street • doors and windows face the street * Retail or home office spaces should be located along street frontages.	*Achieved	
* Ground floor apartment layouts support small office home office (SOHO) use to provide future opportunities for conversion into commercial or retail areas. In these cases, provide higher floor to ceiling heights and ground floor amenities for easy conversion	*Not achieved by design. Refer floor plans	
Objective 4L-2 Design of ground floor apartments delivers amenity and safety for residents.	Apartments have safe and varied fences which delivers safety and amenity plus passive surveillance.	YES
Privacy and safety should be provided without obstructing casual surveillance. Design solutions may include: • elevation of private gardens and terraces above the street level by 1-1.5m (see figure 4L.4) • landscaping and private courtyards • windowsill heights that minimise sight lines into apartments • integrating balustrades, safety bars or screens with the exterior design	*Achieved	
* Solar access should be maximised through: • high ceilings and tall windows • trees and shrubs that allow solar access in winter and shade in summer	*Not Achieved. Refer SEPP Plans L2	
Objective 4M-1 Building facades provide visual interest along the street while respecting the character of the local area.	The building façade has been designed to create visual	YES

Desiry Cridenes	interest along Phillip Street and McDermott Ave through variation and articulation of built form, as well as the transition between various materials and textures. Refer to MATERIALITY; PERSPECTIVES; ELEVATIONS	
 Design Guidance * Design solutions for front building facades may include: • a composition of varied building elements • a defined base, middle and top of buildings • revealing and concealing certain elements • changes in texture, material, detail and colour to modify the prominence of elements 	*Achieved	
* Building services should be integrated within the overall facade.	*Achieved	
* Building facades should be well resolved with an appropriate scale and proportion to the streetscape and human scale. Design solutions may include: • well composed horizontal and vertical elements • variation in floor heights to enhance the human scale • elements that are proportional and arranged in patterns • public artwork or treatments to exterior blank walls • grouping of floors or elements such as balconies and windows on taller buildings	*Achieved	
* Building facades relate to key datum lines of adjacent buildings through upper-level setbacks, parapets, cornices, awnings or colonnade heights.	*Achieved	
* Shadow is created on the facade throughout the day with building articulation, balconies and deeper window reveals.	*Achieved	
Objective 4M-2 Building functions are expressed by the facade.	Achieved. Materials answer and are exposed based on building functions. Refer to PERSPECTIVES ; ELEVATIONS	YES
Design Guidance * Building entries should be clearly defined.	*Achieved through entry statement	
* Important corners are given visual prominence through a change in articulation, materials or colour, roof expression or changes in height	*Achieved	
* The apartment layout should be expressed externally through facade features such as party walls and floor slabs	*Achieved	
Objective 4N-1 Roof treatments are integrated into the building design and positively respond to the street	The design consists of eaved roofs mixed with extruded elements to enhance the articulation of the façade. Refer to ROOF PLAN; PERSPECTIVES; ELEVATIONS	YES
 Design Guidance * Roof design relates to the street. Design solutions may include: • special roof features and strong corners • use of skillion or very low pitch hipped roofs • breaking down the massing of the roof by using smaller elements to avoid bulk 	*Achieved	

using materials or a pitched form complementary to adjacent buildings		
* Roof treatments should be integrated with the building design. Design solutions may include: • roof design proportionates to the overall building size, scale and form • roof materials compliment the building • service elements are integrated	*Achieved	
Objective 4N-2		
Opportunities to use roof space for residential accommodation and open space are maximised	Roof is not accessible. However skylights where located on the top units which face south for sun access.	N/A
Pesign Guidance * Habitable roof space should be provided with good levels of amenity. Design solutions may include: • penthouse apartments • dormer or clerestory windows • openable skylights	*Achieved	
* Open space is provided on roof tops subject to acceptable visual and acoustic privacy, comfort levels, safety and security considerations.	*N/A	
Objective 4N-3 Roof design incorporates sustainability features	Water collection for water reuse, voids and skylights provided. Refer to ROOF PLAN	YES
Pesign Guidance * Roof design maximises solar access to apartments during winter and provides shade during summer. Design solutions may include:	*Achieved	
the roof lifts to the north eaves and overhangs shade walls and windows from summer sun		
* Skylights and ventilation systems should be integrated into the roof design.	*Achieved. Skylights provided for top 3 units facing south	
Objective 40-1 Landscape design is viable and sustainable.	By Others	By Others
Pesign Guidance *Landscape design should be environmentally sustainable and can enhance environmental performance by incorporating: • diverse and appropriate planting • bio-filtration gardens • appropriately planted shading trees • areas for residents to plant vegetables and herbs • composting • green roofs or walls * Ongoing maintenance plans should be prepared		
* Microclimate is enhanced by: • appropriately scaled trees near the eastern and western elevations for shade		
 a balance of evergreen and deciduous trees to provide shading in summer and sunlight access in winter shade structures such as pergolas for balconies and courtyards 		

* Tree and shrub selection considers size at maturity and the		
potential for roots to compete (see Table 4)		
Objective 40-2		
Landscape design contributes to the streetscape and	By Others	By Others
amenity	by others	by others
Design Guidance		
* Landscape design responds to the existing site conditions		
including:		
changes of levels views		
 views significant landscape features including trees and rock outcrops 		
* Cignificant lands again footures should be pretected by		
* Significant landscape features should be protected by: • tree protection zones (see figure 40.5)		
appropriate signage and fencing during construction		
* Plants selected should be endemic to the region and reflect the local ecology.		
Objective 4P-1		
Appropriate soil profiles are provided.	By Others	By Others
Design Guidance		
* Structures are reinforced for additional saturated soil weight.		
* Soil volume is appropriate for plant growth, considerations		
include:		
modifying depths and widths according to the planting mix and invinction fractions.		
and irrigation frequency		
free draining and long soil life spantree anchorage		
* Minimum soil standards for plant sizes should be provided in accordance with Table 5		
Objective 4P-2		
Plant growth is optimised with appropriate selection and maintenance	By Others	By Others
Design Guidance		
* Plants are suited to site conditions, considerations include:		
drought and wind tolerance		
seasonal changes in solar access seasonal changes in solar access		
 modified substrate depths for a diverse range of plants plant longevity 		
* A landscape maintenance plan is prepared		
* Irrigation and drainage systems respond to:		
changing site conditions sail profile and the planting regime		
 soil profile and the planting regime whether rainwater, stormwater or recycled grey water is 		
used		
Objective 4P-3		
Planting on structures contributes to the quality and	N/A	N/A
amenity of communal and public open spaces		
Design Guidance		
* Building design incorporates opportunities for planting on		
structures. Design solutions may include:		
• green walls with specialised lighting for indoor green walls		
wall design that incorporates planting		

green roofs, particularly where roofs are visible from the public domain planter boxes Note: ctructures designed to assemble arean walks.		
Note: structures designed to accommodate green walls should be integrated into the building facade and consider the ability of the facade to change over time		
Objective 4Q-1 Universal design features are included in apartment design to promote flexible housing for all community members	N/A	N/A
Design Guidance * Developments achieve a benchmark of 20% of the total apartments incorporating the Liveable Housing Guideline's silver level universal design features.		
Objective 4Q-2 A variety of apartments with adaptable designs are provided	N/A	N/A
Design Guidance * Adaptable housing should be provided in accordance with the relevant council policy		
* Design solutions for adaptable apartments include: • convenient access to communal and public areas • high level of solar access • minimal structural change and residential amenity loss		
 when adapted larger car parking spaces for accessibility parking titled separately from apartments or shared car parking arrangements 		
Objective 4Q-3 Apartment layouts are flexible and accommodate a range of lifestyle needs	Achieved. Bedrooms have standard sizes/shapes to be used for other activities if needed/wanted. Open Plan Living/Dining also offers flexibility Refer to UNIT TYPES PLAN	YES
Pesign Guidance * Apartment design incorporates flexible design solutions which may include: • rooms with multiple functions	*Achieved. Dual apartments not provided.	
 dual master bedroom apartments with separate bathrooms larger apartments with various living space options open plan 'loft' style apartments with only a fixed kitchen, laundry and bathroom 		
Objective 4R-1 New additions to existing buildings are contemporary and complementary and enhance an area's identity and sense of place	N/A	N/A
Design Guidance * Design solutions may include: • new elements to align with the existing building • additions that complement the existing character, siting, scale, proportion, pattern, form and detailing • use of contemporary and complementary materials, finishes, textures and colours		
* Additions to heritage items should be clearly identifiable from the original building.		

	,	
* New additions allow for the interpretation and future evolution of the building.		
Objective 4R-2 Adapted buildings provide residential amenity while not precluding future adaptive reuse.	N/A	N/A
Pesign Guidance * Design features should be incorporated sensitively into adapted buildings to make up for any physical limitations, to ensure residential amenity is achieved. Design solutions may include: • generously sized voids in deeper buildings • alternative apartment types when orientation is poor • using additions to expand the existing building envelope * Some proposals that adapt existing buildings may not be able to achieve all of the design criteria in this Apartment Design Guide. Where developments are unable to achieve the design criteria, alternatives could be considered in the following areas: • where there are existing higher ceilings, depths of habitable rooms could increase subject to demonstrating access to natural ventilation, cross ventilation (when		
applicable) and solar and daylight access (see also sections 4A Solar and daylight access and 4B Natural ventilation) • alternatives to providing deep soil where less than the minimum requirement is currently available on the site • building and visual separation – subject to demonstrating alternative design approaches to achieving privacy • common circulation • car parking • alternative approaches to private open space and balconies		
Objective 4S-1 Mixed use developments are provided in appropriate locations and provide active street frontages that encourage pedestrian movement.	N/A	N/A
Design Guidance * Mixed use development should be concentrated around public transport and centres.		
* Mixed use developments positively contribute to the public domain. Design solutions may include: • development addresses the street • active frontages are provided • diverse activities and uses • avoiding blank walls at the ground level • live/work apartments on the ground floor level, rather than commercial		
Objective 4S-2 Residential levels of the building are integrated within the development, and safety and amenity is maximised for residents.	N/A	N/A
Design Guidance * Residential circulation areas should be clearly defined. Design solutions may include: • residential entries are separated from commercial entries and directly accessible from the street		
 commercial service areas are separated from residential 		

components • residential car parking and communal facilities are separated or secured • security at entries and safe pedestrian routes are provided • concealment opportunities are quoided	
concealment opportunities are avoided	
* Landscaped communal open space should be provided at podium or roof levels.	
Objective 4T-1	
Awnings are well located and complement and integrate with the building design N/A	N/A
*Awnings should be located along streets with high pedestrian activity and active frontages	
* A number of the following design solutions are used: • continuous awnings are maintained and provided in areas with an existing pattern	
 height, depth, material and form complements the existing street character protection from the sun and rain is provided 	
awnings are wrapped around the secondary frontages of	
corner sites	
awnings are retractable in areas without an established pattern	
* Awnings should be located over building entries for building address and public domain amenity.	
* Awnings relate to residential windows, balconies, street tree planting, power poles and street infrastructure.	
* Gutters and down pipes should be integrated and concealed.	
* Lighting under awnings should be provided for pedestrian safety.	
Objective 4T-2	
Signage responds to the context and desired streetscape character. Achieved. Building sig be integrated to suit t development.	
Design Guidance	
* Signage should be integrated into the building design and respond to the scale, proportion and detailing of the development.	
* Legible and discrete way finding should be provided for larger developments.	
* Signage is limited to being on and below awnings and a single facade sign on the primary street frontage	
Objective 4U-1 Development incorporates passive environmental design Achieved. Refer to SE.	PP PLANS YES
Design Guidance * Adequate natural light is provided to habitable rooms (see 4A Solar and daylight access) *Achieved	
* Well located, screened outdoor areas should be provided for clothes drying. *Not achieved	

Design Guidance * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * Provision of consolidated heating and cooling infrastructure should be incorporated. * A number of the following design solutions ore used: * Provision of consolidated heating and cooling infrastructure should be located in a centralised location (e.g. the basement) * Provision of the following design solutions ore used: * Provision of consolidated heating and cooling infrastructure should be located in a centralised location (e.g. the basement) * Provision of the following design solutions ore used: * Provision of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions or used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A number of the following design solutions ore used: * A partments should be individually metered * Water efficient fittings, appliances and wastewater reuse should be incorporated. * A partments should be collected, stored and reused on site * Procupit tolerant, low water use plants should be used within landscaped areas. * Design Guidance * Water sensitive urban design systems are designed by a sultably qualified professional * A number of the following design solutions are used: * urunoff is collected from roofs and balconies in water used on site uter to the stormwater and infilatation, including bio-retention systems such as a ring arrivers or street t			
Design Guidance * A number of the following design solutions are used: * the use of smart glass or other technologies on north and west elevations * thermal mass in the floors and walls of north facing rooms * hermal mass in the floors and walls of north facing rooms * lookinded concrete floors, tiles or timber rather than carpet * insulated roofs, walls and floors and seals on window and door openings * overhongs and shading devices such as awnings, blinds and screens * Provision of consolidated heating and cooling infrastructure should be located in a centralised location (e.g. the basement) * Provision of consolidated heating and cooling infrastructures should be located in a centralised location (e.g. the basement) * Provision of consolidated heating and cooling infrastructures should be located in a centralised location (e.g. the basement) * Provision of consolidated heating and cooling infrastructures should be located in a centralised location (e.g. the basement) * Provision of consolidated heating and cooling infrastructures should be located in a centralised location (e.g. the basement) * Achieved .AI hobitable rooms have natural ventilation and all units have natural cross ventilation for adminishes we natural ventilation and all units have natural cross ventilation and all units have natural ventilation and all units have natural ventilation * Achieved * Achie	Development incorporates passive solar design to optimise	and materiality chosen. Refer to	YES
* thermal mass in the floors and walls of north facing rooms is maximised * polished concrete floors, tiles or timber rather than carpet * insulated roofs, walls and floors and seeds on window and door openings * overhangs and shading devices such as awnings, blinds and screens * Provision of cansolidated heating and cooling infrastructure should be located in a centralised location (e.g. the basement) Objective 4U-3 Adequate natural ventiliation minimises the need for mechanical ventilation. Design Guidance * A number of the following design solutions are used: * notural cross ventilation for apartments is optimised * natural ventiliation is provided to all habitable rooms and as many non-habitable rooms, common areas and circulation spaces as possible. Discitive 4V-1 Potable water use is minimised TBC. Rainwater collected and stored in the specified buried rainwater transs at ground level will be proposed. *Achieved *	* A number of the following design solutions are used: • the use of smart glass or other technologies on north and	,	
insulated rods, walls and floors and seals on window and door openings overhangs and shading devices such as awnings, blinds and screens Provision of consolidated heating and cooling infrastructure should be located in a centralised location (e.g. the basement) Objective 4U-3	• thermal mass in the floors and walls of north facing rooms is maximised		
**Not achieved. AC units fenced in footstructure should be located in a centralised location (e.g. the basement) **Dipective 4U-3 Adequate natural ventilation minimises the need for mechanical ventilation. **Anumber of the following design solutions are used: **natural ventilation from a partments is optimised **natural ventilation sprovided to all habitable rooms and as many non-habitable rooms, common areas and circulation spaces as possible. **Dipective 4V-1 **Potable water use is minimised **Apartments should be individually metered **Apartments should be individually metered **Rainwater should be collected, stored and reused on site **Dought tolerant, low water use plants should be used within landscaped areas. **Dipective 4V-2 **Dought tolerant, low water use plants should be used within landscaped areas. **Dipective 4V-2 **Dought tolerant, low water use plants should be used within landscaped areas. **Dipective 4V-2 **Design Guidance **Rainwater should be collected, stored and reused on site or receiving waters **Design Guidance **TBC by others **TBC by others **TBC by others **By Others **By Others **Design Guidance **Water sensitive urban design systems are designed by a suitably qualified professional **A number of the following design solutions are used: **runoff is collected from roofs and balconies in water tanks and plumbed into toilets, loundry and irrigation **porous and open paving materiols is maximised **on site stormwater and infiltration, including bio-retention	• insulated roofs, walls and floors and seals on window and door openings		
infrastructure should be located in a centralised location (e.g. the basement) Objective 4U-3 Adequate natural ventilation minimises the need for mechanical ventilation. PESIGN Guidance An number of the following design solutions are used: norms with similar usage are grouped together natural ventilation is provided to all habitable rooms and as many non-habitable rooms, common areas and circulation spaces as possible. Objective 4V-1 Potable water use is minimised PEC.
