### Snowmaking Infrastructure Upgrades – Upper Supertrail to Lower Sundance

The Development will include the installation of new mains and laterals to existing infrastructure. Photo taken at bottom of Sundance.

New fan guns will be installed along the alignment, taking advantage of pre-disturbed areas where possible. Photo taken at bottom of Sundance where new fan proposed on edge of vegetation.

Photo taken towards bottom of Sundance. Snowmaking mains located within highly disturbed ski slope.

Regrowth shrubs will be impacted by lateral replacement to existing infrastructure in some locations.

Looking down the Rossignol Race Course. The snowmaking mains and laterals are located within a heavily disturbed ski slope.

Native shrubs will be removed in areas to allow for pit installation. Photo taken on Rossignol Race Course.

New fan proposed at top of tree island on Rossignol Race Course within the ski slope.

Facing uphill on Upper Supertrail. The snowmaking mains and laterals are within the heavily disturbed ski slope. Temporary trail diversion will be in place during construction to minimise conflict with the MTB trail.

Fan gun to replace existing lance to enhance snowcover on Supertrail.
