

SHADOW STUDY SUMMARY

Only 13 & 15 Spark Street have habitable windows that face Louisa Street. As demonstrated by Sun Eye View studies, the proposed shadows do not impact the amount of solar access received to these habitable rooms. There is some additional overshadowing to the rear yards of the Southern dwellings, however solar access is still maintained to these areas from 8am-4pm.

SHADOW STUDY

As demonstrated by the shadowing study below, the proposed development does not cause any impact on the habitable rooms of 13 & 15 Spark Street. At 9am, the proposed development's shadow hits the wall of 13 Spark Street but not the habitable window itself. Solar access is not reduced.
