

ARCHEOLOGICAL TOP SOIL NOTES

- Prior to bulk earthworks archaeological topsoil (ATS) is to be stripped off the ridgeline across the nominated area shown down to RL 10.0 m AHD and placed in the future creek reserve.
- Prior to stripping, install sediment fencing, diversion drainage and sediment basin. Refer to dwg DA04.
- Undertake the stripping under supervision. Adjust depth and extent as required.
- The area shown at an average of 125mm deep will yield 900 cu.m.
- Place the ATS in the area and shape shown with compaction by track rolling only. The final footprint is to be contained with lot 21 outside the road reserve. Its finished surface is to suit and extension of the batter up to the design road verge. The shape shown achieves 1,000 cu.m and can be expanded as may be required upon final ATS stripping.
- The final footprint is to be surveyed for mapping.
- Upon completion, continue bulk earthworks, filling against the up-slope batter of the ATS, ensuring no further disturbance.
- The final completed batter is then to be revegetated in accordance with the VMP.
