Document Status

Version: v1	Author: Stuart Lord Senior Environmental Scientist	Commissioned by: Tindale Property Pty Ltd c/- Focus Town Planning
Date: 26 April 2023		Ref: ENV1015.0.1 Muswellbrook_PSI

1 Executive Summary

Envirotech Services Australia Pty Ltd (Envirotech) was engaged to prepare a Preliminary Site Investigation (PSI) for a property located at 212-216 Queen Street, Muswellbrook, NSW (the site). The site is proposed for redevelopment into stages 6 and 7 of the Northview Estate residential subdivision (Proposed Development) and that the PSI was required to assess whether contamination is likely to exist on the site through current and/or historical activities and whether additional investigation is required.

Scope of work comprised of site inspection, site history review, sample collection and laboratory analysis. The site history review identified the site to historically be used for rural purposes with the only infrastructure at the site comprising of a residential dwelling (now removed) and a cattle yard. Historical aerial imagery and site inspection identified two large stockpiles of imported fill located in the north western portion of the site. It is possible that the source site of the imported fill is from previous stages of the residential development to the south.

Field investigations comprised the collection of 10 soil samples from seven test pits advanced in targeted locations in the identified areas of concern (AOC). Subsurface conditions generally comprised of CLAY fill overlying natural sandy CLAYs. Minor amounts of anthropogenic material, comprising of concrete and house bricks, were encountered in TP06 and TP07 respectively. Results of analytical testing reported concentrations below the adopted environmental assessment criteria in all samples tested.

Based on the findings of the assessment, no human health and/or ecological source-pathway-receptor linkages exist for the identified potentially contaminating activities. Therefore, it is considered that the site is suitable for the Proposed Development.

2 Introduction

Envirotech Services Australia Pty Ltd (Envirotech) was engaged by Tindal Property Pty Ltd (Tindale) c/- Focus Town Planning (Focus) to prepare a Preliminary Site Investigation (PSI) for a property located at 212-216 Queen Street, Muswellbrook, NSW (the site) (**Figure 1 – Appendix A**).

It is understood that the site is proposed for redevelopment into stages 6 and 7 of the Northview Estate residential subdivision (Proposed Development) and that the PSI is required for the development application (DA) process.

2.1 Objective

The objective of this PSI is to assess whether contamination is likely to exist on the site through current and/or historical activities and whether additional investigation is required.

2.2 Scope of Work

The scope of work undertaken to achieve the objective is as follows:

- Undertake a site history review.
- Undertake a site inspection to observe onsite and offsite conditions.
- Prepare a preliminary conceptual site model (CSM).
- Undertake fieldwork investigations, including the collection of soil samples, in targeted locations based on the findings of the CSM.
- Submission of selected soil samples for laboratory analysis for the identified chemicals of potential concern (CoPC).
- Assessment of laboratory analytical results against adopted land use criteria outlined in The National Environment Protection (Assessment of Site Contamination) Measure 1999 (the ASC NEPM) schedule B1.
- Revision of CSM (if required) to determine if any source-pathway-receptor linkages exist.
- Preparation of a PSI report in accordance with NSW EPA Consultants reporting on contaminated land (2020).

3 Site History

A review of available site history information was undertaken and is provided in the following sections.

3.1 Historical Title Dead Information

Historical title dead information for the site was reviewed with the following identified:

- Commencement of the title occurred in 1913 and was held by Mr. John White, a station manager.
- Mitchells Cement Products Pty Limited purchased the property in 1979.
- The title was transferred three more times until the current proprietor, Northview Reit Pty Ltd in 2021.

A copy of the historical title dead search is provided in **Appendix B**.

3.2 Historical Aerial Photographs

A summary of the review of historical aerial photographs from 1953 to 2022 is presented in **Table 1**.

Table 1 – Historical Aerial Photographs

Year	Summary
1953	<ul style="list-style-type: none">➤ The site is largely vacant with the exception of a dwelling in the north west corner of the property.➤ Surrounding land use comprises of farmland.
1958	<ul style="list-style-type: none">➤ No significant change has occurred at the site.➤ Several building/dwellings have been constructed to the west of the site.
1967	<ul style="list-style-type: none">➤ Two small structures have been constructed to the south of the dwelling in the north west corner of the property. No other significant changes have occurred.➤ Further developed to the west has occurred, including on adjacent land to the west (industrial).➤ Development to the south east has occurred with a large water tank installed and possible earthworks undertaken.
1974	<ul style="list-style-type: none">➤ No significant change has occurred at the site.➤ Further development to the industrial property on adjacent land to the west has occurred.
1980	<ul style="list-style-type: none">➤ No significant change has occurred at the site or surrounding area.
1989	<ul style="list-style-type: none">➤ No significant change has occurred at the site or surrounding area.
1998	<ul style="list-style-type: none">➤ A cattle yard has been constructed in the north western portion of the site.➤ No significant change has occurred to the surrounding area.
2008	<ul style="list-style-type: none">➤ Dwelling in the top north west corner of the site has been removed.➤ A large stockpile is now located in the north west portion of the site. The possible source site of the material is from the residential development to the south.➤ Industrial property on adjacent land to the west has ceased operation with majority of infrastructure removed.

Year	Summary
	➤ Residential development has been constructed to the south.
2013	➤ A second stockpile is now located to the north of the first stockpile in the north western portion of the site. ➤ Further development to the residential subdivision has occurred to the south.
2017	➤ No significant change has occurred at the site or surrounding area.
2022	➤ No significant change has occurred at the site or surrounding area.

It is considered that the construction/demolition of the residential dwelling and the importation of fill is the primary contaminating activity undertaken at the site. A copy of the historical aerial photographs is provided in **Appendix C**.

3.3 Historical Business Directories

A search of the historical business directories identified the following dry cleaners, motor garages and service stations historically located within 1km of the site.

Table 2 – Former Dry Cleaners, Motor Garages and Services Stations

Business Activity	Premise	Year	Distance and Direction from site
Motor garages and engineers	Farrell's Service Station, Aberdeen Rd., Muswellbrook	1961	57 m west
Motor garages and engineers	Solo Service Station, New England Highway, Muswellbrook 2333	1991	
Motor garages and/or engineers and/or services station	Golden Fleece Service Station & Restaurant, New England Highway, Muswellbrook 2333	1961 1970 1982	199m north west

3.4 Former Gas Works

There are no NSW EPA records of former gas work sites on site or within 1 km of the site.

3.5 Delicensed Activities Still Regulated by the NSW EPA

There are no records of delicensed activities still regulated by the NSW EPA onsite or within 1km of the site.

3.6 Former Licensed NSW EPA Activities under the POEO Act

Former Licensed activities under the Protection of the Environment Operations Act 1997, now revoked or surrendered are listed in **Table 3**.

Table 3 – Former Licensed Activities under the POEO Act

EPL No	Organisation	Activity	Distance and Direction from site
4653	Luhrmann Environment Management Pty Ltd		
4838	Robert Orchard	Application of Herbicides	onsite
6630	Sydney Weed and Pest		

EPL No	Organisation	Activity	Distance and Direction from site
	Management Pty Ltd		
11677	Upper Hunter County Council	Miscellaneous licensed discharge to waters (at any time)	
12828	Hermes Resources Pty Ltd	Land-based extractive activity	694m north east

4 Site Condition and Surrounding Environment

4.1 Site Identification

Site identification details are provided in **Table 4**.

Table 4 – Site Details

Lot / DP	Part lot 58/1276946
Address	212-216 Queen Street, Muswellbrook, NSW
Approximate Area (m ²)	26 hectares
Local Government Authority	Newcastle City Council
Land Zoning	R1 – General Residential R5 – Large Lot Residential
Local Environmental Plan	Muswellbrook LEP 2009
Latitude, Longitude	-32.245640, 150.906600
Current Owner	Northview Reit Pty Ltd

4.2 Site Condition

A Senior Environmental Scientist from Envirotech attended the site on the 10th March 2023 to undertake a site inspection to observe onsite and offsite conditions. The site comprises of a large irregular shaped parcel of land located to the north of the previous stages of the Northview Estate residential subdivision. The site is currently vacant and appeared to be utilized for potential grazing purposes with the site separated into a number of paddocks. The only infrastructure observed was an old cattle yard is located in the northern portion of the site. A large stockpile was located in the north western corner of the site and some piles of felled trees were located in the southern portion of the site. A large watercourse dissects the northern portion of the site running east to west. Photographs taken during the site inspection are provide in **Appendix D**.

4.3 Surrounding Land Use

As of 10th March 2023, surrounding land use comprised of the following:

- North: Sandy Creek Road adjacent with rural/agricultural land beyond.
- South: Previous stages of Northview Estate residential subdivision with the township of Muswellbrook beyond.
- East: Rural/agricultural land with open cut mine beyond.
- West: Main Northern Railway and Aberdeen Street adjacent with rural/agricultural land and the Hunter River beyond.

4.4 Topography

Topographically the site comprises of gentle sloping terrain to the north west with elevations of approximately 180 meters Australian Height Datum (m AHD) observed in the southern portion of the site and elevations of approximately 150 m AHD observed in the north western portion of the site.

Surface runoff is considered to migrate across the site as overland flow towards the watercourse located in the northern portion of the site which discharges into Sandy Creek and then the Hunter River located to the west of the site.

4.5 Geology

The majority of the site is underlain by Palaeozoic Branxton Formation conglomerate, sandstone and siltstone of the Maitland subgroup. A small section of the north western corner of the site is underlain by Cainozoic alluvial valley deposits comprising of silt, clay, lithic to quartz lithic sand, gravel¹.

4.6 Soil Landscapes

With reference to the Soil Landscapes of Central and Eastern NSW² soil landscapes identified to be onsite included Roxburgh soil landscape located in the south eastern portion of the site and the Hunter soil landscape located in the north western portion of the site. Roxburgh soil landscapes cover undulating low hills and undulating hills and comprise of yellow and brown podzolic soils, red solodic and yellow soloths soils. Hunter soil landscapes cover floodplains of the Hunter River and its tributaries with the main soils are all formed in alluvium.

4.7 Hydrogeology

A search of the Australian Groundwater Explorer³ data base identified 34 registered groundwater boreholes within 2 km of the site of which 18 were identified to be functioning. The depth of the groundwater boreholes was reported being between 7.5 m to 19 m below ground level (m bgl). Limited standing water level (swl) information was available. However, swl was reported between 3.9 and 5.8 m bgl within groundwater bores >1.8 km south west the site. Porous, extensive highly productive aquifers exist onsite.

4.8 Acid Sulfate Soil Conditions

The Muswellbrook LEP 2009 identifies the site to be not located within a class of acid sulfate soils. Additionally, the Atlas of Australian Acid Sulfate Soils identifies the site to be within a Class B – low probability of occurrence, 6-70% chance of occurrence.

4.9 Naturally Occurring Asbestos Potential

There are no records of naturally occurring asbestos potential onsite or within 1 km of the site.

4.10 Dryland Salinity

With reference to the NSW Department of Planning and Environment⁴ a small section along the southern boundary is identified to be within a high hazard or risk of dryland salinity.

4.11 Local Meteorology

A summary of data collected by the Bureau of Meteorology between 1991 and 2023 at the Scone airport (weather station ID 061363) located 26km to the north is provided below in **Table 5**.

¹ Singleton 1:250,000 Geological Map (nsw.gov.au)

² Soil Landscapes of Central and Eastern NSW | Dataset | SEED

³ Australian Groundwater Explorer: Groundwater information: Water Information: Bureau of Meteorology (bom.gov.au)

⁴ Salinity locations and mapping | NSW Environment and Heritage

Table 5 – Summary of Local Meteorology

Mean maximum/minimum temperature	31.8°C January / 3.4°C July
Maximum/ minimum monthly rainfall	32.4 mm April / 77.7 mm November
Average annual rainfall	620.7 mm

4.12 NSW EPA Contaminated Site List

As of 11 April 2023, the site was not listed as a contaminated site notified to the NSW EPA. Additionally, there is no records of contaminated sites notified to the NSW EPA within 1 km of the site.

4.13 NSW EPA Contaminated Land Records of Notice

No records of notice were reported at the site or within 1km of the site.

4.14 National Waste Management and Liquid Fuel Facilities

There are no sites on the national waste management sites or liquid fuel facilities within 1 km of the site.

4.15 PFAS Investigation and Management Programs

There are no sites, within 1km of the site that are:

- part of the NSW EPA PFAS investigation program;
- being investigated and/or managed by the Department of Defence for PFAS contamination; or
- being investigated or managed by Airservices Australia for PFAS contamination.

4.16 Defence Sites

There are no sites which have been assessed as part of the Defence 3 Year Regional Contamination Investigation Program within 1km of the site.

4.17 Current Licensed Activities under the POEO Act

Current licensed activities under the Protection of the Environment Operations Act 1997 (POEO Act) are listed in **Table 6**.

Table 6 – Current Licensed Activities under the POEO Act

EPL No	Organisation	Activity	Current Environment Risk	Distance and Direction from site
656	Muswellbrook Coal Company LTD	Coal works Mining for coal	Level 1	onsite
3142	Australian Rail Track Corporation Limited	Railway system activities	Level 2	37 m north west

5 Preliminary Conceptual Site Model

A preliminary conceptual site model (CSM) has been developed based on information presented in sections 3 and 4.

5.1 Potential Contaminating Activities/Sources and Contaminants of Concern

Based on the findings of the site history review and site inspection, the potential contaminating activities/sources and their respective CoPC are provided in **Table 7**.

Table 7 – Potential Contaminating Activities/Sources and CoPC

Activity/Source	CoPC
Construction and demolition of residential dwelling	TRH, BTEXN, PAH, Heavy Metals, OC, OP and ACM ⁵ .
Importation of fill material in north west portion of the site	TRH, BTEXN, PAH, Heavy Metals, OC, OP and ACM.

5.2 Potential Affected Media

The potential affected media at the site is considered to be soil.

5.3 Potential Receptors

5.3.1 Potential Human Receptors

Potential human receptors identified at or surrounding the site are considered to be:

- Current and future site users (agricultural/residential).
- Future construction workers during site development (commercial/industrial).
- Users on adjacent properties (agricultural/residential).

5.3.2 Potential Ecological Receptors

Potential ecological receptors identified at or surrounding the site are considered to be:

- Fauna and flora at the site.

5.4 Potential Exposure Pathways

Potential exposures pathways are considered to be:

- Dermal contact and incidental ingestion.
- Uptake by fauna and flora.
- Inhalation of respirable fibers/dust.

⁵ Total recoverable hydrocarbons; benzene, toluene, ethylbenzene, xylene, naphthalene; polycyclic aromatic hydrocarbons; heavy metals (Arsenic (As), Cadmium (Cd), Chromium (Cr), Copper (Cu), Lead (Pb), Mercury (Hg), Nickel (Ni) and Zinc (Zn); organochlorine pesticides (OC); organophosphorus pesticides (OP); asbestos contaminating materials.

5.5 Potential Source-Pathway-Receptor Linkages

Potential source-pathway-receptor linkages are presented in **Table 8**.

Table 8 – Potential Source-Pathway-Receptor Linkages

Source	Exposure Pathway	Receptor	Linkage
Construction and demolition of residential dwelling	➤ Dermal contact and incidental ingestion. ➤ Inhalation of respirable fibers/dust.	➤ Current and future site users ➤ Future construction workers during site development ➤ Users on adjacent properties	Potentially complete.
	➤ Uptake by fauna and flora.	➤ Terrestrial fauna and flora at the site.	Potentially complete
Importation of fill material	➤ Dermal contact and incidental ingestion. ➤ Inhalation of respirable fibers/dust.	➤ Current and future site users ➤ Future construction workers during site development ➤ Users on adjacent properties	Potentially complete
	➤ Uptake by fauna and flora.	➤ Terrestrial fauna and flora at the site.	Potentially complete

Based on the information provided in **Table 8**, potential source-pathway-receptor linkage exists. To determine whether an actual source-pathway-receptor linkage exists, intrusive investigations and analytical testing in the areas of concern is required.

6 Data Quality

6.1 Data Quality Objectives

The Data Quality Objectives (DQOs) adopted for the PSI are summarized in **Table 9**.

Table 9 – Data Quality Objectives

DQO Step	Discussion																						
1: State the problem	The site is proposed for redevelopment into a residential subdivision and based on the preliminary CSM, potential source-pathway-receptor linkages exist.																						
2: Identify the decision/goal of the study	To undertake intrusive investigations and analytical testing to determine if: <ul style="list-style-type: none"> ➢ actual source-pathway-receptor linkages exist and further investigation is required; or ➢ linkages don't exist and the site is suitable for the Proposed Development. 																						
3: Identify the information inputs	The information inputs to the decision/goal are: <ul style="list-style-type: none"> ➢ Site history information. ➢ Field data collected during intrusive sampling. ➢ Laboratory analytical data of selected soil samples for the relevant CoPC. ➢ Adopted Tier 1 assessment criteria provided in Section 7. ➢ Assessment of the reliability/quality of the analytical data, through the assessment of Quality Assurance/Quality Control (QA/QC) as per the Data Quality Indicators (DQI). 																						
4: Define the boundaries of the study	Lateral extents of the PSI are limited to the lot boundaries of the site described as part Lot 58/1276946 and as shown in Figure 1 . Vertical extent of the PSI is to a maximum depth of 3.2 m bgl. A preliminary round of sampling in targeted areas will be undertaken at this stage of the investigation.																						
5: Develop the analytical approach	Acceptable limits for laboratory QA/QC are as follows: <table> <thead> <tr> <th>Field</th> <th>Limit</th> </tr> </thead> <tbody> <tr> <td>Rinsate blanks:</td> <td>All analytes < LOR⁶.</td> </tr> <tr> <td>Intra laboratory duplicates</td> <td>RPD⁷ <50%</td> </tr> <tr> <td>Inter laboratory duplicates</td> <td>RPD <50%</td> </tr> <tr> <td>Trip blank</td> <td><LOR</td> </tr> <tr> <td>Trip Spike Recovery</td> <td>> 70%</td> </tr> <tr> <th>Laboratory</th> <th>Limit</th> </tr> <tr> <td>Matrix spike</td> <td>70-130% (metals) 60-140% (organics)</td> </tr> <tr> <td>Surrogate spike</td> <td>70-130%</td> </tr> <tr> <td>Method blank</td> <td><LOR</td> </tr> <tr> <td>Duplicate samples</td> <td>RPD <50%</td> </tr> </tbody> </table>	Field	Limit	Rinsate blanks:	All analytes < LOR ⁶ .	Intra laboratory duplicates	RPD ⁷ <50%	Inter laboratory duplicates	RPD <50%	Trip blank	<LOR	Trip Spike Recovery	> 70%	Laboratory	Limit	Matrix spike	70-130% (metals) 60-140% (organics)	Surrogate spike	70-130%	Method blank	<LOR	Duplicate samples	RPD <50%
Field	Limit																						
Rinsate blanks:	All analytes < LOR ⁶ .																						
Intra laboratory duplicates	RPD ⁷ <50%																						
Inter laboratory duplicates	RPD <50%																						
Trip blank	<LOR																						
Trip Spike Recovery	> 70%

Matrix spike	70-130% (metals) 60-140% (organics)																						
Surrogate spike	70-130%																						
Method blank	<LOR																						
Duplicate samples	RPD <50%																						

⁶ Limits of reporting

⁷ Relative percentage difference

DQO Step	Discussion
6: Specify performance or acceptance criteria	<p>The sampling analytical schedule is detailed in Section 8.</p> <p>ASC NEPM (2013) Schedule B2 states that the 95% Upper Confidence Limit (UCL) of the arithmetic mean provides a 95% confidence level that the true population mean will be less than or equal to this value. Therefore, a limit on decision error will be 5% that a conclusive statement may be incorrect based on a probability that 95% of the data collected will satisfy the site acceptance criteria.</p> <p>Additionally, a comprehensive assessment of QA/QC evaluating the reliability and useability of field and laboratory data will be undertaken based on the adopted five data quality indicators (DQI) outlined in Section 6.2.</p>
7: Develop the plan for obtaining data	The sampling and analysis plan is detailed in Section 8 .

6.2 Data Quality Indicators

With reference to ASC NEPM (2013) Schedule B2 the following five DQIs, relating to both field and laboratory procedures, have been adopted.

Table 10 – Data Quality Indicators

DQI	Frequency/Requirement
Completeness – A measure of the amount of usable data from a data collection activity	
All critical locations sampled	Samples collected from areas of concern (AoC) identified in CSM and in accordance with the sampling and analysis plan (SAP).
Standard operating practices appropriate and complied with	Sampling undertaken in accordance with industry standards and guidelines.
Experienced sampler	Competent and consistent sampler.
Field documentation correct and completed	Fieldwork to be documented in accordance with Envirotech's standard operating practices (SOP). Soil logs to be logged in accordance with AS 1726:2017 ⁸ .
All critical samples and analytes analysed	Samples analysed from AoC identified in CSM. Analytical schedule undertaken in accordance with SAP.
Appropriate laboratory testing methods	Samples to be analysed at a NATA ⁹ accredited laboratory and by NATA approved methods.
Laboratory documentation complete	Laboratory chain of custody (CoC) appropriately completed.
Sample holding times complied with	Samples analysed to be extracted within laboratory specified time.
Comparability – The confidence (expressed qualitatively) that data may be considered to be equivalent for each sampling and analytical event	
Consistent sampling methods (i.e., equipment, sampler, sample	Sampling to be undertaken in accordance with Envirotech's SOP.

⁸ Australian Standard (AS 1726:2017) – Geotechnical Site Investigations

⁹ National Association of Testing Authority

DQI	Frequency/Requirement
preservation, containers etc.)	
Climatic conditions	Weather conditions noted on field sheets. Sampling to be undertaken during similar weather conditions (if possible). Quantify influence of climatic or physical conditions.
Consistent analytical methods, laboratories and units.	Samples to be analysed at a NATA accredited laboratory and by NATA approved methods.
Representativeness – The confidence that data is representative of each medium present on the site	
Appropriate media sampled to reflect its characteristics	Sampling to be undertaken in accordance with Envirotech's SOP.
Sample holding times complied with	Samples analysed to be extracted within laboratory specified time.
Appropriate sample collection, handling, storage and preservation.	Sampling to be undertaken in accordance with Envirotech's SOP.
Equipment calibration	Field equipment calibrated prior to each sampling event.
Precision – A quantitative measure of the variability (or reproducibility) of data	
SOPs appropriate and complied with.	Comply with industry standards and guidelines.
Intra laboratory duplicate	1 in 20 samples
Inter laboratory duplicate	1 in 20 samples
Laboratory duplicate	Minimum 1 per sample batch
Accuracy – A quantitative measure of the closeness of reported data to the true value	
Matrix spike	1 per sample batch (volatile/semi volatile)
Surrogate spike	1 per sample batch (volatile/semi volatile)
Laboratory method blank	1 per sample batch
Laboratory duplicate samples	1 per sample batch

7 Assessment Criteria

Based on the Proposed Development, the Tier 1 investigation and screening criteria for residential¹⁰ land use has been adopted and are provided in **Table 11**.

Table 11 – Tier 1 Assessment Criteria

Guideline	Assessment Criteria	Analyte Group
ASC NEPM (2013)	Health investigation level (HIL) A	Heavy metals and pesticides
	Health screening level (HSL)	Asbestos
	Soil vapour HSL A CLAY (0m<1m, 1m<2m, 2m<4m) SILT (0m<1m)	TRH and BTEXN
	Ecological investigation level (EIL) < 2m	Heavy metals, pesticides and PAH
	Ecological screening level (EIL) < 2m	TRH and BTEXN
	Management limits for fine soils	TRH
	Aesthetics	-
CRC Care (2011)	Direct contact HSLs	TRH and BTEXN

¹⁰ Residential A with garden/accessible soil also includes children's day care centres, preschools and primary schools.

8 Sampling and Analysis Methodology

8.1 Sampling Methodology

Field investigation was undertaken by a Senior Environmental Scientist on 30 March 2023 and comprised of the following:

- Soil samples were collected from seven test pits targeted to AOC identified in the preliminary CSM. Locations of test pits are provided in attached **Figure 1**.
- Test pits were advanced via 1.7t excavator with a 450mm toothed bucket to a maximum depth of 3.2 m bgl.
- Samples were collected from nominated depths, targeting all types of strata, and logged in accordance with AS1726:2017. A unique sample ID was used for each sample collected. Test pit logs are provided as **Appendix E**.
- Sampling equipment was decontaminated using Decon 90 and a dedicated pair of nitrile gloves used for each sample collection.
- Samples were collected in laboratory prepared containers and placed in an esky filled with ice for transport to a NATA accredited laboratory for analysis.

8.2 Analytical Methodology

The analytical methodology adopted for the PSI to achieve the stated objectives is summarized as follows.

8.2.1 Soil Samples

- Heavy metals (As, Cd, Cr, Cu, Pb, Hg, Ni and Zn) – 10
- OCP and OPP – 9
- TRH, BTEXN and PAH – 10
- Asbestos w/w% – 2
- pH, conductivity, particle size, soil particle density, exchangeable cations, Iron %, organic matter – 1

8.2.2 QA/QC Samples

- Field duplicate: TRH, BTEXN, PAH, heavy metals (As, Cd, Cr, Cu, Pb, Hg, Ni and Zn), OCP and OPP – 1
- Trip blank: TRH (F1) and BTEXN – 1
- Rinsate: TRH, BTEXN, PAH, heavy metals (As, Cd, Cr, Cu, Pb, Hg, Ni and Zn), OCP and OPP – 1

9 Quality Assurance/Quality Control Data Evaluation

9.1 Field QA/QC

Field QA/QC samples collected as part of the sampling program are provided in **Table 12**.

Table 12 – Field QA/QC Samples

Sample Type	Primary Sample ID	Duplicate Sample ID	Frequency
Field Duplicate	TP02_0.3	QC01	1 in 20
Trip blank	TB	-	1 per sampling event
Rinsate	RW01	-	1 per day

Analytical results of the field QA/QC samples are provided in the analytical summary tables within **Appendix F**.

9.1.1 Field Duplicate

Sample duplicates were collected of primary samples at a frequency of 1 in 20 samples. The duplicate sample collected (QC01) for the sampling program was of primary sample TP02_0.3. Calculated RPD % of the field duplicate was undertaken for all analytes and were below the adopted limit of 50% meeting the acceptance criteria. All RPD % results are provided in the analytical summary tables within **Appendix F**.

9.1.2 Trip Blank

One laboratory prepared trip blank sample (TB) was utilised during the sampling program and analysed for TRH (F1) and BTEXN with all recoveries reported below the laboratory LOR meeting the acceptance criteria. Results of the trip blank analysis is provided in the analytical summary tables within **Appendix F**.

9.1.3 Rinsate

One rinsate water sample was recovered as part of the sampling program. The sample was collected from sampling tools and with laboratory prepared rinsate water. All recoveries were reported below laboratory LOR meeting the acceptance criteria. Results of the rinsate analysis is provided in the analytical summary tables within **Appendix F**.

9.2 Laboratory QA/QC

Samples were submitted to ALS Global, a NATA accredited laboratory, for the requested analysis. Samples were collected in laboratory prepared containers and transported using insulated esky containing ice accompanied by COC documentation.

9.2.1 Summary of Outliers

A summary of laboratory QC outliers is as follows:

- No method blank value outliers occur.
- No duplicate outliers occur.
- No laboratory control outliers occur.

- No matrix spike outliers occur.
- No surrogate recovery outliers occur.
- No analysis holding time outliers exist.
- Quality control sample frequency outliers exist for TRH (semi volatile) and PAH for the rinsate water sample due to insufficient sample size. However, this is considered acceptable due to all rinsate results reporting concentrations below laboratory LOR.

9.3 Data Usability

The data validation procedure employed in the assessment of the field and laboratory QA/QC data has indicated that the reported analytical results are representative of the conditions at the sample locations and that the analytical data can be relied upon. Therefore, it is considered that the quality of the analytical data is reliable for the purposes of characterising the site for the proposed land use.

10 Field and Analytical Results

10.1 Soil Lithology

Sub surface conditions encountered during sampling comprised of the following:

Table 13 – Subsurface Conditions

Test Pit	Depth (m bgl)	Description
TP01	0-3	FILL (sandy silty CLAY) / FILL (gravelly silty sandy CLAY) / FILL (clayey SILT).
	3-3.2	sandy CLAY (natural).
TP02	0-3	FILL (sandy CLAY) / FILL (gravelly SAND) / FILL (sandy CLAY)
TP03	0-2.5	FILL (sandy CLAY)
TP04	0-2	FILL (sandy CLAY)
TP05	0-2	FILL (sandy CLAY)
TP06	0-1 ¹¹	FILL (sandy CLAY)
TP07	0-0.2	TOPSOIL (sandy SILT)
	0.2-0.6	Silty sandy CLAY (natural).

10.2 Field Observations

No staining, odours or asbestos contaminating material (ACM) was observed during sampling. Groundwater was not encountered in any test pit advanced during sampling. Minor amounts of anthropogenic material were observed within TP06 (concrete) and TP07(house bricks).

10.3 Analytical Results

All results of analytical testing were reported below the adopted assessment criteria and or laboratory LOR. Analytical summary tables are provided in **Appendix F**. Laboratory certificates of analysis are provided in **Appendix G**.

¹¹ Refusal on concrete.

11 Discussion

Based on the results of analytical testing no exceedances of the adopted assessment criteria for residential land use were reported in any of the samples collected.

11.1 Revised CSM

To determine whether actual source-pathway-receptor linkages exist after the intrusive sampling analytical testing, a revised CSM is provided below.

Table 14 – Revised CSM

Source	Exposure Pathway	Receptor	Linkage
Construction and demolition of residential dwelling	➤ Dermal contact and incidental ingestion. ➤ Inhalation of respirable fibers/dust.	➤ Current and future site users ➤ Future construction workers during site development ➤ Users on adjacent properties	Incomplete. All results of analytical testing reported below adopted assessment criteria.
	➤ Uptake by fauna and flora.	➤ Terrestrial fauna and flora at the site.	
Importation of fill material	➤ Dermal contact and incidental ingestion. ➤ Inhalation of respirable fibers/dust.	➤ Current and future site users ➤ Future construction workers during site development ➤ Users on adjacent properties	Incomplete. All results of analytical testing reported below adopted assessment criteria.
	➤ Uptake by fauna and flora.	➤ Terrestrial fauna and flora at the site.	

Based on the information provided in **Table 14**, no actual source-pathway-receptor linkage exist due to all results of analytical testing being reported below adopted assessment criteria.

12 Conclusion

This report presents the findings of a PSI, undertaken at 212-216 Queen Street Muswellbrook, prepared for the purpose of determining whether contamination is likely to exist on the site through current and/or historical activities and whether additional investigation is required. Based on the findings of the site history review, intrusive field investigations, laboratory analytical testing, it was assessed that no human health and/or ecological source-pathway-receptor linkages exist for the identified potentially contaminating activities. Therefore, it is considered that the site is suitable for the Proposed Development.

13 Limitations

This report was prepared in good faith and in accordance regulatory and industry standards for the use by the Client. The report was commissioned by Tindale Property Pty Ltd c/- Focus Town Planning and is based in part on information obtained from the Client and other parties. Readers are referred to any referenced investigation reports for further data and where necessary seek expert advice in respect to, their situation.

Information obtained in this report is considered to represent a reasonable interpretation of the general condition of the site at the time of the assessment. However, it is not possible to present findings of the entire site at all points and therefore if conditions encountered during excavation differ significantly from those outlined in this report, the author of this document should be contacted for advice.

This report and/or information contained within it should not be reproduced and/or presented/reviewed except in full. No liability will be accepted for use or interpretation of this report by any third party (unless written agreement/approval with the Client).

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

LOR = Limit of reporting

^ = This result is computed from individual analyte detections at or above the level of reporting

Ø = ALS is not NATA accredited for these tests.

~ = Indicates an estimated value.

- ALS is not NATA accredited for the analysis of Exchangeable Cations on Alkaline Soils when performed under ALS Method ED006.
- EP075 (SIM): Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a,h)anthracene (1.0), Benzo(g,h,i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a,h)anthracene (1.0), Benzo(g,h,i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EP080: The trip spike and its control have been analysed for volatile TPH and BTEXN only. The trip spike and control were prepared in the lab using reagent grade sand spiked with petrol. The spike was dispatched from the lab and the control retained.
- EA200N: Asbestos weights and percentages are not covered under the Scope of NATA Accreditation.

Weights of Asbestos are based on extracted bulk asbestos, fibre bundles, and/or ACM and do not include respirable fibres (if present)

The Asbestos (Fines and Fibrous) weight is calculated from the extracted Fibrous Asbestos and Asbestos Fines as an equivalent weight of 100% Asbestos

Percentages for Asbestos content in ACM are based on the 2013 NEPM default values.

All calculations of percentage Asbestos under this method are approximate and should be used as a guide only.

- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: "UMF" Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.

- EA200N: ALS laboratory procedures and methods used for the identification and quantitation of asbestos are consistent with AS4964-2004 and the requirements of the 2013 NEPM for Assessment of Site Contamination
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- ED007 and ED008: When Exchangeable Al is reported from these methods, it should be noted that Rayment & Lyons (2011) suggests Exchange Acidity by 1M KCl - Method 15G1 (ED005) is a more suitable method for the determination of exchange acidity ($H^+ + Al^{3+}$).
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot

CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

LOR = Limit of reporting

RPD = Relative Percentage Difference

= Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ES2310695	Page	: 1 of 11
Client	: Envirotech Services Australia	Laboratory	: Environmental Division Sydney
Contact	: Stuart Lord	Telephone	: +61-2-8784 8555
Project	: Musselbrook PSI	Date Samples Received	: 31-Mar-2023
Site	: ----	Issue Date	: 13-Apr-2023
Sampler	: ----	No. of samples received	: 25
Order number	: ENV1015	No. of samples analysed	: 17

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- NO Method Blank value outliers occur.
- NO Duplicate outliers occur.
- NO Laboratory Control outliers occur.
- NO Matrix Spike outliers occur.
- For all regular sample matrices, NO surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- NO Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Frequency of Quality Control Samples

Matrix: WATER

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
PAH/Phenols (GC/MS - SIM)	0	14	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
TRH - Semivolatile Fraction	0	10	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
PAH/Phenols (GC/MS - SIM)	0	14	0.00	5.00	NEPM 2013 B3 & ALS QC Standard
TRH - Semivolatile Fraction	0	10	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: SOIL

Evaluation: ✘ = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: SOIL

Evaluation: ✘ = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type	Analytical Methods	Count		Rate (%)			Quality Control Specification
		Method	QC	Regular	Actual	Expected

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH in soil using a 0.01M CaCl ₂ extract	EA001	SOIL	In house: Referenced to Rayment and Lyons 4B3 (mod.) or 4B4 (mod.) 10 g of soil is mixed with 50 mL of 0.01M CaCl ₂ and tumbled end over end for 1 hour. pH is measured from the continuous suspension. This method is compliant with NEPM Schedule B(3).
pH (1:5)	EA002	SOIL	In house: Referenced to Rayment and Lyons 4A1 and APHA 4500H+. pH is determined on soil samples after a 1:5 soil/water leach. This method is compliant with NEPM Schedule B(3).
Electrical Conductivity (1:5)	EA010	SOIL	In house: Referenced to Rayment and Lyons 3A1 and APHA 2510. Conductivity is determined on soil samples using a 1:5 soil/water leach. This method is compliant with NEPM Schedule B(3).
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Particle Size Analysis by Hydrometer	EA150H	SOIL	Particle Size Analysis by Hydrometer according to AS1289.3.6.3
Soil Particle Density	EA152	SOIL	Soil Particle Density by AS 1289.3.5.1: Methods of testing soils for engineering purposes - Soil classification tests - Determination of the soil particle density of a soil - Standard method
Asbestos Identification in Soils	EA200	SOIL	AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Asbestos Classification and Quantitation per NEPM 2013	* EA200N	SOIL	Asbestos Classification and Quantitation per NEPM with Confirmation of Identification by AS 4964 - Gravimetric determination of Asbestos Containing Material, Fibrous Asbestos, Asbestos Fines and sample weight and calculation of percentage concentrations per NEPM protocols. Asbestos (Fines and Fibrous FA+AF) is reported as the equivalent weight in the sample received after accounting for sub-sampling (where applicable for the <7mm and/or <2mm fractions).
Exchangeable Cations on Alkaline Soils	ED006	SOIL	In house: Referenced to Soil Survey Test Method C5. Soluble salts are removed from the sample prior to analysis. Cations are exchanged from the sample by contact with alcoholic ammonium chloride at pH 8.5. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil.
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl ₂) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl ₂ which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Organic Matter	EP004	SOIL	In house: Referenced to AS1289.4.1.1. Dichromate oxidation method after Walkley and Black. This method is compliant with NEPM Schedule B(3)
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).

Analytical Methods			
	Method	Matrix	Method Descriptions
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Total Metals by ICP-MS - Suite A	EG020A-T	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Total Mercury by FIMS	EG035T	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the unfiltered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	WATER	In house: Referenced to USEPA SW 846 - 8015 The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM Schedule B(3)
PAH/Phenols (GC/MS - SIM)	EP075(SIM)	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM Schedule B(3)
Preparation Methods			
	Method	Matrix	Method Descriptions
pH in soil using a 0.01M CaCl2 extract	EA001-PR	SOIL	In house: Referenced to Rayment and Lyons 4B1, 10 g of soil is mixed with 50 mL of 0.01M CaCl2 and tumbled end over end for 1 hour. pH is measured from the continuous suspension. This method is compliant with NEPM Schedule B(3).
Exchangeable Cations Preparation Method (Alkaline Soils)	ED006PR	SOIL	In house: Referenced to Rayment and Lyons method 15C1.
Exchangeable Cations Preparation Method	ED007PR	SOIL	In house: Referenced to Rayment & Lyons method 15A1. A 1M NH4Cl extraction by end over end tumbling at a ratio of 1:20. There is no pretreatment for soluble salts. Extracts can be run by ICP for cations.
1:5 solid / water leach for soluble analytes	EN34	SOIL	10 g of soil is mixed with 50 mL of reagent grade water and tumbled end over end for 1 hour. Water soluble salts are leached from the soil by the continuous suspension. Samples are settled and the water filtered off for analysis.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Organic Matter	EP004-PR	SOIL	In house: Referenced to AS1289.4.1.1. Dichromate oxidation method after Walkley and Black. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na ₂ SO ₄ and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Digestion for Total Recoverable Metals	EN25	WATER	In house: Referenced to USEPA SW846-3005. Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM Schedule B(3)
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for purging.
