There is no requirement to enclose the subfloor spaces of verandahs, decks, steps, ramps or landings.</p> <p><i>C7.7.1 - Spaced decking is nominally spaced at 3mm (in accordance with standard industry practice); however, due to the nature of timber decking with seasonal changes in moisture content, that spacing may range from 0-5mm during service. It should be noted that recent research studies have shown that gaps at 5mm spacing afford opportunity for embers to become lodged in between timbers, which may contribute to a fire. Larger gap spacings of 10mm may preclude this from happening but such a spacing regime may not be practical for a timber deck.</i></p> <p><b>7.7.2 Enclosed subfloor spaces of verandas, decks, steps, ramps and landings.</b></p> <p>7.7.2.1 - The subfloor spaces of verandas, decks, steps, ramps, and landings are deemed to be 'enclosed' when:</p> <p>(a) the material used to enclose the subfloor space conforms with Clause 7.4, except that sarking is not required where specified in Clause 7.4.1(c); and</p> <p>(b) all openings are protected in accordance with Clause 3.6 and made of corrosion-resistant steel, bronze or aluminium.</p> <p>7.7.2.2 - No construction requirements for support posts, columns, stumps, stringers, piers and poles.</p> <p>7.7.2.3 - No construction requirements for the framing of verandas, pergolas, decks, ramps or landings (i.e., bearers &amp; joists).</p> <p>7.7.2.4 - Decking, stair treads and trafficable surfaces of ramps and landings shall be -</p> <p>(a) of non-combustible material; or (b) bushfire-resisting timber; or (c) a combination of Items (a) and (b).</p> <p><b>7.7.3 Unenclosed subfloor spaces of verandas, decks, steps, ramps and landings.</b></p> <p>7.7.3.1 - Support posts, columns, stumps, stringers, piers and poles shall be - (a) of non-combustible material; or (b) bushfire-resisting timber; or (c) a combination of Items (a) and (b).</p> <p>7.7.3.2 - Framing of verandas, decks, ramps or landings (i.e., bearers &amp; joists) shall be - (a) of non-combustible material; or (b) bushfire-resisting timber; or (c) a combination of Items (a) and (b).</p> <p>7.7.3.3 - Decking, stair treads and trafficable surfaces of ramps and landings shall be -</p> <p>(a) of non-combustible material; or (b) bushfire-resisting timber; or (c) a combination of Items (a) and (b).</p> <p>7.7.4 - Those parts of the handrails and balustrades less than 125mm from any glazing or any combustible wall shall be -</p> <p>(a) of non-combustible material; or (b) bushfire-resisting timber; or (c) a combination of Items (a) and (b).</p> <p>Those parts of the handrails and balustrades that are 125mm or more from the building have no requirements.</p> <p>7.7.5 - Veranda posts - Shall be made from - (a) non-combustible material; or (b) bushfire-resisting timber; or (c) a combination of Items (a) and (b).</p>
