**GENERAL NOTE**

**BCA & Australian Standards (AS):**

Building codes and standards are established on a federal level by the nationally recognised Building Code of Australia (BCA), & these apply to all phases of construction, including balustrade design and specification. Specifically, BCA 2012 Parts 3.9.1 (stairs) and 3.9.2 (balustrades) and Australian Standard 1170.1 cover regulations for balustrades on stairways, balconies, rooftop terraces and other surfaces between levels.

**BCA Balustrade Regulations and Standards**

A balustrade is defined as a rail and its balusters (posts or other supporting members). BCA regulations state that a balustrade must:

- Be at least 1 metre high as measured from the finished floor;
- Have openings between risers or posts no greater than 125mm; and
- Be able to withstand loads and impacts as determined by AS 1170.1

The height regulation of 1 metre ensures the balustrade is high enough to provide prevention against falling over the balustrade. The openings between risers or posts cannot be greater than 125mm to prevent children from falling between them. Load and impact regulations are designed to ensure balustrades can resist impact or will not collapse when pressure is applied to them from any direction.

**Balustrade Safety & Planters**

BCA regulations state that the balustrade must be 1 metre or more, higher than the finished floor. On roof-top terraces, planters & furniture are often incorporated in the landscape design. It's important for compliance and safety that these elements do not undermine the safety of Communal Open Space (COS) terraces and rooftops, and the compliance with the BCA and AS's are maintained.

- Items to consider are:
- Where planters form the safety balustrade, their internal face must be 1m non-climbable
  - Outdoor furniture such as tables, BBQs, and seating shall be fixed and located a minimum 1m away from balustrades
  - Where furniture is proposed to be fixed or adjacent to COS terrace planters which form the balustrade, then a compliant handrail will be required to be fixed to the external edge of the planter

A concern for COS areas on rooftops or terrace areas is that the strata will add loose furniture which ultimately could undermine the safety of the installed balustrades. **In this case, it shall be the strata bodies responsibility to manage the safety of these areas.**

**Ultimately, the compliance and safety of the COS areas shall be the responsibility of the builder, and carefully inspected and certified at the Occupation Certificate (OC) stage of the development**

**Maintenance of COS area**

Communal Open Space terrace and rooftop areas are exposed to extremes (wind, sun, and extreme weather) so maintenance is important. The following item should be included or considered:

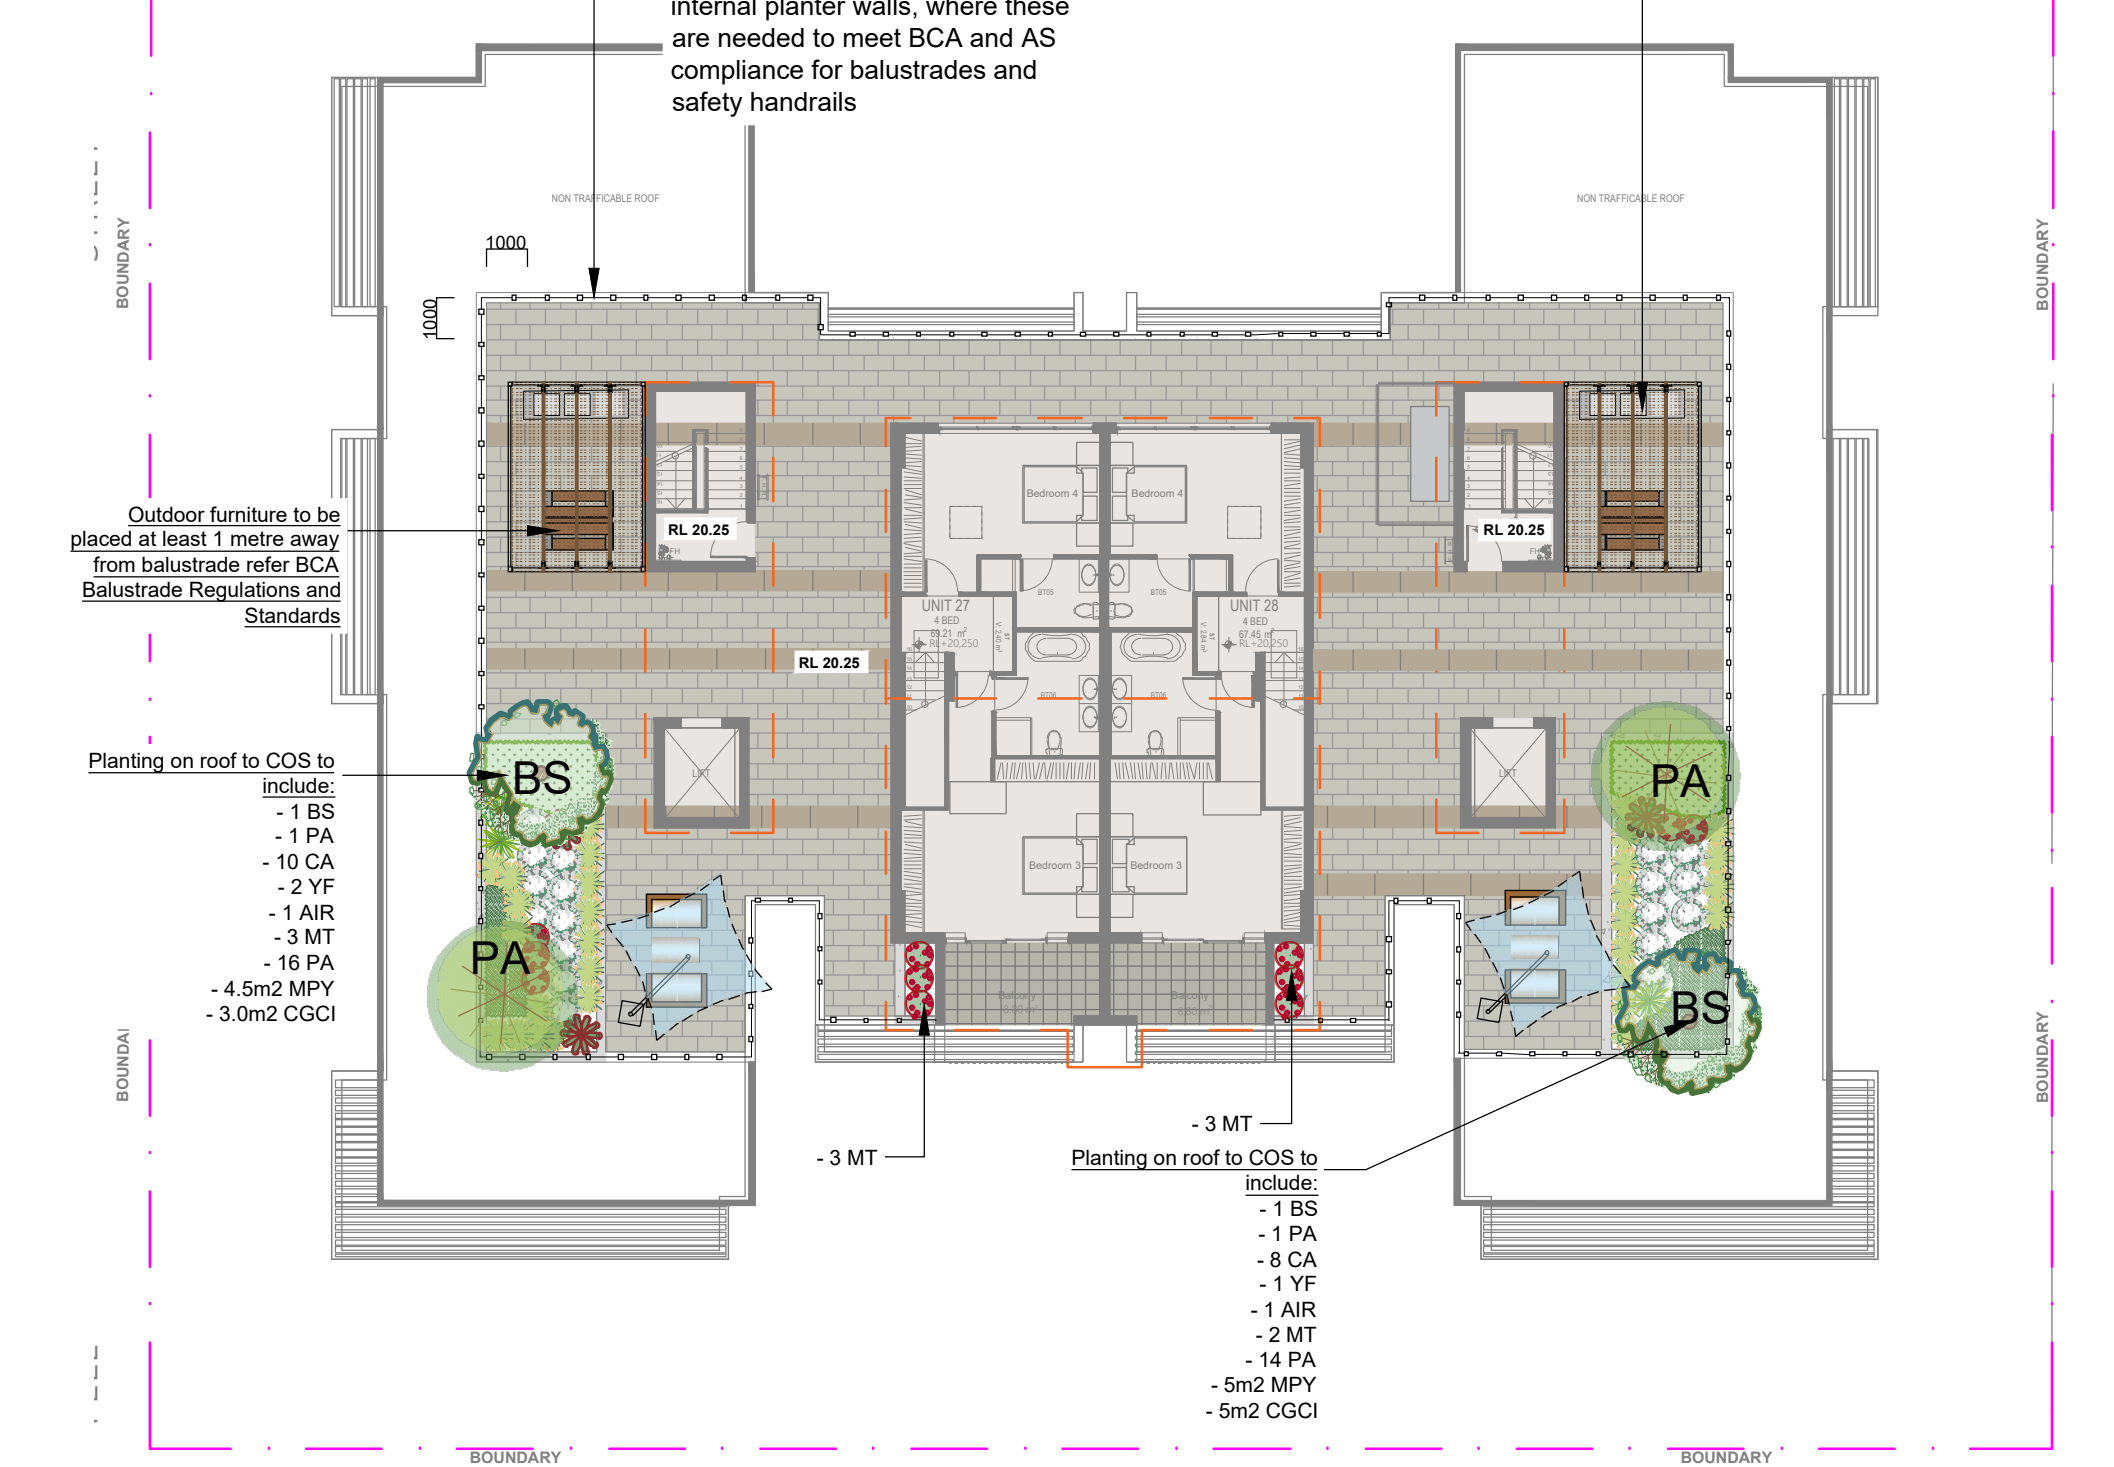

- All planters shall be structurally water-proofed**, with this work certified and periodically inspected. Trades should be closely monitored so they do not subsequently damage completed waterproofing
- All planters shall be irrigated with an automated system** set on an approved watering pattern. Moisture gauges should be installed in some planters to minimize overwatering
- Tree Anchors** shall be installed in high wind areas to larger plants, such as palms & small trees
- Compliance for balustrades and handrails should be monitored regularly
- For the maintenance of large rooftop areas and planters without external balustrades, **anchoring points for tying off harnesses** for landscape maintenance workers are essential

**Tree Anchoring**

For advanced tree planting in high wind and rooftop locations, it is recommended that an approved root ball anchoring system equal to 'Platipus Anchors' shall be used. Install as per the manufacturers specification'

**ALLOW FOR STRAPS ANCHOR POINTS ON ROOF/BALCONY PLANTER WHERE IS NECESSARY AS PER AS 1891.4:2009 AND AS/NZS 5532:2013**

This plan should be read in conjunction with the architectural and hydraulics plans. Work specific to these plans should be prepared in accordance to these plans, including specification and details prior to the installation of landscaping, and should not be altered or compromised during landscape construction. Elements such as drainage swales may be incorporated in garden bed areas (using non-floatable mulch) without compromising the capacity or form.

This plan has been prepared with reference to **Mid-Coast Council's** Landscaping Guidelines & requirements. Planting proposed using mainly indigenous, commercially available plant species selected from local planting lists and the BASIX local plant list and from Sydney Waters "Plant Selector" web site one-drip rated native plants (*acceptable for BASIX planting*).

**s4.55.** approved landscape plan's are required to be constructed as approved to obtain occupancy certificate. ***Permeable areas may be indicated to achieve site coverage restrictions & should be constructed as drawn on this plan.***

## PLANT PALETTE

A photograph of a dense, bushy plant with numerous bright orange-red, star-shaped flowers and green foliage. The flowers are in various stages of bloom, and the leaves are dark green and serrated. The plant appears to be a species of Banksia, possibly Banksia integrifolia.

A photograph of a large, dense bush of Mimulus aurantiacus (yellow monkey flower) in full bloom. The flowers are numerous, small, and bright yellow, covering most of the foliage. The leaves are dark green and appear to be small and succulent. The background is slightly out of focus, showing more greenery and a hint of a path or fence.

A photograph of a Philodendron plant, showing its characteristic large, deeply lobed, bright green leaves. The leaves are arranged in a dense, overlapping pattern, and the plant appears to be growing in a pot or a similar container. The background is dark and out of focus.
