3.1 How will waste be separated and/or stored onsite for reuse and recycling?

Waste is classified into separate bins in accordance with relevant standards, and the majority is reused throughout the construction process.

3.2 How will site operations be managed to ensure minimal waste creation and maximum reuse and recycling?

Site operations will be carefully managed through a waste minimisation strategy that focuses on efficient material use, sorting, and recycling. Construction waste will be classified into separate bins according to relevant standards to facilitate appropriate disposal and maximise reuse. Materials such as timber offcuts, concrete, metal, and packaging will be sorted on-site, with a significant portion reused during the construction process or sent to certified recycling facilities.

Note: Details of the site area to be used for on-site separation, treatment and storage (including weather protection) should be provided on plan drawings accompanying your application.
