Plan of Management

<b>Criterion</b>	<b>Proposed</b>
Hours of operation	Monday-Saturday: 7.00am-5.00pm, Sunday: Closed
Car parking	Two (2) car parking spaces
Number of employees:	Four (4) maximum at a time. There are no persons on site during the typical daytime hours for the most part.

- Loading and unloading are to cause minimal disturbance to adjoining properties. Approx loading and unloading time 15 to 20mins.
- Vehicles are turned off when loading and unloading and are not to be kept idle.
- It is noted that the site is predominantly unused during the day, as work is carried out on site (field).
- Premises are to be kept reasonably neat and tidy at all times.
- Two (2) car parking spaces are located on site for employees. These employees use vehicles to go to site. Workers also take their cars to go to site.

Waste Management

Deliveries between 8am and 4pm: pipes, boxes (bolts, connector, termination kits, cables, light fittings) with most deliveries by van. This would likely occur once or twice a week. Deliveries occur by vans and when the “work truck” is not on site. Deliveries to the site are made by vans and can be accommodated on site given the car parking arrangement and layout.

Waste collection: Due to the nature of the business, minimal waste is generated and can be accommodated through Council’s waste collection service.

Waste is minimal and includes; cardboard packaging, plastics and general waste.

**Note: Waste generation**

The nature of the business relates to installation of services. The packaged goods are taken to site (still in packaging and plastics) for protection during transportation. Plastics, cardboard and packaging are disposed of at the work site.
