Important Note for Development Applicants:

The following specification was used to achieve the thermal performance values indicated on the Assessor Certificate. If they vary from drawings or other specifications this Specification shall take precedence. If only one specification option is detailed for a building element, that specification must apply to all instances of that element for the whole project. If alternate specifications are detailed, the location and extent of the alternate specification must be detailed below and / or clearly indicated on referenced documentation.

Once the development is approved by the consent authority, these specifications will become a condition of consent and must be included in the built works. If you do not want to include these requirements, the proposed construction varies to those detailed or need further information, please contact Evergreen Energy Consultants.

This assessment has assumed that the BCA provisions for building sealing will be complied with at construction.

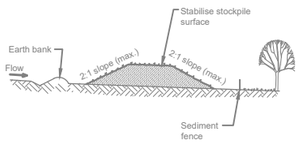
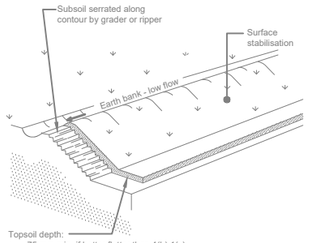
SCALE: 1:100 1:20@ A3 | REV. D
DWG NO: 1324 | DATE: JUNE 2022 | SHEET: 9 OF 14



Construction Notes

1. Place stockpiles more than 2 (preferably 5) metres from existing vegetation, concentrated water flow, roads and hazard areas.
2. Construct on the contour as low, flat, elongated mounds.
3. Where there is sufficient area, topsoil stockpiles shall be less than 2 metres in height.
4. Where they are to be in place for more than 10 days, stabilise following the approved ESCP or SWMP to reduce the c-factor to less than 0.10.
5. Construct earth banks (standard drawing 5-5) on the upslope side to divert water around stockpiles and sediment fences (standard drawing 6-8) 1 to 2 metres downslope.

STOCKPILES SD 4-1

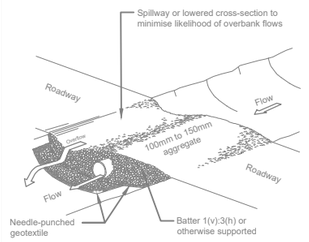


Topsoil depth:
- 75 mm min. if batter flatter than 4(h):1(v).
- 40 mm to 60 mm if batter steeper than 4(h):1(v).
- Specialised techniques required if batter slopes steeper than 2(h):1(v).

Construction Notes

1. Scarify the ground surface along the line of the contour to a depth of 50 mm to 100 mm to break up any hardsetting surfaces and to provide a good bond between the respread material and subsoil.
2. Add soil ameliorants as required by the ESCP or SWMP.
3. Rip to a depth of 300 mm if compacted layers occur.
4. Where possible, replace topsoil to a depth of 40 to 60 mm on lands where the slope exceeds 4(H):1(V) and to at least 75 mm on lower gradients.

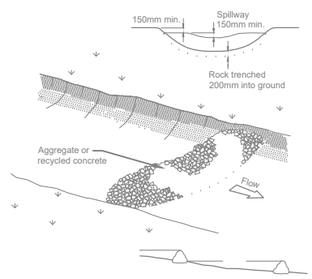
REPLACING TOPSOIL SD 4-2



Construction Notes

1. Prohibit all traffic until the access way is constructed.
2. Strip any topsoil and place a needle-punched textile over the base of the crossing.
3. Place clean, rigid, non polluting aggregate or gravel in the 100 mm to 150 mm size class over the fabric to a minimum depth of 200 mm.
4. Provide a 3-metre wide carriageway with sufficient length of culvert pipe to allow less than a 3(H): 1 (V) slope on side batters.
5. Install a lower section to act as an emergency spillway in greater than
6. Ensure that culvert outlets extend beyond the toe of fill embankments.

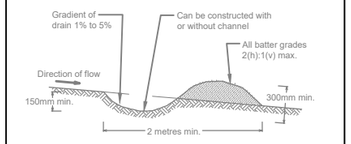
TEMPORARY WATERWAY CROSSING SD 5-1



Construction Notes

1. Check dams can be built with various materials, including rocks, logs, sandbags and straw bales. The maintenance program should ensure their integrity is retained, especially where constructed with straw bales. In the case of bales, this might require their replacement each two to four months.
2. Trench the check dam 200 mm into the ground across its whole width. Where rock is used, fill the trenches to at least 100 mm above the ground surface to reduce the risk of undercutting.
3. Normally, their maximum height should not exceed 600 mm above the gully floor. The centre should act as a spillway, being at least 150 mm lower than the outer edges.
4. Space the dams so the toe of the upstream dam is level with the spillway of the next downstream dam.

ROCK CHECK DAM SD 5-4

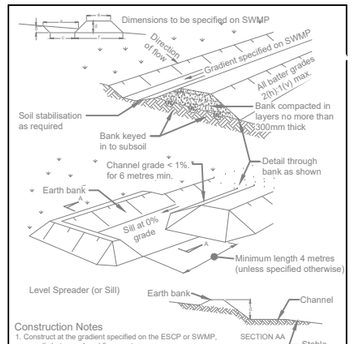


NOTE: Only to be used as temporary bank where maximum upslope length is 80 metres.

Construction Notes

1. Build with gradients between 1 percent and 5 percent.
2. Avoid removing trees and shrubs if possible - work around them.
3. Ensure the structures are free of projections or other irregularities that could impede water flow.
4. Build the drains with circular, parabolic or trapezoidal cross sections, not V shaped.
5. Ensure the banks are properly compacted to prevent failure.
6. Complete permanent or temporary stabilisation within 10 days of construction.

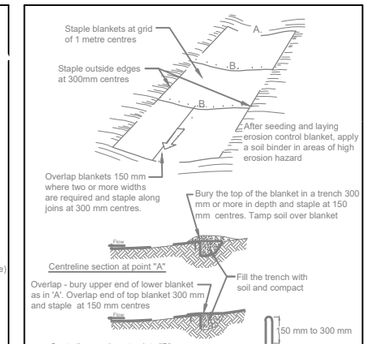
EARTH BANK (LOW FLOW) SD 5-5



Construction Notes

1. Construct at the gradient specified on the ESCP or SWMP, normally between 1 and 5 percent
2. Avoid removing trees and shrubs if possible - work around them.
3. Ensure the structures are free of projections or other irregularities that could impede water flow.
4. Build the drains with circular, parabolic or trapezoidal cross sections, not V-shaped, at the dimensions shown on the SWMP.
5. Ensure the banks are properly compacted to prevent failure.
6. Complete permanent or temporary stabilisation within 10 days of construction following Table 5.2 in Landcom (2004).
7. Where discharging to erodible lands, ensure they outlet through a properly constructed level spreader.
8. Construct the level spreader at the gradient specified on the ESCP or SWMP, normally less than 1 percent or level.
9. Where possible, ensure they discharge waters onto either stabilised or undisturbed disposal sites within the same subcatchment area from which the water originated. Approval might be required to discharge into other subcatchments.

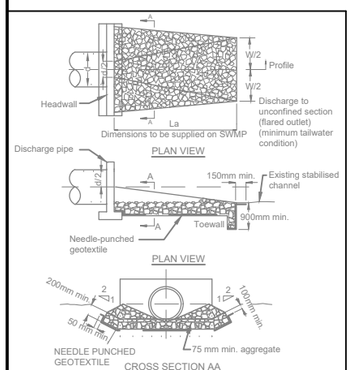
EARTH BANK (HIGH FLOWS) SD 5-6



Construction Notes

1. Remove any rocks, clods, sticks or grass from the surface before laying matting
2. Ensure that topsoil is at least 75 mm deep.
3. Complete fertilising and seeding before laying the matting.
4. Ensure fabric will be continuously in contact with the soil by grading the surface carefully first.
5. Lay the fabric in "shingle-fashion", with the end of each upstream roll overlapping those downstream. Ensure each roll is anchored properly at its upslope end.
6. Ensure that the full width of flow in the channel is covered by the matting up to the design storm event, usually in the 10-year ARI time of concentration storm event.
7. Divert water from the structure until vegetation is stabilised properly.

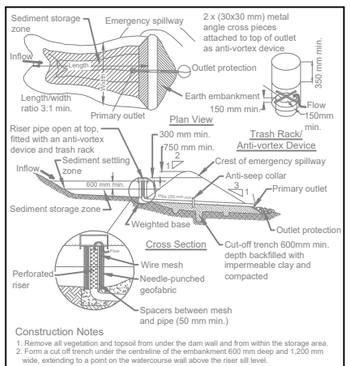
RECP : CONCENTRATED FLOW SD 5-7



Construction Notes

1. Compact the subgrade fill to the density of the surrounding undisturbed material.
2. Prepare a smooth, even foundation for the structure that will ensure that the needle-punched geotextile does not sustain serious damage when covered with rock.
3. Should any minor damage to the geotextile occur, repair it before spreading any aggregate. For repairs, patch one piece of fabric over the damage, making sure that all joints and patches overlap more than 300 mm.
4. Lay rock following the drawing, according to Table 5.2 of Landcom (2004) and with a minimum diameter of 75 mm.
5. Ensure that any concrete or riprap used for the energy dissipater or the outlet protection conforms to the grading limits specified on the SWMP.

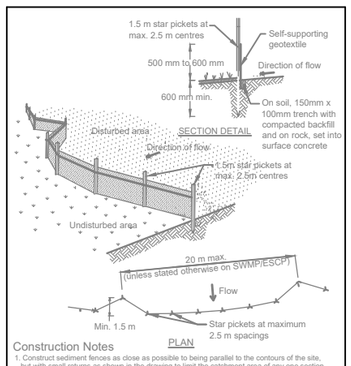
ENERGY DISSIPATER SD 5-8



Construction Notes

1. Remove all vegetation and topsoil from under the dam wall and from within the storage area.
2. Form a cut off trench under the centreline of the embankment 600 mm deep and 1,200 mm wide, extending to a point on the watercourse wall above the riser sill level.
3. Maintain the trench free of water and recompact the materials with equipment as specified in the SWMP to 95 per cent Standard Proctor Density.
4. Select fill according to the SWMP that is free from roots, wood, rock, large stone or foreign material.
5. Prepare the site under the embankment by ripping to at least 100 mm to help bond the compacted fill to the existing substrate.
6. Spread the fill in 100 mm to 150 mm layers and compact it at optimum moisture content following the SWMP.
7. Install the pipe outlet with seepage collars as specified in the SWMP and Standard Drawing 6-3b.
8. Form batter grades at 2(H):1(V) upstream and 3(H):1(V) downstream or as specified in the SWMP

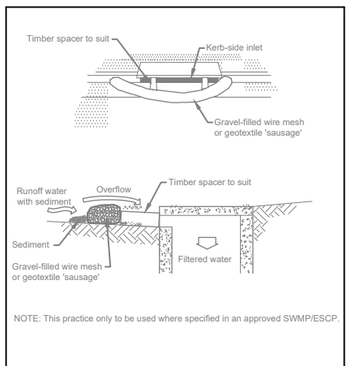
EARTH BASIN - DRY
(APPLIES TO TYPE C SOILS ONLY) SD 6-3



Construction Notes

1. Construct sediment fences as close as possible to being parallel to the contours of the site, but with small returns as shown in the drawing to limit the catchment area of any one section. The catchment area should be small enough to limit water flow if concentrated at one point to 50 litres per second in the design storm event, usually the 10-year event.
2. Cut a 150-mm deep trench along the upslope line of the fence for the bottom of the fabric to be entrenched.
3. Drive 1.5 metre long star pickets into ground at 2.5 metre intervals (max) at the downslope edge of the trench. Ensure any star pickets are fitted with safety caps.
4. Fix self-supporting geotextile to the upslope side of the posts ensuring it goes to the base of the trench. Fix the geotextile with wire ties or as recommended by the manufacturer. Only use geotextile specifically produced for sediment fencing. The use of shade cloth for this purpose is not satisfactory.
5. Join sections of fabric at a support post with a 150-mm overlap.
6. Backfill the trench over the base of the fabric and compact it thoroughly over the geotextile.

SEDIMENT FENCE SD 6-8

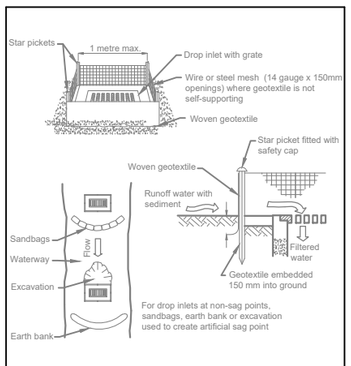


NOTE: This practice only to be used where specified in an approved SWMP/ESCP.

Construction Notes

1. Install filters to kerb inlets only at sag points.
2. Fabricate a sleeve made from geotextile or wire mesh longer than the length of the inlet pit and fill it with 25 mm to 50 mm gravel.
3. Form an elliptical cross-section about 150 mm high x 400 mm wide.
4. Place the filter at the opening leaving at least a 100-mm space between it and the kerb inlet. Maintain the opening with spacer blocks.
5. Form a seal with the kerb to prevent sediment bypassing the filter.
6. Sandbags filled with gravel can substitute for the mesh or geotextile providing they are placed so that they firmly abut each other and sediment-laden waters cannot pass between.

MESH AND GRAVEL INLET FILTER SD 6-11



Construction Notes

1. Fabricate a sediment barrier made from geotextile or straw bales.
2. Follow Standard Drawing 6-8 for installation procedures for the straw bales or geofabric. Reduce the picket spacing to 1 metre centres.

FORMWORK:

1. ALL WORKMANSHIP & MATERIALS SHALL BE IN ACCORDANCE WITH AS3610 & AS3600, EXCEPT WHERE VARIED BY THE PROJECT DOCUMENTATION.
2. THE DESIGN CERTIFICATION & THE PERFORMANCE OF THE FORMWORK SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.
3. DURING CONSTRUCTION SUPPORT PROPPING SHALL BE REQUIRED WHERE THERE ARE LOADS FROM STACKED MATERIALS, FORMWORK & OTHER SUPPORTED SLABS. ONCE THE CONCRETE HAS ACHIEVED ITS NOMINATED 28 DAYS STENGHT, THE IMPOSED LOADS SHALL NOT EXCEED THOSE GIVEN IN THE LOADING TABLE.
4. WITH MULTISTORY CONSTRUCTION, IT IS EXPECTED THAT SUPPORT PROPPING WILL EXTEND A MINIMUM OF 3 LEVELS BELOW THE SLAB BEING POURED. PROP REMOVAL IS TO BE PROGRAMMED SO AS NOT TO OVERSTRESS PREVIOUSLY CAST FLOORS & SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL.
5. THE SUSPENDED SLABS SHALL BE PROPPED UNTIL THE 28 DAYS STRENGTH HAS BEEN ACHIEVED FOR THE SLABS. THE FORMWORK MAY BE REMOVED ONCE 20 MPa STRENGTH HAS BEEN ACHIEVED, HOWEVER THE SLAB WILL NEED TO BE BACK PROPPED UNTIL 28 DAYS STENGTH HAS BEEN ACHIEVED. NO MASONRY OR PARTITION WALLS ARE TO BE CONSTRUCTED ON SUSPENDED LEVELS UNTIL ALL PROPPING IS REMOVED.
6. ALL EXPOSED CORNERS SHALL HAVE A 20mm CHAMFER UNO.
7. ALL FINISHED SHALL BE IN ACCORDANCE WITH THE ARCHITECTURAL SPECIFICATION.

FOUNDATION MAINTENANCE:

1. ALL SOILS ARE AFFECTED BY WATER, SILTS ARE WEAKENED BY WATER & SOME SANDS CAN SETTLE IF HEAVILY WATERED, BUT MOST PROBLEMS ARISE ON CLAY FOUNDATIONS. CLAYS SWELL & SHRINK DUE TO CHANGES IN MOISTURE CONTENT & THE POTENTIAL AMOUNT OF TEH MOVEMENT IS IMPLIED IN THE SITE CLASSIFICATION IN AUSTRALIAN STANDARD AS 2870, WHICH IS SPECIFIED AS FOLLWS:
   A – STABLE (NON – REACTIVE) B – SLIGHTLY REACTIVE
   M – MODERATELY REACTIVE H – HIGHLY REACTIVE
   E – EXTREMELY REACTIVE
2. ALL SITES SHALL BE MAINTAINED AT ESSENTIALLY STABLE MOISTURE CONDITIONS & EXTREMES OF WETTING & DRYING PREVENTED. THIS WILL REQUIRE ATTENTION TO THE FOLLOWING.
3. SITE DRAINAGE: THE SITE SHALL BE GRADED OR DRAINED SO THAT WATER CANNOT POND AGAINST OR NEAR THE HOUSE. THE GROUND IMMEDIATELY ADJACENT TO THE HOUSE SHALL BE GRADED TO A UNIFORM FALL OF 50mm MINIMUM AWAY FROM THE HOUSE OVER THE FIRST METER. THE SUBFLOOR SPACE FOR THE HOUSES WITH SUSPENDED FLOORS SHALL BE GRADED OR DRAINED TO PREVENT PONDING. THE SITE DRAINAGE REQUIREMENTS SHALL BE MAINTAINED.
4. GARDENS: THE GARDENS SHALL NOT INTERFERE WITH DRAINAGE REQUIREMENTS OR THE SUBFLOOR VENTILATION & WEEP HOLES DRAINAGE REQUIREMENTS. GARDEN BEDS ADJACENT TO THE HOUSE SHOULD BE AVOIDED. OVER WATERING OF GARDENS CLOSE TO THE HOUSE SHALL BE AVOIDED.
5. RESTRICTIONS ON TREES / SHRUBS: PLANTING OF TREES SHALL BE AVOIDED NEAR THE FOOTINGS OF THE HOUSE OR NEIGHBORING HOUSE ON REACTIVE SITES AS THEY CAN CAUSE DAMAGE DUE TO DRYING THE CLAY. TO MINIMISE THE POSSIBILITY OF DAMAGE, TREE PLANTING SHOULD BE RESTRICTED TO A DISTANCE FROM THE HOUSE OF:
   – 1.50 x THE MATURE HEIGHT FOR CLASS E SITES.
   – 1.00 x THE MATURE HEIGHT FOR CLASS H SITES.
   – 0.75 x THE MATURE HEIGHT FOR CLASS M SITES
6. WHERE ROWS OR GROUPS OF TREES ARE INVOLVED, THE DISTANCE FROM THE BUILDING SHOULD BE INCREASED. REMOVAL OF TREES FROM THE SITE CAN ALSO CAUSE SIMILAR PROBLEMS.
7. REPAIR OF LEAKS: LEAKS IN PLUMBING, INCLUDING STORMWATER & SEWERAGE DRAINAGE SHOULD BE REPAIRED PROMPTLY.
8. THE OWNERS ATTENTION IS DRAWN TO CSIRO PAMPHLET 'GUIDE TO HOME OWNERS ON FOUNDATION MAINTENANCE & FOOTING PERFORMANCE'. OWNER SHOULD COMPLY WITH THE RECOMMENDATIONS OF THIS PAMPHLET. THE SITE AROUND THE BUILDING PERIMETER & SERVICE TRENCHES ARE TO BE GRADED TO DRAIN AWAY FROM THE BUILDING PERIMETER.

SAFETY IN DESIGN:

1. WORKSPACE HEALTH & SAFETY (WHS) IS IMPORTANT TO VISION ENGINEERS & 'SAFETY IN DESIGN' IS A CORE COMPONENT OF OUR SERVICE. WE RECOGNISE THAT IDENTIFYING DESIGN SOLUTIONS THAT ELIMINATE HAZARDS, NOT ONLY IMPROVES WHS OUTCOMES, BUT ALSO HAS POTENTIAL TO REDUCE COSTS ASSOCIATED WITH FIXING DESIGN PROBLEMS.
2. UNDER THE NEW HARMONISED MODEL OF WORK HEALTH SAFETY LEGISLATION, THERE A RANGE OF NEW LEGISLATION & REGULATORY REQUIREMENTS, SUPPORTED BY A SUITE OF CODES OF PRACTICE CLARIFYING HOW THESE OBLIGATIONS CAN BE MET. VISION ENGINEERS IS COMMITTED TO ITS LEGISLATIVE OBLIGATIONS. THE COMPONENTS DESIGNED BE VISION ENGINEERS HAVE BEEN DESIGNED IN ACCORDANCE WITH RELEVANT AUSTRALIAN STANDARDS & TO MEET THE PERFORMANCE CRITERIA OF THE NATIONAL CONSTRUCTION CODE (NCC). IN THE INSTANCE WE CANNOT FORSEE ANY SIGNIFICANT WHS IMPLICATIONS OR RISKS THAT CAN BE AVOIDED OR MITIGATED BY DESIGN.
3. THE BEAMS, COLUMNS & CONNECTIONS CAN REASONABLY BE EXPECTED TO BE CONSTRUCTED IN ACCORDANCE WITH A CONSTRUCTION PROCESS THAT IS AN 'INDUSTRY STANDARD' CONSTRUCTION PROCESS WITHIN THE CAPABILITIES OF A COMPETENT LICENSED CONTRACTOR. FURTHERMORE, THIS PROCESS IS GENERALLY A LOW RISK OPERATION & THE SITE IN QUESTION DOES NOT POSE ANY UNIQUE RISKS OR HAZARDS. THEREFORE, PROVIDING THAT ALL OTHER PARTIES ASSOCIATED WITH THE DESIGN CONDUCT THEIR DUTIES IN A PROFESSIONAL MANNER & IN ACCORDANCE WITH RELEVANT SAFE WORK AUSTRALIA CODES OF PRACTICE, ALL REQUIREMENTS RELATING TO THE WORK HEALTH & SAFETY ACT 2011 NO. 10 WILL BE SATISFIED.
