ACID SULPHATE SOIL MANAGEMENT PLAN

**35 Crowdy Street, Harrington 2427
Lot 318 DP 754415**

The proposed development is a slab on ground construction with 400mm maximum depth excavation for piers under a portal frame, therefore it is unlikely that any acid sulphate soil will be disturbed. However, if any acid sulphate soil was exposed during excavation, it will be treated with agricultural lime at a ratio of 50kg per tonne of soil or part thereof. The soil will then be spread evenly across the site to a maximum depth of 100mm.

Additionally, it is considered that there will be no impact on the water table.

Should you have any further enquiries, please contact our office on the above number.

Yours sincerely
