SLR Project No.: 630.033021.00001

**RE: Waste Management Plan
Proposed Standalone BESS
6 Euromedah Road, Narromine NSW 2821**

Objectives for the Waste Management:

- To minimise resource requirements and construction waste through reuse and recycling;
- The efficient selection and ordering of resources; and
- To ensure the waste management systems are compatible with the relevant waste collection services.

1.0 Demolition Stage

The proposal does not involve demolition of any structures.

2.0 Construction Stage

Without having a Construction Contractor on site at this stage of the proposal, it is difficult to measure the amount of waste generated and how it is managed, however works required are minimal and Table 2 provides an estimation.

Construction waste will be separated on site by builder's contractors and builder's labourer's during the construction stage. The site needs to be checked on a regular basis to make sure no recyclable materials are mixed with non-recyclable materials; and to set aside on site an area to store the recyclable materials for transportation to local recycling plants.

The site manager will erect a sign on site for waste areas and will inform the builder's staff where material is to be collected for recycling. The site manager and/or builder will impose the execution of the waste separation policy on a regular basis and to have on-going checks.

Stockpiles shall be located and managed appropriately to prevent sediment runoff and ensure minimal environmental impact from the building site.

Suitable all-weather vehicular access points shall be provided for the construction phase, and all sediment and erosion control devices implemented on site prior to commencement of construction works.

It is of note that all construction materials have been ordered to size to minimise waste.

Figure 1 Construction Waste Generation

Type of waste generated	Estimated Volume in m ³	Reuse and Recycling		Disposal
		On-Site	Off-Site	
Metal	<1m ³ (offcuts/surplus)	Cannot be reused on site.	Sent to local metal recycler	
Concrete	<1m ³	Cannot be reused on site.	Unused disposed of at local waste facility by contractor	
Packaging (used pallets and pallet wrap)	<2m ³	Cannot be reused on site.	Pallets reused where possible.	Unused disposed of at local waste facility by contractor
Other waste e.g. pvc plastics, paint, paper / cardboard	<2m ³	Cannot be reused on site.	Paper and cardboard disposed of at local recycling facility	Disposed of at local waste facility

Notes

1. The location of storage of construction waste will be finalised upon engagement of site contractor and tendering process.
2. Quantities to be confirmed upon engagement of site contractor.
3. The site will be fenced off during the construction phase.
