EXECUTIVE SUMMARY

This Social Impact Assessment (SIA) has been prepared for Lidcombe Church Property Pty Ltd to inform the planning proposal for 2 – 36 Church Street (the site). The planning proposal (the proposal) seeks to amend the existing height standards and floor space ratio on site to construct a new integrated residential neighbourhood. The proposal will consist of four new buildings, ranging from 40 to 22 meters, and will include social and private housing and a privately operated child care centre.

Assessing social impacts

An SIA is a specialist study undertaken to identify and analyse the potential positive and negative social impacts associated with a development proposal. Social impacts are those that impact on people's way of life, their culture, community, environment, health and wellbeing, personal and property rights, and their fears and aspirations.

The potential impacts of the proposal are assessed by comparing the consequence of the impact (minimal – extreme) against the likelihood of the impact occurring (rare to very likely). This risk assessment methodology has been used from the International Association for Impact Assessment (IAIA) and the Department of Planning, Industry and Environment (DPI&E) and is outlined below.

Limitations

The risk assessment methodology is a useful tool to assess impacts in a language that can be easily understood. However, this methodology does not reflect the lower level of impact typically associated with urban developments. The risk assessment matrix used by the IAIA and DPI&E is weighted towards a high to extreme rating. This is likely due to its use in high risk environments where the threat to human health is great, such as mining proposals.

For urban development proposals, the likelihood of an impact is typically very likely or almost certain. This results in an impact level that will always be moderate or higher. As such, it is difficult for any positive or negative impacts associated with this proposal to be assessed as a low level impact. Anyone utilising this SIA for the purposes of assessing the proposal should recognise these limitations and not take the assessed impact levels out of context.

			Consequence level				
			1	2	3	4	5
			Minimal	Minor	Moderate	Major	Extreme
Likelihood	A	Very likely	A1	A2	A3	A4	A5
	B	Likely	B1	B2	B3	B4	B5
	C	Possible	C1	C2	C3	C4	C5

	E	Rare	E1	E2	E3	E4	E5

Low		Moderate		High		Very high	
-----	--	----------	--	------	--	-----------	--

Potential Social Impacts

Based on the assessment in this report, the key social impacts of this proposal are considered to be:

- **Availability of social housing:** the provision of social housing units on site will generate a very high positive impact by increasing supply in an area of identified need. This positive impact is expected to directly change people's lives, given the service social housing provides for the most vulnerable people in communities.
- **Change in visual character:** it is expected the proposal will initially have a high negative impact on a small group of residents' visual amenity. This proposal represents a change to the existing height on Church Street and residents in the single story houses opposite will experience a considerable change to their regular outlook which could be met with high concern. However, this is expected to occur in other sites around Lidcombe as the suburb transits to a high density centre in line with strategic directions.

Longer term it is expected the broader community can adapt to this change and will have a low impact on the visual character of the town centre. This is largely influenced by the location of the site in an area highly suitable for density, the design of the buildings to avoid overshadowing residential properties and the inclusion of community uses on site. This will help integrate the proposal with the long term vision for the centre of Lidcombe and is consistent with strategic growth principles.

- **Activation of the site:** the redevelopment of the currently vacant site is expected to have a high positive impact on the local area by activating the site for a mix of residential and community uses and broadening natural surveillance opportunities.

Recommendations are provided below to help further manage and improve the potential impacts arising from the proposal. Based on this assessment and the recommendations provided, it is likely the proposal will generate a positive impact to the local community and the potential changes to the existing visual character can be managed over time.

Recommendations

The following recommendations are provided to further manage the potential impacts from the proposal:

- Prepare an Operational Plan of Management (OPM) as part of the future development application (DA) for the site. The OPM should be undertaken by the social housing provider and document their protocols relating to the social housing residential cohort, support services and building management.
- Consider a flexible residential floor plan or dual key apartments to enable a diverse social housing provision that could include one to three bedroom units in the future. This would be the responsibility of the NSW Land and Housing Corporation to undertake.
- Undertake a Landscape and Visual Impact Assessment as part of the future planning for the site.
- Undertake consultation with the community to provide feedback on the proposal and input to the final design.
- Investigate the need for screening to reduce potential sensitive view receivers and to add to the site amenity.
- Undertake a Crime Prevention Through Environmental Design (CPTED) Assessment during the detailed DA stage to assess and minimise any safety risks. This should consider the facilitation of direct pedestrian access from Building D across Church Street and access movements to and from the proposed child care centre.

1. INTRODUCTION

Urbis Pty Ltd (Urbis) was engaged by Lidcombe Church Property Pty Ltd to prepare a Social Impact Assessment (SIA) for 2 – 36 Church Street, Lidcombe (the site). The SIA is to inform a planning proposal on site to provide an integrated residential neighbourhood including social and private housing and a privately operated childcare centre.

1.1. LEGISLATIVE REQUIREMENT

Section 4.15 of the *Environmental and Planning Assessment Act 1979* (EP&A Act) requires the likely impacts of a development, including social impacts in the locality, to be considered and addressed as part of the planning process.

Cumberland Council currently does not have a policy to guide the preparation of a SIA. This SIA has been informed by best practice guidelines outlined by the International Association for Impact Assessment (IAIA) and the Department of Planning, Industry and Environment (DPIE).

1.2. DEFINING SOCIAL IMPACTS

An SIA is a specialist study undertaken to identify and analyse the potential positive and negative social impacts associated with a development proposal. It involves a detailed and independent study to outline social impacts, identify mitigation measures, and provide recommendations in accordance with professional standards and statutory obligations.

Social impacts are those that impact on people's way of life, their culture, community, environment, health and wellbeing, personal and property rights, and their fears and aspirations. In line with international best practice guidelines, social impacts can involve changes to people's:

- Health and wellbeing
- Economic livelihood
- Safety and security
- Community and belonging
- Environment and surrounds
- Fears and aspirations
- Social equity¹.

1.3. METHODOLOGY

Background review	Impact Scoping	Assessment and reporting
<ul style="list-style-type: none">▪ Review of surrounding land uses▪ Review of relevant state and local policies to understand potential implications of the proposal▪ Analysis of relevant data to understand the existing community.	<ul style="list-style-type: none">▪ Review of site plans▪ Stakeholder mapping▪ Consultation with Council to identify potential impacts.	<ul style="list-style-type: none">▪ Assessment of significant impacts considering management measures▪ Provision of recommendations to enhance positive impacts, reduce negative impacts and monitor ongoing impacts.

¹ Adapted from the International Association for Impact Assessment (IAIA)

2. ASSESSING SOCIAL IMPACTS

The assessment of social impacts can be approached in several ways. The IAIA highlights a risk assessment methodology, whereby the significance of potential impacts is assessed by comparing the consequence of an impact against the likelihood of the impact occurring. This approach is also used in the DPI&E *Social Impact Assessment Guidelines for State Significant mining, petroleum production and extractive industry development* (2017).

This risk assessment methodology is outlined below and has been used in this SIA.

			Consequence level				
			1	2	3	4	5
			Minimal	Minor	Moderate	Major	Extreme
Likelihood	A	Very likely	A1	A2	A3	A4	A5
	B	Likely	B1	B2	B3	B4	B5
	C	Possible	C1	C2	C3	C4	C5
	D	Unlikely	D1	D2	D3	D4	D5
	E	Rare	E1	E2	E3	E4	E5

Low		Moderate		High		Very high	
-----	--	----------	--	------	--	-----------	--

Consequence level

The consequence level of impact considers:

- Who is expected to be impacted, including the volume of people affected and the level of concern they feel about the matter
- When the potential impact will occur and the frequency of potential impacts
- The scale or degree of change from the existing condition as a result of the impact
- The extent to which people or an environment can adapt to or mitigate the impact².

Management measures

Social impacts are assessed before and after the implementation of management measures. Management measures are designed to reduce negative impacts and enhance positive impacts. These measures can take different forms and may be incorporated in the planning, construction or operational stage of the proposal.

Section 7 of this report assess potential impacts prior to management measures as part of the impact scoping phase. Impacts which are assessed as moderate or higher are considered significant and included for further assessment in Section 8. The significant impacts are assessed with any planned mitigation measures to determine the residual impact level.

² Adapted from DPI&E SIA Guidelines 2017

Limitations

The risk assessment methodology is a useful tool to assess impacts in a language that can be easily understood. However, this methodology does not reflect the lower level of impact typically associated with urban developments.

The risk assessment matrix used by the IAIA and DPI&E is weighted towards a high to extreme rating. This is likely due to its use in high risk environments where the threat to human health is great, such as mining proposals.

For urban development proposals, the likelihood of an impact is typically very likely or almost certain. This results in an impact level that will always be moderate or higher.

As such, it is difficult for any positive or negative impacts associated with this proposal to be assessed as a low level impact. Anyone utilising this SIA for the purposes of assessing the proposal should recognise these limitations and not take the assessed impact levels out of context.

3. THE PROPOSAL

The Planning Proposal seeks to amend the *Auburn Local Environmental Plan 2010* (Auburn LEP 2010) to allow the redevelopment of the site for an integrated residential neighbourhood. The proposed development comprises:

- Four residential buildings containing 68 social housing units and 306 privately owned units. The social housing units are intended to be integrated in Building A only.
- Privately operated child care centre (minimum 60 places).
- Basement carparking with approximately 500 spaces.

The site masterplan is shown in Figure 1 to Figure 2 overleaf. The development is part of the Communities Plus Program, which seeks to redevelop Land and Housing Corporation sites throughout NSW into sustainable mixed-use communities. Further information on this program is contained in Section 5.

The Planning Proposal also seeks to amend the height of building standards under Clause 4.3 and the Floor Space Ratio (FSR) standard under Clause 4.4 of the Auburn LEP 2010 as per Table 1.

Table 1 Proposed amendments to Auburn LEP 2010

Development control	Existing max.	Proposed max.
Height of Buildings (HOB)		
Building A	14.9 metres	22 metres
Building B	16.9 metres	34 metres
Building C	22.9 metres	40 metres
Building D	27 metres	40 metres
Floor Space Ratio (FSR)	2.6:1 2.49:1 1.49:1 1.29:1	3:2:1

Voluntary Planning Agreement

A Voluntary Planning Agreement (VPA) is also proposed as part of the Planning Proposal. The proposed VPA comprises a monetary contribution to Cumberland City Council for road upgrades and traffic improvements in the Lidcombe Town Centre. This was considered by Council as a key priority for Lidcombe.

Figure 2 Ground floor plan

Source: Plus Architecture

4. SITE CONTEXT

The site is positioned within the Lidcombe Town Centre, 400m from Lidcombe train station. Lidcombe is identified as a principle town centre and a growing employment node. It has an 'eat street' and night time economy presence, due to the concentration of various food and beverage outlets along the town centre. Aside from food outlets, most facilities in the town centre are local level civic, medical or community services.

The site is currently unoccupied and is located opposite single storey houses and walk up apartments. This dwelling mix is typical of the existing context, where newer, high density housing supply has increased to help meet population growth. St Andrew's Ukrainian School is also located near the site, however this is a language school and is only open on Saturday's from 9am – 1:30pm.

The mix of single storey and high density dwellings also represents the changing nature of the suburb. Lidcombe is currently transitioning from a low-density railway suburb to a transit-oriented development centre in response to growth. This change has resulted in an increase in residential flat buildings and density within the town centre. It is expected this growth and density will continue if strategic directions to increase building heights and change planning controls within Lidcombe are realised.

4.1. SURROUNDING SOCIAL INFRASTRUCTURE

Figure 5 overleaf maps the existing social infrastructure within walking distance (400m) and a 2km radius to the site. Table 1 summarises the facilities within this catchment area as well as key findings from relevant local strategic documents.

Table 2 Social infrastructure review

Category	Findings
Community facility	<p>Cumberland's <i>Community Facility Strategy</i> identifies a deficit of community facilities within Lidcombe. Currently, there are no community facilities north of the railway line (where the site is located) and only three within the catchment area.</p> <p>The Lidcombe Community Centre is co-located with the library and has a maximum capacity for 80 people. The centre is a single hall and is primarily used for events, dances and concerts. The other identified facility - Berala Community Centre – is a newer facility with multi-purpose functionality. The centre is located further from the site and contains a main hall and meeting rooms which can be reconfigured to cater for different capacities.</p>
Library	<p>Lidcombe Library is the only library in the catchment area and is located within walking distance of the site, to the southern side of the station. At 360 sqm, it is the second smallest library in Cumberland LGA and is significantly below the recommended floor space provision. Cumberland's <i>Library Strategy</i> identifies an additional 1,051 sqm of floor space is needed to meet standards.</p>
Open space	<p>Lidcombe generally lacks a network of local level parks and open space, with no open space within walking distance of the site. Most of the open space identified is isolated for sports fields.</p> <p>Remembrance Park, to the south of the station, provides the only formalised seating area and play area near the town centre. There are no playgrounds to the north of the station, near the site. This environment is consistent with the findings of Cumberland's <i>Draft Open Space and Recreation Strategy</i> which identifies a deficit of local parks and playgrounds in Lidcombe.</p>
Recreational facility	<p>The site generally has good access to formalised recreational space. Wyatt Park, to the east of the site, is a significant recreational corridor for the Lidcombe and Auburn communities. The corridor co-locates a range of recreational facilities including Auburn Aquatic Centre, Auburn Basketball Centre, a youth centre, sports fields and several outdoor courts. Phillips Park is also near the site and contains soccer fields and cricket pitches.</p>

Figure 5 Social infrastructure map

Source: Urbis

5. POLICY CONTEXT

A review of relevant state and local policies was undertaken to understand the strategic context of the proposed development and any potential impacts. The complete policy review is contained in Appendix A.

A summary of the key findings from the policy review, as it relates to the proposal, are outlined below:

Table 3 Policy review impact scoping

Theme	Summary of findings
Shortage of social housing	<p>NSW is facing an increasing demand for social and affordable rental housing, with approximately 60,000 households on the waiting list. This demand has largely been driven by an unaffordable private rental market and fewer social housing vacancies. Research also indicates the length of social housing stays are becoming longer, with more than half of all social housing tenants holding a lease for over 10 years.</p> <p>To help increase supply, the NSW Government has partnered with the Land and Housing Corporation to deliver new social housing sites via the Communities Plus program. The proposal is part of this program.</p>
Social housing as integrated developments	<p>Historically, social housing in NSW was concentrated in housing estates. Concentrating social housing largely resulted in poor health and liveability outcomes, with many estates experiencing an increase in crime and unemployment rates.</p> <p>The NSW Government now seeks to integrate social housing with private and affordable housing to help reduce concentrations of disadvantage. Under this model, social housing will look the same as private dwellings and be located close to transport, employment and community services. This model has considerably improved the quality of social housing supply and renewed social housing experiences.</p>
Suitability of Lidcombe town centre for density	<p>As the population grows, new housing supply must be integrated with local services and public transport infrastructure to create more liveable and walkable cities. Town centres provide a key opportunity to increase housing and commercial space in highly connected areas.</p> <p>Lidcombe is identified as a principle town centre in Cumberland's <i>Local Strategic Planning Statement</i>. Its connection to existing public transport provides a key opportunity to increase housing density in an area well connected to NSW city centres (Parramatta and Sydney). This will be critical in achieving the Greater Sydney Commission vision for a 30 minute city. The <i>Draft Auburn and Lidcombe Town Centres Strategy</i> also considers Lidcombe is suitable for increased density, provided higher quality design standards are met.</p>
Increased pressure on local services and infrastructure	<p>The centre of Lidcombe is changing with increases in housing densities and migration rates expected to drive population growth. This is placing pressure on the existing supply of social infrastructure which is already low in the following areas:</p> <p>Open space</p>

Lidcombe currently has a deficit of open space (parks over 0.5 ha) and local level playgrounds. To help address this, Council aims to create a network of smaller spaces that provide a diversity of recreational activities and improved pedestrian connectivity.

Childcare and arts services

There are currently no Council-run education and care services in Lidcombe, which represents a lack of equitable provision to Council services. There is also an identified need for additional arts and creatives spaces, particularly considering Lidcombe's strategic location and highly diverse demographic profile.

Community facilities

There is an existing shortfall of community facility space in the suburb, which will continue to increase with population growth. Council aims to develop a new community hub (incorporating a library, multipurpose community centre and other functions) in the town centre to help meet demand. The existing Lidcombe library site could be considered as a location option.

6. SOCIAL BASELINE

A social baseline identifies the demographic and social characteristics of the existing community. It is an important tool in understanding how a community currently lives and that community's potential capacity to adapt to changes arising from a proposal.

6.1. COMMUNITY PROFILE

A community profile has been developed for Lidcombe suburb based on demographic data from the Australian Bureau of Statistics (ABS Census 2016), DPI&E and the Department of Family and Community Services (FACS). The demographic characteristics of Cumberland LGA and Greater Sydney have been used for comparison purposes. The complete demographic table is contained in Appendix B.

High proportion of young adults

A third of the population is aged 20 – 34 years.

Culturally and linguistically diverse

Most of the population were born overseas (60%) and speak a language other than English (80%).

Family households are dominant

Close to 80% of the population live in family households, with 14% living in lone person households.

Mix of dwellings and densities

Half of all dwellings are separate houses, however high to medium density living is also common, representing 28% of all dwellings.

Regular public transport use

Lidcombe has considerably higher rates of people travelling to work by public transport (37%) compared to the LGA (26%) and Greater Sydney (23%).

High rates of homelessness in the LGA

Cumberland LGA has the second highest rate of homelessness across all NSW LGA's, accounting for 8% of the population.

Long waiting times for social housing

There is a five to ten year wait for studio/one bedroom social housing properties in the Auburn – Granville Allocation Zone. Waiting times increase to over ten years for two to four bedroom properties.

Strong population growth

Population projections indicate the LGA will increase by 23% by 2036. Growth will be experienced across all age groups, with the strongest growth in people over 70 years (80%).

6.2. CRIME AND SAFETY

Crime data from the Bureau of Crime Statistics Research (BOCSAR) indicates Lidcombe generally has a similar or lower rate of crime compared to NSW. The exceptions to this are rates of non-domestic assault and motor vehicle crimes, which are higher than the Cumberland LGA and NSW average.

Most crimes in Lidcombe are concentrated around the train station. This concentration is typical of most stations, due to high volume of people (both residents and visitors) passing through the area at all times of the week.

7. IMPACT SCOPING

A proposal may cause a range of direct and indirect social impacts which can have a positive, negative or neutral impact on the existing environment and community. A SIA should assess the impacts which are considered to have the most significant impacts on the community and identified stakeholder groups.

The following section outlines the impact scoping considerations which were used to inform the determination of significant social impacts. The assessment process used to determine each impact level is described in Section 2.

7.1. IMPACTED COMMUNITIES

Based on the local context and community profile, the following individuals and communities are likely to be impacted by the proposal:

- Lidcombe residents
- Residences on Church Street
- Western Sydney community, particularly:
 - Households on the NSW social housing waitlist
 - Lower socio-economic families.

7.2. STAKEHOLDER CONSULTATION

As part of the SIA process, a phone call was held with Council's Engagement office to understand the local context and potential impacts of the proposal. High level, key findings are summarised below.

Table 4 Summary of consultation

Key area	Detail
Lidcombe community	<ul style="list-style-type: none">▪ The suburb has a high rate of homelessness which has largely been driven by overcrowding.▪ The community is also highly diverse and is fairly young. Students have been attracted to the area given the suburb's location to tertiary education providers (e.g. TAFE, WSU Parramatta).
Suitability of site	<ul style="list-style-type: none">▪ Density of the site is considered appropriate, given the site's proximity to the train station and town centre.▪ The location of the site next to the railway corridor provides a greater separation buffer to existing land uses.▪ Some tenants may not want to have views to Rookwood Cemetery, depending on personal preference.▪ Activation of the broader town centre area could be enhanced. There is limited lighting and pedestrian amenity late at night.
The proposal	<ul style="list-style-type: none">▪ Affordable and social housing is a key need in the area, particularly given the current waiting lists and homelessness rates.▪ The inclusion of community uses on site would be beneficial to the area, considering that they are open to both the public and incoming residents.▪ Future planning may need to include an assessment of school capacity in the area, depending on the size of apartments chosen.

	<ul style="list-style-type: none"> It's recognised that there may be some stigma attached to social housing. However, supply is a key need for the area.
Social infrastructure needs	<ul style="list-style-type: none"> Council's <i>Children's and Family Strategy</i> identified a lack of Council-run child care centres in Lidcombe. Affordable and quality child care places are much needed in the area. Historic community facility provision in Cumberland LGA has resulted in many smaller halls which lack flexibility and are costly to maintain. Council is moving towards the construction of larger, multipurpose facilities. There are plans to construct a new multipurpose community facility in the CBD. The applicant should continue to consult with Council to consider if a monetary contribution may be more appropriate to this facility, given Council's current provision model. Open space should be shaded to allow for cooler areas and greater use.
Pedestrian amenity	<ul style="list-style-type: none"> Church Street is a major road and can be challenging for pedestrians to cross given the roundabouts and split median strips. The proposal should consider how pedestrians will be able to safely navigate this road, without relying on median strips/safety islands. Consideration should also be given to how access to the child care centre will be managed.

7.3. PRELIMINARY ASSESSMENT

Table 5 outlines the social impacts which were considered as part of this SIA. These social impacts have been informed by the contextual information presented in Section 2 to Section 7 of this report.

The social impacts in Table 5 were assessed against the SIA criteria contained in Section 2, without considering management measures.

Any impacts which were assessed as having a moderate or higher impact are considered significant and included for further assessment in Section 8. Social impacts which were assessed as having a low or neutral impact are described below and are not included for further assessment.

Table 5 Impact scoping

Potential impacts	Potentially impacted communities	Preliminary assessment
Neutral to low impacts: not included for further assessment		
Traffic generation from the proposal	Lidcombe residents St Andrews Ukrainian School	<p>The proposal will involve the construction of a new roundabout at Church and Martin Street, as well as new access driveways. The proposal also seeks to provide 500 basement carparking spaces to accommodate the incoming residents.</p> <p>The Traffic Impact Assessment prepared by Stanbury Traffic Planning considers the surrounding road network can accommodate the proposal with reasonable levels of services.</p> <p>As the Traffic Impact Assessment considers there are no traffic issues to prevent approval, the traffic</p>

Potential impacts	Potentially impacted communities	Preliminary assessment
		<p>generation from the proposal is considered to have a low to neutral impact on the community.</p>
Access to facilities and services	Lidcombe residents	<p>The proposal will introduce a new residential population who are likely to require access to open space and social infrastructure facilities.</p> <p>Population growth in Lidcombe is placing increasing pressure on the existing supply of local social infrastructure and open space, with Council identifying a shortfall of parks (over 0.5 ha) and playgrounds in the area.</p> <p>The proposal will seek to accommodate some needs of the incoming population on site, with residents having access to an on-site park as well as a privately operated child care centre. The proposal will also locate residents in a highly connected location, being 400m to Lidcombe train station, providing increased ease of access to surrounding services.</p> <p>As part of the planning for the site, there have been ongoing VPA discussions with Council to allow the proposal to best contribute to the expected facility and service needs in the area. The VPA has progressed from the delivery of on-site, Council managed community facilities to a monetary contribution for transport upgrades. This reflects Council's current preference for meeting key community facility needs in the area.</p> <p>Based on this, the proposal is likely to create a low impact on access to facilities and services, with the proposal providing some on-site services and locating residents in a highly connected location. It's expected the incoming population will still generate demand for new social infrastructure however, the proposal has sought to accommodate the needs of the incoming population and has proposed a VPA which aligns with Council's current priorities for meeting key infrastructure gaps in the area.</p>
Moderate to very high impacts: significant impacts, assessed further in Section 8		
Availability of social housing	<p>Western Sydney community</p> <p>Households on the NSW social housing wait list</p>	<p>Evidence indicates that NSW is facing a shortage of social housing which is impacted on the most vulnerable members of our communities. The proposal will increase the supply of social housing and is likely to have a significant positive impact.</p>

Potential impacts	Potentially impacted communities	Preliminary assessment
		This impact has been included for further assessment in Section 9.
Change in visual character	Lidcombe residents Residents on Church Street	<p>The proposal will introduce a new height limit to the Lidcombe town centre and represents a relatively large land area. The proposed density increase is in line with the strategic directions of the city but will represent a visual change which will be most pronounced on residents immediately opposite the site.</p> <p>This impact has been included for further assessment in Section 9</p>
Activation and connectivity	Lidcombe residents Residents on Church Street	<p>The proposal will redevelop a site which is currently vacant, offering new opportunities to contribute to the broader activation and connectivity of the town centre.</p> <p>This impact has been included for further assessment in Section 9</p>

8. ASSESSMENT OF SIGNIFICANT IMPACTS

The following section provides a detailed assessment of the significant social impacts to the proposal, as identified in Table 5. The significant impacts are assessed with any planned mitigation measures to determine the residual impact level. The assessment process used to determine each impact level (low to very high) is described in Section 2.

8.1. AVAILABILITY OF SOCIAL HOUSING

Description of impact	Impacted groups
Increased social housing supply in Western Sydney	<ul style="list-style-type: none"> Western Sydney community Households on the NSW social housing wait list
Current environment	
<p>Social housing is a critical form of infrastructure for the most vulnerable people in the community. It provides direct housing and social support to people from a range of demographics, including the elderly, carers, families and people with a disability.</p> <p>Evidence from the NSW Government (see Appendix A) indicates that NSW is facing an increasing shortage of social housing. There are currently 60,000 households on the NSW waiting list, with demand primarily driven by an unaffordable private rental market and fewer social housing vacancies. Social housing demand is also high in the local catchment area. Data from FACS indicates there is a five to ten year wait for studio/one bedroom rooms in the Auburn – Granville catchment and over ten years for two, three and four bedroom properties.</p> <p>Historically, social housing in NSW was concentrated in housing estates which resulted in poor health and liveability outcomes. Current planning seeks to integrate social housing with private and affordable housing to reduce concentrations of disadvantage.</p>	
Impact of the proposal	
<p>The proposal will provide approximately 68 social housing units in Building A to help meet the current housing shortage of one and two bedroom units in the local catchment area. The social housing units will be co-located with approximately 306 private residential units across Buildings B – D, in line with current integration models.</p> <p>The proposal will provide these new social housing units in a highly accessible location. Incoming tenants will be within walking distance (400m) to Lidcombe's major public transport hub, being within easy distance to Sydney and Parramatta's employment centres. Incoming tenants can also access the services within the Lidcombe town centre and benefit from the child care centre provided on-site.</p>	
Management measures	SIA recommendations
<ul style="list-style-type: none"> Management of the social housing units by the Department of Communities and Justice (formally FACS) or a Community Housing Provider to ensure provision is maintained equitably and to a high standard. Design of all buildings to be undertaken by Plus Architecture to ensure the exterior all social housing units are consistent with the private, 	<ul style="list-style-type: none"> Prepare an Operational Plan of Management (OPM) as part of the future development application (DA) for the site. The OPM should be undertaken by the social housing provider and document their protocols relating to the social housing residential cohort, support services and building management. Consider a flexible residential floor plan or dual key apartments to enable a diverse social housing provision that could include one to

residential units. The design is also proposed to be of a high quality built form.	three bedroom units in the future. This would be the responsibility of the NSW Land and Housing Corporation to undertake.
Residual impact (considering management measures)	
Likelihood: Very likely	Consequence: Major
Based on the above assessment, it is expected the provision of social housing units on site will generate a very high positive impact by increasing supply in an area of identified need. This positive impact is expected to directly change people's lives, given the service social housing provides for the most vulnerable people in communities.	

8.2. CHANGE IN VISUAL CHARACTER

Description of impact	Impacted groups
Potential change to the visual character of Lidcombe town centre.	<ul style="list-style-type: none"> ▪ Lidcombe residents ▪ Residents on Church Street
Current environment	
<p>Lidcombe is an urban area and is identified as a principle local centre. The suburb has been developed around the train station, with most services concentrated in this CBD area. The CBD area is generally surrounded by low density residential and some walk up apartments. The site is located at the eastern end of the CBD and is currently vacant. It is located opposite single storey houses and medium density apartments, with density increasing moving west towards the city centre.</p> <p>Over the past years, the suburb has been developing in response to population growth. This has seen density in the CBD increase with the construction of multiple medium to high density apartments. However, the <i>Draft Auburn and Lidcombe Town Centres Strategy</i> notes some of these developments have a poor urban quality due to limiting planning controls. Some new developments have a bulky appearance, poor amenity and little usable outdoor space for residents and the public. To help overcome this and align with the strategic direction of the city, the strategy proposes a maximum height limit of 60 metres for the Lidcombe Town Centre. Currently, this strategy has not been adopted by Council.</p>	
Impact of the proposal	
<p>The proposal will introduce four new residential buildings on site, ranging from 40 metres to 22 metres. While residential uses are permitted on site, this will be a considerably higher built form than the existing surrounding uses. This height change will be most pronounced on residents living opposite the site on Church Street.</p> <p>New developments with a higher built form can be a contested land use in any community given the change it represents to the skyline and the potential and/or perceived impacts on amenity and services. However, this tension can be ameliorated by ensuring height is concentrated in appropriate locations, bulk appearances are reduced, and community benefits are increased.</p> <p>The proposal has been designed to maximise new housing supply in a highly connected area, supporting the Greater Sydney Commission's vision for a 30 minute city. In selecting this site, the proposal will integrate new housing in walking distance to public transport, shops and services. Lidcombe town centre has also been identified as suitable for increased density. The proposal aligns with the maximum 60 meter</p>	

height limit which is proposed for the centre. The buildings on site will be stepped, ensuring the bulk of the height is located closest to the town centre.

Being located next to the railway line, many of the potential overshadow impacts to neighbouring properties have been reduced. Shadow diagrams indicate all shadows in mid-winter (at 9am, 12pm and 3pm) will be confined to the railway line. No shadows are expected on the residential properties on Church Street. The Heritage Impact Statement considers the height of the buildings will have an acceptable impact on surrounding heritage items (including the cemetery) and will not change their outcome.

The proposal has also been designed to enhance connectivity with the surrounding area. The buildings are setback from the road and incorporate various public open space and greenery along Church Street. This helps to reduce overshadowing on Church Street and provides an enhanced pedestrian amenity.

Management measures	SIA recommendations
<ul style="list-style-type: none"> Location of the proposal next to the railway corridor, minimising potential overshadowing impacts on residences. Design of the site to incorporate a child care centre to provide public benefit and activate the site. This reduces the potential for the site to become isolated from the community and helps to better integrate the site into the urban fabric. Provision of a large set back from Church Street to reduce the feeling of overshadowing and enclosure on pedestrian users. 	<ul style="list-style-type: none"> Undertake a Landscape and Visual Impact Assessment as part of the future planning for the site. Undertake consultation with the community to provide feedback on the proposal and input to the final design. Investigate the need for screening to reduce potential sensitive view receivers and to add to the site amenity.
Residual impact (considering management measures)	
Likelihood: Likely (initial short term) to Possible (long term)	Consequence: Moderate (short term) to Minimal (long term)

Based on the above assessment, it is expected the proposal will initially have a high negative impact on a small group of resident's visual amenity. This proposal represents a change to the existing height on Church Street and residents in the single story houses opposite will experience a considerable change to their regular outlook which could be met with high concern. However, this is expected to occur in other sites around Lidcombe as the suburb transits to a high density centre in line with strategic directions.

Longer term it is expected the broader community can adapt to this change and will have a low impact on the visual character of the town centre. This is largely influenced by the location of the site in an area highly suitable for density, the design of the buildings to avoid overshadowing residential properties and the inclusion of child care on site. This will help integrate the proposal with the long term vision for the centre of Lidcombe and is consistent with strategic growth principles.

8.3. ACTIVATION OF THE SITE

Description of impact	Impacted groups
Potential for increased activation and connectivity of a vacant site.	<ul style="list-style-type: none"> Lidcombe residents Residents on Church Street

Current environment

The site is one of the largest land holdings in the town centre, stretching for approximately 270 meters. However, the site is vacant and does not provide activation to the broader area. The lack of activity and lighting on site provides limited pedestrian amenity, particularly at night.

The site also borders Church Street which is one of the main vehicle and pedestrian corridors for Lidcombe. A pedestrian path is provided on both sides of Church Street to facilitate access from the station to the nearby residential areas. However, Church Street is a difficult road to cross for pedestrians. The roundabout at Sweet/Church Street and the split median strip at Martin/Church Street creates a challenging and potentially unsafe crossing point.

Impact of the proposal

The proposal will activate a previously vacant site and provide opportunities to contribute to the overall safety of the town centre. Train stations are typically areas of heightened crime. The redevelopment of the site to cater for residents and child care users will provide greater natural surveillance opportunities along the main pedestrian spine to the station. The provision of balconies overlooking Church Street will also increase natural surveillance opportunities. The inclusion of a park and child care centre on site will attract people to use and access the site during the day, when residential sites are mostly vacant.

Management measures

- Provision of general landscaping improvements along Church Street such as tree planting to help soften the built form. This will encourage greater use of the space to and from the town centre.
- Location of the park and child care centre fronting Church Street to encourage activity at the public-facing side of the site, opposed to facing the rail corridor.

SIA recommendations

- Undertake a Crime Prevention Through Environmental Design (CPTED) Assessment during the detailed DA stage to assess and minimise any safety risks. This should consider the facilitation of direct pedestrian access from Building D across Church Street and access movements to and from the proposed child care centre.

Residual impact (considering management measures)

Likelihood: Likely

Consequence: Moderate

Based on the above assessment, the redevelopment of the currently vacant site is expected to have a high positive impact on the local area by activating the site near the Lidcombe Town Centre and broadening natural surveillance opportunities.

9. CONCLUSION

This SIA has been undertaken to assess the potential social impacts arising from the planning proposal at 2 - 36 Church Street. The planning proposal seeks to amend the existing height and floor space ratios to construct a new residential development with social and private housing and a privately operated child care centre.

Based on the assessment in this report, the key social impacts of this proposal are considered to be:

- **Availability of social housing:** the provision of social housing units on site will generate a very high positive impact by increasing supply in an area of identified need. This positive impact is expected to directly change people's lives, given the service social housing provides for the most vulnerable people in communities.
- **Change in visual character:** it is expected the proposal will initially have a high negative impact on a small group of resident's visual amenity. This proposal represents a change to the existing height on Church Street and residents in the single story houses opposite will experience a considerable change to their regular outlook which could be met with high concern. However, this is expected to occur in other sites around Lidcombe as the suburb transits to a high density centre in line with strategic directions.

Longer term it is expected the broader community can adapt to this change and will have a low impact on the visual character of the town centre. This is largely influenced by the location of the site in an area highly suitable for density, the design of the buildings to avoid overshadowing residential properties and the inclusion of community uses on site. This will help integrate the proposal with the long term vision for the centre of Lidcombe and is consistent with strategic growth principles.

- **Activation of the site:** the redevelopment of the currently vacant site is expected to have a high positive impact on the local area by activating the site for a mix of residential and community uses and broadening natural surveillance opportunities.

Section 9.1 below contains recommendations to help further manage and improve the potential impacts arising from the proposal. Based on this assessment and the recommendations provided, it is likely the proposal will generate a positive impact to the local community and the potential changes to the existing visual character can be managed over time.

9.1. RECOMMENDATIONS

The following recommendations are provided to further manage the potential impacts from the proposal:

- Prepare an Operational Plan of Management (OPM) as part of the future development application (DA) for the site. The OPM should be undertaken by the social housing provider and document their protocols relating to the social housing residential cohort, support services and building management.
- Consider a flexible residential floor plan or dual key apartments to enable a diverse social housing provision that could include one to three bedroom units in the future. This would be the responsibility of the NSW Land and Housing Corporation to undertake.
- Undertake a Landscape and Visual Impact Assessment as part of the future planning for the site.
- Undertake consultation with the community to provide feedback on the proposal and input to the final design.
- Investigate the need for screening to reduce potential sensitive view receivers and to add to the site amenity.
- Undertake a Crime Prevention Through Environmental Design (CPTED) Assessment during the detailed DA stage to assess and minimise any safety risks. This should consider the facilitation of direct pedestrian access from Building D across Church Street and access movements to and from the proposed child care centre.

10. DISCLAIMER

This report is dated 3 June 2020 and incorporates information and events up to that date only and excludes any information arising, or event occurring, after that date which may affect the validity of Urbis Pty Ltd (**Urbis**) opinion in this report. Urbis prepared this report on the instructions, and for the benefit only, of LIDCOMBE CHURCH PROPERTY PTY LTD (**Instructing Party**) for the purpose of SIA (**Purpose**) and not for any other purpose or use. To the extent permitted by applicable law, Urbis expressly disclaims all liability, whether direct or indirect, to the Instructing Party which relies or purports to rely on this report for any purpose other than the Purpose, and to any other person which relies or purports to rely on this report for any purpose whatsoever (including the Purpose).

In preparing this report, Urbis was required to make judgements which may be affected by unforeseen future events, the likelihood and effects of which are not capable of precise assessment.

All surveys, forecasts, projections and recommendations contained in or associated with this report are made in good faith and on the basis of information supplied to Urbis at the date of this report, and upon which Urbis relied. Achievement of the projections and budgets set out in this report will depend, among other things, on the actions of others over which Urbis has no control.

In preparing this report, Urbis may rely on or refer to documents in a language other than English, which Urbis may arrange to be translated. Urbis is not responsible for the accuracy or completeness of such translations and disclaims any liability for any statement or opinion made in this report being inaccurate or incomplete arising from such translations.

Whilst Urbis has made all reasonable inquiries it believes necessary in preparing this report, it is not responsible for determining the completeness or accuracy of information provided to it. Urbis (including its officers and personnel) is not liable for any errors or omissions, including in information provided by the Instructing Party or another person or upon which Urbis relies, provided that such errors or omissions are not made by Urbis recklessly or in bad faith.

This report has been prepared with due care and diligence by Urbis and the statements and opinions given by Urbis in this report are given in good faith and in the reasonable belief that they are correct and not misleading, subject to the limitations above.

APPENDIX A

POLICY REVIEW

STATE GOVERNMENT

Greater Sydney Commission – Central District Plan 2018

The Greater Sydney Commission's District Plans divide Greater Sydney into five districts which represent their common locality and planning opportunities. The site is located within the Central District.

The Central District Plan (the District Plan) is a 20year plan to manage growth in the context of economic, social and environmental matters to achieve the 40-year vision for Greater Sydney. The District Plan is guided by four key themes that represent the planning priorities for each district, with ten directions to guide delivery. The planning priorities of relevance to this proposal are summarised below.

Key planning priorities	Relevance to proposal
C3: Providing services and social infrastructure to meet people's changing needs	<ul style="list-style-type: none">▪ A growing population is increasing the demand on existing services and infrastructure. There is a need to better integrate these facilities to help meet demand and contribute to healthier neighbourhoods.▪ New facilities should be accessible with direct walking/cycling connections to encourage healthy lifestyles and facilitate social interaction.▪ The development of shared use, multipurpose, flexible and intergenerational facilities will be essential in ensuring better access and usage of services.▪ Publicly owned land, including social housing in renewal precincts, may provide opportunities to co-locate social infrastructure and mixed uses at the heart of neighbourhoods.
C4: Fostering healthy, creative, culturally rich and socially connected communities	<ul style="list-style-type: none">▪ Social housing should be integrated with private and affordable housing to help reduce concentrations of disadvantage. Social housing should also have good access to transport, employment, community facilities and open spaces to provide a better social housing experience.
C5: Providing housing supply, choice and affordability with access to jobs, services and public transport	<ul style="list-style-type: none">▪ The location, type and cost of housing directly influence a person's quality of life (e.g. commuting time).▪ New housing supply must be coordinated with local infrastructure to create liveable, walkable and cycle-friendly neighbourhoods with direct access to shops, services and public transport.
C0: Delivering integrated land use and transport planning and a 30 – minute city	<ul style="list-style-type: none">▪ The District Plan sets a long-term vision for people to have public transport access to their closest metropolitan or strategic centre within 30 minutes.▪ Integrating land use, transport and infrastructure is necessary to achieve this vision.▪ Encouraging the growth of strategic and local centres will reduce the need for people to travel long distances to access jobs and services.

NSW Government - Future direction for Social Housing in NSW 2016

The Future Directions for Social Housing in NSW sets out the NSW Government's vision for social housing over the next 10 years. The strategy is intended to drive better outcomes for tenants and helping those who are able to transition out of social housing.

The strategy notes that:

- Demand for social and affordable rental housing is increasing. Fewer social housing vacancies and an unaffordable private rental market has driven the growth of the social housing waitlist to 60,000 households.
- The average length of housing stays are also becoming longer, with more than 50% of people in social housing holding a lease for more than 10 years.
- Approximately 40% of social housing in NSW are located in concentrated housing estates. Many estates experience high levels of crime, unemployment, domestic violence, poor educational outcomes and associated child protection issues. The strategy notes improving the physical environment, including access to infrastructure, parks and community facilities can help to address this, as well as providing better support to employment and training opportunities.

To help meet demand, the NSW Government has launched Communities Plus in collaboration with the Land and Housing Corporation to fast track social housing developments. The new social housing developments will be modern, look the same as neighbouring private dwellings and be close to transport, employment and other community services. It aims for large redevelopments to target a 70:30 ratio of private to social housing to enable more integrated communities.

LOCAL GOVERNMENT

Cumberland Council – Cumberland 2030: Our Local Strategic Planning Statement 2019

Cumberland's *Local Strategic Planning Statement (CLSPS)* set outs that LGA's economic, social and environmental land use needs over the next 10 years. It sets out clear planning priorities about what will be needed (such as jobs, homes, services and parks) and actions to deliver the priorities for the community's future vision.

As part of the CLSPS process, the community were asked to provide feedback on how they wanted the LGA to look like in the future. Key community feedback of relevance to this proposal include:

- Sense of community and liveability of the area
- Equality and access to infrastructure and services
- High quality and diverse range of green spaces
- Jobs close to home
- A strategic approach to planning and development that results in positive outcomes for the community.

The CLSPS recognises the importance of town centres in delivering a range of services and facilities to support future growth. Town centres provide community life, retailing and entertainment and provide a highly valued cultural atmosphere. Lidcombe is identified as a principle local centre, with "popular eat streets and vibrant night time economy". It's also growing as a key employment generating centre due to its strategic location.

Key planning priorities which support the vision of Cumberland and of relevance to this proposal include:

- Delivering housing diversity to suit changing needs
- Delivering affordable housing suitable for the needs of all people at various stages of their lives
- Designing vibrant and attractive town centres
- Providing high quality, fit-for purpose community and social infrastructure in line with growth and changing requirements.

Cumberland Council – Cumberland Community Strategic Plan 2017 – 27

Cumberland's *Community Strategic Plan* sets out the community's vision for the future; the strategies in place to achieve it, and how progress towards or away from the vision will be measured. Cumberland community's vision for the future is to "Welcome, Belong, Succeed".

Key outcomes of relevance to this proposal to achieve this vision are:

- We have high quality community facilities and spaces that fit our purposes
- We feel safe in all areas of Cumberland at all times
- We have equal access to local services and facilities
- We have great natural and green spaces that suit a variety of uses
- We have access to jobs locally and in our region
- Our planning decisions and controls ensures the community benefits from development.

Cumberland Council – Draft Auburn and Lidcombe Town Centres Strategy 2016

The *Draft Auburn and Lidcombe Town Centre Strategy* will be used to inform the preparation of a planning proposal to amend the zoning, floor space and height controls for these town centres. It has been prepared in response to the current development which, while meeting minimum requirements, didn't provide the expected aesthetic or functional contribution to the centres. It became apparent that there is a disconnect between heights and floor space ratios (FSR), with heights often insufficient to encourage the quality of design anticipated.

The strategy makes the following observations for Lidcombe's built form:

- Shop top housing is the predominant form of housing in the town centre. Residential flat building and lower density housing surround the town centre. There is an opportunity to provide a greater variety of housing, including both affordable housing and live-work opportunities.
- Improving the connectivity for all users across the rail line and within the centre will be critical to achieving a cohesive functioning town centre in the future.
- There is an identified need to increase the retail convenience offerings for the local population, especially for a supermarket within the town centre.
- Across the Lidcombe and Auburn town centres, some developments have sought to maximise the floor space within the limited heights by filling as much of the site as possible. This has resulted in a bulk appearance, poor amenity and little useable outdoor space at the ground level for both residents and the public.

Cumberland Council – Draft Open Space and Recreation Strategy 2019 – 2029

Cumberland's *Open Space and Recreation Strategy* provides a 10 year direction for open space, sport and recreation services and facilities. The strategy's principles, strategic directions and actions focus on achieving social inclusion, connectivity, health and wellbeing, increased sport and recreation participation and social and environmental sustainability within Cumberland.

The strategy identifies Lidcombe has a deficit of open space, with poor access to parks over 0.5 ha in size. Phillips Park is the only identified open space which serves the population of Lidcombe North. To help minimise this deficit, the strategy provides the following priorities:

- Expanding the size of existing open space (e.g. through the acquisition of adjoining sites)
- Improving the pedestrian access to existing open space (e.g. through active street networks or connecting up parks)
- Creating a network of smaller spaces that provide a range of recreation functions with active street connections between.

The strategy also notes there is a current and future need for more local play spaces and additional off-leash areas in Lidcombe.

Cumberland Council – Community Facilities Strategy 2019 – 2029

Cumberland's *Community Facilities Strategy* provides direction for Council's programming, management, planning and provision of community facilities over the next 10 years.

Key findings of relevance to Lidcombe include:

- There is an existing shortfall of community facility space, which will increase with population growth. To overcome this, Council have implemented a key action to investigate the opportunity to develop a community hub (incorporating library, multipurpose community centre and other functions) within the Lidcombe Town Centre. As an option, this could be considered through the redevelopment of Lidcombe's existing Library and Community Centre site.
- There is a need for additional arts and creative spaces across the LGA, with particular need in Lidcombe. Industry benchmarks also indicate the need for a multipurpose performing arts or cultural centre in Cumberland.
- There are no Council-run education and care services in Lidcombe. This represents a lack of equitable access to Council's services for the community. The majority of Council's education and care services are focused in the western and central sections of the LGA.
- All of Council's libraries (except Granville library) will be undersized in the future. Local infrastructure contributions can contribute to the expansion or redevelopment of libraries in high growth areas (e.g. Lidcombe).

Cumberland Council – Children and Families Strategy 2019 – 2023

Cumberland's Children and Families Strategy provides a four year direction for the provision of education and care services. The strategy aims to ensure Council is collaboratively planning for the growing and changing needs, interests and aspirations of children and families in Cumberland.

Key findings of relevance to the proposal include:

- Lidcombe North will have the fourth highest growth of children (0 – 4 years) and primary school children (5 – 12 years) in the LGA.
- Based on benchmarks there is a current gap of 1,014 places for children aged 0 – 5 years for centre-based care. By 2036, this gap will extend to 2,864 places.
- Council will investigate opportunities to provide additional Council operated education and care services in the eastern section of the Cumberland area.

Socio Economic Indexes for Areas (SEIFA)

The Socio-Economic Indexes for Areas (SEIFA) has been developed by the Australian Bureau of Statistics (ABS) to provide an overview of social and economic wellbeing and welfare of communities across a range of spatial scales. Four indices have been developed. The Index of Relative Socio-Economic Advantage and Disadvantage is a continuum of advantage (high values) to disadvantage (low values) and is derived from Census variables related to both advantage and disadvantage.

The area with the lowest score is given a decile of 1, the area with the second lowest score is given a decile of 2 and so on, up to the area with the highest score is given the highest decile.

Table 7 SEIFA Index

Advantage and Disadvantage
