1. INTRODUCTIONS

1.1 General

AssetGeoEnviro (Asset) were engaged by Munro Operations Trust to conduct a Preliminary Site Investigation (PSI) at a proposed development for 138 -142 Cronulla Street, Cronulla, NSW which is legally identified as Lot 1 to 4 in DP 18461 (~1.47ha) and located within the municipality of The Sutherland Shire Council (the site). The site area is shown in Figure 1 (**Appendix A**). This follows on from a previous Geotechnical Investigation for the site by Asset (Ref 5533-G1 dated 6 May 2019).

The EPA will generally require a PSI:

- where the land the subject of the development proposal is not currently being used for a sensitive land use and a more sensitive land use at the site is now being proposed; or
- where potentially contaminating activities are being undertaken or have been undertaken on the land; or
- where the historical uses of the site or historical activities at the site are unknown or unclear.

Moreover, Planning authorities are required to consider the potential for land to be contaminated, and the impacts of that contamination on the suitability of the land for proposed uses, by:

- the Remediation of Land SEPP when determining development applications; and
- a Ministerial Section 117 Direction when preparing environmental planning instruments.

Architectural plans have been provided prepared by Innovate Architects, Project No 2627, Sheet 01 to 31, dated August 2019. Based on these plans, we understand that the project involves the construction of seven storey mixed-use building with up to three level basements. There is a reported unlined rock sewer tunnel across the site, located at depth about 9.5m below ground level (mbgl). The sewer is approximately 1.8m high and 1.2m wide. It is believed to have been completed in 1956.

Soil disturbance will involve removal of the soil from the entire site area except for a 3m wide setback along the eastern boundary. Rock excavation for the basement levels is proposed down to approximately RL 8.2m AHD (FFL of RL 8.7m less 0.5m nominal for floor slab) across the entire site except for the 3m eastern boundary setback, and then down to RL 5.0m AHD (FFL of RL 5.5m less 0.5m nominal for floor slab).

Figure 2 (**Appendix A**) shows the lowest basement level and the approximate sewer tunnel location.

1.2 Objective of the PSI

The preliminary site investigation report should:

- identify all past and present potentially contaminating activities
- identify potential contamination types
- discuss the general site condition
- provide a preliminary assessment of site contamination
- assess the need for further investigations

The objective of the PSI was to establish the presence of contamination from potential impacts by Chemicals of Concern (COC) to underlying soil or groundwater related to current or historical uses at the site and on the surrounding land. This assessment was aimed at fulfilling Council's requirements to provide recommendations in accordance with the provisions of State Environmental Planning Policy No. 55 (SEPP 55) regarding site's suitability for the proposed development.

1.3 Scope of Work

The following scope of work was carried out:

- review of soil, geology, and groundwater information for the area to assess the environmental setting of the site and assess the transport of potential Chemical of Concern (COCs);
- review of NSW Environment Protection Authority (EPA) registers to identify any related existing environmental notices and licences issued under the Protection of the Environment Operations Act 1997 (POEO Act) regarding contaminated land or the environment;
- review of historical aerial photographs to identify past site uses;
- carry out a site inspection to identify any potential existing sources of COCs;
- derivation of the general Conceptual Site Model (CSM) of contamination and exposure for the site users under the proposed development, including undertaking of the data gap analysis;
- a search of relevant Council records/documents if existed for information relating to operational site history in regard to any environmental incidents;
- a search of groundwater bore records held by the EPA;
- provide a PSI report detailing the summary of the findings of our investigation consideration as to whether the site is suitable for the proposed development and recommendations for any additional investigation works, remediation or management if required.

This report must be read in conjunction with the attached "Important Information about your Environmental Report" in **Appendix E**. Attention is drawn to the limitations inherent in site investigations and the importance of verifying the subsurface conditions inferred herein.

2. PRELIMINARY ENVIRONMENTAL ASSESSMENT

2.1 Site Identification

Site details are summarised in the **Table 1** following:

Table 1 - Site Details

Address	138 -142 Cronulla Street, Cronulla, NSW, 2230.
Cadastral Description	Lot 1 to 4 in DP 18461.
Land Area	(~1.47ha)
Local Council Authority	The Sutherland Shire Council
Adjoining Land Uses	North – commercial core (B3) East – mixed residential (high-rise) + commercial (B3) West – road + rail line (B3) South – Park- Public Recreation (RE1)
Site Location / Site Layout	Figures 1 and 2

2.2 Soil, Geology

AssetGeoEnviro were engaged by Shakeup Architecture to conduct a Preliminary Site Investigation (PSI) at a proposed development for 138 -142 Cronulla Street, Cronulla, NSW which is legally identified as Lot 1 to 4 in DP 18461 (~1.47ha) and

The Wollongong – Port Hacking 1:100,000 Geological Map indicates that the site is underlain by Hawkesbury Sandstone. A generalised geotechnical model for the site has been developed from the previous Geotechnical Investigation and is shown in **Table 2**. For more details in regard to the Australian Soil Classification System (ASC) information, please refer to **Appendix B**. The soil stratigraphy in the two locations investigated on site as part of the geotechnical investigation (AssetGeoEnviro Sep 2019) was identified as comprising:

Table 2 – Soil Profile Details

Unit	Origin	Description	Depth to Top of Unit ¹ (m)	Unit Thickness ¹ (m)
1	Fill	Asphalt and concrete pavement.	Ground surface	0.05 - 0.3
		Gravelly Sandy CLAY/ Sandy CLAY, dark brown/dark red brown mottled dark grey, low to medium plasticity; fine to medium grained, gravel, subangular; trace ironstone fragments.	0.05	0.65
2	Residual/ Natural	Sandy CLAY/CLAY, brown/pale grey mottled orange/red, low to medium plasticity, stiff to very stiff; trace sandstone fragments.	0.3 - 0.7	3.8 - 4.8
3a	Bedrock ²	SANDSTONE, pale grey/grey/red mottled orange/purple/dark grey, fine to medium grained, BP0° to 30°, poorly developed layering, thinly laminated to laminated, highly to moderately weathered, low to medium strength, assessed to be Class 5 and 4 Sandstone.	4.5 - 5.1	1.6 - 2.1
3b	Bedrock ²	SANDSTONE, pale grey mottled grey, fine to medium grained, BP0° to 20°, poorly to well-developed layering, thinly laminated to laminated, slightly weathered, medium strength becoming better with depth, assessed to be Class 3 Sandstone or better.	6.7 - 6.8	Not proven

Notes:

1. The depths and unit thicknesses are based on the information from the test locations only and do not necessarily represent the maximum and minimum values across the site.
2. Rock classification to Pells, P.J.N., Mostyn, G. & Walker, B.F., Foundations on Sandstone and Shale in the Sydney Region, Australian Geomechanics Journal, December 1998.

Based on the soil, geological and hydrogeological review, the site is situated over an area with up to 0.6 metres of fill overlaying residual Clay. Based upon this information, the potential migration of COCs (if existed) within this geological system is considered to be very low.

2.3 Groundwater and Hydrogeology

Based on previous geotechnical investigation conducted on this site, groundwater was not observed in the boreholes during auger drilling to depths of 4.5m to 5.1m bgl. Due to the introduction of water whilst coring, observation of groundwater inflow/levels below auger termination depths was not possible.

It is noted that the groundwater observation may have been made before water levels had stabilised. No long-term groundwater monitoring was carried out. Groundwater is likely to be confined to open joints in the sandstone and will locally be under-drained by the reportedly unlined sewer tunnel.

The observations indicate that groundwater is unlikely to be a constraint to the proposed development

2.4 Registered Groundwater Boreholes

There are no registered groundwater boreholes on this site. The next closest registered Groundwater bore is almost 333 meters-North (refer **Appendix B**, Page 99).

2.5 NSW EPA Registers

A search of the NSW EPA Contaminated Land database for the property was conducted as part of this PSI. The NSW EPA does not hold records of notification of this site to NSW EPA as a contaminated site under Section 60 of the CLM Act (1997).

The list only contains contaminated sites that EPA is aware of, with regard to its regulatory role under the CLM Act. It is important to mention that, an absence of a site from the EPA contaminated land registry list does not necessarily mean the site is not contaminated. The site may have been notified to the EPA but not yet assessed, or contamination may be present, but the site is not yet being regulated by the EPA. Further information about particular sites may be available from the appropriate planning authority, for example, on a planning certificate issued by the local council under section 149 of the Environmental Planning and Assessment Act.

Hence, if a site does not appear on the record it may still be affected by contamination. For example:

- Contamination may be present, but the site has not been regulated by the EPA under the Contaminated Land Management Act 1997 or the Environmentally Hazardous Chemicals Act 1985.
- The EPA may be regulating contamination at the site through a licence or notice under the Protection of the Environment Operations Act 1997 (POEO Act).
- Contamination at the site may be being managed under the planning process.

2.6 Search of Public Register of POEO Licenses

A search of the public register of licenses issued under the Protection of the Environment Operations Act 1997 (POEO) did not identify any licences or notices issued for the site. SYDNEY TRAINS is the only Licensed activity under the Protection of the Environment Operations Act 1997, within 39 meters-North West.

2.7 Review of Historical Aerial Photographs

A review of historical aerial photographs from 1943 to 2019 was undertaken as part of this assessment. Details of the photographs reviewed, and the key findings of our review are given in **Table 3** with reviewed aerial photographs presented as part of the LOTSEARCH Report (**Appendix B**).

Table 3 – Historical Aerial Photographs Review

Source	Photograph Details	Onsite Uses	Offsite Uses
LOTSEARCH	Date: 1943	Vacant Land + two small structures on site	South: Park West: ralline (not established yet) + road East: vacant land North: Scattered building structures
	Date: 1956	Nothing changed from the 1943 aerial photograph.	South: Park West: ralline (established) + road East: few subdivisions appeared North: Scattered building structures
	Date: 1961	Northern side subdivided. Minor structures appeared on subdivided lot. No other discernible changes noted at this site from the 1956 photograph.	South: Park West: ralline + road East: residential/structures appeared within subdivisions North: more building/structures built
	Date: 1965	Nothing changed from the 1961 aerial photograph.	South: Park West: ralline + road East: more residential/structures developed within subdivisions North: more commercial building/structures built
	Date: 1970	Nothing changed from the 1965 aerial photograph.	South: Park West: ralline + road East: more residential/structures developed within subdivisions North: more building/structures built
	Date: 1984	Nothing changed from the 1970 aerial photograph.	No other discernible changes noted at this site from the 1970 photograph.
	Date: 1994	No other discernible changes noted at this site from the 1984 photograph.	No other discernible changes noted at this site from the 1984 photograph.
	Date: 2005	Main/now commercial building/structure appeared on site + car park to north	No other discernible changes noted at this site from the 1994 photograph.
	Date: 2007	Commercial No significant changes from the 2005 aerial photograph.	No other discernible changes noted at this site from the 2005 photograph.
	Date: 2014	Commercial No significant changes from the 2007 aerial photograph.	No other discernible changes noted at this site from the 2007 photograph.
	Date: 2018 & 2019	Commercial No other discernible changes noted at this site from the 2014 photograph.	No other discernible changes noted at this site from the 2014 photograph.

2.8 Historical Business Directories

Review of historical business listings between 1950,1961,1970,1975,1978,1982 and 1986 for the site and neighbouring properties did not reveal any information regarding potential contaminating activities. The dominant commercial nature of the site over the years includes restaurants and take away foods, groceries, property management, real states and medical practitioners.

2.9 WorkCover NSW Dangerous Goods Search

No dangerous goods search was undertaken for this site, however, the presence of historical storage of significant quantities of dangerous goods is considered very low.

2.10 Acid Sulfate Soil

Atlas of Australian Acid Sulfate Soils Data Source-CSIRO- (**Appendix B**, page. 112) states that the probability of occurrence of Acid Sulfate Soils (ASS) on this site is Extremely Low (1-5% chance of occurrence with occurrences in small localised areas).

2.11 Naturally Occurring Asbestos Potential

No records of potential Naturally Occurring Asbestos (NOA) found in the dataset buffer.

2.12 PFAS Investigation

This site is not included in any of the PFAS Investigation Sites register under EPA, Department of Defence (DoD) and/or Airservices Australia National PFAS Management Program.

2.13 Site Inspection

The site is located on the eastern side of Cronulla Street, as shown in **Appendix D**. The site is bounded to the west by Cronulla Street, to the east by Surf Lane, to the north by commercial building and to the south by Beach Park Avenue.

This site was inspected in two occasions, once at the time of the previous investigation (2019.04.26) which was occupied by a single-storey brick and brick-rendered commercial buildings with car park. There were cracks observed on car park asphalt and concrete paved area and multiple cracks observed on retaining wall at south-west corner of car park, but the buildings appeared otherwise to be in good visual condition. On the second occasion (03/11/2019), site induction was conducted mainly for the purpose of meeting/interview locals (part of desktop investigations) to gain more insight of the site history. The Monro Park on south remained unchanged since 50s. The current site occupiers are mainly commercial/restaurant business while some were operating since approximately a decade ago.

Topographically, the site is located on flat to gently sloping terrain. The overall ground surface slopes in the region are about 2°. No construction detail/pertaining reports have been made available with regards to this site. No trace of any potential fill (potential source of contamination) materials was noted to have been present at the time of inspection.

2.14 Conceptual Site Model (CSM)

A Conceptual Site Model (CSM) summarises the expected site conditions at and surrounding the Site, as they relate to Site contamination and potential risks to human health and the environment. In summary, the CSM for the Site identified a range of potentially contaminated media and exposure pathways.

If required, a CSM will be developed based on the findings of the background information review, field observations, COC and Area of Environmental Concern (AEC). The CSM involves the assessment of environmental/human health risk based on a contaminant (source) – pathway – receptor methodology. Where there is a complete linkage between the source-pathway-receptor, then there is potential for a risk to exist. Where the linkage is not present, there is no potential for a risk to exist. The SPR for the conceptual site model is summarised in **Table 4**.

Table 4 – General Conceptual Site Model (CSM)

Conceptual Site Model (CSM)	
Source of Contaminant	A substance that has the potential to cause harm to a receptor. In a broader sense, sources can include particular ground conditions, for example, redundant footings within the ground, which have the potential to impact on redevelopment proposals. Other sources include former industrial activities, contaminated soil and groundwater, vapours derived from these sources, buried waste and from historical use of substances such as pesticides and herbicides
Exposure Pathways	The route by which the source is brought into contact with the receptor. This can include the transport of contamination via water and subsequent ingestion, inhalation of dust and vapour and through dermal contact. The exposure to a contaminant may consist of one or more pathways, but in general, a single pathway will dominate.
Potential Receptors	Human beings, other living organisms, physical systems and built structures that could be affected by the source. A receptor will only be affected if a pathway from the source to the receptor is complete and a pollutant linkage established. Groundwater and surface water systems can be considered as receptors in their own right as their quality is regulated by statutory bodies, as well as being pathways for contaminant migration to other receptors.

2.14.1 Sources

Potential current and historical sources of Chemical of Concern (COCs) that may have resulted in COC impact at the site include:

- Hazardous building materials and fibre cement fragments if found on site/buildings.
- Potential presence of uncontrolled fill material beneath the site.
- Internal and external painted surfaces in relation to any building structure on site.
- The potential presence of the underground or aboveground fuel storage system.

Current site activities are considered to pose a low environmental risk with no significant sources of COCs identified apart from the above items.

Potential COCs associated with the above source include (Soil and water):

- Heavy metals, TRHs, BTEXN, PAHs, PCBs, OCP/OPPs, PCBs, Phenolic compounds, VOCs and ACMs.

COC	Context
Asbestos Containing Material (ACM), Asbestos Fines (AF) and Fibrous Asbestos (FA)	Due to the long history of ACM use in Australia, and the persistence of ACM in the environment, there is a potential for ACM on Site, particularly within the illegally dumped stockpiles and the hut or any fill materials.
Metals/metalloids and Heavy Metals	Anthropogenic impacts may be associated with the deterioration of metallic objects and application of pesticides/herbicides (arsenic). Elevated metal concentrations may be present in fill associated with practices described above due to some historical industrial activities on neighbouring sites.
Organochlorine Pesticides (OCP), Organophosphorus Pesticides (OPP), Herbicides and Pesticides	OCPs are persistent and bioaccumulative in the environment. They were formerly used as pest control for crops, livestock and buildings. OPPs are slightly less persistent and have been used since the banning of OCP in Australia. OCP/OPPs may have been potentially used on the Site to manage weeds.
Benzene, toluene, ethylbenzene, xylenes (BTEX) and other Volatile Organic Compounds (VOCs)	Volatile organic compounds (VOC) present in petroleum-based fuels, oils and solvents in general solvents, paint strippers, rubber cements and other industrial compounds. Potential for impacts vis spills/leaks from vehicles/machinery operating within the Site.
Polycyclic aromatic hydrocarbons (PAH)	PAHs can occur naturally in crude oil, coal and incompetently oxidised carbon materials (wood, coal, diesel etc.) and ash. Used in the production of bitumen and asphalt material.
Total Petroleum and/ Recove rable Hydrocarbons (TRH)	TRHs are predominantly present in fuels (petrol, diesel, and kerosene) solvents, oils, fats and other organic matter. Potential for TPH impacts vis spills/leaks from vehicles/machinery operating within the Site.

2.14.2 Exposure Pathways

There is a potential for inhalation, dermal contact or ingestion of potentially impacted materials on site if existed.

2.14.3 Potential Receptors

The potential receptors of COCs onsite include:

- Site users including workers, visitors, occupants (human health risk) – there is a potential to be affected by COCs via any of the exposure pathways (dermal, ingestion or inhalation) during the proposed development and associated excavation works as well as during future anticipated site uses.
- The risk to the Terrestrial and aquatic ecological receptors (be a potential receptor of significant concern) are considered to be low due to the nature of proposed development and relatively small proposed unsurfaced areas upon completion as well as the lack of significant onsite vegetation (excluding the surrounding areas) and highly disturbed urban environmental setting. However preliminary screening against the ecological criteria should be considered.

2.14.4 Potential Risk

Risk will be assessed by using the source, pathway and receptor model. A risk can only be present for a specific scenario if there is a complete, source, pathway and receptor linkage onsite. That is, if there is a source of contamination (if existed) in excess of the nominated investigation level and if there is a complete pathway of exposure to that contamination by a receptor, then there is a potential risk. The magnitude of risk depends on the consequence of the exposure.

Based on the general conceptual site model (CSM) there considered to be a low potential risk to human health and ecological receptors due to no clear historical activities which were potentially contaminating across the site.

3. CONCLUSIONS AND RECOMMENDATIONS

3.1 Summary

This PSI report has been prepared with the objective of identifying any potential contamination issues which may impact on the proposed development. The PSI includes a historical summary of previous reports (where available), historical aerial photographs, titles and any other historical information sources, NSW EPA Contaminated Land Search and a site inspection. All data was used in the development of a general Conceptual Site Model (CSM). Review of historical business listings identified no previous uses at the site that may potentially cause contamination (mainly commercials). Hence, no Area of Environmental Concern were identified for this site.

3.2 Data Gaps

Following completion of this assessment a number of data gaps still exist for this site which are summarised as follows:

- Lack of information available regarding the history of Hazardous Chemicals and Dangerous Goods which may have potentially been kept on site.
- A search of Stored Chemical Information Database (SCID) held by WorkCover NSW for any Underground Storage Tanks (USTs) presence needs to be conducted even if the risk of any potential historical storage of significant quantities of dangerous goods is considered unlikely.
- No soil chemical data available for the areas of the site currently overlayed by buildings.
- A land title search, also to be conducted through NSW Land and Property Information to review any previous site uses other than public school if ever existed.
- No groundwater chemical data available for the site.
- No preliminary or detailed site investigations have been conducted for the area covered by this PSI. As such, there are no reports available with site-specific information which may have assisted with us the PSI drafting.
- As there were no known previous environmental investigations which have been conducted on the site, there were no specific areas of COCs to target.
- This report was prepared assuming that no other potentially contaminating activities were occurred on site that have not been documented/recorded.
- This report was prepared assuming that no other potentially contaminating activities such as illegal dumping, importing contaminated fill, etc. were occurred on the neighbouring site nor within the Monro Park.

The results from the historical searches indicated that the proposed future development does not intersect any potential contamination sources (low risk). Based on the findings from a review of the available information and site inspection, there does not appear to be any documented source(s) of contamination.

3.3 Recommendations

Where a site history demonstrates that site activities have been non-contaminating, there may be no need for further investigation or site sampling. However, where contaminating activities are suspected or known to have occurred, or if the site history is incomplete, it may be necessary to undertake a preliminary sampling and analysis program to assess the need for a detailed investigation.

AssetGeoEnviro considers that the site as described in Section 2.1 of this report can be made suitable for the proposed development provided that following recommended actions are undertaken:

- Completion of a search of the Dial Before You Dig (DBYD) database prior to any excavation/earthworks on site.
- Any materials especially fill proposed to be excavated and disposed offsite during proposed development works must be classified in accordance with the NSW EPA (2014) Waste Classification Guidelines, prior to offsite disposal to an appropriately licenced waste management / landfill facility.
- The excavation for the proposed development is anticipated to be partially within soils, and mostly within sandstone bedrock. Excavation within the soils and extremely weathered bedrock would be achievable using conventional earthmoving equipment (i.e. hydraulic excavator bucket).
- Should any material to be imported to site for any purposes, it should be assessed for potential contamination in accordance to NSW EPA (2014), to confirm suitability for intended uses or to be classified as Virgin Excavated Natural Material (VENM).
- Prior to commencement of buildings demolition works A hazardous materials assessment/survey must be conducted to confirm the hazardous materials are not present. Should any materials be identified, it should be managed appropriately manage to prevent any cross contamination across the site and materials to be taken off-site.
- Any fill materials to remain on site (especially within the 3m wide eastern part of the site) following the earthworks/excavation must be sampled/analysed for potential contamination content. Consideration should be given to the separation of all identified potentially impacted fill materials from the remainder of natural/residual excavated materials across the site during the proposed development works, to prevent the potential cross contamination.

4. LIMITATIONS

This report has been prepared by AssetGeoEnviro in response to and subject to the following limitations:

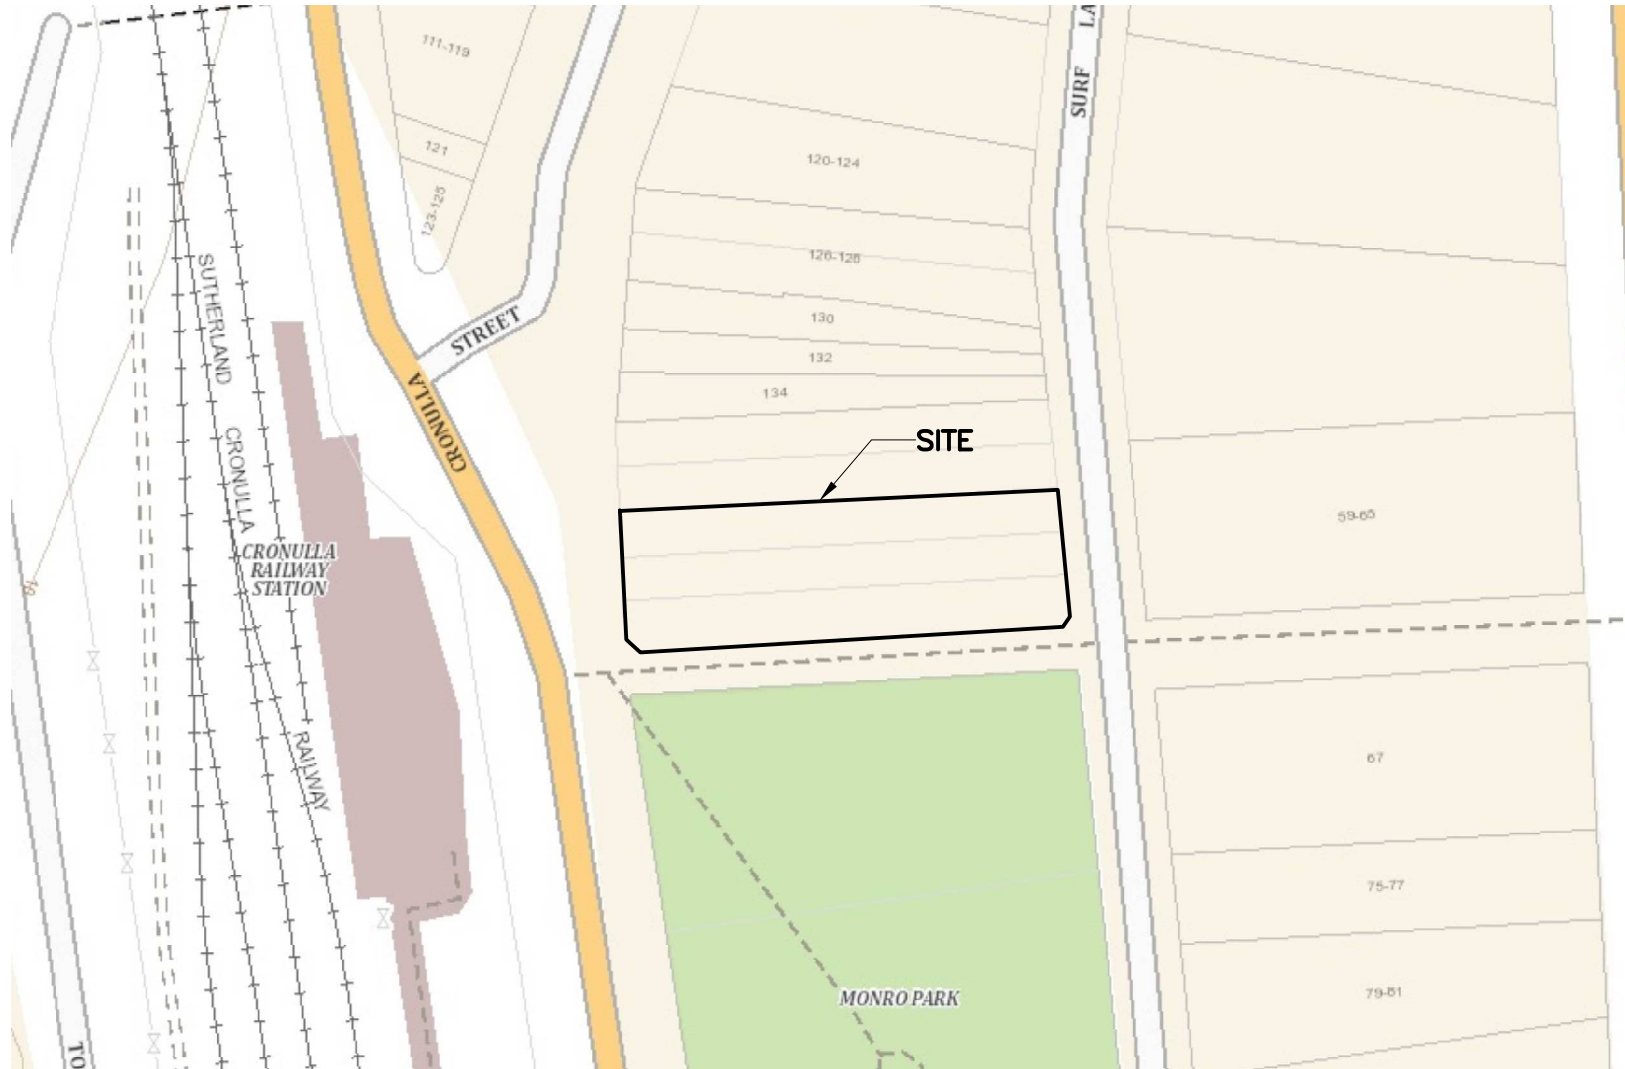

- The specific instructions received from Munro Operations Trust.
- The Proposal document (AssetGeoEnviro ref: 5533-1-P1) dated 17 October 2019 including the Terms of Agreement for Professional Services contained therein.
- The report has been prepared to a specific scope of works as set out in Section 1.3 of this report.
- This report may not be relied upon by any third party not named in this report for any purpose except with the prior written consent of AssetGeoEnviro (which may or may not be given at the discretion of AssetGeoEnviro).
- This report comprises the formal report, documentation sections, tables, figures and appendices as referred to in the index to this report and must not be released to any third party or copied in part without all the material included in this report for any reason.
- The report only relates to the site referred to in Section 2.1 of this report located at 138-142 Cronulla street, Cronulla, NSW which was the subject of this investigation ("the site") and further described in Figures 1 and 2.
- The report relates to the site as at the specified date of investigation as conditions may change thereafter due to natural processes and/or site activities.
- No warranty or guarantee is made in regard to any other use than as specified in the scope of works and the Proposal document.
- AssetGeoEnviro permission needs to be taken prior to any release of this report and details for the proposed development if required to be sent to the relevant regulatory authorities that have an interest in the property or are responsible for services that may be within or adjacent to the site for their review.
- AssetGeoEnviro accepts no liability where our recommendations are not followed or are only partially followed. The document "Important Information about your Environmental Report" in Appendix E provides additional information about the uses and limitations of this report.
- In addition to the limitations inherent in site investigations (refer to Appendix E), it must be pointed out that the recommendations in this report are based on desktop study conditions from limited investigations. To confirm

- AssetGeoEnviro accepts no liability where our recommendations are not followed or are only partially followed. The document “Important Information about your Environmental Report” in Appendix E provides additional information about the uses and limitations of this report.
- In addition to the limitations inherent in site investigations (refer to Appendix E), it must be pointed out that the recommendations in this report are based on desktop study conditions from limited investigations. To confirm the assessed soil and/or groundwater properties beneath the site, further investigation would be required involving sampling plan, exploration drilling depth and installation of groundwater monitoring wells and should be carried out if the scale and provisions / requirements of the development warrants, or if any of the properties are critical to the design, construction or performance of the development.

Disclaimer:

The purpose of this report is to provide an overview of some of the site history, environmental risk and planning information available, affecting an individual address or geographical area in which the property is located. It is not a substitute for an on-site inspection or review of other available reports and records. It is not intended to be, and should not be taken to be, a rating or assessment of the desirability or market value of the property or its features. You should obtain independent advice before you make any decision based on the information within the report. The detailed terms applicable to use of this report are set out at the end of this report.

Location Confidences

Where Lotsearch has had to georeference features from supplied addresses, a location confidence has been assigned to the data record. This indicates a confidence to the positional accuracy of the feature. Where applicable, a code is given under the field heading “LC” or “LocConf”. These codes lookup to the following location confidences:

LC Code	Location Confidence
Premise match	Georeferenced to the site location / premise or part of site
General area or suburb match	Georeferenced with the confidence of the general/approximate area
Road match	Georeferenced to the road or rail
Road intersection	Georeferenced to the road intersection
Feature is a buffered point	Feature is a buffered point
Land adjacent to geocoded site	Land adjacent to Georeferenced Site
Network of features	Georeferenced to a network of features

Dataset Listing

Datasets contained within this report, detailing their source and data currency:

Contaminated Land & Waste Management Facilities

138 -142 Cronulla Street, Cronulla, NSW 2230

List of NSW contaminated sites notified to EPA

Records from the NSW EPA Contaminated Land list within the dataset buffer:

Map Id	Site	Address	Suburb	Activity	Management Class	Status	Location Confidence	Dist (m)	Direction
N/A	No records in buffer								

The values within the EPA site management class in the table above, are given more detailed explanations in the table below:

EPA site management class	Explanation
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the Environmental Planning and Assessment Act 1979 (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record of Notices.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the Protection of the Environment Operations Act 1997 (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the Protection of the Environment Operations Act 1997 (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the Environmental Planning and Assessment Act 1979 (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the Contaminated Land Management Act 1997 (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record of Notices.
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997. A regulatory approach is being finalised.
Regulation under the CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the Contaminated Land Management Act 1997 is not required.
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or Protection of the Environment Operations Act 1997. Alternatively, the EPA may require information via a notice issued under s77 of the Contaminated Land Management Act 1997 or issue a Preliminary Investigation Order.

Atlas of Australian Soils

Soil mapping units and Australian Soil Classification orders within the dataset buffer:

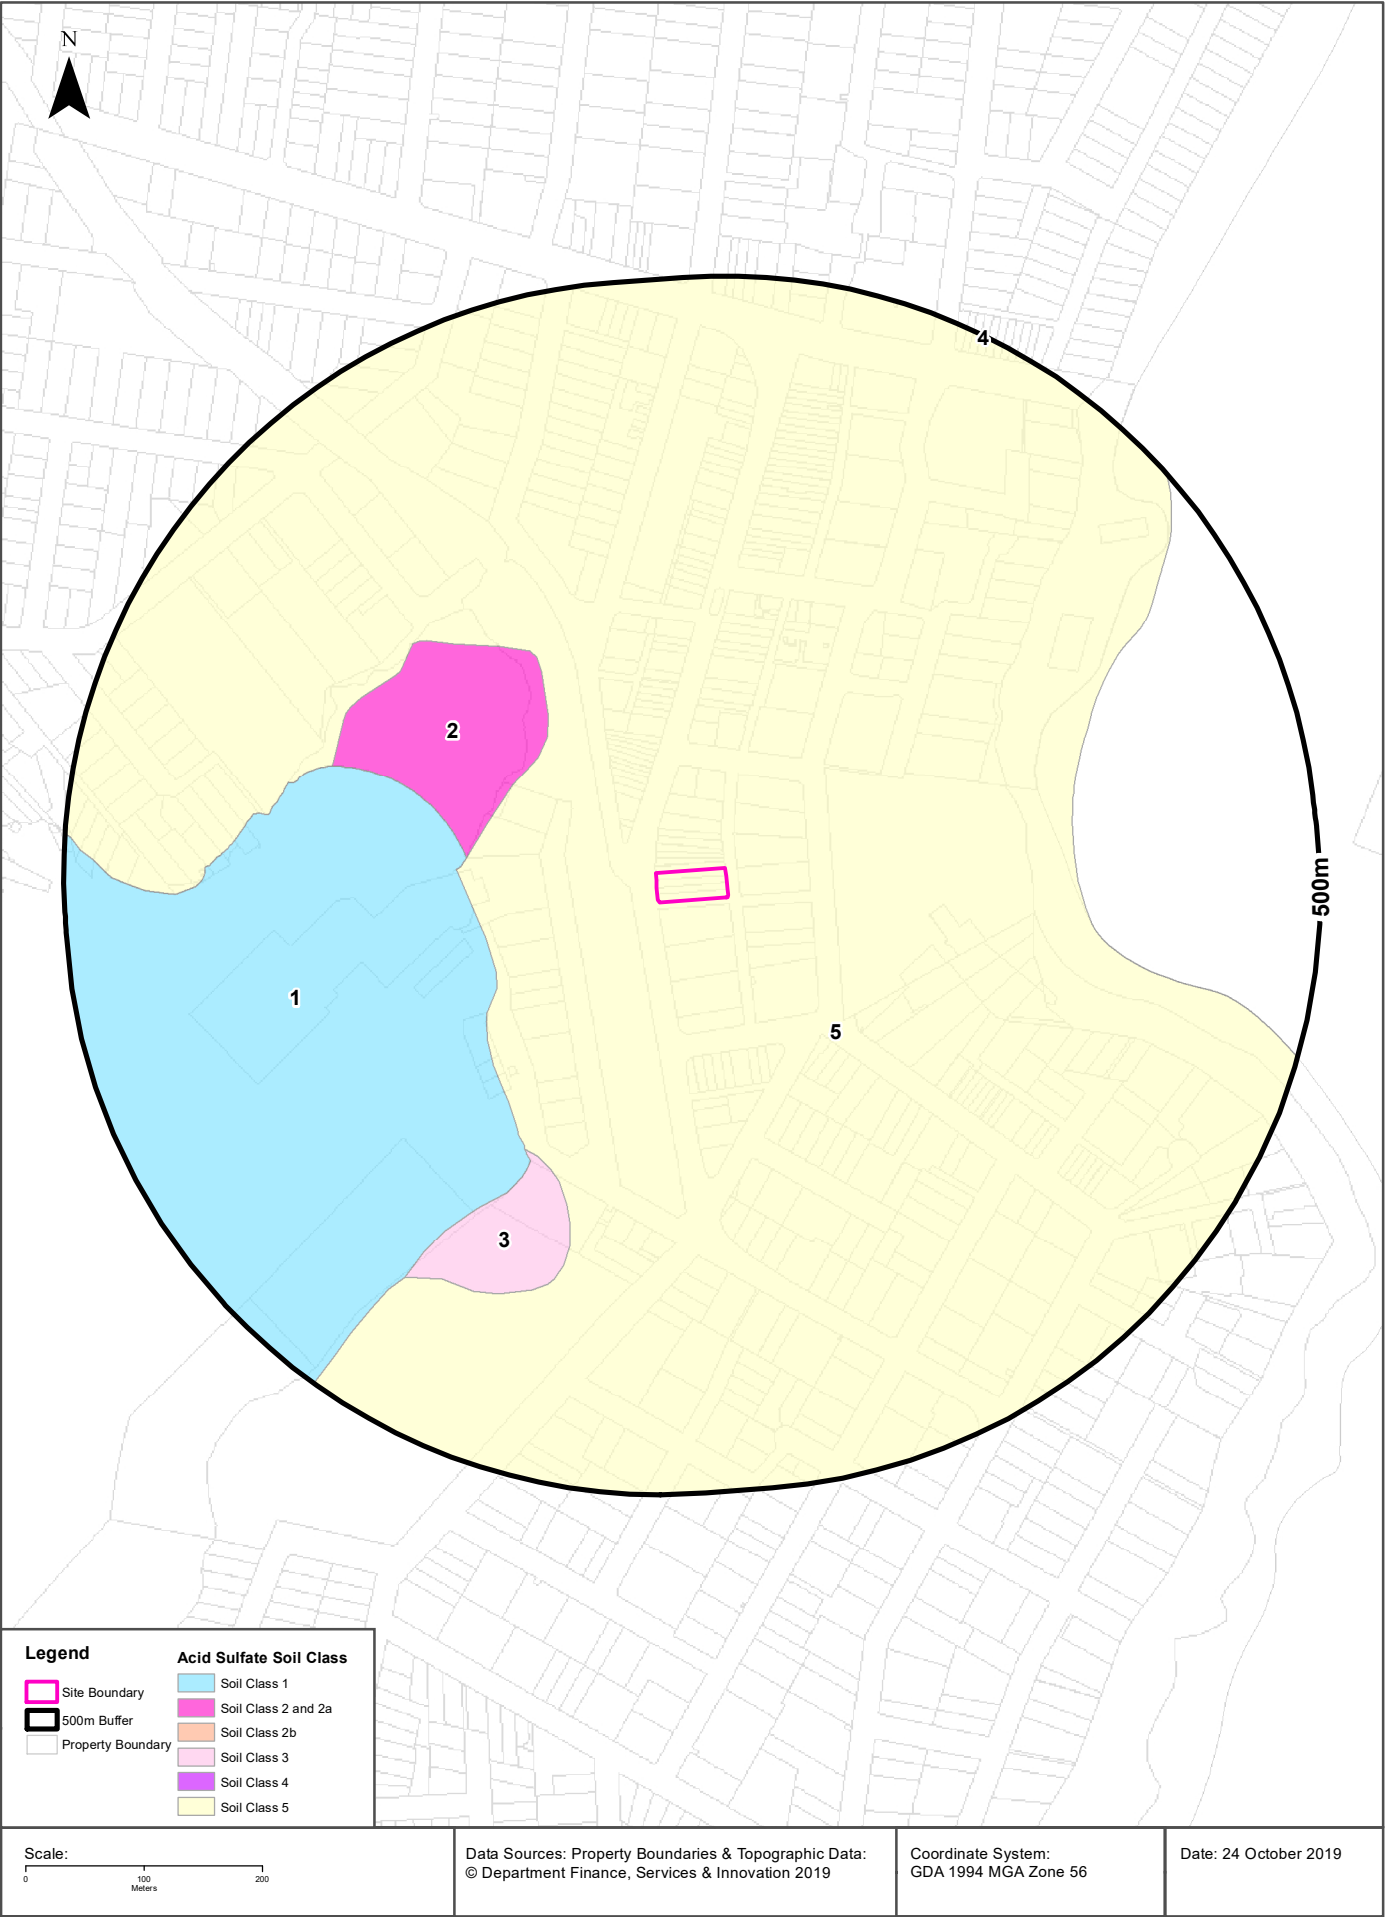

Map Unit Code	Soil Order	Map Unit Description	Distance
Mb2	Kandosol	Dissected sandstone plateau of moderate to strong relief with sandstone pillars, ledges, and slabs-- level to undulating ridges, irregularly benched slopes, steep ridges, cliffs, canyons, narrow sandy valleys: chief soils are (i) on areas of gentle to moderate relief, acid yellow leached earths (Gn2.74) and (Gn2.34) and acid leached yellow earths (Gn2.24)-sometimes these soils contain ironstone gravel; and (ii) on, or adjacent to, areas of strong relief, siliceous sands (Uc1.2), leached sands (Uc2.12) and (Uc2.2), and shallow forms of the above (Gn2) soils. Associated are: (i) on flat to gently undulating remnants of the original plateau surface, leached sands (Uc2.3), siliceous sands (Uc1.2), sandy earths (Uc5.22), and (Gn2) soils as for (i) above (these areas are in part comparable with unit Cb29); (ii) on flat ironstone gravelly remnants of the original plateau surface, (Gn2) soils as for unit Mb5(i); (iii) on gently undulating ridges where interbedded shales are exposed, shallow, often stony (Dy3.41), (Dr2.21), and related soils similar to unit Tb35; (iv) narrow valleys of (Uc2.3) soils flanked by moderate slopes of (Dy3.41) soils; (v) escarpments of steep hills with shallow (Dy) and (Dr) soils between sandstone pillars; and (vi) shallow (Um) soils, such as (Um6.21) on steep hills of basic rocks. As mapped, minor areas of units Mg20, Mm1, and Mw8 are included. Data are limited.	0m
Tb35	Sodosol	Dissected plateau remnants--flat to undulating ridge tops with moderate to steep side slopes: chief soils are hard acidic yellow and yellow mottled soils (Dy3.41), (Dy2.21), and (Dy2.41) and hard acidic red soils (Dr2.21); many shallow profiles occur and profile thickness varies considerably over short distances. Associated are: (Gn3.54), (Gn3.14), and possibly other (Gn3) soils; (Db1.2) soils on some ridges; (Dy5.81) soils in areas transitional to unit Mb2; soils common to unit Mb2; and eroded lateritic remnants. Small areas of other soils are likely. Flat ferruginous shale or sandstone fragments are common on and/or in and/or below the soils of this unit.	451m

Acid Sulfate Soils

138 -142 Cronulla Street, Cronulla, NSW 2230

Environmental Planning Instrument - Acid Sulfate Soils

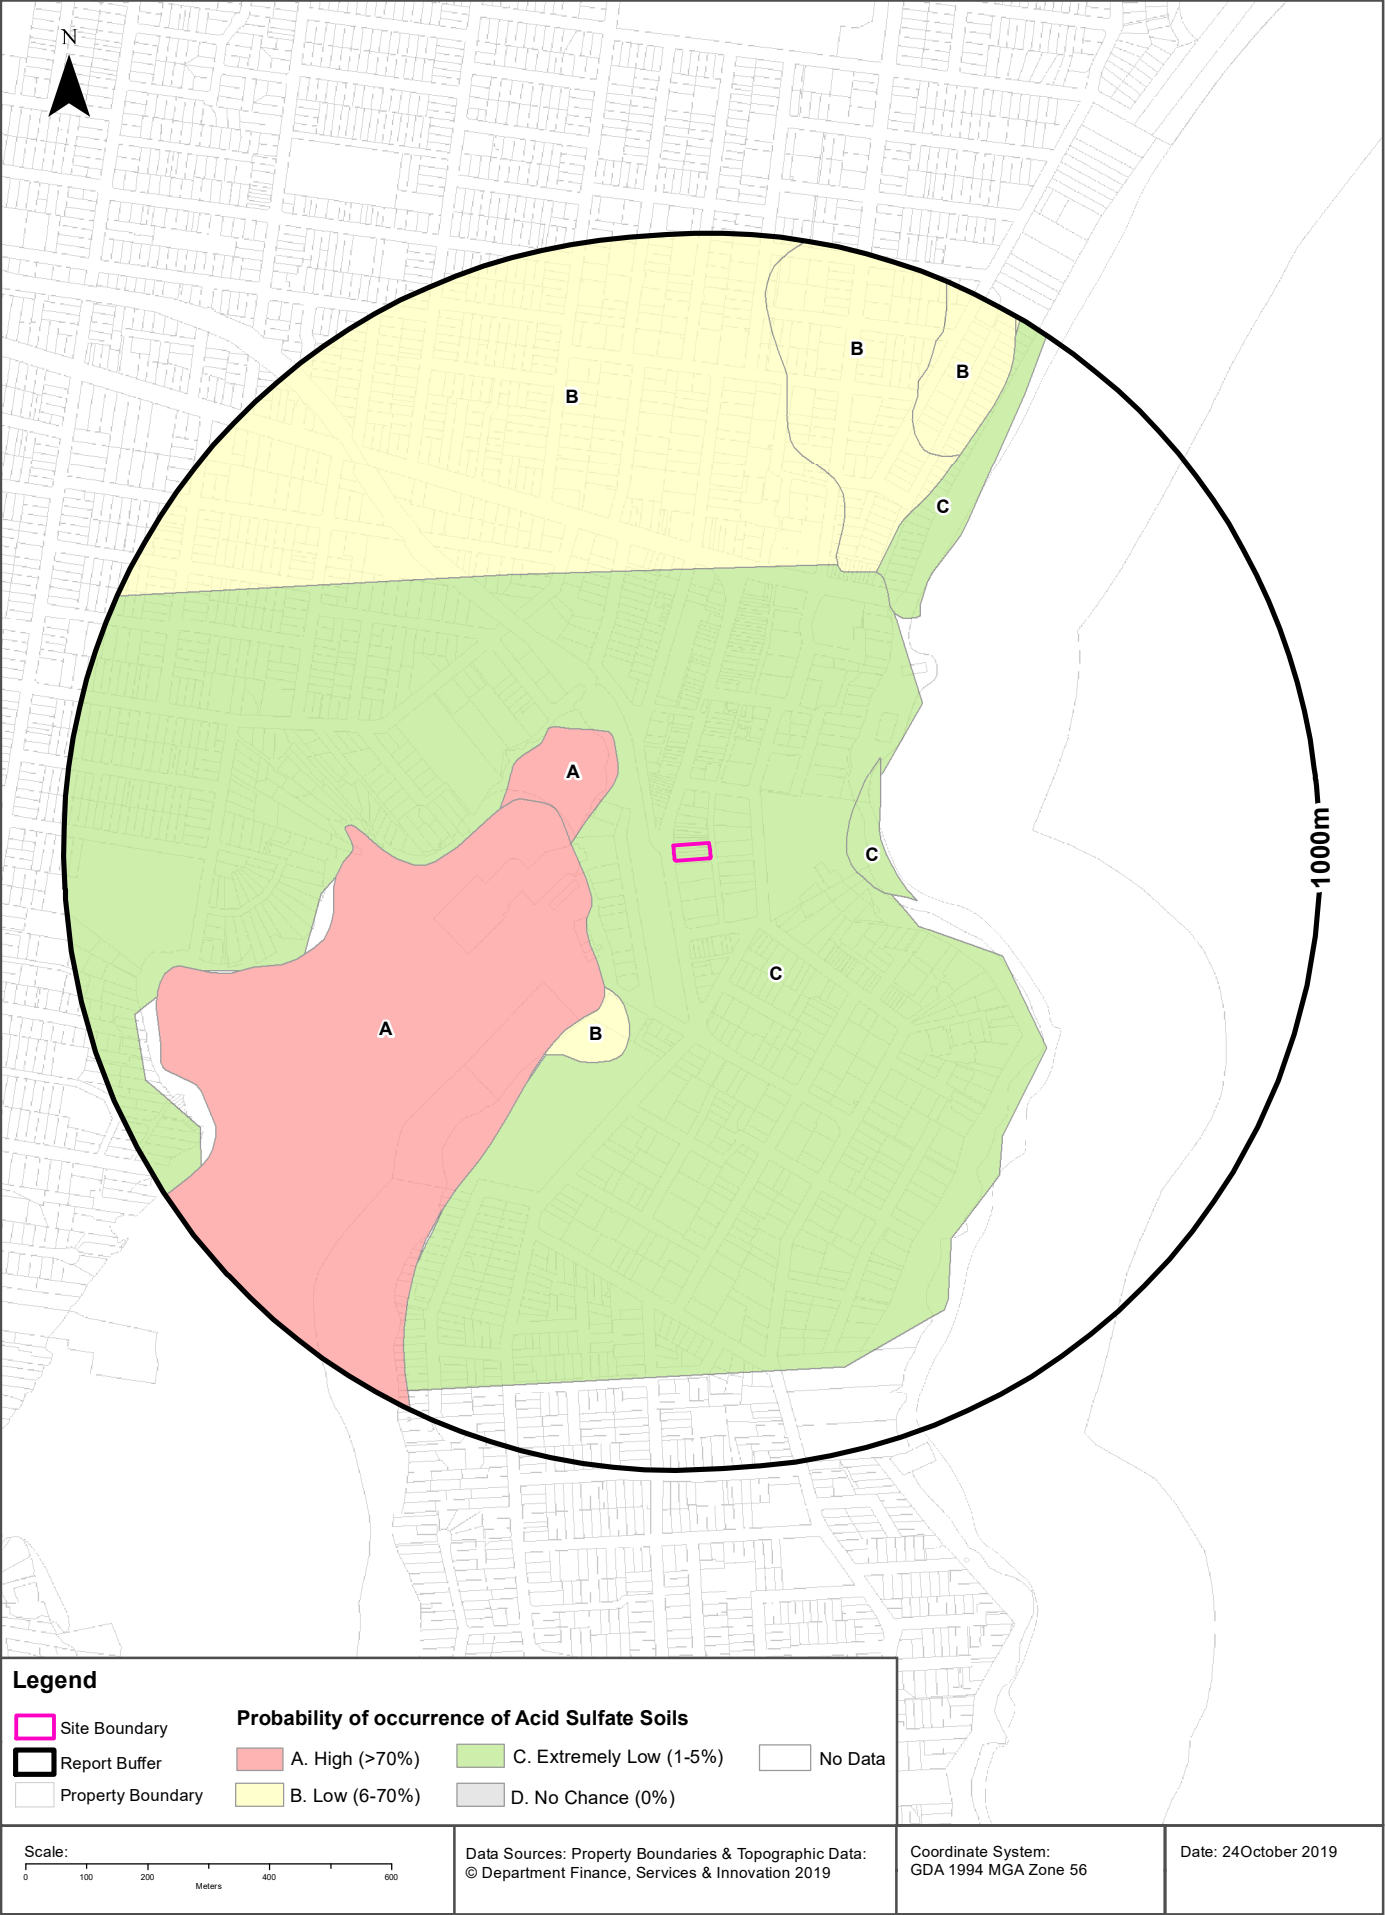

What is the on-site Acid Sulfate Soil Plan Class that presents the largest environmental risk?

Soil Class	Description	EPI Name
5	Works within 500 metres of adjacent Class 1, 2, 3, or 4 land that is below 5 metres AHD and by which the watertable is likely to be lowered below 1 metre AHD on adjacent Class 1, 2, 3 or 4 land, present an environmental risk	Sutherland Shire Local Environmental Plan 2015

If the on-site Soil Class is 5, what other soil classes exist within 500m?

Soil Class	Description	EPI Name	Distance	Direction
2	Works below natural ground surface present an environmental risk; Works by which the watertable is likely to be lowered present an environmental risk	Sutherland Shire Local Environmental Plan 2015	140m	North West
1	Any works present an environmental risk	Sutherland Shire Local Environmental Plan 2015	148m	South West
3	Works more than 1 metre below natural ground surface present an environmental risk; Works by which the watertable is likely to be lowered more than 1 metre below natural ground surface, present an environmental risk	Sutherland Shire Local Environmental Plan 2015	237m	South West
4	Works more than 2 metres below natural ground surface present an environmental risk; Works by which the watertable is likely to be lowered more than 2 metres below natural ground surface, present an environmental risk	Sutherland Shire Local Environmental Plan 2015	497m	North East

USE OF REPORT - APPLICABLE TERMS

The following terms apply to any person (End User) who is given the Report by the person who purchased the Report from Lotsearch Pty Ltd (ABN: 89 600 168 018) (Lotsearch) or who otherwise has access to the Report (Terms). The contract terms that apply between Lotsearch and the purchaser of the Report are specified in the order form pursuant to which the Report was ordered and the terms set out below are of no effect as between Lotsearch and the purchaser of the Report.

1. End User acknowledges and agrees that:
 - (a) the Report is compiled from or using content (**Third Party Content**) which is comprised of:
 - (i) content provided to Lotsearch by third party content suppliers with whom Lotsearch has contractual arrangements or content which is freely available or methodologies licensed to Lotsearch by third parties with whom Lotsearch has contractual arrangements (**Third Party Content Suppliers**); and
 - (ii) content which is derived from content described in paragraph (i);
 - (b) Neither Lotsearch nor Third Party Content Suppliers takes any responsibility for or give any warranty in relation to the accuracy or completeness of any Third Party Content included in the Report including any contaminated land assessment or other assessment included as part of a Report;
 - (c) the Third Party Content Suppliers do not constitute an exhaustive set of all repositories or sources of information available in relation to the property which is the subject of the Report (**Property**) and accordingly neither Lotsearch nor Third Party Content Suppliers gives any warranty in relation to the accuracy or completeness of the Third Party Content incorporated into the report including any contaminated land assessment or other assessment included as part of a Report;
 - (d) Reports are generated at a point in time (as specified by the date/time stamp appearing on the Report) and accordingly the Report is based on the information available at that point in time and Lotsearch is not obliged to undertake any additional reporting to take into consideration any information that may become available between the point in time specified by the date/time stamp and the date on which the Report was provided by Lotsearch to the purchaser of the Report;
 - (e) Reports must be used or reproduced in their entirety and End User must not reproduce or make available to other persons only parts of the Report;
 - (f) Lotsearch has not undertaken any physical inspection of the property;
 - (g) neither Lotsearch nor Third Party Content Suppliers warrants that all land uses or features whether past or current are identified in the Report;
 - (h) the Report does not include any information relating to the actual state or condition of the Property;
 - (i) the Report should not be used or taken to indicate or exclude actual fitness or unfitness of Land or Property for any particular purpose
 - (j) the Report should not be relied upon for determining saleability or value or making any other decisions in relation to the Property and in particular should not be taken to be a rating or assessment of the desirability or market value of the property or its features; and
 - (k) the End User should undertake its own inspections of the Land or Property to satisfy itself that there are no defects or failures
2. The End User may not make the Report or any copies or extracts of the report or any part of it available to any other person. If End User wishes to provide the Report to any other person or make extracts or copies of the Report, it must contact the purchaser of the Report before doing so to ensure the proposed use is consistent with the contract terms between Lotsearch and the purchaser.
3. Neither Lotsearch (nor any of its officers, employees or agents) nor any of its Third Party Content Suppliers will have any liability to End User or any person to whom End User provides the Report and End User must not represent that Lotsearch or any of its Third Party Content Suppliers accepts liability to any such person or make any other representation to any such person on behalf of Lotsearch or any Third Party Content Supplier.
4. The End User hereby to the maximum extent permitted by law:
 - (a) acknowledges that the Lotsearch (nor any of its officers, employees or agents), nor any of its Third Party Content Supplier have any liability to it under or in connection with the

- Report or these Terms;
- (b) waives any right it may have to claim against Third Party Content Supplier in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms; and
 - (c) releases each Third Party Content Supplier from any claim it may have otherwise had in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms.
5. The End User acknowledges that any Third Party Supplier shall be entitled to plead the benefits conferred on it under clause 4, despite not being a party to these terms.
 6. End User must not remove any copyright notices, trade marks, digital rights management information, other embedded information, disclaimers or limitations from the Report or authorise any person to do so.
 7. End User acknowledges and agrees that Lotsearch and Third Party Content Suppliers retain ownership of all copyright, patent, design right (registered or unregistered), trade marks (registered or unregistered), database right or other data right, moral right or know how or any other intellectual property right in any Report or any other item, information or data included in or provided as part of a Report.
 8. To the extent permitted by law and subject to paragraph 9, all implied terms, representations and warranties whether statutory or otherwise relating to the subject matter of these Terms other than as expressly set out in these Terms are excluded.
 9. Subject to paragraph 6, Lotsearch excludes liability to End User for loss or damage of any kind, however caused, due to Lotsearch's negligence, breach of contract, breach of any law, in equity, under indemnities or otherwise, arising out of all acts, omissions and events whenever occurring.
 10. Lotsearch acknowledges that if, under applicable State, Territory or Commonwealth law, End User is a consumer certain rights may be conferred on End User which cannot be excluded, restricted or modified. If so, and if that law applies to Lotsearch, then, Lotsearch's liability is limited to the greater of an amount equal to the cost of resupplying the Report and the maximum extent permitted under applicable laws.
 11. Subject to paragraph 9, neither Lotsearch nor the End User is liable to the other for:
 - (a) any indirect, incidental, consequential, special or exemplary damages arising out of or in relation to the Report or these Terms; or
 - (b) any loss of profit, loss of revenue, loss of interest, loss of data, loss of goodwill or loss of business opportunities, business interruption arising directly or indirectly out of or in relation to the Report or these Terms,
 irrespective of how that liability arises including in contract or tort, liability under indemnity or for any other common law, equitable or statutory cause of action or otherwise.
 12. These Terms are subject to New South Wales law.

All existing & overall dimensions are nominal & subject to verification on site, where any discrepancy occurs between new work & existing dimensions - existing dimensions/work should take preference where necessary - otherwise notify Innovate Architects Pty Ltd.

Selected termite protection to be used on site in accordance with local council's requirements, B.C.A and all relevant Australian Standards.

Smoke detectors to comply with requirements of specification e1.7 (NSW) fire and smoke alarms shall comply with AS 3786 and be connected to the main power supply.

GENERAL NOTES:
All work to be carried out in accordance with the Building Code of Australia, all Local and State Government Ordinances, relevant Australian Standards, Local Electricity and Water Authorities Regulations and all other relevant Authorities concerned.

All structural work and site drainage to be subject to Engineer's details or certification where required by Council. This shall include r.c. slabs and footings, i.e. and steel beams and columns, wind bracing to AS 1170 and AS4055, anchor rods or bolts, tie downs, fixings etc., driveway slabs and drainage to Council's satisfaction.

All timbers to be in accordance with SAA Timber Structure Code AS1720 and SAA Timber Framing Code AS 1684. All work to be carried out in a professional and workmanship like manner according to the plans and specification.

NOTE:
Do not scale off the drawings unless otherwise stated and use figured dimensions in preference. All dimensions are to be checked and verified on site before the commencement of any work, all dimensions and levels are subject to final survey and set-out. No responsibility will be accepted by this firm for any variations in design, builder's method of construction or materials used, deviation from specification without permission or accepted work practices resulting in inferior construction. Locate and protect all services prior to construction.

APPENDIX E

Important Information about your Environmental Report

SCOPE OF SERVICES

The environmental report ("the report") has been prepared in accordance with the scope of services as set out in the contract, or as otherwise agreed, between the Client and Asset Geotechnical Engineering Pty Ltd ("Asset"), for the specific site investigated. The scope of work may have been limited by a range of factors such as time, budget, access and/or site disturbance constraints.

The report should not be used if there have been changes to the project, without first consulting with Asset to assess if the report's recommendations are still valid. Asset does not accept responsibility for problems that occur due to project changes if they are not consulted.

RELIANCE ON DATA

Asset has relied on data provided by the Client and other individuals and organizations, to prepare the report. Such data may include surveys, analyses, designs, maps and plans. Asset has not verified the accuracy or completeness of the data except as stated in the report. To the extent that the statements, opinions, facts, information, conclusions and/or recommendations ("conclusions") are based in whole or part on the data, Asset will not be liable in relation to incorrect conclusions should any data, information or condition be incorrect or have been concealed, withheld, misrepresented or otherwise not fully disclosed to Asset.

LIMITATIONS OF SITE INVESTIGATION

The investigation program undertaken is a professional estimate of the scope of investigation required to provide a general profile of subsurface conditions. The data derived from the site investigation program and subsequent laboratory testing are extrapolated across the site to form an inferred geological model, and an engineering opinion is rendered about overall subsurface conditions and their likely behavior with regard to the proposed development. Despite investigation, the actual conditions at the site might differ from those inferred to exist, since no subsurface exploration program, no matter how comprehensive, can reveal all subsurface details and anomalies.

The engineering logs are the subjective interpretation of subsurface conditions at a particular location and time, made by trained personnel. The actual interface between materials may be more gradual or abrupt than a report indicates.

Therefore, the recommendations in the report can only be regarded as preliminary. Asset should be retained during the project implementation to assess if the report's recommendations are valid and whether or not changes should be considered as the project proceeds.

SUBSURFACE CONDITIONS ARE TIME DEPENDENT

Subsurface conditions can be modified by changing natural forces or man-made influences. The report is based on conditions that existed at the time of subsurface exploration. Construction operations adjacent to the site, and natural events such as floods, or ground water fluctuations, may also affect subsurface conditions, and thus the continuing adequacy of a report. Asset should be kept apprised of any such events, and should be consulted to determine if any additional tests are necessary.

VERIFICATION OF SITE CONDITIONS

Where ground conditions encountered at the site differ significantly from those anticipated in the report, either due to natural variability of subsurface conditions or construction activities, it is a condition of the report that Asset be notified of any variations and be provided with an opportunity to review the recommendations of this report. Recognition

of change of soil and rock conditions requires experience and it is recommended that a suitably experienced environmental engineer be engaged to visit the site with sufficient frequency to detect if conditions have changed significantly.

REPRODUCTION OF REPORTS

This report is the subject of copyright and shall not be reproduced either totally or in part without the express permission of this Company. Where information from the accompanying report is to be included in contract documents or engineering specification for the project, the entire report should be included in order to minimize the likelihood of misinterpretation from logs.

REPORT FOR BENEFIT OF CLIENT

The report has been prepared for the benefit of the Client and no other party. Asset assumes no responsibility and will not be liable to any other person or organisation for or in relation to any matter dealt with or conclusions expressed in the report, or for any loss or damage suffered by any other person or organisation arising from matters dealt with or conclusions expressed in the report (including without limitation matters arising from any negligent act or omission of Asset or for any loss or damage suffered by any other party relying upon the matters dealt with or conclusions expressed in the report). Other parties should not rely upon the report or the accuracy or completeness of any conclusions and should make their own inquiries and obtain independent advice in relation to such matters.

DATA MUST NOT BE SEPARATED FROM THE REPORT

The report as a whole presents the site assessment, and must not be copied in part or altered in any way.

Logs, figures, drawings, test results etc. included in our reports are developed by professionals based on their interpretation of field logs (assembled by field personnel) and laboratory evaluation of field samples. These data should not under any circumstances be redrawn for inclusion in other documents or separated from the report in any way.

PARTIAL USE OF REPORT

Where the recommendations of the report are only partially followed, there may be significant implications for the project and could lead to problems. Consult Asset if you are not intending to follow all of the report recommendations, to assess what the implications could be. Asset does not accept responsibility for problems that develop where the report recommendations have only been partially followed if they have not been consulted.

OTHER LIMITATIONS

Asset will not be liable to update or revise the report to take into account any events or emergent circumstances or fact occurring or becoming apparent after the date of the report.
