

**Table 4.2 Future traffic volumes**

Traffic generation route	Existing daily traffic volume (May 2013)	Proposed additional daily traffic	Future total daily traffic	Percentage traffic increase
Inyadda Drive north of the site	1030	458	1488	44%
To and from the Princes Highway, via Bendalong Road (west)	930	350	1280	38%
Local traffic to and from Bendalong via Inyadda Drive and Bendalong Road (east)	520	108	628	21%
Inyadda Drive south of the site	1040	178	1218	17%
Local traffic to and from Manyana (east) via Inyadda Drive and Curvers Drive	690	89	779	13%
Local traffic to and from Manyana (west) via Inyadda Drive and Curvers Drive	580	89	669	15%

During peak holiday periods, the traffic volumes on most local roads will be significantly greater than the volumes given in Table 4.2. However, any reduction in service levels would not normally extend for longer than about three weeks each year and it is not economic in areas like Manyana to provide road infrastructure to meet peak holiday demand.

### 4.3 Traffic impacts at Intersections

The existing intersections at Curvers Drive, Inyadda Drive and Bendalong Road have a good level of visibility and safety for turning traffic. The need for additional turning lanes at these intersections has been assessed using the Austroads warrant guide. This guide considers the relative volumes of through, left and right turning traffic on the roads at each intersection during the morning and afternoon peak traffic periods.

The Austroads warrant guide and the road design standards for rural turn lanes are given in Appendix B. Using these standards, the need for turning lanes for the existing and future traffic volumes at each intersection is summarised in Table 4.3 and Table 4.4.

**Table 4.3 Existing need for intersection turn lanes**

Intersection and turn movement	Morning peak approach traffic volume	Morning peak turning traffic volume	Morning Peak Turning Lane requirement	Afternoon peak approach traffic volume	Afternoon peak turning traffic volume	Afternoon peak Turning Lane requirement
Princes Highway left turn at Bendalong Road	183	10	Type BA (Note Type AU is already provided)	301	16	Type AU (Note Type AU is already provided)
Princes Highway right turn at Bendalong Road	226	13	Type AU (Note Type CH already provided with seagull acceleration lane)	236	18	Type AU (Note Type CH already provided with seagull acceleration lane)

**Table 4.3 Existing need for intersection turn lanes**

Intersection and turn movement	Morning peak approach traffic volume	Morning peak turning traffic volume	Morning Peak Turning Lane requirement	Afternoon peak approach traffic volume	Afternoon peak turning traffic volume	Afternoon peak Turning Lane requirement
Bendalong Road left turn at Inyadda Drive	19	8	Type BA (No widening is required)	25	19	Type BA (No widening is required)
Bendalong Road right turn at Inyadda Drive	20	12	Type BA (Note sealed shoulder widening is required to meet the Austroads Type BA Standard)	60	47	Type BA (Note sealed shoulder widening is required to meet the Austroads Type BA Standard)
Curvers Drive left turn at Inyadda Drive	37	34	Type BA (No widening is required)	27	19	Type BA (No widening is required)
Curvers Drive right turn at Inyadda Drive	38	37	Type BA (No widening is required)	27	18	Type BA (No widening is required)

As shown in Table 4.3, for the existing traffic situation, a higher standard of intersection is already provided at the Princes Highway intersection than is required (a type CH Channelised intersection with an additional seagull acceleration lane for the right turn traffic departing from Bendalong Road). However, at the Bendalong Road and Inyadda Drive intersection, the existing intersection is deficient according to the current Austroads 2010 intersection design standard and requires additional sealed shoulder widening through the intersection, as shown in Figure 7.5 of the Austroads 2010 Road Design Guide (refer Appendix B).

**Table 4.4 Future need for rural intersection turn lanes**

Intersection and turn movement	Morning peak approach traffic volume	Morning peak turning traffic volume	Morning peak turning lane requirement	Afternoon peak approach traffic volume	Afternoon peak turning traffic volume	Afternoon peak turning lane requirement
Princes Highway left turn at Bendalong Road	185	12	Type BA (Note Type AU is already provided)	310	25	Type AU (Note Type AU is already provided)
Princes Highway right turn at Bendalong Road	230	17	Type AU (Note Type CH already provided with seagull acceleration lane)	245	27	Type AU (Note Type CH already provided with seagull acceleration lane)
Bendalong Road left turn at Inyadda	21	10	Type BA (No widening is required)	30	24	Type BA (No widening is required)

**Table 4.4 Future need for rural intersection turn lanes**

Intersection and turn movement	Morning peak approach traffic volume	Morning peak turning traffic volume	Morning peak turning lane requirement	Afternoon peak approach traffic volume	Afternoon peak turning traffic volume	Afternoon peak turning lane requirement
Bendalong Road right turn at Inyadda	26	18	Type BA (Note sealed shoulder widening is required to meet the Austroads Type BA Standard)	78	65	Type BA (Note sealed shoulder widening is required to meet the Austroads Type BA Standard)
Curvers Drive left turn at Inyadda	39	36	Type BA (No widening is required)	31	23	Type BA (No widening is required)
Curvers Drive right turn at Inyadda	40	39	Type BA (No widening is required)	31	22	Type BA (No widening is required)

In future, as summarised in Table 4.4, there will be increases in the left and right turning and approach traffic volumes at all three intersections, most noticeably at the Bendalong Road/Inyadda Drive intersection. However, there will be no resulting change in any of the intersection turning lane requirements as a result of these traffic increases.

The existing deficiency at the Bendalong Road and Inyadda Drive intersection, where a sealed road shoulder is required in the eastbound direction, will become more noticeable as traffic volumes increase and should be addressed.

#### 4.4 Cross sectional and overtaking requirements on Bendalong Road

The existing road cross sectional width has been measured at approximately one kilometre intervals, along the full 11.3 km length of Bendalong Road, between the Princes Highway and Inyadda Drive. The measured road widths are sufficient to meet the Council's road design requirements for all of the following road classifications:

- Local Street, 500 to 2000 vpd;
- Collector Street, up to 3000 vpd; and
- Local Distributor Road, between 3000 to 6000 vpd.

Outside the peak holiday periods, the current daily traffic volume using Bendalong Road is approximately 930 vehicle movements. With the additional "external" vehicular traffic generated by the Proposal, this will increase by 38% to about 1280 vehicle movements but will not necessitate any general widening of Bendalong Road between the Princes Highway and Inyadda Drive.

The existing overtaking opportunity (the percentage length of the road where overtaking is permitted in the direction of travel i.e. where the sight distance is a minimum of 500 metres ahead) has been estimated from inspections at approximately one kilometre intervals along the full 11.3 km length of Bendalong Road. The proportion of road where overtaking is permitted currently is approximately 33%.

The Austroads daily traffic volume standards for the provision of overtaking lanes along two lane rural roads are given in Appendix B. This shows that, where the proportion of heavy vehicles is 5% or less and the length of the road where overtaking is possible is 33%, then the traffic volume can be up to 4330 vehicles per day before overtaking lanes are required. Using this standard, neither the existing daily traffic volume (930 movements) or the predicted future volume (1234 movements) will create a need for overtaking lanes on Bendalong Road.

#### 4.5 Road pavement requirements for Bendalong Road and Inyadda Drive

From the intersection traffic counts in Appendix A, the existing proportions of heavy vehicle traffic on the major roads in the locality are approximately 2-4% on Bendalong Road and Inyadda Drive and 3-6% on the Princes Highway.

Traffic generated by the Proposal will be primarily residential and similar in composition to the existing daily traffic using these roads. The only exception will be during the subdivision infrastructure and major housing construction phases when the anticipated levels of truck traffic will be greater than for the normal situation. There is some possibility of localised road pavement damage occurring on Bendalong Road or Inyadda Drive from construction traffic. The condition of these two roads should be monitored by regular inspections and any identified pavement damage quickly repaired.

At other times, traffic generated by the Proposal should not warrant any road pavement upgrades on either Bendalong Road or Inyadda Drive. However, when these roads are next due for reconstruction and repair, the Council should ensure adequate pavement depth is provided for these roads to accommodate the future predicted traffic loading for heavy vehicle traffic, for a minimum 20 year future design life, from the time at which the road pavement is reconstructed.

#### 4.6 Access for pedestrians and cyclists

Access for pedestrians and cyclists from the site to the surrounding areas has been determined using the guidance standards given in Council's Subdivision Code (DCP 100).

The code recommends that paved footpaths, to a minimum width of 1.2 metres, be provided along all local or collector streets where the traffic volumes are likely to exceed 500 vehicle movements daily. For the proposed residential subdivision road layout, the two perimeter roads (around the northern boundary of the subdivision and along the northern edge of the southern precinct) and the local road connection between the two subdivision precincts are all likely to require paved footpaths.

## 5 Recommendations and conclusions

The traffic impacts from the Proposal have been assessed and the key findings are as follows:

- Public transport services are not currently available at Manyana, but they are available at the nearest position on the Princes Highway. The Proposal will improve the viability of providing regular public transport services in the future and it is likely that a daily return bus service to Milton and Ulladulla will become viable towards the latter stages of its development.
- Traffic generated by the Proposal will not affect the capacity or safety of either Bendalong Road or Inyadda Drive. Daily traffic volumes, both within Manyana and along Bendalong Road, are relatively light at present and the forecast increases with the Proposal will not raise these volumes sufficiently to warrant higher design standards, including road widening.
- An existing traffic deficiency has been identified at the intersection of Bendalong Road and Inyadda Drive, where a sealed road shoulder through the intersection in the eastbound direction is required to meet the current Austroads design standard (a type BA intersection). This deficiency should be addressed. All other potentially affected intersections have sufficient spare capacity to safely and efficiently accommodate the forecast increased traffic.
- The Proposal will not increase the proportion of heavy vehicles using the road network and will not generally cause damage to road pavements. However, during the infrastructure and major housing construction stages, there is some potential for pavement damage and the condition of the access roads should be monitored by inspections at regular intervals. If damage occurs it should be quickly rectified to maintain safe and efficient travel conditions.
- Council's Subdivision Code indicates that paved footpaths will be required for all roads which are classified as local or collector streets within the proposed subdivision.
