Appendix C Analytical Reports

1 Introduction

Earth Water Consulting Pty Limited (EWC) was engaged by parties Bowen, Duce & Hunter (the “Client”) to undertake an Environmental Site Assessment (ESA) for 9, 148 and 189 Gaudrons Road, Sapphire Beach) (the “Site”) (Figure 1).

1.1 Objectives

The objectives of the ESA are to:

- Investigate the Site history and identify potentially contaminating activities that are currently being performed on the Site or that may have been performed on the Site in the past; and
- Make a preliminary assessment of potential contamination issues for residential development based on the Site history review; and
- Where a risk of contamination has been assessed to undertake detailed sampling and analysis of the affected proposed building envelopes.

1.2 Suitability to Undertake Works

Strider Duerinckx has project managed and signs off on this investigation. Strider is an environmental geologist with 25 years experience in contaminated sites investigations including numerous banana plantation assessments. Strider is a CEnvP (Site Contamination Specialist) accredited.

2 Proposed Development

Based on plans provided, it is understood that it is proposed to subdivide the subject properties as follows in **Table 1** and shown in Figures 2-4.

A single road per property will be constructed on No. 9 and No. 189 to allow vehicular access to the proposed lots.

Table 1: Property Details

Existing Property	Lot & DP	Existing Size (m ²)	Proposed No. of Lots	Proposed Building Envelopes (m ²)	Proposed Lot Size (m ²)
No. 9	L11, DP1141269	52,939	3	1 @ 1,500	6,700-25,000
No. 148	L7, DP555490	20,496	2	NIL additional	10,000-10,500
No. 189	L2, DP5550362	44,594	4	3 x @ 1,344 to 1,395	10,000-10,400

3 Scope of Work

This PESA has been undertaken in reference to the relevant sections in the *Consultants Reporting on Contaminated Land* (NSW EPA 2020), and Department of Urban Affairs and Planning *Managing Land Contamination – Planning Guidelines SEPP55 – Remediation of Land* (DUAP & EPA 1998).

The assessment included:

- A desktop review of historical conditions and activities on the Site including:
 - Historical aerial photographs review (to map change in use over time);
 - NSW EPA contaminated land and POEO notices and records (onsite or offsite contamination presence or significant activities),
 - Historical ownership records;
 - Review of banana cultivation and cattle tick dip sites registers;
 - A review of a current s10.7 (2&5) certificates for any notations by council;
 - Review of geology and hydrogeology including groundwater bores (risk of contamination migration); and
 - Review of environmental constraints such as groundwater dependent ecosystems (sensitive receptors).
- A site walkover of the Site to assess current layouts, surface conditions, presence hazardous building materials that may result subsurface contamination, and the presence of any obvious previous contaminating activities (such as current or historical fuel storage);
- Preparation of a Conceptual Site Model (CSM);
- Undertaking detailed sampling and analysis of the proposed building envelopes on 9 and 189 Gaudrons Road in accordance with NSW EPA (1997) Guideline requirements; and
- Presentation of a ESA report, including the historical review, analytical results, conclusions and recommendations on the contamination status of the property and suitability of the rezoning application and future subdivision.

4 Site Description

4.1 Site Identification

The Site details are provided in **Table 1**. The Site properties are zoned RU2, rural landscape. Existing Site layout features are shown on Figures 5-7.

4.2 Location and Features

4.2.1 No. 9 Gaudrons Road

No. 9 is located at about 30mAHD in the lower eastern portion of Gaudrons Road, on the southern side. The property straddles a ridgeline, with intermittent drainage present along the southern boundary draining east under the Pacific Highway, and along the northwestern boundary draining

north. Both are First-order streams in accordance with the Strahler ordering system. Surface slopes are relatively shallow, and the property is currently an operating mixed banana plantation and hothouse fig farm, containing two dwellings and several sheds. The sheds and hothouses will be removed where required for any subdivision works. To allow the subdivision, an existing farm dam in the southeastern corner will also be filled with clean soil found onsite.

4.2.2 No. 148 Gaudrons Road

No. 148 is located at about 160mAHD on the northern side of Gaudrons Road and is bisected by an incised intermittent First-order intermittent gully. The property is steeply sloping down to the east and north to this gully across rocky ground. An existing dwelling is located in the southeastern corner of the property and an illegal dwelling along the western boundary. The proposed subdivision will create a building entitlement to allow the approval of this existing second dwelling. The property is a former banana plantation farm that has a number of disused access tracks but is now only used for hobby goat rearing.

4.2.3 No. 189 Gaudrons Road

No. 189 is located at about 190mAHD on the southern side of Gaudrons Road. The property has been heavily cleared, is generally east facing and is former banana plantation land crisscrossed by former agricultural tracks. A new road will be constructed generally along one of these. A number of First-order intermittent gullies drain east from the property. An existing dwelling is located in the northern edge of the property adjacent to Gaudrons Road.

4.3 Surrounding Land Use

The surrounding land use is detailed in **Table 2**.

Table 2: Surrounding Landuse

Existing Property	North	South	East	West
No. 9	Gaudrons Road then rural res	Former banana plantation undeveloped	Pacific Highway	Rural res
No. 148	Rural res			
No. 189	Rural res	Former banana plantation undeveloped		

5 Site Inspection

A site inspection was undertaken on 2 November by Strider Duerinckx. During the inspections it was noted that:

Table 3: Site Inspection Observations

Existing Property	Observations
No. 9	<p>Active mixed horticulture including banana plantation in middle southern area, fig fruit trees in middle southern and greenhouses in centre.</p> <p>2 older houses are present along the northwestern area with a gravel access road. The houses will likely stay during subdivision.</p> <p>Two Galvanised Iron (GI) farm sheds south of the dwellings, one is a packing shed and one is a maintenance shed. The maintenance shed had no significant chemical or drum storage within, with minor oil staining around benches. The concrete slabs looked to be in good condition.</p> <p>The southern greenhouse is located on a fill platform, and irregular hummocky ground downslope to the west of the sheds suggest filling in that area also.</p> <p>Undeveloped forest is present along the western edge.</p>
No. 148	<p>The existing dwelling is perched on a narrow crestline along the southern boundary. The groundsurface slopes steeply down to the north across a series of cut/fill terraces.</p> <p>A shed type dwelling is present along the western boundary. Given its age and construction, it may be constructed with Asbestos Containing Material (ACM) sheeting.</p> <p>Several former banana plantation tracks are present parallel to contours on the property, and the majority of the property is cleared of vegetation except thin weeds and grass.</p> <p>Undeveloped forest is present along the northern edge.</p>
No. 189	<p>A single dwelling is located on the very northern tip of the property close to Gaudrons Road.</p> <p>A main track cuts down from Gaudrons Road through the centre of the property and appears to be a former banana plantation track. Most of the property is cleared of forest vegetation and contains thick weeds and grass.</p> <p>No packing shed is visible</p>

Typical Site details are shown the following photographs.

5.1.1 No. 9 Gaudrons Road Photographs

Photograph 1 – Looking east across cleared ridgeline crest.

Photograph 2 – Looking south across banana plantation and fig nursery.

Photograph 3 – Looking south across greenhouses.

5.1.3 No. 189 Gaudrons Road Photographs

Photograph 7 – Looking east towards Lot 2 building envelope (centre).

Photograph 8 – Looking west across Lot 4 building envelope.

Photograph 9 – Looking north across Lot 3 proposed building envelope.

6 Geology, Hydrogeology and Topography

6.1 Topography

The properties are located variously on steeply sloping ridgelines and lower lying more gentle footslopes. The dominant topographical features of each property are summarised in **Table 4**.

Table 4: Topography

Existing Property	Topography
No. 9	Dominant north trending ridgeline through the middle of the property, located at about 32mAHD. Sloping down to the northwest and southeast towards two intermittent gullies. Lowest ground surface at 10AHD in the southeastern corner.
No. 148	Dominant intermittent gully that drains northeast through the centre of the property, with steeply sloping (>30%) groundsurface. Groundsurface highest in southwestern corner at ~150mAHD, and lowest in northeast at ~110mAHD.
No. 189	Series of complex divergent and convergent landforms draining to a series of gullies. Groundsurface is steeply sloping (>30%) and highest point is in southwestern corner at ~230mAHD. Lowest in southeastern at ~120mAHD.

6.2 Geology

The properties are all underlain by the Coramba beds. These are comprised of lithofeldspathic wacke, minor siltstone, mudstone, metabasalt, jasper and rare calcareous siltstone.

6.3 Soils

We reviewed the Soil Landscapes of the Coffs Harbour 1:100,000 Sheet (Milford, 1999) which indicates that No. 9 Gaudrons Road is underlain by the Megan Soil Landscape, No.148 by the Suicide Soil Landscape and No.189 by the Bobo Soil Landscape (**Table 5**).

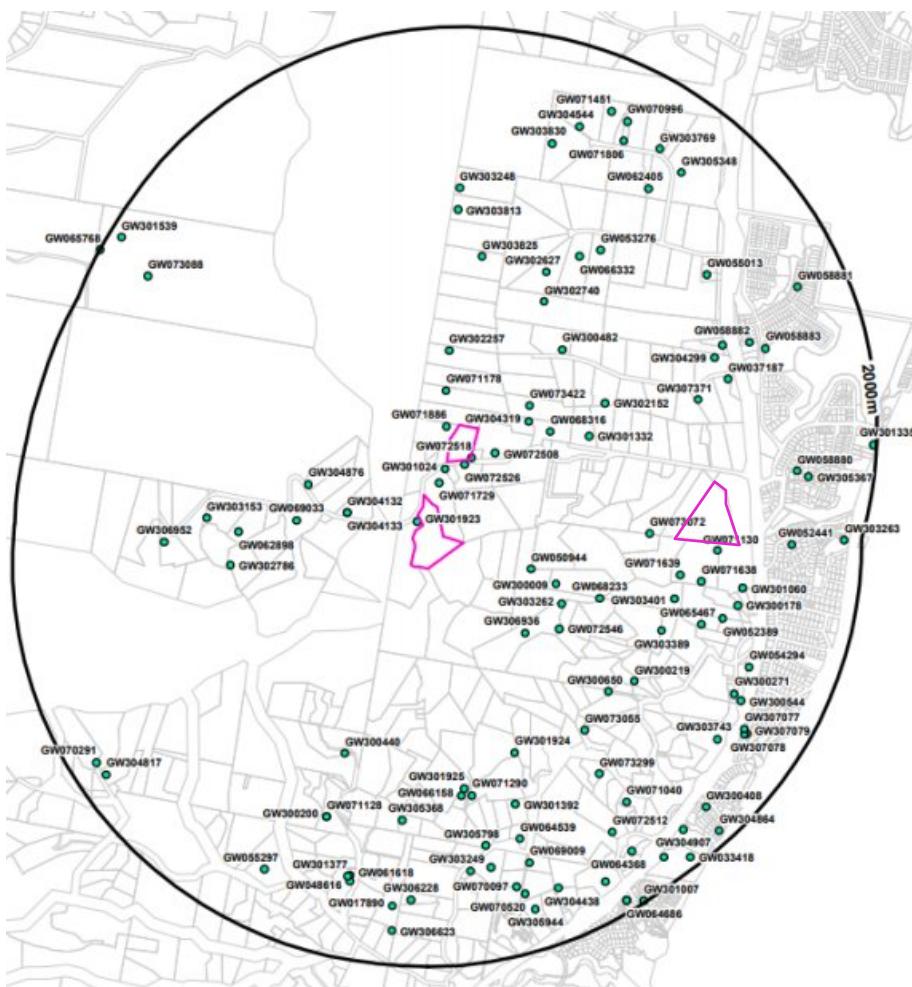

Table 5: Soil Landscapes

Existing Property	Soil Landscape	Type	Typical Profile	Limitations
No. 9	Megan	Erosional	moderately deep to deep (>100 cm), well drained structured Red Earths, Brown Earths, Brown or Red Podzolic Soils	strongly acid, stony (localised) soils of high erodibility.
No. 148	Suicide	Colluvial	moderately deep to deep (>100 cm), well drained, stony structured Yellow Earths on crests and upper slopes, with stony Lithosols and structured Red Earths on mid-slopes and footslopes.	strongly acid stony soils with low wet bearing strength, strong subsoil acidity and low fertility. Steep slopes.
No. 189	Bobo	Colluvial	moderately deep, weakly structured Red Earths, and very shallow, well-drained Lithosols on very steep slopes with shallow soils.	strongly acid, stony, shallow (localised) soils with low fertility, high aluminium toxicity potential and low wet bearing strength. Very steep slopes.

6.4 Hydrogeology

The mapped regional aquifer is located within fractured bedrock and is an aquifer of low to moderate productivity.

No licensed groundwater bores are located on the Site. There are numerous registered groundwater bores within 2000m of the properties. These are registered for mainly household use and drilled to between 29-132m depth. Some irrigation bores are also present.

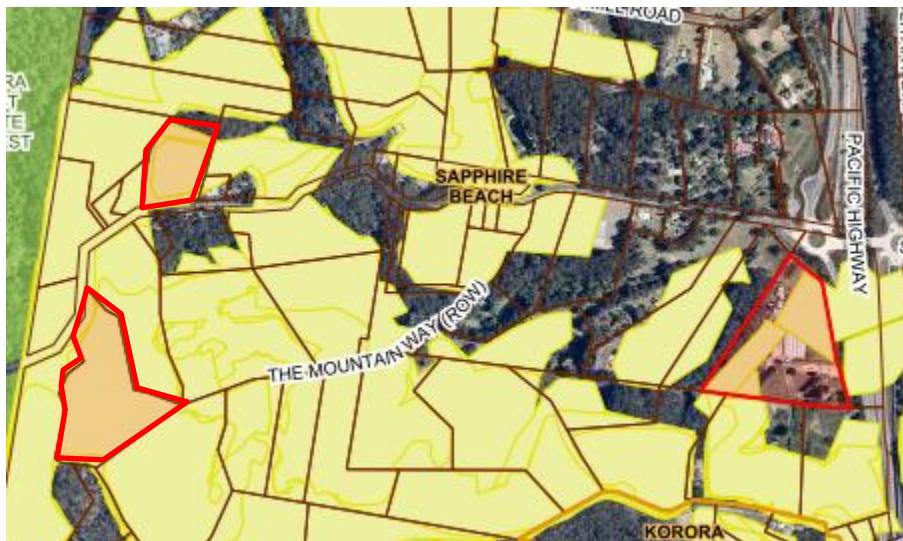

Photograph 10 – Licensed groundwater bores

7 Site History

In order to provide a detailed desktop review, a search was undertaken of the Lotsearch Pty Ltd environmental database. Aerial photo excerpts from this report are included in Appendix A.

7.1 Mapped BP Land

A review of the Coffs Harbour City Council LEP mapping indicates that the three properties and surrounds are mapped as having been under banana cultivation between 1943 and 1994 (Photograph 11).

Photograph 11 – CHCC mapped former banana plantations

7.2 Previous Environmental Investigations

No previous environmental investigations are known to have been undertaken on the properties.

7.3 Aerial Photographs

7.3.1 No. 9 Gaudrons Road Aerials

A review of aerial photographs from 1943-2019 was undertaken, and summarised in Table 6. The aerials are included in Appendix A.

Table 6: No. 9 Aerial Photograph Review

Year	Site	Surrounding Land
1943	The Site is partially forested and cleared grazing (?) land.	The Pacific Highway is located about 150m to the east. Forested land is present to the north and west, with banana cultivation occurring about 200m to the south.
1956	Banana cultivation is occurring in the southwestern and northeastern portions.	A small farm shed is located just off the middle of the southern boundary. Extensive banana cultivation is occurring to the east, west and south. Possible market gardening is occurring directly south in the low lying area.
1964	Banana cultivation is occurring along the western portion just east of the forest strip. The remainder of the property is cleared and fallow.	As per 1956, except no banana plantation to the east. Fallow.

Year	Site	Surrounding Land
1974	Cleared and fallow.	East and west cleared and fallow. South banana plantation still present. No shed along southern boundary. Rural residential development north of Gaudrons Road.
1984	House and one shed has been constructed as well as farm dam in southeastern corner.	Dwelling constructed across gully to the west. Remainder of surrounding landuse as per 1974.
1994	Second house constructed. Banana plantation in southwestern corner as per current, and market gardening in the eastern portion. Banana plantation also in northwestern corner.	As per 1984.
2004	Banana plantation increased to encompass majority of eastern strip.	Banana plantation in lowlying area just south of southeastern corner. Former banana plantation now to southwest.
2010	Houses and sheds as per current. Banana plantation extents have increased to southeast and into the middle of the property.	
2013	Some removal of banana plantation in centre of the property to prepare for greenhouse construction	All banana plantations removed surrounding the property. Pacific Highway realignment works in progress and highway has moved west removing some of the bananas that were located on the eastern portion of the larger property.
2016	As per 2014. Greenhouse removed from 37 Wakelands Road.	As per 2014.
2019	Greenhouses present. All bananas removed except southwestern corner.	As per 2016.

7.3.2 No. 148 Gaudrons Road Aerials

A review of aerial photographs from 1943-2019 was undertaken, and summarised in Table 6. The aerials are included in Appendix A.

Table 7: No. 148 Aerial Photograph Review

Year	Site	Surrounding Land
1943	The property is forested except for a portion along the eastern edge that has been recently cleared (felled trees visible).	Remnant forest surrounding with cleared land east, and banana plantations to the southeast and northwest.
1956	Banana cultivation is occurring in the southern half.	Banana plantations to the east and west. Forest to south and north.
1964	Banana cultivation is occurring entirely except for a narrow forested northern strip.	Extensive banana plantations to the east, west and south. A farm shed is present along ridgeline near southwestern boundary.
1974	As per 1964, but cutting and filling occurred in the southeastern corner in preparation for a dwelling construction	As per 1964.
1984	House has been constructed.	Dwelling constructed to the east and northwest.
1994	Banana plantations have ceased onsite. House has been constructed along western portion of the property.	All banana plantations have ceased in the vicinity, and rural residential development is occurring.
2004	As per 1994.	As per 1994.
2010	As per 2004.	As per 2004.
2013	As per 2010.	As per 2010.
2019	As per 2016.	As per 2016.

7.3.3 No. 189 Gaudrons Road Aerials

A review of aerial photographs from 1943-2019 was undertaken, and summarised in Table 6. The aerials are included in Appendix A.

Table 8: No. 189 Aerial Photograph Review

Year	Site	Surrounding Land
1943	The property is forested.	Remnant forest surrounding with banana plantations to the east.
1956	Banana cultivation is occurring across the property except for the elevated ridgeline slope in the southwestern corner. A farm shed may be present downslope of the current dwelling, close to the northeastern corner.	Banana plantations to the north, south, east and west.
1964	Banana cultivation is occurring.	Extensive banana plantations surrounding. A farm shed is present along ridgeline near southwestern boundary.
1974	As per 1964, but cutting and filling occurred in the northeastern corner and two structures (shed and dwelling?) now present.	As per 1964.
1984	As per 1974.	Some banana plantations removed and houses constructed.
1994	As per 1984.	As per 1984
2004	Banana plantation activities ceased and property is fallow.	Reduced banana plantation activities on the adjacent property to the east.
2010	As per 2004, except shed has been demolished and house roofline extended.	Banana plantation activities ceased to the east and west and those properties are fallow.
2013	As per 2010.	Only one banana plantation property remaining, to the south.
2019	As per 2016.	All banana plantation activities have ceased in the vicinity.

7.4 NSW EPA Records

A search of the NSW EPA's contaminated land record revealed no investigation or remediation notices have been issued on the three properties or adjacent lots for contamination or 'significant risk of harm' under Section 58 of the Contaminated Land Management Act 1997.

A search of the public register under Section 308 of the Protection of the Environment Operations Act indicated that no current and recently surrendered licenses have been held for potentially contaminating activities on the three properties or adjacent lots.

7.5 Other Contaminating Sites

The properties are not listed as any Defence sites, former gasworks, PFAS contaminated, loose fill asbestos insulation registered, cattle tick dip, dry cleaners, fire rescue, gas terminals, liquid fuel depots, active mines or quarries, derelict mines, petrol stations, power stations, electrical substations, telephone exchanges, active or historical waste management facilities (landfills) or wastewater treatment facilities, nor are any located in the vicinity.

7.6 Adjacent Business Operations

A search of published business directories indicates no registered and advertising businesses operated from the properties or immediate surrounds from 1950 through 1991.

7.7 Historical ownership

A search of historical owners was undertaken of the properties. These are summarised in Tables 9-11, and the results are included in Appendix B.

Table 9: No.9 Gaudrons Historical Ownership

Date	Detail
	(Lot 11 DP 1141269)
08.08.1952 (1952 to 1973)	Ernest Rockley Goodenough (Banana Grower)

18.11.2011 (2011 to date)	# Grenville Frederick Charles Duce

7.8 Summary of Site History

7.8.1 No. 9 Gaudrons Road

The historical review confirmed that since at least 1956 (but no earlier than 1943), the property has been used for banana plantation and other agricultural activities.

House and shed construction were undertaken between 1974-1984, the second shed and house then constructed between 1994 and 2004, and greenhouses between 2013-2019. The current owners purchased the property in 1992.

A shed likely used for mixing of chemicals has been present on the property since 1974.

7.8.2 No.148 Gaudrons Road

The historical review confirmed that since at least 1956 (but no earlier than 1943), the property has been used for banana plantation and other agricultural activities. These ceased sometime between 1984-1994.

House construction was undertaken around 1984, and the second house then constructed between 1984 and 1994. The remainder of the property remains fallow.

The current owner purchased the property in 2002, and banana growers were listed on ownership records between 1952 and 1971.

No chemical storage or packing shed appears to have been located on the property.

7.8.3 No.189 Gaudrons Road

The historical review confirmed that since at least 1956 (but no earlier than 1943), the property has been used for banana plantation and other agricultural activities. These ceased sometime between 1994-2004.

House construction was undertaken between 1956-1964, and the shed removed between 2004-2010. The remainder of the property remains fallow.

The current owners purchased the property in 2008, and banana growers were listed on ownership records between 1952 and 1971.

A possible chemical storage or packing shed appears to have been located on the property in the far northeastern corner. This has been subsequently removed, and as it forms part of the existing dwelling Lot A, no additional residential exposure is expected from this facility following the subdivision.

8 Potential Areas and Contaminants of Concern

Based on the site history and a walkover, a number of Areas of Environmental Concern (AECs) and associated Contaminants of Concern (CoC) were identified for the properties. These are summarised in **Table 12**. Given the widespread extents of former or current agricultural activities, the AECs cover the entire lots.

Table 12: Areas of Environmental Concern

Existing Property	AEC	CoC
No. 9	Banana plantations over the proposed building envelope	heavy metals (arsenic, lead), aldrin, dieldrin and DDT.

Existing Property	AEC	CoC
No. 189	Banana plantation over the property	heavy metals (arsenic, lead), aldrin, dieldrin and DDT.

At No.148, no additional building envelopes are being created and as such the proposed development is not increasing the risks of contamination exposure over current conditions.

9 Investigation Criteria

The soil investigation levels for banana plantation contamination (OCP, Arsenic and Lead) were adopted from the NSW EPA (1997) Guidelines. These are comparable to health-based investigation levels for residential sites with access to soil for home grown vegetables at less than the 10% of the daily intake, that are provided in NEPM (NEPC 2013) Guidelines. The investigation criteria are shown in the attached Table LR1.

10 Sampling Program

The sampling program was developed to meet the objectives of the investigation and was undertaken by a trained EWC environmental scientist.

Composite sampling and analysis was undertaken across the proposed building envelopes on No. 9 and 189 Gaudrons Road of the proposed three lots. The sample details are provided in Table 13.

Table 13: Sampling Program

Round	Date	Property	Lot BE	Composite Sample ID	Discrete Sample ID
1	27 April 2021	No.9	Lot 3 BE	C-1 to C-4	S-1 to S-16
2	25 May 2021	No.189	Lot 1-3 BE (x3)	C-5 to C-16	CS-17 to CS-64

Discrete samples were collected in a 10m grid through the proposed building envelope into a laboratory supplied jar. Composite samples were created by the laboratory from 4 sub-samples. Samples were collected from 0-75mm depth range.

The composite samples were analysed for Arsenic, Lead and OCP pesticides.

11 Results

11.1 Sample Descriptions

The sampling locations are presented in Figures 8 and 9. Samples consisted of black sandy to clay loam topsoil, gravelly.

During sampling no odiferous or discoloured soils were noted though pieces of blue plastic used for covering banana was observed on the No.189 groundsurface.

12 Analytical Results

Samples were forwarded under Chain of Custody conditions at Eurofins Laboratory for analysis. The laboratory reports are included in Appendix C.

12.1 Surface Sampling

The soil analytical results are summarised in the attached Table LR1. Comparison of composite sample results to the investigation criteria indicated that:

- Concentrations of OCP were reported below the laboratory Limit of Reporting (LOR) for all samples; and
- Concentrations of Arsenic and Lead were reported below the Investigation Criteria for all samples analysed.

12.2 95% Upper Confidence Limits

As all results were reported below the laboratory LOR and/or the investigation criteria, calculation of the 95% Upper Confidence Limits (UCLs) were not required to be calculated.

12.3 Quality Assurance and Quality Control

12.3.1 Field Quality Control

Environmental sampling activities were based on industry accepted standard practices.

The sampling equipment was decontaminated between sampling locations by washing with detergent and rinsing with clean water. A new pair of disposable gloves was used when handling each soil sample. Samples were collected in laboratory supplied jars and shipped in a chilled esky to the laboratory.

12.3.2 Laboratory Quality Control

Primary samples were submitted to Eurofins Laboratory, which is a national laboratory that undertakes analyses to NATA accredited analytical methodologies, and participates in NATA endorsed laboratory round robin analyses. Laboratory Quality Control included testing and reporting of reagent blanks, laboratory control samples (LCS), matrix spikes and surrogates spikes, and laboratory duplicates to assess laboratory quality control.

The laboratory quality assurance results are included within the laboratory reports attached in Appendix C. No exceptions to the laboratory quality control reportable limits were noted.

12.3.3 Data Quality Check

The quality assurance and quality control of the field and laboratory methods is considered sufficiently robust for the investigation undertaken. Given this it is concluded that the analytical results dataset reliably represents soil concentrations in the field as sampled.

13 Discussion of Results

Historical banana plantation cropping has been reported for No.189 and is ongoing at No.9 Gaudrons Road. The proposed building envelopes are undisturbed from the cropping state. Broadacre composite sampling confirmed that concentrations of pesticides are below levels of detection in soil in the proposed building envelopes, and that concentrations of Arsenic and Lead are detectable but at concentrations below the investigation criteria. As such the surface soils in the proposed building envelope areas are considered suitable for the proposed residential redevelopment.

14 Conclusions and Recommendations

The ESA has identified that the subject properties were developed between 1943-1956 as banana plantations, and have progressively ceased these activities since about 1994, with ongoing agricultural landuse activities occurring on No.9 Gaudrons Road up to this day. In addition, No.9 Gaudrons Road contains existing packing and maintenance sheds, but these will be located on portions of the property that are not creating new building entitlements and do not require further investigations at this time.

The agricultural nature of the potential contamination is common place in the northern beaches area of Coffs Harbour, with strong local government environmental policies, assessment and remediation procedures in place. In addition the NSW EPA (1997) banana plantations assessment guidelines provides a stepped approach to assessing and remediating such properties.

Detailed sampling was undertaken of the proposed additional building envelopes to be created on No.9 and No.189 Gaudrons Road, with concentrations of the chemicals of concern well below the investigation criteria.

As such, in their current states, all three properties are considered suitable for the proposed subdivision and creation of additional residential building entitlements without further investigations.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Organochlorine Pesticides	Sydney	May 04, 2021	14 Days

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Lab Sample ID	QA Source	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Organochlorine Pesticides	Melbourne	May 29, 2021	14 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water (USEPA 8270)			
Heavy Metals	Melbourne	May 29, 2021	180 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
% Moisture	Melbourne	May 28, 2021	14 Days
- Method: LTM-GEN-7080 Moisture

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code Description
Q15 The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Authorised by:

Andrew Black	Analytical Services Manager
Emily Rosenberg	Senior Analyst-Metal (VIC)
Joseph Edouard	Senior Analyst-Organic (VIC)

Glenn Jackson
General Manager

Final Report – this report replaces any previously issued Report

- Indicates Not Requested

* Indicates NATA accreditation does not cover the performance of this service.

Measurement uncertainty of test data is available on request or please [click here](#)

Eurofins shall not be liable for loss, cost, damages or expenses incurred by the client, or any other person or company, resulting from the use of any information or interpretation given in this report. In no case shall Eurofins be liable for consequential damages including, but not limited to, lost profits, damages for failure to meet deadlines and lost production arising from this report. This document shall not be reproduced except in full and relates only to the items tested. Unless indicated otherwise, the tests were performed on the samples as received.
