Executive summary

Design Build Instruct Pty Ltd (DBI-Link) (the proponent) is proposing to rezone primary production land to large lot residential over a 277 hectare site between Mountain Ash Road, Windellama Road, Barretts Lane and Rosemont Road, Goulburn, New South Wales (the Project Area). This assessment identified a number of Aboriginal archaeologically sensitive landforms such as ridgelines, creeks and drainage lines with moderate archaeological potential. Due to these findings, DBI-Link is required to prepare an Aboriginal Cultural Heritage Assessment Report (ACHAR) in accordance with the Guide to investigating, assessing and reporting on Aboriginal cultural heritage in NSW (OEH 2011) and the Aboriginal cultural heritage consultation requirements for proponents 2010 (ACHCRP) (Department of Environment, Climate Change and Water 2010a).

Everick Heritage Pty Ltd (Everick Heritage) has been engaged by DBI-Link to prepare the ACHAR for the project.

Consultation

Aboriginal community consultation has been conducted in accordance with the Aboriginal cultural heritage consultation requirements for proponents 2010 (Department of Environment Climate Change and Water 2010a). Table 3-1 lists the Aboriginal groups and individuals who registered in interest in the Project and Table 6-1 lists the members who participated in the pedestrian survey. Section 3 details the Consultation Requirements process and Appendices A to C provide evidence of the Consultation Requirements undertaken.

Survey

A survey of the Project Area was conducted as a part of this ACHA on the 12 December 2022 and the 13 December 2022. The proposed methodology was to conduct a pedestrian survey of the proposed development area in stratified systematic transects. The level of ground surface cover due to high levels of previous rain meant that little of the natural ground surface was visible reducing the ground surface visibility and survey coverage to less than one per cent of the natural ground surface. One area of Potential Archaeological Deposit (PAD) was identified at the top pf one hill crest which had be subject to less agricultural disturbance (Figure 6-1). Archaeological objects, in the form of flaked stone artefacts are most likely to be present within the top 100 millimetres, within the residual topsoil.

Recommendations

It is recommended that if any ground disturbing activities are proposed within the area of PAD would need to be accompanied by archaeological test excavations. If the area of PAD can be avoided by the proposed works, then no further work is required.

It is an offence under the *NPW Act* to knowingly impact upon an archaeological site. If any Aboriginal objects, such as stone artefacts, are identified during any stage of the proposed works, work must cease in the immediate area, until the objects can be assessed by an archaeologist. If the finds are assessed to be Aboriginal objects, then notification to Heritage NSW must be undertaken.

If suspected human remains are discovered and/or harmed in, on or under the land within the Project Area, the following actions must be undertaken:

- The remains must not be harmed/further harmed
- Immediately cease all works at that particular location
- Secure the area so as to avoid further harm to the remains
- Notify the NSW Police and the Environment Line (Heritage NSW) on 131 555 as soon as practicable and provide any details of the remains and their location
- Do not recommence any work at that particular location unless authorised in writing by Heritage NSW.

Definitions and abbreviations

ACHA	means Aboriginal Cultural Heritage Assessment
ACHAR	means Aboriginal Cultural Heritage Assessment Report
AHC	means Australian Heritage Council
Australian Heritage Council Act	means *Australian Heritage Council Act 2003 (Cth)*
AHIMS	means Aboriginal Heritage Information Management System
AHIP	means Aboriginal Heritage Impact Permit
ALR Act	means *Aboriginal Land Rights Act 1983*
asl	means above sea level
ASR	means Aboriginal Archaeological Survey Report
ASRF	means Aboriginal Site Recording Form
ATSIHP Act	means *Aboriginal and Torres Strait Islander Heritage Protection Act 1984 (Cth)A*
BP	means Before Present (that is 1950)
cm	means centimetres
CHL	means Commonwealth Heritage List
Code of Practice	means Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales
DCP	means Development Control Plan
DECCW	means Department of Environment, Climate Change and Water (now Heritage NSW)
DPE	Department of Planning and Environment
EIS	Environmental Impact Statement

ESD	Ecological Sustainable Development
EP&A Act	means *Environmental Planning and Assessment Act 1979 (NSW)*
EPBC Act	means *Environment Protection and Diversity Conservation Act 1999 (Cth)*
ESD	means Ecologically Sustainable Development
Everick Heritage	means Everick Heritage Pty Ltd
the Guide	means Guide to Investigating, Assessing and Reporting on Aboriginal cultural heritage in NSW
GPS	means Global Positioning System
ha	means hectares
ISEPP	means S*tate Environmental Planning Policy (Infrastructure) 2007 (NSW)*
km	means kilometres
LALC	means Local Aboriginal Land Council
LEP	means Local Environmental Plan
LGA	means Local Government Area
m	means metres
mm	means millimetres
NHL	means National Heritage List
NPW Act	means *National Parks and Wildlife Act 1974 (NSW)*
OEH	means (former) New South Wales Office of Environment and Heritage
PAD	means Potential Archaeological Deposit
Project Area	means area shown in Figure 1.2
RAP	means Registered Aboriginal Party

RNE	means Register of the National Estate
s	means section

1. Introduction

1.1. Project description and background

Design Build Instruct Pty Ltd (DBI-Link) (the proponent) is proposing to subdivide 277 hectares (ha) of land on Mountain Ash Road, Goulburn (the Project Area; Figure 1-1). The proposed development comprises the subdivision of 13 parcels of land into 105 residential properties (Figure 1-2). Works associated with the development of these properties also includes the construction of perimeter roads around the properties. In order for the subdivision to proceed, a rezoning of the land by Goulburn Mulwaree Council from primary production land to large lot residential land is required.

A desktop due diligence assessment was prepared for the Project Area by Everick Heritage Pty Ltd (Everick Heritage) for DBI-Link (Appendix E). Based on previous archaeological assessments, regional studies and past land use, the Project Area was assessed by Everick Heritage (2022) as having low-moderate potential for Aboriginal sites and objects and further archaeological assessment. In addition, Section 3.1 of the Goulburn Mulwaree Development Control Plan (DCP) 2009, which was developed in consultation with the Pejar Local Aboriginal Land Council (LALC) suggests that the site is located within Aboriginal Sensitive Land and an Archaeological Survey must be prepared and lodged with any development application for land subdivision (Section 3.1.8:51).

Following submission of the desktop due diligence for the Project Area to Goulburn Mulwaree Council, they responded that preparation of an Aboriginal Cultural Heritage Assessment for the Project Area would be required in accordance with the recommendations of the Urban and Fringe Housing Strategy (Elton Consulting 2020) and the advice provided by Council at the rezoning proposal post-lodgement meeting on 7th December 2021. In addition, Council pointed out that the requirement for a full Aboriginal Cultural Heritage Assessment was also being requested by Department of Planning and Environment (DPE) for all planning proposals in that precinct.

Subsequently, DBI-Link engaged Everick Heritage to prepare this Aboriginal Cultural Heritage Assessment Report (ACHAR).

1.2. Project Area

The Project Area is situated on Mountain Ash Road, Windellama Road, Barretts Lane and Rosemont Road, Goulburn, New South Wales (NSW). The lands subject to subdivision comprise Lot 1 DP 779194, Lot 103 DP 70346, Lot 1 DP 853498, Lots 104, 105, 106 DP 126140 and Lot 1 and 2 DP 835278, Lot 3 DP 835278, Lot 1 DP 731427 and Lot 22, 23, 24 DP 811954 and extends over approximately 277 hectares (Figure 1-1). The Project Area is located within the Parish of Towrang and County of Argyle (Figure 1-1). The Project Area is also within the Goulburn Mulwaree Local Government Area (LGA) and within the Pejar LALC area.

1.3. Study aims and objectives

The objectives of this ACHAR were primarily identified through Goulburn Mulwaree Council as follows:

- Conduct an archaeological survey to identify Aboriginal sites and potential archaeological deposits (PAD)
- Consult with the Aboriginal community through Pejar LALC

Additionally, an objective was to identify whether Aboriginal cultural values were present in the Project Area and would be impacted.

This ACHAR has been undertaken in accordance with the following guidelines:

- Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales 2010 (DECCW 2010b).
- Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW (OEH 2011).
- Aboriginal cultural heritage consultation requirements for proponents 2010 (DECCW 2010a).
- The Burra Charter 2013 (Australia ICOMOS 2013).

1.4. Authors and contributors

Caitlin Cole (Senior Archaeologist, Everick Heritage) supervised the archaeological survey, directed the project and provided management input. Caitlin also undertook the background sections for this report.

Caitlin has a Bachelor of Arts (Honours) and seven years experience as a consultant archaeologist and been involved with all facets of both historic and Aboriginal cultural heritage management.

Grace Eldon (Consultant Archaeologist, Everick Heritage) undertook and wrote the background sections providing a review of the relevant literature and relevant previous assessments. Grace also undertook the database searches and prepared the mapping. Grace has a Bachelor of Arts (Honours) and one year experience as a consultant archaeologist.

Vanessa Edmonds (Principal-NSW, Everick Heritage) provided a quality and compliance review.

Mapping and spatial data analysis for this project has been undertaken by Alfred Gasore.

1.5. Report structure

The purpose of this report is to document the results of an investigation of Aboriginal heritage at the Project Area. As such, the structure of this report includes:

- Section 1 – Introduction providing information on the project background and description
- Section 2 – Statutory requirements: outlines relevant legislation for this assessment.
- Section 3 – Consultation: provides information on the Aboriginal consultation process.
- Section 4 - Environmental context: provides an overview of the environmental conditions to provide context for the predictive model
- Section 5 – Ethnohistoric and Archaeological context: presents the results of the background ethnohistoric and literature research, summary of relevant previous assessments, and database searches. This section also presents a predictive model as background to the survey sampling strategy.
- Section 6 – Archaeological survey: discusses the aims, timing and personnel, constraints, survey sampling strategy, methodology and coverage.
- Section 7 – Cultural heritage assessment: presents the results of the cultural heritage assessment identifying Aboriginal cultural values and landscapes.
- Section 8 - Impact assessment: assesses potential impacts to Aboriginal objects and places as well discussion of ecologically sustainable principles.
- Section 9– Recommendations
- Section 10 – References

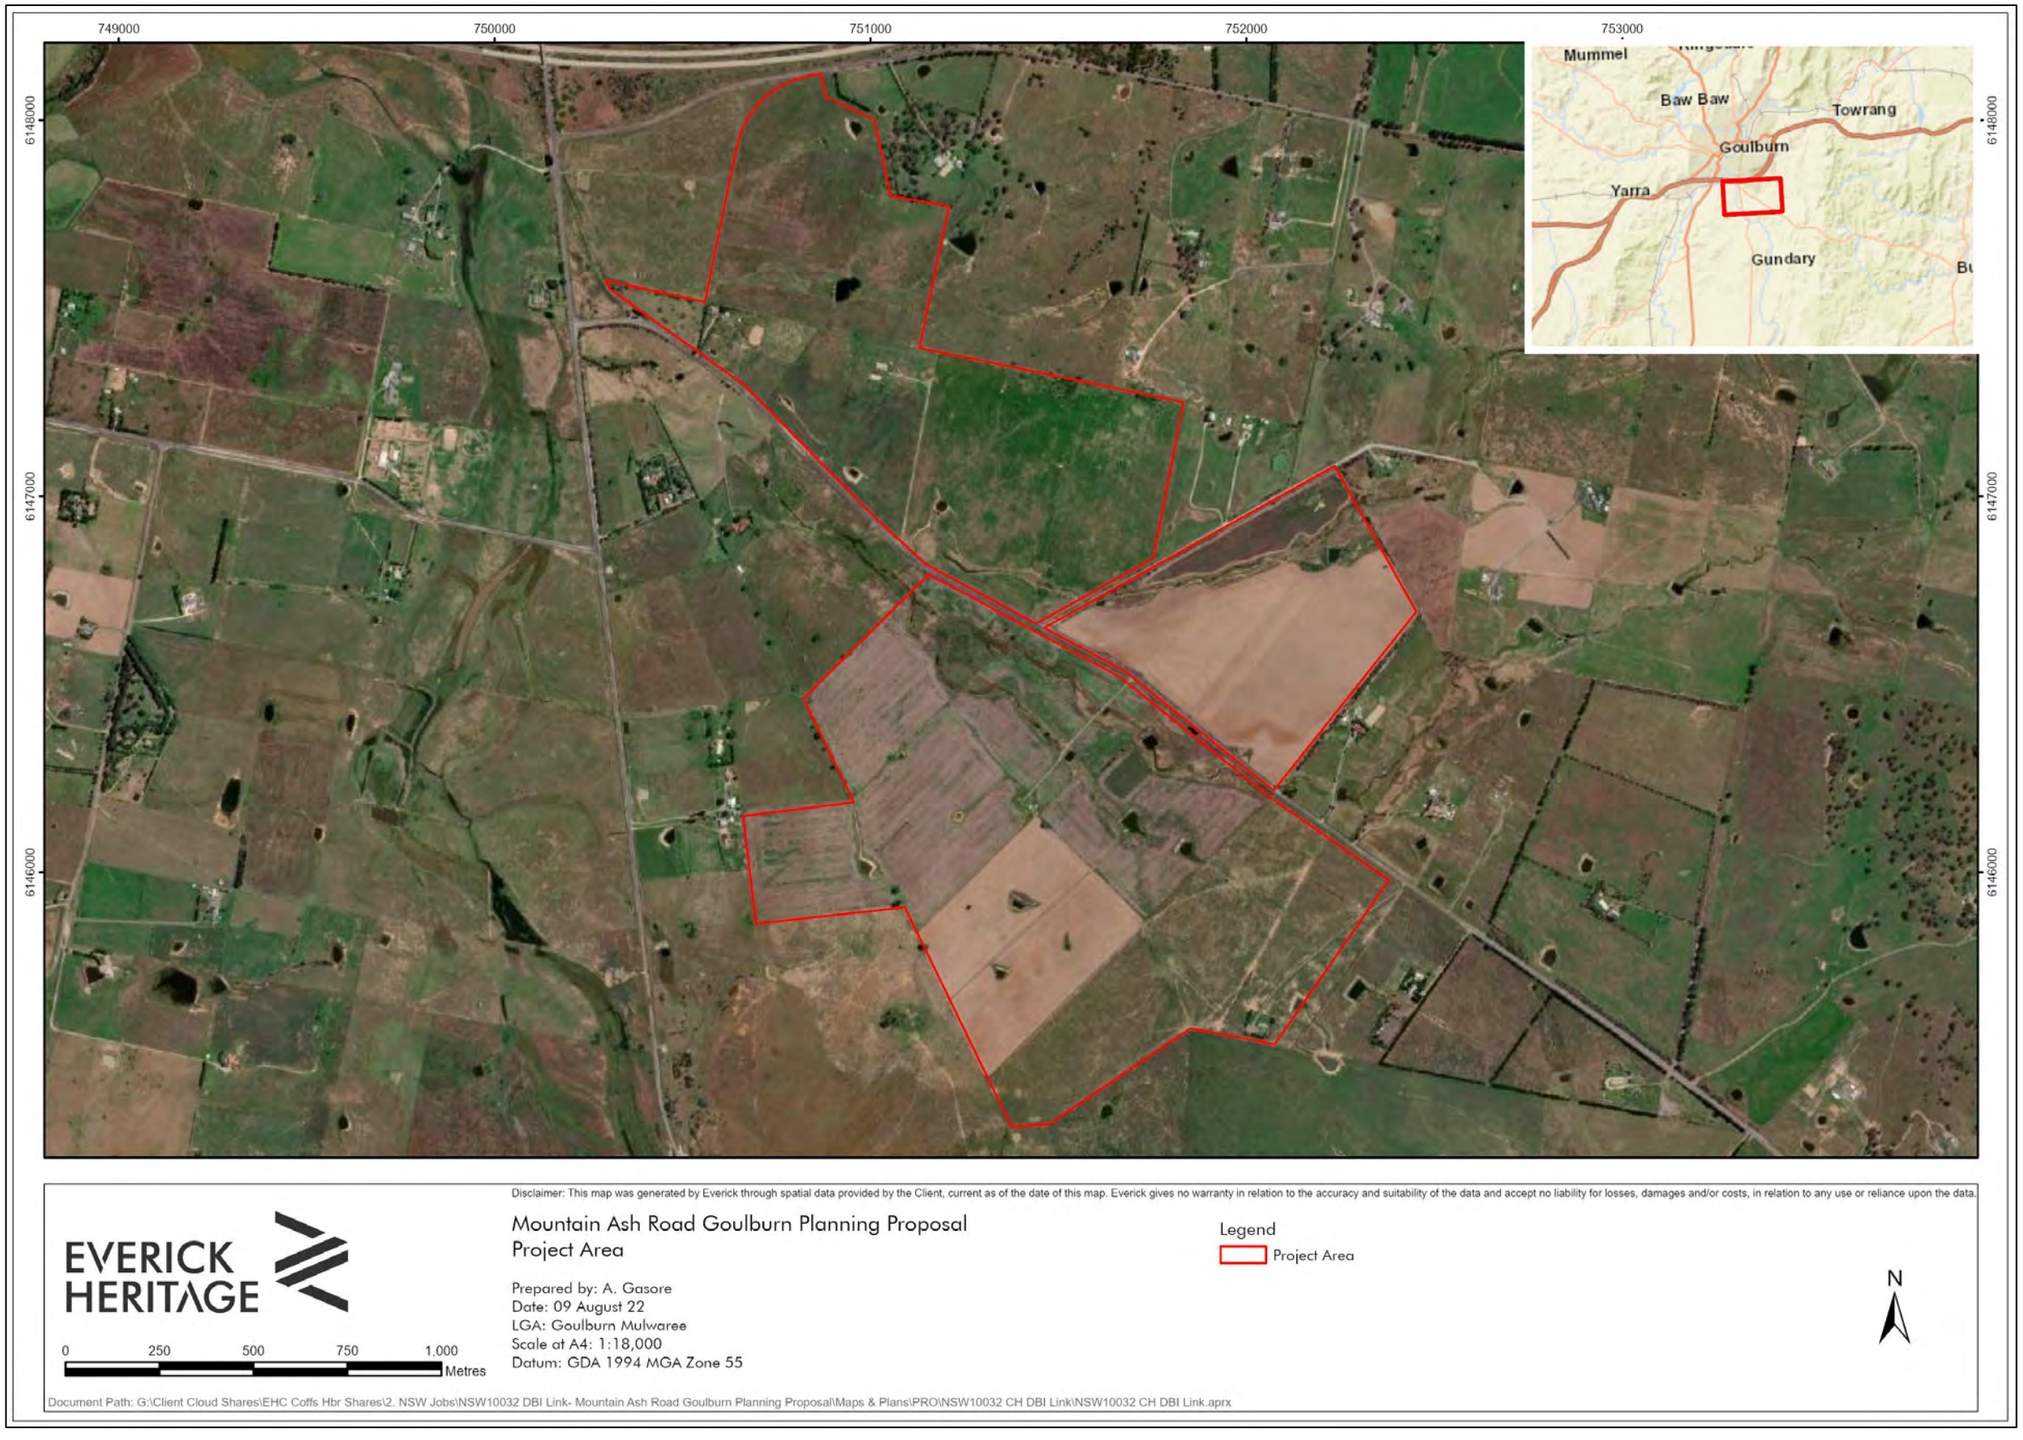

Figure 1-1: Location of the Project Area

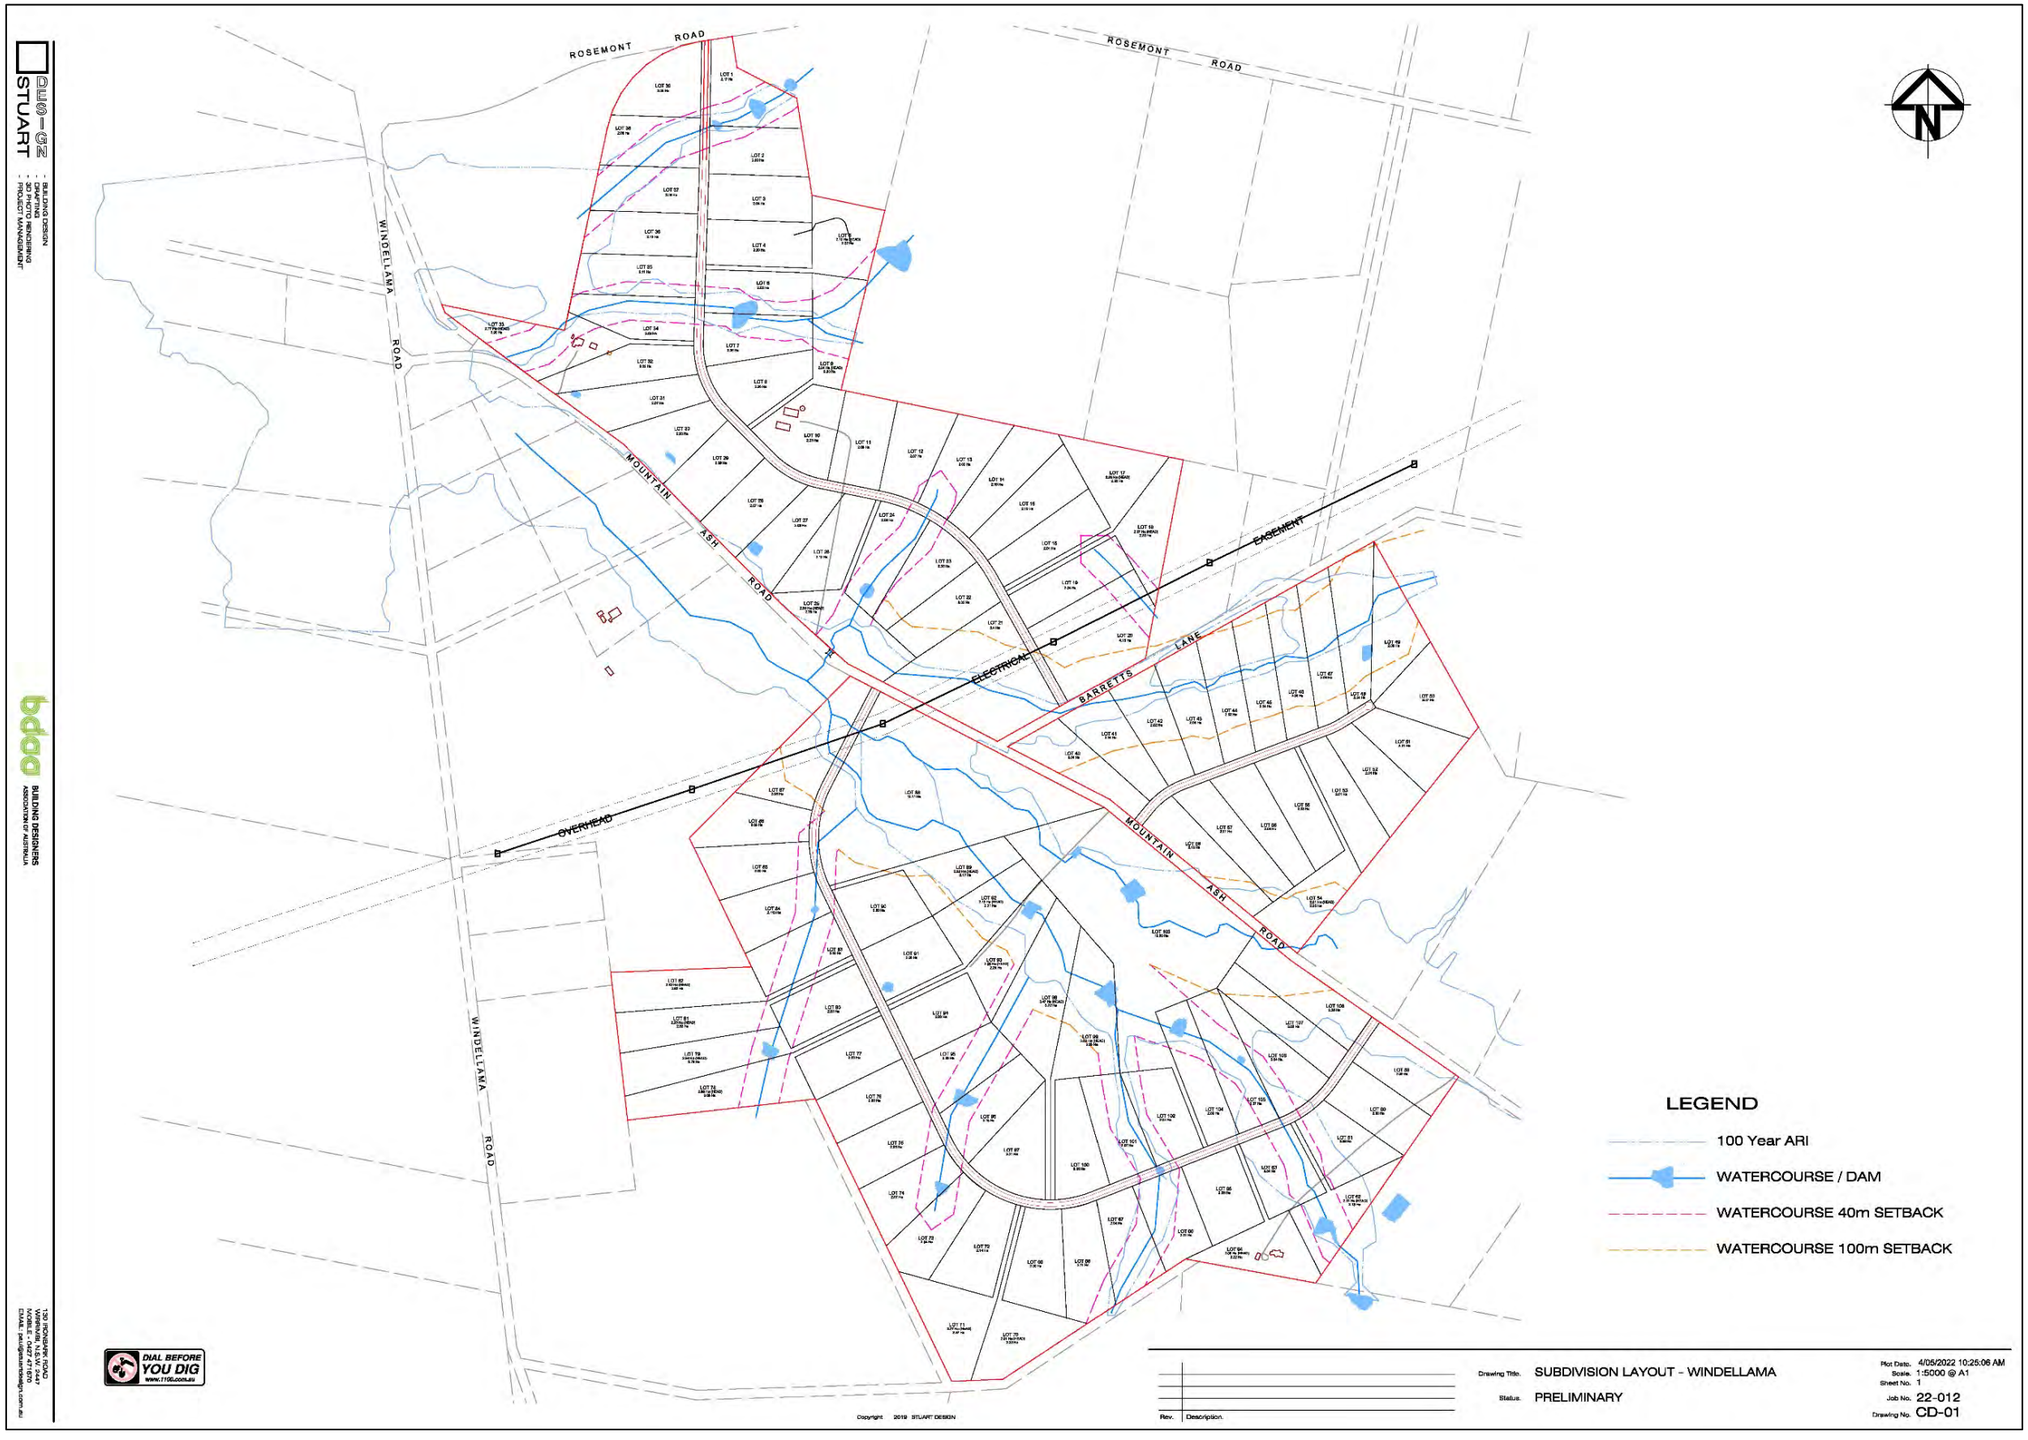

Figure 1-2: Proposed development plan (Source: DBI-Link)

2. Legislative context

2.1. State legislation

2.1.1. National Parks and Wildlife Act 1974 (NSW)

The *National Parks and Wildlife Act 1974 (NSW) (NPW Act)* provides statutory protection to all Aboriginal places and objects. An Aboriginal object is defined as:

> *any deposit, object or material evidence (not being a handicraft made for sale) relating to the Aboriginal habitation of the area that comprises New South Wales, being habitation before or concurrent with (or both) the occupation of that area by persons of non-Aboriginal extraction, and includes Aboriginal remains.*

An Aboriginal Place is declared by the Minister under section (s) 86 of the *NPW Act*. Aboriginal Places are recognised for their special significance to Aboriginal culture. Aboriginal Places gazetted under the *NPW Act* are listed on the State Heritage Register established under the *Heritage Act 1977 (NSW).*

Part 6 of the *NPW Act* provides specific protection for Aboriginal objects and declared Aboriginal places by establishing offences of harm. Harm is defined to mean:

> *destroying, defacing, damaging or moving an object from the land.*

The protection provided to Aboriginal objects applies regardless of the level of their significance or issues of land tenure. Aboriginal objects and places are afforded statutory protection in that it is an offence to knowingly or unknowingly desecrate and Aboriginal object or place under section (s) 86 of the *NPW Act*.

In accordance with s 89A any person who is aware of the location of an Aboriginal object must notify the Chief executive in the prescribed manner within a reasonable time of becoming aware of that object. The prescribed manner is through preparation and submission of an Aboriginal Site Recording Form (ASRF) to the Aboriginal Heritage Information Management System (AHIMS) (DECCW 2010b: 14).

In order to undertake a proposed activity which is likely to involve harm to an Aboriginal object or Aboriginal Place it is necessary to apply to Heritage NSW (Department of Planning and Environment) for an Aboriginal Heritage Impact Permit (AHIP). AHIPs are issued by the Aboriginal Heritage Regulation

Team (Heritage NSW) under section 90 of the *NPW Act* and permit harm to certain Aboriginal objects and Aboriginal Places.

2.1.1.1. Goulburn Mulwaree Local Environmental Plan 2009

The *Environmental Planning and Assessment Act 1979 (NSW)* (*EP&A Act)* requires councils to consider environmental effects when assessing new developments. Heritage is one of the matters for consideration. Sites of environmental heritage (including historic heritage sites and sometimes Aboriginal heritage sites) are protected by gazetted Local Environment Plans (LEP) and Development Control Plans (DCP) which specify the constraints on development in the vicinity of these sites unless being assessed under Part 5 of the *EP&A Act* (see below). The Goulburn Mulwaree LEP 2009 has provided a Schedule (Schedule 5) of Environmental Heritage which provides statutory protection for those items listed. There are no Aboriginal sites listed on Schedule 5 of the Goulburn Mulwaree LEP.

In addition to the LEP protections, the Project Area is also subject to the Goulburn Mulwaree Council DCP (2009). As part of the Goulburn Mulwaree DCP 2009, an Aboriginal Heritage Study was compiled for the entire Goulburn Mulwaree LGA (AMBS 2012). The Aboriginal Heritage Study was developed in consultation with the Pejar LALC suggests that the site is located within Aboriginal Sensitive Land and an archaeological survey must be prepared and lodged with any development application for land subdivision. Chapter 3 of the Goulburn Mulwaree DCP provides various controls and guidelines for the development of the area. The archaeological survey undertaken as part of this ACHAR is in compliance with the DCP controls associated with Aboriginal Sensitive Land.

2.1.2. Native Title Act 1994 (NSW)

The *Native Title Act 1994 (NSW)* was introduced to work in conjunction with the *Native Title Act 1993 (Cth)*. Native Title claims, registers and Indigenous Land Use Agreements are administered under the Act. A search of National Native Title Tribunal was undertaken on 12 October 2022. The search showed that Native Title does not exist across the Project Area.

2.1.3. Aboriginal Lands Right Act 1983 (NSW)

Aboriginal Land Councils (at the State and local level were established by the *Aboriginal Land Rights Act 1983 (ALR Act)*. Aboriginal Land Councils have a statutory obligation under the *ALR Act* to:

a) take action to protect the culture and heritage of Aboriginal persons in the council's area, subject to any other law, and

b) promote awareness in the community of the culture and heritage of Aboriginal persons in the council's area.

The Project Area is within the boundary of the Pejar LALC who has been consulted for this ACHAR.

2.2. Commonwealth legislation

2.2.1. Environment Protection and Biodiversity Conservation Act 1999 (Cth)

The *Environment and Heritage Legislation Amendment Act (No.1) 2003 (Cth)* amends the *Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act)* to include 'national heritage' as a matter of National Environmental Significance and protects listed places to the fullest extent under the Constitution. It also establishes the National Heritage List (NHL) and the Commonwealth Heritage List (CHL).

The *Australian Heritage Council Act 2003 (Cth) (AHC Act)* establishes the Australian Heritage Council (AHC), an advisory body to the Minister for the Environment and Heritage and retains the Register of the National Estate (RNE).

The *Australian Heritage Council (Consequential and Transitional Provisions) Act 2003 (Cth)* (*Australian Heritage Council Act*) repeals the *Australian Heritage Commission Act 1975 (Cth)*, amends various Acts as a consequence of this repeal and allows the transition to the current heritage system.

Together the above three Acts provide protection for Australia's natural, Indigenous and non- Indigenous heritage. Features include:

- The NHL of places of national heritage significance.
- The CHL of heritage places owned or managed by the Commonwealth.
- The creation of the AHC, an independent expert body to advise the Minster on the listing and protection of heritage places.
- Continued management of the Register of the National Estate (RNE).

2.2.1.1. National Heritage List

The NHL is a list of places with outstanding heritage value to our nation, including places overseas. So important are the heritage values of these places that they are protected under the *EPBC Act*. This means that a person cannot take an action that has, will have, or is likely to have, a significant impact on the national heritage values of a national heritage place without the approval of the Australian Government Minister for the Environment and Heritage. It is a criminal offence not to comply with this law and there are significant penalties.

2.2.1.2. Commonwealth Heritage List

The CHL is a list of places managed or owned by the Australian Government and not of relevance to this project.

2.2.1.3. Register of the National Estate

The RNE is an evolving record of Australia's natural, cultural and Aboriginal heritage places that are worth keeping for the future. The AHC compiles and maintains the RNE under the *Australian Heritage Council Act.* Places on the RNE that are in Commonwealth areas, or subject to actions by the Australian Government, are protected under the *EPBC Act* by the same provisions that protect Commonwealth heritage places (see above).

Following amendments to the *Australian Heritage Council Act*, the RNE was frozen on 19 February 2007, meaning no new places can be added, or removed. From 2012, all references to the RNE were removed from the *EPBC Act* and the *AHC Act*. The RNE is now maintained on a non- statutory basis as a publicly available archive.

2.2.2. Aboriginal and Torres Strait Islander Heritage Protection Act 1984 (Cth)

Most State Aboriginal heritage databases provide protection for those sites with physical evidence. The *Aboriginal and Torres Strait Islander Heritage Protection Act 1984 (Cth) (ATSIHP Act)* deals with Aboriginal cultural property in a wider sense. Such cultural property includes any places, objects and folklore that 'are of particular significance to Aboriginals in accordance with Aboriginal tradition'. In most cases, archaeological sites and objects registered under the State Act will also be Aboriginal places subject to the provisions of the *ATSIHP Act*.

There is no cut-off date and the *ATSIHP Act* may apply to contemporary Aboriginal cultural property as well as ancient sites. The *ATSIHP Act* takes precedence over State cultural heritage legislation where there is conflict. The responsible Minister may make a declaration under Section 10 of the *ATSIHP Act* in situations where state or territory laws do not provide adequate protection of heritage places.

3. Consultation

Everick Heritage has conducted the community consultation process in accordance with the Aboriginal cultural heritage consultation requirements for proponents 2010 (ACHCRP) (DECCW 2010a), the Code of Practice (DECCW 2010b) and the Burra Charter 2013 (Australia ICOMOS 2013).

In accordance with Step 4.1.2 of the Consultation Requirements the following organisations were contacted to request names of Aboriginal people or organisations who may hold cultural knowledge relevant to determining the significance of Aboriginal objects and/or places within the project Area or nearby:

- Pejar LALC
- The Registrar, *Aboriginal Land Rights Act 1983 (NSW)*
- National Native Title Tribunal
- NTSCORP
- Goulburn Mulwaree Council
- Goulburn Local Land Services
- Aboriginal Heritage Regulation Team, Heritage NSW, Department of Planning and Environment (DPE)

In accordance with Step 4.1.3 of the Consultation Requirements, an advertisement was placed in the Goulburn Post on 12 October 2022 seeking to consult with Aboriginal persons regarding the project and who hold cultural knowledge of the region to register their interest by 26 October 2022 (Appendix B).

In accordance with Step 4.1.3 of the Consultation Requirements, letters and emails were sent to all Aboriginal people and organisations identified through the response by the agencies contacted as part of Step 4.1.2, primarily Heritage NSW. These letters and emails provided details about the location and nature of the of the project and invited those with an interest to register by .

Table 3-1 provides a list of those Aboriginal parties who registered. In accordance with Step 4.1.6 of the Consultation Requirements a list of the registered Aboriginal parties (RAPs) and a copy of the advertisement (Step 4.1.3) were forwarded to Heritage NSW and Pejar LALC.

In accordance with Step 4.3 of the Consultation Requirements background information and an ACHAR methodology was sent to the RAPs by email on 31 October 2022 requesting a response by 28 November

2022. Consultation with Pejar LALC, as outlined in the DCP and Council request as the primary source of cultural knowledge for the area, and as the primary site field officers. Five responses were received, all in favour of the methodology and results of the assessment (Appendix D).

The draft ACHAR was sent for RAP review on the 7 February 2023. One response was received in agreeance with the draft ACHA.

4. Environmental context

4.1. Topography and hydrology

The Project Area overlaps the boundaries of the Bullamalita soil landscape, and the Collector Creek soil landscape as depicted within the *Soil Landscapes of the Goulburn 1:250,000 Sheet* (Hird 1991) (Figure 4-3). The major soil types in the Goulburn area favour sustainable and productive agriculture (Goulburn Mulwaree Heritage Study Review 2018). A visual representation of the soil landscapes is provided in Figure 4-1 and Figure 4-2.

The majority of the Project Area is situated within the Bullamalita soil landscape, an area near Goulburn that is associated with Upper Silurian and Lower Devonian geological sediments, in conjunction with undulating rises and valleys between low hills (Hird 1991). The local relief is between 10 to 50 metres (m), with slopes of less than 10 per cent. The soils consist of acid to neutral yellow duplex soils, usually with balanced A2 horizons, as can be seen in Figure 4-1, that set very hard on drying, of which occur on lower side slopes, foot slopes and drainage lines along the undulating rises and hills. Depth to bedrock is typically more than 200 centimetres (cm).

The Collector Creek soil landscape is characterised by alluvial plains, frequently subject to active erosion and aggradation by channelled or overbank stream flow. The soil landscape is situated on the narrow floodplains associated with Salpetre Creek, the Mulwaree River, Wollogorang, Currawang and Collector Creeks. Within the Project Area, this soil landscape is associated with the lowest elevation, and as such is subject to frequent waterlogging. The alluvial floodplains have an elevation which can vary from around 700 m on Collector Creek to about 660 m on the Mulwaree River (Hird 1991). Moderately deep, grey and yellow mottled duplex soils with bleached A2 horizons and neutral to alkaline reaction prevail in this landscape. Deposits associated with Collector Creek have formed on colluvial and alluvial deposits of Quaternary and Cainozoic clay, silt, and sand, with depths exceeding 300 cm (Figure 4-2).

There are numerous watercourses within the Project Area. Gundary Creek is a major fourth-order watercourse which is located adjacent to the Project Area, running west of Windellama Road. Multiple first order tributaries feed into Gundary Creek from within the Project Area. This includes numerous first-order streams which meander through the southern end the Project Area. An unnamed third-order watercourse flows southeast alongside the south side of Mountain Ash Road. Another unnamed third-order stream flows south of Barretts Lane, in the northeast portion of the Project Area. Figure 4-4 shows the distribution of creek lines of the Project Area.

4.2. Climate

Highlands and tributaries dominate the wider region, bounded by vegetation which reflects the temperate environment. A temperate climate dominates both soil landscapes, with a montane climate occurring at higher elevations (Hird 1991).

4.3. Vegetation

Original vegetation for the Collector Creek landscape would have once included dry and wet tussock grasslands with spear grasses and snow gums (Hird 1991:63). For the Bullamalita landscape, most often savannah woodland of Yellow Box and Red Gum populated the area (Hird 1991:42). Both soil landscapes follow the perennial creek lines associated with the Project Area. These soil landscapes have been extensively cleared and populated with introduced species since the introduction of cultivation two hundred years ago.

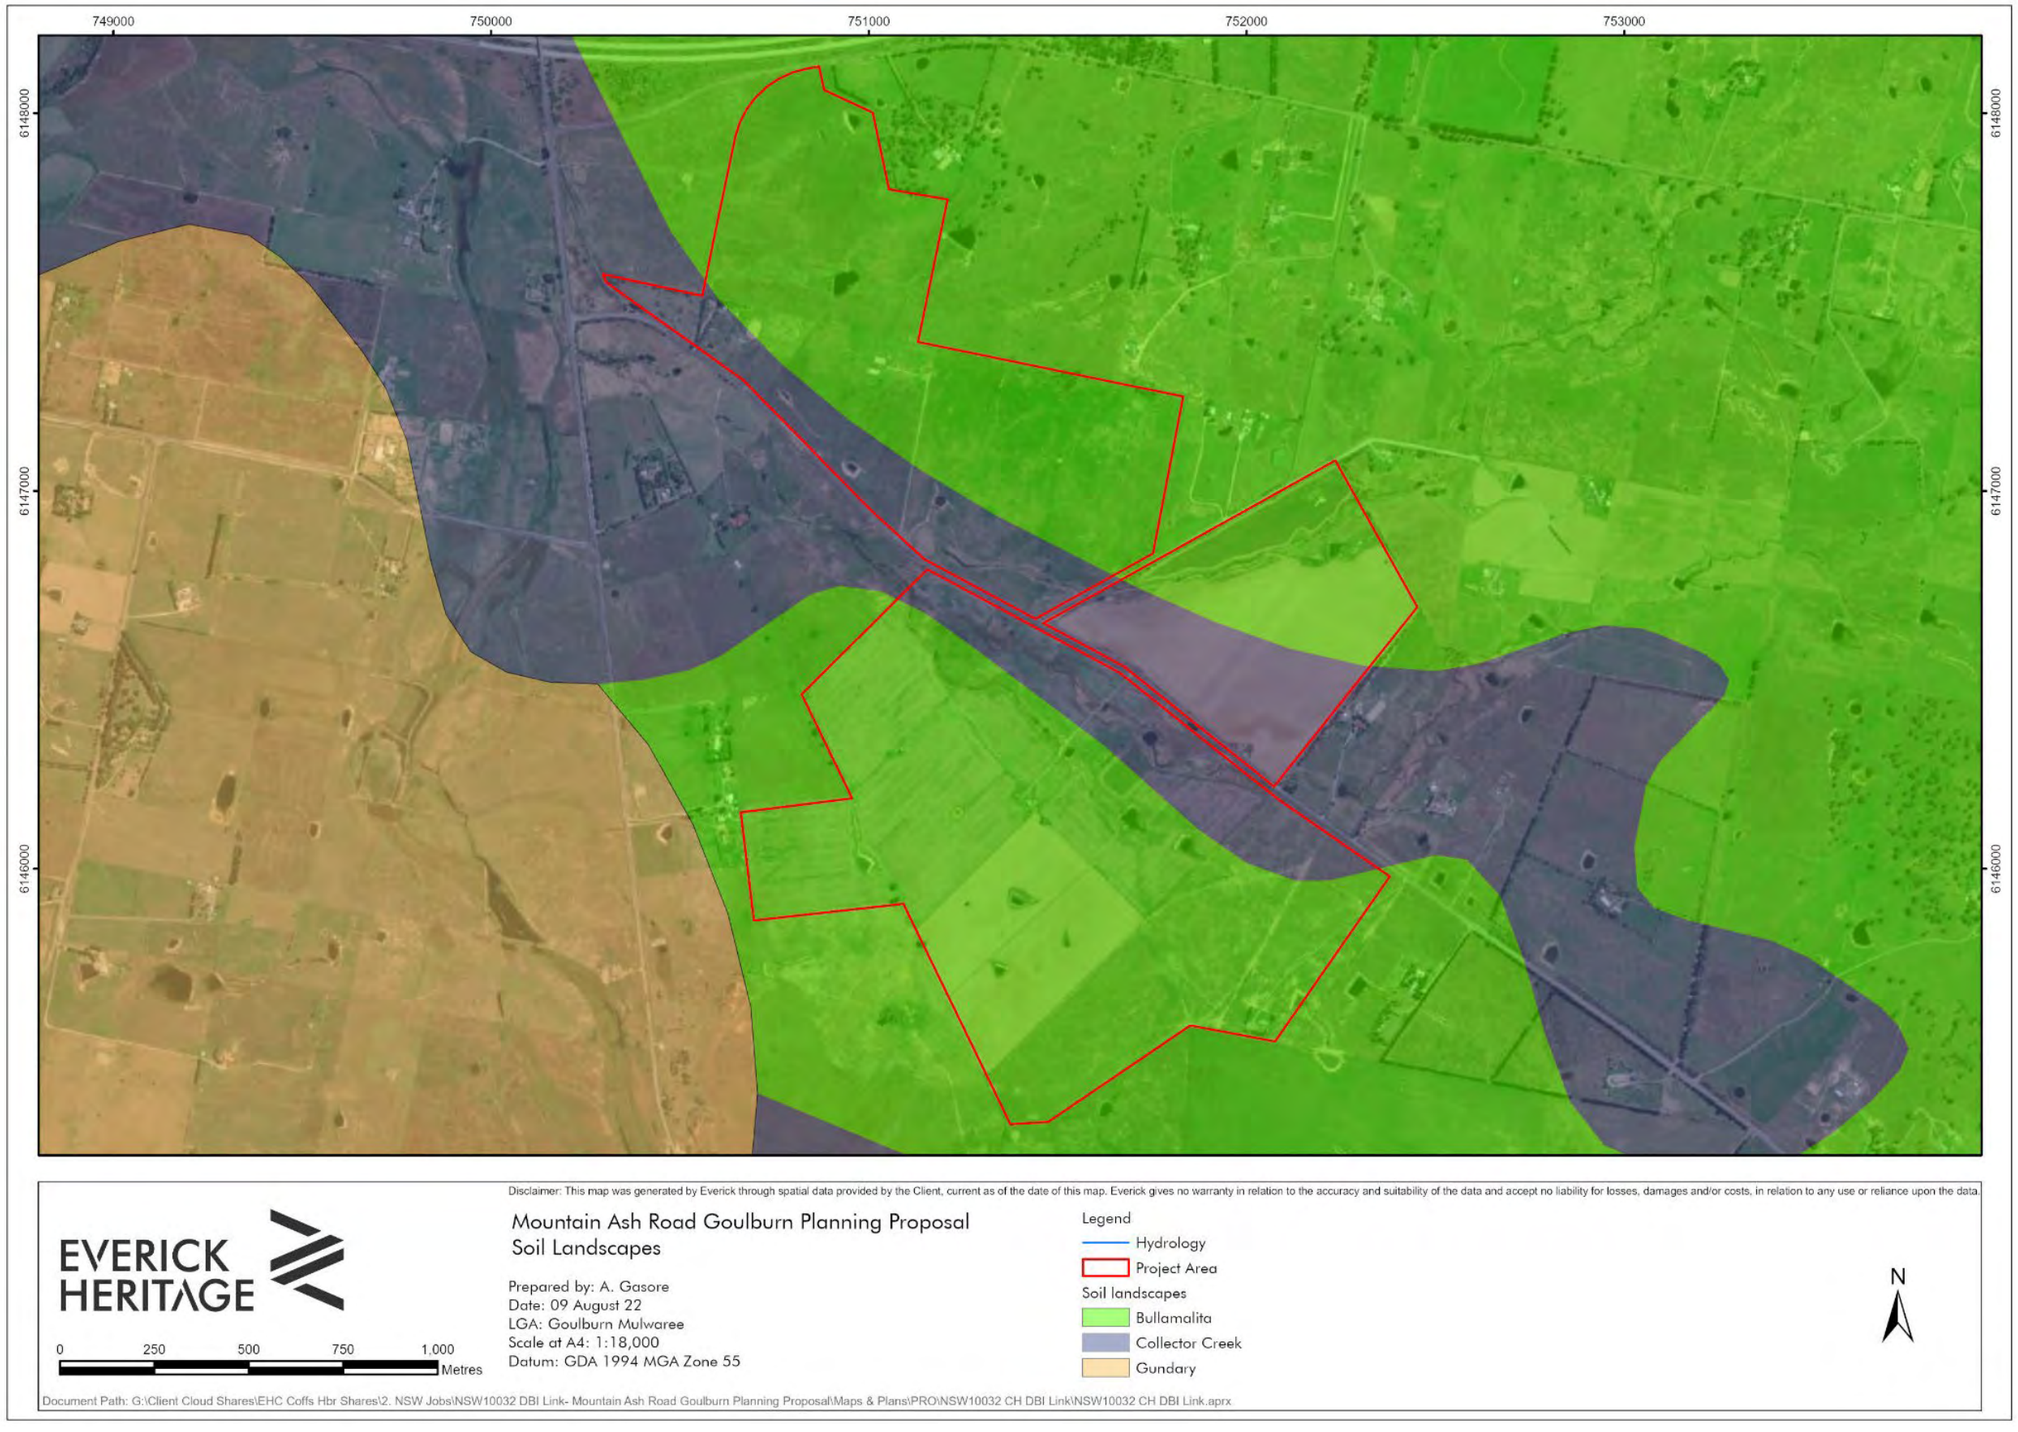

Figure 4-3: Soil landscapes of the Project Area

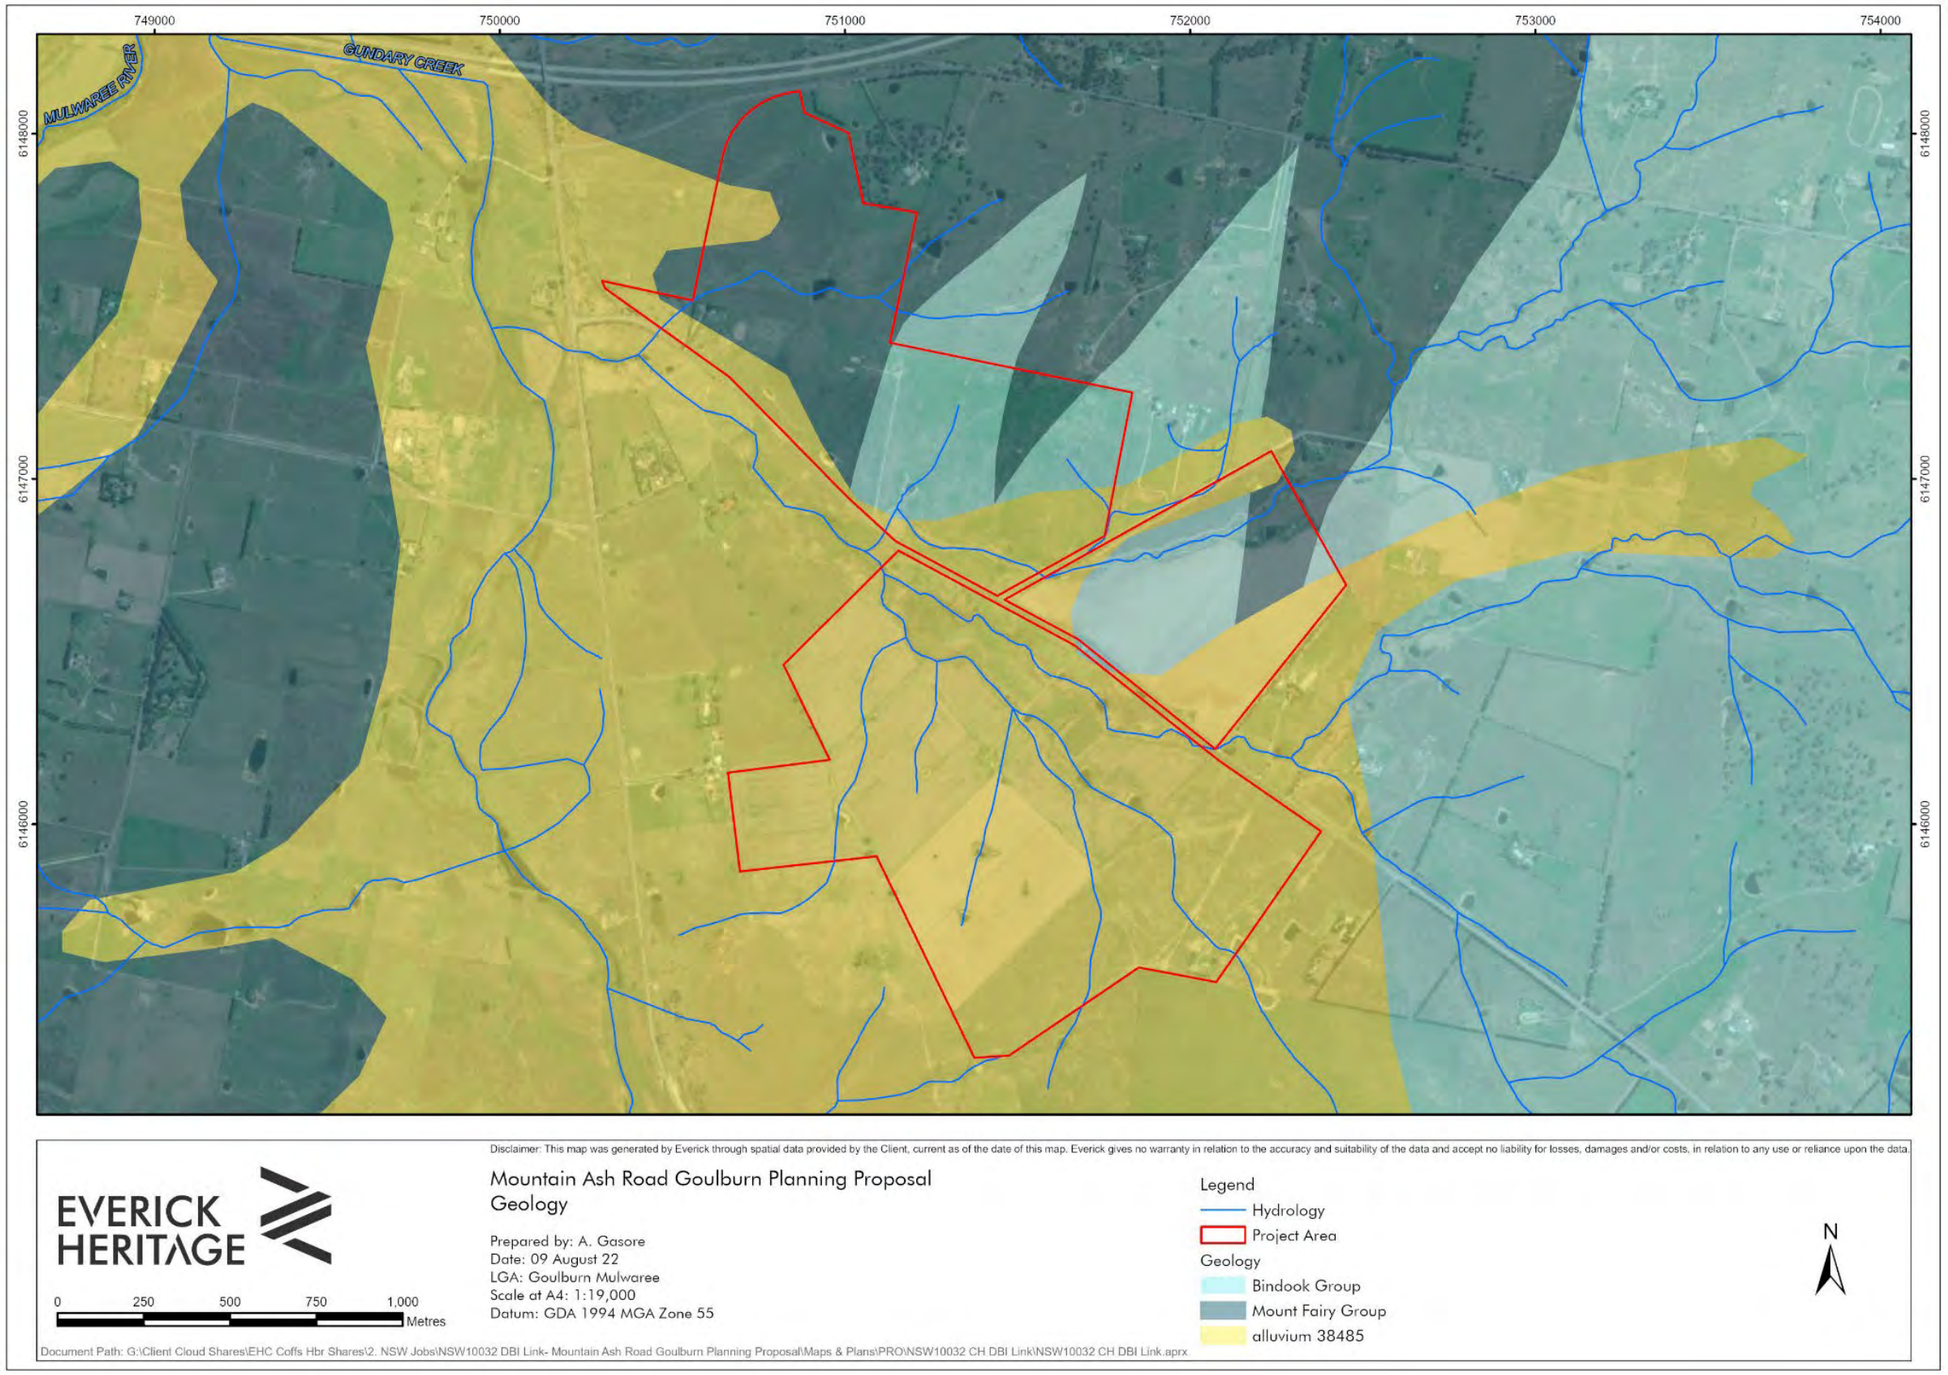

Figure 4-4: Geology of the Project Area

4.4. Land use history

The Project Area is located just 3.8 kilometres (km) southeast from the centre of Goulburn. The landscape and topography, within which the Project Area sits would once have facilitated the expansion of the town's pastoral industry. Historically, the major industries in the rural regions of Goulburn Mulwaree were pastural based, mainly focused on wool production, lamb and cattle grazing. There has been a downturn of traditional agricultural industries in the area and an attempt to diversify alternative enterprises have included the growing of canola, lavender, berries, grapes, olives, and poultry (Goulburn Mulwaaree Heritage Study Review 2018). The downturn in the agricultural markets has generally led to pressure for residential subdivisions of larger land holdings, some of which contain significant historic homesteads and associated rural buildings. Today, in the Goulburn Mulwaree LGA, agriculture and grazing remain the dominant industries.

The Project Area was originally associated with the Jonas Bradley land grants in the early 19th century. Jonas Bradley arrived in the Colony in 1791 and in 1825. Jonas and his two sons, Thomas and William, each received 100 acres of land near Goulburn. These initial land grants were extended by purchase and grant and over the next 77 years, consolidated about 32,000 acres in the immediate Goulburn district. The Project Area is located within this original land grant and is visible as open farmland in early parish maps (Figure 4-5).

The Project Area has remained unchanged with the exception of minor infrastructure relating to farming practices as well as the construction of roads. Mountain Ash Road is present on parish maps as early as 1882 (Figure 4-5). This road has been used as a service passage since the late 19th century as the original route to Bungonia. There has been little to no residential development within the Project Area, and it is likely was subdivided as the main farming complex as multiple homesteads can be seen adjacent to the Project boundaries. Aerial imagery taken in 1975 and 2022 can be compared to reveal continual clearing and ploughing of paddocks in the Project Area, however, land alongside watercourses has remained untouched (Figure 4-6). The Project Area is still currently utilised for crops, predominantly wheat and livestock agistments.

5. Ethnohistoric and archaeological context

5.1. Ethnohistoric context

The Project Area is likely to have been associated with the Gandangara (also known as the Gundungurra, Gundungari, Gurra-gunga, and Burragorang) and Ngunnawal (also called the Nyunnawal, Ngunuwal, Ngoonawal, Wonnawal, Nungawal, Yarr, Yass tribe, Lake George, Five Islands tribe or Molonglo tribe) clans who inhabited the Goulbourn district. The Gandangara and Nyunnawal occupied the Mulwaree region at the time of first European settlement. The Project Area was probably located within the boundaries of the Gandangara tribe. However, taking into consideration the fluid nature of tribal boundaries, the area may well have been within Gandangara territory, or within a sub-set of either of these groups.

For both the Gandagnara and the Ngunnawal, their diets could be quite varied according to availability of food including kangaroos, wallabies, possums and other small marsupials such as bandicoots, as well as emus, wild turkey, echidna, native ducks, fish and eels, freshwater mussels, snakes, native bees and ants. The pre-colonial landscape of Project Area provided an ecologically diverse environment of both plant and animals resources for both food and material items. The surrounding waters and landscapes formed an integral part of many Aboriginal community's belief systems, and would have attracted occupation and use, for its nature resources. In short, Gandangara and Ngunnawal made best use of all the plant and animal resources available to them in their environment. Sustainable practices were used, such as firestick farming, cultivation, and transient camping to maintain their traditional lifestyle and the health of the environment in which they lived.

From the 1820s onwards, traditional Gandangara and Ngunnawal life became increasingly disrupted due to European land use as early pastoralists with sheep and cattle entered the region in search of fresh pastures. Occupation by pastoralists led to settlement, the establishment of roads, towns and inns, and an influx of convict workers, who built the roads and shepherded stock (Goulburn Mulwaree Heritage Study Review 2018). Due to the area's rich agricultural lands, the broader County of Argyle where Goulburn Mulwaree is situated was one of the first areas to be extensively explored and cultivated in the Sydney Basin. Numerous land grants were established in and around the Goulburn Plains and by the early 1820s the district was being used to grow wheat, sheep and cattle for the Sydney market (Bayley 1954: 17 cited in Navin Officer 2019).

5.2. Archaeological context

5.2.1. Regional context

Previously recorded Aboriginal sites within the Goulburn Mulwaree LGA generally occur in the vicinity of watercourses, in elevated areas, and in areas with suitable geology or mature vegetation. The Project Area is located broadly to the south of Goulburn City, where tributaries of varying sizes dissect the current landscape. As a result, a relatively large number of Aboriginal heritage studies have been completed in and around the City of Goulburn. Over half of the sites recorded in Goulburn City consist mainly of artefact sites (isolated finds of flaked stone, or low to moderate density scatters of artefacts, as well as open campsites, and scarred trees). Whereas recorded sites in the greater Goulburn Mulwaree LGA comprise of open campsites, isolated finds and scarred trees.

A large-scale archaeological study of the proposed highway by-pass route to the south of Goulburn was conducted by Koettig in 1983. The conclusions found twenty-two sites, all surface scatters of stone artefacts and all situated with 200 m of watercourses (68 per cent of which were located under 100 m from a body of water). Most sites were of low density, except one which was situated along the Mulwaree River near its junction with Gundary River, some 1.5 km northwest of the Project Area. Six hundred and fifty artefacts were recovered from ten test pit excavations in this area (New South Wales Archaeology 2004).

Lance and Koettig (1986) were the first to complete a regional review of Aboriginal archaeological sites within the Goulburn region. The Aboriginal Resources Planning Study for the City of Goulburn postulated there was four major landform zones to occur in the area (major watercourses, undulating hills and plains, hill tops and built-up areas) where each zone was assigned an archaeological sensitivity and site significance (Koettig and Lance 1986). Sites with low-moderate archaeological sensitivity and significance were noted to generally occur along hilltops, hills with an elevation of 700-750 m above sea level and in built up areas. Sites with moderate-high archaeological sensitivity and significance occurred in close proximity to water, in elevated areas and with suitable underlying geology or mature vegetation.

Drawing on the regional site distribution model by Koettig and Lance (1986) the following general trends can be applied to the Project Area:

- Artefact scatters are the most common type of site in the region and have been identified in all environmental contexts. They are most likely to occur on gentle, well-drained lower slopes within 100

m of water. Artefact scatters at the junction of watercourses tend to be large, with high densities of stone artefacts.

- Types of stone used in the manufacture of tools include chert, silcrete, quartz, quartzite and fine-grained volcanic rocks.
- Burial sites are rare, and historical sources indicate that they are most likely to be found on ridges and hill tops, in hollow trees, and in caves. In some cases they may also occur in sand bodies.
- Modified trees (scarred or carved) are rare, as scars are only likely to be present on trees at least 80-100 years old, and natural vegetation in the Goulburn region has been altered by fire and forest clearance.

This model aimed to identify the location of documented sites and determine the nature, distribution, and significance of known and potential areas of archaeological sensitivity and significance in the region (NGH environmental 2017). According to the model, the majority of sites in the Project Area are most likely to be stone artefact scatters located within the 'undulating hills and plains' zone, particularly on basal slopes adjacent to ephemeral watercourses.

Fuller (1989) undertook a field investigation of the Goulburn Area, identifying zones as being of high sensitivity or potential significance drawing on the model created by Lance and Koettig (1986). Fuller (1989) located 17 artefact scatters and five isolated finds while surveying a representative sample of environmental zones within the City of Goulburn. The majority of sites were small low-density scatters of less than 10 artefacts, however, one site produced more than 100 artefacts, and another produced an estimated 1,000 artefacts. The most common raw materials found were quartz, chert and silcrete. Fuller (1989) also reported that the majority of archaeological sites in the Goulburn region were open campsites with a strong tendency to occur on hill slopes, ridge crests and watercourse flats within 100 m of river and creek lines.

5.2.2. Local context

Everick Heritage (2022) prepared an Aboriginal Heritage Desktop Due Diligence Assessment for the proposed subdivision for the current Project Area. This assessment was conducted during preliminary stages of this current Aboriginal Cultural Heritage Assessment (ACHA) process to serve as a guide to minimize the potential impacts on Aboriginal heritage. Derived from a predictive model produced by Koettig and Lance (1986), Everick Heritage (2022) produced a predictive model of archaeological sensitivity within the Project Area which was based on the previous larger scale models postulated by Koettig and Lance (1986). Koettig and Lance (1986) predictive model states there was four major landform zones to occur in the area (major watercourses, undulating hills and plains, hill tops and built-

up areas) where each zone was assigned an archaeological sensitivity and site significance. Sites with low-moderate archaeological sensitivity and significance were noted to generally occur along hilltops, hills with an elevation of 700-750 m above sea level (asl) and in built up areas. Sites with moderate-high archaeological sensitivity and significance occurred in close proximity to water, in elevated areas and with suitable underlying geology or mature vegetation. According to the predictive model, the most common archaeological site type that will occur are open artefact scatters comprised of silcrete, quartz or chert artefacts. They are most likely to occur on gentle, well-drained lower slopes within 100 m of water. Artefact scatters at the junction of watercourses tend to be large, with high densities of stone artefacts. Based on Everick Heritage's predictive mapping, the current Project Area is situated in an area designated as moderate archaeological sensitivity as it is located within the 'undulating hills and plains' zone, on basal slopes adjacent to ephemeral watercourses.

5.3. Database searches

5.3.1. Aboriginal Heritage Information Management System

Caution should be taken when using the AHIMS database to reach conclusions about site prevalence or distribution. For example, a lack of sites in a given area should not be seen as evidence that the area was not occupied by Aboriginal people. It may simply be an indication that it has not been surveyed for cultural heritage, or that the surveys were undertaken in areas of poor surface visibility. Further to this, care needs to be taken when looking at the classification of sites. For example, the decision to classify a site an artefact scatter containing shell, rather than a midden can be a highly subjective exercise, the threshold for which may vary between archaeologists. It is also important to note that the nature and location of Aboriginal sites can be culturally sensitive information, and should only be made publicly available with the consent of the Aboriginal community.

An extensive search of the Heritage NSW AHIMS was conducted on 03 August 2022 for the Project Area and its surrounds (search ID:7054002), which returned 87 Aboriginal site listings (Appendix A). The closest of these sites is RRAS4 – Artefact Scatter (AHIMS ID 51-6-0420) located approximately 190 m northeast of the Project Area within the adjoining property (Figure 5-1). A review of the site card for AHIMS ID 51-6-0420 states that the site consists of two stone artefacts located within bare ground on the crest an upper slope of a broad spur. The site card also states that there is potential for further artefact to be located on the surface in areas where disturbance is less, but the subsurface potential is low, due to the skeletal topsoils. This characterisation of artefact scatters sites within the local area is echoed in other nearby sites, where the topsoil has been eroded away on crests and upper slopes.

Heritage NSW lists 20 standard site features that can be used to describe a site registration with AHIMS, and more than one feature can be used for each site. For the 87 sites within the search area, a total of eight different site features is recorded. Details of the occurrence of site features is provided in Table 5-1. The most common site features are stone artefacts with 74 occurrences making up 85.1 per cent of the total returned sites. The predominance of this type of evidence is likely to be related to several factors: The production of a large number of items (both tools and waste) in the production, maintenance and use of flaked stone artefacts; the permanent nature of the material; and the destruction of other types of evidence, through natural processes such as decomposition and post colonisation land-use practices such as vegetation clearance.

The distribution of registered sites is shown in Figure 5-1. Many of the registered sites are situated along the many creeks and tributaries running from the Illawarra escarpment eastwards towards the coastline.

This is likely an indication of the use of freshwater creeks and rivers as a source of food, water and other resources found in the alluvial floodplains of the Bullamalita and Collectors Creek soil landscapes.

Table 5-1: Frequency of site features within the search area

Site feature	Number	Percentage
Artefact	74	85.1
Artefact, Potential Archaeological Deposit (PAD)	5	5.7
Burial	1	1.1
Hearth	1	1.1
Modified Tree (Carved or Scarred)	2	2.3
Potential Archaeological Deposit (PAD)	2	2.3
Stone Quarry, Artefact	1	1.1
Restricted Site	1	1.1
Total	**87**	**100**

5.4. Other database searches

The following heritage registers were accessed on 04 August 2022:

- The National Heritage List - Contains no heritage listings within or within close proximity to the Project Area.
- Commonwealth Heritage List - Contains no heritage listings within or within close proximity to the Project Area.
- Register of the National Estate - Contains no heritage listings within or within close proximity to the Project Area.
- The State Heritage Register - Contains no heritage listings under Section 1 or 2 (Aboriginal Places listed under the *NPW Act* and Items listed under the *Heritage Act 1977 (NSW)* within or within close proximity to the Project Area.

- The Register of the National Trust of Australia - Contains no listings within or within close proximity to the Project Area.
- Goulburn Malwaree LEP 2009 – There are no Aboriginal places listed in the Project Area, however, three locally listed heritage places are located adjacent to the Project Area:
  - Dwelling, "Homeden" (No. 1014)
  - "Irriwilbin" homestead (circa 1860) (No. 1498)
  - Dwelling, "Wyoming" (No. 1006)
- AHIP Public Register: No AHIPs were identified within the Project Area

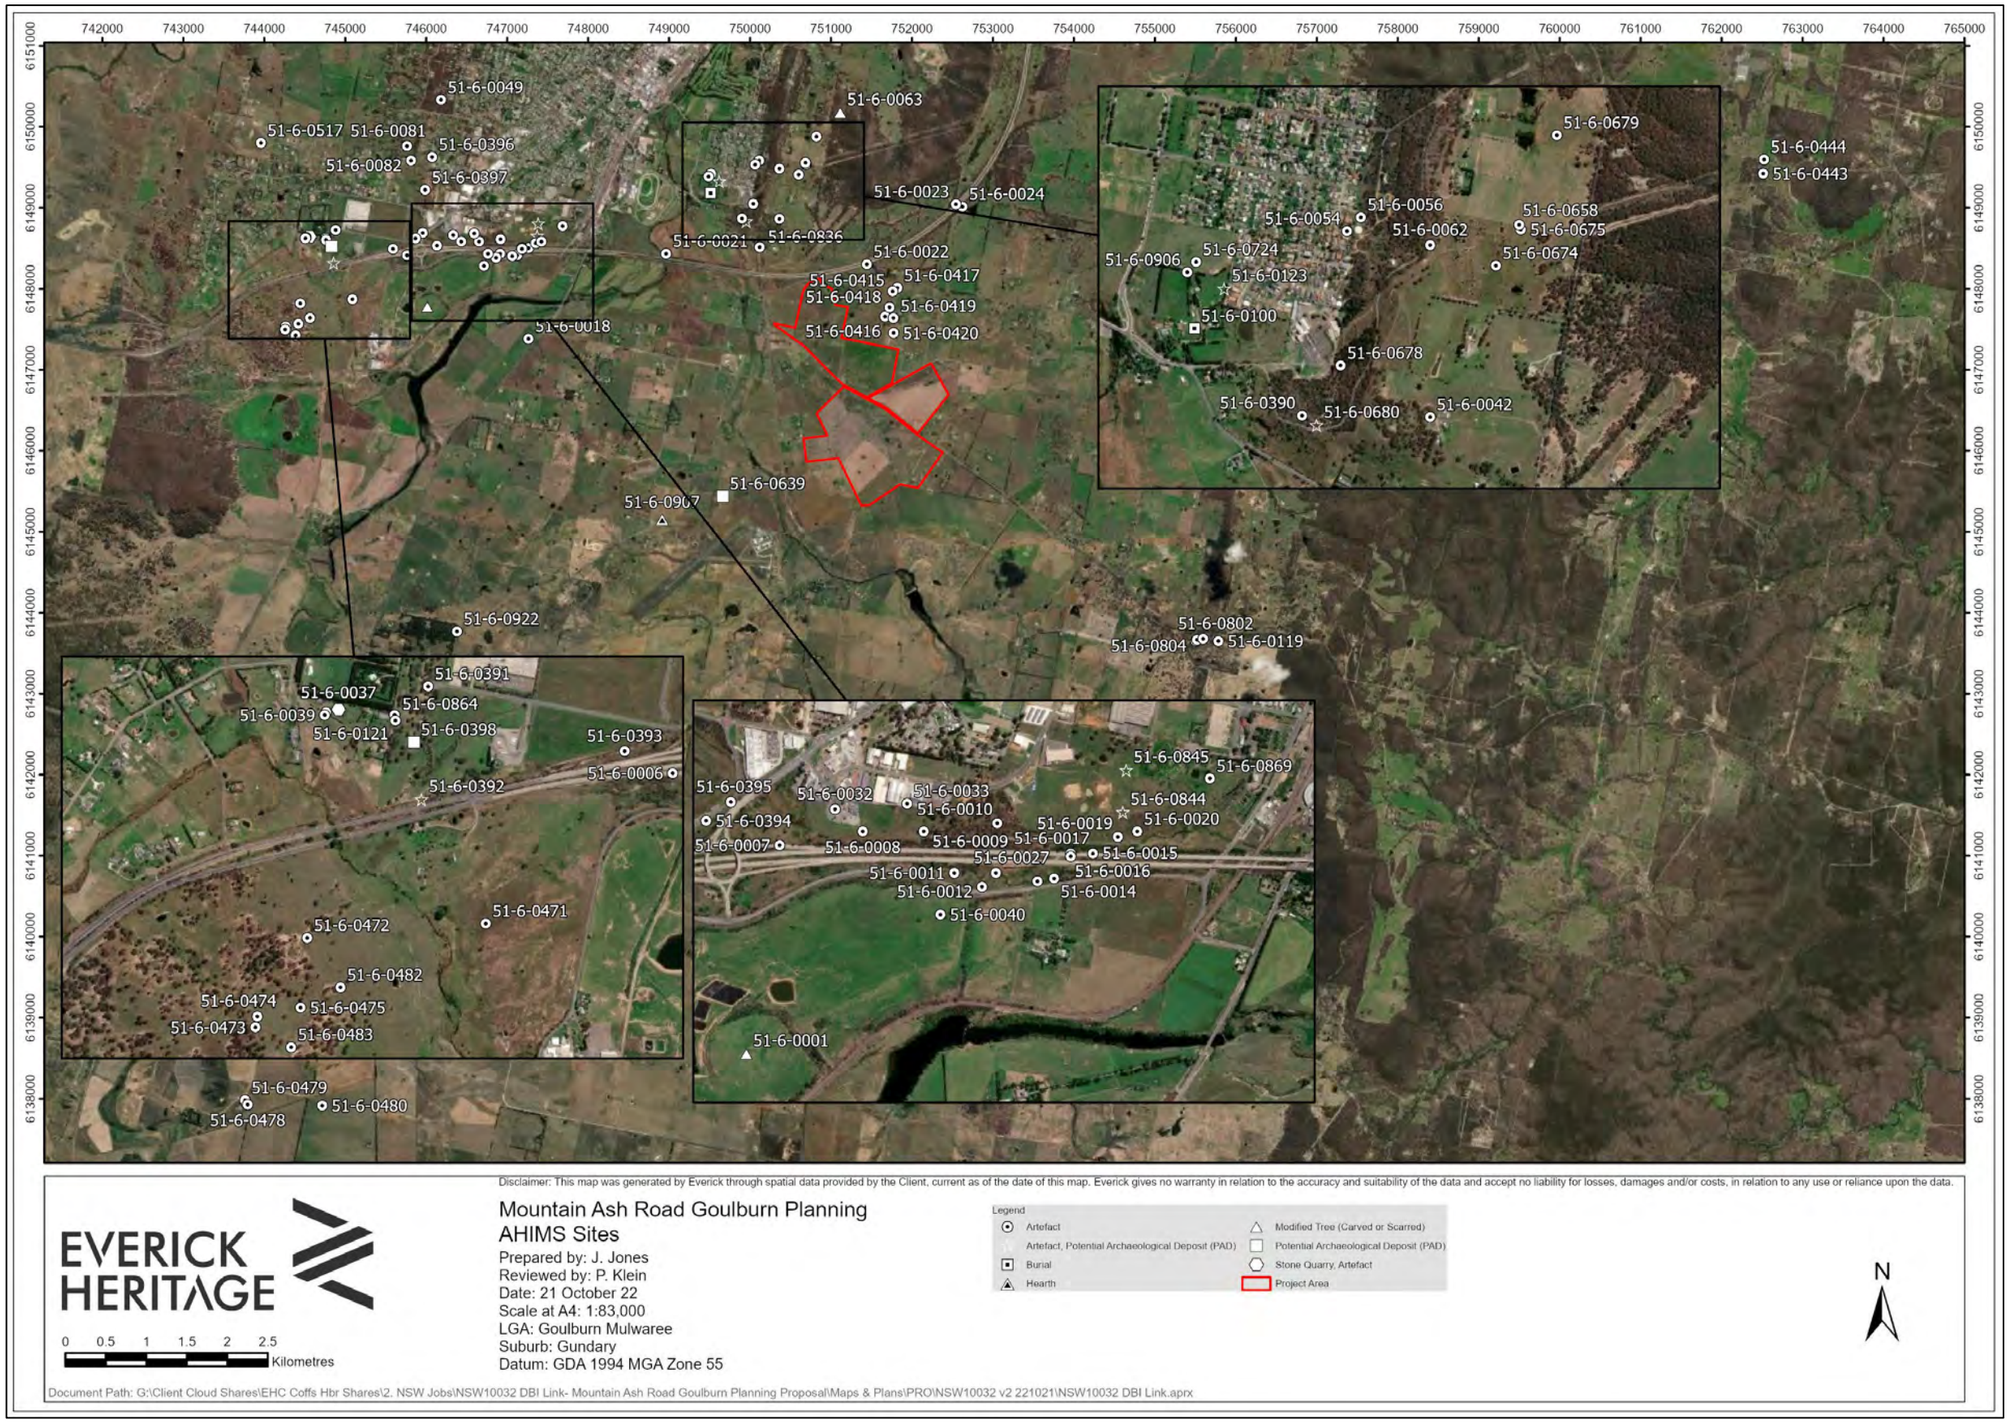

Figure 5-1: AHIMS search results in the vicinity of the Project Area

5.5. Summary and predictive model

A predictive model can be created to predict the broad character of Aboriginal cultural heritage sites in the Project Area based on the following:

- A study of the AHIMS database of regional site distribution
- Potential Aboriginal use of natural resources and landscape features which may have been present within the Project Area in the past
- Previous assessments and the results of surveys and testing programmes within the regional area.

Based on the desktop assessment and transect survey, the predictive model is as follows:

- The most likely site types to occur within the Project Area are artefact sites (isolated finds, low-moderate density artefact scatters and/or campsites). These would most likely occur within the vicinity of permanent and semi-permanent water courses as well as elevated landforms.
- There is low potential for scarred trees to occur within the Project Area. The Project Area has been subject to historical clearing and logging, resulting in the clearance of mature native vegetation.
- If located within the Project Area, the most archaeologically sensitive landforms would include riparian zones on low-gradient slopes and levees within 100 m of water.

Given the predictive model, the Project Area is considered to possess moderate archaeological sensitivity and moderate potential for Aboriginal sites as mapped in Figure 5-2. Based on previous archaeological assessments, regional studies and past land use, location and proximity to water is considered to be a preeminent factor which determined past Aboriginal occupation of the land. The Project Area is bounded to the west by the Gundary River, a perennial river which would have served as an important, perennial source of water and other resources (food, shelter, transport) for local Aboriginal populations. Typically, this would imply that the area is of moderate archaeological potential and possibly containing sites such as artefact scatters and small campsites as noted in previous archaeological assessments within the same soil landscape (Koettig 1983: Keottig and Lance 1986: Fuller 1989 and New South Wales Archaeology 2004). As indicated by a review of the AHMIS search results, the most common sites in the immediate region of the Project Area are artefact sites, due to the presence of watercourses and ridgelines within the vicinity of the proposed works.

The lack of Aboriginal sites recorded within the Project Area is likely the result of historic land use, in this case for agriculture, which may have also contributed to the region having been cleared and subject to

ground disturbing activities such as ploughing. Scarred trees are likely to occur anywhere in the landscape where clearing has not occurred. Yet, due to the extensive amount of historical clearance within the wider area, it is difficult to determine characteristics of scarred tree distribution in the landscape. It must be noted that site distribution pattern is partly the result of intensive surveys triggered by proposed developments, rather than accurately reflecting the nature of Aboriginal land use. If any sites are identified, it is likely they will comprise heavily disturbed artefact scatters and isolated artefacts, with these site types having already been identified in the vicinity of the Project Area.

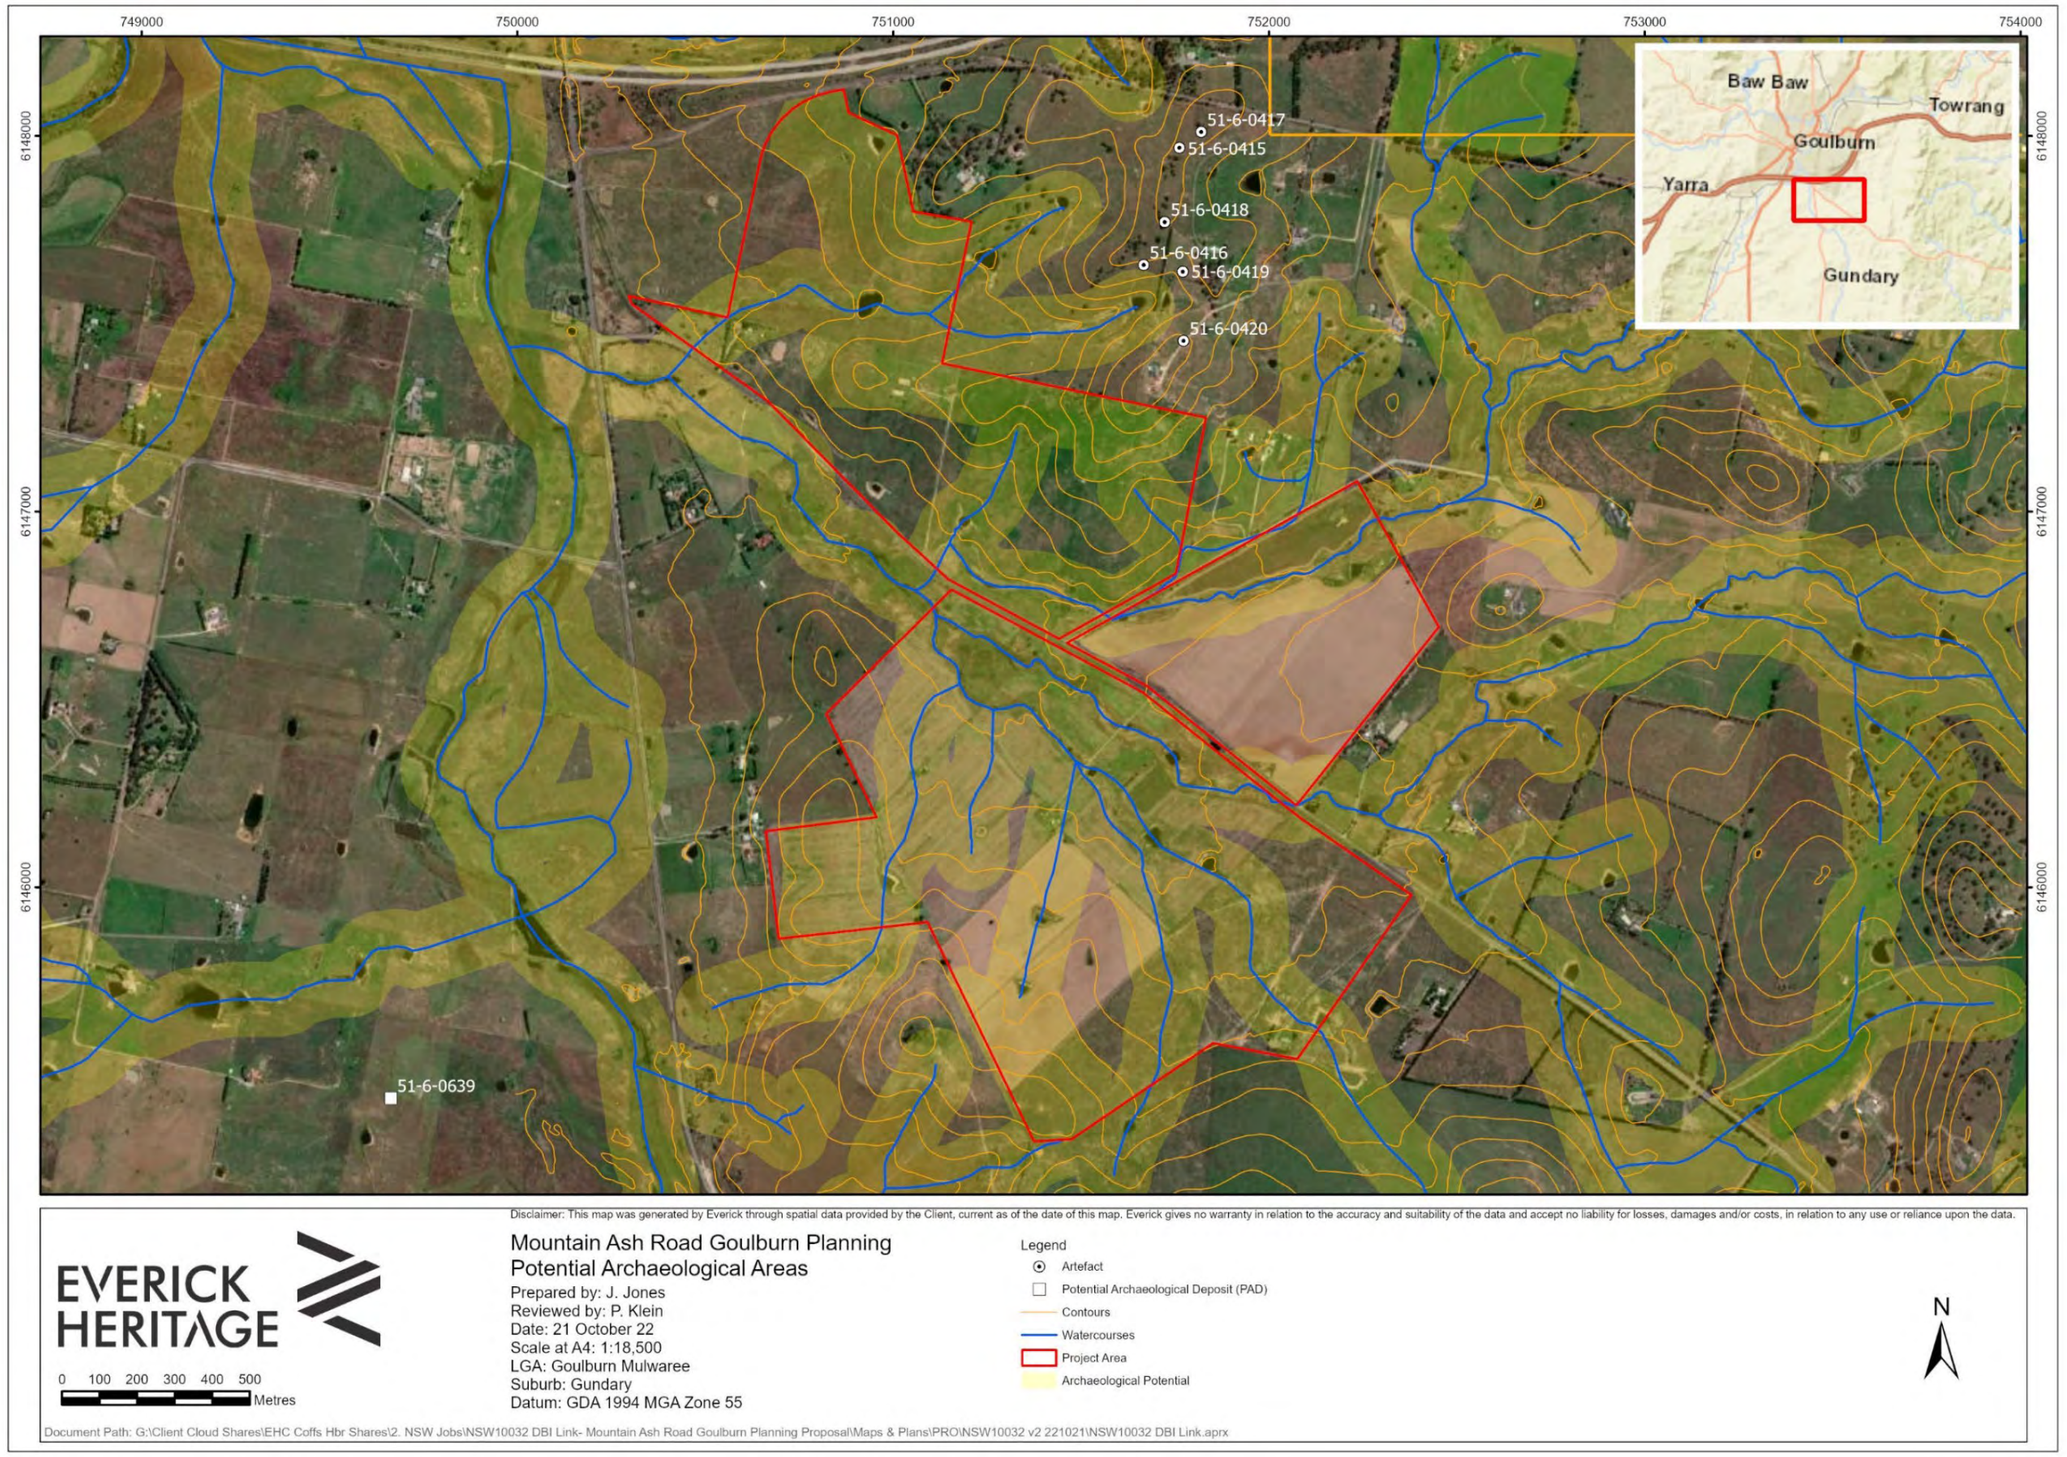

Figure 5-2: Areas of high archaeological potential based on distance to water and elevated plateaux or hill tops adjacent to water

6. Archaeological survey

6.1. Aims

The primary aims of the archaeological survey were to:

- To conduct an archaeological survey in accordance with the Code of Practice
- Identify any landscape features in the Project Area which might contain Aboriginal objects, that is areas of PAD
- Consult with Pejar LALC regarding the significance of the area and discuss recommendations for the management and mitigation of any Aboriginal archaeological or cultural values
- Identify any landscape features in the Project Area which might contain Aboriginal objects, that is areas of PAD
- Verify the extent and nature of disturbance in the Project Area identified through background research (section 4.4).

6.2. Timing and personnel

A survey of the Project Area was undertaken over two days from the 12 to the 13 December 2022 with the following attendance:

Table 6-1: Fieldwork personnel

Name	Organisation	Date
Caitlin Cole	Everick Heritage	12/12/2022-13/12/2022
Grace Eldon	Everick Heritage	12/12/2022-13/12/2022
Dru McAlister	Pejar LALC	12/12/2022
Luke Heite- Freeman	Pejar LALC	12/12/2022
Chris McAlister	Pejar LALC	12/12/2022-13/12/2022

Sarah Little	Pejar LALC	13/12/2022
Gregory Little	Pejar LALC	13/12/2022

6.3. Constraints

An assessment of the constraints to site detection is made to assist in formulating a view as to the effectiveness of the field inspection to find Aboriginal sites and cultural heritage materials. It also assists in forming a view of the likelihood of concealed sites, keeping in mind a site-specific knowledge of the disturbance impacts that European land uses and natural processes may have had on the survivability of Aboriginal sites in the Project Area.

The constraints to site detection are almost always influenced most by post-European settlement land uses and seldom by natural erosion processes. The area of surface exposure and the degree of surface visibility within exposed surfaces are usually the product of recent land uses, for example land clearing, ploughing, road construction and natural or manmade erosion. In this case, the major constraint to Aboriginal site survivability and detection was extensive ground cover across the Project Area. Ground cover consisted of waist-high wheat and grasslands with extensive weed inclusions and presented the major constraint to the survey by greatly limiting ground surface visibility. Recent rains, including on the first day of survey resulted in low-lying areas of the Project Area being subject to extensive waterlogging as existing drainage lines were filled with water causing low level flooding.

Another constraint survey coverage was that, at the time of survey, portions of the Project Area were used as a horse agistment. The far southeast portion of the Project Area was not accessible due to the presence of livestock. The ground surface visibility and desktop assessment showing previous agricultural activity within this paddock indicates that the area would have low archaeological potential.

6.4. Survey sampling strategy

A systematic sampling strategy was implemented across the entirety of the Project Area due to the large size (277 ha). A sample of all landforms present within the Project Area was undertaken to confirm levels of disturbance and potential archaeological sensitivity in areas not identified during the desktop assessment. Survey Units were delineated by property boundaries within the Project Area.

6.5. Survey methodology

All survey units were inspected by foot in transects of varying width by two archaeologists and three RAPs. Survey transects were undertaken following drainage depressions and ridgelines or terraced formations adjacent to sources of water, which coincided with areas identified as having higher archaeological sensitivity within the desktop research. Transect width was approximately 20 m between participants with the archaeologists at the outer edge of the transect. Areas which were not subject to detailed survey included areas outside of the identified areas of higher archaeological sensitivity, areas where dense vegetation was present, and areas which could not be accessed due to livestock presence.

A Global Positioning System (GPS) was utilised to record points of interest and the location of photographs taken as part of the survey. The platform used for this mapping of data is called Field Maps / Survey123, which records the GPS points, track logs, and enables photographs to be taken with the GPS data. Accurate site plans can be prepared from this system. Datum and grid co-ordinates will be eastings and northings in MGA94. Survey notes are also described using the system. Within the Field Maps / Survey123 system, notes are made of observable disturbance, vegetation communities and soil exposures where visible. Handwritten survey notes were also made. A photographic record was kept of all survey units to record aspects such as surface exposures, vegetation, disturbance and areas of archaeological potential. Scales were used for photographs where appropriate.

The following details were recorded for each survey unit:

- Landforms
- Ground surface exposure and nature of exposure
- Visibility as a result of vegetation
- Degree of disturbance
- Nature of current and historical land use
- Significance of the location for the Aboriginal community.

6.5.1. Aboriginal sites and potential archaeological deposit identification

In accordance with Requirement 6 of the Code of Practice, the following criteria was used when recording evidence of Aboriginal cultural heritage:

- the spatial extent of the visible objects, or direct evidence of their location

- obvious physical boundaries where visible
- identification by the Aboriginal community on the basis of cultural information.

No Aboriginal sites were identified during the survey. Areas of archaeological sensitivity were identified where, although no surface expression of artefacts was located, the low ground surface visibility was not able to confirm the definitive absence of archaeological material. Especially on raised terraces and hills adjacent to the watercourses.

6.6. Survey coverage

The Project Area was divided into five survey units (Table 6-2Figure 6-1):

- Survey Unit 1 consists of 31.7 ha and concentrates the high points of the northern portion lot. Local relief reaches 650 m asl in the far west margin. Ground visibility was very poor with ground surface exposures only present next to dams and livestock tracks.
- Survey Unit 2 consists of 37.5 ha and is characterised by a hill crest in the northern portion and is currently used as an agistment for sheep. Earthworks apparent in this survey unit in the form of dams and modified drainage lines. Ground surface visibility was less than one per cent and highly disturbed by sheep grazing.
- Survey Unit 3 consists of an area of 11.6 ha and is situated between two ridges. It can be characterised as a waterlogged depression dissected by creek lines, swamps and low relief terraces. Ground visibility was very low due to the extensive grass and waterlogged ground surface cover.
- Survey Unit 4 consists of 66.5 ha and makes up the western portion of the Project Area. It is characterised by a ridge line in the west and gentle north-east facing slopes with numerous drainage channels. Despite the landform typically classed as high archaeological sensitivity, this survey unit has been greatly ploughed and natural drainage channels dammed. Ground surface visibility was slightly higher than other units at three per cent.
- Survey Unit 5 consists of 12.1 ha and is located on the north side of Mountain Ash Road within a low-lying relief. It is adjacent to a swamp / drainage channel and has been ploughed for wheat. Ground surface visibility was less than one per cent in ground soak and vegetation cover.

Approximately 0.16 per cent of the Project Area was effectively covered by the survey (Table 6-2), as identified during the desktop assessment there is a moderate potential for artefacts to be located on the surface, but ground surface visibility was poor. Average vegetation cover was high at around 93 per cent

and exposure low at around 1.4 per cent. The low level of coverage was primarily due the low ground surface visibility due to increased vegetation coverage.

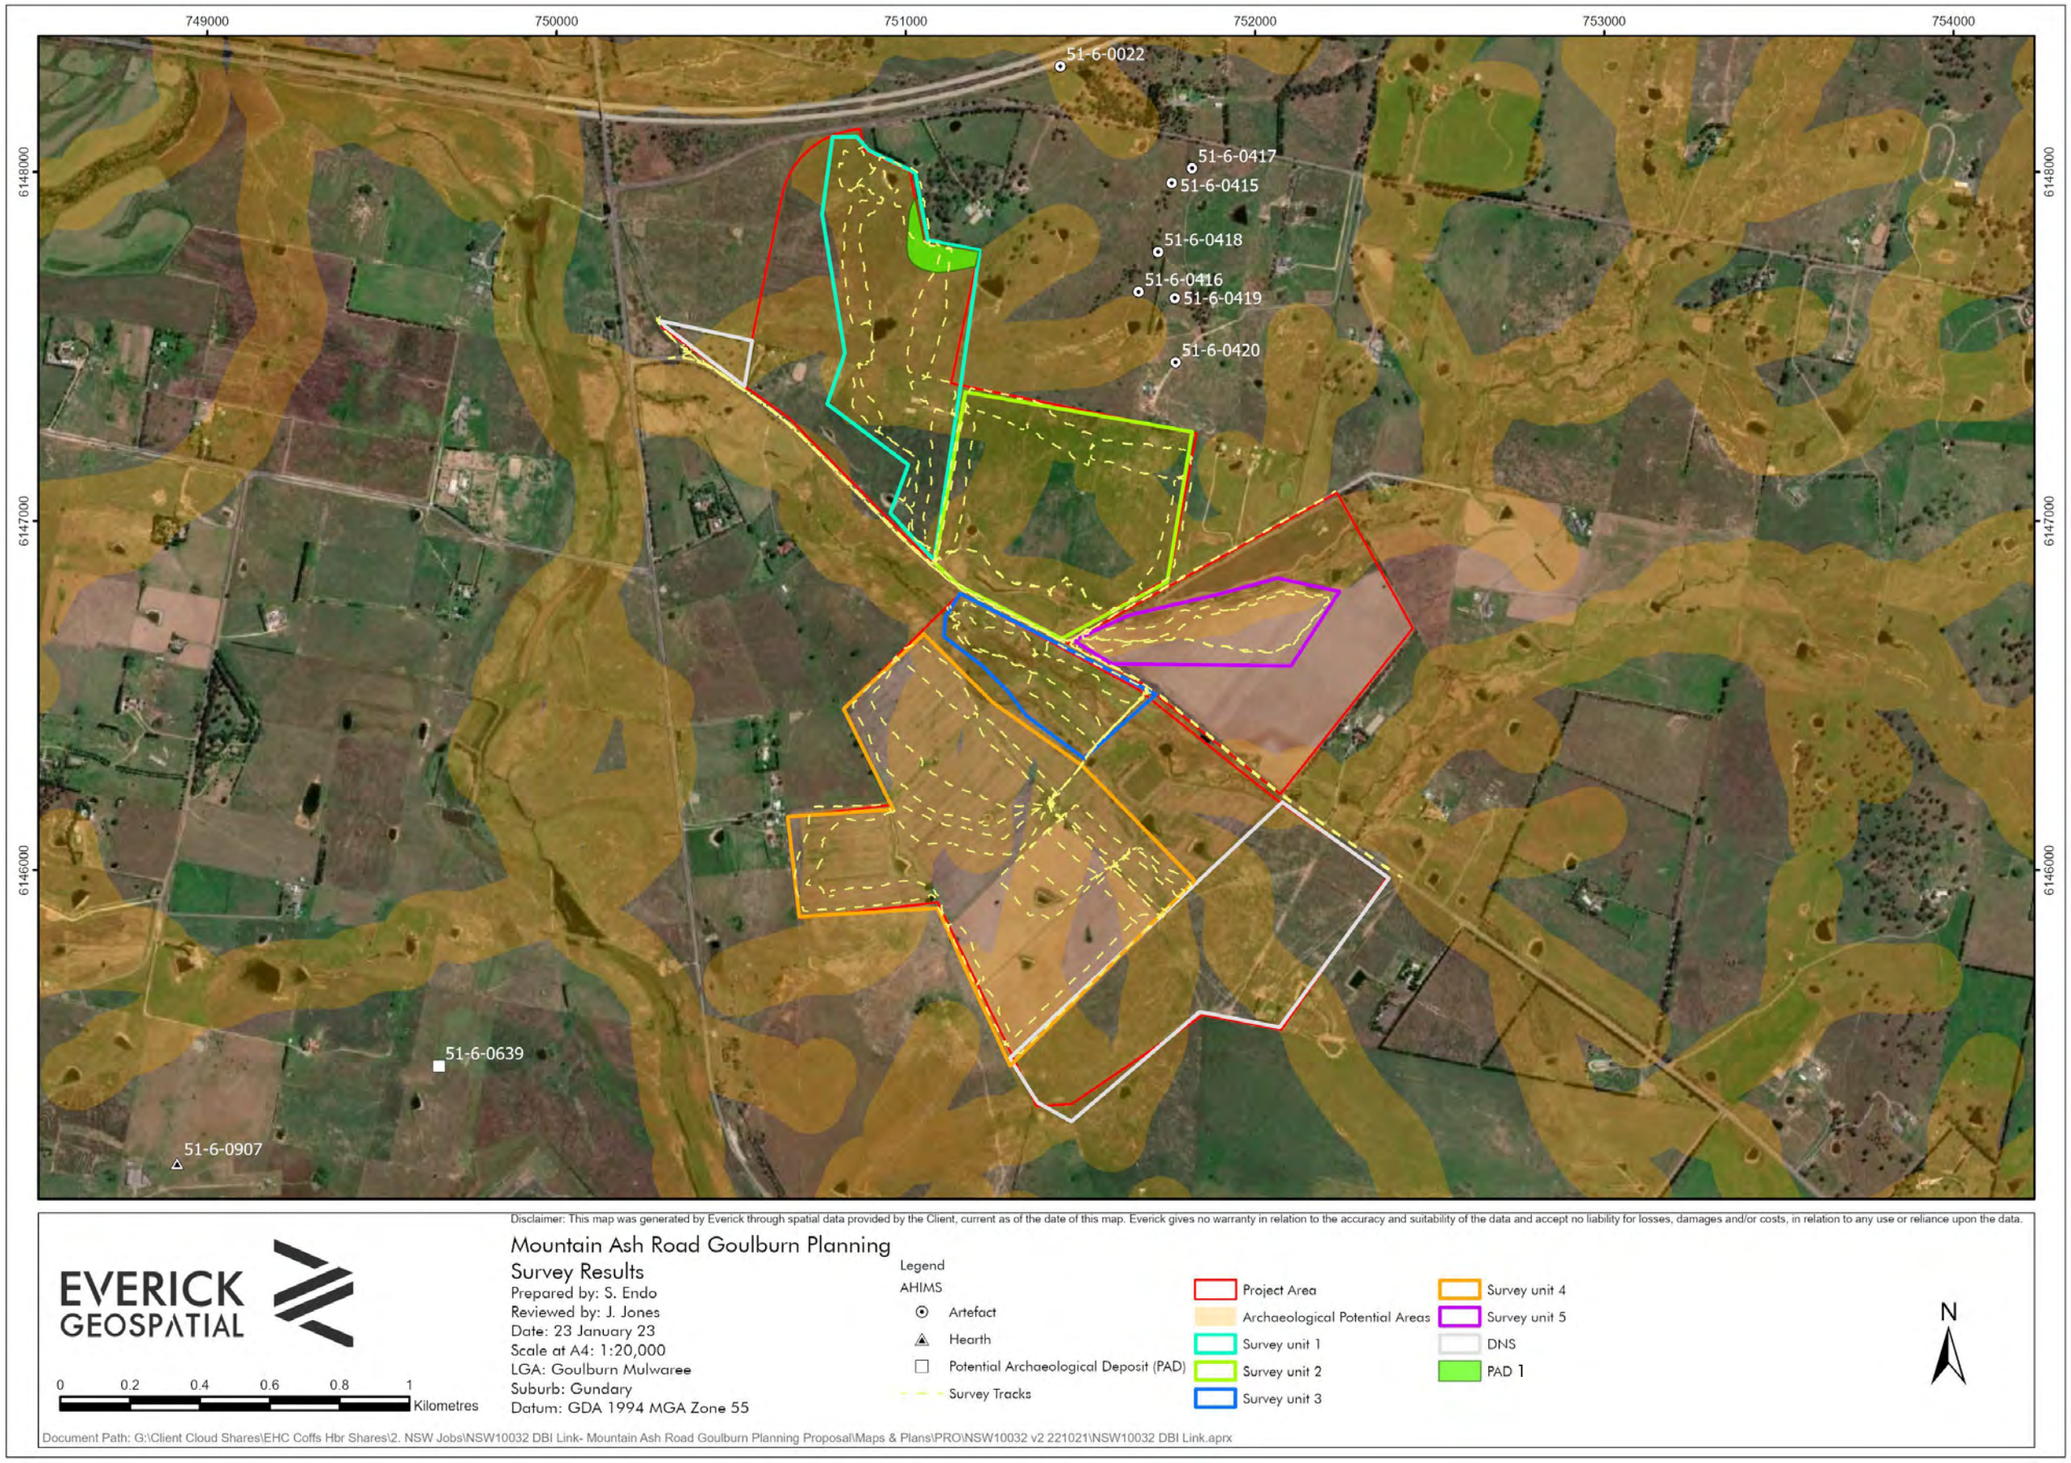

Figure 6-1: Survey Units and survey transects across the Project Area

Table 6-2: Survey coverage of the proposed works areas

Survey Unit	Landform	Size (square metres)	Vegetation cover (%)	Exposure (%)	Effective coverage in metres (%)	Cultural material present or Potential Archaeological Deposit
1	High crest and sloping terraces	317,000	95	1	158.5 (0.05)	PAD 1 located at the ridge top of ridge at the northern boundary of the Project Area
2	Gently sloping terraces with low-lying grasslands and shrub	375,000	95	1	187.5 (0.05)	Nil
3	Depression between valleys with multiple creek lines, swamps and low relief terrace	116,000	98	1	23.2 (0.02)	Nil
4	High ridge point and gently sloping terraces with numerous drainage channels with northeast aspect	665,000	80	3	3,990 (0.6)	Nil
5	Low relief terrace adjacent to swamp/drainage line	121,000	98	1	24.2 (0.02)	Nil
Total		**2,770,000**			**4,383.4 (0.16)**	**PAD (PAD 1)**

6.7. Results and discussion

A field survey was conducted of the Project Area over a two-day period, which included a sample of all areas of high archaeological potential within the Project-Area as mapped in yellow on Figure 5-2. Areas subject to survey included a sample of the identified survey units targeting all landforms within the survey unit except the waterlogged banks of the creeks and creek beds, particularly in Survey Unit 3 and Survey Unit 5 (Figure 6-1). No cultural material was found within any of the survey units. It is noted this was likely due to high grass coverage rather than indicative of any lack of sites. One area of PAD (PAD 1) was identified at the crest of a hill on the northern boundary of the Project Area.

The entire Project Area was noted to have been highly disturbed through pre-agricultural clearing. Ridges and elevated landforms located on the northern and southern margins of the Project Area were identified as areas of higher Aboriginal cultural heritage potential, although subsequent ploughing and soil removal has lowered the archaeological sensitivity in the majority of these areas. Figure 6-1 depicts areas of potential archaeological sensitivity identified in the Project Area as a result of the desktop assessment and further refined by the field survey. The survey resulted in the recording of one area of PAD (PAD 1), on the northern boundary in an area which was assessed as containing less ploughing disturbance than the other ridge tops surveyed. It is expected that associated soils would be shallow at the ridge top, so the potential for artefacts would be in the top 100 mm at the surface and not associated with deep subsurface deposits. The remainder of the Project Area where livestock grazing, dams and other agricultural infrastructure have been built were noted as highly disturbed areas. Cropping and ploughing located on the crests of hills, where the soil is shallower, would lower the potential for archaeological deposit to retain in situ in these locations.

At the time of survey, the Project Area was covered by dense grasslands and weed, and in some areas, wheat up to 1 m tall, which completely obscured the ground surface (Figure 6-2). In consultation with RAPs, survey coverage of the entire impact footprint was not completed as it was agreed that the high vegetation cover would obscure any surface artefacts which may be located on the ground surface. Further consultation with the RAPs was undertaken to discuss whether the eastern half of Survey Unit 5 should be surveyed, and it was concluded that a representative sample of the landforms had been viewed.

As identified in the desktop assessment (Appendix E), ploughing and cultivation would have resulted in the disturbance of the entirety of the Project-Area (Figure 6-3). Siltstone and quartz gravels comprise a background effect also aiding in obscuring any Aboriginal objects which might be located on the visible ground surface. Additional areas of disturbance were noted along vehicle tracks, livestock tracks and

around the edges of dams and trees (Figure 6-4 and Figure 6-5). All survey units have been completely cleared of native vegetation and allowed to revegetate with a mix of introduced species including weeds and grasses.

In this landscape, the most archaeologically sensitive landforms identified during the desktop assessment are raised areas or terraces within 200 m of creeks or other sources of water as well as ridge line and crest tops. Raised landforms would have provided good views of the surrounding approaches as well as staying dry during seasonal flooding where the surrounding alluvial depressions would commonly be waterlogged. In general, the topography of the Project Area comprises undulating rises between wide valleys rather than raised areas and terraces. Interacting with this is the extensive ploughing and agricultural activity which has lowered or removed the potential for in situ archaeological remains to be preserved across the majority of the Project Area. There is a low likelihood of unrecorded Aboriginal objects, across the Project Area due to the level of disturbance. The likelihood of in situ archaeological material within the Project Area is more likely along high points on ridge lines and low relief terraces, although the presence of disturbed artefacts located within surface runoff drainage depressions cannot be ruled out. One area of ridge top which was located within 150 m of the nearest AHIMS site was has been mapped as PAD 1 in Figure 6-1.

7. Cultural values assessment

7.1. Cultural landscapes

Cultural landscapes are defined as:

> *A place or area valued by an Aboriginal group (or groups) because of their long and complex relationship with that land. It expresses their unity with the natural and spiritual environment. It embodies their traditional knowledge of spirits, places, land uses, and ecology. (US/ICOMOS 1996 in Andrews et al 2006).*

Andrews et al (2006) suggest the following guiding principles for evaluating Aboriginal cultural landscapes.

- The long associated Aboriginal group or groups have participated in the identification of the place and its significance, through the consultation process. This principle ensures that Aboriginal peoples will be consulted, involved and participate in the identification of frameworks and sites.
- Spiritual, cultural, economic, social and environmental aspects of the group's long attachment with the identified place, including continuity of use and traditions, social and kinship relationships, intimate knowledge of the area, and spiritual affiliations illustrate its cultural value.
- The interrelated cultural and natural attributes of the identified place make it a valued cultural landscape. Recognising the integrated nature of Aboriginal relationship to place, including the inseparability of cultural and natural values. Tangible evidence may be largely absent, with the attributes primarily in oral and spiritual traditions and in activities related to the place. However, there could be tangible attributes which include natural resources, archaeological sites, burials/graves, material culture, and written or oral records.

  This guiding principle also recognises natural components such as ecosystem, climate, geology, topography, water, soils, views, and dominant and culturally significant fauna and flora in the context of the associated Aboriginal people's relationship to the place.
- The cultural and natural attributes that embody the significance of the place are identified through traditional knowledge of the associated Aboriginal group(s) including traditional environmental knowledge, narratives, place names, language, traditional uses, rituals, and behaviour related to the

identified place. It recognises that some knowledge cannot be shared, but available knowledge must be sufficient to demonstrate the significance of the place in the culture of the associated group.

- The cultural and natural attributes that embody the significance of the place may be additionally understood through academic studies such as histories, including oral history and ethno-history, archaeology, anthropology, and environmental sciences.

Aboriginal cultural knowledge was traditionally bequeathed through oral traditions from generation to generation. Within all Aboriginal communities there was a time of dislocation and upheaval associated with the arrival of colonial settlers. This widespread disruption resulted in much of the detailed knowledge and understanding of many of the elements of the cultural landscape being lost from the Aboriginal community, nonetheless many Aboriginal people maintain a strong connection to the land of their ancestors and collectively possess a wealth of knowledge passed down through the generations.

7.2. Methodology

The cultural assessment in this report includes information collected through academic research, and consultation during the survey and through the consultation period for the RAP review. This information was collected by Caitlin Cole (Senior Archaeologists, Everick Heritage) and Grace Eldon (Archaeologist, Everick Heritage).

7.3. Identified Aboriginal cultural heritage values

The following cultural values have been identified through background research. Consultation on site indicated that Rocky Hill, north of the Project Area contains archaeological sites, and is of cultural significance to the Aboriginal people in the area. The Goulburn Mulwaree Aboriginal Heritage Study (AMBS 2012) states that Rocky Hill is the location of a bora ground or ceremonial site. This location is approximately two kilometres from the northern most point of the Project Area, and corresponds with the nearest high point to the Project Area. Landscapes such as the Project Area may have been a significant resource gathering area or camp site as people travelled through the region to Rocky Hill.

Further Aboriginal cultural values will be included following the RAP review of the draft ACHAR.

8. Impact assessment

The majority of the Project Area has been subject to extensive ground disturbance which will have lowered the archaeological potential to low, particularly on the ridge crest which have skeletal soil profiles and the ploughing and ground disturbance would lower the archaeological potential in the majority of these areas. The exception to this assessment occurs in the area identified as PAD 1, which has been subject to less agricultural disturbances.

If there are proposed ground disturbing activities proposed at any location within PAD1, then the nature of the subsurface archaeology would need to be tested to confirm the presence or absence of Aboriginal cultural heritage material. An preliminary overview of the proposed lot design and the area of PAD has been provided in Figure 8-1. Fence lines, at a minimum are likely to be constructed within this area of PAD.

Figure 8-1: Location of PAD 1 in relation to the proposed subdivision plan provided by DBI-Link

8.1. Ecologically sustainable development principles

The Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW (OEH 2011) specifies that Ecological Sustainable Development (ESD) principles must be considered when assessing harm and recommending mitigation measures in relation to Aboriginal objects.

The following relevant ESD principles are outlined in Section 3A of the *EPBC Act:*

- Decision-making processes should effectively integrate both long term and short term economic, environmental, social and equitable considerations (the 'integration principle')
- If there are threats of serious or irreversible environmental damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation (the Precautionary Principle)
- The present generation should ensure that the health, diversity and productivity of the environment is maintained or enhanced for the benefit of future generations (the Principle of Intergenerational Equity).
- The conservation of biological diversity and ecological integrity should be a fundamental consideration in decision making (Conservation of Biodiversity).
- Improved valuation, pricing and incentive mechanisms should be promoted (Improved Valuation, Pricing and Incentive).

OEH (2011: 13) states that consideration of these principles should result in:

- An understanding of the cumulative impact of the proposal on Aboriginal objects or places in relation to other identified sites in the region.
- Ascertaining how wherever possible or practicable harm to significant Aboriginal objects or places can be avoided.
- Establishing and assessing the risks and consequences of various options.
- Assessing the costs and benefits of various options for future generations.
- Suggesting actions proposed to help promote intergenerational equality.

The proposal for works being undertaken as part of this stage consists of rezoning with no ground disturbance proposed. One ridge top as identified in Figure 6-1 has been identified as a PAD1.

Eventually the area of identified PAD may be subject to construction impacts, including the installation of underground services and access roads in addition to the construction of housing pads (Figure 8-1). At the time of this assessment the location of the housing pads and the degree of impact is unknown, although it is assumed that there would be impact by the provision of fences a t the lot boundaries. If at a future stage this area is subject to ground disturbance, then the principles of sustainable development, intergenerational equity and the integration principle will need to be assessed. In order to address the precautionary principle with regards to uncertainty regarding areas of PAD which will be impacted it is suggested that archaeological test excavation be undertaken to clarify the archaeological sensitivity in this area.

The Integration Principle

No archaeological sites have been thus far identified within the Project Area. These values have been considered with regard to the planning and approvals process for the Project Area and therefore, comply with the integration principle by considering long term and short term environmental and social effects.

8.1.1. Conservation of Biodiversity

Cultural values associated with biodiversity are interwoven with the lives of Aboriginal people and their use of the landscape. The Project works are being undertaken in consideration of impacts to and improvement of the local environment (stormwater drainage). With regards to conservation of biodiversity, the Project Area contains multiple creek and drainage depressions which would have been significant resource gathering areas for the local Aboriginal people, although the associated vegetation at this time has been disrupted due to the extensive clearing. The central wetland area will be preserved within the new larger lots in this area as riparian offsets have been built into the lot sizing at this planning stage (see Figure 1-2).

8.1.2. Improved Valuation, Pricing and Incentive

DBI-Link is committed to cultural heritage protection as a key component of project development. The costs and time required to ensure these high standards of assessment and protection measures are required as a standard part of the Goulburn Mulwaree DCP.

8.1.3. Summary statement of ecologically sustainable principles

The likelihood of impact from the Project on Aboriginal objects or places is low. The majority of the Project Area, has been subject to extensive ground disturbance from agricultural activities which lowers the archaeological potential of the area. The impact from subdivision will result in less than one per cent impact to any original land surfaces within the Project Area, thereby reducing any likely impact on Aboriginal objects.

A recommendation is provided for increased Aboriginal heritage interpretation within the Project Area in consultation and participation with the Gandangara and Ngunnawal peoples. This will promote intergenerational equity.

8.2. Cumulative impact

A cumulative impact is the combined effects of environmental or social impacts that occur because of a range of activities or developments within a particular local area or region that impact on Aboriginal cultural heritage. Ideally cumulative impacts should be assessed from a baseline of data relating to the incremental impact of the actions of a development when added to other past, present and reasonably foreseeable future impacts. No Aboriginal objects have been identified at the property and they are not considered to be likely in areas outside of the identified PAD (PAD1). Therefore, there will be little cumulative impacts on Aboriginal objects or places in the region, depending on the degree of impact to the Potential Archaeological Deposit and whether it contained archaeological sites.

9. Recommendations

9.1. Guiding principles

The overall guiding principle for cultural heritage management is that where possible, Aboriginal sites should be conserved. If conservation is not practicable, measures should be taken to mitigate against impacts to Aboriginal sites. The following recommendations are provided in light of these guiding principles.

9.1.1. Further archaeological assessment

No Aboriginal objects or places were identified during the archaeological survey due to the high level of vegetation cover across the entire Project Area ground surface. One area of PAD which has moderate potential to contain archaeological material in the top 100 mm of sediments was identified during the survey (PAD1). If ground disturbance cannot be avoided within this area of PAD, then further archaeological investigation, if the form of archaeological test excavation will be required.

9.2. Discovery of human remains

If suspected human remains are discovered and/or harmed in, on or under the land within the Project Area, the following actions must be undertaken:

- The remains must not be harmed/further harmed
- Immediately cease all works at that particular location
- Secure the area so as to avoid further harm to the remains
- Notify the NSW Police and the Environment Line (Heritage NSW) on 131 555 as soon as practicable and provide any details of the remains and their location
- Do not recommence any work at that particular location unless authorised in writing by Heritage NSW.

9.3. Unexpected finds

It is an offence under the *NPW Act* to knowingly impact upon an archaeological site. If any Aboriginal objects, such as stone artefacts, are identified during any stage of the proposed works, work must cease in the immediate area, until the objects can be assessed by an archaeologist. If the finds are assessed to be Aboriginal objects, then notification to Heritage NSW must be undertaken.

Appendix B – Newspaper notice

Invitation for Registrations of Interest
Aboriginal Cultural Heritage Assessment

Design Development Instruct Pty Ltd invites Aboriginal people and Aboriginal groups who hold cultural knowledge relevant to determining the significance of Aboriginal objects and places for Mountain Ash Road, Goulburn to register to be consulted.

Design Development Instruct Pty Ltd is proposing a subdivision totaling an area of 277-hectare (ha) on Mountain Ash Road on the outskirts of Goulburn, New South Wales (NSW). Thirteen existing parcels of land will be rezoned into 105 residential properties. The lands subject to subdivision comprise Lot 1 DP 779194, Lot 103 DP 70346, Lot 1 DP 853498, Lots 104, 105, 106 DP 126140 and Lot 1 and 2 DP 835278, Lot 3 DP 835278, Lot 1 DP 731427 and Lot 22, 23, 24 DP 811954.

The purpose of consultation with Aboriginal people is to assist the proponent in the preparation of an application for an AHIP and to assist the DPC Secretary in the DPC Secretary's consideration and determination of the application.

Please note that details of the Aboriginal people or organisations who register an interest in consultation will be forwarded to Heritage NSW and Pejar Local Aboriginal Land Council (PLALC). Please advise at the time of registration if you do not wish for your details to be released to the relevant organisations.

For more information please contact:

Dear Bo Field,

RE: ABORIGINAL CULTURAL HERITAGE ASSESSMENT MOUNATIN ASH ROAD, GOULBURN, NSW.

We wish to advise that we have been engaged to undertake an Aboriginal Cultural Heritage Assessment located at Mountain Ash Road, Goulburn on behalf of the Design Build Instruct Pty Ltd. The proposal seeks to subdivide 13 existing parcels of land into 105 residential lots which will be later developed. The Project Area is located along Mountain Ash Road. The lands subject to subdivision comprise Lot 1 DP 779194, Lot 103 DP 70346, Lot 1 DP 853498, Lots 104, 105, 106 DP 126140 and Lot 1 and 2 DP 835278, Lot 3 DP 835278, Lot 1 DP 731427 and Lot 22, 23, 24 DP 811954. Everick Heritage is seeking the assistance of the Aboriginal community in assessing potential impacts this Project may have on Aboriginal cultural values in the area. The proponent details for the Project are as follows:

Simon Halcrow

Property Development Consultant

Design Build Instruct Pty Ltd,

simon@dbilink.com

Design Build Instruct Pty Ltd wish to engage any Aboriginal people and organisations with knowledge of the local area to provide any information they may know about the history and cultural significance of the area. The consultation will be undertaken to inform the ACHA, which is required by Goulburn Mulwaree Council and Heritage NSW

In consideration of the Heritage NSW, Department of Premier and Cabinet *Guide to investigating, assessing and reporting on Aboriginal cultural heritage in NSW* (the Guide) 2011, and in order to ensure that they fulfil their legal and ethical obligations to identify and protect Aboriginal cultural heritage, our

Dear Marilyn Carroll-Johnson,

RE: ABORIGINAL CULTURAL HERITAGE ASSESSMENT MOUNATIN ASH ROAD, GOULBURN, NSW.

We wish to advise that we have been engaged to undertake an Aboriginal Cultural Heritage Assessment located at Mountain Ash Road, Goulburn on behalf of the Design Build Instruct Pty Ltd. The proposal seeks to subdivide 13 existing parcels of land into 105 residential lots which will be later developed. The Project Area is located along Mountain Ash Road. The lands subject to subdivision comprise Lot 1 DP 779194, Lot 103 DP 70346, Lot 1 DP 853498, Lots 104, 105, 106 DP 126140 and Lot 1 and 2 DP 835278, Lot 3 DP 835278, Lot 1 DP 731427 and Lot 22, 23, 24 DP 811954. Everick Heritage is seeking the assistance of the Aboriginal community in assessing potential impacts this Project may have on Aboriginal cultural values in the area. The proponent details for the Project are as follows:

Simon Halcrow

Property Development Consultant

Design Build Instruct Pty Ltd,

simon@dbilink.com

Design Build Instruct Pty Ltd wish to engage any Aboriginal people and organisations with knowledge of the local area to provide any information they may know about the history and cultural significance of the area. The consultation will be undertaken to inform the ACHA, which is required by Goulburn Mulwaree Council and Heritage NSW

In consideration of the Heritage NSW, Department of Premier and Cabinet *Guide to investigating, assessing and reporting on Aboriginal cultural heritage in NSW* (the Guide) 2011, and in order to ensure that they fulfil their legal and ethical obligations to identify and protect Aboriginal cultural heritage, our

Dear Jodie Stewart,

RE: ABORIGINAL CULTURAL HERITAGE ASSESSMENT MOUNATIN ASH ROAD, GOULBURN, NSW.

We wish to advise that we have been engaged to undertake an Aboriginal Cultural Heritage Assessment located at Mountain Ash Road, Goulburn on behalf of the Design Build Instruct Pty Ltd. The proposal seeks to subdivide 13 existing parcels of land into 105 residential lots which will be later developed. The Project Area is located along Mountain Ash Road. The lands subject to subdivision comprise Lot 1 DP 779194, Lot 103 DP 70346, Lot 1 DP 853498, Lots 104, 105, 106 DP 126140 and Lot 1 and 2 DP 835278, Lot 3 DP 835278, Lot 1 DP 731427 and Lot 22, 23, 24 DP 811954. Everick Heritage is seeking the assistance of the Aboriginal community in assessing potential impacts this Project may have on Aboriginal cultural values in the area. The proponent details for the Project are as follows:

Simon Halcrow

Property Development Consultant

Design Build Instruct Pty Ltd,

simon@dbilink.com

Design Build Instruct Pty Ltd wish to engage any Aboriginal people and organisations with knowledge of the local area to provide any information they may know about the history and cultural significance of the area. The consultation will be undertaken to inform the ACHA, which is required by Goulburn Mulwaree Council and Heritage NSW

In consideration of the Heritage NSW, Department of Premier and Cabinet *Guide to investigating, assessing and reporting on Aboriginal cultural heritage in NSW* (the Guide) 2011, and in order to ensure that they fulfil their legal and ethical obligations to identify and protect Aboriginal cultural heritage, our

Dear Mr Eddy Neumann,

RE: ABORIGINAL CULTURAL HERITAGE ASSESSMENT MOUNATIN ASH ROAD, GOULBURN, NSW.

We wish to advise that we have been engaged to undertake an Aboriginal Cultural Heritage Assessment located at Mountain Ash Road, Goulburn on behalf of the Design Build Instruct Pty Ltd. The proposal seeks to subdivide 13 existing parcels of land into 105 residential lots which will be later developed. The Project Area is located along Mountain Ash Road. The lands subject to subdivision comprise Lot 1 DP 779194, Lot 103 DP 70346, Lot 1 DP 853498, Lots 104, 105, 106 DP 126140 and Lot 1 and 2 DP 835278, Lot 3 DP 835278, Lot 1 DP 731427 and Lot 22, 23, 24 DP 811954. Everick Heritage is seeking the assistance of the Aboriginal community in assessing potential impacts this Project may have on Aboriginal cultural values in the area. The proponent details for the Project are as follows:

Dear Robert Monaghan,

RE: ABORIGINAL CULTURAL HERITAGE ASSESSMENT MOUNATIN ASH ROAD, GOULBURN, NSW.

We wish to advise that we have been engaged to undertake an Aboriginal Cultural Heritage Assessment located at Mountain Ash Road, Goulburn on behalf of the Design Build Instruct Pty Ltd. The proposal seeks to subdivide 13 existing parcels of land into 105 residential lots which will be later developed. The Project Area is located along Mountain Ash Road. The lands subject to subdivision comprise Lot 1 DP 779194, Lot 103 DP 70346, Lot 1 DP 853498, Lots 104, 105, 106 DP 126140 and Lot 1 and 2 DP 835278, Lot 3 DP 835278, Lot 1 DP 731427 and Lot 22, 23, 24 DP 811954. Everick Heritage is seeking the assistance of the Aboriginal community in assessing potential impacts this Project may have on Aboriginal cultural values in the area. The proponent details for the Project are as follows:

Simon Halcrow

Property Development Consultant

Design Build Instruct Pty Ltd,

simon@dbilink.com

Design Build Instruct Pty Ltd wish to engage any Aboriginal people and organisations with knowledge of the local area to provide any information they may know about the history and cultural significance of the area. The consultation will be undertaken to inform the ACHA, which is required by Goulburn Mulwaree Council and Heritage NSW

In consideration of the Heritage NSW, Department of Premier and Cabinet *Guide to investigating, assessing and reporting on Aboriginal cultural heritage in NSW* (the Guide) 2011, and in order to ensure that they fulfil their legal and ethical obligations to identify and protect Aboriginal cultural heritage, our

RE: ABORIGINAL CULTURAL HERITAGE ASSESSMENT MOUNATIN ASH ROAD, GOULBURN, NSW.

We wish to advise that we have been engaged to undertake an Aboriginal Cultural Heritage Assessment located at Mountain Ash Road, Goulburn on behalf of the Design Build Instruct Pty Ltd. The proposal seeks to subdivide 13 existing parcels of land into 105 residential lots which will be later developed. The Project Area is located along Mountain Ash Road. The lands subject to subdivision comprise Lot 1 DP 779194, Lot 103 DP 70346, Lot 1 DP 853498, Lots 104, 105, 106 DP 126140 and Lot 1 and 2 DP 835278, Lot 3 DP 835278, Lot 1 DP 731427 and Lot 22, 23, 24 DP 811954. Everick Heritage is seeking the assistance of the Aboriginal community in assessing potential impacts this Project may have on Aboriginal cultural values in the area. The proponent details for the Project are as follows:

Simon Halcrow

Property Development Consultant

Design Build Instruct Pty Ltd,

simon@dbilink.com

Design Build Instruct Pty Ltd wish to engage any Aboriginal people and organisations with knowledge of the local area to provide any information they may know about the history and cultural significance of the area. The consultation will be undertaken to inform the ACHA, which is required by Goulburn Mulwaree Council and Heritage NSW

In consideration of the Heritage NSW, Department of Premier and Cabinet *Guide to investigating, assessing and reporting on Aboriginal cultural heritage in NSW* (the Guide) 2011, and in order to ensure that they fulfil their legal and ethical obligations to identify and protect Aboriginal cultural heritage, our

Attention: Grace

Re: Expressing Interest - Mountain Ash Road, Goulburn

We are submitting our registration of Woka Aboriginal Corporation for full process on this project. We have been involved with the Mt Gilead project since 2015. We are all Aboriginal people from all over NSW. We are from different clans. We provide employment to all Indigenous people. We are all experienced Aboriginal Cultural Heritage Site Officers. We have worked on number of projects in the area. We are aware that registering for this project does not guarantee work, should field surveys, test excavations, or salvage excavations be required. However, we hope you adhere to equal employment opportunities, fair work practices and equality and share work RAPS, with rotating rosters, so all that register are equally given time to partake with our Culture and Heritage Preservation. And we hope you share the work equally with Indigenous People, not those that send white people for Aboriginal Culture & Heritage fieldwork. Also note that fieldwork should not be given to the same RAPS all the time, as it not fair, nor equal employment opportunity.

Some of the bigger company's we have engaged with are Lendlease, NBN, Transgrid, Rose Hill Camellia project the Metro, etc. We have worked with the National Parks & Wildlife, WaterNSW, RMS/TFNSW on for over a decade on projects. We have our history & stories passed down to us by our Elders. We have assisted in surveys, test excavations, salvage & consulting with archaeologists over a vast number of years. We are experienced in the field of identifying potential PADS, artefacts, Including our learned history and knowledge passed down to us. We appreciate the opportunity to be part of protecting and preserving our Aboriginal heritage and Culture. We are very proud of our heritage and culture passed to us by our Ancestors and our own histories . We are therefore pleased with being a part of this research and to provide our experience and knowledge.
Our organisation has the current Public liability insurance and is WHS compliant, with all member's holding white cards and required PPE.
All our members are extremely experienced in the identification of Aboriginal artefacts and have worked with numerous Archeologists in field surveys, including test and salvage excavations on fieldwork. We are very passionate about our ancestral land and our conservation of our history matters the upmost to us. We hold strong links to our ancestors, our culture and our heritage and lore. We are motivated

to share our history with our current generation and future generations to pass down to our Mob.

Please note we do not want our details forwarded to LALC, please do not release our correspondence. Please register Woka Aboriginal Corporations name for this project. Please feel free to contact me if you have any questions.

Sincerely
Steve
Aboriginal Heritage Custodian

Hi Grace

We are registering Corroboree Aboriginal Corporation in a full capacity. We have worked on a vast number of projects as Cultural Heritage Officers in the project area. We are currently involved on many projects in the subject area. My family and other family members have lived in the area and family currently reside in the surrounding areas. We are registering in a full capacity. We are Aboriginal people who are culturally & heritage aware. We have the necessary ability, experience, skills, insight and the knowledge to identify artefacts on field work. And as Aboriginal People we connect thru the land, thru our Ancestors and our Heritage. Therefore we are able participate on all levels. We have worked with many archaeologists across a broad landscape. We have consulted with most archeological companies over many years on projects. We have all the relevant insurances and safety gear. We are all fit, capable and adapt to a vast landscape.
Contact is preferred via email: ***corroboreecorp@bigpond.com*.**
The contact number, email and contact person is also listed in the signature.
Please do not disclose any of our details to LALC. We have responded for inclusion, to participate on all levels. Thanks.

Kind regards
Marilyn Carroll-Johnson
Director
Corroboree Aboriginal Corporation
Mob: 0415911159
Ph: 0288244324

Hi Grace and Caitlin

As Myself (Lilly Carr) and Paul Boyd are both proud Ngunawal descendants, I would like to say that we are happy with what we have read in your methodology for this project at Goulburn, and would be delighted to be a part of the Fieldwork if anything arises

Kind regards

Dear Grace,

After reading the proposed methodology I had an issue with no future plan to do test excavations, it seems to me that the land will be used for places of residence which will greatly impact the land, even if on a larger lot size. If we do identify PADs then I would also like to recommend test excavating said PADs. I would also suggest 4 RAPs to increase the opportunities for other community members.

Other than that I don't have any other issues with the document.

With thanks,

Duncan

Executive summary

DBI-Link is proposing to rezone primary production land to Large Lot Residential (proposed two hectare (ha) sized lots) over a 277 ha site between Mountain Ash Road, Windellama Road, Barretts Lane and Rosemont Road, Goulburn, New South Wales (the Project Area) (Figure 1-1 and Figure 1-2). The proposed works will cross a number of Aboriginal archaeologically sensitive landforms such as creeks and drainage lines. Everick Heritage Pty Ltd has been engaged by DBI-Link to prepare an Aboriginal Heritage Desktop Assessment to assess the archaeological potential and sensitivity of the Project Area.

A search of the Aboriginal Heritage Information Management System (AHIMS) was conducted on 03/08/2022 (Client Service ID: 7054002). Eighty-seven Aboriginal sites were identified in the search. No AHIMS sites are recorded within the Project Area. Table 3-1 indicates that the majority of features (85.1per cent) are associated with stone artefacts (Artefact; Isolated Find). There has been no previous archaeological investigation within the Project Area.

Based on previous archaeological assessments, regional studies and past land use, the Project Area is assessed as having moderate potential for Aboriginal sites and objects. These would most likely be stone artefacts located near creek lines or other water sources. Proximity to water is considered to be a preeminent factor which determined past Aboriginal occupation of the land. The Project Area is bounded to the west by the Gundary Creek, a perennial river which would have served as an important, perennial source of water and other resources (food, shelter, transport) for local Aboriginal populations.

While the rezoning of the property will not result in any impact to Aboriginal sites, the impact of subsequent works should be considering when assessing the need for further archaeological investigation. Due to the moderate potential for archaeological deposits or sites to occur within the Project Area, it is recommended that additional archaeological investigations such as the preparation of a code compliant Archaeological Survey Report or Aboriginal Cultural Heritage Assessment Report (ACHAR) are completed prior to the construction phase of works.

Furthermore, Appendix B of the Goulburn Mulwaree DCP 2009, (Appendix B) which was developed in consultation with the Pejar Local Aboriginal Land Council suggest that the site is located within Aboriginal Sensitive Land and an Archaeological Survey must be prepared and lodged with any development application for land subdivision.

1. Introduction

1.1. Project background

DBI-Link is proposing a subdivision of a 277-hectare (ha) site on Mountain Ash Road on the outskirts of Goulburn, New South Wales (NSW). Goulburn is located approximately 192 kilometres (km) southwest of Sydney and 95 km northwest of Canberra.

Everick Heritage Pty Ltd (Everick Heritage) has been engaged by DBI-Link to provide a Aboriginal Heritage Desktop Assessment (desktop assessment) to support a proposal to Goulburn Mulwaree Council for the request to rezone the primary production land on the outskirts of Goulburn, to Large Lot Residential areas.

1.2. Project Area

The Project Area envelops the north portion of Mountain Ash Road and the entirety of Barretts Lane, located within the locality of Brisbane Grove (Project Area, Figure 1-1) as well as within the boundaries of the Parish of Towrang and the Parish of Goulburn. It is principally within the County of Argyle, which is bounded to the west by Gundary Creek, situated within the Goulburn Mulwaree Council Local Government Area (LGA) as well as within the Pejar Local Aboriginal Land Council (LALC) area.

1.3. Project description

The subdivision of the 13 existing parcels of lands (Project Area) into 105 residential properties covers an area of approximately 2,653,109.96 square metres. Nine lots to the north of Mountain Ash Road comprise of the following allotments: Lot 1 DP 779194, Lot 103 DP 70346, Lot 1 DP 853498, Lots 104, 105, 106 DP 126140 and Lot 1 and 2 DP 835278. To the south, the Project Area covers four allotments: Lot 3 DP 835278, Lot 1 DP 731427 and Lot 22, 23, 24 DP 811954. The location of the Project Area and the subdivision allotments can be seen in Figure 1-2.

DRAFT

1.4. Methodology

This assessment consisted of the following tasks, in line with Steps 1-5 of the Due Diligence Code of Practice for the Protection of Aboriginal Objects in New South Wales (Due Diligence Code of Practice) (Department of Environment, Climate Change & Water 2010a):

- Assess the nature of the works activities with consideration of ground surface disturbance and the potential to impact on mature indigenous trees which may be culturally modified.
- Assess the presence and nature of recorded Aboriginal sites in the surrounds of the Project Area through database searches and other sources of information such as relevant archaeological reports.
- Assess the past and present landscape features of the Project Area.
- Present evidence and findings from the site inspection.
- Assess the archaeological potential of the Project Area and any likely impact of the works on landforms of archaeological potential.
- Provide recommendations for mitigation of impact to any Aboriginal archaeological values.

1.5. Authors and contributors

Grace Eldon (Archaeologist, Everick Heritage) prepared this desktop assessment. Grace has one year experience as a consultant and has been developing her consultancy skills over the last year. She holds a Bachelor of Arts (Hons) in Archaeology.

A quality and compliance review of this report was conducted by Vanessa Edmonds (Principal, Everick Heritage). Vanessa has over 35 years of experience in cultural heritage management in NSW.

Alfred Gasore (GIS, Everick Heritage) prepared the mapping.

DRAFT

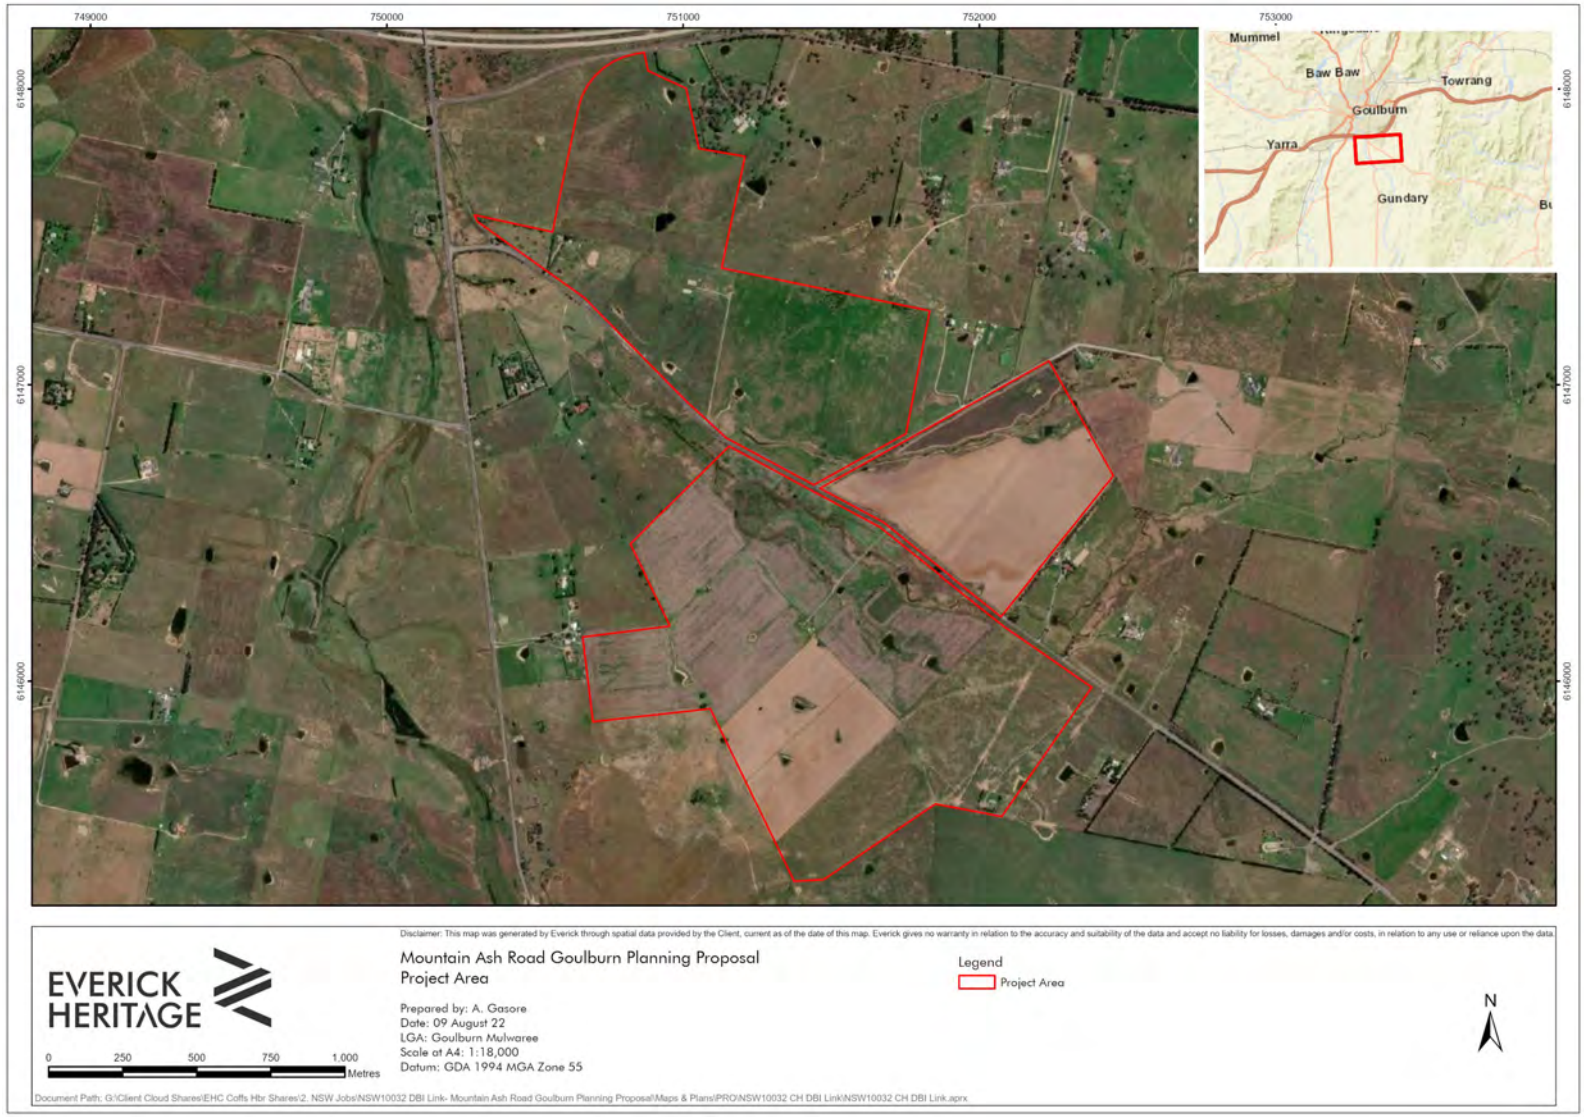

Figure 1-1: Project Area

Figure 1-2: Indicative lot layout plan

2. Legislative context

2.1. Commonwealth legislation

2.1.1. Aboriginal and Torres Strait Islander Heritage Protection Act 1984 (Cth)

Most State Aboriginal heritage databases provide protection for those sites with physical evidence. The *Aboriginal and Torres Strait Islander Heritage Protection Act 1984 (Cth)* (*Commonwealth Act)*, deals with Aboriginal cultural property in a wider sense. Such cultural property includes any places, objects and folklore that 'are of particular significance to Aboriginals in accordance with Aboriginal tradition'. In most cases, archaeological sites and objects registered under the *National Parks and Wildlife Act 1974 (NSW) and Heritage Act 1977 (NSW)* will also be Aboriginal places subject to the provisions of the *Commonwealth Act*.

There is no cut-off date and the *Commonwealth Act* may apply to contemporary Aboriginal cultural property as well as ancient sites. The *Commonwealth Act* takes precedence over State cultural heritage legislation where there is conflict. The responsible Minister may make a declaration under Section 10 of the *Commonwealth Act* in situations where state or territory laws do not provide adequate protection of heritage places.

2.2. State legislation

2.2.1. National Parks and Wildlife Act 1974 (NSW)

The *National Parks and Wildlife Act 1974 (NSW) (NPW Act)* provides statutory protection to all Aboriginal places and objects. An Aboriginal object is defined as:

> *any deposit, object or material evidence (not being a handicraft made for sale) relating to the Aboriginal habitation of the area that comprises New South Wales, being habitation before or concurrent with (or both) the occupation of that area by persons of non-Aboriginal extraction, and includes Aboriginal remains.*

DRAFT

An Aboriginal Place is declared by the Minister under section 86 of the *NPW Act.* Aboriginal Places are recognised for their special significance to Aboriginal culture. Aboriginal Places gazetted under the *NPW Act* are listed on the State Heritage Register established under the *Heritage Act 1977 (NSW)*.

The protection provided to Aboriginal objects applies regardless of the level of their significance or issues of land tenure. Aboriginal objects and places are afforded statutory protection in that it is an offence to knowingly or unknowingly desecrate and Aboriginal object or place under section 86 of the *NPW Act*.

In accordance with section 89A, any person who is aware of the location of an Aboriginal object must notify the Chief executive in the prescribed manner within a reasonable time of becoming aware of that object. The prescribed manner is through preparation and submission of an Aboriginal Site Recording Form to the Aboriginal Heritage Information Management System (AHIMS) (DECCW 2010b: 14).

In order to undertake a proposed activity which is likely to involve harm to an Aboriginal object or Aboriginal Place it is necessary to apply to Heritage NSW (Department of Planning and Environment) for an Aboriginal Heritage Impact Permit (AHIP). AHIPs are issued by the Aboriginal Heritage Regulation Team (Heritage NSW) under section 90 of the *NPW Act* and permit harm to certain Aboriginal objects and Aboriginal Places.

2.2.2. National Parks and Wildlife Regulation 2009 (NSW)

The Due Diligence Code of Practice was adopted by the *National Parks and Wildlife Regulation 2009 (NSW) (NPW Regulation)* and introduced in October 2010 by Heritage NSW (formerly DECCW). The aim of this guideline is to assist individuals and organisations to exercise due diligence when carrying out activities that may harm Aboriginal objects and to determine whether they should apply for consent in the form of an AHIP.

A due diligence assessment should take reasonable and practicable steps to ascertain whether there is a likelihood that Aboriginal objects will be disturbed or impacted during the proposed development. If it is assessed that sites exist or have a likelihood of existing within the development area and may be impacted by the proposed development, further archaeological investigations may be required along with an AHIP. If it is found to be unlikely that Aboriginal sites exist within the study area and the due diligence assessment has been conducted according to the Due Diligence Code of Practice, work may proceed without an AHIP.

This desktop assessment does not comply with the *NPW Act*, a site inspection is required to ground truth the results of this assessment.

2.2.3. Native Title Act 1994 (NSW)

The Native Title Act 1994 (NSW) was introduced to work in conjunction with the Commonwealth *Native Title Act 1993 (Cth)*. Native Title claims, registers and Indigenous Land Use Agreements are administered under the *Native Title Act 1994 (NSW)*. A search was conducted of the Native Title register on 9 August 2022 but no claims were noted.

DRAFT

3. Background

The purpose of this section is to assist in the prediction of:

- The potential of the landscape over time to have accumulated and preserved Aboriginal objects.
- The ways Aboriginal people have used the landscape in the past with reference to the presence of resource areas, surfaces for art, other focal points for activities and settlement.
- The likely distribution of the material traces of Aboriginal land use based on the above.

3.1. Environmental context

3.1.1. Soil landscapes of the Project Area

The Project Area overlaps the boundaries of the Bullamalita soil landscape, and the Collector Creek soil landscape as depicted within the Soil Landscapes of the Goulburn 1:250,000 Sheet (Hird 1991). In general, the major soil types in the Goulburn area favour sustainable and productive agriculture (Goulburn Mulwaree Council Heritage Study Review 2018). A visual representation of the soil landscapes is provided in Figure 3-3.

The majority of the Project Area is situated in the Bullamalita soil landscape, an area near Goulburn that is associated with Upper Silurian and Lower Devonian sediments, in conjunction with undulating rises and valleys between low hills (Hird 1991). The local relief is between 10 to 50 metres (m), with slopes of less than 10 per cent. The soils consist of acid to neutral yellow duplex soils, usually with balanced A2 horizons, as can be seen in Figure 3-1, that set very hard on drying, of which occur on lower side slopes, foot slopes and drainage lines along the undulating rises and hills (>2,000 millimetres [mm]).

The Collector Creek soil landscape is characterised by alluvial plains, frequently subject to active erosion and aggradation by channelled or overbank stream flow. The soil landscape is situated on the narrow floodplains associated with Salpetre Creek, the Mulwaree River, Wollogorang, Currawang and Collector Creeks. The alluvial floodplains have an elevation which can vary from around 700 m on Collector Creek to about 660 m on the Mulwaree River (Hird 1991). Moderately deep, grey and yellow mottled duplex soils with bleached A2 horizons and neutral to alkaline reaction prevail in this landscape. Deposits associated with Collector Creek have formed on colluvial and alluvial deposits of Quaternary and Cainozoic clay, silt, and sand, with depths ranging to 3,000 mm (Figure 3-2).

DRAFT

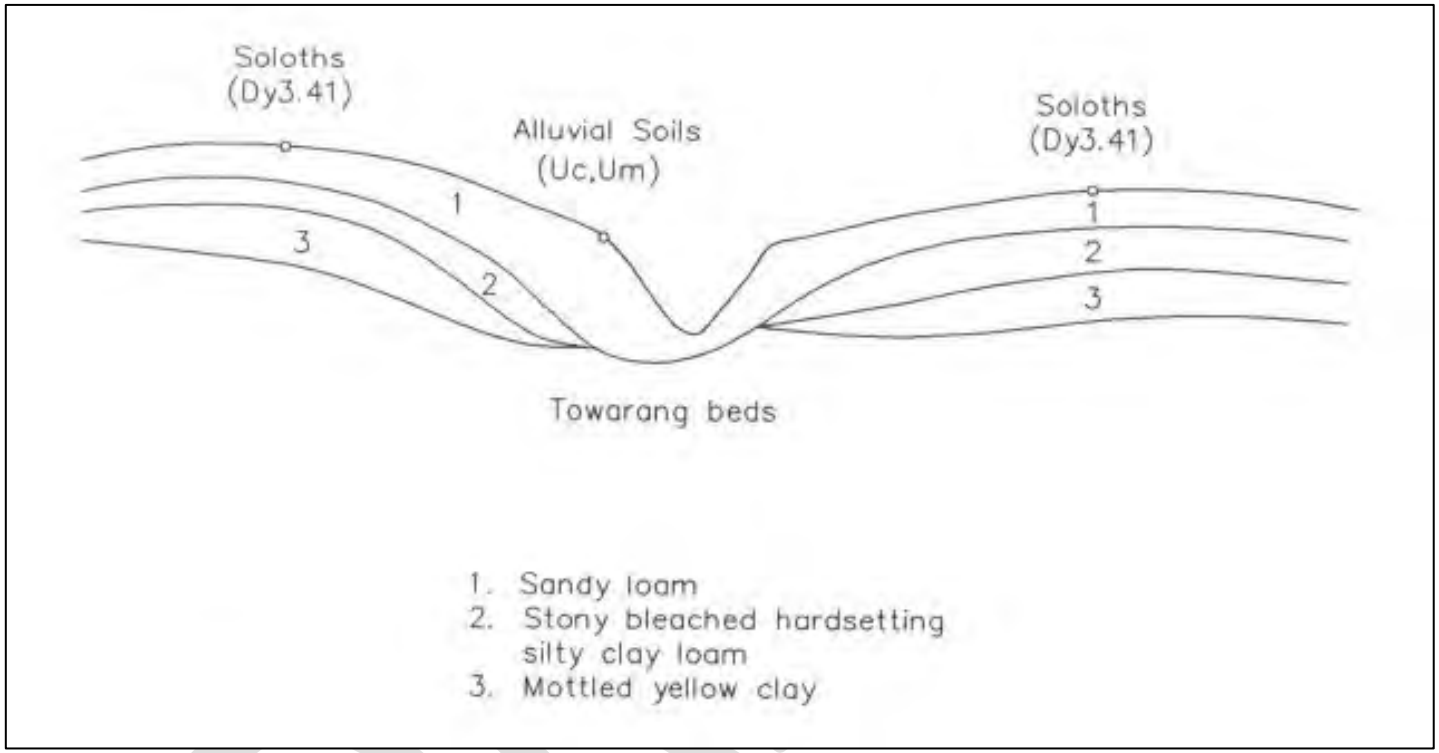

Figure 3-1: Geology of Bullamalita soil landscape

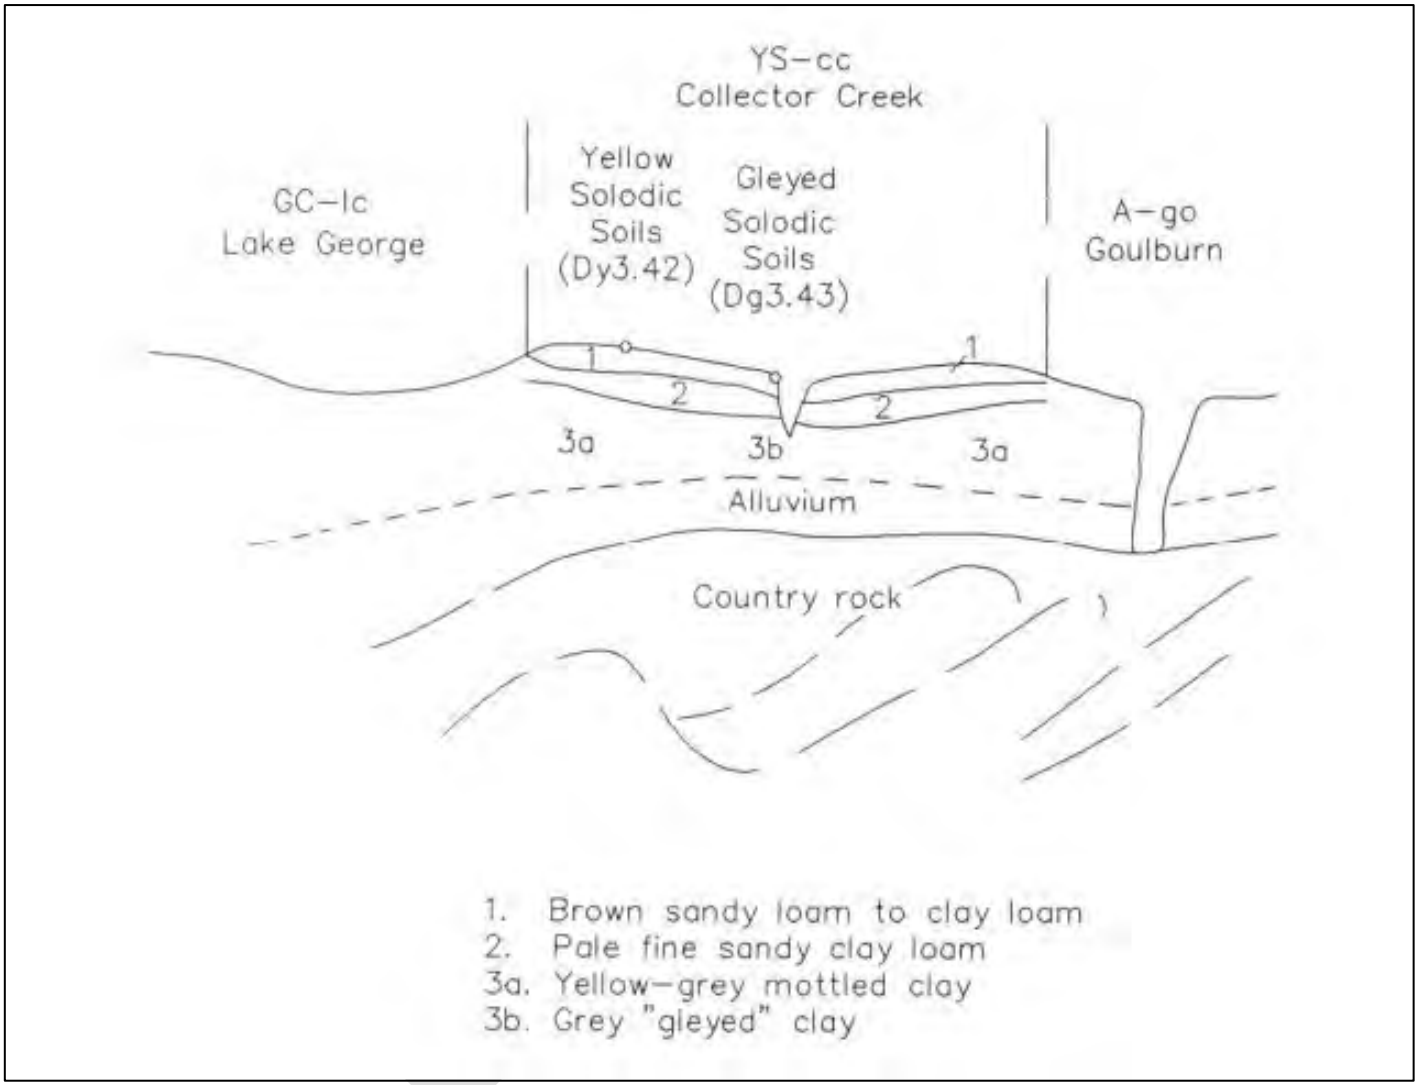

Figure 3-2: Geology of Collector Creek soil landscape

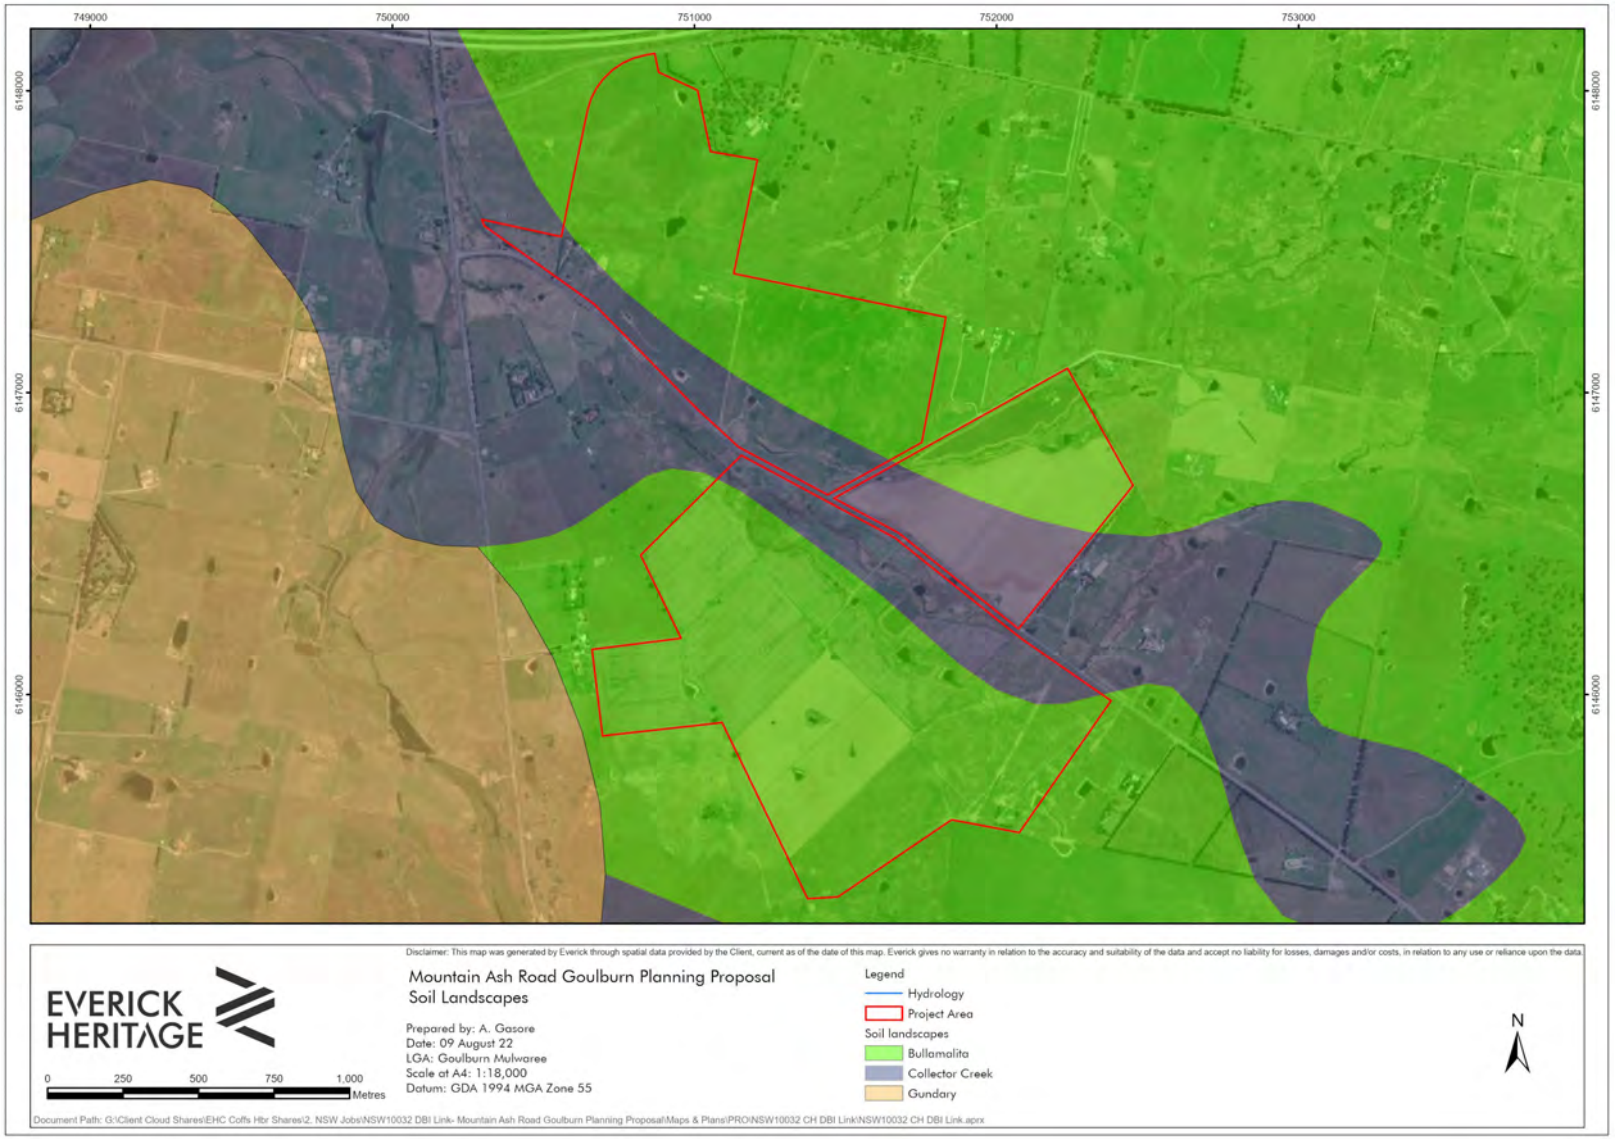

Figure 3-3: Soil landscapes of the Project Area

3.1.2. Hydrology

There are numerous watercourses within the Project Area. Gundary Creek is a major fourth-order watercourse which travels perpendicular to the Project Area, west of Windellama Road. Multiple tributaries off Gundary Creek and expand into the Project Area. This includes numerous first-order streams meandering through the southern end the Project Area. An unnamed third-order watercourse flows southeast alongside the south side of Mountain Ash Road. Another unnamed third-order stream flows south of Barretts Lane, in the northeast portion of the Project Area. Figure 3-4 shows the distribution of creek lines of the Project Area.

3.1.3. Vegetation

The Collector Creek soil landscape is found in the Southern Tableland Red Grass-Spear Grass Grassland and the Bullamalita soil landscape is generally characterised as a Southern Tablelands Grassy Box Woodland. The above two soil landscapes have been subject to significant ground disturbing works as both have been extensively cleared. Their features, however, characterise the adjacent creeks and banks, as well as gradient slopes and undulating alluvial plains covering the Project Area. Highlands and tributaries dominate the region of the Project Area, bounded by vegetation which reflects the temperate environment. A temperate climate dominates both soil landscapes, with a montane climate occurring at higher elevations (Hird 1991).

These landscapes have been extensively cleared and populated with introduced species since the introduction of cultivation during the Contact period. Original vegetation for the Collector Creek landscape would have once included dry and wet tussock grasslands with spear grasses and snow gums (Hird 1991). For the Bullamalita landscape, most often savannah woodland of Yellow Box and Red Gum populated the area (Hird 1991). Brittle Gum occurs on the boundary with the Midgee soil landscape. Both soil landscapes follow the perennial creek lines associated with the Project Area.

DRAFT

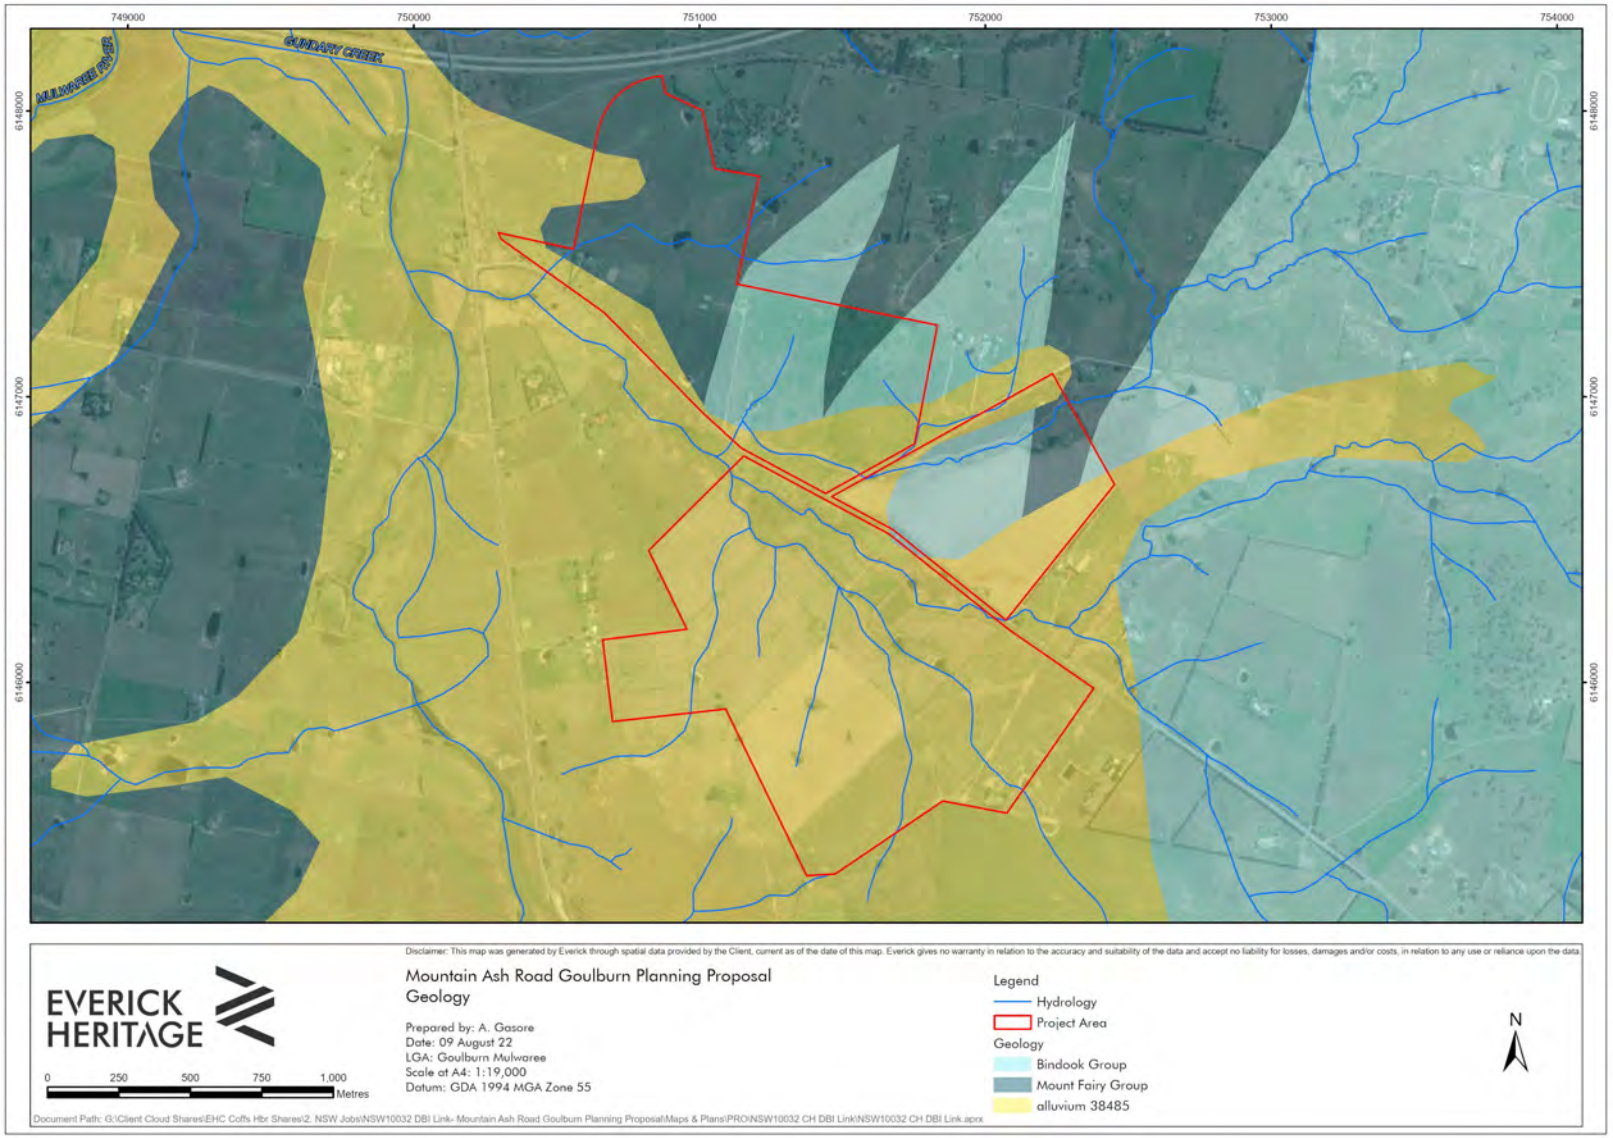

Figure 3-4: Geology of the Project Area

3.2. Past and present land use

The Project Area is located just 3.8 km southeast from Goulburn itself. The landscape and topography, within which the Project Area sits would have facilitated the expansion of the town's pastoral industry.

Historically, the major industries in the rural regions of Goulburn Mulwaree were pastural based, mainly focused on wool production, fat lambs and cattle grazing. There has been a downturn of traditional agricultural industries in the area and an attempt to diversify alternative enterprises have included the growing of canola, lavender, berries, grapes, olives, and poultry (Goulburn Mulwaaree Heritage Study Review 2018). The downturn in the agricultural markets has generally led to pressure for residential subdivisions of larger land holdings, some of which contain significant historic homesteads and associated rural buildings. Today, in the Goulburn Mulwaree LGA, agriculture and grazing remain the dominant industries.

An historic map of the Parish of Towrang from 1881 (Figure 3-6) highlights the ongoing development of land residential purposes with large land grants allotted to private owners. Aerial imagery taken in 1975 and 2022 can be compared revealing further clearing and levelling of paddocks in the Project Area, however, land alongside watercourses has remained untouched (Figure 3-5). Mountain Ash Road encompasses a portion of the Project Area. This road has been used as a service passage since the late 19th century as the original route to Bungonia (Figure 3-6). The Project Area has remained undeveloped with the exception of minor infrastructure relating to agricultural practices since the 19th century, as well as the construction of an additional building on the northern side of the property.

DRAFT

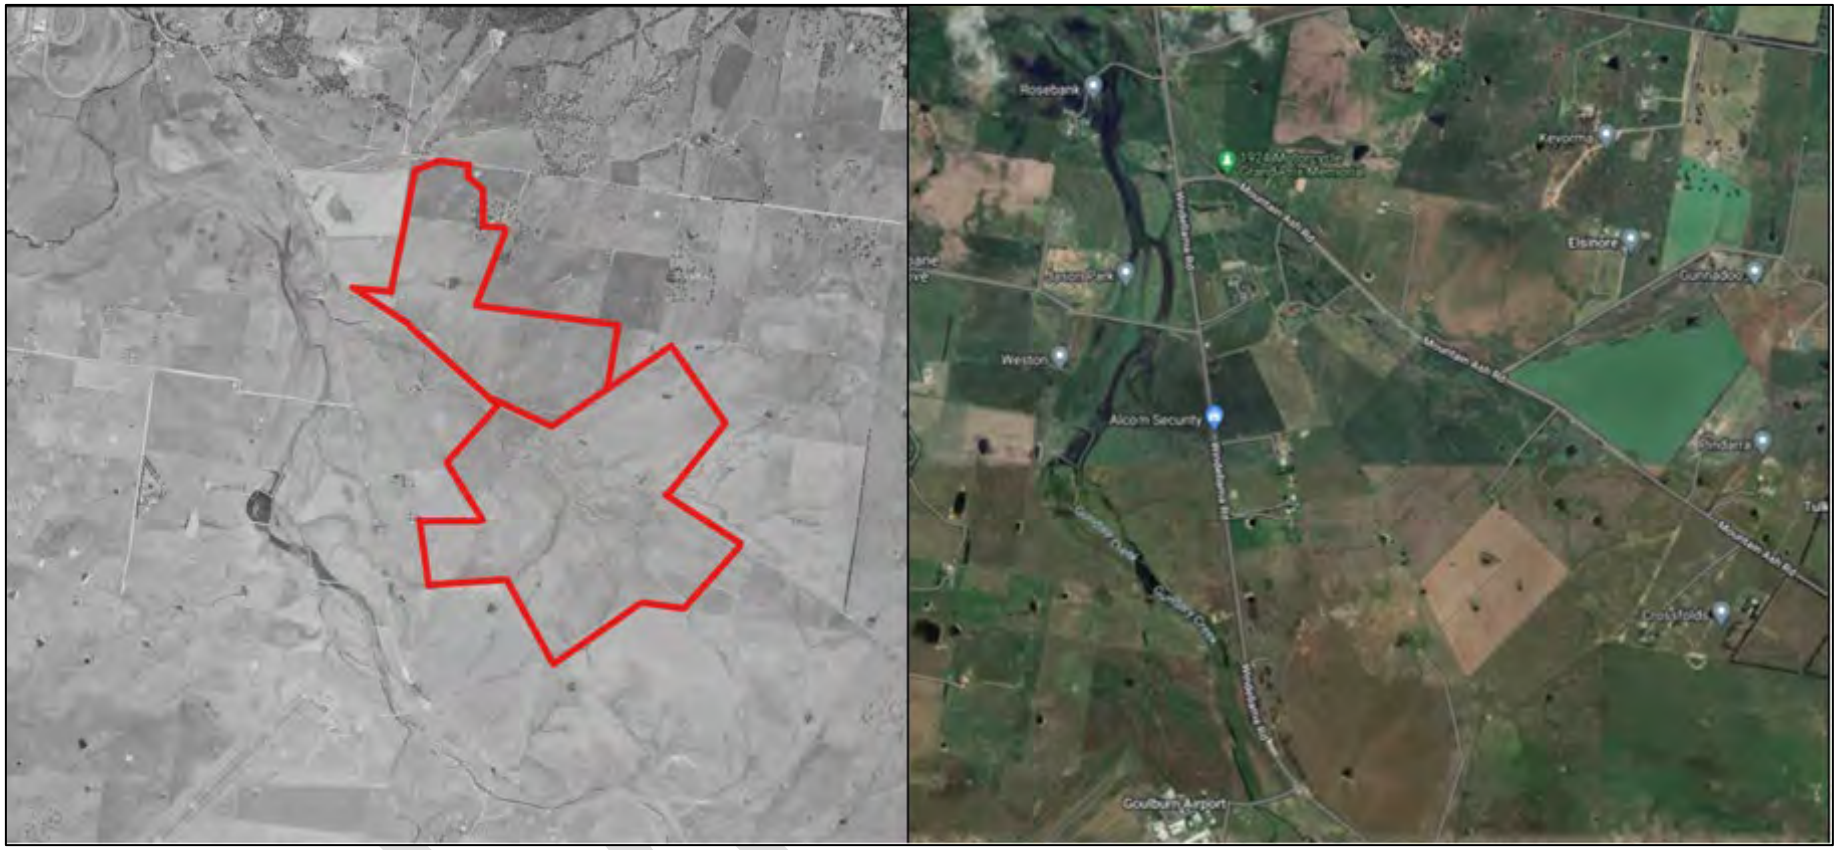

Figure 3-5: Aerial imagery of the Project Area from 1975. The approximate location of the Project Area is shown in red (Source: NSW Spatial Service)

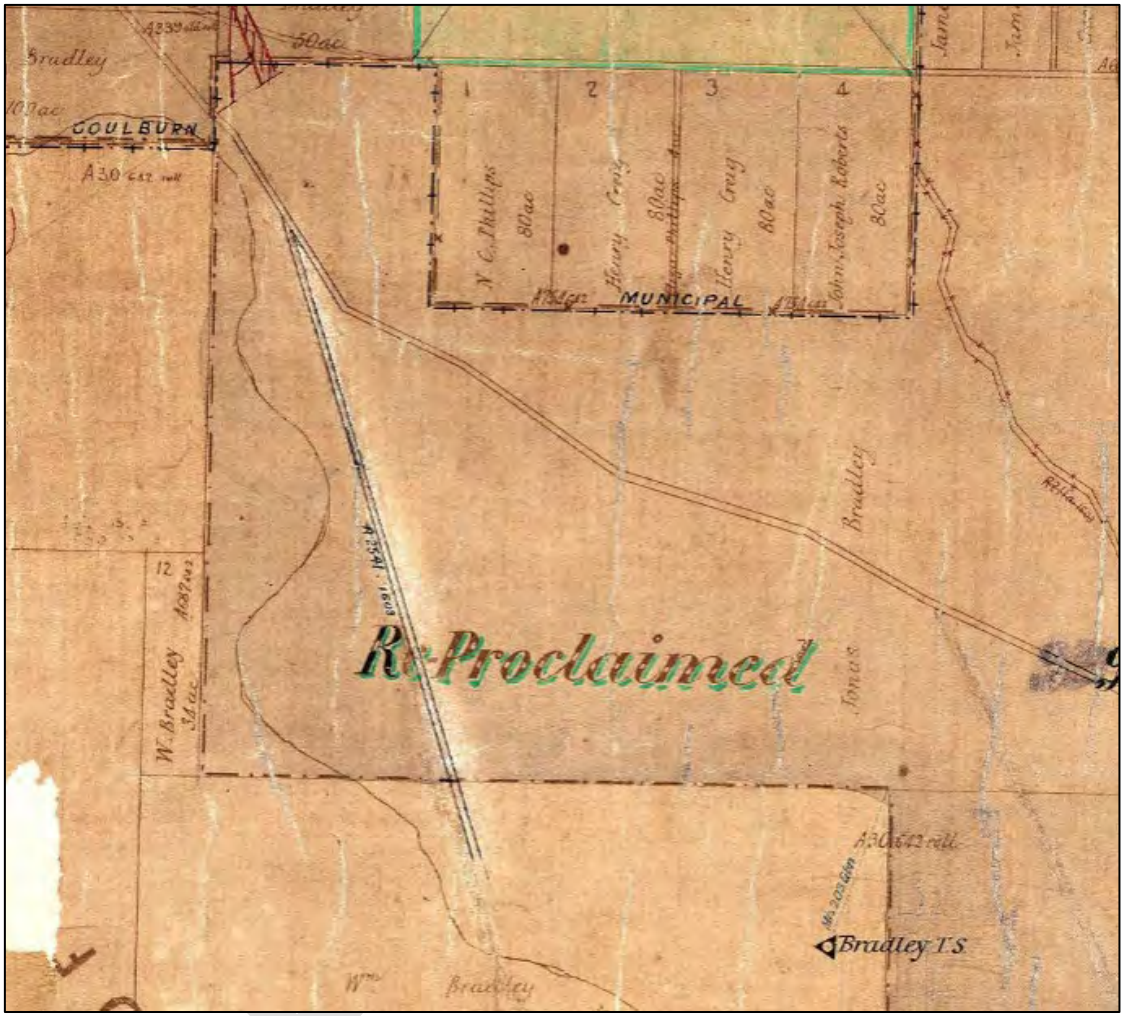

Figure 3-6: 1881 Parish of Towrang parish map showing the location of the Project Area and the allotments of the land, south of Goulburn (Source: NSWHLRS)

3.3. Ethnohistoric context

The Project Area is likely to have been associated with the Gandangara (also known as the Gundungurra, Gundungari, Gurra-gunga, and Burragorang) and Nyunnawal (also called the Ngunuwal, Ngoonawal, Wonnawal, Nungawal, Yarr, Yass tribe, Lake George, Five Islands tribe or Molonglo tribe) clans who inhabited the Goulbourn district. The Gandangara and Nyunnawal occupied the Mulwaree region at the time of first European settlement. The Project Area was probably located within the boundaries of the Gandangara tribe. However, taking into consideration the fluid nature of tribal boundaries, the area may well have been within Gandangara territory, or within a sub-set of either of these groups.

For both the Gandagnara and the Nyunnawal, their diets could be quite varied according to availability of food including kangaroos, wallabies, possums and other small marsupials such as bandicoots, as well as emus, wild turkey, echidna, native ducks, fish and eels, freshwater mussels, snakes, native bees and ants. The pre-colonial landscape of Project Area provided an ecologically diverse environment of both plant and animals resources for both food and material items. The surrounding waters and landscapes formed an integral part of many Aboriginal communities' belief systems, and would have attracted occupation and use, for its nature resources. In short, Gandangara and Ngunawal made best use of all the plant and animal resources available to them in their environment. Sustainable practices were used, such as firestick farming, cultivation, and transient camping to maintain their traditional lifestyle and the health of the environment in which they lived.

From the 1820s onwards, traditional Gandangara and Ngunawal life became increasingly disrupted due to European land use as early pastoralists with sheep and cattle entered the region in search of fresh pastures. Occupation by pastoralists led to settlement, the establishment of roads, towns and inns, and an influx of convict workers, who built the roads and shepherded stock (Goulburn Mulwaree Heritage Study Review, 2018). Due to the area's rich agricultural lands, the broader County of Argyle where Goulburn Mulwaree region is situated was one of the first areas to be extensively explored and cultivated in the Sydney Basin. Numerous land grants were established in and around the Goulburn Plains and by the early 1820s the district was being used to grow wheat, sheep and cattle for the Sydney market (Bayley 1954: 17 cited in Navin Officer 2019).

DRAFT

3.4. Previous archaeological assessments

3.4.1. Regional studies

Previously recorded Aboriginal sites within the Goulburn Mulwaree LGA generally occur in the vicinity of watercourses, in elevated areas, and in areas with suitable geology or mature vegetation. The Project Area is located broadly to the south of Goulburn City, where tributaries of varying sizes dissect the current landscape. As a result, a relatively large number of Aboriginal heritage studies have been completed in and around the City of Goulburn. Over half of the sites recorded in Goulburn City consist mainly of artefact sites (isolated finds of flaked stone, or low to moderate density scatters of artefacts, as well as open campsites, and scarred trees). Whereas recorded sites in the greater Goulburn Mulwaree LGA comprise of open campsites, isolated finds and scarred trees.

A large-scale archaeological study of the proposed highway by-pass route to the south of Goulburn was conducted by Koettig in 1983. The conclusions found twenty-two sites, all surface scatters of stone artefacts and all situated with 200m of watercourses (68% of which were located under 100m to a body of water). Most sites were of low density, except one which was situated along the Mulwaree River near its junction with Gundary Creek, some 1.5 kilometres (km) northwest of the Project Area. 650 artefacts were recovered from ten test pit excavations in this area (New South Wales Archaeological 2004).

Lance and Koettig (1986) were the first to complete a regional review of Aboriginal archaeological sites within the Goulburn region. The *Aboriginal Resources Planning Study for the City of Goulburn* postulated there was four major landform zones to occur in the area (major watercourses, undulating hills and plains, hill tops and built-up areas) where each zone was assigned an archaeological sensitivity and site significance. Sites with low-moderate archaeological sensitivity and significance were noted to generally occur along hilltops, hills with an elevation of 700-750 metres (m) above sea level and in built up areas. Sites with moderate-high archaeological sensitivity and significance occurred in close proximity to water, in elevated areas and with suitable underlying geology or mature vegetation.

Drawing on the regional site distribution model by Koettig and Lance (1986) the following general trends can be applied to the Project Area:

- Artefact scatters are the most common type of site in the region and have been identified in all environmental contexts. They are most likely to occur on gentle, well-drained lower slopes within 100m of water. Artefact scatters at the junction of watercourses tend to be large, with high densities of stone artefacts.

DRAFT

- Types of stone used in the manufacture of tools include chert, silcrete, quartz, quartzite and fine-grained volcanic rocks.
- Burial sites are rare, and historical sources indicate that they are most likely to be found on ridges and hill tops, in hollow trees, and in caves. In some cases they may also occur in sand bodies.
- Modified trees (scarred or carved) are rare, as scars are only likely to be present on trees at least 80-100 years old, and natural vegetation in the Goulburn region has been altered by fire and forest clearance.

This model aimed to identify the location of documented sites and determine the nature, distribution, and significance of known and potential areas of archaeological sensitivity and significance in the region (NGH environmental 2017). According to the model, the majority of sites in the Project Area are most likely to be stone artefact scatters located within the 'undulating hills and plains' zone, particularly on basal slopes adjacent to ephemeral watercourses.

Fuller (1989) undertook a field investigation of the Goulburn Area, identifying zones as being of high sensitivity or potential significance drawing on the model created by Lance and Koettig (1986). Fuller located 17 artefact scatters and 5 isolated finds while surveying a representative sample of environmental zones within the City of Goulburn. The majority of sites were small low-density scatters of less than 10 artefacts, however, one site produced more than 100 artefacts, and another produced an estimated 1000 artefact. The most common raw materials found were quartz, chert and silcrete. Fuller (1989) also reported that the majority of archaeological sites in the Goulburn region were open campsites with a strong tendency to occur on hill slopes, ridge crests and watercourse flats within 100m of river and creek lines.

DRAFT

3.4.2. Database searches

Caution should be taken when using the Heritage NSW Aboriginal Heritage Information Management System (AHIMS) database to reach conclusions about site prevalence or distribution. For example, a lack of sites in a given area should not be seen as evidence that the area was not occupied by Aboriginal people. It may simply be an indication that it has not been surveyed for cultural heritage, or that the surveys were undertaken in areas of poor surface visibility. Further to this, care needs to be taken when looking at the classification of sites. For example, the decision to classify a site an artefact scatter containing shell, rather than a midden can be a highly subjective exercise, the threshold for which may vary between archaeologists. It is also important to note that the nature and location of Aboriginal sites can be culturally sensitive information and should only be made publicly available with the consent of the Aboriginal community.

A search of AHIMS was initially conducted on 03/08/2022 (Client Service ID:7054002) with the following coordinates:

Lat, Long from: -34.8998, 149.6654

Lat, Long to: -34.7589, 149.9126

Eighty-seven Aboriginal objects and zero Aboriginal Places were identified in the search (Figure X). There are nine recorded sites within one kilometre of the Project Area. Heritage NSW lists there are 20 standard site features that can be used to describe a site registration with AHIMS, and more than one feature can be used for each site. No AHIMS sites are recorded in the Project Area, the nearest site being AHIMS ID 51-6-0420, which is an Artefact Site 190 metres (m) northeast of the Project Area.

The distribution of registered sites is shown in (Table 3-1). The majority of sites are associated with Artefact sites.

Table 3-1: AHIMS features within vicinity of the Project Area

Site feature	Number	Percentage
Artefact	74	85.1
Artefact, Potential Archaeological Deposit (PAD)	5	5.7
Burial	1	1.1
Hearth	1	1.1

DRAFT

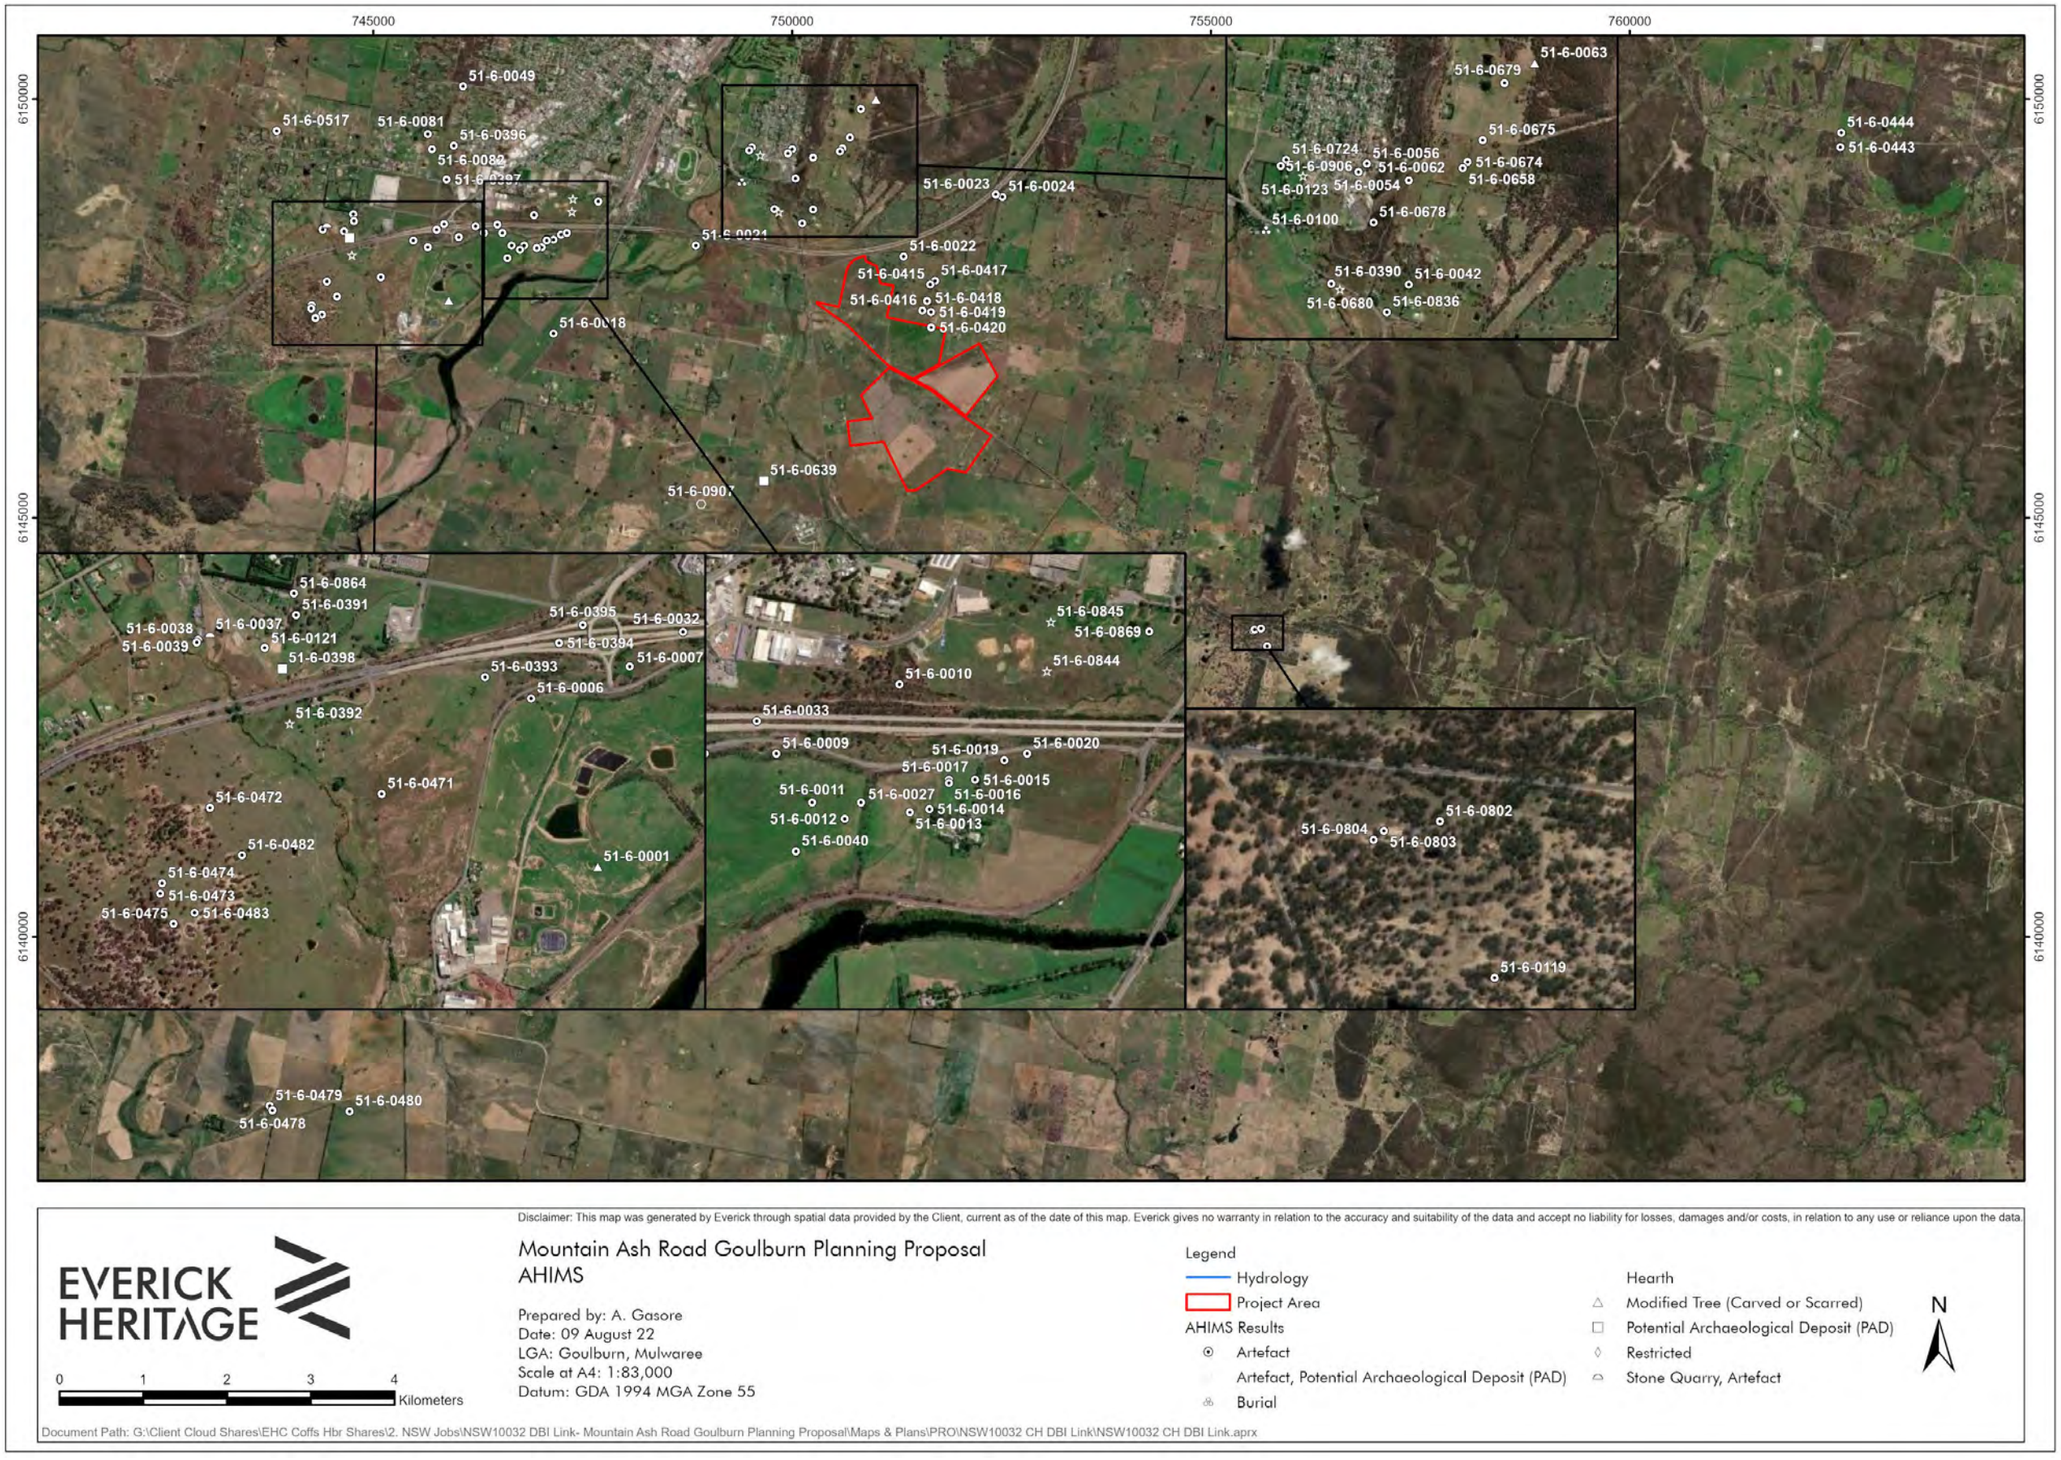

Site feature	Number	Percentage
Modified Tree (Carved or Scarred)	2	2.3
Potential Archaeological Deposit (PAD)	2	2.3
Stone Quarry, Artefact	1	1.1
Restricted Site	1	1.1
Total	**87**	**100**

3.4.3. Other database searches

The following heritage registers were accessed on the 4 August 2022:

- World Heritage List (Australian Heritage Council/ UNESCO): No heritage items within the Project Area
- The National Heritage List (Australian Heritage Council): No heritage items within the Project Area
- Commonwealth Heritage List (Australian Heritage Council: No heritage items within the Project Area
- AHIP Public Register: No AHIPs were identified within the Project Area

3.5. Summary and predictive model

A predictive model can be created to predict the broad character of Aboriginal cultural heritage sites in the Project Area based on the following:

- A study of the AHIMS database of regional site distribution
- Potential Aboriginal use of natural resources and landscape features which may have been present within the Project Area in the past
- Previous assessments and the results of surveys and testing programmes within the regional area.

Based on the desktop assessment, the predictive model is as follows:

- The most likely site types to occur within the Project Area are artefact sites (isolated finds, low-moderate density artefact scatters and/or campsites). These would most likely occur within the vicinity of permanent and semi-permanent water courses as well as elevated landforms.
- There is low potential for scarred trees to occur within Project Area. The Project Area has been subject to historical clearing and logging, resulting in the clearance of mature native vegetation.
- If located within the Project Area, the most archaeologically sensitive landforms would include riparian zones on low-gradient slopes and levees within 100 m of water.

Given the predictive model, the Project Area is considered to possess moderate archaeological sensitivity and moderate potential for Aboriginal sites. Based on previous archaeological assessments, regional studies and past land use, location and proximity to water is considered to be a preeminent factor which determined past Aboriginal occupation of the land. The Project Area is bounded to the west by the Gundary River, a perennial river which would have served as an important, perennial source of water and other resources (food, shelter, transport) for local Aboriginal populations. Typically, this would imply that the area is of moderate archaeological potential and possibly containing sites such as artefact scatters and small campsites as noted in previous archaeological assessments within the same soil landscape (Koettig 1983: Keottig and Lance 1986: Fuller 1989 and New South Wales Archaeology 2004). As indicated by a review of the AHMIS search results, the most common sites in the immediate region of the Project Area are artefact sites, due to the presence of watercourses within the vicinity of the proposed works.

The lack of Aboriginal sites recorded within the Project Area is likely the result of historic use, in this case for agriculture, which may have also contributed to the region having been cleared and subject to ground disturbing activities such as ploughing. Scarred trees are likely to occur anywhere in the landscape where clearing has not occurred. Yet, due to the extensive amount of historical clearance within the wider area,

it is difficult to determine characteristics of scarred tree distribution in the landscape. It must be noted that site distribution pattern is partly the result of intensive surveys triggered by proposed developments, rather than accurately reflecting the nature of Aboriginal land use. If any sites are identified, it is likely they will comprise heavily disturbed artefact scatters and isolated artefacts, with these site types having already been identified in the vicinity of the Project Area.

4. Assessment of archaeological sensitivity

4.1. Discussion

Archaeological sensitivity is closely related to observed levels of ground disturbance. However, other factors are also taken into account when assessing archaeological sensitivity, such as whether Aboriginal objects were located on the surface, and whether the area is within a sensitive landform unit according to the predictive statements.

Landscape features may indicate the presence of Aboriginal objects, as a result of Aboriginal people's use of those features in their everyday lives and for traditional cultural activities. It is essential to determine whether the site contains landscape features that indicate the likely existence of Aboriginal objects. The Due Diligence Code of Practice (2010a: 12) defines these landscapes as:

- within 200 m of waters, or
- located within a sand dune system, or
- located on a ridge top, ridge line or headland, or
- located within 200 m below or above a cliff face, or
- within 20 m of or in a cave, rock shelter, or a cave mouth.

The Project Area contains sensitive landscape features as it is located on an alluvial plain with a gentle-undulating topography. There are several sources of water within 200 m of the Project Area, including fourth and third-order streams, as well as first and second order streams.

Part 8A, Clause 80B (4) of the *NPW Regulation* states that land is disturbed if it is has been the subject of human activity that has changed the land's surface, being changes that remain clear and observable. Examples of activities that may have caused disturbance are provided in the *NPW Regulation* as:

(a) soil ploughing,

(b) construction of rural infrastructure (such as dams and fences),

(c) construction of roads, trails and tracks (including fire trails and tracks and walking tracks),

(d) clearing of vegetation,

(e) construction of buildings and the erection of other structures,

(f) construction or installation of utilities and other similar services (such as above or below ground electrical infrastructure, water or sewerage pipelines, stormwater drainage and other similar infrastructure),

(g) substantial grazing involving the construction of rural infrastructure,

(h) construction of earthworks associated with anything referred to in paragraphs (a)-(g).

The Project Area has been subject to disturbance in the form of (a), (c), (d), and (g).

4.2. Conclusions

A search of the AHIMS database did not identify registered sites with the Project Area. Although, an AHIMS search has identified there are seven sites situated within a kilometre of the Project Area. Overall, the Project Area has been assessed as demonstrating moderate archaeological sensitivity and potential. The current landscape restricts a number of archaeological site types being found. By solely conducting archaeological assessments on the surface visibility and the presence of stone artefacts is not indicative of the true nature and density of archaeological material in this region. The importance of establishing surveys and potential test excavations in highly disturbed regions must be considered as a preeminent factor to determine past Aboriginal occupation of the land.

Previous archaeological studies indicates that there is potential for Aboriginal cultural heritage to be located within the Project Area. Sites such as low-density artefact scatters would most likely occur on elevated landforms, particularly around water sources. While the proposed rezoning does not include any works which would result in the impact to these potential sites, the impact of further construction and development as a result of the rezoning should be considered. The construction of buildings, roads and associated services which would occur following the rezoning will likely result in impact or potential impact to Aboriginal cultural heritage. It is recommended that further archaeological investigations in the form of a preparation of an Aboriginal Cultural Heritage Assessment Report (ACHAR) be completed prior to the construction phase of work.

DRAFT

Overall, the Project Area has been assessed as having moderate potential for subsurface archaeological deposits and the following actions should be undertaken.

DRAFT

5. Recommendations

The following recommendations regarding Aboriginal heritage are based on consideration of:

- Statutory requirements under the *NPW Act*
- Due Diligence Code of Practice (DECCW 2010a)
- The results of the background research

It was found that:

- No previously recorded Aboriginal sites are located within the Project Area, although recorded sites are within 100 m of the Project boundary
- The most likely site types to be found within the Project Area are artefact sites (isolated finds, low-moderate density artefact scatters and campsites). Scarred trees which are common in the wider region, are unlikely to occur within the Project Area due to clearing and possible logging of the area.
- The Project Area is likely to have been subject to ground disturbance as a result of current and historic agricultural practices although there is still potential for Aboriginal cultural heritage to be located within the Project Area, albeit in a disturbed context.
- The Project Area is of moderate Aboriginal archaeological sensitivity and moderate archaeological potential.

The following recommendations are made:

- Given that there are no works associated with the proposed rezoning of the Project Area, the proposed works will not result in impact or potential impact to Aboriginal cultural heritage.
- Prior to any construction, further archaeological assessment must be completed in the form of the preparation of an ACHAR or archaeological survey due to the potential for archaeological deposits to exist within the Project Area.
- Appendix B of the Goulburn Mulwaree DCP 2009, (Appendix B) which was developed in consultation with the Pejar Local Aboriginal Land Council also suggests that the site is located within Aboriginal Sensitive Land and an Archaeological Survey must be prepared and lodged with any development application for land subdivision.
