Dear David

Ginninderry - Murrumbidgee River Corridor Boundary Change and Trunk Sewer Alignment

Brown Consulting prepared the Sewer and Water Concept Plan Report dated June 2014 for the Riverview Group. Since preparation of this report, the Murrumbidgee River Corridor boundary has been revised in the NSW part of the development which affects the trunk sewer main alignment identified in this report, with a section of this main now falling within the river corridor reserve.

Calibre have overlaid the updated river corridor boundary on the original sewer masterplan which highlights one location only where the previously proposed trunk sewer main would run through the area added to the river corridor reserve. This new trunk sewer main alignment can be modified to ensure the trunk sewer is able to stay within the development footprint and outside the river corridor reserve by installing an additional section of micro tunnel to avoid disturbance to the Corridor area. We have now adopted that additional micro-tunnel as part of our sewer master planning for the project.

Should you have any further queries regarding the above please do not hesitate to contact the undersigned.

Yours faithfully
Calibre Consulting
