	pattern of land use that occurred during this time beyond the outskirts of Sydney. Linnwood Estate is historically representative of the wealth and aspirations of this class of Late Victorian Sydney self-made men, and also demonstrates the extensive local landholdings of Susan McCredie. From 1917 to 1936 Linnwood Estate was the first and only Truant School to exist in NSW. It is representative of a period in the history of NSW Education practice when truancy was a prevalent problem in government run schools. The recognition of this problem is in part due to the regulation of school attendance as part of the *Public Instruction Amendment Act 1916*. At this time truancy was considered an anti-social activity, that if not curtailed would eventually lead to delinquency. The Guildford Truant School at Linnwood Estate was part of the Department of Education's attempt to rectify this problem. Linnwood Estate is associated with state organised welfare activities in NSW. The Truant School, the Domestic Science School and McCredie Cottage Child Care Centre, Faulds House, as well as other, more recent welfare uses, demonstrate a continuous use of the site for these purposes for over 80 years. It is associated with the practice of the NSW government to educate female wards in domestic practices thereby preparing them for the adult world.
b) Associative	Linnwood Estate is associated with George McCredie, a significant figure in the cultural history of the local area, and to a lesser extent of NSW. As a mayor of the local municipality, state parliamentary member for the local Cumberland electorate and for his heavy and enthusiastic involvement in community affairs of the Guildford area including the Presbyterian Church and the Guildford Cricket Club, George McCredie was a prominent citizen in the local area between 1890 and 1903. His wife, Susan McCredie, was also a prominent member of the community, and maintained a respected profile in the local area after George McCredie's death. George McCredie is significantly associated with the history of NSW primarily through his management and action of cleansing The Rocks area in Sydney following the outbreak of the bubonic plague in 1900. George McCredie was contracted by the City to carry out the cleansing process which included the resumption of many buildings in the area, the cleaning of drains and sewers and catching and destroying rats. George McCredie's photographic records of The Rocks cleansing is an invaluable State significant historical resource. George McCredie and his company A.L. & G. McCredie & Sons, Architects and Consulting Engineers, were responsible or associated with the construction of many of Sydney's prominent buildings such as George Patterson House, the Burns Phillip Building, Mark Foys, and many of the former wharves in Darling Harbour. The firm was also responsible for the laying of the first underground telephone lines through tunnels beneath Sydney's streets and pavements. Linnwood House and the associated buildings on the site are significant for their association with the large number of state wards and truants that resided, and were schooled there, between the years of 1917 and 1999, notably the gangster Chow Hayes.
c) Aesthetic/Technical	Linnwood House is a reasonably well-preserved example of a late Victorian country retreat constructed by a prosperous Sydney businessman. The house, constructed in a slightly Italianate style, featured quality internal decoration and pleasure gardens displaying the high aspirations of the McCredies. The size, construction and detail (internal and external) of the dwelling give it considerable architectural significance in the local area.

	McCredie Cottage is a purpose designed building that makes it significant for its demonstration of the architect's intention, and the prevalent 'Sydney School' of design at the time. Originally designed to house pre-school age state wards, the cottage was designed to be of a smaller, non-threatening scale so that children would be more comfortable in their own environment. Linnwood House and its grounds has, since the period of construction, exhibited and retained landmark qualities in the local area due to the aesthetic character of the dwelling and it associated landscape.
d) Social	Linnwood House, particularly its grounds, are socially significant to the local Guildford community for the continuing association of the site with the local community through its use for community and social activities. Presently the community responds to Linnwood Estate and the site for its aesthetic and landmark qualities, and views it as a valuable community resource. Linnwood Estate is associated with the many groups of children and state wards that lived, schooled and worked at the site at various times. Linnwood Estate contributes to the identity of this extensive and diverse community, and greatly impacted upon their life.
e) Scientific	Linnwood Estate and its surrounding landscape is evidence of the use and moulding of the landscape to create a country estate. The site provides evidence of this pattern of land use in the local area. McCredie Cottage and Faulds House are evidence of purpose designed welfare dwellings. McCredie cottage is particularly significant as it was designed specifically for the preschool age children that would inhabit it. Linnwood House is evidence of the conversion of a late Victorian residence for specific welfare and education uses such as the Truant School and the Domestic Science School. Linnwood Estate is evidence of a 'welfare site' that was continually adapted over the course of eighty years in order to meet specific use requirements in regard to the housing and education of particular groups of state wards in NSW. The site is likely to have a high level of archaeological potential, owing to a limited degree of site disturbance. The demolished remains of the original stables and cottage at the South West corner of the site are likely to be fairly undisturbed. The site is also likely to reveal evidence of former paths, outbuilding, drains, waste disposal, gardens and fences. There is a remote possibility that the footings of the 1894 Linnwood church may be located in the vicinity of the Western boundary of the site. The significance of archaeological remains on the site is relative to the overall significance of the property.
f) Rarity	Linnwood Estate, as an example of a late Victorian country retreat constructed by a prosperous city businessman, is a rare survivor in the local area. The use of Linnwood Estate as a Truant School is rare in NSW. The Truant School was the only one of its kind in the history of NSW education/welfare. The continual use, development and adaptation of the site for various welfare and education purposes, for over 80 years, is rare in the history of NSW.
g) Representativeness	Linnwood House is a reasonably intact representative example of a late Victorian residence constructed in a slightly Italianate style, as a country home. Faulds House and McCredie Cottage are representative of the use of the site for specific welfare purposes, and of the Sydney School of Architecture translated into Government institutional buildings.

Physical Description

The following physical description and condition assessment is quoted from the Conservation Management Plan (CMP) for 'Linnwood' prepared by City Plan Heritage in 2004. Due to limited site access available no additional assessment was undertaken.

There are four primary building structures located on the property. The original home, 'Linnwood' (1891), a dormitory building (1923), McCredie cottage (1970) and Faulds house (1976). Linnwood Estate is situated within spacious grounds with many mature trees established. Several early elements from the initial phase of development of the property are evident within this curtilage including an unusual octagonal summerhouse, laundry and fountain. The original entrance is marked by substantial chamfered timber gate posts with unusual cast iron orb finials. The accompanying concrete post, pipe rail and wire mesh fence probably dates from the early 20th century. The drive is now bitumen paved and the main gate posts remain.

A long winding gravel driveway leads to Linnwood House which is built on rising ground. The gardens were at one time extensively landscaped and featured water fountains, summer house, schoolroom and a hall where church services for the small township of Guildford were held. Running close to the site's northern boundary, this drive is lined with mature Eucalypts many lemon scented gums (*Corymbia citriodora and* syn. *Eucalyptus citriodora*) that are dated as mid-20th century plantings.

The site retains many early tree plantings and formal garden arrangements, along with later plantings from the 20th century such as a grove of eucalypts along the entrance drive. Other significant trees plantings include:

- Canary Island palms (*Phoenix canariensis*),
- Black bean (*Castanospermum australe*),
- Camphor laurels (*Cinnamomum camphora*),
- Coral trees (*Erythrina spp*.),
- Himalayan or deodar cedar (*Cedrus deodara*),
- Brush box (*Lophostemon confertus*),
- African olive (*Olea africana*),
- Mulberry (*Morus alba*),
- Firewheel tree (*Stenocarpus sinuatus*),
- Hoop pine (*Araucaria cunninghamii*),
- Crepe myrtle (*Lagerstroemia indica*),
- Plums (*Prunus cerasifera cv.s*).

Shrubs include:

- Hibiscus (*H.rosa-sinensis*),
- Frangipani (*Plumeria rubra),*
- Jade bush (*Portulacaria afra*),
- Himalayan jasmine (*Jasminium mesnyii*),
- Photinia glabra (popular hedge species),
- Cape honeysuckle or tecoma (Tecomaria capensis)
- Two species of privet, (*Ligustrum ovalifolium and L.vulgare*),

Herbaceous plants include:

- Indian shot (*Canna indica*),
- Red hot pokers (*Knifofia spp*.) and
- Adam's bayonet (*Yucca gloriosa*).

Linnwood House (1891)

The front façade is symmetrical with verandas to either side of a projecting central portico. The style is vaguely Italianate, however architectural detailing is minimal, restricted to brickwork arches, string coursing, recessed brickwork, and moulded window sills. Atypical of the Italianate style, the façade is not stuccoed, and was finished as painted brick. There is no evidence (documentary or physical) to indicate that the building was originally face brick, nor is there any evidence discovered so far for tuck

pointing. The building may have been left in a partly unfinished state. Four French doors with timber shutters open onto the veranda. The central main entrance door features stained glass panels to the door, sidelights, and large arched fanlight. The floor of the veranda features tessellated tiles, whilst the central section beneath the portico is highlighted with patterned encaustic tiles. The veranda is edged with Carrara marble slabs. The entry steps also use marble for the treads and risers. The veranda is detailed with cast iron lacework and columns. The skillion roofed veranda is painted in striped bands reminiscent of the original scheme. The roof to the portico is hipped. All visible roofing is slated. The ground level slopes from North to South, and the southern end of the façade sites on a layer of fill, elevated above the drive.

The North elevation comprises two sections. The principal section comprises two projecting window bays at each end, with a veranda between. The rear section is plain and features only window openings. The walls are painted brick, with a shallow rendered base course. Architectural detailing is provided by string coursing and moulded window sills. The veranda has a corrugated iron skillion roof painted in striped bands reminiscent of the original. The floor of the veranda features tessellated tiles to the same pattern as the façade. Subsidence and structural movement has caused damage to the tiles and unevenness to the floor of the veranda. The veranda is fringed with cast iron lacework, heavily overpainted. The central door to the veranda from L5 is a reused original door inserted into an original opening. The rear wing is plain brickwork, with simple rendered window sills. Additions to the rear wing in the late 1930s resulted in reconstruction of the rear third of the elevation which is evident in changes to the brickwork. The additions were sympathetic to the original building. All visible roofing is slated. The ends to the projecting bays are hipped. There is some evidence of damp damage, and there are many drainage points along the base of the rear wing.

The South elevation comprises two sections. The front section comprises two projecting window bays at each end, with a veranda between. The rear section is plain, and relieved only by window openings. The walls are painted brick, with a shallow rendered base course. The footings to the rear wing are visible to below ground level and have been finished with ashlar lines. Architectural detailing is provided by string coursing and moulded windowsills. The veranda has a corrugated iron skillion roof painted in striped bands reminiscent of the original scheme. The floor of the veranda features tessellated tiles of the same pattern as the façade. Subsidence and structural movement has caused damage to the tiles. Due to the micro-climate on this side, the floor is affected by biological growth. The veranda ceiling is heavily mildewed. The veranda is fringed with cast iron lacework, heavily overpainted. The rear wing is plain brickwork, with simple rendered window wills. Additions in the late 1930s resulted in reconstruction of the West end of the rear wing, evident in changes to the brickwork. The additions were reasonably sympathetic to the original design. All window openings to the rear wing have been reconstructed and feature soldier course brick lintels (late 1930s). All visible roofing is slated. The ends to the projecting bays are hipped. The ground level outside the cellars was excavated in the later 1930s. The gardens edging the side of the house are heavily overgrown.

Dormitory Building (1923)
The Dormitory building was constructed in two stages. The first stage was constructed c.1923, in order to provide additional accommodation for the Truant School. The second stage appears to date from c.1936-37, when a program of works was conducted for the 'Lynwood Girls School'. The South wings and the middle wing of the Dormitory were extended, with materials and detailing matching the 1923 fabric. Further extensions to Linnwood House and works to the courtyard in between the two buildings were conducted at the same time.

The dormitory is of face brick construction, with hipped roofing, currently cement tiled. The main corridor on the East side is roofed over with flat roofing covered in rubber sheeting which has detached. External window and doors openings are detailed with soldier course lintels. The windows are all six paned double hung timber sash windows, a characteristic feature of the 1920s-30s works. The second stage extensions to the building are visible in changes to the brickwork, particularly at the rear of the building.

McCredie Cottage (1970)
An extensive one and two storey brick building designed in the late 1960s and constructed and opened in 1970. The building was designed by Department of Education architects in the Sydney School

architectural style, typical of the period. The building was designed for pre-school aged wards, and live-in accommodation for carers.

The building is located at the South end of the Byron Road frontage of the site, and the impact on the visual curtilage of Linnwood Estate is moderate. The building is planned around a central open courtyard. The Northern wing of the building has classrooms and office space on the ground level and two self contained units on the upper level.

The central courtyard is surrounded by wings on each side containing classrooms and bedrooms. The North East side of the building has a paved courtyard and swimming pool. The building has been unused for some time and is currently facing lifecycle maintenance and repair issues.

The building also comprises a large communal kitchen area and laundry. One of the features of the building are the fittings provided for use by young children (for example, basins).

Fauld House (1976)
Single storey brick building designed in the late 1960s, and constructed in and opened in 1976. The building was designed by Department of Education architects in the Sydney School architectural style, typical of the period. The building was constructed to provide semi-independent accommodation for high school aged girls at Linnwood Estate.

The building is located within the immediate curtilage of the South side of Linnwood Estate. Its impact is reduced through being set into the slope of the site, and having low ceiling heights and roof planes. It is reasonably sympathetic to its setting despite its proximity to the house.

The building is planned around a central courtyard, and is configured to comprise four clusters of rooms joined by corridors. The North cluster comprises a lobby, recreation room, offices and a large communal kitchen. The remaining clusters each comprise a suite of rooms around a central light well core. Internally the building is detailed with timber panelling.

Condition
The condition for each structure is as follows:

- **Linnwood House** – Good, in 2016 the roof underwent restoration. The 2004 CMP notes the brickwork, especially around the portico, is suffering from rising damp and there is considerable efflorescence on the walls. The floor of the veranda has sunk and the tiles and marble edging are cracked in many places. The ironwork is in reasonable condition, with some corrosion evident at the base of the columns.

- **Dormitory Building** – Fair, the building underwent refurbishment in the 1990s. Although, as noted in the CMP there is structural damage at the southern end of the building and cracking is evident in the south wall. This was noted as being due to ground subsidence where the floor level is raised on high footings above the sloping ground level.

- **McCredie Cottage** – Fair, although as noted in the CMP water penetration to the building represents an important maintenance issue and has led to some conservation issues. The CMP also notes that the gutters are blocked with leaf litter and heavily corroded, in which many of the gutters have fallen off.

- **Faulds House** – Fair, although as noted in the CMP owing to lack of maintenance, the building is affected by damp penetration from blocked gutters. All windows and door openings are currently boarded up for security.

- **Main gate** – Fair, although the paint is peeling off.

Condition	Good	**Fair**	Poor

Alterations and Additions

- The main residence has been adaptively re-used over many years to provide institutional care facilities for live-in clients of the Department of Community Services.
- The roof of Linnwood House underwent restoration in 2016.
- Bitumen driveway
- Lacework on verandah has been removed and posts have been repainted

Although there have been some alterations to the subject site such as the main roof and verandah, it is not irreversible. Linnwood House is considered to have high integrity as it retains much of its original form and features and the grounds still retain many original features. Many early tree plantings (including Araucarias, camphor laurels), garden layout (including entrance drive, and garden features such as outbuildings, an iron fountain, iron railing fence to street), large plantings (such as giant bamboo) remain, along with later plantings from the 20th century such as a grove of eucalypts along the entrance drive. Such a relatively intact large urban garden retaining early structure, plantings and detail is increasingly rare today.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1891

The following history is quoted from the Office of Environment and Heritage State Heritage Register's listing sheet for 'Linnwood'.

The development of Guildford, and the building of Linnwood as the McCredie home:
Prior to the first land grants been given in the area the Merrylands and Guildford area was set aside for use as church and school lands for the district of Parramatta. Approximately 404 hectares were set aside following the settlement of Parramatta as a means of raising money for the continual upkeep of churches and schools in the Parramatta area through funds raised from the use of the lands. However, much of this land was never to be used in this manner, and in 1837 the first major land grant of the area was given. Guildford was named after the Earl of Guildford, a relative of Lieutenant Samuel North, the first major landowner in the area. In the 1860's and 1870's many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford with the permanent school built in 1876.

The Guildford area continued to grow slowly during the late 19th and early 20th century during which time the McCredies came to the area, purchased land, and built Linnwood. During this time the area was described as a 'busy though not populous fruit growing district' in 1886 and in 1888 a newspaper noted, "Like its name sake, the metropolis of Surrey, Guildford is a place of hills and also of fields and orchards; like the neighbouring districts it is known for its fruit." Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place."' In 1915 a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens."

George McCredie, his wife Susan, and their nine children, moved to Guildford in early 1891, having constructed Linnwood as their country home. The McCredies, and George in particular, promptly proceeded to become involved in all facets of life in Guildford.

George McCredie was born in 1859 at 'The Glebe' in Pyrmont Sydney and was the son of a builder from Northern Ireland. He was educated at Fort Street Public School and left to become an apprentice carpenter with the Australasian Steam Navigation Company (ASN Co.) at the age of 14. At the age of 18 he was made a foreman and took a company of men to Townsville in North Queensland to construct the first large wharf in the area. In 1880 he married Susan Faulds Blackwood, daughter of James Blackwood of J. Blackwood and Sons Engineering Company. In 1880 he left the company and travelled overseas in a world trip and visited the 'old country' to gain practical experience and to aquaint himself with the wider and larger enterprises of the rest of the world. Following his return to Australia he joined

a partnership with his brother in A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers, and undertook professional training at night school under the supervision of a Professor Jones.

McCredie and Sons were associated with the construction of many large and important buildings in Sydney and along the waterfront and often worked for the government as private contractors to undertake their proposed works. The McCredies were involved in engineering works for warehouses, factories, stores docks and reclamation projects and were responsible for or associated with the building of many buildings around Sydney such as 'Montana' in Glebe (Sydney Home Nursing Service Headquarters), George Patterson House on George Street (The Establishment), the Burns Philip Building in Bridge Street, the Mark Foy Retail Building and the Sydney GPO in Martin Place. As well as the construction of such buildings the McCredies also worked for the government on larger projects such as the planning and construction of tunnels for telephone wires throughout the city and the cleansing of The Rocks area following the outbreak of the bubonic plague in 1900.

In 1891 George McCredie and his family moved from Glebe to Linnwood in Guildford and became heavily involved in the local community and political life. In 1892 he became a Justice of the Peace and in 1900 he undertook his most notable professional experience in co-ordinating the cleansing of The Rocks following the outbreak of the Bubonic Plague.

A long winding gravel driveway leads to Linnwood house which is built on rising ground. The gardens were at one time extensively landscaped and featured water fountains, summer house, schoolroom and a hall where church services for the small township of Guildford were held. Linnwood was designed in the Italianate style with a central portico flanked by French windows and segmented projecting bays. A feature to be noted are the stained glass windows and doors in the main house.

George became involved in the local community and was elected alderman of the Prospect and Sherwood Council and for some years served as Mayor. He had designed and constructed the maze of underground telephone cable tunnels that are still used today for that purpose and Linnwood was the first to be connected to the telephone system from Sydney.

George established Presbyterian services in a hall on his property in 1894. The family lived comfortably in this quiet rural estate until George McCredie passed away, aged 44, at Linnwood of unknown causes following a period of sickness in 1903. He had been appointed by the Government to take charge of the clean up and stop the advance of bubonic plague throughout Sydney. His first priority was to inspect and assess the infected districts. Areas were cleared one at a time of the "accumulation of filth, the utter disregard of sanitary arrangements and numberous sad cases of poverty". Volunteers were understandably reluctant to assist in clearing rubbish and demolition of buildings. 17,000 rats were killed during the demolitions that stretched from the Rocks to Chippendale and also to Manly, where a further 27,548 were destroyed at the quarantine depot. As a result of the close contact with the plague, George died "from an illness attributed to the effects of the plague".

He was survived by Susan Faulds McCredie and 8 children (James McCredie, his son, passed away in 1895 at the age of thirteen at Rewa in Glebe). Susan McCredie later left Linnwood, initially leasing it and then selling it to the Department of Education, before moving to Wahroonga where she passed away in 1936. After George's death the community contributed money to build the neat brick George McCredie Memorial Church in Guildford Road, on land donated by the family.

Linnwood as a state school and children's home:
In November 1889, Susan McCredie was formally registered as the owner of Lots 15, 16, 17, 24 and 25 of Section of Henry Whittaker's estate, via his executor, Joseph Byrnes. Linnwood was subsequently erected on Lots 25 and 24. George McCredie witnessed the transfer, but held no interest in ownership of the land. The land was purchased for (Pounds)750. Susan McCredie also purchased 6 lots adjoining the property to the North with a frontage to Guildford Road (lots 6 to 10, Sect D, DP 2403 - Vol 952 Fol 63).

In June 1892, after having been elected to the Mayoralty of Prospect and Sherwood, George McCredie entertained his fellow alderman, and two local press men, at Linnwood. Near identical descriptions of

the property were published in the Cumberland Mercury and the Cumberland Argus in the following week. The report notes that the house and grounds were connected to town water (the Water Supply Pipeline to the North of Linnwood was connected in 1886) and the electric lighting was generated on site.

Linnwood is described not as a villa, or a mansion, but as an "extensive cottage". The interior was described as "comfort trenching on the confines of luxuriousness" - but certainly not opulence. This report confirms the others in the description of the rooms. At the rear, the breakfast room and kitchen were to the left of the court, the laundry and "other offices" to the right. For the grounds, the report describes roses, a tennis court in front of the house, "a Church behind the vines to the west, a range of model stables and coach-houses down south where the electric light plant is stored; a coachman's quarters fountains, a swimming bath, gigantic swings and summer-houses, growing crops, and avenues, and poultry yards.

Susan McCredie also purchased a substantial amount of the surrounding land of Whittaker's Estate, including all of Sections E, F, G, and 1, and substantial parts of Sections J, L, and A. By 1901, Susan McCredie owned most of the land between Guildford Road, in the North, Byron Road to the East, Whittakers Road to the West, and Pine Road and the Great Southern Railway to the south. In December 1901, Real Estate agents Mobbs and Hunt advertised for sale most of the large area of Whitaker's Estate purchased by Susan McCredie earlier in the year. Sales of land however did not begin apace for some years. The land was advertised as comprising "orchard, vineyard blocks, factory, villa & business sites".

In 1901, Susan McCredie purchased from Joseph Byrnes more allotments of land at Guildford (Vol.1368 Fol 4), including the triangular portion of land between the water pipeline and Guildford Road, on which the George McCredie Memorial Church was later erected (Lot 78 Sect A DP 2403). In May 1902, Lot 78 was transferred from Susan McCredie to her husband George, David Davidson, and Alexander George, in equal parts. All three were active committee members locally in the Presbyterian church, and it is tempting to see in this transfer an intention to alienate this land for construction of a Presbyterian church, and therefore the basis for the local lore that the McCredie family donated the land for the church.

In 1890, Susan McCredie's brother, Ludovic Blackwood, had purchased land from the Whittaker Estate, acquiring Lots 18 to 23 of Section D, which adjoined the property on which Linnwood was subsequently built, and fronted Carrington. In December 1901, Ludovic Blackwood's land was transferred to Susan McCredie. (Bk708 No86). However, in 1907, the same land was transferred back to her brother Ludovic. The nature or purpose of these transactions is unclear. From this time onwards, the substantial estate of Susan McCredie at Guildford was progressively sold. The sale of allotments was particularly frequent during the 1920s, especially in 1922 and 1925 providing Susan McCredie with a steady stream of income.

A Sketch plan has survived on PWD files illustrating the Linnwood property at the end of Susan McCredie's period of ownership. Perhaps drawn as early as 1917, the plan has been later stamped by the Miscellaneous Branch of the Lands Department in October 1921. Aside from the house itself, other buildings on the property at the time included the summer house, the stables, cottage and shed on the Southern boundary. Near the tennis courts is a small building, which given its location may have housed sporting equipment. The property was fenced into different sections. The East portion of the land was cleared, and featured tennis courts and baths (the nature of the latter is unexplained). The entrance drive was separately fenced. Linnwood itself was surrounded by gardens, including a lawn area on the North side of the house. At the South of the main garden area, a cultivated portion was fenced off. At the rear of the site, an orchard was planted and fenced. A narrow fenced path appears to have run between the orchard and the garden from the rear service wings of Linnwood to the stables and cottage. It appears from early photos that this might have been latticed, and provided a screen between the family recreation areas and the passage of staff and workmen. This presents an insight into physical barriers to reflect class segregation at the time.

In 1917, the Department of Education began looking for a suitable location for a new Truant School. A.L. Hinton, a Sydney real estate agent, was consulted, and offered several properties in the

Parramatta region. In July 1917, Linnwood was included in the list of properties and the particulars of the residence and grounds were described. By September negotiations were in progress for the lease of the land from Mrs McCredie, with an option of purchasing the property during the life of the lease for (Pounds)5,000. Among the reasons for choosing Linnwood for the Truant School were its location, and ample accommodation and grounds: "it is more or less isolated although within easy reach of the Railway Station. There is sufficient accommodation for the staff without any additions and ample ground to provide suitable occupation for the boys after school hours. A Department of Education architect's report in September 1917, stated that Linnwood was in a very good state of repair, and had only two or three slight cracks. A lease of the site from Mrs McCredie by the Crown was entered into, to commence at the beginning of December 1917.

The philosophy behind the measures taken to control truancy was that truancy is "the vestibule of all juvenile delinquency". The aim of the Truant School was to avoid the truant becoming a 'Juvenile offender'. One such truant was the notorious Sydney Gunman "Chow Hayes" (Cameron White, NSW Heritage Office) Though the truant school itself was run by the Education Department, the policing of truancy was conducted by the Child Welfare Department. All children between the ages of 7 and 14 were, by law, required to attend school. The position of Superintendent for the new Truant School was advertised at the end of 1917, and from nine candidates, the successful applicant was Charles Dawson.

The superintendent commenced duties on 1 February, 1918 and the final boys were admitted on 19 March, 1918. The staff consisted of the Superintendent (Charles. E. Dawson), Mrs Dawson, who was appointed as supervisor of domestic arrangements, a male attendant, a female attendant, a cook and a laundress-general. A residence, situated in 4.65 hectares of ground, was first rented and then purchased by the Department, The land has a frontage of 161 metres to Byron Road and a depth of 291.7 metres. The final accommodation consisted of twelve beds. In May 1918 the accommodation was increased to 20 beds, and in December 1918 a further six beds were installed. In November 1919 an additional male attendant was appointed and the accommodation was increased to 50 by temporary arrangements which meant much congestion.

"In April 1920 an additional female attendant was appointed. In October 1920 twenty five more beds were added and placed on outside verandahs which were most unsuitable in wet weather. In December 1920 a single portable class room with an attendant's bedroom attached, was erected. The class room was used as a dormitory. In September 1921 a nightwatchman was appointed, and in October 1921 a first assistant teacher commenced duties. In November 1921 a double portable classroom was completed. This was used as a dormitory and the single portable class room was used as a school in place of the small summer house which had been previously in use as a temporary class room. This summer house is now used as a manual training room. In November 1923 a new block of buildings containing three dormitories each holding 20 beds, a corridor, a lobby and dressing room was completed. A new W.C. block, boys' bathroom and a laundry block were also completed. Other structural alterations in the existing buildings were affected at the same time thus giving splendid accommodation for 100 inmates. In October 1924 we installed another twenty-five beds thus bringing the accommodation to 100 beds.
In July 1925 a new domestic water supply was installed and in August 1925 a 70cm fire service with three fire hydrants was completed. Thus, the school accommodation now stands at 100 with a staff consisting of superintendent, first assistant teacher, supervisor of domestic arrangements, two female attendants, a nightwatchman, two male attendants, a cook and a laundress general".

The Truant School was reserved for "confirmed and recalcitrant truants". The school was run like a boarding school, the boys living in dormitories and being schooled on site. The Child Welfare Department believed that its policy of sending "confirmed" truants to Guildford was, on the whole, successful. For example, in the years 1926 to 1929, between 13% and 16% of truants sent to the school returned after having been discharged. The Department could argue that this meant over 80% of truants sent to the school were 'cured' of their truancy. During these years, there was also a decrease in the number of truants admitted each year, but an increase in the number of residents at any one time.

During the Depression years, the Child Welfare Department recorded a substantial drop in rates of truancy across the State. This ran counter to expectations, which were that Depression would increase

truancy rates. In explanation, the Department believed that the presence of unemployed parents in the home was the principal cause for the drop in truancy. With parents at home, it was believed that there was more control over children's attendance at school, not to be found when one or both parents were absent from home in the workplace during the day. By 1931, the drop in overall truancy rates also translated into a drop in the number of residents and boys being admitted to the Truant School. At the end of 1931, there were 58 boys in residence at Linnwood. On average, most boys spent around 3 to 4 months at Linnwood.

The new dormitory building at the rear of Linnwood was constructed by the builder, Mr P Cameron of Harris Park. The Dormitory additions were completed towards the end of 1923. A sketch plan, probably post 1923 as it indicates works proposed in 1921-22 and seemingly completed, illustrates the proposed location of new water pipes through Linnwood, servicing the bathroom next to the best bedroom, and the proposed bathroom in the hallway.

Each of the architectural plans from the early 1920s were prepared by the Department of Education architect, John Smart. The first preliminary plan for a new dormitory building at the rear of Linnwood was prepared at the beginning of 1919. A pavilion building linked to Linnwood via a covered way. Departmental officials regarded the proposal as "a high expenditure for a rented property". It would appear that this was the primary reason for delays in providing additional accommodation. By December 1920, a handwritten note to the 1919 architect's memo stated that "it has been decided to purchase this property for (Pounds) 5,000". A significant impediment to capital works on the site was thus removed. The initial plans for a new dormitory were rapidly outdated and never implemented.

The desire for improved accommodation to meet the increasing needs of the school accelerated at the end of 1919, with a memorandum from Superintendent Dawson, requesting alterations to existing buildings, including a new door to the office (the former library), and laundry and bath accommodation attached to the gardener's residence. The alterations to the gardeners cottage for the baths and laundry were under construction in late 1919, thus pre-empting a more extensive package of works developed in 1921 and 1922, and implemented in 1923. A plan survives of proposals for a new door to the office, which proposed to utilise an existing external door from the sewing room.

In 1920, the superintendent wrote several times to the Chief Inspector, indicating that the present accommodation arrangements (including beds on the verandas) were insufficient, and calling for new accommodation to be constructed along the lines already proposed. Mr Dawson was insistent, and stated that the congestion "leaves no room for further admissions unless I follow the suicidal method of releasing boys before they are due, of which, I must confess, I have already been guilty".

The erection of the single and double portable classrooms commenced towards the end of 1921. A sketch plan of Linnwood in the 1922 bundle of papers presents an illustration of the existing floor plan of the building in its Truant School use. It illustrates the conversion of the building, with the dormitories located at the rear of the main building, with service rooms and staff quarters in the rear wings. A partition had been added in the middle of the hall. The superintendent's quarters were situated at the front, utilising the main bedroom and the drawing room. The McCredie' bathroom and dressing room had been converted to a "temporary bedroom" and bathroom with a partition installed. The dressing room at the rear on the North side appears to have been extended. This may therefore date after the 1922 plans for new works. The door to the office, the former library, had already been inserted.

On the basis of these plans, a report was prepared by the architect in November 1921, and acted upon in March 1922. The report noted that the existing dormitories within Linnwood were "inadequately ventilated and are very much overcrowded". The number of boys squeezed into each dormitory was only possible because the boys changed in a common dressing room, therefore "leaving the dormitories free from any furniture or fitments except the beds".

The report also notes that there was inadequate classroom space, only one classroom where there should be two. The report notes that a portable class room building was under construction at the time (1921), which was to be used at first as a temporary dormitory. It is also noted that there was an existing portable room on site, containing almost twice as many beds as it should. It was recommended that following provision of more dormitory space, this room should be converted to an "isolation dormitory".

The architect concluded that the existing building could not accommodate the present, or expected needs, of the Truant School, and that the recommended option was to construct a new dormitory building at the rear of Linnwood. The simple dormitories were designed to provide "ample windows and doors for light and air", and it was noted that "though rather crowded they would be much superior from a health point than the present dormitories of the existing main building".

The report notes that the office - the former library - required a public entrance to avoid people passing the Superintendent's quarters at the front of the building. It was proposed to alter a window to a doorway (see Fabric Survey). For similar reasons, it was proposed to install a screen in the hall to separate the residential quarter from the dormitories and visitors. The report goes on to note further requirements, including new lavatories and an extended dressing room, reversion to the original sewing room, conversion of the existing laundry in the rear wing to a store room and the construction of a new laundry near the drying area, and the provision of shower baths "in another large stable building". The existing shower baths were located in a detached building occupied by a teacher and his family (wife and three children), and were considered to be an intrusion on privacy, and discharged waste water to the ground nearby.

The final architect's certificate for completion of the works is dated November 1923. The architect's report also includes a list of variations to the proposed works.

A 1935 memorandum from the then superintendent Mr Kably to the Director of Education details the schedule of the boys at the time. Junior boys were in class during the mornings, until dinner at midday, then 1/2 hour playtime at I pm. From 1:30 to 3:30, the junior boys were engaged in gardening duties around the grounds under the supervision of an attendant. On Friday afternoons, the boys were engaged in darning and similar activities. The Senior boys were in class from 1:30 to 3:30 in the afternoons. In the mornings, the Senior boys were put to work from 9 to 11:15 in chores, such as "laundry work, scrubbing dining room or dormitories, window cleaning, or polishing". They did their gardening chores from 11:15 until dinner at midday. The memorandum notes that Linnwood had no maids, and so all domestic chores fell to the boys. At the suggestion of full time schooling, the author made no objection, and noted that arrangements were already in place for full time schooling for the junior boys, except Friday afternoons.

A 1927 Annual Financial return for the school notes that the school raised some income from the sale of calves, indicating that at least a part of the property was used for cattle breeding. A 1929 memorandum addressed the issue of failing admissions during the preceding years. The memorandum questioned whether the Metropolitan Children's Court was making full use of the Truant School, as overall truancy numbers had not declined.

During the 1930s at Linnwood, there were only just over a dozen boys at the school. Enrolments continued to drop in the 1930s, and by 1935, there were less than 20 boys at the school each week (April 1935). In the summer break of 1935 to 1936, Superintendent Dawson took long service leave, and took a study tour of the UK and the United States, looking at schooling for 'maladjusted' children. Mrs Dawson was in charge during her husband's absence. It was suggested that the school be closed. From Linnwood, Mr Dawson became Principal of the Pyrmont Adjustment School.

The Director of Education's report made reference to a report by Mr Dawson on the UK and US schools he examined, and his recommendation that problem boys, including truants, should not be going through the court system. The decision to close the school was also primarily a result of the dropping numbers. The remaining boys at the school were discharged on 29 November 1936, and the Guildford Truant School officially closed its doors in 1936. A female attendant continued as a caretaker after the school closed. On 28 November 1936, the Child Welfare Department took over the site for use as one of their institutions.

Prior to opening Linnwood as a domestic science training school for female state wards, repairs were required, including renovation of the portable classrooms. Painting and repairs were required to the rooms of Linnwood, and heating needed to be installed. Converted in 1939 from the Truant school to a "residential domestic science school for female wards", Linnwood was home to 58 girls, from 12 to

15 years of age. The selection of residents was based upon those who were "unable to settle down in foster homes, or for other reasons are considered more suitable for the hostel type of life" at Linnwood. The 1961 Annual Report says that Linnwood included a school with a curriculum adapted to the "varying mental abilities and ages" of the girls. "Cooking, needlework and home management" were central to the curriculum, plus "special courses". The report notes that many girls passed public service and nursing examinations, and many were placed in "clerical position". The report also notes that the girls were taken on excursions outside the home, including to the theatre, movies, exhibitions, and picnics. Other activities included "ballet, drama and choral work and such handicrafts as embroidery, needlecraft and flower arrangement." Sporting activities included basketball, softball and swimming. The playing fields were located on the expanse of land to the front of the house. The girls also had their own Girl Guides troop, and on at least one occasion hiked to Prospect.

A departmental publication from 1966 (CWD 1966) describes the purpose and activities at "Lynwood Hall" at Guildford. The report notes that Linnwood was for girls aged from 12 to 15, from a deprived background. The report claims that "worthwhile goals are set and the girls are encouraged to meet them" (CWD 1966, p.21). In addition to a "general emphasis on domestic science", an emphasis was also placed on "deportment, courtesy and correct social conduct". The report notes that organisations such as Rotary and the C.W.A were responsible for providing outings for the girls and facilitating contact with the community (a picture of the Queen presented by the CWA hangs in the central hall). Other outings included trips to the city to see the ballet. Ballet was apparently very important at Linnwood, and girls who performed well in classes were bound to be favourites of the staff.

In Departmental literature, Lynwood was described as an "home science training establishment", but which also "develops special courses where necessary for girls proposing to take up employment in particular avenues, e.g., commercial and industrial business and nursing" (DCWC Annual Report, 197, p. 55). Life at Linnwood, as described by former residents, appears to have been either harsh or rewarding, or both at different times and for different people. Punishments carried out at Linnwood varied depending upon the misdemeanour. Perhaps the most dreaded, was to be locked in the 'klink', the small, narrow room beside the laundry at the rear of the additions to Linnwood. The window was boarded up, and the room was used as a place of solitary confinement. Alternatively, girls who had misbehaved were made to scrub the tiled veranda floors, or the main hall, or the large dining area at the rear of the building. Another punishment was being forbidden to speak to the other girls for a period of time.

Activities for the girls at Linnwood included gardening. Plots were allocated and the best kept gardens were rewarded with prizes. The girls, like the boys before them, were also responsible for cooking. The girls were divided into groups, and each took turns to cook the meals and serve them. Of the two kitchens at Linnwood, one was used for cooking lessons. Another day was set aside for washing. The girls attended school on the remaining three days. Weekends were recognised, and these were the days for outings and activities. Staff never addressed the girls by their first name according to accounts. Surnames were commonly used, which was not atypical for any boarding school environment of the time, however, accounts are that girls were also often referred to by a number only. (Oral History).

On 12 July, 1956, Linnwood was extensively damaged by a fire. Former girls remember the fire starting in the rear kitchen, and then spreading from there and through the roof. The interior of the principal rooms within Linnwood itself do not appear to have been directly affected. Newspaper reports of the fire mention the girls carrying furniture, bedding, clothes and crockery from Linnwood to the front lawn, and also trying to help put out the fire with hoses. Assistance was provided by local residents until the arrival of the district fire brigades. The reports confirm that the fire started at the back of the house, extensively damaging the kitchen and dining area, and then spread principally through the roof. The Dormitory building was apparently undamaged, and was to be used for accommodation until the main building was repaired (SMH).

McCredie cottage was opened on 17th July 1970, to accommodate 26 preschool aged children, all wards of the State. A departmental report states that the building was the "first cottage home to be specially designed and constructed for preschool children". The report contained the following description of the philosophy behind the design of the building: "The needs of the children have received special consideration in the architecture, such that the home, which is in fact quite extensive,

never gives the impression to its true size "proportions and perspective have been so designed that no child will feel overawed or dwarfed by the establishment."

McCredie cottage also comprised a self-contained flat for senior female wards, who would assist in the care of the children, and at the same time receive experience for future employment as live-in child care workers.

Resident numbers at Linnwood during the late sixties to early seventies, was within the range of 30 to 50 residents. McCredie cottage housed 26 to 28 children at any one time. Though Linnwood for example housed on average around 40 residents at a time, during the year more than twice that number were admitted, half of whom were discharged within a twelve month period. At McCredie cottage, the total number of admissions each year was about triple the average number of residents at a time. (Departmental Reports, 1971 and 1972). The Annual Report also states that the children at McCredie were there only until such a time as they could be placed in foster homes (p.55). The opening of McCredie had assisted in reducing the demand at other facilities. (p.9)

At the end of the 1970s, McCredie cottage was adapted to also cater for children up to the age of 8. Faulds House was opened on 23d April 1976. It was designed to provide accommodation for girls who were of primary and high school age and attended local schools. The intention, according to the Department, was to provide "a family type setting with minimum restrictions" The report also noted that upon opening Faulds House, Linnwood was closed and renovated, "to be reopened as a hostel for working age girl wards".

Married couples were in charge of Faulds. Some girls would stay at Faulds until transferred into foster homes. Others who stayed at Faulds continued in schooling to School Certificate level.

In 1977, Linnwood was described as a "Group House" by the department. In the 1980s, Linnwood was used as a hostel for State Wards up to the age of 16. There was room at this time for 16 wards in the building, male and female. They paid for their board, and were given a degree of independence. The aim of the managers was to teach the teenagers to cope on their own, and an emphasis was placed on teaching living skills (1984 Newspaper Article).

In 1991, a reunion was held at Linnwood, attended by 75 former residents. In later years (e.g. 1995), Linnwood was used by the Auburn/Holroyd Disability Services Branch of the Department of Community Services (Parramatta Advertiser, 20/11/95). In 1996, it was noted that no children had lived in Linnwood itself for three years (1993). In 1996, staff and students from Minali, another DOCS home, were relocated to Linnwood, as well as an Education department "assessment and tutorial service and an outreach and aftercare service" (DOCS, 1996:20).

In 1984, a plan to provide a museum at Linnwood was advertised. On 21 March 1985, The Department of Community Services granted a license to the Holroyd and District Historical Society, to operate the 'Linnwood Museum', from the building. In September of that year, the museum was officially opened by the then Minister for Youth and Community Services, Frank Walker (Pamphlet).

The Friends of Linnwood was formed in 2002 following a successful community campaign to save it from being sold and redeveloped by the NSW Department of Education. The group has since raised $200,000 towards restoration works for the historic house (Stevens, 2015).

In January 2002 Minister Yeadon announced that control of the property would be transferred to the NSW Heritage Office. A steering committee was formed with representatives from the Heritage Office, Heritage Council, Holroyd City Council and the community. Control of the whole site was transferred to the Heritage Office on 30 June 2002 (Draft CMP: Linnwood (City Plan Heritage 2001).

The former Holroyd City Council debated handing back control of Linnwood to the state government in November-December 2015, after a proposal to subdivide the land and use sale proceeds to fund its restoration have been stalled (Stevens, 2015). Council will proceed with plans to subdivide the land and use proceeds from the Tamplin Road Reserve sale towards restoration of Linnwood house, following a series of meetings with the Heritage Division OEH to address long-running delays.

Additional notes
Susan McCredie constructed the 'George McCredie Memorial Church' (LEP item I139) in 1905 after the death of George McCredie.

On the 17th of March 2001, the Minister approved creation of two Crown Reserves over the Linnwood Hall Estate. One contains all buildings and heritage curtilage and will be managed by Holroyd Council. The other covers the open space fronting Tamplin Road, will be managed by the Land and Property Management Authority.

Faulds House and Dormitory currently utilised by Sunnyfield disability services / community services under lease. The Friends of Linnwood group also organise open days at the property.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- It is recommended that the 2004 Conservation Management Plan be updated.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Statement of Significance

The Pipehead, water supply canal and associated works is of State significance for its historic, associative, aesthetic, social, scientific, rarity and representative values. It is an integral part of the Upper Nepean Scheme and for many years acted as the operational 'Headworks' for the Upper Nepean Scheme as a whole.

Historically, the Pipehead is significant for its importance in the history of water supply in Sydney, as one of the key components of the Upper Nepean System from 1913 until 1995. The Pipehead Site and its tangible historical components present evidence of a former work practice of water screening, unique in type and scale of operation in Sydney and NSW. Aesthetically and technologically, the Pipehead Site features elements notable in the State context for their technological qualities and construction, including surviving Screening Deck components (basin, chambers, penstocks, and cranes) and associated minor and auxiliary items.

The Pipehead Site contains elements of research potential for further understanding of the cultural history of the water industry and specific technological processes in NSW. Elements of particular significance are the Screening Basin, Rotor Screen and Deck Area. The Pipehead Site is unique in NSW for its technological role in the Sydney's water supply system. Rare or unique notable elements of the site include the Rotor Screen and Deck Area elements (basin, chambers, penstocks, cranes).

The Pipehead Site is also of significance for the local area and Sydney Water for its aesthetic and technological significance. The Pipehead Site is notable in the local and organisational context for its design and technological role within Sydney's water supply system. The Pipehead Site has strong associations with two Government agencies: with the historical development of Sydney Water as one of the oldest continuously occupied Corporation properties, and with the Public Works Department who

constructed the site and its original Basin in the 1880s. The Pipehead Site contains buildings and areas of research potential for further understanding of the specific technological processes of water industry and clear evidence of former work practices of a unique type of operation in Sydney. Surviving cultural plantings contribute to this potential. The site contains artefacts from past uses and installations that, by their contextual association, contribute to understanding of the site's development. The site also includes elements of qualities and construction notable in technological and research potential terms. Most important elements include: the Rotor Screen and Deck Area elements (basin, chambers, penstocks, and cranes), the segment of Lower Canal located within the site, segments of water supply mains within the site - including those from Pipehead to Potts Hill and from Prospect to Pipehead, surviving structures of the 1940s and earlier site configurations (including the 1917 Valve House and the Monitor Station for 2100mm and 1800mm pipelines), and associated minor elements.

Criteria Assessment	
a) Historic	The Pipehead site is of considerable historic significance as an integral part of the region's gravitational supply of water known as the Upper Nepean Scheme, one of NSW earliest and most enduring schemes. Identifiable remains such as the Engineer's Residence (1913), the Valve House (1917), the Monitor Station (for 2100mm + 1800mm pipelines), Rotor Screen and Deck Area (basin, screening chambers, penstocks and cranes) (1913-1929), the Lower Canal (1888) and water mains are of historical significance as remnants of one of NSW's earliest and most enduring water supply schemes and as evidence of past work practices and technologies. The height of the Pipehead site's importance within the water supply scheme provides evidence of past work practices and technologies.
b) Associative	The Pipehead site and its structures are associated with the Upper Nepean Scheme commissioned in 1888. It is also associated with the historical development of Sydney Water as one of the oldest continuously occupied Corporation properties, and with the Public Works Department who constructed the site and its original Basin in the 1880s.
c) Aesthetic/Technical	The Pipehead Site features the Rotor Screen and Deck Area elements (basin, chambers, penstocks, cranes), notable in the State context for its technological qualities and construction. Several buildings at the Pipehead Site complex are notable in the local context for their aesthetic qualities, including the 1917 Valve House, the 1913 Residence and the Monitor Station for 2100mm and 1800mm Pipelines. The buildings, pipelines and canal are prominent features which as a collection visually display change in water supply construction and technology from 1888 to 1995. The site is notable for the introduced plantings including the Canary island palms and Washington Palms west of the Deck Area and along the canal to the northwest. These exotic common species create a parklike atmosphere.
d) Social	The Pipehead Site has been the place of employment for many people including many prominent engineers.
e) Scientific	The Pipehead Site was the operational "Headworks" for the Upper Nepean Scheme. Substantial fabric survives at the headworks which therefore provides a major research, educational and interpretive resource.
f) Rarity	The Pipehead Site is unique in Sydney's and NSW water supply system. The Pipehead Site contains the unique screening works that operated from 1913 until 1995.
g) Representativeness	The Pipehead Site is representative of water screen facilities in Sydney and NSW. The surviving fabric at the site allows interpretation of work practices from 1888 until 1995.

Physical Description

The following physical description and condition assessment is quoted from the Office of Environment and Heritage State Heritage Register's listing sheet for 'Pipehead, water supply canal and associated works' (last updated 5 December 2005). Due to limited site access available no additional assessment was undertaken.

Pipehead

The following significant items are listed in the Upper Nepean Scheme Heritage Study, 1992 and are the only items on the site considered to be included in this listing:

Listed by Inventory Number, Precinct Name, Item Name, Item Type*, Type No* (* if applicable).*

- *Pipe Head Deck (Basin and Screening Chambers), Screening Chamber*
- *Screening Chamber No.2, Screening Chamber*
- *Travelling Jib Cranes, Cranes*
- *72 inch mains, Pipe Head to Potts Hill, Mains Pipe*
- *Former Residence, now Environment Team office, Residence*
- *Former Ryde Valve House, Valve House.*
- *Supervisory Control Centre, Headworks, Control Room (now refurbished as an Incident Management Centre). (Note, this building is not of Heritage significance)*

Lower Canal.

The following significant items are listed in the Upper Nepean Scheme Heritage Study, 1992.
Listed by Inventory Number, Precinct Name, Item Name, Item Type*, Type No* (* if applicable).*

- *51, Canal Overbridge, Canal Overbridge, 18.*

Additional heritage items include:

- *WPS 22. Guildford, pumping to Holroyd Reservoir).*
- *WPS 42. Pipe Head.*
- *WPS 189. Pipe Head - Ryde.*

Pipehead

The Pipehead Complex is situated off Frank Street, Guildford, at the termination of the Lower Canal from Prospect Reservoir, at 46 3/4 miles (74.8 Kilometres) from the commencement of the Upper Nepean Scheme. The Pipehead Complex is the Headquarters for the Water Board's former Headworks organisation for the supply of bulk water to Sydney and includes a wide range of buildings and ancillary structures to facilitate this purpose. These include steel sheds for equipment storage and maintenance, the Holroyd Pumping Station, outlets for the Ryde Pumping Station suction mains and Booster Station, a booster station for supply to Potts Hill, other ancillary plant, recent offices and administration buildings, and the former main supervisory control centre for the "Headworks" water supply system. A former residence is now in use as the Catchment Control and Management Office.

The complex also retains several items, which specifically relate to the supply of water to Sydney under the original Upper Nepean Scheme. Most notable amongst these is the Pipe Head Deck, comprising the basin and screening chambers, located at the end of the Lower Canal. Although two of the screening chambers (the two on the north, Nos. 1 and 3) have been modified, the No.2 chamber on the south side was "retained for emergency stand-by" and remains essentially in its original configuration with timber-framed plate screens, which are lifted by two travelling jib-cranes. On the east side of the Pipe Head Deck is the commencement of the three 72 inch (1800 mm) mains (Nos. 1, 2 and 3), which convey water from Pipe Head to Potts Hill. Pipe Head initially only formed the junction (basin) between the open canal or Lower Canal and the original 72 inch (1800 mm) pipeline, with screening being carried out at Potts Hill. The first screening chamber at Pipe Head was completed in 1913.

On the west side of the Lower Canal, just before it enters the basin is a concrete lined inlet, entering at an oblique angle. This was formerly the inlet for the 44 inch (1100 mm) woodstave pipeline,

constructed in 1927 to amplify the supply between the Upper Canal, Pipe Head and Potts Hill. (This was part of the 54" - 46" line from Prospect to Potts Hill with a 44" offtake to Pipe Head). A section of this woodstave pipe and an associated butterfly valve were displayed at the Pipe Head Complex for many years, but have now been relocated to Prospect Reservoir. There is also a steel "trash rack" and stop-board grooves across the Canal at the entry to the Pipe Head Basin, which are typical of the remnant evidence throughout the Upper Nepean Scheme of past uses and operational technology.

The Upper 72 inch (1800 mm) main from the Upper Canal, constructed in 1937, passes to the south of the Pipe Head Deck and has a cross-connection to the No.3, 72 inch (1800 mm) main to Potts Hill, just east of the Pipe Head Deck.

Near the north-east corner of the Deck stands the picturesque, former Ryde Valve House constructed in 1917. A "Venturi" flow meter from this valve house is on display inside the main administration building.

Other major water supply structures at Pipe Head include the 84 inch (2,100 mm) pipeline from Prospect Reservoir, constructed between 1954 and 1958. This formerly entered the Deck, but now passes under the Lower Canal to join the 120 inch (300 cm) main to Potts Hill, which runs in an underground tunnel, completed in 1972. Additional structures include various (recent) valve installations, sub-stations etc.

Condition

The condition for each component is listed below. Although the site was not accessible a number of components could be viewed from the outside.

- **Pipelines:** as the Pipehead, lower canal and pipelines remain a key component of Sydney Water's supply system they have been well maintained and are in a good condition.
- **The Valve House (completed 1917):** has been well-maintained and has been re-painted. It is therefore in a good condition.

The site is an operational asset, owned, managed and maintained by Sydney Water. The item is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

All of site is located within the Sydney Water property boundaries and was physically inaccessible. As a result, the degree and nature of possible alterations was not able to be observed from site inspection. Previous documentation from the Office of Environment and Heritage SHR listing sheet, notes:

- In 2007, the curtilage for this item had been modified as some of this item has been subdivided off by Sydney Water.
- The Valve House has been repainted.
- New fencing near the Valve House has been added to the property to increase security.

The integrity of the item could not be confirmed from the site inspection. It is likely that the item has been modified extensively during necessary upgrades to the system, though the route and function of the pipeline remains the same. Although modified in line with operational standards, the item retains moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1880-1888

The following history is quoted from the Office of Environment and Heritage State Heritage Register's listing sheet (last updated 5 December 2005) for 'Pipehead, water supply canal and associated works'.

As early as 1817 retired army officer Lieutenant Samuel North was granted 640 acres south of Parramatta and south of today's suburb of Guildford. He named his property Guildford in honour of the Earl of Guildford. An area of 1000 acres west of Woodville Road was reserved by Governor Phillip and then passed to the Church and Schools Corporation. John Thomas Campbell, administrative assistant to Governor Macquarie in 1823 also received a grant of 1000 acres of land. Campbell's land which he called 'Quid pro Quo', lay west of Woodford Road and south of Rawson Road. William and John Lackey also received grants in the area in 1838. Their property was known as Woodville. Then in 1843 Henry Whitaker purchased North's Guildford property along with several neighbouring properties and called his land Orchardleigh.

The Quid pro Quo estate was subdivided for sale into 4 blocks in 1832. Additional subdivisions occurred in the 1860s and 1870s with land being purchased by Holroyd and Sherwin. Phillip's reserved area was subdivided in 1871. By 1870 a small settlement had developed with a school at William and John Lackey's Woodville and by 1880 a church had been erected.

In 1876 a railway station opened to the north, west of Woodville Road and at the west end of today's Guildford Road. As a new settlement began to develop around the railway station, the earlier settlement became known as 'Old Guildford'. Near the railway station the land of Stimson was subdivided in 1876 and 1884 and the new settlement of Guildford emerged. It was not until 1913 that Guildford began to grow into a busy town. A brickworks established in 1915 and the subsequent building industry contributed to its growth. New shops and houses were built for the increasing population. While the building boom lasted into the 1920s, a 1928 aerial photograph shows that much of the surrounding region was still undeveloped.

The Upper Nepean Water Supply Scheme
A Commission was appointed in 1867 to resolve the problem of water shortages which had been exacerbated by the region's increasing population and periods of drought. The Commission recommended implementation of the "Upper Nepean Scheme". After years of debate, this particular scheme was sanctioned by the English civil engineer W.Clark, who had been employed by the government to assess the various options. According to this scheme, water would be directed from the Nepean River and its tributaries (the Avon, Cataract and Cordeaux) through a system of tunnels, canals and aqueducts known as the Upper Canal, down to Prospect Reservoir and from there through the Lower Canal to the Pipehead Basin. The Pipehead Basin was the junction at which the Lower Canal joined the 72" pipeline that would convey water to the screening facility at Potts Hill Reservoir and from there to the Crown Street Reservoir and reservoirs at Woollahra, Paddington and Waverley.

Pipehead's Construction
The Public Works Department began contracting work on construction of the Upper Nepean Scheme in 1880. The following year the government purchased the narrow strip of land for the Pipehead Site from the area's major estates, land probably used for grazing and timber. According to technical documents from 1884, the Pipehead Basin was to be a 'simple reservoir built of brick with a mass concrete floor, on a roughly square plan with rounded corners'. It would have a strainer which spanned its width supported by the reservoir walls and 5 pylons and included a wrought iron grating to prevent course matter from reaching the water supply mains.

In 1888 the first water supply main from Pipehead to the Potts Hill Site became operational. This 72" pipe, known as Main No. 1, was constructed of 'wrought iron riveted pipes, connected with steel collars with lead joints'. In the same year the Pipehead Site was fenced and work commenced on the Pipehead Basin (which was completed in 1893). According to a c.1888 plan, the Pipehead Site consisted of the Basin, the canal and pipework and the perimeter fence with its 3 gates. There were no buildings on the plan: no residences, offices or other structures.

Increasing demands on the water supply and efforts to upgrade sections of the mains in other areas led to the establishment of a second water supply main from Pipehead to Potts Hill. Main No.2 was constructed from 'mild steel pipes with angle iron flanged joints, and coated internally with asphaltum. It became operational in 1900. A water main for direct supply to Ryde was completed in 1909. For the first time, this allowed water to bypass the Potts Hill screening chamber. It would be screened instead in a single chamber that had been added to the Pipehead Basin in c.1903-5. A Venturi Meter was added to the Ryde main in c.1906 and a small valve house was constructed above it.

From 1902-12 the Lower Canal was relined and the level of water was raised by 1.5m, increasing the canal's capacity by approximately 75%. The Potts Hill screening chamber found difficulty coping with the increased supply of water and it became a 'major hold up point in the water supply network'. In order to resolve this problem a new screening facility was built at the Pipehead Site - with 3 Pipehead Basins completed in 1913, 1918 and 1928/9. The Potts Hill screening station was then dismantled. Cranes were introduced to operate the screening at Pipehead. These included the earliest crane (a traversing jib crane with an oil motor) possibly dating to 1909, a new travelling crane which was in operation by 1915 and a locomotive crane which was installed in 1916. After electricity powered the site in 1917 these cranes were converted to electric power and by 1922 there were 4 cranes in operation on the site.

A 3rd water supply main from Pipehead to Potts Hill, Main No. 3, was completed in 1925. It was constructed from electrically welded steel pipes with collars and 'full-run' lead joints. However, the Pipehead to Potts Hill mains were considered so silted that, in 1926, they had to be relined. Supply was again being amplified to meet consumer demand and a new temporary woodstave main was proposed. The preference for woodstave over steel was intended to avoid the delays anticipated by the need to obtain pipes. This new main was completed by the end of 1927. With supply still being amplified in 1929 the Chief Engineer proposed construction of a 72" water supply main between the Upper Canal and Pipehead. Work began on the new main in 1931 but the Depression interrupted the project. Work resumed in 1933 under a special unemployment relief programme and the main was completed by 1937. The temporary woodstave main ceased to operate in 1938 and was gradually dismantled and/or filled with sand from 1939-41.

Expansion of the Site

A parcel of land (4 acres, 2 rods and 31.75perches) between the Pipehead Site and Parkes & Palmer Streets was purchased in 1906 as an addition to the site. There was a cottage on this land, situated about 150m west-northwest of the Basin. At the same time the section of Sydney Street which divided this land from the Pipehead Site was also acquired.

Around 1910 a detailed survey was undertaken of the Pipehead Site. This showed the site had 2 cottages. The first was originally built for the caretaker probably c.1880s as a 'typical unpretentious working class residence' with 4 rooms, timber cladding and a bull-nosed verandah. By 1910 there were plans to convert this into an office. The second cottage was purchased in 1906 with the Sydney Street property. This had been built as a private residence with brick foundations, pine weatherboard cladding, corrugated galvanised iron, brick fireplaces and a 4 panelled pine entrance door. This was evident in aerial photographs of 1928, 1951 and 1961. It was removed some time in the 1960s and the area on which it stood was cleared by bulldozers to make way for a stores and workshop area.

The detailed survey plan of 1910 also indicated the footprint of a 3rd cottage or 'new residence' (facing Parkes St. to the south of the Basin). The plan also showed the site held a 'machine shop, carpenter's store, general workshop/store' (built 1905). There was a 'boosting plant' with a 2nd boosting plant in the planning. An elevated tank of 100,000 gallons was proposed for construction, to be used in conjunction with the 2 boosting plants. This tank was installed in 1913.

Work began on the new or 3rd cottage in 1911 and was completed by 1913. Documents for this show a 'spacious house plan, characteristic for upper middle-class residences in outer suburbs of the time'. The plan featured 3 bedrooms, an office, large board and dining room, sitting room, 2 verandahs and an amenities wing.

A 1915 survey plan of the Pipehead Site showed the 100,000 gallon Elevated Tank and original cottage (situated to the north of the screening basin) had, by this time, been demolished. Sydney Water Corporation's 2005 conservation management plan suggests that the original cottage footprint is 'still identifiable in its original location'.

The Pipehead Site was again expanded in 1928-9 with acquisition of 4 land allotments (c.7.5acres) between Albert, Bowden and Frank Streets. This had previously been owned by orchardists Daniel and Edwin Wakeley. At the same time, part of Frank Street which separated these two purchases from the original Pipehead Site was also acquired and still more land was purchased in 1949.

The Carpenter's Store in the 1910 survey plan and 1928 aerial photograph was no longer shown in a 1951 aerial photograph. Sherwood Pumping House in the 1928 aerial photo had been removed by 1951 and replaced with new structures which housed Boosting Plants. The 1951 aerial photo shows addition of several auxiliary structures near the 1906 cottage and a large new building with a hipped roof east of the Canal.

In the 1950s there were 2 new structures built: a large rectangular building in the north-west portion of the site (between the Canal and Palmer Street) and a smaller rectangular building adjacent the Boosting Plants. Also, a new 84" steel pipeline was completed from Prospect to Pipehead in 1958. Aerial photographs show a number of changes made to the site between 1961 and 1970. The boosting stations north of the Basin were removed as was the 1905 workshop building. This was replaced by a Water Pumping Booster c.1967. The second cottage (bought in 1906) and large rectangular 1950s building were demolished, and the northwest portion of the site completely cleared. New buildings in this area included the Old Store Building, Storage Shed, Asset Management Workshop and Storage Building. The pre-1950s building with the hipped roof to the east of the Canal was replaced with the present Main Building and Conference Room 3 in c.1967. A residence was built for the Resident Site Operator and so were a Pipeline Control Room, Geological Office and Laboratory and several smaller structures.

In the years 1970-8 a Geological Sample Storage Shed and Water Pumping Station No. 189 were built and 2 of the main screen basins were replaced by a set of 4 rotary drum screens. Supply from Pipehead to Potts Hill was enhanced by the construction of an additional supply tunnel in 1972. A second Geological Sample Storage Shed and 'Hellodrome' were built between 1978-86 and No.1 and No.2 screening decks were enclosed by a steel shed in 1981.

In 1991 the Board decided to move screening operations from Pipehead to Prospect and in 1995 staff were relocated and the screening area was decommissioned. After the screening decks officially closed in July 1995 the site was used only for administrative offices.

In 2005 water was still piped from Prospect to Pipehead and from Pipehead to Ryde, Potts Hill and Holroyd. Sydney Water Corporation's 2005 conservation management plan says the elements to and from the Pipehead Site and the Screening Chambers completed in 1929 'are generally in their configuration as at the time of construction'. The now empty Lower Canal is also largely unaltered. Other historic elements such as the woodstave main, boosting and pumping stations and the pre-1913 screening facilities are no longer identifiable in the landscape (Stedinger & Associates, 2008, 9-14).

Pipehead has been the operational 'headworks' since 1888 for the Upper Nepean Scheme, Sydney's first reliable water supply. The scheme was the first of its kind in NSW, harvesting water in the Southern Highlands and transporting it via canals, aqueducts and pipelines. The storage was initially only at Prospect, but later major storages were added at Cataract, Cordeaux, Avon and Nepean.

The Pipe Head to Potts Hill Water Supply consists of 3 pipelines built between 1888 and 1925. In particular, Pipeline No.1 commissioned in 1888 was the first link between Pipehead (at Guildford) and the Potts Hill No.1 Reservoir, the scheme's major service reservoir. The pipelines display state-of-the-art technology of the time in Australia. Also, the pipelines illustrate the advancements in major pipeline construction over a span of some 37 years. 4 stages of land purchases to the current site started with an initial resumption in 1881, purchase in 1906, gradual purchases in 1928-9 and a further resumption in 1949.

Now the pipelines have not become obsolete, but by virtue of boosters, are still key components of Sydney's water supply system. It was the changeover from open canal to No. 1 pipeline that gave Pipehead its name. The site is now arguably the most important operations and control centre for Sydney's water supply system.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The 2005 Conservation Management Plan should be updated for this site to understand in greater detail the history and significance of the place, as well as how to manage change and monitor conditions of the site.

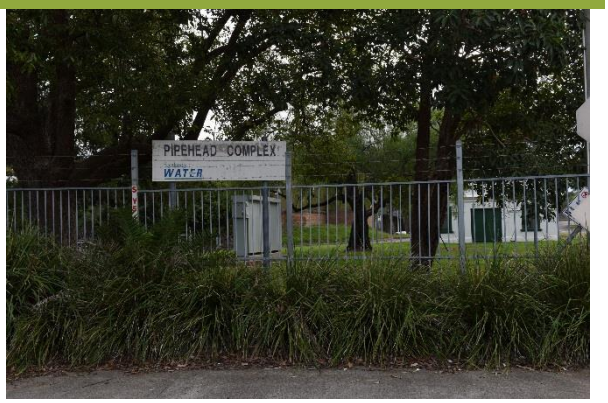
Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.



2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Statement of Significance

The Former Goodlet and Smith Brickworks Site at Holroyd is of local significance for its historic, associative, aesthetic, social rarity and representative values. The brickworks site is historically significant as the first mechanised brick plant in the region and one of the earliest in NSW. It is historically associated with Goodlet and Smith, who ran the brickworks from 1884 to 1955 and is socially significant to the local area as a major regional employer during its operation. The site has aesthetic significance for the remnant built fabric on the site, which although mostly dating to the inter-war period, demonstrates the continued use of the site as a brickworks and the rise and fall of Goodlet and Smith's other industrial ventures at this site. The Goodlet and Smith Brickworks site is rare as one of the last preserved brickworks sites in NSW and is a good representative example of built structures typical to brickworks and industrial manufacturing sites of this period.

Criteria Assessment	
a) Historic	The item is significant as the first mechanised brick plant in the area, and one of the earliest in NSW.
b) Associative	The item significant for its associations with the Goodlet and Smith Company, which was a major producer and retailer of building materials. They were the first manufacturer of Marseille Tiles in Australia.
c) Aesthetic/Technical	The item, through the remnant built fabric, demonstrates a number of the site's former functions, especially in the manufacture of various building materials.
d) Social	The item was a major regional employer during its operation.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is rare as one of the last preserved brickwork sites in NSW.

g) Representativeness	The item is representative of the buildings typical of brickworks and industrial manufacturing sites.

Physical Description

The former Goodlet and Smith Brickworks site is currently occupied by a modern, medium-density residential development in the east with large community recreational spaces to the west known as the Holroyd Gardens. Holroyd Gardens Park contain a number of concrete footpaths throughout, with other park features including shelters, a carpark, and play equipment. Within this curtilage other built features include a rotunda, man-made lake and a childcare centre.

Within this landscape preserved remnants of the former industrial manufacturing buildings and structures relating to the major brickmaking processes of the place. These include the Hoffman kilns, down draught kilns, chimney stacks and various machines relating to brickmaking.

Hoffman Kiln
The Hoffman kiln is located at the south-eastern end of the site. Presently, there are remnants of this kiln which are protected by a galvanized iron roof and surrounded by a black aluminium security gate. The kiln is constructed of sandstock bricks with a collar of machine made bricks around the base.

Chimney Stack No. 1
Likely to be associated with the Hoffman Kiln is an oval-ended brick chimney stack (Stack No. 1) also constructed of sand-stock bricks and was likely constructed in 1878. The original chimney was approximately 150 feet high however the chimney was reduced to 80 feet in 2002 for safety reasons.

Down draught kilns
Remnants of two down draught kilns and the foundations of a third are situated immediately west of the Hoffman Kiln. The kilns are rectangular in shape and consist of stokeholes alone the sides of the kiln which have been infilled with brick. There are remnants of the gas firing system located on the roof of the kiln.

Chimney Stack No. 2
A square-ended brick chimney stack (Stack No 2) is situated to the west of the down draught kilns and is associated with these kilns. It is noted that underground flues would have led to this chimney which was originally 100 feet high.

Benedict Stone Building
A large open shed constructed from massive timbers with tiled roof and galvanised iron sides. A Babcox and Wilcox electric Travelling crane is inside the structure.

Other structures on the site:

- Dual brick press
- Brick making plant and Fire Damaged Brick- making plant
- Moulding Shed
- Buildings associated with Administration and Amenities

The remnant structures relating to the Goodlet and Smith Brickworks site have been well maintained and have measure in place such as security fences and roof structures to support their conservation. The item is therefore considered to be in a good condition.

The archaeological potential of the site is considered to be low to nil due to the historical land use. Land disturbance associated with the operation of the brick pit, the use of the Holroyd Gardens as a landfill site and the residential development in the vicinity of the remnant brick pit structures has reduced the likelihood of archaeological relics to remain in situ.

Condition	Good	Fair	Poor

Alterations and Additions

- Surrounding medium density residential development and community landscaping
- Interpretive signage
- Public amenities added, e.g. barbeques and picnics
- Timber bridge built

The site retains the integrity of its core features, such as the brickmaking plant, however, other features such as the old tile plant and texture brickworks, are less complete. The site also retains its integrity in terms of size and spatial relationships between the features on the site.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1878

Although situated within the present-day suburb of Holroyd, the Goodlet and Smith Brickworks Site was located within Merrylands and relates to it development as a suburb.

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The subject site was first used for brickmaking in 1878 when the Junction Brick and Pottery Co. established their works there. The Junction Brick and Pottery Co. operated for only two years and eventually the plant was bought by Goodlet and Smith in 1884. Goodlet and Smith remodelled the plant and expanded into tile and cement production on the site. With the death of John Hay, Goodlet in 1914 and the economic ups and downs of the period 1914 to 1950 the company struggled to survive. An extensive fire in 1924 destroyed the tile plant and a replacement plant was not in place before the onset of the Depression. The cement works, closed in 1919, were replaced by plant to manufacture Benedict Stone which operated between 1927 and 1929. In 1954, the company was taken over by Newbolds General Refractories who operated the plant with minimal investment until. Management of the brickworks site was taken over by L.J. Hooker in 1979 and brickmaking at the site was closed down fully in 1989. Holroyd Council purchased the brickworks site in 1993 for redevelopment.

The former brick pit at Holroyd has been turned into recreational parklands, first known as Walpole Street Gardens. Council assumed management of the Holroyd Gardens Park site in 1984 for development as open space. Designs for the present park commenced shortly after and the park was opened in 1988 as part of bicentennial celebrations. The park was formerly renamed Holroyd Gardens Park on 17 December 1999 (Government Gazette No.141).

The remains of the brickworks are situated in the midst of a number of low-rise apartment blocks known as Holroyd Gardens Estate. The extant structures and areas of archaeological potential and significance have been preserved within a heritage precinct in the Gardens.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**

Curtilage Map

Statement of Significance

Pitt Cottage is of local significance for its historic and aesthetic values, and as a representative and largely intact example of a Late Victorian cottage in the area. Built in c. 1894, the dwelling is associated with the nearby 1892 Goodlet and Smith brickworks and the dwelling exemplifies the impact of the early brickworks on the residential development of early Granville and Merrylands. The house fronts one of the earliest roads in Merrylands, indicating the early street alignment and the type of residence which was constructed during the late 19th century. The building has undergone some repair works in the recent past, improving its formerly dilapidated condition and overall aesthetic significance. As a result, the integrity of both original and sympathetically modified external fabric makes it a significant element in the streetscape.

Criteria Assessment	
a) Historic	Built in c. 1894, the dwelling is related to the nearby 1892 Goodlet and Smith brickworks and the dwelling exemplifies the impact of the early brickworks on the residential development of early Granville and Merrylands. The house fronts one of the earliest roads in Merrylands, indicating the early street alignment and the type of residence which was constructed during the late 19th century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is significant as an early Victorian cottage and recent repairs have improved its condition and overall aesthetic significance. The integrity of both original and sympathetically modified external fabric makes it a significant element in the streetscape.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a largely intact example of an early Victorian cottage. It is indicative of the type of residence which was constructed during the late 19th century.

Physical Description

The dwelling is a symmetrical rendered brick Victorian style cottage. It appears as single storey from the street but contains a lower floor which fits in with the slope of the site. The building features a simple hipped roof of corrugated iron and a pair of face brick chimneys with stepped profiled detailing. While the front and side roof planes appear to have been replaced in the recent past, the rear elevation appears to be earlier fabric. The verandah contains a corrugated iron ogee roof that extends along the front façade. The verandah roof is supported on simple timber posts with chamfered corners set on a concrete floor. The symmetry of the front facade is configured with a central door and single timber windows on either side. Each window opening has a segmental arched head and rendered sill. On the front and northern elevations, it is clear that windows have been replaced with aluminium frames and the original window cavity infilled at the bottom to cater for the smaller aluminium frames. The rear of the dwelling has a small skillion lean-to at the south eastern corner of the house.

The property is situated centrally within a large block on the corner of Pitt and Robert Streets. The dwelling is set closer to the street than other dwellings, exemplifying the early street alignment. A high Colorbond fence and a range of ad hoc overgrown plantings obscures the building's frontage from Pitt and Robert Streets. The property also contains a concrete driveway and paths.

Overall the condition of the item is considered to be good, in particular the timber elements which show no identifiable defects.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Corrugated iron roof and guttering elements
- Steel security screens
- New windows, with former window spaces infilled to accommodate smaller sized frames*
- Ad hoc landscaping
- Concrete paths and driveway
- Colorbond fence to front boundary*

Although some windows have been modified and the visual connection of the dwelling to the streetscape is altered as a result of landscaping elements, the dwelling is considered to have high integrity as it retains much of its original form and features.

Integrity	**High**	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes	
Construction years	c. 1894

Note: While the subject site is addressed to the suburb of Holroyd, it is historically related to the development of Merrylands. As a result, the historical overview of Pitt Cottage has been contextualised in the history of Merrylands.

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. This particularly concerned Pitt Street which was adjacent to the station. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The subject property formed part of 145 acres originally granted to Richard Atkins in 1798. The grant was Atkin's second in the district, as he was previously granted 100 acres in 1793. Pitt Street, formerly known as Pitt Row, is one of the earliest roads in Merrylands, providing access to the Church and School Estate granted in 1825.

It remains unknown when and for whom Pitt Cottage was constructed, although its architectural style would indicate it was constructed during the late 19th century. The property first appears in the Sands in 1894, occupied by Samuel Rapson, who resided at the property until 1921 when it was purchased by Donald Harkness, a motor garage proprietor. William Littlefield purchased the property in 1925, however, is noted earlier at the property in the Sands from 1922-33. The property is listed as 'Momanite' in 1930. The present boundaries were formed in 1955, when the property was subdivided and purchased by Robert Morefield. The property was in the ownership of the Nunnari family from 1958.

Today, the dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the front fence should be replaced with a timber picket style fence and the landscaping to the front altered to reflect a more sympathetic, European style planting arrangement.
- Should the opportunity arise, aluminium windows should be replaced with timber windows which reflect the original style and design intent of the dwelling. The infilled areas of window openings should be reversed and made good.

Curtilage Map

Statement of Significance

The Haslams Creek Road Bridge is of local significance for its historic, aesthetic, scientific, rarity and representative values. Built in 1928, the Haslams Creek Bridge has historic significance as an important piece of public infrastructure associated with the continual improvement of Parramatta Road, which is an early and important travel route within Sydney. Along with the Haslams Creek Culvert, a short distance upstream, and the Parramatta Road alignment, the bridge represents a key episode in the evolution of this major transport conduit. A steady increase in motor vehicle traffic through the 1920s on this route called for a smooth and robust crossing of Haslams Creek. The existing bridge represents the state of the art in sturdy crossings of minor waterways offered by the Main Roads Board at that time. Haslams Creek Bridge is a relatively early example of the reinforced concrete beam design, which was capable of crossing Haslams Creek in a single span and on a skew, so that Parramatta Road could remain straight. The bridge has provided a safe creek crossing for over 80 years. The structure is also visually distinctive as an Inter-War reinforced concrete bridge. Its presence above deck is announced by the intact concrete handrailing system. In particular, the structure has pleasant lines with elliptical curved beams visible from downstream in particular. The bridge is a good intact example of its type and, as such, is likely to have some rarity value on a local scale. The structure has the capacity to represent single span concrete beam bridges in NSW.

Criteria Assessment	
a) Historic	The Haslams Creek Bridge has historic significance as an important piece of public infrastructure associated with the continual improvement of Parramatta Road, an early and important route within the colony and having continued importance to the present.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The structure is visually distinctive as an Inter-War reinforced concrete bridge. Its presence above deck is announced by the intact concrete handrailing system. The structure has pleasant lines with elliptical curved beams visible from downstream in particular. The bridge is technically significant as representing the state of the art in sturdy crossings of minor waterways offered by the Main Roads Board at that time. The beam design was pioneered in NSW in the 1910s, but not commonly used until the early 1930s, making Haslams Creek Bridge a relatively early use of the design. The beam design was capable of crossing Haslams Creek in a single span and on a skew, so that Parramatta Road can remain straight. The carriageway provided was sufficiently wide so that there has been no need to widen the bridge in the intervening 75 years and two ample footways are still in existence.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The bridge is likely to have some local rarity value as piece of 1920s-1930s main road infrastructure with a high level of integrity.
g) Representativeness	The bridge has representative value in demonstrating the typical physical characteristics of 1920s-1940s single span reinforced concrete beam bridges on a skew. Its intact concrete hand railings are representative of a common form of railing system used on concrete bridges in this era across the State, few of which have survived to the present.

Physical Description

The Haslams Creek Bridge is a reinforced concrete beam bridge located on Parramatta Road, which crosses Haslams Creek (a channelised formation). The bridge is single spanned structure, constructed on a skew of approximately 20 degrees. It has reinforced concrete beams and deck. Typically of the elliptical arched shape, the inner beams under the roadway are deeper in the centre of the span, with uniform soffits which then curve down to match the shape of the side beams. The bridge was constructed in two sections, split along the centreline, presumably to facilitate continued traffic flow at the time. The railings along the sides of the footways are of reinforced concrete and appear to be original.

The bridge is in fair condition with no observed problems.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Minor repairs to handrails
- Resurfacing of road base

The bridge has undergone very little change and the integrity of the structure is therefore considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1928

The following history has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Haslams Creek Bridge', dated 2009.

Haslams Creek flows into Homebush Bay on the Parramatta River. By 1789 the Rose Hill Packet was ferrying people and goods up the Parramatta River, and in the same year a track was begun, three metres wide, hacked through the bush, between Sydney and Parramatta. By 1794, the track was widened and cleared to make it more suitable for carriages. Francois Peron wrote in 1802 that the road between Sydney Town and Parramatta "is almost every where wide enough for three carriages to pass abreast, and bridges have been thrown over such parts of it, as are interrupted by the waters: so that the traveller meets with no obstacle on his journey." (Peron cited in DMR, 1976, p. 9; Coupe, 1988, pp. 30-2; Perumal Murphy, 1989, p. 5) The original line of Parramatta Road may not have crossed Haslams Creek at same location as the current road, but the 1797 alignment probably came close to the current alignment at the site. (Kennedy, 1971, p. 13)

The first grants in the vicinity of today's Homebush, Lidcombe, Auburn and Strathfield area were made in 1793 to a group of free settlers, and the area was subsequently known as Liberty Plains. Samuel Haslam, after whom Haslams Creek is named, received his first 50 acre grant in the area to the north of the Parramatta Road in 1806, and a second small grant to the south of Parramatta Road and east of Haslams Creek. A number of undated maps of the Parish of Liberty Plains show the creek and indicate a 'Haslams Bridge'. (Kennedy, 1971, p. 13). The Creek was formerly known as Hacking Creek.

Industry entered the area early in its history. John Blaxland, brother of the explorer, received a large grant in the Silverwater/Newington area in 1807 and by 1816 he had cleared the land and established a salt works and woollen mill. Newington College and a home for aged women and then the Silverwater Corrective Services Complex succeeded his operations on the site (Kennedy, 1971, p. 13). Land was selected for the Rookwood Cemetery in 1865, and the crematorium in 1925 (Kennedy, 1971, p. 14). Haslams Creek for many years flowed through the holdings of the Sydney Meat Preserving Company Ltd 1876-1965, which dammed the creek, and past the former State Abattoir on Homebush Bay (Auburn Library, Local History Collection, correspondence Edmund Perrin, Local History Librarian; GOL/Lidcombe Oval Sydney Meat Preserving Company Ltd dam on Haslems Creek).

The railway arrived in the Lidcombe district in 1855, with a station opened at Lidcombe in 1859, initially known as Haslams Creek Station. After much debate as to the routing of the line further west, it reached Parramatta in 1860. An additional station was constructed at Auburn in 1877 at the request of land speculators, who then exploited the improvement in access to the area by subdividing and selling land. (Kennedy, 1982, p. 13-4). The Auburn - Lidcombe area experienced a boom in housing construction in the 1920s. A 1928 publication presented Auburn as a 'teeming suburb' with both neat and comfortable homes and towering factory chimneys stretching as far as the eye can see in all directions from Parramatta Road. The industrial development of the area in the 1920s resulted in a constant stream of motor lorries on the area's main roads. Auburn, with Clyde, Granville and Parramatta, remains one of Sydney's most important industrial and commercial centres. The Tooheys Brewery adjacent to the Haslams Creek Bridge to the south of Parramatta Road opened in the late 1970s, replacing the company's breweries at Taverners Hill near Leichhardt and Central Station. (Spearritt, 1978, p. 30,36, 48, 50, 118-21, 162).

The reinforced concrete beam bridge across Haslams Creek was constructed in 1928, in the wider context of increased traffic volumes, weights and speeds on Parramatta Road. The bridge was constructed by the State Monier Pipe and Reinforced Concrete Works as part of a short deviation straightening a kink in Parramatta Road between John Street and Day Street. The bridge was constructed in two parts, probably to facilitate continued traffic access. Light traffic was given access to the crossing after the bridge was completed to assist in consolidating the bridge approaches, which were completed by August 1930 (Main Roads, Vol. 1 No. 11, August 1930, p. 245). In the previous year, the same contractors had constructed a 23-foot reinforced concrete culvert 'near Francis Street' in Lidcombe, probably the culvert currently existing a short distance upstream from the bridge. The culvert is situated in the vicinity of the previous alignment of Parramatta Road and may have played a

role in facilitating continued traffic access across the creek while the bridge was under construction. (Main Roads, Vol 1 No. 4, January 1930, p. 84)

The Haslams Creek Bridge is one of over 1,000 bridges built by the Main Roads Board cum Department of Main Roads between 1925 and 1940. During that period the Department's engineers adapted existing standards of bridge design to meet the requirements of improved motor vehicle performance - they were generally wider than previously with an improved load capacity. The principal types of bridges constructed during the period were: reinforced concrete beam; concrete slab; steel truss on concrete piers; and timber beam bridges. Concrete was favoured in many instances because it was perceived to be a low maintenance material (DMR, 1976, pp.169, 170). Based on RTA bridge database records, reinforced concrete beam or girder bridges were the most common form of concrete bridge construction to 1948, with more than 160 extant. They have been very popular in NSW, and elsewhere, providing an efficient and often aesthetically pleasing solution to a wide range of crossing types. Within the general group of beam bridges, the main longitudinal members have had various configurations ranging from a simple set of rectangular beams cast integrally with the deck, through beams with curved soffits, to flat soffit decks where the edge beams also form the bridge parapet or sidewall. These bridges on the state's main roads and highways, constructed to replace high-maintenance and aged timber bridges or open crossings, along with other road improvements, ushered in the age of comfortable motor transport and efficient road transport of goods and produce to which we are accustomed today.

A photograph of the Haslems Creek Bridge was used to illustrate an article, for the general reader, on rigid frame concrete highway bridges in 1932 (Main Roads, Vol. 4 No. 1, September 1932, p. 10).

Haslems Creek, formerly a meandering earth-banked waterway, was channelised in the early 1930s as an Unemployment Relief project supervised by the Department of Public Works. The concrete walls of the channel abut the abutment walls of the bridge and replaced the small areas of stone pitching originally constructed on the embankments adjacent to the bridge, which can be seen in early photographs such as that in the Main Roads Magazine cited above. (RTA File 5/12.151, Municipality of Lidcombe, Triennial Report 1932-4, pp. 27-8).

Generally, the bridge has remained in good condition to the present. An inspection of 30th January 1959 reported some cracking, leaks and exposed reinforcement. The bridge was overtopped by water several times in the 1960s, when the levels and flows into in Homebush Bay were affected by the rehabilitation of the bay by the Maritime Services Board. (RTA File 5/12.151).

The bridge remains in service as a road bridge.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- This item is not archaeological in nature and should be reclassified as a Heritage Item.

  The former LEP has classified a series of items of an industrial nature, including railway, road and water infrastructure, as 'archaeological' sites. This classification is historical and relates to the former use of the term 'Industrial Archaeology', which refers to the study of industrial and engineering history. The use of the term 'Industrial Archaeology' is no longer used and the term 'Industrial Heritage' now preferred. Archaeological sites are legally defined as sites which contain one or more 'relics' and, in NSW, relics are specifically protected by the Sections 138 -146 of the Heritage Act 1977. The classification of a site as 'archaeological' consequently affects the statutory controls and procedures, including the need for excavation permits and pre-excavation procedures, triggered by Development Applications.

Curtilage Map

Revised Curtilage recommended – refer below.

Statement of Significance

The Haslams Creek Canal is of local significance for its historic values. Along with the Haslams Creek Road Bridge on Parramatta Road and the Parramatta Road alignment, this canal represents an episode in the evolution of the major transport conduit of Parramatta Road in the 1930s. The channel is historically significant as a development of drainage channels in the area and as a channel created during the 1930s, as an unemployment relief project.

Criteria Assessment	
a) Historic	Along with the Haslams Creek Road Bridge on Parramatta Road, further downstream, and the Parramatta Road alignment, this canal represents an episode in the evolution of the major transport conduit of Parramatta Road in the 1930s. The channel is historically significant as a development of drainage channels in the area and was a channel created during the 1930s as an unemployment relief project.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not have any particular technical significance for its design and engineering.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Haslams Creek Canal extends from just south of Parramatta Road to just north of Boorea Street, Lidcombe. Haslams Creek has been canalised with the provision of near vertical concrete walls (and presumably a dished concrete base) above Parramatta Road, while below Parramatta Road the creek is aligned by a concrete wall, sloping into the creek bed with a distinct batter.

The condition of the canal appears to be fair. A section of the canal wall south of Parramatta Road is propped by structural supports to reduce the structural movement of the wall.

Condition	Good	**Fair**	Poor

Alterations and Additions

Haslams Creek has been realigned in sections over a period of time and it is now difficult to establish the date of each section without further historical research. The integrity of the item is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Early 1930s

The following history has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Haslams Creek Culvert', dated April 2009.

Haslams Creek was originally located within the Municipality of Rookwood, gazetted in 1891. The suburb (and municipality) changed its name to Lidcombe in 1913, due to negative associations with Rookwood cemetery. By the early twentieth century, the creek flowed past the State Abattoirs in Homebush, under Parramatta Road (in the vicinity of Haslams Creek Culvert and Bridge), and then ran though land occupied by the Sydney Meat Preserving Company Ltd (1876-1965), on the corner of Parramatta Road and St Hilliers Road.

The adjacent suburbs of Auburn, Lidcombe and Silverwater experienced a boom in housing construction in the 1920s. The concurrent industrial development of these suburbs resulted in a constant stream of motor lorries along the area's main roads (particularly Parramatta Road). The construction of the railway to Parramatta meant that Parramatta Road had been neglected in the late nineteenth century and into the early twentieth century until the prevalence of motor transport in the 1920s and 1930s. The increase in traffic along Parramatta Road at this time led to pressure for it to be widened (Main Roads, January 1930, pp 81-85). The widening of Parramatta Road encouraged further industry to Lidcombe and Auburn. These suburbs were attractive to industry because they still contained large tracts of land in close proximity to the fresh water supply from Parramatta River.

In January 1930, the DMR journal (Main Roads) reported that the State Monier Pipe and Reinforced Concrete Works had constructed a 23-foot reinforced concrete culvert 'near Francis Street' in Lidcombe at a total cost of 2,423 pounds in 1927 (this was a culvert over a tributary of Haslams Creek, further east along Parramatta Road). The following year, the same company erected a reinforced concrete bridge over Haslams Creek measuring 41 feet in length at a cost of 4,639 pounds (in 1932, this bridge was described as being a rigid frame bridge with a 40 foot span, measuring 54 feet across, see Main Roads, September 1932, p 10).

It appears that the 1928 bridge over Haslams Creek [RTA Bridge 307] was intended as a 'short deviation (between John and Day Streets) ...cutting out an unnecessary kink' on Parramatta Road. It is not known why the reinforced concrete culvert, upstream from Haslams Creek Bridge, was built a year earlier, although it is possible it was constructed to divert some of the traffic flow while the main bridge was under construction (although the was located on the original alignment of Parramatta Road).

The DMR's Main Roads journal compared the hardships experienced by early road builders on Parramatta Road, due to the streams and tributaries crossing it (flowing from the Parramatta River), with the recent works constructing the traffic deviation over Haslams Creek: 'Due to the clayey nature of the soil, the new banks will have to be subjected to light traffic for some time before the deviation can be opened to all traffic; ordinary methods of compaction having proved abortive' (Main Roads, January 1930, p 81).

In August 1930, it was reported in the Main Roads journal that 'the approaches to the bridge on the deviation of Parramatta-road at Haslam's (sic) Creek, Lidcombe, have been constructed in cement concrete. The completion of this work ...marks the last stage in the construction of the deviation between John-street and Day-street' (Main Roads, August 1930, p 245). The deviation measured 1,015 feet in length and was constructed in cement concrete and gravel. The Main Roads Board spent at least 4,188 pounds on the works to straighten Parramatta Road by 1929 (by which time these works were incomplete) (Main Roads, January 1930, p 84).

By 1934, the local council was clearly frustrated with DMR about the section of road which had been made redundant by the deviation, although it is unclear as to whether the council wished it to remain open or to be closed to traffic. The mayor of Lidcombe reported at this time that 'the question of closing the old section (of Parramatta Road) between John and Day Streets remains in the same position as it was three years ago' (Municipality of Lidcombe, Triennial Report 1932-34, p 19). The section of road on which Haslams Creek Culvert is located remains unused by passing traffic.

The State Government had purchased land near Lidcombe Railway Station in the late 1920s on behalf of the Lidcombe Municipal Council, for the creation of Wyatt Park. The NSW Department of Public Works oversaw the creation of the park as an Unemployment Relief Work during the 1930s, and in the process the course of Haslams Creek was diverted to a concrete and brick stormwater channel. In 1934, the mayor of Lidcombe reported that there were delays in the construction of the stormwater channel in the vicinity of the culvert: 'At present there is a temporary hold-up of the extension from Booreea Street to the tidal waters of Haslam's (sic) Creek (across the former land holdings of the Sydney Meat Preserving Company Ltd), but steps are being taken by this Council to overcome the obstacles that are delaying this extension, and we hope to see the whole length of this stormwater channel completed in the very near future.' (Municipality of Lidcombe, Triennial Report 1932-34, p 27).

It is significant that the channelisation of Haslams Creek occurred after both Haslams Creek Culvert and Haslams Creek Bridge had been constructed. That both structures were built on a skew (or angle) over Haslams Creek, and that the subsequent stormwater channel neatly dovetails into them, suggests that the different government agencies in charge of works in the area maintained communications (and probably shared plans) because each of the features neatly fit together.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- This item is not archaeological in nature and should be reclassified as a Heritage Item.
  The former LEP has classified a series of items of an industrial nature, including railway, road and water infrastructure, as 'archaeological' sites. This classification is historical and relates to the former use of the term 'Industrial Archaeology', which refers to the study of industrial and engineering history. The use of the term 'Industrial Archaeology' is no longer used and the term 'Industrial Heritage' is now preferred. Archaeological sites are legally defined as sites *which* contain one or more 'relics' and, in NSW, relics are specifically protected by the Sections 138 -146 of the Heritage Act 1977. The classification of a site as 'archaeological' consequently affects the statutory controls and procedures, including the need for excavation permits and pre-excavation procedures, triggered by Development Applications.

- The previous listing of the Haslams Creek Canal has only identified a portion of Haslams Creek Canal between the Great Western Highway and Boorea Street, Lidcombe. As the canal extends much further through the Cumberland LGA, the heritage curtilage should be revised for the Cumberland Council LEP to reflect Creek Haslams Canal in its entirety. As this includes new land not previously covered by an LEP, this will form part of the Stage 2 assessment of Cumberland Council Heritage Study.

Lot/Section/DP	100	-	1157634
Current LEP ID	I174 (Cumberland LEP)		
Former LEP ID	A56 (Parramatta LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Transport - Rail	

Curtilage Map

Revised Curtilage- refer below.

Statement of Significance

The Lidcombe Signal Box is significant at a local level, for its historic, technical and representative values. Most importantly, it demonstrates the former importance of manual signalling on the busy suburban railway lines near the Flemington car yards and other rail junctions. The wider Lidcombe Railway Station was established during the first phase of NSW railway construction in the 1850s, with the station opening in 1858 as part of the Main South Line. The signal box dates from the 1924 phase of development and contributes to the understanding of the technical requirements for safe working and railway signalling required at this time. It is representative of a standard 1920s signal box. However, the box is no longer operational and has been refurbished internally and its signalling equipment removed, reducing its ability to demonstrate its previous function.

Criteria Assessment	
a) Historic	The signal box dates from the 1924 phase of development of Lidcombe Railway Station and demonstrates the former importance of manual signalling on the busy suburban railway lines near the Flemington car yards and other rail junctions.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The signal box demonstrates the continuing importance of manual signalling on the busy suburban railway lines near the Flemington car yards and other rail junctions. It also contributes to the understanding of the technical requirements for safe working and railway signalling required at this time.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	It is representative of a standard 1920s signal box design. However, the box is no longer operational and has been refurbished internally with signalling equipment removed, reducing its ability to demonstrate its previous function.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Lidcombe Railway Station Group', dated July 2009. The description is comprehensive and matches the condition visible during the site inspection.

External: the building comprises of two parts, a rectangular base at the ground level, which is five bays long and is constructed of precast concrete, and a timber framed, fibre cement clad structure at the first floor level. The base has engaged piers that define the bays and original windows with rendered sills, overhanging lintels and security grilles fitted to the exterior. Access to the ground floor level is from the western side. The first floor structure has typical chamfered plan details to the corners and it sits on a precast concrete slab and is approximately three bays long in comparison to the base. It has balconies with steel tubular balustrade to its east and west and timber framed multi-paned sliding casement windows with security grilles to the exterior. The signal box has a hipped roof with Marseilles terracotta tiles, overhanging eaves with fibre cement sheet linings to soffits. Plain timber posts support the north-east, north-west and south-east corners of the roof.

Internal: The ground floor has set plaster finish to the perimeter walls and original terrazzo floors. There are new beams supporting precast concrete slabs to first floor. The first floor is accessed by a new galvanised steel staircase. It has typical ceiling details, raked plaster sections to the perimeter walls and cover mouldings. Interior walls have fibre cement sheet and batten cladding. Partition walls have been added to the western end of the first floor. The signal box was refurbished in 2004. All original signalling equipment has been removed.

The signal box was refurbished in c. 2004 and is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Refurbished in 2004
- All original signalling equipment removed*

While the exterior of the building has been well-kept, the interior of the building is reported to be refurbished and void of its original signalling equipment. Therefore, the integrity of the building has been rated as 'moderate'.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1924

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel

Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination of the names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government was an active subdivider in the area. Specifically, in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

The Main Western line to Parramatta Junction (Granville) was originally completed in 1855. The line opened on 26 September 1855 and was double track from Sydney to Newtown, and then single track to Parramatta Junction (but duplicated in 1856). The line was built as a direct connection to Parramatta Junction and, subsequently, for the purpose of connecting Sydney with the major rural railways that were constructed across the Blue Mountains to Bathurst and across the Southern Highlands to Goulburn via Liverpool. There were few stops along the line between Sydney and Parramatta and it was not the original intention of the line to serve suburban development. Changes to the line were more often related to the line’s long distance purpose than to the communities along it. In 1892, the line was quadrupled from Homebush to Flemington, with the quadruplication being extended to Lidcombe in 1924.

Lidcombe is a major junction location with buildings from three significant periods: the 1881 major upgrade of the site with wayside buildings (converted to island platform structures in the 1924 upgrade); the 1924 upgrade with the addition of tracks and the overhead booking office and steps; and 1997/8 modifications for the Olympic Park line.

A station was opened at Lidcombe (then called Haslams Creek) on 1 November 1858 and featured a combined residence and booking office on a timber platform. The initial stimuli of development at Lidcombe were the establishment of the cemetery at Rookwood (to the south-east), from 1867, and the 140 acre works of the Sydney Meat Preserving Company (to the north), in 1871. The station was renamed Rookwood in 1878.

In 1881, the station was significantly upgraded, including demolition of the original building and construction of the present Platforms 2/3 and 4 and their buildings. There were also branch lines into the cemetery and meat works. In 1896, a footbridge was constructed linking the two platforms at the western end.

In 1913, the name of the suburb and station was changed to Lidcombe to remove associations with the nearby cemetery. In 1912, a new railway line was opened between Lidcombe and Regents Park, thus making Lidcombe a significant railway junction. In 1924, quadruplication of the main railway line from Sydney brought an extra platform (Platform 1), signal box, bridge and overhead booking office to Lidcombe.

The signal box was refurbished in c. 2004, with all original signalling equipment removed. Today, it no longer functions as an operational Signal Box.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- This listing should be converted from an archaeological item to a built item.
- The heritage curtilage of the Lidcombe Signal Box (A56) may be amalgamated into the curtilage for Lidcombe Railway Station (listing to be subject to Stage 2 – new heritage item) to form one heritage listing. The RailCorp Section 170 Heritage and Conservation Register curtilage (see below) for the Lidcombe Railway Station Group includes the Signal Box and should be used as the basis for this new curtilage; see item #4800244.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the correct Lot/DP and will need to be altered.

	Level 2	Transport - Rail	

Curtilage Map

Statement of Significance

The Railway Overpass over Olympic Drive is locally significant for its historic values. The bridge is significant as evidence of the 1924 upgrades to Lidcombe Railway Station and, in association the Railway Street overbridge (replaced 2013), the reconstruction of the Regents Park line. The item had some technical significance as evidence of a jack-arch and steel girder structure however the loss of the character defining Jack-arch and steel girder superstructure has reduced the representative qualities of this item.

Criteria Assessment	
a) Historic	The bridge is historically significant as evidence of the 1924 upgrades to Lidcombe Railway Station and, in association, the Railway Street overbridge (replaced 2013), the reconstruction of the Regents Park line.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion. The bridge was a typical example of a number of bridges on the Main Suburban, Western Line and Regents Park Line, however the loss of the character defining Jack-arch and steel girder superstructure has reduced the representative qualities of this item.

Physical Description

The Olympic Drive overbridge was originally a 150 tonne, jack-arch and steel girders structure supported by brick piers and brick abutments. The current overbridge has replaced the jack-arch steel girder with a reinforced concrete superstructure supported atop the brick abutments. The overbridge features a central concrete abutment with a contemporary overhead wiring structure supporting the railway line.

The overbridge is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Jack-arch steel girder replaced with a reinforced concrete superstructure.

The loss of the character defining superstructure of the Olympic Drive overbridge had reduced the integrity of the item. It is considered to have low integrity.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1924

The Main Western line to Parramatta Junction (Granville) was originally completed in 1855. The line opened on 26 September 1855 and was double track from Sydney to Newtown, and then single track to Parramatta Junction (but duplicated in 1856). The line was built as a direct connection to Parramatta Junction and, subsequently, for the purpose of connecting Sydney with the major rural railways that were constructed across the Blue Mountains to Bathurst and across the Southern Highlands to Goulburn via Liverpool. There were few stops along the line between Sydney and Parramatta and it was not the original intention of the line to serve suburban development. Changes to the line were more often related to the line's long-distance purpose than to the communities along it. In 1892, the line was quadrupled from Homebush to Flemington, with the quadruplication being extended to Lidcombe in 1924.

Lidcombe is a major junction location with buildings from three significant periods: the 1881 major upgrade of the site with wayside buildings (converted to island platform structures in the 1924 upgrade); the 1924 upgrade with the addition of tracks and the overhead booking office and steps; and 1997/8 modifications for the Olympic Park line.

A station was opened at Lidcombe (then called Haslams Creek) on 1 November 1858 and featured a combined residence and booking office on a timber platform. The initial stimuli of development at Lidcombe were the establishment of the cemetery at Rookwood (to the south-east) from 1867 and the 140 acre works of the Sydney Meat Preserving Company (to the north) in 1871. The station was renamed Rookwood in 1878.

In 1913, the name of the suburb and station was changed to Lidcombe to remove associations with the nearby cemetery. In 1912, a new railway line was opened between Lidcombe and Regents Park, thus making Lidcombe a significant railway junction. In 1924, quadruplication of the main railway line from Sydney brought an extra platform (Platform 1), signal box and bridge and overhead booking office to Lidcombe.

The two railway overbridges spanning Olympic Drive, at Church Street and Railway Street, are believed to date from 1924 when the above upgrades occurred, and the Regents Park line was reconstructed. In 2011, the bridge underwent repair and reinforcement work. In 2013, the Railway Street bridge was replaced with a new reinforced concrete bridge. Today, the structure remains in use as a railway bridge.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Curtilage Map

Statement of Significance

The Lidcombe War Memorial and Park is significant for its historic, aesthetic, rarity and social heritage values. The item was erected by Messrs E.L. Kingsley & Sons and unveiled by Sir Granville Ryrie in 1921 to commemorate those who fell in World War I (1914-1918). It now also commemorates World War II, Korea, Malaya, Borneo Vietnam, Malaya The Gulf East Timor and all United Nations Peace Keeping Forces still serving, as well as Merchant Navy and the women of Australia. The item is socially significant to the local community, in particular war veterans and their families, as a place of remembrance. The War Memorial is a rare example of its type in Lidcombe, though it is typical of suburbs and country towns in Australia. The memorial retains its aesthetic significance through the retention of much of its original form and detailing. The landscape setting of the item plays an important role in contributing to the aesthetic values of the memorial.

Criteria Assessment	
a) Historic	The item was erected by Messrs E.L. Kingsley & Sons and unveiled by Sir Granville Ryrie in 1921 to commemorate those who fell in World War I (1914-1918). It now also commemorates World War II, Korea, Malaya, Borneo Vietnam, Malaya, The Gulf East Timor and all United Nations Peace Keeping Forces still serving, as well as Merchant Navy and the women of Australia.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The memorial retains its aesthetic significance through the retention of much of its original form and detailing. The landscape setting of the

	item plays an important role in contributing to the aesthetic values of the memorial.
d) Social	The item is socially significant to the local community, in particular war veterans and their families, as a place of remembrance.
e) Scientific	The item does not meet this criterion.
f) Rarity	The War Memorial is a rare example of its type in Lidcombe, though it is typical of suburbs and country towns in Australia.
g) Representativeness	The item does not meet this criterion.

Physical Description

The war memorial is a composite stone memorial with a statue of a single soldier resting on a downward directed rifle (the pose known as 'reversed arms'). His hands rest on the butt and the muzzle on the ground, which is a mark of respect or mourning. The soldier is mounted on a stone slab, supported on four columns and a central pedestal, resting on a plinth. The gold name plates for both World Wars are mounted on the flat internal faces.

The memorial is located within Remembrance Park (formerly known as Wellington Park). Remembrance Park is located within the centre of the suburb of Lidcombe on the corner of James and Joseph Streets. The park features play equipment in the northeast corner and contains a number of concrete footpaths. The main footpath is laid diagonally across the site on a northwest to southeast axis.

The memorial is set within southwest corner of the park and is surrounded by a neat lawn area bounded by four concrete plinth markers and a circular pathway. Hedges and rose bushes frame the stairway to the monument. Several mature trees surround the park, including a avenue of Canary Island Date Palms and a Port Jackson Fig Tree.

The memorial includes the following inscriptions:

> *'Erected by the citizens of Lidcombe to commemorate the valor of the men who served in the Great War 1914-1919' 'Unveiled by Major General Sir Granville Ryrie. KCMG CB VD 13th Nov. 1921'*
>
> *'The erection of this memorial was organised by the Lidcombe Peace & Memorial Committee'*
>
> *'FOR GOD KING AND COUNTRY'*
>
> *'In Memory of the Fallen Their Names Liveth For Ever' A silent remembrance to the seamen of the Merchant Navy who at great cost and loss of life kept our sea lanes open during the wars.*
>
> *'No unnamed tomb for all to see, the sailors Valhalla is where they lie'.*
>
> *'Lest We Forget A memorial to all Australian women from settlement to now. The pioneers, the nurses and service women The Womens Land Army, & those women who served in the war effort at home to make victory possible Lest We Forget A tribute to all who served in World Wars 1 & 2 Korea, Malaya, Borneo Vietnam, Malaya, The Gulf East Timor and all United Nations Peace Keeping Forces still serving Lest We Forget We will remember them Lidcombe RSL Subbranch honours all the servicemen & women who served the wars and conflicts who by their service and sacrifice helped win the peace for Australians Lest We Forget.'*

The war memorial and surrounding park are in good condition, having been well maintained over time. Some of the gold inlay on the memorial shows signs of deterioration.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New hedges and rose bushes have been added around the memorial and plinths.
- Additional Commemorative concrete plinths and plaques commemorating; Australian Women serving in the wars, all servicemen and women who served in wars and conflicts, Seamen of the Merchants Navy, and all who served in World Wars I and II, Korea, Malaya, Borneo, Vietnam, Malaya, The Gulf East Timor and all United Nations Peace keeping forces still serving.
- Timber picket fence surrounding memorial removed.
- Remembrance Park has developed to include play equipment and more formal landscaping elements.

Though the memorial has been modified over time to include new commemorative elements, the integrity of the item continues to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1921

Lidcombe War Memorial Statue
The Lidcombe War Memorial Statue was erected in Wellington Park (now known as Remembrance Park) in 1921 after World War I to commemorate those who had served. It was unveiled by Sir Granville Ryrie on Remembrance Day, 11 November 1921. The monument was built by Messrs E.L. Kingsley & Sons. The monument now commemorates those who served in any conflicts of which Australia has been involved. Additional plinths surround the memorial and commemorate those who served with the Merchant Navy, the women of Australia, and those who served in all conflicts.

Wellington Park, Lidcombe
Wellington Park was established by the Lidcombe Municipal Council in c.1914. The park is described as 'a thing of beauty and a joy'. The Park comprised of well-clipped grass, carefully tended flower beds, and a bowling green. As early as 1921 it was considered appropriate to rename the park from "Wellington" to "Memorial". Remembrance Park was finally selected several years later.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**

4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- This listing should be converted from an archaeological item to a heritage item with landscape values.
- Monitor condition of gold inlay on memorial, should the opportunity arise, the gold lettering should be regilded by a professional gilder.

Address	Between Parramatta Road and the M4 Western Motorway, opposite 66-72 Parramatta Road, Lidcombe NSW 2141		
Lot/Section/DP	In road reserve	-	-
Current LEP ID	I177 (Cumberland LEP)		
Former LEP ID	I20 (Auburn LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Landscape	
	Level 2	Landscape - Natural	

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The Stand of *Eucalyptus longifolia* is of local heritage significance for its scientific and aesthetic values. The site contains remnant vegetation that are representative of the native vegetation that once covered a larger area of the Cumberland Plain. They have been retained despite significant changes to the surrounding locality and may be a valuable seed source. They have aesthetic significance as an extant group of native trees with landmark value on the corner of the original arterial road of Parramatta Road through the locality.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The plantings have aesthetic significance as an extant group of native trees with landmark value on the corner of the original arterial road of Parramatta Road through the locality.
d) Social	The item does not meet this criterion.
e) Scientific	The site contains remnant vegetation that is representative of the native plantings that once covered a larger area of the Cumberland Plain. They may be a valuable seed source.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item contains a sample of remnant vegetation that is representative of the native vegetation.

Physical Description

The subject site contains a group of native *Eucalyptus Longifolia* which are remnant vegetation of the Cumberland Plain. There are approximately ten extant trees, standing at approximately ten to fifteen metres in height.

Some of the trees are showing signs of dieback. There has been some recent disturbance of the ground plane around the trees. They are in fair condition overall.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Construction of Hill Road and the Western Motorway, post 1970.

Though the surrounding landscape has been drastically altered, the trees have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Pre-1788

The Stand of *Eucalyptus Longifolia* is a remnant group of trees which relate to the pre-contact landscape. Lidcombe has been altered significantly since European colonisation, resulting in the loss of the large majority of this natural habitat. This stand of trees is an extant, tangible reminder of the former landscape.

Recommendations

Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring			

		development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The replacement of plantings on a like for like basis to ensure the conservation of the landscape and the biodiversity of the Cumberland Plain is maintained, is considered appropriate. However, should seek advice from a landscape specialist.
- Due to the construction of Hill Road through the middle of the listing, the heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland LEP.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the correct Lot/DP and will need to be altered.

Former LEP ID	I26 (Auburn LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The residence at 59 East Street, otherwise known as 'Glenroy', is locally significant for its historic, associative, aesthetic, rarity and representative values. The dwelling is a rare, intact and visually striking example of a Victorian Gothic mansion erected in Lidcombe in c. 1892. The residence is associated with Frederick Lidbury, who took up residence in the home in 1892. Lidbury was mayor of Rookwood on a number of occasions and the suburb was later named 'Lidcombe', after both Frederick Lidbury and his mayoral opponent Alexander Larcombe.

Criteria Assessment	
a) Historic	The item is historically significant as part of the late nineteenth century development of Lidcombe.
b) Associative	The residence is associated with Frederick Lidbury, who took up residence in the home in 1892. Lidbury was mayor of Rookwood on a number of occasions and the suburb was later named 'Lidcombe', after both Frederick Lidbury and his mayoral opponent Alexander Larcombe.
c) Aesthetic/Technical	The building is aesthetically significant as it provides a well-kept, visually striking and intact example of a Victorian Gothic mansion. Established landscaping such as hedges contributes towards the overall aesthetic significance of the dwelling.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The dwelling is a rare example of a Victorian Gothic mansion.
g) Representativeness	The item is representative of the Victorian Gothic mansion.

Physical Description

The two-storey Victorian Gothic mansion is a rendered brick structure with a large single bay projecting from the façade as well as castellated turrets. The projected bay features ornamentally carved barge boards connected to the gable end, moulded bands, six windows and small shingled roof projection. The windows are generally tall and narrow with pointed arches and aluminium windows which replace original timber windows. The residence features a tower at the entrance with similar features and castellations around the roof parapet. The roof of the remaining residence is a simple gable with projecting rendered brick chimneys with terracotta chimney pots. The gable ends feature small projecting timber finials.

The site contains some established mature plantings, including hedges and palm trees, which contribute towards the overall setting of the property. The hedges follow the boundary of the property, set against a modern black palisade fence with a matching gate. The rear of the site is paved with a pergola.

While the dwelling appears to be in good condition generally, the timber barge board to the D'arcy Avenue elevation has deteriorated, leaving half of the board detached from the roof.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Weatherboard addition to the rear
- Skillion lean-to addition to the side
- Windows to facade replaced with an aluminium framed style*
- Modern palisade fence and gate

Although many of the windows have been replaced, the building appears to be highly intact.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1892

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name "Lidcombe" is derived from the combination of the names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government was an active subdivider in the area. Specifically, in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd,

Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

'The Gables' was described on a plan of the McNab's paddock subdivision, in 1892, as a “handsome” residence recently erected by Mr. McNab at a cost exceeding $2800. The land was purchased by the McNabs from the deceased estate of Father John Joseph Therry in 1868.

The residence became the home of Frederick Lidbury in 1892, who, as described above, was active in local government and was the Mayor of Rookwood on a number of occasions. The suburb was eventually named after Lidbury and his opponent Alexander Larcombe. Lidbury named the residence 'Glenroy'. The residence has, in recent years, been used for wedding receptions and social functions and has been renamed 'The Gables'.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item’s heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. Curtilage Map

Statement of Significance

The Clive E Evatt Commemorative Plaque is locally significant for its associative value, as evidence of a tree that was planted by the Hon. Clive R. Evatt, a prominent barrister and politician for the Labour Party, as well as Minister for Housing at the time of the planting event.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item has associative significance as evidence of a tree that was planted by the Hon. Clive R. Evatt, a prominent barrister and politician for the Labour Party, as well as Minister for Housing at the time of the planting.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The plaque consists of nine bricks (three x three) which are capped with concrete. The plaque is concrete. The original tree has been removed and replaced with a much younger planting and the former seating has been removed.

The inscription reads:

"On the 11th September 1948 this commemorative tree was planted by THE HON. CLIVE R. EVATT Minister for Housing. W. R. Ames. Town Clerk, W. J. Carlton. M.L.A. M.T. Guilfoyle, Mayor"

The item is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Original tree removed
- New tree planted
- Seating removed

The integrity is considered to be moderate as the original tree and some seating have been removed.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1948

This Commemorative Plaque was erected 11 September 1948 and marks the tree that was planted by the Hon. Clive R. Evatt, a prominent barrister and politician for the Labour Party. At the time the tree was planted, Evatt was the Minister for Housing. It is understood that the plaque and tree were erected to commemorate those who fought in the World Wars and resided in Housing Commission homes developed in the area. In 1945, there was a scheme of Housing Commission Homes built on both Yarram and Boorea Streets where the subject site is situated.

The plaque is also located in the vicinity of the Marne Park Estate, which was subdivided in 1915, and was bought by the War Service Homes Commission in order for a Soldiers Settlement of almost 100 homes to be established.

Curtilage Map

Revised Curtilage- refer below.

Statement of Significance

The cottage at 24 James Street, Lidcombe is locally significant for its historic, aesthetic and representative values. Built c. 1921, the dwelling was constructed during a time when Lidcombe experienced a housing and industrial boom. The item is a representative example of a Federation cottage which contributes towards the heritage character of Lidcombe. It has aesthetic significance as a well-presented Federation dwelling which is highly intact as viewed from the public domain. Modifications to the building have been sympathetic and the building contributes positively to the streetscape.

Criteria Assessment	
a) Historic	Built c. 1921, the cottage is demonstrative of a time when Lidcombe experienced a housing and industrial boom.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as a well-presented Federation dwelling which is highly intact as viewed from the public domain. Modifications to the building have been sympathetic and the building contributes positively to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a Federation style residence.

Physical Description

The site consists of a single-storey, Federation period dwelling constructed of weatherboard. The dwelling is long and rectangular in shape, with a simple gable roof, recently replaced with Colorbond. The gable end features an unornamented timber barge board with a profiled finial. The roof also contains two face brick chimneys with terracotta cowls. The front façade consists of a bullnose verandah roof of corrugated iron, set on profiled timber verandah posts with decorative timber brackets. There is an offset timber front entry door with leadlight windows. The windows to the façade consist of a set of two double-hung timber sash windows.

An extension at the rear of the dwelling is a timber skillion structure. An open timber carport with lattice is located at the rear of the dwelling, accessed by a paved driveway along the western side of the dwelling which also provides access to the eight other dwellings on site. A second driveway frames the eastern side of the building, providing access to the neighbouring property. Each side elevation contains three timber windows with a timber and Colorbond awning.

The rear of the site is occupied by eight modern brick and weatherboard dwellings with Colorbond roofs. All of the dwellings have been given the same colour scheme as the historic dwelling. Nevertheless, these elements are considered to be a detracting addition to the site which have altered the overall setting of the heritage item.

The Federation dwelling is screened from the street by some mature vegetation which does not appear to be native plantings or formal plantings. A long hedge lines the western driveway.

The Federation dwelling on site is in good condition overall, showing no signs of deterioration and having undergone recent repair and replacement works.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Weatherboard skillion addition to the rear
- Open timber car port
- Colorbond roof and contemporary guttering
- Security screens to door and windows on front façade
- Eight new dwellings to the rear*

While the property contains a series of modern dwellings, altering the spatial setting of the original dwelling and detracting from the overall setting of the item, the fabric of the original dwelling is highly intact. However, the integrity of the setting is low.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1921

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam, who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination of the names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government was an active subdivider in the area, specifically in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

The subject property is located within part of land that was originally granted to George and John Sunderland, who were granted 60 acres and 100 acres respectively. Subsequently, these 160 acres of land were purchased by Reverend Father Therry, the first official Catholic Chaplain to Australia. The estate was known as the ‘Therry Estate of Haslam’s Creek’ and was later subdivided as the ‘Township of St Joseph at Liberty Plains‘ in May 1867 by J. V Gordon. The subject property can be traced back to John Ryall who lived at 24 James Street from 1921.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item’s heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item’s listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the listing concerns the dwelling only and the rear of the site has been subdivided to include eight new dwellings, the heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland LEP.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the correct Lot/DP and will need to be altered.

Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Revised curtilage- refer below.

Statement of Significance

The dwelling at 55 Kerrs Road is locally significant for its historic, associative, aesthetic, rarity and representative values. Built 1876, the dwelling is a representative example of a fibro workers cottage erected in Lidcombe during the late nineteenth century when new subdivisions were laid out. This is exemplified in not only the built fabric of the dwelling but the orientation of the residence which shows alignment to a former street arrangement. The item is associated with William White, a carriage builder of Rookwood. It has aesthetic significance as a good example of a worker's residence which is highly intact and features interesting decorative features. The dwelling contributes positively towards the streetscape. The cottage is a very early surviving and rare example of fibro construction in Lidcombe.

Criteria Assessment	
a) Historic	Built 1876, the dwelling is a fibro workers cottage erected in the early subdivision of Lidcombe.
b) Associative	The item is associated with William White, a carriage builder of Rookwood.
c) Aesthetic/Technical	The item has aesthetic significance as a good example of a worker's residence which is highly intact and features interesting decorative features. The dwelling contributes positively towards the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The cottage is a very early surviving and rare example of fibro construction in Lidcombe.
g) Representativeness	The dwelling is a representative example of a fibro workers cottage erected in Lidcombe during the late nineteenth century when new

	subdivisions were laid out. This is exemplified not only in the built fabric of the dwelling but the orientation of the residence which shows alignment to a former street arrangement.

Physical Description

The subject site consists of a one-storey Victorian residence constructed of fibro which has a simple rectangular plan with a hipped roof. Notable features include a corrugated iron roof, face brick chimney and timber detailing. The façade consists of a bullnose verandah with four symmetrically arranged posts extending along the entire frontage, which wraps around the corner of the building and extends along the side wall. Timber lattices have been applied to part of the verandah, specifically at the ends and in the corner. The front door is located centrally to the front facade and features two small side windows. Two large, three paned casement windows are located in the wall either side of this front entrance. A brick chimney projects from the roof of the side wall with a terracotta chimney cowl. The roof features a small, centrally located dormer window with a decorative timber barge board and two casement windows containing small stained-glass panels.

The side, street facing elevation contains several timber double hung sash windows with decorative timber and corrugated iron bullnose style awnings. The dwelling has been extended to the rear with a fibro skillion structure.

The dwelling is set back on a different alignment than the other dwellings within the street. The front setback contains a well-kept garden with a range of plantings, including hedges and succulents, and a paved pathway. These do not appear to be historically related to the dwelling. The property is bound by a timber picket fence along the street boundary.

Within the curtilage of the dwelling, a contemporary subdivision has occurred and a modern residence has been constructed at 53 Kerrs Road which was unintentionally included within a previous listing.

The dwelling is in good condition overall showing no signs of deterioration from the public domain.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Fibro skillion extension to the rear

The dwelling is highly intact and has high integrity as a result.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1876

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination of the names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government

figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government was an active subdivider in the area, specifically in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

The improved transportation to the region, including rail and road networks, and the relocation of many industries resulted in a growth in residential development around the emerging town centres and within walking distance from the places of employment. The nature of these early residence varied according to their location. Most were constructed simply from timber with weatherboard cladding and shingled or galvanised iron rooves. Many were simple, single storey workers' cottages, of which a number remain.

Other dwellings, built around the turn of the century, were constructed from brick or timber or a combination of the two, with tiled rooves and timber detailing. The cottage at 55 Kerrs Road is a very early surviving example of fibro construction in Lidcombe built 1876. It was built for William White, carriage builder of Rookwood. Originally, the building may have been situated on a larger block, with small sheds or outhouses adjacent. These appear to have been demolished. The orientation of the residence suggests a variation in street alignment or development of the street at a later date.

Presently, the dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The heritage curtilage of this item should be reduced to include 55 Kerrs Road only. Other than potential historical archaeology, which was likely destroyed by the modern dwelling on site, the inclusion of 53 Kerrs Road is unwarranted. The heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland LEP.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the correct Lot/DP and will need to be altered.

Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Commercial	

Curtilage Map

Revised curtilage recommended - refer below.

Statement of Significance

Fenton House is locally significant for its historic and aesthetic values. It is historically significant for its role in serving the area as a corner retail and residential building since 1916. It provides evidence of the major population boom during the Federation and Inter-War period when residential development and the associated civic infrastructure grew at pace throughout the city in response to industrial activity. The building has aesthetic significance as a detailed and largely intact example of a Federation/ Inter-War style of architecture. The siting of the building on a prominent street corner also makes it a notable and attractive landmark in its local area.

Criteria Assessment	
a) Historic	The building has served as a corner retail / residential building since 1916. It provides evidence of the major population boom during the Federation / Inter-War period when residential development and the associated civic infrastructure grew at pace throughout the city.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building has aesthetic significance as a detailed and largely intact example of Federation / Inter-War architecture. The siting of the building on a prominent street corner also makes it a notable and attractive landmark in its local area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Fenton House is a two storey Federation style corner shop located on Joseph Street and James Street. The building is constructed of brick which has been rendered and painted. The corner of the building has a high parapet, with roughly rendered panels and protruding piers with cornices. A medallion emblem and the building name are featured in the brickwork of the canted corner. A series of unusual paired, quarter arch, timber, double hung windows exist in the first floor wall. A suspended awning extends along one facade and rounds the corner, though it is terminated before it reaches the other end of the building. Some timber framed windows remain on the ground floor, set high in the wall. The shopfronts to the street facing elevations have been altered, with the introduction of aluminium framed windows and doors to the lower facade, air-conditioning units and modern signage for 'Guardian Funerals'. The lower façade is less intact than the upper façade.

To the east, the shop has been extended in brick with a substantial two-storey structure which contains a roller door. Further, a large brick warehouse has been extended off the later brick addition. The warehouse is fronted by a concrete carpark.

Overall, the original shop building appears to be in good condition. The additional structures are also in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Aluminium framed windows and doors*
- Air-conditioning units to street facing elevations*
- Modern signage*
- Brick extension to the east*
- Brick warehouse*

Due to a range of alterations to the façade elements, the integrity of the building is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1916

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name "Lidcombe" is derived from the combination of the names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government was an active subdivider in the area, specifically in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s

onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

As the residential estates of Lidcombe grew around the ever-growing industrial activity, many estates contained their own general / corner store. It was usually a family business to provide for everyday requirements, particularly where the town centres were not within walking distance. Such stores were usually additions to existing residences, though there are some freestanding examples as well as some semi-detached residences / stores built as complete entities. Not many of these stores are still functioning and many have been converted into private rooms.

Fenton House was built in 1916 as a local store to service the residences in the surrounding area. Today, it is used by Guardian Funeral as a commercial property.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		

		11. The condition of this item is poor. Condition and maintenance should be monitored.		

Other recommendations and/or comments:

- Should the opportunity arise, the air-conditioning units to the façade should be removed and the windows / walls made good. Further, the aluminium windows should be replaced with timber.
- As the listing should concern the original shop only, not the face brick extension and associated warehouse, the heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland LEP.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the correct Lot/DP and will need to be altered.

Curtilage Map

Statement of Significance

The Lidcombe Hotel has local heritage significance for its historic, social, aesthetic and rarity values. Built in 1930, it is an example of a hotel established in the early twentieth century, prominently situated in the town centre of Lidcombe, opposite the railway. The hotel is historically significant as it would have provided temporary accommodation for some of the workers to come to the area in the early twentieth century, as well as provided stimulus to the growth of the town centre in the immediate vicinity. It is socially significant as a popular place of gathering and meeting in the Lidcombe community. The building has aesthetic significance as a robust masonry Inter-War Georgian Revival building, which is enhanced by the prominent corner location.

Criteria Assessment	
a) Historic	The item is historically significant as an example of a hotel establishment from the early twentieth century, prominently situated in the centre of the town of Lidcombe, opposite the railway. The hotel would have provided temporary accommodation for some of the workers to come to the area in the early twentieth century, as well as provided stimulus to the growth of the town centre in the immediate vicinity.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building's aesthetic significance is enhanced by the prominent corner location. A robust masonry building of two to three storeys with an eclectic collection of Inter-War Georgian Revival building details above the metal awning line.

d) Social	The item has social significance as a popular place of gathering and meeting in the Lidcombe community.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is among the earliest leisure facilities to be established in the area.
g) Representativeness	The item does not meet this criterion.

Physical Description

This Lidcombe Hotel is an Inter-War Georgian Revival building, characterised by the pediment, bracketed eaves, quoining to brickwork, round heads to windows, multi-paned windows of horizontal proportions, string courses, Palladian motif, face brickwork and references to the Classical Order. It is a robust masonry building of two to three storeys with an eclectic collection of neo-Georgian style details above the metal awning line. The roof is hipped with a medium pitch and culminates in an elaborate corner pediment with a Palladian arch and recessed balconies behind. The building is sited on a corner, with the main entrance at a 45-degree splay to the corner to emphasise the building's importance. Above the awning line the building appears intact. The awning line is broken to emphasise the recessed side entry. The roof contains a large quantity of solar panels. There is no landscaping to the property.

The building has been well maintained and is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Signage and posters fixed directly to the façade*
- Solar panels on roof
- Neon signage applied to awning

The building has been well kept with regards to form and detailing. It retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1930

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government an active subdivider in the area. Specifically, in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other

prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries, are some examples of the industrial companies that developed within Lidcombe.

Hotels at the turn of the century were established to cater for local residents. Hotels were amongst the earliest leisure facilities be established in the area. Initially, they catered for travellers but later provided accommodation for single men who had recently arrived in the district and were to be employed in the local industries. Such accommodation was in great demand. The earlier hotels were usually located in a prominent position in the town centres, or on the major transport routes such as Parramatta Road.

The Lidcombe Hotel was opened in 1930, with N. T. Tripp as licencee. The hotel remains in use as a hotel.

Curtilage Map

Statement of Significance

Lidcombe Fire Station is locally significant for its historic, aesthetic, social and representative heritage values. Built in 1899, the item relates to an early historic stage in the construction of Stations for the Fire Brigades of NSW. Evidence is preserved of the historical development of the workplace over time. The building is socially significant for its services to the community and links to volunteer and retained firemen. The building is aesthetically significant and representative as a good example of an intact Federation Utilitarian building with simple detailing, constructed in the Federation Classical free style.

Criteria Assessment	
a) Historic	The item is historically significant because it represents an early historical stage in the construction of stations for the Fire Brigades of NSW. Evidence is preserved of the historical development of the workplace over time. The first Fire Brigade premises were erected in Joseph Street at the corner of Kerrs Road in 1892 on land offered by Alderman B. Gormley, with funds raised by donation from local community.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as a good example of an intact Federation Utilitarian building with simple detailing, constructed in the Federation Classical free style.
d) Social	The item is socially significant for the provision of services to the community. The first fire that the Volunteer Fire Brigade was called to was at the Sydney Meat Preserving Company in 1892. It is also socially significant for its links to volunteer and retained firemen.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item retains representative qualities as an intact Fire Station built in the Federation Classical free style.

Physical Description

The building has been constructed in a Federation Classical free style. It is a two-storey Flemish brick-bond structure with a corrugated iron hipped roof to the second storey and a first-storey wing. The street facade features one double hung window on the ground floor, with a segmental arched lintel, as well as three such windows on the first floor. There are several modern signs affixed to the façade, as well as an older cantilevered “FIRE STATION” sign. The engine bay entrance with modern roller door is framed by protective steel braces to the brickwork and features a segmented arched lintel. The lintels are comprised of three rows of header bricks, with a rendered sill. Directly above the entrance bay is an indented rendered rectangle which reads “F.B.B. 1899”. The roof eaves feature simple timber fascia. While most of the external brickworks has been left exposed, one upper storey wall has been rendered. To the rear, a concrete ramp and handrail has been added. A single-storey, skillion style extension has also been added in a matching brick.

There is no significant or notable landscaping on site. The building is framed by concrete driveways to both sides and a paved footpath to the front.

The building is in good condition overall, though there is some notable efflorescence to the brickwork.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New concrete ramp and handrail to rear/side entrance
- Single-storey, skillion style extension
- Concrete carpark to rear
- Modern roller door
- Single sash pane windows are modified*

For the most part, changes to the building have been sympathetic in style and colour. The building retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1899

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government was an active subdivider in the area. Specifically, in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

In the 1890's, the Volunteer Fire Brigade was established in Lidcombe. The first Fire Brigade premises were erected in Joseph Street at the corner of Kerrs Road in 1892 on land offered by Alderman B. Gormley, with funds raised by donation from local community. The first fire that the Volunteer Fire Brigade was called to was at the Sydney Meat Preserving Company in 1892.

A new station was constructed in 1899 on the present site. It was originally called Rookwood Fire Station but was renamed Lidcombe Fire Station in 1913 following the renaming of the suburb. Today, the building is still used as a Fire Station.

Statement of Significance

The Former Lidcombe Police Station has local significance for its historic, aesthetic and representative heritage values. Built in 1928, the item provides evidence of the early twentieth century development of the town centre and local administrative / justice system. The building is the third such premises constructed by the NSW Police. It is aesthetically significant as a Federation Bungalow style Police Station which is prominently sited on John Street and contains fine detailing such as timber shingles to the projecting gable. Although partially modified, the building retains a substantial amount of original fabric. The item is a good and relatively intact example of a Federation Bungalow style Station with its own internal 'lock-up'.

Criteria Assessment	
a) Historic	Built in 1928, the item provides evidence of the early twentieth century development of the town centre and local administrative / justice system. The building is the third such premises constructed by the NSW Police.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	It is aesthetically significant as a Federation Bungalow style Police Station which is prominently sited on John Street and contains fine detailing such as timber shingles to the projecting gable. Although partially modified, the building retains a substantial amount of original fabric.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good and relatively intact example of a Federation Bungalow style Station with its own internal 'lock-up'.

Physical Description

The subject site consists of a one storey, brick Federation Bungalow style public building with a Marseille tiled roof. There is a verandah to the John Street facade, with brick piers supporting paired timber posts. There is a simple timber valance to the verandah with exposed timber rafters. Glass French doors open onto the verandah, with timber framed windows on either side. The main entrance is to the side of the building with a small projecting gable and rendered sign on the lintel reading 'POLICE STATION'. This entry is flanked by a set of three timber windows (one with an air-conditioner infill) and two sets of windows. The building to the east is linked to the main building through what appears to be a small holding cell and yard.

Landscaping to the John Street entrance is mature and dense, with some mature tree roots impacting on the surrounding perimeter brick wall. A low brick boundary wall exists around the perimeter of the site.

To the rear of the building is a large multi-storey residential apartment building. Additional development appears to be in progress as construction materials are being stockpiled in the landscaping areas of the item.

Overall, the condition of the building appears to be fair.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Large residential building to the rear of the site*
- Asphalted front entrance pathway*
- Air-conditioning unit to window*

The building maintains a high level of integrity, though the surrounding site has been heavily modified with the addition of high density residential.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name "Lidcombe" is derived from the combination names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government was an active subdivider in the area. Specifically, in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

The first Police Constable of Lidcombe rented a premises quite close to the Rookwood Cemetery in 1881. Apparently, at this time, owing to the distance to the prison, many prisoners were temporarily housed under the old signal box at the Railway Station.

A station was erected at the corner of John and Board Streets, before being moved to Mark Street. There was only one small detached cell to accommodate prisoners. Soon the staff had increased to four and then twelve. In 1928, the Police Department erected the present Station, with a 'lock up' of its own at the corner of John and Mary Streets. Today, the building is vacant and is no longer used as a police station.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Some of the built fabric is showing deterioration, such as timber and verandah elements, brick boundary fence, and some floral growth on the built fabric indicating excess moisture.
- Should the opportunity arise, the entrance pathway should be re-design to be more sympathetic towards the heritage character of the item.
- Opportunities for adaptive reuse should be investigated.

Curtilage Map

Statement of Significance

The Former Lidcombe Post Office is of local significance for its historic, aesthetic, social and representative values. Built circa 1920s, the item is one of the municipality's early, purpose-built post offices. The site provides evidence of the notable growth of population and associated development of civic infrastructure which occurred in the area during the Federation / Inter-War period. It has social significance for the important utility it provided to people in the community. The building also has local aesthetic significance as a reasonably intact example of a Federation Free Style building and is a notable landmark in a commercial centre where much of the early historic building stock has been modified.

Criteria Assessment	
a) Historic	The item is historically significant as one of the municipality's early, purpose-built post offices. The item provides evidence of the notable growth of population and associated development of civic infrastructure which occurred in the area during the Federation / Inter War period.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as a reasonably intact example of a Federation Free Style building and is a notable landmark in a commercial centre where much of the early historic building stock has been modified.
d) Social	The Lidcombe Post Office has local social significance as one of the municipality's early, purpose built post offices.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good example of a reasonably intact Federation Free Style building.

Physical Description

The post office is a single storey rectangular building with half gabled terracotta tile roof and exposed rafters, on the corner of Joseph and Taylor Streets. The building, however, addresses the 'T' intersection of Bridge and Joseph Streets. The southern end of the western facade on Joseph Street has twin parapeted gables separated by the original entry portico which has now been enclosed/boarded up. The gables are of brick with sandstone capping, string course and bracketed weather bar over the air vents. Three six paned double hung timber windows, separated by a pier of brickwork, are centred under each gable. Some of the windows have been boarded up. A sandstone lintel is over the windows, and a sandstone sill extends the width of the gable fronts. The original entry has two sandstone Tuscan columns supporting a double sandstone lintel with rondels, and cornice. The top lintel has “Lidcombe” in bronze lettering, while the bottom lintel has “Post Office” carved in relief. The porch has the original grey terrazzo, with red banding floor, with yellow terrazzo steps. The entry to the postal chamber has been moved to the northern end of the west facade. An unsympathetic addition of a porch in brick and timber has been built c. 1945, with timber and wire glass double entry doors to a new postal chamber (the original telegraph exchange). The southern facade has two pairs of six pane double hung timber either side of the chimney. The chimney stack is of plain brickwork with a sandstone capping and a small terra cotta pot.

There is no landscaping on site, being surrounded by asphalt and concrete surfaced areas.

The condition of the building material is fair to poor, with sandstone delamination and staining, peeling paint on windows, broken glazing, graffiti and guano on surfaces. A number of glazing panels have been broken. The M from the “Lidcombe” lettering has become detached and is at risk of falling off and being lost.

Condition	Good	**Fair**	Poor

Alterations and Additions

- 1950s extension to the rear*
- Steel window grilles at the rear*
- Steel traffic barriers fixed to building wall*
- Cyclone fencing security gates
- Suspended illuminated commercial signage above portico*

Though there are several unsympathetic accretions, the integrity of the building is considered to be high as much of the original fabric is intact.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1920s

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government an active subdivider in the area. Specifically, in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

A post office was established at Haslams Creek in 1868 at the railway platform. This had been initiated as a result of a public meeting at Phillip Kiefer's Inn at the 11th milestone in 1859. A telegraph office opened in 1879 at Rookwood, combining operations with those at the railway platform. Rookwood Post Office had operated from the Town Hall in Church Street for some years before being moved to the building at Joseph and Taylor Streets in 1920. In the late 1980's a severe hail storm damaged the roof fabric. The previously unglazed tiles were replaced with glazed tiles. At present, the site is unused.

Recommendations

Statement of Significance

The Lidcombe Public School and Infants Department are locally significant for their historic, aesthetic, social and representative heritage values. The school has served as a community educational resource since 1879. Through this, the buildings provide evidence of the nature of suburban development of local social and cultural institutions which accompanied the residential growth of the suburb in the 1880s and later 1910s.

The School buildings have aesthetic significance as intact and well detailed Victorian Free Classical and Federation Arts and Crafts school buildings of the period and externally they retain much of their original character and fabric. The siting of the group and the integrity of its aesthetic qualities also make it a notable and attractive landmark in its local area. The site contains several large eucalyptus trees which likely date from the original school yard.

The buildings demonstrate representative qualities of both Victorian and Federation school buildings built between 1879 and 1916.

Criteria Assessment	
a) Historic	The school is historically significant for its role as an educational institution for the community since 1879. The buildings also provide evidence of the nature of suburban development of local social and cultural institutions which accompanied the residential growth of the suburb in the 1880s and later 1910s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The School buildings have aesthetic significance as intact and well detailed Victorian Free Classical and Federation Arts and Crafts

	school buildings of the period and externally they retain much of their original character and fabric. The siting of the group and the integrity of its aesthetic qualities also make it a notable and attractive landmark in its local area.
d) Social	The school has social significance with the current and past community of Lidcombe including current and past pupils, parents and teachers.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The buildings demonstrate representative qualities of both Victorian and Federation school buildings built between 1879 and 1916.

Physical Description

The Lidcombe Public School covers a large part of an entire suburban block and comprises a series of one and two storey buildings, constructed in two tone face brick. The original Victorian Free Classical building, constructed in 1879, appears to be small single storey pavilion with an unequal gable roof and stone dressings. Later Federation Arts and Crafts buildings continue the use of brickwork but substitute bands of darker brick and concrete lintels for the stonework. The buildings are roofed with red terracotta and cement tiles and all feature timber framed, small pane, double hung windows. Small brick amenities blocks are located in the grounds. In addition to demountable buildings, the latest building is a low scale face brick, with cement tiled roof in a 'T' plan with timber awning windows.

The site contains several large eucalyptus trees which likely date from the original school yard. The playground is paved and grassed.

Overall, the site is considered to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Staged additions were made to the school in 1883 and 1893.
- In 1916, the infants building was created and further substantial additions were made in 1922, comprising six extra classrooms.
- In 1962, an annex was opened to cater for partially sighted children after Wahroonga Blind School was closed down. The annex was still operational in 1979.
- There have been a number of additions to the complex since the first schoolroom was erected, the latest being in 1962.

As viewed from the street, the historic buildings appear to have high integrity. Though, as is the nature of school buildings, they are subject to change overtime. It is likely that the interiors and some elevations are of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1879-1916

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination of the names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The NSW government was an active subdivider in the area, specifically in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

The Lidcombe Public School was first erected in John Street in 1879. Classes had previously been conducted in private premises. Staged additions were made to the school in 1883 and 1893. In 1916, the infants building was created and further substantial additions were made in 1922, comprising six extra classrooms. In 1917, an Honours Roll to soldiers killed in WWI was unveiled at the school. In 1962, an annex was opened to cater for partially sighted children after Wahroonga Blind School was closed down. The annex was still operational in 1979. There have been a number of additions to the complex since the first schoolroom was erected, the latest being in 1962.

Today, the site remains in use as a public school.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item’s heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item’s listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g.	**X**

				paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the Development Application should be accompanied by a detailed heritage assessment and fabric analysis to understand which buildings are significant and how to manage change.
- Should any new buildings be proposed for the site, the architecture of the new buildings should not detract or adversely impact upon the heritage items and respect the heritage character.

Curtilage Map

Revised curtilage recommended - Refer below.

Statement of Significance

This Minali Special School residence has local significance for its historic, aesthetic, associative and rarity values. The building was the residence of the superintendent of the Lidcombe State Hospital for many years, giving it rare associative and historic significance. It is a rare example of a relatively large residence erected in the study area in the early twentieth century. It is aesthetically significant as it provides a good example of a Federation residence erected in the municipality during this phase of development. The original fabric of the building is intact, though currently being restored, and it has attractive and interesting decorative detail.

Criteria Assessment	
a) Historic	The Minali Special School residence is historically significant as an early twentieth century dwelling relating to the early operation of the former Lidcombe Hospital Site.
b) Associative	The residence was occupied by the superintendent of the Lidcombe State Hospital for many years.
c) Aesthetic/Technical	The item is aesthetically significant as it provides a good example of a Federation residence erected in the municipality during this phase of development. The original fabric of the building is intact, though currently being restored, and it has attractive and interesting decorative detail.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is a rare example of a relatively large residence erected in the study area in the early twentieth century.

g) Representativeness	The item does not meet this criterion.

Physical Description

As the site was not accessible during the site inspection, the following physical analysis has been replicated from the former listing sheet for the item, dated March 2011 :

> *The former residence that now lies within the grounds of the Minali Special School was built in the Federation style. It is a one storey building with a hip and valley roof, through which two simple chimneys project. The building has rough cast cement rendered exterior walls with buttresses and a variety of square bays at irregular intervals. The northern room has an arched opening to a sleepout, which has now been enclosed. The services area to the south leads onto a verandah which has since been enclosed. All windows and doors in the building have been recently removed, possibly for renovation. Evidently the front and back doors featured panels of amber and blue glass. An 'Oiel de Boeul' window is situated in one wall of the residence. Brackets where shutters have been fitted to the back windows are still evident.*

Biosis Pty Ltd Statement of Heritage Impact (2017) describes the landscape surrounding the subject site. A row of mature trees surrounds the site and includes the following species:

- Brush Box
- Hop Pine
- Blackbutt
- African Olive
- Forest Red Gum
- Tallowood

As the site was inaccessible during the site inspection, a condition rating has not been provided.

Condition	Good	Fair	Poor

Alterations and Additions

- Unknown, no access to site.

As the site was inaccessible during the site inspection, an integrity rating has not been provided.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1908

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The NSW government was an active subdivider in the area, specifically in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

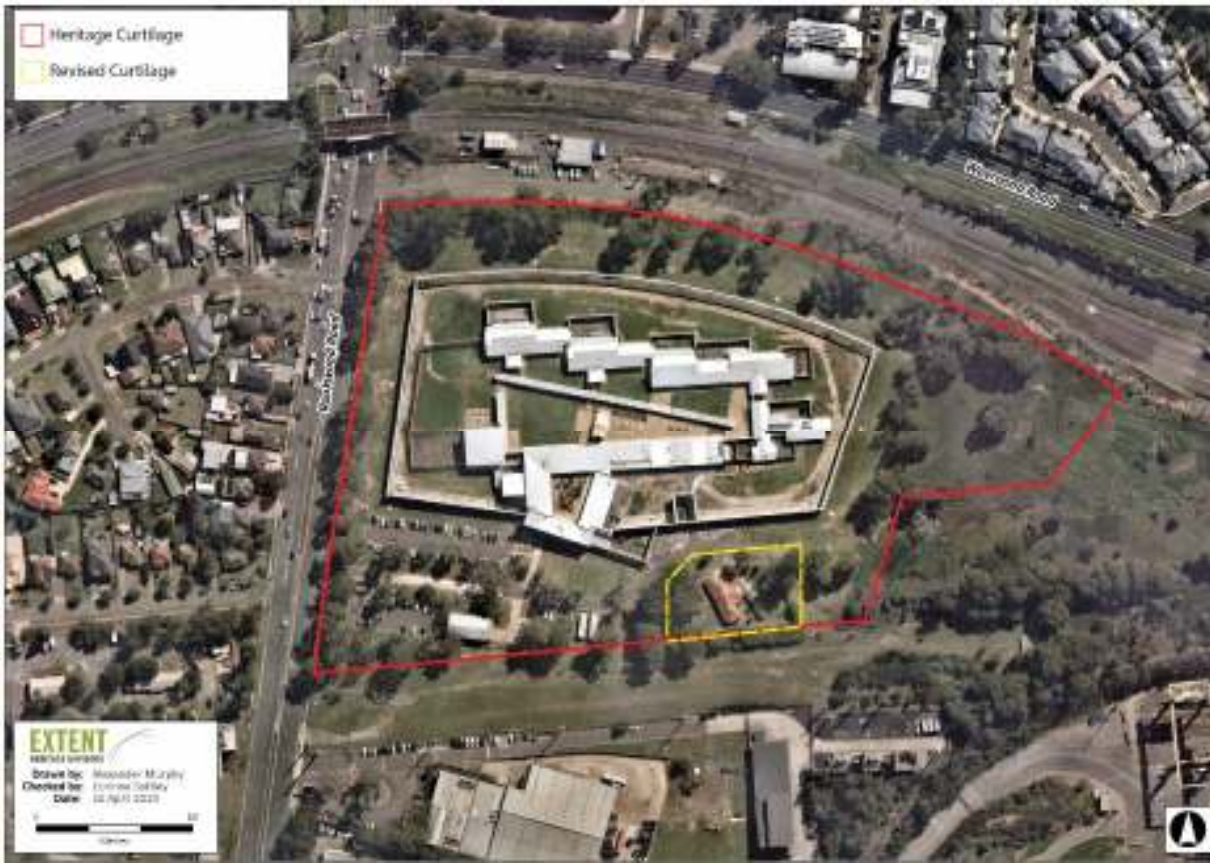
Lidcombe Hospital
The New South Wales government bought the land in 1879 from HG Douglas and Joseph Hyde Potts. Some of it was used to expand Rookwood Cemetery while another section was used for a boys' reformatory to teach farming and other useful skills to young offenders.

Established in 1893, the asylum (later Lidcombe Hospital) occupied 1300 acres (526 hectares) in the suburb now called Lidcombe. In 1907, it occupied 755 acres (306 hectares). Over time, land was transferred or sold to other institutions. Carnarvon Golf Course, on the western side of Joseph Street, was part of the dairy for the hospital until 1948. In other developments, in 1959 the State Institute of Clinical Pathology moved to a new building on the southern border of the land; Minda Child Remand Home opened in 1966; Cumberland College of Health Sciences (later the Lidcombe campus of the University of Sydney) appeared in 1974; Paraquad NSW opened Ferguson Lodge in 1979; the Multiple Sclerosis Society came in 1984; and the Lidcombe College of Technical and Further Education was set up in 1993.

In summary, the site underwent the following name and use transformations:

- 1885-1892: Boys Reformatory and Model Farm (proposed)
- 1893-1913: Rookwood Asylum for the Aged and Infirm
- 1914-1926: Lidcombe State Hospital and Asylum for Men
- 1927-1966: Lidcombe State Hospital and Home
- 1966-1995: Lidcombe Hospital (Note: the Jack Lang Wing remained in use for hospital purposes until 1997).
- 1998-2000: Olympic Media Village

Superintendent's Residence
The Minali Special School residence was once the home of Dr. Robert Fox, the former medical superintendent of the former Lidcombe State Hospital. It occupied part of the hospital's extensive grounds. The residence was built circa 1908.



From 1966, the Minda Remand Home opened for the detention of young juveniles who were awaiting court appearances. At this time the residence was used as the Deputy Manager's Residence.

Minali Special School
Following the Minda Remand School, the Minali Special School was opened in 1975 to provide educational and residential facilities for state wards. The former Superintendent's Residence was utilised as the Minali Centre School Office until the closure of the Minali Special School in 1994. The residence remained vacant from the early 1990s until it was restored in 2006 and is currently used as administration offices for the Juniperina Juvenile Justice Centre.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).

Curtilage Map

Statement of Significance

The Railway Hotel has local significance for its historic, social, aesthetic and representative heritage values. Built in 1876, the building is an example of a hotel established in the late nineteenth century (though later rebuilt or substantially renovated), prominently situated in the centre of the town of Lidcombe, opposite the railway station. More specifically, the hotel is historically significant as it would have provided temporary accommodation for some of the earliest workers to come to the area in the late nineteenth century, as well as provided stimulus to the growth of the town centre in the immediate vicinity. It is socially significant as a popular place of gathering and meeting in the Lidcombe community. The item is aesthetically significant as a hotel in a prominent corner location with a layering of architectural stylistic features. The building features Art Deco elements such as the lettering and bonded horizontal mouldings to the parapet. The streamlined appearance of the parapet is consistent with the theme of movement typical to the 1930's, as an expression of both horizontal and vertical movement. The building's aesthetic significance has been hampered by a number of modifications (or possible rebuilding).

Criteria Assessment	
a) Historic	The item is historically significant as an example of a hotel established in the late nineteenth century (though later rebuilt or substantially renovated), prominently situated in the centre of the town of Lidcombe. The hotel is historically significant as it would have provided temporary accommodation for some of the earliest workers to come to the area in the late nineteenth century, as well as provided stimulus to the growth of the town centre in the immediate vicinity.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is aesthetically significant as a hotel in a prominent corner location with a layering of architectural stylistic features. The building features Art Deco elements such as the lettering, the bonded horizontal mouldings to the parapet. The splayed corner is emphasised by a finial and a raised parapet line. The streamlined appearance of the parapet is consistent with the theme of movement typical to the 1930's, as an expression of both horizontal and vertical movement. A number of modifications obscure some of its heritage aesthetic.
d) Social	The item is socially significant as a popular place of gathering and meeting in the Lidcombe community.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a type of temporary accommodation providing for workers coming to the area in the late nineteenth century.

Physical Description

The Railway Hotel is a two-storey hotel building with a basement cellar area and a small one storey wing to the rear. It is a typical pub extending to the street boundary alignment with a splay to the corner. The corner location is typical of such pubs in the Sydney region. The corner is further emphasised by a finial and a raised parapet line. The streamlined appearance of the parapet is consistent with the theme of movement which was typical to the 1930's, with an expression of both horizontal and vertical movement. The building features Art Deco elements such as the lettering, the bonded horizontal mouldings to the parapet, the splayed corner with finial detail. Some elements seem to date from an earlier period, such as the multi paned timber windows. The facade below the awning has clearly been updated and modernised, however the façade fenestration appears to be original.

There are some trees along the Toohey's Lane side of the property, though it is unclear if they are located within the curtilage. To the rear of the hotel is a large asphalt carpark.

The building has been well-kept as a functioning hospitality venue and is in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Illuminated signage fixed to ground façade walls*
- Illuminated signage suspended from awning*
- Flagpoles on roof*
- Air conditioning condensers mounted to brackets on first floor façade*

Overall, the Railway Hotel appears to be of moderate integrity due to the addition of modern signage and flagpoles, and the likelihood that the interiors have been modified.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1876

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government an active subdivider in the area. Specifically, in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

The hotels were among the earliest leisure facilities to be established in the area. Initially they catered for travellers but in the late nineteenth century they were established to cater for local residents. Hotels provided accommodation for single men who had recently arrived in the district and were to be employed in local industries. Such accommodation was in great demand. The earlier hotels were usually located in a prominent position in the town centres, or on the major transport routes such as Parramatta Road.

The Railway Hotel was originally licenced in 1876 as the “Rookwood Hotel”. The publican in 1884 was M. C. DeLisle. By 1890, the licence was held by Joseph Abrahams. The name change to the Railway Hotel occurred with the change of publicans in 1887. Today, the building remains in use as a hotel.

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The building is currently painted a cream colour accented in red. This is not a typical colour scheme for buildings of this period or style. Undertake a historic paint finishes analysis to inform a more appropriate colour scheme.

Curtilage Map

Statement of Significance

The Royal Oak Hotel has local significance for its historic, social, aesthetic, rarity and representative heritage values. The first Royal Oak Hotel was established in 1878 was historically significant as an early hotel which provided temporary housing for men working in the area.

The current Royal Oak Hotel was rebuilt in 1941 and is prominently situated in the centre of the town of Lidcombe, opposite the railway station. The building provides evidence of the residential and urban growth of the Lidcombe during the twentieth century. It is socially significant as a popular place of gathering and meeting in the Lidcombe community. The building is of high aesthetic significance as an intact Post-War Period pub built in the P & O style with Art Deco detailing. This is enhanced by the high level of integrity retained through much of its original character and fabric. The building demonstrates representative qualities of an intact P & O style pub with Art Deco detailing, built in 1941. The item is a rare building typology found in the Lidcombe area and more broadly Cumberland LGA.

Criteria Assessment	
a) Historic	The hotel is historically significant for providing temporary accommodation for some of the earliest workers to come to the Lidcombe area in the late nineteenth century. The hotel also provided stimulus to the growth of the town centre in the immediate vicinity.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	This is a highly decorative example of a Post-War Period P & O Style pub with Art Deco detailing. The facade forms a major curve to imply movement around the building. The building's aesthetic significance is enhanced by the prominent corner location.

d) Social	It is socially significant as a popular place of gathering and meeting in the Lidcombe community. The hotel provided accommodation for single men who had recently arrived in the district and were to be employed in local industries.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is a rare building typology found in the Lidcombe area and more broadly Cumberland LGA.
g) Representativeness	The building demonstrates representative qualities of an intact P & O style pub with Art Deco detailing, built in 1941. The item retains much of its original fabric and form.

Physical Description

The Royal Oak is a highly decorative example of an Post-War Period P & O Style pub with Art Deco detailing. The horizontal movement of the façade is expressed by bonded concrete strips forming the boundaries of a glazing strip. Infill to the glazing strip is bonded, multi coloured brickwork and fenestration at regular intervals. The verticality of the building is stressed by a brick and concrete finial in a vertical strip at the centre of the facade. The building is two storeys in height with a basement cellar. Circular metal grilles above the windows emphasise the linear quality (similar to an ocean liner). Original tiles are extant on the facade. The roof has a stepped parapet.

The curved facade gives the impression that the building is turning the corner, however it is positioned on a traditional straight street. Available historic mapping shows that there was never a road along the eastern façade where it wraps around, though this side of the building may have been an open lot or walkway prior to the construction of the neighbouring shop.

Some later aluminium doors and windows have been installed on the ground floor. Some damage to the fascia of the awning is evident, as well as general staining to the face brickwork, but otherwise the facade is in good condition.

There are several potted frangipani trees to the upper façade. Other than this there does not appear to be any other landscaping to the site.

The building has been well-kept as a functioning hospitality venue and is in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Signage
- Satellite dish*

While the overall form of the hotel is intact, the orientation and form of the hotel is indicative of an earlier street and footpath alignment. This is obscured by later infill development along Railway Street. The building appears largely unaltered from its time of construction in the 1941 and has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1941

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government an active subdivider in the area. Specifically, in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

The hotels were among the earliest leisure facilities to be established in the area. Initially they catered for travellers, but in the late nineteenth century they were established to cater for local residents. Hotels provided accommodation for single men who had recently arrived in the district and were to be employed in local industries. Such accommodation was in great demand. The earlier hotels were usually located in a prominent position in the town centres, or on the major transport routes such as Parramatta Road.

The original Royal Oak Hotel was built in 1878 and licenced in that year. The publican is listed as being E. Smith. Tooth and Company purchased the hotel in 1919. The hotel was rebuilt in 1941 in the Post War Period. Today, the building remains in use as a hotel.

Statement of Significance

The St. Joachim's Catholic Church and associated buildings have local historic, aesthetic, rarity and social significance, having served as a community resource since 1926. The buildings are also significant for the evidence they provide of the nature of suburban development in the Inter-War period in Lidcombe. In particular, the buildings provide evidence of the development of local social and cultural institutions which accompanied the residential growth of the area in the 1920s and again in 1950s. Architecturally, the Church building is rare example of an Inter-War Romanesque suburban Church and externally it appears to retain much of its original character and fabric. The later 1950s Parish Hall and School also contributes to the aesthetic significance of St Joachim's as an intact example of a modernist brick veneer building.

Criteria Assessment	
a) Historic	The St. Joachim's Catholic Church and associated buildings have local historic and social significance as having served as a community resource since 1926. The buildings are also significant for the evidence they provide of the nature of suburban development in the Inter-War period.

b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The Church building is rare example of an Inter-War Romanesque suburban Church and externally it appears to retain much of its original character and fabric. The later 1950s Parish Hall and School also contribute to the aesthetic significance of St Joachim's as an intact example of a modernist brick veneer building.
d) Social	The church provided evidence of the development of local social and cultural institutions to accompany the notable residential growth of the period, the church served the local Catholic community.
e) Scientific	The item does not meet this criterion.
f) Rarity	The Church building is rare example of an Inter-War Romanesque suburban Church in the area.
g) Representativeness	The item does not meet this criterion.

Physical Description

The two storey high church is sited picturesquely on a corner location in the town centre of Lidcombe. It has a moderately low pitched gable roof with a small turreted tower. The walling is heavily textured with a number of feature piers. A number of round arched opening are positioned in the side walls of the church. A large stone arch in the brickwork marks the entrance, where two double doors are located. Above these doors is situated a large circular (wheel) window in stone with machicolation motifs in the brickwork above. Two open porticos are situated either side of the main entrance.

The complex also contains:

- Parish Hall, built in the late twentieth century from brick with a metal clad gable roof
- Benedict Junior College, a blond brick, two-storey building with a tiled gable roof
- Marist Bros. Monastery, a Federation, two-storey brick building with a tiled, hipped roof
- Church of Our Lady of the Assumption Armenian Catholic Church, a single-storey stripped back Spanish Mission style church with rendered brick.

St. Joachim's School is situated in Mary Street, near the Church.

The church appears to retain much of its original character and fabric. The Church is in good condition and does not appear to have been significantly modified since construction.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Alterations and additions are unclear from site inspection due to access restrictions.

The integrity of the Church, Parish School and Hall appears to be high. The integrity of other educational structures, layout and landscape is unclear from the public domain.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1926-1950

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it.

The name “Lidcombe” is derived from the combination names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. The suburb was renamed to "Lidcombe" on 15 October 1913.

The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe. The New South Wales government an active subdivider in the area. Specifically, in a portion of land north of Rookwood cemetery not incorporated into the Rookwood Necropolis. The land now bounded by Bachell Street, Nicholas Street, Swete Street and the railway, was subdivided and sold at auction by the government from the 1880s onwards. Other prominent subdividers at Lidcombe and Rookwood included land, building and investment companies. Groups such as the Sydney and Provincial Land and Building Company Ltd, Land Company of Australasia, and National Permanent Building, as well as others were responsible for much of the subdivision and sale of estates.

Lidcombe experienced a housing and industrial boom in the 1920s. High-tech industries that were established in the area at included the manufacture of electrical goods, motor car manufacturing, steel construction and wool and knitted industries. The Ford Motor Company of Canada, Jantzen (Australia) Ltd and Associated General Electric Industries are only some examples of the industrial companies that developed within Lidcombe.

The earliest Catholic Services were held at St. Joseph's Hospital, Auburn. The first Catholic Church of St. Joachim's was opened in 1884, near where Fr. J.J. Therry had laid a foundation stone over 20 years before. This early Church was replaced in 1926 by the present Church. Over the years, many additions have been made to the St. Joachim's complex, including the construction of a Parish Hall, Convent, Benedict Junior College in 1989 and Marist Brothers Monastery. Today, the site remains in use as a church and school.

Recommendations

Curtilage Map

Revised Curtilage recommended- refer below.

Statement of Significance

Wyatt Park forms a large recreational precinct in Lidcombe with considerable historic, aesthetic, social and rarity values to the local community. The Park is historically significant of the development of community sporting facilities and recreational uses in the Lidcombe and Auburn area from the 1930s onwards. The sporting venues at the Park have been constructed at different stages from 1930 onwards, often with the financial support of local beneficiaries and the government. The sporting complex is of aesthetic significance for its use of modernist architectural forms that date between 1930 and 1950. Of particular aesthetic significance is the Lidcombe Oval and grandstand that opened in 1933 and retains much of its original fabric. Similarly, the swimming centre constructed during the Post War period in 1959, also retains some original fabric. The Park is socially significant as a major sporting and recreational venue for both Lidcombe and Auburn, dating from 1951. The Wyatt Park recreational precinct is rare as an example of a recreational facility constructed in the post war period, of which few examples remain in Western Sydney.

Further, the line of fifteen Eucalyptus microcorys trees surrounding Wyatt Park along Olympic Drive have historic and aesthetic significance, forming a landmark vegetation in the local region. The Eucalyptus microcorys was widely planted in the area in the early 1970s, when an interest in Australian native vegetation was expressed in greening much of Sydney's inner west areas by the Federal Labor Government.

Criteria Assessment	
a) Historic	The Wyatt Park recreational precinct forms a large recreational complex in Auburn with considerable historic significance to the local community. The sporting venues at the Park have been constructed

	at different stages from 1930 onwards, often with the financial support of local beneficiaries and the government. The Eucalyptus microcorys are demonstrative of the interest in Australian native vegetation that was expressed in greening much of Sydney's inner west areas by the Federal Labor Government in the area in the early 1970s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The built structures within the Park vary in style. The sporting complex is of aesthetic significance for its use of modernist architectural forms that date between 1930 and 1950. Of particular aesthetic significance is the Lidcombe Oval and grandstand that opened in 1933 and retains much of its original fabric. Similarly, the swimming centre constructed during the Post War period in 1959, also retains some original fabric. Although substantially renovated between 2016 and 2017, the building retains the form of the original structure. Original fabric and decorative detailing along Church Street is also retained. Further, the line of fifteen Eucalyptus microcorys trees form a landmark vegetation in the local region.
d) Social	The Park is socially significant to the local community as a major sporting and recreational venue for both Lidcombe and Auburn, dating from 1951. The sporting venues at the Park were constructed at different stages, often with the financial support of local beneficiaries or the government. More recently the park, in particular Lidcombe Oval is socially significant to the local community for its association with Western Sydney Magpies rugby league and various cycling clubs.
e) Scientific	The item does not meet this criterion.
f) Rarity	The Wyatt Park recreational precinct is rare as an example of a recreational facility constructed in the post war period, of which few examples remain in Western Sydney.
g) Representativeness	The item does not meet this criterion.

Physical Description

Wyatt Park is a large recreational precinct that contains a variety of sporting fields including a swimming centre, two sporting ovals and basketball and netball courts. The precinct is a green space that also contains the Auburn Youth Centre and features a portion of Haslams Creek which is channelised and operates as a stormwater drain. The surrounding landscape is framed with a line of Eucalyptus microcorys trees along the road and boundary of the site. A carpark is located at the south of the site between the Church Street and Olympic Drive intersection and Haslam Creek Stormwater Drain.

Auburn Swimming Centre
The Auburn Swimming Centre is now known as the Auburn Ruth Everuss Aquatic Centre. The building that opened in 1959 was substantially redeveloped between 2016 and 2017. The complex now features a gym, café, a 25-metre indoor pool, a 50-metre outdoor lap pool, outdoor water polo pool, family leisure and program pool and splash pad.

The Auburn Ruth Everuss Aquatic Centre is simply massed, with some skillion, butterfly and gable roofs. The original concrete block wall along Church Street is painted white and features patterned coursing and tiling. The main changes to the building associated with the redevelopment included the construction of a new entrance and rear addition over the indoor pools. The entrance to the complex is distinguished by a large skillion roof concrete entrance foyer with an area for administrative use, as well as wet areas for visitors. The rear addition features a glass curtain wall with a steel framed roof.

The building is in a good condition due to its recent renovation.

Youth Centre
The Youth Centre is a large, two storey, brick building with simple massing and low-pitched gable roof. The square parapet along the lower façade is newly painted to yellow. The recent coating has removed the former 'Youth Centre' signage. The building features timber windows which have also been recently repainted white. The second storey features a deep set back and is clad in pressed metal and a row of windows on the eastern elevation.

The building is in a good condition due to its recent building maintenance repair works.

Lidcombe Oval and Buildings
Lidcombe Oval is a large circular oval in the centre of the site. The oval is distinguished by the oval entrance gates which feature a brick stepped square parapet with typical Art Deco font that reads 'Lidcombe Oval'. The now painted brick structure features a ticket box and provides entrance to the oval. The reverse side of the structure, fronting the oval features a roller door, presumably protecting a screen or score board. Lidcombe oval also features a grandstand. The grandstand is a brick structure with a steel framed gable roof. The structure features a concrete slab floor to the upper storey as well as concrete lintels over the regularly spaced windows on the ground floor. The oval is encircled by a chain-link fence.

Overall Lidcombe Oval appears to be in a good condition, although there are some signs of efflorescence on the brickwork.

Stormwater Drain
The Haslam Creek Stormwater drain is constructed of brick and lined with concrete on the channel floor. The brick is also capped in concrete and features concrete semi-circular abutments along the channels wall. The bricks are in a good condition, as is the mortar.

Stand of Eucalyptus microcorys
A group of fifteen Eucalyptus microcorys trees, which form a distinctive line to the edge of Olympic Drive. The trees are well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The Auburn Ruth Everuss Aquatic Centre: The building was substantially redeveloped to include a new entrance building, large indoor pool complex, gym, outdoor water polo pool, family leisure and program pool, and splash pad. The redevelopment made use of the existing lap pools, adding the splash pad and larger awnings are new additions to the site. The original decorative concrete block wall along Church Street is retained and painted white.
- Auburn Youth Centre: The building appears to have undergone a refresh program, with repainting of window frames and parapet.
- Lidcombe Oval: The entrance gate is painted blue.

While many structures in the park appear to have had little external modification, it is likely the facilities they contain have been progressively upgraded over time. The integrity of the item, as a whole is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1932 onwards

The suburb of Lidcombe is located 14 kilometres west of Sydney and was first seen as an exploring party rowed up the Parramatta River came close to the area on 4 February 1788. Early land grants in the area were given to settlers around 1804 such as H.G. Douglas, Joseph Hyde Potts, and Samuel Haslam who established the first farms in the area. These early land grants ranged between 60 to 200 acres and were focused around Parramatta Road and the small tracks deviating from it. The opening of the railway station at Lidcombe (known as Haslam Creek station) in 1859 led to the subdivision and subsequent development of Lidcombe.

The name “Lidcombe” is derived from the combination of the names of two former Mayors. When the name Rookwood no longer appealed to residents (due to its association with the expanding necropolis), a new name was created for the suburb. This combined Frederick Lidbury, an active local government figure and Mayor of Rookwood on several occasions with Alexander Larcombe, his main Mayoral opponent. The suburb was renamed to "Lidcombe" on 15 October 1913.

The land in which Wyatt Park is now located, formerly sat within the 100 acres land grant to Anne Curtis. This came to be owned by the Sydney Meat Preserving Company. The land was reserved for public recreation in 18 November 1927, however, had been previously unofficially used as a playing area and trotting track to the north. Council was able to influence the owners, Sydney Meat Preserving Company, not to subdivide that area and after negotiation, were able to influence the current Premier, J. T. Lang (the local member) to ensure the land was reserved for public recreation. The government purchased the 45 acres for £4,500 and Lang announced the purchase officially on 10 August 1926.

Lidcombe Council prepared a comprehensive scheme of development for Wyatt Park which would be gradually implemented with the assistance of D. L. Davidson of the Town Planning Association. A grant of £3,000 from the Commonwealth Government enabled Lidcombe Council to construct an Oval. The grandstand was completed with a loan of £1,000 from the State Government in 1932-3 from Christmas relief funds for the unemployed. Lidcombe Oval had a cycle track built in 1947. The oval was also the home ground for the Western Sydney Magpies rugby league from 1967 to 1986 before the club moved to Campbelltown Stadium in 1987.

The site had previously contained the Lidcombe Baths which were established in 1898 from funds donated by the Independent Order of Oddfellows. The baths were called the 'Hampden Baths' and opened in 1899. A dressing shed was constructed in the 1920's and the site remained a popular swimming venue until the 1930's. In 1941, the baths were closed and soon after removed when Church Street was realigned and Olympic Drive constructed. The Auburn Swimming Centre at Wyatt Park was opened in 1959.

Other improvements made to the park during the Economic Depression of the 1930s included the Council’s acceptance of the state government's "work for the dole" scheme. The scheme came into operation for Lidcombe in June 1933 and continued until July 1937. Works completed included 14 miles of roads, 4 miles of kerbing and guttering, 3 miles of concrete paving and 3 miles of tarred footpaths. The construction of stormwater channels also formed part of unemployment relief works in the 1930s under schemes managed by the Water Board included the Cooks River drainage area, partly situated in Lidcombe, the Haslam's Creek area in Lidcombe. Over £500,000 was spent on storm water channel construction, particularly the channel through Wyatt Park.

In the 1970s, it is likely that the stand of Eucalyptus microcorys was planted when a revived interest in Australian native vegetation was expressed in the greening much of Sydney’s inner west areas by the Federal Labor Government.

The Auburn Swimming Centre, now known as the Auburn Ruth Everuss Aquatic Centre, reopened in 2017 after its redevelopment. Today, the site remains in use as a recreational precinct for various sporting activities and the Lidcombe Oval is again the home ground for the Western Sydney Magpies rugby league team.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Consideration should be given to the integration of I40 (Auburn LEP) with I41 (Auburn LEP) as they are located in the same location, with the same curtilage. Both relate to the park landscape and have thus been combined within this listing sheet. The revised curtilage below reflects the existing curtilage of I40. The Lot/DP stated within this listed sheet reflects this revised curtilage.
- Should the opportunity arise, a Heritage Interpretation Plan should be prepared for the park to assist in telling its social history.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Statement of Significance

The following Statement of Significance has been quoted from the NSW Office of Environment and Heritage, State Heritage Register listing sheet for 'Lidcombe Hospital Precinct' (2004):

Lidcombe Hospital is of outstanding significance in the history of NSW health care, operating for over a century from 1893-1995 as a major State Asylum for the aged and infirm, then an important State teaching hospital specialising in geriatric care and rehabilitation. Lidcombe Hospital became a leader in geriatric care and rehabilitation practices in the 20th Century. The expansion, then the closure, of the hospital reflects the changes in State and Commonwealth government health care policies over the twentieth century. The site has significance for its association with innovative medical practitioners, specialists in geriatric heath care, nurses and the local community for over a century. As the site of the Media Village, the place also has associations with the 2000 Sydney Olympic Games, which provided short-term accommodation for approximately *5,000 visiting journalists.*

The precinct contains an exceptional and rare collection of fine, intact architecture and landscapes of the Victorian, Edwardian, Interwar and late-20th Century styles, together with outstanding examples of asylum and institutional planning from leading Colonial, Government and private architects from the 19th and 20th Centuries. The asylum and hospital planning is an exceptional example of the 19th century advancements in health care along the principles of Florence Nightingale, where it was considered healthy to surround hospital and asylum buildings with gardens as part of patient treatment and the buildings were designed with particular attention to natural light, ventilation and climate control for the care of patients. The collection of reformatory, asylum and hospital buildings include dormitories designed by James Barnet (1885-1887), the former Dining Hall (1885), the Superintendent's Residence (1887) and nine wards designed by Walter Liberty Vernon (1893-1906). All reformatory and asylum buildings are designed in harmony around the central Village Green and unite qualities of shelter and surveillance, community and destitution, within a landscape both picturesque and functionally self-sufficient. The Recreation Hall and Chapel (1963) designed by Ken Woolley, the No. 1 Nurses Quarters (1910), Herdsman's Cottage (c1885), Boiler House and Chimney (1901) and the later Nos 2 and 3 Nurses Quarters (1931 and 1939) all contribute to the aesthetic and historic qualities of the place.

The nine Vernon-designed wards, individually and collectively, are outstanding examples of hospital pavilion buildings in a bungalow form, which are a deliberate continuation of the hospital pavilion typology found in some French and British Colonies of the time, with innovative design variations demonstrating the early use of the colonial vernacular in NSW public buildings and advancements in design for patient care. Australian designs for naturally ventilated hospital wards were well known internationally. Vernon's work demonstrated greater attention to light and ventilation than English examples and landscaping of a much higher standard. The ward buildings demonstrate Vernon's deliberate (and early) use of the Australian Colonial vernacular in his design of public buildings, particularly the wrap-around verandah as a means of climate control, rather than the Italianate arcade or colonnade. The building designs of Vernon at Lidcombe Hospital thereby represent one of a series of public buildings built in NSW, such as the Lands Board Office, the Bourke Courthouse and Grafton Experiment Farm buildings, that mark the search for a distinctly Australian architecture, an architecture that drew on the colonial vernacular. (Boyd)

The earliest roads demonstrate the pattern of development of the Lidcombe Hospital site and the location of the former farming activities and isolation facilities of the earlier Asylum and hospital periods, including Farm Road, Mance Avenue, Brooks Circuit, Main Avenue, Church Street, Sussex Street, Copeland Road and Peden Lane. Landscape plantings including the hoop pines and phoenix palms, tallowwoods, brush boxes, iron barks, pepper trees and spotted gums contribute to the aesthetic qualities of the precinct, including a surviving grove of eucalypts situated on a separate portion of the former hospital site. The Village Green, at the centre of the precinct, is of outstanding significance at a State level for its historic and aesthetic qualities.

The archaeological resource of the site has the potential to contribute to our understanding of the early modifications of the landscape through farming activities and the development of early institutional care for the aged, infirm and the destitute. The Hospital was the site of first Septic Tank system constructed

on a large scale to service an institution in Australia. Remains of the Tank are now located on an adjacent site but infrastructure associated with this system may survive.

The Lidcombe Hospital site has played a significant role in the development of the surrounding suburban areas and the growth of the local area as an employer. It has also acted as a physical barrier to development within the area. The Lidcombe Hospital has continued to be held in high esteem by the local community, including in the present day a number of local community groups, for its cultural, social and landscape values.

Criteria Assessment	
a) Historic	▪ The Lidcombe Hospital site was in continual use for over 100 years, initially providing care and shelter for destitute men, then evolving into an important State teaching hospital providing a comprehensive range of community health care facilities. The Lidcombe Hospital site, as a whole, contains physical evidence of major public works associated with changes in State and Commonwealth health care policy. ▪ From its inception as a proposed Boys Reformatory and Model Farm, to an Asylum for destitute men through to a State teaching hospital, eventually specialising in geriatric care and rehabilitation, the Lidcombe Hospital Precinct demonstrates the changing attitudes of managing and caring for the aged, infirm and destitute. ▪ The Lidcombe Hospital Precinct shows the design and development of a government welfare institution initially reliant upon a self-sustaining farm. ▪ Lidcombe Hospital site shows the design of an institution that had to isolate its proposed function as a Boys Reformatory from the surrounding community, and how it developed to accommodate medical isolation facilities, such as the Scabies and Epilepsy Wards, then evolved to more general health care functions. ▪ In 1919 Rookwood State Hospital and Asylum for Men was the largest institution of its type in the Commonwealth. ▪ The Lidcombe Hospital site played a significant role during the 2000 Sydney Olympics providing accommodation and facilities for over 5,000 journalists. It was temporarily renamed Olympic Media Village. ▪ It is important in demonstrating the colonial government's response to institutionalised housing and care of wayward boys and destitute and infirm men. ▪ The Lidcombe Hospital Precinct is important in demonstrating the concept of a self-sustaining public welfare institution that required intensive farming operations to support its functions. ▪ The Lidcombe Hospital Precinct is important for its role as an Asylum with working farm providing produce to other state institutions. Despite there being little physical evidence of this aspect of operations remaining it is an important historic value associated with the site. ▪ The Lidcombe Hospital site is important for providing and developing geriatric health care and rehabilitation facilities and health care programs during the twentieth century. ▪ The Lidcombe Hospital Precinct reflects changes in State health policy during the twentieth century. The decline and subsequent closure of Lidcombe Hospital reflects the changing emphasis of healthcare for the aged to keep people out of institutions and in their own homes, by integrating geriatric care services provided by general practitioners, hospital outreach services and voluntary agencies.

	▪ Lidcombe Hospital in the 1960s and 1970s was a leader in New South Wales in the medical speciality of 'geriatrics' and the treatment and rehabilitation needs of the elderly. ▪ The Lidcombe Hospital site was transformed during the 2000 Sydney Olympics by providing housing for approximately 5,000 journalists. It demonstrates the important government and community commitment to a major public event. ▪ The Lidcombe Hospital site has played a significant part in the development of many of the surrounding suburban areas and the growth of local communities, both as an employer and as a physical barrier to suburban expansion. ▪ The Lidcombe Hospital site has maintained continuous health care for those in need from the 1890s until its closure in 1995-97. ▪ The Lidcombe Hospital Precinct demonstrates the continually changing needs and responses to the treatment and care of the elderly.
b) Associative	▪ The Lidcombe Hospital Precinct demonstrates the changes in the practice of accommodating and caring for the homeless, destitute and the elderly during the twentieth century. ▪ In 1967, Medical Superintendent George Procopis developed Lidcombe Hospital, as a whole, into an important geriatric hospital with emphasis on activity and rehabilitation therapy; and included treatment and rehabilitation for patients suffering alcoholism, demonstrating the hospitals commitment to innovative and progressive health care. ▪ Dr Tinsley established a full rehabilitation department in 1961 at Lidcombe Hospital and developed programs to actively improve physical and mental facilities and quality of life for aged and disabled persons, demonstrating evolving attitudes to geriatric health. ▪ The Lidcombe Hospital site, as a whole, is significant for its association with Dr Piere Fiaschi and the advanced techniques he made in anaesthesia in 1919 when the Mettzer method of insufflation anaesthesia was introduced to the Sydney medical fraternity. ▪ Many medical specialists, including Dr Lionel Cosins, an English geriatrician of note visited Lidcombe Hospital because of its advanced Rehabilitation Centre, indicating its professional reputation in geriatric medicine. ▪ The Lidcombe Hospital Precinct has associations with the office of eight New South Wales Government Architects notably, James Barnet, Walter Liberty Vernon, George McRae, Cobden Parkes; and the architect Ken Woolley, in demonstrating evolving government design approaches to major public health infrastructure through the twentieth century.
c) Aesthetic/Technical	▪ The precinct contains an exceptional and rare collection of fine, intact architecture and landscapes of the Victorian, Edwardian, Interwar and late-20th Century styles, together with outstanding examples of asylum and institutional planning from leading Colonial, Government and private architects from the 19th and 20th Centuries. ▪ The asylum and hospital planning is an exceptional example of the 19th century advancements in NSW for health care along the principles of Florence Nightingale, where it was considered healthy to surround hospital and asylum buildings with gardens as part of patient treatment and the buildings were designed with

	particular attention to natural light, ventilation and climate control for the care of patients. Australian designs for naturally ventilated hospital wards were well known internationally, where for example, the examples by Hall and Dods in Brisbane were mentioned in advice on hospital design given by the English War Office in 1915. (Boyd) ▪ The nine Vernon-designed wards, individually and collectively, are outstanding examples of hospital pavilion buildings also evidenced in some French and British colonies of the time, which demonstrate the deliberate continuation of the hospital pavilion and barracks designs of the Royal Engineers for the West Indies, with its own distinctive variations derived from the Australian colonial vernacular. This Colonial pavilion style was also employed in Sydney for the Rum Hospital and the Military Hospital on Observatory Hill, and in Newcastle for the James Fletcher Hospital. Examples of similar hospital pavilions are also evidenced in the French colonies. Overseas institutional layouts were visited by both Barnet and Vernon. Vernon's work demonstrated greater attention to light and ventilation than English examples and landscaping of a much higher standard. (Boyd) ▪ Vernon's ward buildings also demonstrate the deliberate and early use of the Australian Colonial vernacular in the design of NSW public buildings, particularly the wrap-around verandah as a means of climate control, rather than the Italianate arcade or colonnade favoured during this stylistic period. The building designs of Vernon at Lidcombe Hospital thereby represent one of a series of public buildings built in NSW, such as the Lands Board Office, the Bourke Courthouse and Grafton Experiment Farm buildings, that mark the search for a distinctly Australian architecture, an architecture that drew on the colonial vernacular. (Boyd) It is possibly this incorporation of the colonial vernacular, along with the deliberately modest building scale, form and non-institutional design, that has led to the wards sometimes being described as being of a bungalow style, even though they were not designed as residences. ▪ The nine Vernon-designed wards (1893-1906) demonstrate finely crafted and detailed timber and fretwork, roof vents, fleches, brick chimneys and encircling verandahs which are aesthetically distinctive. Both individually and collectively they contribute to the aesthetic values of the Lidcombe Hospital Precinct and the Lidcombe Hospital site as a whole. ▪ The architectural character of the Barnet and Vernon-designed buildings and their arrangement around the Village Green reflects late Victorian planning ideals for institutional facilities. ▪ The Vernon-designed bungalow wards demonstrate an adaptation of the domestic bungalow design idiom to the larger institutional scale, also responding to Australian climatic conditions. ▪ The Lidcombe Hospital Precinct contains a rich ensemble of buildings that reflect changing technologies associated with the provision of medical care and public health administration for a period of over 100 years. ▪ The Lidcombe Hospital Precinct is a visually distinctive cultural landscape with buildings sited along contour related roadways creating a 'village' style institution within a landscaped setting. ▪ The buildings around the Lidcombe Hospital Precinct including the Barnet-designed wards (1885-1887), Superintendent's Residence (1887), former Dining Hall (1885), the nine Vernon-designed wards (1893-1906) and the Village Green itself, have an strong

	aesthetic cohesiveness and create a harmonious arrangement of buildings around a landscaped open space. ▪ A number of prominent built elements and landscape features, such as the phoenix palms and hoop pines along the Main Avenue, the Boiler House Chimney, the Clock Tower, the Village Green surrounded by the Barnet and Vernon-designed buildings, the Woolley-designed Recreation Hall and Chapel, the large fig trees and the separate grove of surviving mixed Eucalypts, are all landmark features within the Precinct. ▪ The design of early buildings, their configuration and relationship to each other and the layout of the Lidcombe Hospital Precinct, including the roads, creates an aesthetically distinctive complex of hospital buildings that provides built evidence of significant phases of the development of an important health care facility in New South Wales. ▪ The design and layout of the roads into and within the Lidcombe Hospital Precinct demonstrate the pattern of development and changes that have occurred. The earliest extant roads are important for the understanding of both the Lidcombe Hospital site, as a whole, and include Farm Road, Mance Avenue, Main Avenue, Brooks Circuit, Church Street, Sussex Street, Copeland Road and Peden Lane. ▪ The sequence of buildings on the Lidcombe Hospital site as a whole reflects the changing attitudes to, and technologies of, health care and forms of accommodation thought suitable for patients and staff and architectural philosophies of the late nineteenth and twentieth centuries.
d) Social	▪ The Lidcombe Hospital site is valued by former medical administrators, healthcare practitioners and nurses for: its prominence in development and training in the area of geriatric care and rehabilitation in New South Wales, and for its role as a teaching hospital. ▪ The Lidcombe Hospital site was important to the local community in providing employment and access to a wide range of health care facilities. Local people have strong associations with the place as former staff, patients and visitors. ▪ It is a place that is held in high esteem by a number of identifiable groups for its cultural and social values. ▪ If the Lidcombe Hospital Precinct was damaged or destroyed, it would cause the community and cultural groups a sense of loss. ▪ It is a place of particular importance and association for the Lidcombe Heritage Group Inc. and the Auburn District Historical Society.
e) Scientific	▪ The archaeological resource associated with the Lidcombe Hospital Precinct (in varying degrees depending on integrity) has the potential to contribute to and enhance the extant documentary and physical evidence concerning the development and use of the site over time. ▪ The archaeological resource associated within the Lidcombe Hospital Precinct can contribute to an understanding about developments and changes in the treatment of the destitute, infirm and ailing during the nineteenth and twentieth centuries in Sydney. ▪ The archaeological resource of much of the Lidcombe Hospital Precinct has the potential to yield information about the everyday functioning of the early institutions of asylums and homes for the

	destitute in a unique way through sufficiently intact physical remains which could provide meaningful information. ▪ The archaeological resource associated with the first Septic Tank constructed in Australia and the possible relationship between the irrigation system stormwater channel and the sewerage system has the potential to yield information about the development of the early sewerage system and its technical innovation. The remains of the Septic Tank itself are no longer within the hospital boundary, but pipes and channels and associated infrastructure are likely to be located in the Lidcombe Hospital Precinct. (The remains of the Septic Tank are in the University of Sydney Cumberland College campus). ▪ Archaeological investigations of the early road system could reveal details relating to modifications of the landscape and land use patterns over time that are not available in the documentary resource. ▪ The major part of the former hospital site, beyond the Lidcombe Hospital Precinct, has low or no archaeological significance because it is unlikely to yield further information that will contribute to an understanding of the site's history. This is because no occupation occurred at those areas (occupation was ephemeral, or minor activities associated with the major phases of the site's history took place at those locations). In addition, they are the areas where site disturbance has so compromised archaeological resources that no meaningful information could be pursued through archaeological means. ▪ The evolution of the Lidcombe Hospital Precinct from a facility for the care of the destitute, homeless, aged and infirm, with a self-sustaining farm, into an important teaching hospital specialising in geriatric health care and rehabilitation is a benchmark or reference type for such health care facilities in New South Wales. ▪ The buildings constructed in the Lidcombe Hospital Precinct during the first phases of its development, designed by architects Barnet and Vernon, provide evidence of the government's architectural solution for late nineteenth and early twentieth-century institutions for wayward boys and homeless and destitute men. ▪ The wards designed by Vernon provide evidence of late nineteenth and early twentieth-century methods of natural ventilation and climate control for dormitory-style buildings in New South Wales.
f) Rarity	▪ Lidcombe Hospital Precinct provides evidence of the type of self-sufficient institution developed in the late nineteenth century for the care of wayward boys and later for homeless and destitute men. ▪ The Lidcombe Hospital Precinct, including the Barnet wards, the former Dining Hall, Superintendent's Residence and the Vernon bungalow wards, arranged around the Village Green, are a rare and intact group of institutional buildings reflecting the design philosophies for reformatories/asylums in the late nineteenth and early twentieth centuries. ▪ The largely intact Vernon wards demonstrate a rare expression of the Australian Bungalow architectural style in an institutional setting, responding to the climate in New South Wales and adapted for institutional use.

	▪ The timber detailing, fretwork, roof vents, fleches, brick detailing and verandahs demonstrated in the Vernon ward buildings create a unique architectural aesthetic that is of exceptional interest. ▪ The Lidcombe Hospital Precinct demonstrates the evolution, during the twentieth century, of an institution for the destitute into an important State teaching hospital for the wider community. ▪ It would require further research and analysis to detail the extent to which the Lidcombe Hospital site demonstrates other aspects of the rarity this criterion.
g) Representativeness	The Lidcombe Hospital Precinct, with its historic, aesthetic, social significance, technical/research potential and rarity, provides ample evidence to represent the key State historic themes of science, government and administration, health, education, death and persons. It therefore satisfies all of the following inclusion guidelines: ▪ is a fine example of its type; ▪ has the potential characteristics of an important class or group of items; ▪ has attributes typical of a particular way of life, philosophy, custom, significant process, design, technique or activity; ▪ is a significant variation to a class of items; ▪ is part of a group, which collectively illustrates a representative type; ▪ is outstanding because of its setting, condition or size; and ▪ is outstanding because of its integrity; and ▪ is important for the esteem in which it is held.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, State Heritage Register listing sheet (2004) for 'Lidcombe Hospital Precinct':

Hospital site, setting and layout
The Lidcombe Hospital site contains a variety of buildings and landscape features in a landscaped setting. It also contains historical archaeological features which provide physical evidence of the development of the site from the late nineteenth century to the present day.

The site boundaries have changed substantially since the proposed Boys Reformatory and Model Farm was proposed in 1885, having expanded and contracted during its evolution (Godden Mackay Logan, 2004).

The institution dates to 1876. Its earliest building was the 1885 superintendent's quarters of the Boys' Reformatory (1886-7, comprising five buildings for inmates) (Read, 2018).

Lidcombe Hospital represents hospital planning concepts spanning the 20th century, with its earliest (1880s-90s) phase under Colonial (government) Architect James Barnet, and later phase (1893-1906) under his successor, Government Architect, Walter Liberty Vernon. They demonstrate bungalow style buildings around a 'village green', a continuation of hospital pavilion and barracks designs found in French and British colonies of the era, with greater care over light, ventilation and landscaping of far higher standard. Both Barnet and Vernon visited overseas institutions to inform their work. Vernon's nine wards show deliberate (and early) use of Australian colonial vernacular in public buildings - e.g. wrap-around verandahs to control climate (cf Italianate arcades). With other Vernon work, they show a search for a distinctly 'Australian' style as well as cutting-edge health provision (Boyd, Noni, quoted in Read, 2018).

The buildings were supported by adjacent supporting farm and vegetable gardens and orchards (now gone c/o the 2000 Olympics Media Village and 2006-11 redevelopment for housing). The whole demonstrates self-sufficiency and independence of such institutions and how they worked (Read, 2018).

Its core grounds laid out formally in circuitous drives and landscaped spaces show distinctive High-Victorian and Federation era landscaping, with an array of exotic and native species, spacious lawns, feature shrubs and flower bedding. Surviving mature specimen trees speak of that age as much as its buildings do, notably native rainforest trees such as Norfolk Island and hoop pines (Araucaria heterophylla, A. cunninghamii), figs such as Moreton Bay (Ficus macrophylla) and Port Jackson (F.rubiginosa), brush boxes (Lophostemon confertus)(as lined many a suburban street of the era) and specimen or lines of palms (e.g. Californian Washingtonia robusta, Canary Island dates (Phoenix canariensis) and native cabbage tree palms (Livistona australis)(State Heritage Register listing). Later plantings (1950s-70s) included more native species - Eucalyptus such as tallowwoods (E.microcorys), red ironbarks (E.fibrosa), spotted (Corymbia maculata) and lemon-scented gums (Corymbia citriodora), bottlebrushes and paperbarks. Detail plantings (shrubs, flowers) have been lost with cuts in staff and budgets but structure plantings of major trees generally survive. (Read, 2018).

Road and landscape elements

- *Village Green, Areas 1 and 2 and vistas within the Village Green;*

- *Hoop pine and open space (site of former Administration Building) at junction of Main Avenue and Brooks Circuit at the entry to the historic core (32);*
- *Avenue of hoop pines (Araucaria cunninghamii) and phoenix palms (Phoenix sp.) ((33);*
- *Avenue of tallowwoods (Eucalyptus microcorys) (14);*
- *Remnant plantings (hoop pine, pepper tree (Schinus areira), flame tree (Brachychiton acerifolium) (15);*
- *Moreton Bay fig (ficus macrophllya) and row of tallowwoods (Eucalyptus microcorys) (16);*
- *Avenue of plantings at rear of historic core, Moreton Bay figs (Ficus macrophylla) and brush boxes (Lophostemon confertus) (17);*
- *Petticoat and cotton palms in eastern area of historic core (Washingtonia robusta and Washingtonia filifera) (20);*
- *Mixed plantings east of Superintendent's Residence (21);*
- *Mixed plantings in Area 1 of Village Green opposite Superintendent's Residence (25);*
- *Chinese juniper (Juniperus chinensis) (37);*
- *Hoop pine (Araucaria cunninghamii) and phoenix palm (Phoenix sp.) (38);*
- *Avenue of Canary Island palms (Phoenix canariensis) (41);*
- *Plantings at Palm Avenue (south end of triangle) (42);*
- *Northern end of Sussex Street (roadway and palms) (43)*
- *Red ironbark (Eucalyptus fibrosa) (46);*
- *Plantings associated with Nurses Quarters No. 1 and No. 3 (18);*
- *Plantings associated with Nurses Quarters No. 2 (19);*
- *Boundary planting south of Superintendent's Residence (22);*
- *Plantings for Olympic Media Village in Village Green Area 1 (24);*
- *Double row of brush box (Lophostemon confertus) (28);*
- *Row of cypresses (Cupressus species) (29);*
- *Mixed plantings northwest corner of historic core (30);*
- *Mixed plantings to southern sector of original triangle (39);*
- *Eucalypts and palms (40);*

- *Triangular bed at fulcrum of Mance Ave and Sussex Street (48);*
- *Plantings for Olympic Media Village along Mance Avenue (62);*
- *Landscape feature north of Vernon-designed wards (63);*
- *Pond, bridge and plantings north (rear) of Vernon-designed wards (64); and*
- *Plantings for Olympic Media Village near Chapel Road (65).*
- *Grove of mixed gums (Eucalyptus spp.) (57) on a separate portion of the former hospital site to the remainder of the listing (Godden Mackay Logan, 2004).*

Hospital Buildings

- *Herdsman's Cottage (Building 94);*
- *Gatehouse (Building 90);*
- *Barnet-designed dormitory wards (Buildings 7, 9, 66A and 89);*
- *Barnet-designed Dining Hall and Kitchen (Building 66);*
- *Barnet-designed Superintendent's Residence (Building 53);*
- *Barnet-designed Toilet Block (Building 89A) and ablutions facilities (Building 9A);*
- *Vernon-designed nine pavilion wards (Buildings 1, 2, 3, 4, 5, 10, 11, 12 and 13);*
- *Vernon-designed No.1 Nurse's Home (and 1919 annex) (Buildings 72 and 69);*
- *Vernon-designed Gatehouse (Building 90);*
- *Vernon-designed dormitory ward additions (Buildings 6 and 8, to Building 7);*
- *Vernon-designed ablutions facilities (Building 8A);*
- *Boiler House attributed to Walter Liberty Vernon (Building 59);*
- *Parkes-designed Nurse's Homes Nos 2 and 3 (Buildings 73 and 74);*
- *Three fibro buildings; the Male Nurse Amenities (Building 96, the two Red Cross Buildings (Buildings 95A and 95B);*
- *WWII Air Raid Shelter (Building 91);*
- *1953 Memorial Clock in the village green (Building 92);*
- *Three Parkes-designed 1930s/1940s ward buildings (Buildings 34, 35 and 36); and*
- *Woolley-designed Recreation Hall (Building 64) (Godden Mackay Logan, 2004)*

Condition	**Good**	Fair	Poor

Alterations and Additions

The majority of buildings outside the Lidcombe Hospital Precinct have now been demolished and substantial changes have been made to the landscape to prepare the site for a residential development. The Lidcombe Hospital Precinct contains all early extant buildings to the 1940s and other built elements from the 1950s and 1960s, and the most significant parts of the road network. While hospital infrastructure has been adapted to accommodate new technologies and uses, the essential character of the Precinct remains intact. The core of the Precinct, centred on the Village Green, very strongly reflects the key values of the site.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1885-1892, 1893-1913, 1914-1926, 1927-1966, 1966-1995, 1998- 2000, 2006.

The following history has been quoted from the NSW Office of Environment and Heritage, State Heritage Register listing sheet for 'Lidcombe Hospital Precinct':

Six key phases of development demonstrate the evolution of the site, from proposed Reformatory and Model Farm for wayward boys to an important teaching hospital that specialised in geriatric care and rehabilitation until its transformation into the Media Village for the Sydney 2000 Olympics. An innovative aspect of the development of the site was Sydney's first Septic Tank with associated facilities,

constructed in 1897-1898 to alleviate the inadequacies of the existing system. A summary of key development dates is provided below:

1885-1892: Boys Reformatory and Model Farm (proposed).
1893-1913: Rookwood Asylum for the Aged and Infirm.
1914-1926: Lidcombe State Hospital and Asylum for Men.
1927-1966: Lidcombe State Hospital and Home.
1966-1995: Lidcombe Hospital (Note: the Jack Lang Wing remained in use for hospital purposes until 1997).
1998-2000: Olympic Media Village.
2006+ conversion into a planned residential precinct, 'Botanica' with heritage conservation and new development over stages (Government Architect, NSW).

*The Lidcombe Hospital Recreation Hall and Chapel was designed by architect Ken Woolley.**

* ***Ken Woolley (1933-2015):***
Ken Woolley died in late 2015. His designs for the University of Sydney's Chemistry School and St. Margaret's Hospital chapel, done when he was 22, are heritage-listed. Before he was 30 he had completed a number of famous Sydney buildings, including the University of Sydney's Fisher Library, the State Office Block on the corner of Macquarie and Bent Streets (demolished in 1997 for Aurora Place), the Woolley House in Mosman, the Lidcombe Hospital Recreation Hall and Chapel and the first Pettit & Sevitt project home houses. Woolley went to University of Sydney through a traineeship from the NSW Public Works Department that paid the fees and an allowance, with holiday employment and a five year contract after graduation. He graduated in 1955 with first class honours in architecture and the University Medal. He was awarded the Byera Hadley Travelling Scholarship for 1955, working in London for Chamberlin Powell and Bon, in the midst of discussion about modernism and the International style. The Smithsons, New Brutalism and New Liberty styles were part of this discourse. He travelled to Finland in the north, Italy and Spain in the south, visiting prominent architects and buildings of the day.

In 1964 Woolley went into partnership with Ancher Mortlock Murray, and on to a career including over 6000 dwelling units and production houses and his own three Wilkinson Award-winning homes. The early years of the practice saw the individual partners doing their own thing, but with time and retirements Woolley became sole principal and design director of Ancher Mortlock Woolley in 1982 and from then on much of the firm's work carried his stamp. He saw himself as a late modernist, influenced in various ways by Alvar Aalto, Mies van der Rohe and Le Corbusier and attuned to the development of regionalism, New Brutalism, the theoretical aspects of post-modernism and reattachment to traditions.

His works in the Australian Embassy in Bangkok, Parramatta Federal Courts, the ADFA Cadets' Mess, several student union buildings on universities, wharf-side Navy buildings of Garden Island, the Park Hyatt Hotel, Sydney Town Hall House and Sydney Square (between the Town Hall and St. Andrew's Cathedral), the ABC Radio and Goossens Hall - first section of the ABC's Ultimo headquarters, Australia's pavilion at Expo '88, the State Library of Victoria (extension), the Olympics 2000 sports halls, the Agricultural Society Dome and the Hockey Stadium at Homebush and Sydney Airport Control Tower. He designed the new Large Theatre at Sydney Opera House.

In the 21st century came the latest refurbishment of the Queen Victoria Building, an effort at revival of the Pettit & Sevitt houses and other collaborative projects with his former practice, Ancher Mortlock Woolley. He was a visiting professor at University of NSW and University of Sydney and chaired or was a member on various award, review and competition juries. Woolley was interested in architectural theory and was working on a book, 'People in Glass Houses' about the key point in Modernist architecture, around 1930, when he died.

Woolley was made a member of the Order of Australia (AM) in 1988, awarded the Gold Medal of the Royal Australian Institute of Architects in 1993 and elected a fellow of the Academy of Technological Sciences and Engineering in 2001. He received the Centenary Medal in 2003 for services to structural engineering. In 2010 he was awarded a Doctorate of Science in Architecture honoris causa by the

University of Sydney, where he was an adjunct professor of the Faculty of Architecture, Design and Planning (Woolley & Veitch, 2015, 49).

1990s+ disposal and private ownership:
By the 1990s the site was superfluous to the Health Department's needs and was sold into private ownership for redevelopment as housing. At an early stage in the redevelopment process, the owner and developer Frasers Property Australia nominated the heritage precinct for inclusion on the NSW State Heritage Register thereby ensuring greater community awareness and expert scrutiny. The site underwent a stage of master planning, with the aim of balancing the parts of the site identified as needing to be retained with spaces available for redevelopment (Government Architect, NSW).

Conservation of the entire site followed an innovative two-tiered conservation management planning process with the master plan informed by an overarching conservation management plan (CMP) and archaeological zoning plan. The CMP defined the appropriate heritage curtilage for the heritage precinct, determined the locations for new development around its periphery, and set out principles for protecting the settings of individual elements such as the Superintendent's Residence. Specific elements conservation policies were then developed to provide detailed guidance for the conservation and adaptive re-use of individual buildings, groupings, landscape, and roads (GA, NSW).

The key driver in this work was that the functions of the hospital should remain visible and able to be appreciated even when the site transitioned to a new use. As a result, the historic core and the hospital's key roads and paths were prioritised for retention while areas of lesser importance were designated for new development (GA, NSW).

2006+ Residential housing adaptive reuse and additions, infill:
Lidcombe Hospital site has been converted into an award-winning, master-planned residential precinct, "Botanica", with heritage conservation and new development proceeding over a number of stages since 2006. The heritage buildings and landscape have been repurposed, but through careful design and interpretation, the site's significance as a hospital that provided innovative health care for more than 100 years can still be appreciated (Government Architect, NSW).

Botanica is now a 750-dwelling residential subdivision, covering 44 ha of the former hospital site. Within that, a core heritage precinct of 7 ha containing a range of significant buildings and spaces has been adaptively re-used for residential, commercial, and community uses, forming the heart of the new suburb (GA, NSW).

As well as its many historic buildings, the site's roads, paths, and circulation spaces were identified in the conservation management plan as important parts of the place's history. As a result, they have been retained in the new development and form some 7 ha of parklands, cycleways, and walks, which are now valued assets (GA, NSW).

The heritage-listed pavilion wards have been redeveloped as 'The Gallery' residences, and the Superintendent's House has been redeveloped as 'The Manor'. These dwellings now form part of the unique features within the wider development. Converting the hospital buildings into residential dwellings posed numerous design challenges, such as providing open-plan living spaces while maintaining the unique character of each building. Outdoor areas were similarly challenging, requiring historic landscapes to be integrated into the public realm without detracting from their historic character. Other significant buildings within the heritage precinct have been adaptively re-used as a childcare centre, church (former hall) and as retail and commercial properties, replicating the once active community hub within the hospital which originally housed a bakery, stores, and other hospital functions (GA, NSW).

Restoration of each building began with a detailed site assessment to identify the work required. Layers of later fabric were removed, including asbestos, and then the original fabric was made good and re-used where possible. Heritage trade specialists were engaged to undertake an extensive program of restoration and repair works. Timber floors and windows were retained but they needed extensive work to repair past damage, including salvaging and reinstating float glass from other buildings on the site (GA, NSW).

The site master plan identified that many of the original roads, pathways, and historical connections between the various elements should be retained as a way of understanding the historical functioning of the hospital. The result is that 1.4 ha of parkland has been dedicated to council, now incorporating cycleways and a heritage trail with interpretation hubs and element-specific signage. Other important parts of the original hospital landscaping, like the entry drive lined with hoop pines and phoenix palms, have formed prominent components of the redevelopment. The new landscape design involved adapting the former hospital grounds to new public uses that are viable and of a high quality while retaining trees and addressing watershed issues. This included limiting the choice of new materials used in public spaces, such as parks and playgrounds, to those that respond to the site's historic character (GA, NSW).

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Reconcile, update and correlate the LEP information and mapping with the SHR listing for this precinct.
- Explore options with the Heritage Division of the Office of Environment and Heritage to draft a new or revised site-specific Development Control Plan to ensure consistency between State and local objectives.
- The 2004 Conservation Management Plan for this site should be updated to understand in greater detail the history and significance of the place, as well as how to manage change and monitor conditions of the site.
- Liaise with the Heritage Division of the Office of Environment and Heritage to remove redundant Health Services Section 170 Heritage and Conservation Register SHI data entries which do not have any available mapping or information, creating confusion between the listing sheets. These include 26 items along Joseph Street:
  - Ablution Facilities, former
  - Aged Care Assessment and Medical Museum
  - Air Raid Shelter
  - Boiler House with Chimney Stack
  - Chaplain Residence
  - Clock Tower
  - Cmla Workshop
  - Dermatology Units
  - Diabetes Centre
  - Dormitory Block / Convalescent Wards
  - Gatehouse
  - Herdmen's Cottage
  - Medical Ward Ophthalmology
  - Nurses Home
  - Occupational Therapy
  - Old Training School
  - Orchid Society Building
  - Orchid Society Rooms
  - Physiotherapy Out Patients
  - Recreational Hall
  - Rehabilitation Workshop
  - Salaries and Finance Section
  - Sawing Room
  - Speech Pathology Unit
  - Verminous Patient's Bathroom, Toilet Block, former
  - Work Assembly Unit / Occupational Therapy

Curtilage Map

Statement of Significance

The dwelling at 121 Hawksview Street, Merrylands is locally significant for its historic, aesthetic and representative values. Built in c.1892, the dwelling is historically significant in relation to the suburb of Guildford, on which it is on the border of as it relates to the early subdivision Church and School Estate. The property forms part of the land granted to John Hodgson in 1872 and relates to the subsequent residential development of Guildford following the establishment of the railway in 1891. The dwelling has aesthetic significance as a highly intact Late Victorian weatherboard cottage with fine detailing. It is an important element in the streetscape which contributes positively towards the heritage character of the area. It is a representative example of a Late Victorian weatherboard cottage.

Criteria Assessment	
a) Historic	Built in c.1892, the dwelling is historically significant as it relates to the early subdivision Church and School Estate. The property forms part of the land granted to John Hodgson in 1872 and relates to the subsequent residential development of Guildford following the establishment of the railway in 1891.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a highly intact Late Victorian weatherboard cottage with fine detailing. It is an important element in the streetscape which contributes positively towards the heritage character of the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	It is a representative example of a Late Victorian weatherboard cottage.

Physical Description

The dwelling is a single-storey weatherboard residence with a hipped roof of Colorbond sheeting. The roof has a single brick chimney on the western side of the house with a single terracotta chimney cowl. A bullnose verandah wraps around the southern and eastern sides, and is supported by decorative timber posts, brackets and frieze. The verandah has a raised timber boarded floor and Colorbond roof. The front facade is symmetrical around a central door, however, the eastern section of the verandah has been infilled with similar weatherboards. The weatherboards to the façade are deeper in width than the boards to the side of the house. The door is timber panelled and has a glazed top light and an aluminium security screen. Adjacent to the door is the electrical panel. On either side of the door is a pair of timber framed double hung windows with decorative timber architraves and sills, as well as fly screens. Windows to the verandah infill are now aluminium sliding, replacing original timber windows. At the rear is a flat roofed addition also clad with weatherboard.

There is a paved driveway along the western boundary and a timber picket fence to the street. An open metal carport is located adjacent to the dwelling along the driveway.

The property appears to have a somewhat reduced curtilage. However, the present boundaries do not appear to cramp the house which has an unusually deep setback within the street and is surrounded by a large, mature garden. The trees and plantings to the property are highly visible and form important elements in the streetscape as there are few other trees of a similar age along this section of the street.

Overall, the condition of the building good. With such a dense vegetation setting, there is biological growth evident on the roof.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Aluminium sliding windows to the façade*
- New roof cladding, guttering and downpipes replaced
- Weatherboard infill to eastern side of the façade
- Flat roof, single-storey addition to the rear

The house generally retains its scale and form, and, although modified, has undergone sympathetic alterations and additions which have retained its heritage value. The integrity of the building is high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1892

Note: The historical context for this item relates to the development of the suburb of Guildford rather than Merrylands and has thus been situated within the context of the development of Guildford.

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the

adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

Although Guildford had residents from 1799, it was not until the advent of the subdivision of the Church and School Estate and the opening of the first railway station in the district in 1876 that there was much development. The subject property formed part of 23 acres 1 rood originally granted to John Hodgson in 1872.

Ownership of the grant changed hands a number of times, until 1876, when it was purchased by John Murphy. Murphy subdivided and subsequently sold the land and an allotment of over 4 acres on Hawksview Street was purchased by Edwin Johnson. Johnson further subdivided and the present boundaries were formed. Hawksview Street first appears in the Sands Directory in 1892, with 5 properties noted on the street. It remains unknown when the house was constructed, though it was likely constructed during this early era of Hawksview Street due to its architectural style. The property was purchased by Henry Veron in 1912. From the DA and BA cards, the nature of an addition in 1959 is unknown.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Curtilage Map

Statement of Significance

Central Gardens is locally significant for its historic, aesthetic and social values. The garden has historic significance through its origins as the Sherwood Brick and Tile Works established by Mr Arthur Todd Holroyd in c.1869. The site was acquired by the then Holroyd City Council in the 1970s and the former brickpit was redeveloped to form the Doug McLaren Lakes in 1974. The site is significant for its aesthetic qualities as an expression of cultural plantings. The garden retains remnant Cumberland Plain Woodland and other native species. The park features elements named after prominent Holroyd identities, such as the Doug Maclaren Lakes, the Franklin Edward Memorial Tennis Courts and the Norrie Maley Kiosk, and is of social significance to the local community as a recreation space.

Criteria Assessment	
a) Historic	The garden has historic significance through its origins as the Sherwood Brick and Tile Works established by Mr Arthur Todd Holroyd in c.1869. The site was acquired by the then Holroyd City Council in the 1970s and the former brickpit was redeveloped to form the Doug McLaren Lakes in 1974.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The site is significant for its aesthetic qualities as an expression of cultural plantings. The garden retains remnant Cumberland Plain Woodland and other native species.
d) Social	The park features elements named after prominent Holroyd identities, such as the Doug Maclaren Lakes, the Franklin Edward Memorial Tennis Courts and the Norrie Maley Kiosk, and is of social significance to the local community as a recreation space.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Central Gardens is a reclaimed brick pit that now functions as a large recreational space. The northern end of the park along Merrylands Road includes the Yarrabee picnic areas, carpark, playground and informal recreation areas. The western edge of the park incorporates bushland regeneration which is categorised as a natural area that consists of remnant Cumberland Plain Woodland. This is bounded to the east and south by the Doug Maclaren Lakes. The centre and western portions of the park feature manmade waterways associated with the Doug Maclaren Lakes. The eastern edge of the park contains a wildlife sanctuary, works depot, plant storage area, green-house, shade house, garage and rangers shed. The central and southern portion of the park features the Norie Maley kiosk, amphitheatre, toilets and the Pinaroo picnic area. The remaining southern portion of the park incorporates a tennis court, carpark and outdoor educational space referred to as 'Bush School'. The bush school is located between the large playground and Paton Street and is a nature-based play and learning area.

There are a variety of the park structures and facilities throughout the site. The park also contains public art. In particular, there is a concrete and steel artwork near the Doug Maclaren Lakes that was created by local artist Desmond McCord and donated to the then Holroyd Council in 1999. The artwork was relocated to Central Parks and unveiled by Mayor of Holroyd City John H. Brodie on 13 April 2008.

The vegetation at Central Gardens primarily consists of a mixture of native indigenous vegetation and planted trees within a parkland setting, the most significant being the remnant Cumberland Plain woodland.

Common canopies species include:

- Eucalyptus moluccana (Grey Box),
- *Eucalyptus crebra* (Narrow-leafed Ironbark),
- *Eucalyptus tereticornis* (Forest Red Gum),
- *Melaleuca styphelioides* (Prickly-leafed Paperbark).

Understory includes:

- *Bursaria spinosa* (Blackthorn),
- *Dillwynia juniperina* (Prickly Parrot-pea), and
- Several other indigenous species.

Other species:

- *Casuarina glauca* (Swamp Oak),
- *Ulmus parvifolia* (Chinese Elm), and
- *Liquidambar styraciflua* (Sweet Gum).

The condition of Central Gardens is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Central Gardens was officially opened on April 12, 1976
- Norrie Marley Kiosk built in c.1990s
- Play equipment constructed in 1994
- Boardwalk around the Doug Maclaren Ponds, c.1995
- Artwork of Desmond McCord unveiled in 2008
- Wildlife sanctuary refurnished in 2012

Central Park retains a high level of integrity.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1868 and 1970s

Merrylands
Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of Merrylands Railway Station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks and Sherwood Brick and Tile Works.

Central Gardens
Prior to Council ownership of the land, the area was used for clay extraction pits and kilns for brick making by the Sherwood Brick and Tile Works. The works was established by Mr A. R Holroyd in c.1869. In 1891 the works was up for sale. In the advertisement it was noted that the site contained three kilns, an A Faucett (Leeds) brickmaking machine, stand mill, sheds and buildings.

The site was acquired by Council in the 1970s. Central Gardens was officially opened on April 12, 1976 by The Hon Tom Uren, the then leader of the Opposition. The former clay extraction pits were later redeveloped in 1974 to form the Doug McLaren Lakes.

The Doug Maclaren Lakes and the Franklin Edward Memorial Tennis Courts were named after prominent Holroyd identities. Doug McLaren was a lawyer in the Merrylands area and was known for his community work. The ponds were dedicated in memory of Doug Maclaren on 5 November 1978. An artwork near the Doug Maclaren Lakes created by local artist Desmond McCord was donated to the then Holroyd Council in 1999. The artwork was relocated to Central Parks and unveiled by Mayor of Holroyd City John H. Brodie on 13 April 2008.

The Frank Edward Memorial Tennis Courts were named after Alderman Edward (1953-1974) whom was the Deputy Mayor of Holroyd in 1961 and 1962. He was also a delegate to Prospect County Council from its formation and was involved in many local organisations. The tennis courts were dedicated to Frank Edwards on 5 November 1978.

The Norrie Maley Kiosk was named in memory of the late Norrie Maley, wife of alderman Harry Maley O.A.M. Norrie Maley was heavily involved in the community and was the patroness of several organisations including the Red Cross, Senior Citizens, Meals on Wheels Services, sporting groups and girl guides.

The site remains in use as the Central Gardens, a large open recreational space with a variety of playgrounds, picnic equipment, tennis courts, wildlife sanctuary and outdoor educational spaces, framed by significant revegetation and remnant Cumberland Plain Woodland.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The replacement of plantings on a like for like basis to ensure the conservation of the landscape is considered appropriate. However, advice should be sought from a landscape specialist.
- This item has been converted from an Archaeological Item to a Heritage Item. The former LEP has classified a series of items of an industrial nature, including railway, road and water infrastructure, as 'archaeological' sites. This classification is historical and relates to the former use of the term 'Industrial Archaeology', which refers to the study of industrial and engineering history. The use of the term 'Industrial Archaeology' is no longer used and the term 'Industrial Heritage' is now

preferred. Archaeological sites are legally defined as sites which contain one or more 'relics' and, in NSW, relics are specifically protected by the Sections 138 -146 of the Heritage Act 1977. The classification of a site as 'archaeological' consequently affects the statutory controls and procedures, including the need for excavation permits and pre-excavation procedures, triggered by Development Applications.

Item Name	‘Hampden’ Federation Period Cottage		
Recommended Name	‘Hampden’ - Federation Period Cottage		
Site Image			
Address	10 Alfred Street, Merrylands NSW 2160		
Lot/Section/DP	18	B	976883
Current LEP ID	I194 (Cumberland LEP)		
Former LEP ID	I60 (Holroyd LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential Buildings (private)	

Curtilage Map

Statement of Significance

The Federation cottage at 10 Alfred Street, Merrylands, known as 'Hampden', is of local significance for its historic and aesthetic values. Built c.1913, the residence is historically linked to the major subdivision of the Richard Atkins Denham Farm estate, which facilitated the industrial and residential development of Merrylands from the 1880s to the 1920s. It is aesthetically significant as a fine example of a Federation cottage that retains much of its original detailing. The building makes a strong contribution to the character of Alfred Street and is a representative example of Federation period cottages.

Criteria Assessment	
a) Historic	The property is historically linked to the major subdivision of Richard Atkins Denham Farm estate, which facilitated the industrial and residential development of Merrylands from the 1880s to the 1920s. It is an early example of a Federation period cottage, built c.1913.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as a fine example of a Federation cottage that retains much of its original detailing.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of a Federation cottage. It remains as an intact example of this period of residential construction.

Physical Description

The item is a single storey, symmetrical, timber-framed Federation cottage on brick foundations. The dwelling has a hipped roof, clad with concrete tiles and has rusticated weatherboard walls. The roof has a tall brick chimney with brick stringcourses, two terracotta chimney pots and an antenna attached. The verandah is an extension of the main roof and is supported on painted timber stop chamfered posts with a decorative timber valance and bracket. The balustrade is a simple timber ladder infill. The verandah is enclosed at each end with a coloured glass decorative screen and slated timber seats. The central door is obscured by a security screen door and framed with two timber framed casement windows. The casements feature small panes of coloured glass at the top and bottom. The timber framed double hung windows to the side elevations are fronted by flyscreens and have decorative fixed timber framed awning with metal roof sheeting. The building features a skillion rear addition.

The southern edge of the property is dominated by a concrete paved driveway that leads to a contemporary garage at the rear of the property. The double garage has a gabled roof, roller door and is clad in corrugated steel. The front yard is predominately grassed with some garden beds along the fence that are new additions. The property is bounded by an aluminium picket fence.

The building appears to be well-maintained and recently repaired. The external condition is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Roof cladding replaced
- Suspended concrete slab and steps replace the original verandah floor
- A/C installed*
- New paint scheme*
- New driveway
- Garage
- New front landscaping
- Aluminium picket fence

The building is evidently modified with a contemporary paint scheme and replaced roof fabric and new landscaping. However, overall the building retains a moderate level of integrity and intactness in terms of the retained building form and decorative elements. The replaced roof fabric does not adversely impact on the significance of the item.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1913

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards

operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The site is located on a 100-acre grant that was made to Richard Atkins in May 1793. Atkins, who temporarily worked as Judge Advocate, employed four convict servants who, by 1802, cleared this grant and an adjoining 145 acres to cultivated wheat and maize and tendered sheep and pigs. It appears the northern section of the Atkins Estate was purchased by Alexander Campbell to construct the residence "Boori" in 1863. In 1876, Merrylands Station was established south east of the estate. By 1883, the south eastern section of Atkins Denham Farm was subdivided forming the Station Block Estate. It is assumed Campbell owned a number of the lots within this subdivision.

In 1883, the lease was reassigned to the Cumberland Permanent Building Land and Investment Society who then purchased the site in 1886. In 1913, Charles Yapp purchased the property and it is assumed the cottage was constructed at this time. The Sands Directory lists Charles Yapp "Hampden" as the occupant from 1916. The property was retained in the ownership of the Yapps until 1973, when Gladys Yapp, wife of Charles passed away. The property was left to Nea Ada Lohman, who also retained ownership until her death in 1995 and after this the property was purchased again.

The building remains in use as a private residence.

Curtilage Map

Statement of Significance

The cottage at 11 Hilltop Road, Merrylands is of local significance for its historic and aesthetic values. Built c.1910, the cottage relates to the early subdivisions and the large estates that facilitated the commercial and residential development of Merrylands, notably the Burda Park estate subdivision of c.1909. Although modified, the building retains its aesthetic significance as a Federation cottage. The external cladding, of ashlar lined weatherboard, is significant as rare original fabric in the district. The aesthetic value is further enhanced by the intact detailing, siting in the landscape and deep setback.

Criteria Assessment	
a) Historic	The property is historically significant for its association with the early subdivision of the Merrylands area and as an early residential building from c. 1910 that retains Federation period features and character.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The site has aesthetic significance as a Federation period cottage that retains rare original fabric of ashlar lined weatherboard as its external cladding. This significance is enhanced by the intact detailing, siting in the landscape and deep setback.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The cottage is representative of Federation era residential cottages, retaining features and characteristics that demonstrate this building type.

Physical Description

The item is a single storey weatherboard Federation period cottage. The weatherboards on the front façade are an imitation of masonry, while the side are shiplapped. The cottage is symmetrical in design, with a gabled hip roof and broken back verandah extending around the full perimeter of the house. The roof has been reclad with modern concrete tiles, however, the original twin face brick chimneys with corbelled brick neck mouldings remain. The verandah forms a small gable above the central entrance, which has timber and stucco detail. The verandah is supported by truncated timber posts on high brick piers and has a face brick and rendered balustrade. This appears to be a later addition, c.1920s/30s. A central door is timber and glass panelled with glazed top and side lights and a security screen. A timber framed double hung window with fly screens is fixed over the lower sash frame the door either side.

The rear of the house was not accessible at the time of this survey; however, aerial imagery shows a large rear extension. The extension is built of red brick with a hipped gable roof clad in terracotta tiles. The extension is set back from the main building and joins the main building at the centre of the rear roof panel with a narrow gable.

The house is located on a large block and has a deep setback to Hilltop Road. To the west of the cottage is a large contemporary garage constructed from concrete, timber and steel. The front yard features a modified landscape framed by a contemporary garden space. Significant plantings within the front yard are limited to the two paradise palms. The front yard is predominately a gravelled driveway with a concrete path. The property features a hedge along the street that replaces a timber picket fence.

The building appears to be well-maintained and is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Wrought iron lace frieze (a later addition) has been removed from the verandah
- New garage to the west
- Roof reclad with concrete tiles
- New paint scheme
- Rear extension, c. 2017

Although modified with the inclusion of a rear addition, the cottage retains its original scale and form. Where fabric has been replaced, such as the recladding of the roof, this has followed the principle of like-for-like. The item is considered to have moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1910

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The subject property formed part of 95 acres originally granted to John Bolger in 1810 and 70 acres originally granted to Roweland Hassall in 1818. In 1886, the property formed part of 117 acres and 5 perches acquired by Dr Arthur Oakes, Walter Oaks and John Manton. In 1898, the property was purchased by architect Archie Oaks and sold again in 1902, when Charles Ormsby, an executive Officer, purchased the property.

The dwelling first appears in the Sands Directory in 1912, occupied by Ormsby and known as 'Burda'. It is assumed the cottage was constructed for Ormsby by this time, however, it may date earlier as 'Burda Park' is noted on an early plan of the district dated 1908. The property appears to have retained a large area of land surrounding the house (over 4 acres) until 1953, when it was subdivided, possibly coinciding with the death of Ormsby. The house and surviving grounds passed to Estelle Ormsby at this time. The property was further subdivided in 1955 and purchased by the present owners. The present boundaries were formed at this time.

The item remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Any new proposals should retain and conserve all original or early form, fabric and detail including the ashlar weatherboard cladding, the open verandahs, the face brick chimney and the form of the roofline with pedimented entry gable. There should be no additions that break through the roofline or alterations the front of the house.

Curtilage Map

Statement of Significance

The Greek Orthodox Church is locally significant for its historic and social values, having served as a place of worship for members of the local community since the 1890s. Established in the 1890s as a Methodist Church, the building was one of the first churches erected in Merrylands and provides evidence for the residential development of the area through the provision of community services for their spiritual needs. Subsequent acquisition and adaptation to serve as a church for the Greek Orthodox community made the site an important religious place, reflective of the growing multicultural community within the Cumberland LGA.

Criteria Assessment	
a) Historic	The item was originally built in the 1890s as a Methodist Church and the building was one of the first churches erected in Merrylands. The church provides evidence for the residential development of the area through the provision of community services for their spiritual needs. The church was later acquired and adapted to serve as a church for the Greek Orthodox community.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The site has social significance, having served as a place of worship for members of the local community since the 1890s.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Church (Main)
The main body of the Greek Orthodox Church is built to a rectangular "box" plan with a steeply pitched gabled roof which features a circular louvred vent at the top of the gable. This section of the church is fronted by a new gabled entry with a low-pitched roof clad in terracotta tiles. The roof extends to include a porch, replacing an original small weatherboard porch to the front elevation. The present entrance porch is supported by three rendered brick piers with semi-circular arches. The walls are painted brick with shallow buttresses along the north and south elevations. The central doorway features lancet headed doors and windows which are typical of ecclesiastical gothic style. The windows are covered by modern roller doors and the original lancet windows in the end wall are covered over.

Hall
The church hall is built to a rectangular "box" plan with a lower pitched gabled roof and exposed rafters along eaves and a painted timber bargeboard. The hall has battened fibro-cement sheeted walls above the sill level. Each elevation features timber framed multipaned double hung sash windows with a painted timber architrave. A small gable roofed porch is located at the centre of the front elevation. The porch roof is also clad with corrugated iron.

Landscape
A steel palisade security fence extends along the perimeter of the property boundary. A formal garden with several fruit trees and an olive tree is located at the front and rear of the church, with an established hedge along the fence. The garden area fronting Hyland Road features a large circular garden bed that has a rendered finish with a young tree planted at the centre surrounded by a hedge. A concrete path leads from Holroyd Road and continues around the Church.

Condition
The Church and Hall are both well maintained and appear to be in good condition. There are some minor repairs required to the timber elements of the hall. There is some paint peeling along the bargeboard and architraves.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Original small weatherboard porch to front elevation replaced by present entrance porch with triple arches
- Original lancet windows in the end wall covered over
- Steel palisade fence
- New tree planted in rendered garden bed

Overall the integrity of the item appears to be moderate. Although the entry to the church is modified, the new entry relates to the Greek Orthodox use of the site and has some social significance.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1890s

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land granted to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality. Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

Originally a Methodist Church opened at the site in the 1890s, although it is unconfirmed whether the current building was constructed at this time. It was one of the first churches established within the boundaries of Merrylands. The Church remained Methodist until at least 1933 as shown in the Sands Directory. At a later date, presumably in the post-war period, the church was acquired by the Greek Orthodox community, however it is not part of Archdiocese of Australia.

Presently, the site is occupied by a charity called Agia Skepi Tis Panagias Greek Orthodox Holy Metropolis of Ancient Patristic Tradition of Sydney and NSW Ltd. This charity was registered in 2008.

Recommendations

Curtilage Map

Revised curtilage recommended – refer below.

Statement of Significance

The cottage at 130 Jersey Road, Merrylands is of local significance for its historic and aesthetic values. Built c.1897, the cottage historically relates to the semi-rural subdivision of William Puckey's estate by George Mobbs in c.1890, known as the Cumberland Model Farms. The building has some aesthetic significance as a late Victorian cottage although roof extensions to the north and east have modified the character of the building, the original building form is still visible. The aesthetic value is enhanced by the item's prominent location on the corner of Jersey Road and Kooba Street, and its level of intact fabric and detailing which makes a strong contribution to the streetscape character. The residence is representative of the small-scale cottage constructed in this period on the Cumberland Model Farms estate.

Criteria Assessment	
a) Historic	Built in c.1897, the cottage historically relates to the semi-rural subdivision of William Puckey's estate by George Mobbs in c.1890, known as the Cumberland Model Farms.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant for its relatively intact fabric and detailing. Although the character of the building has been modified to the north and east, the original building form is still visible. The aesthetic value is enhanced by the item's prominent location on the corner of Jersey Road and Kooba Street, which makes a strong contribution to the streetscape character.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item is representative of the small-scale cottage constructed in this period on the Cumberland Model Farms estate.

Physical Description

The subject building is a single storey face brick cottage in a late Victorian style. The brickwork is laid in the English garden wall bond. The cottage roofscape features a variety of forms. The main body of the cottage has a steep pitched double gabled roof, with a steep pitched hipped roof to the north and a contemporary skillion roof at the rear. The gabled and hipped roof is clad with Decramastic metal pressed roof sheeting with a bituminous coating, profiled to resemble concrete tiles. This roofing material was likely replaced in the c.1970s. The rear skillion extension is clad in corrugated galvanised iron. The roof contains two brick chimneys, one located between the gables and one at the northern end, have brick string course and terracotta chimney posts. A box gutter between gables runs to a central downpipe on the southern elevation. A hipped verandah extends along the front and around the northwest corner and has similar roof sheeting and simple timber posts with simple neck mouldings. Contemporary canvas awnings are affixed to the verandah.

The symmetrical front facade has a central door obscured by steel security screen and framed either side by timber framed double hung sash windows. The window and door openings have segmental arched heads with soldier course. The windows on the front façade have painted timber shutters and rendered sills. To the north of the verandah is an early side addition (likely dates c.1970s when the roof was reclad) accessed from the verandah through a set of timber French doors and is enclosed by a diagonal timber lattice balustrade infill. This entry includes a timber framed four-pane double hung sash window and another door fronted by a security screen. The dwelling features a significant rear skillion addition constructed of corrugated galvanised iron and concrete with large windows and a Colorbond roof.

Located on a deep corner block, the cottage forms an important streetscape element. The dwelling features some established trees and contemporary plantings along the front fence. The item is framed by a low timber picket fence to the front boundary. The timber picket fence extends around the corner of Kooba Street where an untreated timber fence extends the rest of the length.

The building is well maintained and appears to be in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New Decramastic roof sheeting, c.1970s
- North hipped roof addition
- Rear skillion extensions c.1990s
- Contemporary fencing along southern elevation

Although modified with the inclusion of a rear extension the building retains a moderate level of integrity. The extension located at the rear of the property is an architecturally interesting addition that makes a notable contribution to the dwelling. The item retains its scale and form as the extension has been carefully designed to not adversely impact the heritage significance of the item.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1897

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The subject site is located on land that formed part of 100 acres granted to William Puckey in 1810. Puckey's estate formed part of 338 acres, comprising 6 separate Crown Grants dating from 1810-1818, purchased by George Mobbs, an auctioneer, in 1892. Mobbs subsequently subdivided the land into approximately 2-4 acre allotments, which were sold as the "Cumberland Model Farms". The Advertisements of the Cumberland Model Farms subdivision note the Sydney Water Supply touches the South West boundary and would enable buyers to irrigate their holdings. Other merits for buyers included the proximity to various railway stations and public schools located nearby.

Lot 1-4 Section B of the Cumberland Model Farms subdivision comprising over 6 acres at the corner of Jersey and Irrigation Roads were purchased by Martin, Edmund and John Wilkinson in 1896, and subsequently sold to Ada and David Kirk in 1897. This cottage dates from the late 19th century, possibly constructed for Kirk as part of the early subdivision.

The property was purchased by George and Annie Hunt in 1921, who appear in the Sands Directory between 1923-27, when the property was purchased by Azariah and Louisa Montgomery. Montgomery resided at the property until at least 1949, when it passed briefly to Alexander and Stanley Montgomery, and then to Kenneth Montgomery in 1950. Applications for building work have included garages in 1950 and 1969, septic tank in 1960, and additions in 1978 and 1979.

The building remains in use as a private residence.

Recommendations

Curtilage Map

Statement of Significance

The 'Boori' Victorian Italianate Residence and Grounds is of local heritage significance for its historic, associative, aesthetic and representative values. Built in 1865, the residence is historically associated with the subdivision of Richard Atkins' 1793 land grant Denham Farm. 'Boori' was built for Alexander Campbell, a prominent early merchant, as a wedding gift for his daughter. The item remains one of the Cumberland LGA's earliest major homesteads and gentlemen estates. Although modified, the building retains important original features and fabric, including early plantings, and is aesthetically significant as a fine example of a mid-Victorian residence. The residence demonstrates representative qualities of a Victorian 'gentlemen's residence' constructed in the mid-nineteenth century.

Criteria Assessment	
a) Historic	The item is historically significant as the residence constructed in 1865 for Alexander Campbell, a prominent early merchant, as a wedding gift for his daughter. The residence is historically associated with the subdivision of Richard Atkins' 1793 land grant Denham Farm. The item remains one of Cumberland's earliest major homesteads and gentlemen estates.
b) Associative	The item has historical associations with Alexander Campbell, a prominent merchant in Sydney known for his involvement with various early colonial banks and appointment to the Legislative Council.
c) Aesthetic/Technical	The item is a fine example of a mid-Victorian residence. Although modified, the building's aesthetic significance is enhanced by the retention of important original features and fabric, including important early plantings.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of a fine Victorian gentlemen's residence, built c.1865.

Physical Description

'Boori' is a single storey Victorian Italianate residence with a symmetrical front elevation. The roofscape consists of projecting gable wings with a skillion roofed verandah in between. The symmetrical façade is flanked at each end by projecting gables that have decorative bargeboards and ventilators. The verandah has a bellcast corrugated iron roof supported on open patterned cast iron columns. At the rear is a verandah and courtyard, severed on one side by a long service wing. The roof is constructed of tiles at the front and corrugated iron at the rear. The main door opens onto the verandah which has sidelights and is flanked by shutters. The window openings at the gable ends are half-round headed windows.

'Boori' was restored and refurbished in collaboration with the National Trust in 2008, who provided advice on the residence which had fallen into disrepair. It was reported that although the skirting boards were removed by squatters who used the fabric for firewood, the interior appeared quite intact with extensive polished timber joinery, plaster walls and ceilings. The interiors of the residence are described as having:

A significant gracious entrance vestibule with large crystal chandelier; the formal entertaining rooms include drawing room, dining and family rooms each with open marble fireplace. It has a massive master bedroom with marble fireplace plus five other spacious bedrooms and three luxuriously appointed marble tiled bathrooms. The kitchen is "olde worlde" farmhouse style, superbly planned and adjoins a large breakfast room.

The grounds originally featured a prominent entrance gateway, circular gravel driveway with an ornate stone fountain. The gravel driveway has been replaced with a brick paved driveway. The entire landscape is substantially redeveloped which has reduced the curtilage of item. There are some mature trees within the grounds that are from the Victorian era and are highly significant, including an established gum at the centre of the front yard.

The condition of the building appears to be good. It is well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- 2008 refurbishment
- Brick paved driveway
- Construction of pool in front yard*
- New paint scheme

The building appears to retain a moderate level of integrity, as viewed from the street.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c. 1865

In 1793, on May 28, Lieutenant-Governor Francis Grose granted Richard Atkins 100 acres in the township of Parramatta. He was to pay 1 shilling rent per year for every 50 acres, commencing after five years. Richard Atkins arrived in Sydney as a free settler in 1792. He spent 18 years in the colony and held positions as: Registrar of the Vice-Admiralty Court, Inspector of Public Works, Deputy Judge Advocate, Judge Advocate and Registrar of Imports and Exports.

Atkins named the 100 acres Denham Farm, from Denham Court, which was the ancestral name of his family's home in Buckinghamshire. Atkins was born a Bowyer but changed his name to inherit under the will of Sir Richard Atkins of Clapham. He returned to England in 1810 under orders (his fare of One Hundred Pounds paid by the Court) to give evidence in the trial of Lt. Col. George Johnson (of the Rum Rebellion fame).

In 1810, the conveyance of 100 acres was transferred to John Bowman. Bowman was described as a "gentleman from Richmond, N.S.W." John James Bowman inherited Denham Farm from his father. John Bowman appears not to have lived in N.S.W for at his death on April 21, 1855, he owned land in India and is described as being "Late: of Calcutta in the Province of Bengal. First Assistant to the Master Attendant of the Port of Calcutta."

The estate was in the hands of William Bowman for 20 years, however, before the estate was sold William Bowman died on December 11, 1874, leaving his wife Elizabeth Bowman and James Chisholm as his executors. They appointed Richard Coleby to act as J.J.R. Bowman's executor on April 3, 1875.

On March 8, 1876 Richard Coleby as executor of the estate, sold Lots 13, 14 and 16 (20 acres) in the Denham Farm subdivision to James Merriman, a Member of the N.S.W. Legislative Assembly and one-time Mayor of Sydney. In September 24, 1879, James Merriman sold Lots 13, 14 and 16 to Alexander Campbell.

Alexander Campbell arrived in Sydney from Scotland on February 24, 1838. He became a vital member of Sydney's mercantile world and a shrewd businessman. In 1843 - 44, he was a Director of the Sydney Banking Company, a proprietor of the Sydney Banking Co. and a proprietor of the Bank of Australia, both of which ceased operations by 1850. Until 1844 and again later, he was a Director and shareholder of the Australian General Assurance Co. In February 1844, he was appointed a Justice of the Peace. In 1851 Campbell was on the provisional committee of the Sydney Exchange. He was Chairman of the Sydney Stock Exchange several times and remained a Director until 1891.

He was an early supporter of the Australian Mutual Provident Society from 1858 and served as a Director for many years. In 1869, Campbell founded the Mercantile Bank of Sydney. Another venture was his managership of the Agra and Masterman's Bank in 1863 - 67.

Campbell was appointed to the Legislative Council in October 1864 and retained his seat until July 1890, when ill health obliged him to resign. Campbell died at his home Rosemont, Woollahra, on November 8, 1891; his body was found in an ornamental pool and the coroner's verdict was asphyxiation from drowning.

Campbell was married three times and had twelve children. Campbell's second daughter from his first marriage, Rachel Eliza, was married on May 2, 1865, at St. Mark's Church, Darling Point to Charles William Lloyd of Parramatta. Campbell's wedding present was Lot 13 of six acres, on condition that the trustees were to pay Rachel any income derived from the farm and upon Rachel's death the property was to pass to her children rather than her husband. Rachel Campbell became the first of a succession of five women to own Boori over the next one hundred and fifteen years.

"Boori" was built in 1865. The foundations of the house were of local sandstone, sandstock bricks and cedar rafters. The house was carefully positioned at the centre of the Lot from South to North, to ensure that the rooms gained maximum sunshine with cooling through draughts. The style and construction of ‘Boori’ is very similar to Rosemont at Woollahra and it is considered probable that Alexander

Campbell commissioned the same builder. The word "Boori' is Aboriginal for "young child" or "new beginnings".

The Lloyd family lived in the house until August 19, 1896, when it was sold to Rosa O'Reilly, wife of D.P. O'Reilly for four thousand pounds, with a mortgage of £3,500 to the Lloyd's. D.P. O'Reilly was the local Member for Parramatta and 'was a good cricketer'.

During the ownership of 'Boori' by Rosa O'Reilly, the house and land were used first as a school and later as a hospital. In 1908, Rosa O'Reilly defaulted on the mortgage and the property returned to the Lloyd family who rented the house to Harriett Jones.

Harriett Jones, wife of William Jones, had previously been married to Arthur Johnson 'educated in Scotland and Oxford'. They had six children before Arthur died, leaving her widowed with little money. Fortunately, Harriett inherited wealth from her successful great uncle, the grazier, James White. Harriett Jones was able to purchase 'Boori' in 1914.

William Jones was killed in an accident in 1915. Harriett Jones died in 1938, leaving the property to her daughter, Daphne Edna Jones. Daphne Jones lived in the house for 72 years. She died on her birthday, August 21, 1980. During this time, Daphne Jones lived with her brother, his wife and their only daughter.

Following the death of Daphne Jones, 'Boori' then fell into disrepair and squatters tore up the skirting boards for firewood. The last owner spent $200,000 restoring and refurbishing the old six-bedroom home in collaboration with the National Trust before selling it in 2001.

The land surrounding 'Boori' was progressively subdivided with the development of Merrylands and with the construction of the Western Motorway.

Today, the property remains in use as a private residence.

Recommendations

Statement of Significance

Merrylands Public School is of local significance for historic and aesthetic values, and as a representative example of Federation period education buildings. Established in March 1886, Merrylands Public School was known as Goughtown School. The item historically relates to the 1886 and 1887 subdivision of the Gough Town Estate and was one of the earliest schools to be established in the area. The current main building, built in 1916, provides evidence of the residential growth in the area which sparked the development of civic institutions. The school also provides evidence of early State government interest in the development of the area. Merrylands Public School is aesthetically significant as an intact example of Federation period education buildings. This is enhanced by the collection of other early education buildings on site and the mature native trees located along the school's perimeter. The building demonstrates good representative qualities of education building styles and periods that date from the Federation Period onwards.

Criteria Assessment	
a) Historic	The item, which was first built in March 1886, was known as Goughtown School. The item historically relates to the 1886 and 1887 subdivision of the Gough Town Estate and was one of the earliest schools to be established in the area. The current main building, built in 1916, provides evidence of the residential growth in the area which facilitated the development of civic institutions. The school also provides evidence of early State government interest in the development of the area.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is aesthetically significant as a fine and intact example of Federation period education building that retains much of its original detail. This is enhanced by the collection of other early education buildings on site and the mature native trees located along the school's perimeter.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of a Federation period education building built in 1916.

Physical Description

Merrylands Public School consists of a number of education buildings in various periods and styles. The main building with a frontage to Fowler Road is a large two-storey brick Federation building constructed in 1916. The external walls are constructed of brown brick and decorated with painted red brick string courses and segmental arches. A verandah along the single storey of the building fronts the playground. The building has a gabled roof with two project gables that give the building a 'U' shaped plan. The roof is clad with corrugated iron and has wide eaves and exposed timber rafters. The gable end is infilled with timber battens and fibro sheeting and reads 'Merrylands Public School'. The windows are generally multipaned timber framed double hung sashes with brick segmental arches and sloped sills. Some windows have been removed and infilled on Fowler Road elevation.

A two-storey Infants school building located along Holdsworth Street dates to 1949. The building is constructed of face brick with large, multipaned timber sash windows and a gabled roof clad in corrugated iron. The gable ends have brick infill and simple timber barge boards.

The school has single-storey weatherboard clad classrooms elevated on brick piers with a gabled roof and skillion roof verandah along the long front elevation. Other examples of standard education buildings include demountable buildings and contemporary brick buildings with gabled and hipped roofs. At present the school is undergoing expansion with the construction of a large building in the middle of the school.

The school features a number of established native trees within its boundary which have heritage significance as natural heritage. The vegetation is more densely populated along Fowler Road and Matthew Street, however, is dispersed along the perimeter of the school. The school features pockets of grassed playgrounds to the north along Morris Street and Fowler Road. A steel palisade fence surrounds the school.

The buildings are in a good condition and appear to be well-maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Construction of main building in 1916, replacing the earlier school buildings
- Construction of Infants school in 1947
- New boundary fence
- A number of additions to the complex since the first schoolroom was erected

The historic buildings appear to have high integrity when viewed from the street. Though, as is the nature of school buildings, they are subject to change overtime and it is likely that the interiors and some elevations are of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	School established 1886; main building constructed 1916

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

Merrylands Public School, originally known as the Goughtown School, opened in March 1886 as was one of the earliest schools to be established in the area. The school was established on land acquired in the 1886 and 1887 subdivision of the Gough Town Estate. The Gough Town estate consisted of 378 allotments named after the internationally renowned temperance orator, John Bartholomew Gough. The area was developed by Philip Risby Holdsworth, a temperance advocate and land agent. In 1881, Gough Town estate was established for subdivision following the acquisition of the 100 acres of land adjacent to Arthur Todd Holroyd's Sherwood Scrubs property.

The land was bounded by Merrylands Road (then known as Park Road), Chetwyn Road (Kings Road), Matthew Street, and Fowler Road (Lucas Street). New streets included Henson, Price, James, Morris, Roseby, Davies, Creer and Harcus Streets. The streets were named after Holdsworth's temperance colleagues from the Temperance Alliance an umbrella organisation of the United Temperance Association of New South Wales. Buyers were assured there was no better site in the area for a new township, and that the future of Gough Town should be a rapidly improving one. An open square at the centre of the estate, called Lawson Square (after the English temperance campaigner, Sir Wilfrid Lawson) was reserved for 'public recreation' and land at the southwest corner was allocated for school purposes.

The school name was changed from Goughtown to Merrylands Public School in 1912. The school underwent various stages of expansion and development, in particular at the turn of the century and again in the 1940s. The school continues to expand in the twenty first century as the population growth continues to rise and the need for large education facilities is required to accommodate students enrolled.

The early buildings appear to have been replaced in 1916 with the construction of the large main building. The former school buildings were noted as being in a dilapidated condition and inadequate to accommodate the number of students enrolled. The new building had a foundation stone laid by J.T Lang Esq MLA, 9.12.1916.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the Development Application should be accompanied by a detailed heritage assessment and fabric analysis to understand which buildings are significant and how to manage change.

Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Religion	

Curtilage Map

Statement of Significance

The Merrylands Uniting Church at 7 Memorial Avenue has local significance for its historic, associative, aesthetic and social values. Historically, the church is significant being purpose-built in 1928 to service the spiritual needs of the Methodist and Uniting Church in the community. It further has associative and social value through its association with the Methodist and Uniting Church Community particularly as it was constructed by voluntary labour in 1928. The Church has aesthetic value as a largely intact example of an Inter-War period church with Federation influences and is a prominent element in the streetscape. It is a good representative example of churches of its kind in the local area and provides evidence of the needs and growth of religious activity in the area.

Criteria Assessment	
a) Historic	The item has historic significance as a purpose-built church constructed in the early twentieth century to service the spiritual needs of the Methodist and Uniting Church in the community.
b) Associative	The item is associated with the growth of the Uniting Church in Sydney, as well as with the Church and Schools land grants scheme which was important in the development of areas as they provided critical community services.
c) Aesthetic/Technical	The item is a good, intact example of a simple Inter-War period local church.
d) Social	The item has social significance as a place of worship for Methodist and Uniting Church goers.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item is good, intact example of a simple Inter-War period local church.

Physical Description

The Merrylands Uniting Church is a timber framed weatherboard building on brick step and pier foundations. The roof is gabled with exposed rafters at the eaves, a gablet roof vent in the centre of the gable with timber framing. The main entrance comes off this gabled end in a small enclosed porch, with a three-sash window with decorative pedimented architraves addressing the street, and the entrance door on the return side. The porch is enclosed at waist-height with brick, then timber framed fibro-cement sheet above. There are stone plaques laid at the front of the porch commemorating the construction of the church, "This Stone was laid by Mrs J B Smith, May 12th 1928" and "This Stone was laid by Mrs L Hurd, May 12th 1928".

To the north of the building is a modern extension in brick, connected by an enclosed glass atrium. The new church has a large semi-circular window addressing the principle façade (boarded up) and a pyramidal roof with cement tile cladding. To the north of this is a carpark which forms the current main entrance to the church.

The property is surrounded by modern steel cyclone fencing, and a heavily secured access gate to the northern carpark. There are some mature plantings and a mature Eucalyptus tree to front of the church.

Due to the church's undermaintained, fenced and boarded presentation, it appears as a redundant building. The building is generally in a fair condition with some elements in a poor condition such as galvanised iron roof, timber barge boards, eaves, weatherboards and window frames.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Extension of new brick building attached with a glazed atrium on northern elevation
- Steel security fence surrounding property*
- Timber boarding to window *

Overall, as the general form and structure of the church remains, it has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards

operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The subject property is located on the early Church and Schools Estate established in 1825, and first offered for sale in 1871. The property formed part of 18 acres acquired by Arthur Todd Holroyd in 1872 and further subdivided as part of "Gough Town" in 1881. Holroyd was a Member of Parliament in the mid to late 19th century and was the first mayor of the municipality. In 1881, lot 9 section 1 (bounded by Memorial Ave and Park Street) was purchased by Oby Williams Rawson. The lot was further passed to Patrick MacKell (1886) and Robert MacKell (1907). In 1928 the site was purchased by a number of local citizens, reputably for the construction of a Methodist church which was built by voluntary labour. It appeared in the Sands Directory as a Methodist Church by 1929.

The original building is used as the church hall for the main church building, which is a modern brick building to the north. The property was transferred to the Methodist Church (NSW) Property Trust in 1972.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.	X		

Other recommendations and/or comments:

- It is strongly advised that elements identified as being in a poor state (i.e. timber barge boards, weatherboards and window frames) are repaired to ensure the significance of the entire built element is not compromised.
- It is strongly advised that the structures are regularly maintained to ensure the significance of the entire item is not compromised by a lack of maintenance.

Heritage Inventory Sheet

Item Name	Electrical Substation		
Recommended Name	Electricity Substation		
Site Image			
Address	285 Merrylands Road, Merrylands NSW 2160		
Lot/Section/DP	-	-	Part SP 69008
Current LEP ID	I201 (Cumberland LEP)		
Former LEP ID	I68 (Holroyd LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Utilities - Electricity	

Curtilage Map

Revised curtilage recommended- refer below.

Statement of Significance

The Electricity Substation is of local significance for its historic, aesthetic and rarity values. Built in 1928, the substation has historic significance as a structure purpose-built to provide electricity infrastructure to the local community. It is technically significance as a now redundant technology for the generation and distribution of electricity and retains some aesthetic significance as an intact example of the standardised types of suburban electricity substation constructed in the 1920s. This substation is also rare as one of a small group of remaining intact industrial infrastructure and is a good representative examples of Electricity Substation facilities that were established widely throughout Sydney as a result of increased electricity needs.

Criteria Assessment	
a) Historic	The item has historic significance as a purpose-built structure providing electricity infrastructure services to the local community.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Although, the item is an element of a now redundant technology for the generation and distribution of electricity, the item has some aesthetic significance as an intact example of the standardised types of suburban electricity substation constructed in the 1920s.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item forms a small collection of remaining substation structures in the wider community.
g) Representativeness	The item is representative of Electricity Substation facilities that were established widely throughout Sydney as the electricity network expanded, and population growth increased electricity needs.

Physical Description

The Electricity Substation on the corner of a large residential lot on Merrylands Road and Treves Street is a brick building with a single wide opening on its principle façade to Treves Street. The door is fitted with a modern steel roller door. It has a gabled roof with the gable end rendered with “Electrical Supply” and “1928” in relief. The corner pilasters are expressed with a soldier course of brick as the capital. There is a 4-pane, double-sash casement window on the north elevation. The roof has terracotta tiled cladding.

There is a small paved driveway leading to the entrance opening of the structure which has a yellow bollard set into it. A public concrete footpath that runs along Treves Street separates the structure from the road.

There is an extensive amount of leaf litter deposited on the roof to the north site, which appears to have damaged the guttering. The substation is set within a heavily developed area, with multi-storey developments encroaching the structure on most sides. Rubbish is being dumped on the site around the building.

Overall, the structure is in a fair condition due damage to guttering and the extent of rubbish dumped on the site.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Modern roller door to the entrance opening*
- Colorbond and steel security fencing*

As the building retains its overall form and structure it has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land granted to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The subject property is located on 100 acres originally granted to Richard Atkins in 1793. In 1805, the land was conveyed to Edward Lamb, and then John Bowman in 1812. It remained with the Bowman

Family until 1875, when it was conveyed to Andrew Sutherland Low. The land remained with the Low family until 1912, when it was sold to John Miller and Neil McAuley, at which point it started being subdivided.

The Holroyd local government commenced supplying electricity to its municipality in 1923. The local authority purchased its supply in bulk from the Sydney Municipal Council at 5.5kV. The substation located in Auburn (No. 167) was the former bulk supply receiving station. The number of substations constructed in the Sydney region exploded from the late 1920s, with dozens of substations being constructed to cope with the expanding demand. While in the early years of network construction many substations had unique characteristics and were sited in response to a particular need, from the late 1920s standardised designs were generally used and expansion was based on a need to establish and expand the electricity grid rather than in response to localised or site-specific issues. The one located along corner of Merrylands Road and Treves Street is one of many built during this period to service the expanding population of the district and shares a similar design, size, and construction were provided in the former Holroyd municipality during the 1920s.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	X	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Explore opportunities for adaptive reuse so that its presence within the community and its condition is maintained.
- The land surrounding the electricity substation has been redeveloped for the inclusion of a medium density residential apartment block. The heritage curtilage should be revised as shown in the figure below for the Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Community Facilities	

Curtilage Map

Statement of Significance

The Merrylands School of Arts has local significance for its historic, associative and social values. The item has historic significance as a purpose-built School of Arts for the local community and is associated with NSW Premier Jack Lang who was instrumental in its initial establishment. The site also has social significance for its use as a community building since the 1920s. The building has little aesthetic significance, however, it contributes to the historic character of a now heavily developed residential and commercial main streetscape. It is a good representative example of the School of Arts facilities that were established widely in NSW, a number of which in the surrounding Western Sydney suburbs were established at the same time.

Criteria Assessment	
a) Historic	The item has historic significance as a purpose-built School of Arts building that has been used for community purposes since its inception.
b) Associative	The item has associations with former NSW Premier Jack Lang, who was personally involved in the application and establishment of this School of Arts.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item has social significance to the community of Merrylands as a community facility since its inception.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of School of Arts facilities that were established widely in NSW, a number of which in the surrounding Western Sydney suburbs were established at the same time.

Physical Description

The Merrylands School of Arts building is a single-storey brick building with a simple, symmetrical façade with high parapet that hides a skillion roof clad in modern corrugated sheet. The front façade features a simple, symmetrical elevation with a centrally positioned modern solid timber security door with steel security grilles and a single large window opening on either side. The windows are a multipaned arrangement of an operable casement window with surrounding fixed top and side lights. All panes have a textured spotswood glass. The front of the windows is fitted with steel security grilles fixed to the surrounding brickwork. Over the entry door is a small timber portico with corrugated steel roofing. The portico is supported against the building with small timber brackets. There are solid timber panels as a valance surrounding the portico.

The top of the parapet is decorated with a simple dentil pattern between two pilasters at the corners of the building, with a roughcast capital. The side facades step down to the back, fenestrated with a number of windows of various size. The sides and rear are enclosed with a high steel paling security fence. The façade is painted with a modern, muted colour scheme. Modern signage is fixed to the brickwork and the portico valance.

There are two mature trees to the front of the structure and a line of mature plantings to the western side of the structure.

Overall, the condition of the building is good and appears regularly maintained. There is cracking and movement evident in the brickwork.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Steel security grilles and fencing on windows, door and property boundary*

The building generally maintains its original form and structure and therefore has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1917

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants which were given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

This property is located on 100 acres originally granted to Richard Atkins in 1793. In 1805, the land was conveyed to Edward Lamb, and then John Bowman in 1812. It remained with the Bowman Family

until 1875 when it was conveyed to Andrew Sutherland Low. The land remained with the Low family until 1912 when it was sold to John Miller and Neil McAuley, at which point it started being subdivided.

The land on which the School of Arts is on was sold in 1917 to Joshua Toy, Alexander Gates and Stanley O'Neill who were likely the patrons for the School. It was around this time that the brick building was built. MP Jack Lang was involved in the application for its development and his correspondence with Council, he describes the site as a "School" with a timber building on the site. Likely, money from the sale of the timber building was used to build the current brick structure. Trustees of the School of Arts exchanged in 1922, 1969, and finally in 1982 where it was transferred to the Municipal Council. It was converted into the Merrylands Youth Centre in 1985, its current use.

Statement of Significance

Merrylands Fire Station is of local significance for its historic, aesthetic and representative values. Built in 1937, the building replaced an earlier weatherboard clad fire station built in 1900 and provides evidence of the suburban development of Merrylands with the provision of fire and emergency services to the area. The building has aesthetic significance as a fine and intact example of an Inter-War Art deco Fire Station which has fine architectural detailing and retains much of its original fabric and detailing. The station makes a positive contribution to the streetscape and has landmark qualities to Merrylands Road. The item is representative of the Inter-War Art Deco style.

Criteria Assessment	
a) Historic	Built in 1937, the building replaced an earlier weatherboard clad station built in 1900 and provides evidence of the suburban development of Merrylands with the provision of fire and emergency services to the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building has aesthetic significance as an intact example of an Inter-War Art Deco Fire Station which has fine architectural detailing and retains much of its original fabric and detailing. The station makes a positive contribution to the streetscape and has landmark qualities to Merrylands Road.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item demonstrates representative qualities of an Inter-War Art Deco Fire Station.

Physical Description

The Merrylands Fire Station is a brick single storey structure with Inter-War Art Deco architectural detailing. The fire station is fronted by a face brick garage, with an accommodation and offices wing behind. The roofscape is hipped with a projecting gable to the street clad with terracotta tiles. The roof features two rendered brick chimneys with terracotta chimney pots, as well as replaced guttering. The garage features a parapeted brick gable with stepped brick string courses with an Art Deco motif at its centre and brick piers. A large red vent is located at the apex of the gable parapet. A contemporary garage roller door is at its centre. A rendered lintel with stepped and concentric detailing sits above the roller door. The panel reads 'Fire Station' in painted steel lettering. The window openings are generally timber framed double hung sashes.

A splayed low brick wall extends from the garage towards Merrylands Road. The western edge of the allotment is dominated by a concrete slab driveway that extends around the building and leads to a carpark to the south of the property. The eastern edge features a small brick wall with a steel gate, community notice board, footpath and some plantings.

The building appears to be in a good condition and is well-maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Modern illuminated sign on front elevation
- New guttering
- Red vent to apex of front gable
- New roller garage door

The building appears to have high integrity, having undergone minor alterations.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1937

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality. Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

Fire brigades were first formed in the area at Merrylands and Wentworthville. Merrylands had its own fire station by 1900, which was constructed of weatherboard and relocated from Blacktown. This fire station was replaced in 1937 by the brick structure standing on site today. The fire station was built at a cost of £1797 and is said to have replaced the old wooden structure which required replacement. The former fire station was described by Alderman Campbell as 'obsolete' and a 'disgrace to the locality'. The weatherboard structure was bought from Fairfield some years before and was so small the fire engine could only just fit.

Provisions were made in the new engine room to house the very latest Dennis fire engine of high power and speed. There was also a watch rook, a recreation room, storeroom and bathroom. Quarters had also been provided for the captain which consisted of a living room, three bedrooms and kitchen. The official opening of the station in July 1937 was attended by the Mayor of Holroyd, Mr Tucker Jones and fire brigade representatives. Today, the site remains in use as a fire station.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. Curtilage Map

Revised curtilage- refer below.

Statement of Significance

Merrylands Railway Station Building is of local significance for its early associations with the late nineteenth century expansion of the railway network throughout the Western Sydney area, initially serving the area's industry but eventually enabling the subdivision and development of land for residential suburbs. The station precinct has undergone continual modifications since its initial construction and the only remaining significant structure is the 1940s building on the Up platform (platform directing trains towards Sydney Central Station). The station building demonstrates the railway policy of the period for constructing substantial structures for suburban stations and is evidence of the upgrade of rail station facilities to accommodate growing suburban residential populations. The station building is a good representative example of a number of similar Inter War Stripped Functionalist style railway buildings in NSW and demonstrates the transition in railway architectural styles from the earlier standard Federation-style buildings.

Criteria Assessment	
a) Historic	The station is historically significant as evidence of the late nineteenth century expansion of the railway network throughout the Western Sydney area. Initially the station served industry in the area but eventually enabled the subdivision and development of land for residential suburbs. The Platform 1 brick building is evidence of the period of development, refurbishment and upgrade of rail station facilities between 1929 and 1950 to improve stations for the growing suburban residential populations. It also reflects a significant time period in station design policy, which dictated the use of brick and construction of substantial buildings for outer suburban stations.

b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The Platform 1 building is aesthetically representative of the station buildings constructed between the wars. Its architectural Inter-War Stripped Functionalist style and use of materials, seen in the originally red face brick, gabled roof, cantilevered awning, soldier brick lintels, and horizontally proportioned windows are also representative of this phase of building, although the paintwork detracts from its original design intention.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The Platform 1 building is a good and relatively intact representative example of the 'type 13' second island/side platform station buildings constructed between 1929 and 1950. The type is defined by its brick construction, cantilevered awning, the incorporation of all station building functions within the single structure and the use of elements and features of the popular architectural styles of the time. A large proportion of extant station buildings throughout the Sydney region belong to this class.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Inventory listing sheet for 'Merrylands Railway Station Building', dated 2009. As the description features a comprehensive physical description of both external and internal station elements, only minor amendments were made with regards to recent station upgrades.

Note: Up Platform refers to the platform directing trains towards Sydney Central Station and Down Platform refers to the platform directing trains away from Sydney Central Station.

CONTEXT

The station group is located adjacent to the Merrylands town centre slightly north of the junction between Railway Parade and Military Road. The Military Road side of the station contains a modern transport interchange. The station is located on the South Line between Granville and Guildford stations. The rail line runs in a north-east to south-west direction. Platforms are located either side of the rail line with a footbridge over and a pedestrian subway tunnel at the southern end of the station. Recent upgrade works, including a commuter car park and a contemporary glazed canopy have been undertaken on the northwest side of the station.

PLATFORM 1 BUILDING (1940-44)

External: The brick building located on the Up Platform 1 includes awnings and a terracotta tile roof reflecting its Inter War Functionalist design origins. Originally face brick the existing building has recently been painted and the roof features gable ends on the side elevations covered in later FC sheet panels. The eaves are boxed on the south eastern elevation only. A flat roof extends over a portion of the newsagent at the south western end while at the opposite end a partially open flat roof canopy extends over the male bathroom foyer. A cantilevered awning is attached to the south eastern elevation. It extends to the approximate platform edge for the length of the building with a narrower awning extending the remainder of the platform. The section of awning attached to the building is constructed of steel girders, metal fascia and painted corrugated metal roof.

The building includes a portico at the southern end which features the newsagent and ticket window. The newsagent space is a later fitout and includes modern tiles on the ground, rendered and painted walls, and modern suspended ceiling and display units along the walls. The ceiling in the portico features fibro panels with a simple modern cornice and fluorescent lights. The ticket windows are modern steel and toughened glass types, although they have been damaged by fire

The main south east facing elevation, which fronts the platform features numerous window and door openings which are generally constructed of soldier course lintels, while corners of the building and piers feature rounded bricks. The doors have been replaced with plain solid timber types. The windows are mostly original and are timber double hung sash windows with two horizontal panes divided by a fine bar in each sash. Some windows have security grilles installed.

The northwest facing elevation features double hung timber sash windows. A row of smaller high level windows are located at the north eastern end and open to the bathrooms. At the basement level there are three small timber doors to the sub-floor area.

***Internal:** Internally the building is divided into various spaces which are accessed from the south eastern elevation. Generally the interior of the building features modern plasterboard ceilings with simple modern cornices and fluorescent lights, painted and rendered walls, simple timber skirtings and simple timber architraves. Internal doors are also plain timber types and appear to be later elements. At the south western end of the building is the Station manager's room with the ticket windows opening to the portico. This area, which is also the location of the timber ticket windows, was burned out in 2008 and is yet to be refurbished in 2009.*

Adjacent to the Station Manager's room is the passenger waiting room which features a painted concrete floor, modern plasterboard ceiling and rendered and painted walls. The female bathrooms are adjacent to the waiting room. The walls are rendered and painted, the ceiling is modern, internal joinery to the stalls including the doors appear to be original, the floor in the foyer is stencilled and painted concrete, there is a timber seat along one wall, the floor of the cubicles area is tiled in small mosaic tiles, larger modern tiles have been applied to the skirting and splashbacks and signage is attached to the walls. At the north eastern end of the building is the male bathroom. It features a later low flat metal roof over the foyer. Walls in this section are not full height but have been enclosed above with later steel frame wire mesh panels. This section is constructed of brick walls with a painted concrete floor. There is a high level window above the urinal on the south eastern wall. The interior features the same materials as the female bathrooms.

PLATFORM 2 PASSENGER SHELTER (2007-08)
A steel framed corrugated metal canopy covers the entire length of Platform 2 connecting the platform with the stairs leading to the overhead walkway. It is a new structure and replaced the original deteriorated timber platform building in 2007-08.

PLATFORMS (c1940)
Both straight side platforms are precast concrete units and are topped with asphalt. Modern aluminium palisade fencing, timber bench seating, lighting and signage are located on the platforms.

FOOTBRIDGE/OVERHEAD WALKWAY (c.1913, modified 2007)
At the south western end of the station is the steel footbridge, which connects Platforms 1 and 2 over the rail line. It is a simple, plain steel structure consisting of a tower on each side of the platform, stairs and a bridge between. It features painted steel balustrade with steel posts supporting the corrugated metal awning. This structure matches that of the later awning and fence structures throughout the station. Clear windows are located on the outward facing elevations of the towers and along portions of the walkway. The walkway and steps are concrete. More recent lift towers have been located behind the structure to allow accessibility to the street and platforms. The footbridge may contain remnants of the 1913 taper haunched girder footbridge.

The station elements appear to be in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- 1880 - Porter's residence built
- 1881 - Goods shed erected
- 31 Dec 1890 - Old platform demolished and replaced by two side platforms with waiting sheds
- 17 Mar 1891 - Station interlocked and a signal box erected
- 22 Jun 1901 - Provision made in the station buildings for postal business
- 1914 - Platforms extended and station buildings relocated
- 1929 - Signal box renewed
- 23 Mar 1937 - Third signal box built at 23.546km
- 1940 - Platform 1 Building constructed
- 1942 - New booking and parcels office added to the down platform building
- 9 Dec 1959 - Merrylands Road level crossing equipped with half-boom gates and 'F' lights
- 24 Mar 1969 - Merrylands Road level crossing closed and new over bridge opened at 22.972km
- 4 Jun 1972 - Signal box removed*
- c.1990 - Concrete decking was installed on the footbridge
- 2003 - The Liverpool end of the Sydney-bound platform building was modified with the removal of a column in the concession
- 2005 - 1890 Platform 2 building on the Liverpool-bound platform was removed.* With its timber construction and skillion roof design it was one of less than 20 such examples remaining from a total of 450 examples built between 1890 and 1960. It was one of three examples in Sydney
- Post 2006 - lifts installed on footbridge*
- 2007 - The face bricks on the Platform 1 building were painted
- Platform 1 Building modifications with no date include:
  - Provision of newsagent at south western end
  - Fitout of newsagent space
  - Painting of ticket window wall
  - Replacement of internal ceilings throughout*
  - Replacement of doors throughout*
  - Security bars to windows*
  - Security mesh and door and metal roof to male bathroom foyer*
  - Lightweight partitions forming bathroom and storerooms in station manager's room
  - Kitchenette in station manager's room
  - Air conditioning units attached to north western elevation*
- Fencing, balustrade, awning and concrete floor of the walkway on the footbridge added
- 2017 - Bird Proofing, Landscaping improvements, Toilet refurbishments, Lighting LED replacements – All Vandalux and Pole top lights fittings replaced to LED fittings, and seating and bins replaced

Merrylands Railway Station has been heavily altered over time. The original platforms and structures as well as those from the late nineteenth century have been lost during improvements to the station. This has had a significant impact on the potential for the station complex to demonstrate various phases of development.

Key elements within the precinct that remain relatively intact and representative of the core heritage values of the site include the Platform 1 station building. The Platform 1 building is relatively intact except for some minor additions to the southern end and alterations to the Station Master's room. However, a fire within the ticket office and painting of the exterior has reduced its integrity. The integrity of the site is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1878

The following history has been quoted from the NSW Office of Environment and Heritage State Heritage Inventory listing sheet for 'Merrylands Railway Station Building', dated 2009.

Merrylands Station was opened in 1878. It was the fifth station to open along the Parramatta (Granville) to Liverpool section of railway, following Fairfield (1856), Cabramatta (1870), Guildford (1876) and Canley Vale (1878). This section of railway, which would eventually stretch to Goulburn as the Main Southern Line, is a spur from the original Sydney to Parramatta line which eventually opened in 1855 after the private company constructing the line ran into financial problems.

In 1890, one year before the duplication of the rail line, the original platform was demolished and replaced with two platforms, one either side of the line and new waiting sheds were constructed. The timber waiting shed, which was extant on the 'down' platform until 2006, was one of these buildings. It was one of the last locations where timber was used for station buildings before the policy in 1912 to erect brick structures in Sydney. The next major addition to the station was the footbridge and extension of the platform in 1913. Some of the station buildings are recorded as being removed and repaired at this time.

In 1940, the Department approved a brick Inter War Stripped Functionalist style building on the Sydney bound platform with construction completed by 1944. Its robust construction reflects the Department of Railways' policy of building substantial structures for the suburban area in the 1930s. This structure was built using State funding and contrasts with the mostly superior quality and larger buildings between Westmead and Seven Hills, which were funded by the Commonwealth during World War II.

In 1970 the level crossing at the southern end of the station was replaced with the existing concrete subway tunnel. In 1996-1997 major upgrade works were undertaken on the platforms including the addition of steel canopies along the length of the platform.

In 2003, the Liverpool end of the Sydney-bound platform building was modified with the removal of a column in the concession and in 2007 the face bricks on the building were painted. The 1912 steel beam footbridge has been severely modified with a canopy and lifts.

There was a signal box situated at the southern end of the up platform, directly adjacent to the Merrylands Road level crossing, though this has been removed.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The heritage curtilage for the Cumberland LEP should be revised to match the RailCorp Section 170 Heritage and Conservation Register curtilage for the station; item #4801921. Refer to the plan below, showing the orange curtilage. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Statement of Significance

The Merrylands Baby Health Care Centre is of local historic and social significance for the evidence it provides of the nature of Post-War development in Holroyd. It reflects not only the rapid growth of residential population in the area in this period, (particularly government sponsored schemes such as by the Housing Commission) but also the recognition by government agencies of the day of the need to provide health and education facilities in line with contemporary ideas on child raising. It is also directly associated with the "Baby Boomers" phenomenon which saw child births increase dramatically in the immediate Post-War years. Aesthetically, the building is significant as an interesting and relatively intact representative example of the "domestic" style suburban Baby Health Centres erected throughout the state in the Post-War period. The Merrylands Baby Health Care Centre demonstrates representative qualities as an intact Post-War brick veneer health care buildings, constructed c.1947.

Criteria Assessment	
a) Historic	The item has historical significance as a specific civic service provided by governments of this time to support growing communities in the suburbs.
b) Associative	The item has associations with a specific generation, known as “baby boomers” which reflected the Post-WW2 population growth. The building is also associated with Eric Nicholls, a prominent architect that worked closely with Walter Burley Griffin and who was well known for his Functionalist and Art Deco residential and public building designs.
c) Aesthetic/Technical	The item has aesthetic significance as a fine example of suburban Baby Health Centres erected throughout the state in the Post-War period. It has particularly fine detailing for a civic building that would typically be quite vernacular. The Functionalist and Art Deco

	architectural design of the centre is attributed to Eric Nicholls, a prominent architect that worked closely with Walter Burley Griffin.
d) Social	The item has social significance as it represents a specific but important period of growth for the Merrylands community.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representation of the domestic style of baby health care centres that were erected throughout NSW in the Post-War period.

Physical Description

This is a single storey "domestic" scaled and detailed building with asymmetrical layout featuring semicircular fronted wing to one side. The roof comprises several hipped components and front entry is marked by a small entrance "portico" with straight edged parapet. Both portico and steel grilles to front door and windows show slight influence of modified "Inter-War Art Deco" style. The front boundary is lined by low boundary wall of matching face brickwork with steel gate to entry.

In plan, the building comprises a basic rectangular-shaped building with a north-facing semi-circular window and a large covered rectangular portico at its front, which is the western façade addressing Miller Street. The building has a Marseille-patterned terracotta tile with hipped roof and boxed eaves.

The recent redevelopment of the Merrylands RSL adjacent has required major modifications to the building and its surrounding landscaping. Much of the landscaped setback has been absorbed into a new vehicle porte cochere and turning circle, and to the rear of the building, a connection to the new RSL building has been created, involving a new opening into the fabric of the building. The roof has been replaced with new tiling. Internal modifications have been made to open the space up for use as an interpretive and gallery space. However, many of the external decorative elements such as windows, grilles and boundary walls have been retained to maintain much of its original built character from the streetscape.

There are no significant plantings surrounding the building, except for a mature frangipani tree which contributes the aesthetic of the building.

Overall the condition of the building is good, having undergone recent modifications.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Modifications to the surrounding landscaping has reduced the landscaped area around the building
- New penetration in the rear of the building allowing a connection to the new RSL building *
- New roof tiling

As the building retains its general form and structure, it is in a god condition

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1947

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south.

Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

Following WW2, the population of many suburbs in Australia grew rapidly, a phenomenon known as the "Baby Boom". Several suburbs in particular grew quickly with the development of the Commonwealth and State Housing Commission works under the Curtain Government, which was tasked with rehousing and rehabilitating the increased Post-War population. In response to the Baby Boom, many councils initiated Baby Health Care centres as a community support to the booming population. These Baby Health Care centres were run by and employed council employees. This particular Baby Health Care centre was completed in 1947 and opened by W. H. Lam. Its Functionalist and Art Deco architectural design is attributed to Eric Nicholls, a prominent architect that worked closely with Walter Burley Griffin and who was well known for his residential and public building designs.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The item is under pressure by adjacent large-scale developments in terms of the building aesthetic and heritage curtilage. Additional mitigations such as interpretation or public programs may add to restoring the item's heritage values.
- Due to the substantial changes to the curtilage, landscape and built heritage setting of Merrylands baby Care Centre it is recommended that a detailed fabric analysis is undertaken to better understand the physical setting and significance of the place. This should be undertaken as part of a review and update of the Conservation Management Plan, prepared by Godden Mackay Logan in 2002.

Curtilage Map

Statement of Significance

Merrylands East Primary School is of local significance for its historic, aesthetic and representative values. Built in 1928, the main school building is historically significant as the Merrylands East Infants School which has served as a public school for the local community since its opening. The school provides evidence of the major population boom Merrylands experienced during the Inter-War period when residential development and associated civic infrastructure grew at pace throughout the area. The building also reflects the educational and social policies of the State Government's Department of Education during the period with the provision of new schools throughout the State. The Primary School building has aesthetic significance as a well detailed and substantially intact example of Inter-War Georgian Revival architecture, a style that is not particularly common within the area. The siting of the building and the integrity of its aesthetic qualities also make it a notable and attractive landmark in its local area. The item demonstrates representative qualities of Inter-War Georgian Revival architecture educational building.

Criteria Assessment	
a) Historic	Built in 1928, the main school building is historically significant as the Merrylands East Infants School which has served as a local public school for the local community since its opening. The original Primary School classroom block provides evidence of the major population boom Merrylands experienced during the Inter-War period when residential development and associated civic infrastructure grew apace throughout the area. The building also reflects the educational and social policies of the State Government's Department of Education

	during the period with the provision of new schools throughout the State.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as a well detailed and substantially intact example of Inter-War Georgian Revival architecture, a style that is not particularly common within the area. The siting of the building and the integrity of its aesthetic qualities also make it a notable and attractive landmark in the local area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an Inter-War Georgian Revival architecture educational building.

Physical Description

Merrylands East Public School consists of a large main building built in the Inter-War Georgian Revival architectural style, which dates to 1928. The main building is a large hip-roofed classroom block with a projecting central bay with a hipped-gable roof clad with concrete tiles. Pressed metal roof sheets are infilled between the northern projecting hipped roofs. The building's brickwork is rendered atop a brick infilled base. Rendered brick chimneys with semi-circular cowls flank the central bay which features the name and date of the school above a pair of multipaned timber framed double-hung sash windows surmounted by a multipaned semi-circular fanlight. All elevations have a number of multipaned timber framed double hung sash windows. The southern elevation features rectangular windows, while the north elevation features semi-circular windows.

A large two-storey brick classroom block with a gabled roof clad in tiles is located to the west of the main building. The building features square, timber framed double hung sash windows. Further west within the school curtilage there are demountable classrooms and single-storey brick classrooms with timber framed casement windows that appear to date to the 1960s. To the east of the main building, there are contemporary school buildings and a staff carpark.

The school contains a number of established native eucalyptus trees along the perimeter of the school that are significant. The school features a black steel palisade fence. North of the main building is a central asphalt courtyard.

There appears to be extensive cracking in the brickwork on the façade of the Inter-War Georgian Revival building. The condition of has therefore been noted as fair.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Several additions to the school during the 1960s and c.2000s
- New fence

The building appears to retain a high level of integrity with much of its external fabric and detailing retained. However, as the building still operates as a primary school, it is likely the interiors have undergone some change. The item has moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1928

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The main building at Merrylands East Public School opened as the new Public School for Infants at Merrylands East in 1928. The official opening ceremony was performed by Mt Ross Thomas, acting Chief Inspector of the Department. Merrylands East Public School received several additions in 1965. The additions included two new classrooms at a cost of £24,000. Today, the site remains in use as a public school.

Recommendations

Curtilage Map

Statement of Significance

Lawson Square Reserve is of local significance for its historic, associative, aesthetic and social values. Lawson Square forms an important part of the early land subdivision in 1886 and 1887 known as the Gough Town Estate. The area was developed by Philip Risby Holdsworth, a temperance advocate and land agent. The name for Lawson Square came from the English temperance campaigner, Sir Wilfrid Lawson. The park reflects the town planning principles of the subdivision and it largely retains the early boundaries of that subdivision. The aesthetic significance of the park is enhanced by the several established Eucalyptus trees and *Phoenix canariensis* that evenly line the park. The park has some social significance to the local community as it was largely the work of local voluntary labour that helped establish and maintain the space.

Criteria Assessment	
a) Historic	Lawson Square forms an important part of the early land subdivision in 1886 and 1887 known as the Gough Town Estate. The name for Lawson Square came from the English temperance campaigner, Sir Wilfrid Lawson. The park reflects the town planning principles of the subdivision and it largely retains the early boundaries of that subdivision.
b) Associative	The area is associated with Philip Risby Holdsworth, a temperance advocate and land agent. The name for Lawson Square was after the English temperance campaigner, Sir Wilfrid Lawson.
c) Aesthetic/Technical	The park's aesthetic significance is enhanced by the several established Eucalyptus trees and Phoenix canariensis that evenly line the park.

d) Social	The park has some social significance to the local community as it was largely the work of local voluntary labour that helped establish and maintain the space.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Lawson Square is a large grassed recreational area within the suburb of Merrylands. The public park is located along Price Street and Desmond Street, on the block of land between Creer Street and Harcus Street. The park is lined with evenly spaced Phoenix canariensis with Eucalyptus trees also located along the boundary. The park contains a tennis court, picnic shelter and play equipment. A low steel fence extends along the park's perimeter. A concrete slab footpath extends the length of the park at its centre on a north-south axis. The park facilities are post 1943.

The park appears to be in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New fence
- Tennis courts added c.1948
- Park facilities (i.e. toilet block)
- Contemporary play equipment
- Contemporary lighting along footpath throughout park

The park retains a high level of integrity as a recreational space. The later additions including park facilities and play equipment facilitate the continued use and local appreciation of the park.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1881

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

Lawson Square forms an important part of the early land subdivision in 1886 and 1887 known as the Gough Town Estate. The Gough Town Estate consisted of 378 allotments named after the internationally renowned temperance orator, John Bartholomew Gough. In 1881, Gough Town Estate was established for subdivision following the acquisition of the 100 acres of land adjacent to Arthur Todd Holroyd's Sherwood Scrubs property. The area was developed by Philip Risby Holdsworth, a temperance advocate and land agent.

The land was bounded by Merrylands Road (then known as Park Road), Chetwyn Road (Kings Road), Matthew Street, and Fowler Road (Lucas Street). New streets included Henson, Price, James, Morris, Roseby, Davies, Creer and Harcus Streets. The streets were named after Holdsworth's temperance colleagues from the Temperance Alliance, an umbrella organisation of the United Temperance Association of New South Wales. Buyers were assured there was no better site in the area for a new township, and that the future of Gough Town should be a rapidly improving one. An open square at the centre of the estate called Lawson Square (after the English temperance campaigner, Sir Wilfrid Lawson) was reserved for 'public recreation' and land at the southwest corner was allocated for school purposes in 1881.

In 1932, the Lawson Park Committee had the funds to plant 50 trees in the park, in which a tree planting day was held between July and August. The committee had also ensured the fence was repaired and repainted, swings erected, a water tap and soccer posts constructed at the help of local, voluntary labour. The site gained a tennis court c.1948. The site remains in use as a public park.

Curtilage Map

Statement of Significance

The dwelling at 56 St Ann Street, Merrylands is of local significance for its historic, aesthetic and representative values. Built c.1920, the dwelling is historically linked to the suburban development of Merrylands which occurred following the opening of the Merrylands Station in 1876. The residence is associated with the Gough Town Estate subdivision which formed the alignment of St Ann Street in 1881. The residence is aesthetically significant as a relatively intact Federation period cottage that retains much of its original fabric and detailing as viewed from the exterior. The intact nature of the cottage makes it a fine representative example of the Federation style of building as constructed in the area in the early decades of the 20th century and as representative of the development which occurred during the 1920s in Merrylands.

Criteria Assessment	
a) Historic	Built c.1920, the dwelling is historically linked to the suburban development of Merrylands which occurred following the opening of the Merrylands Station in 1876. The residence is associated with the Gough Town Estate subdivision which formed the alignment of St Ann Street in 1881.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The residence is aesthetically significant as a relatively intact Federation period cottage that retains much of its original fabric and detailing as viewed from the exterior.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The intact nature of the cottage makes it a fine representative example of the Federation style of building as constructed in the area in the early decades of the 20th century and as representative of the development which occurred during the 1920s in Merrylands.

Physical Description

The subject building is a single storey weatherboard Federation residence. The walls are clad in rusticated weatherboard. The residence has a half gable roof clad in corrugated steel with one simple face brick chimney with two terracotta pots. The roof extends over a broken back verandah which wraps around the front of the building terminating about 1.5m down the side facades. The verandah roof is supported on timber posts with decorative brackets, which support a simple timber balustrade with lattice infill. The front facade of the building features a central door fronted by a contemporary security screen framed by two timber casement windows with three multipaned sashes. The house also features a skillion roofed section at the back of the building.

The building is set back from the street and features a recently landscaped front yard with timber picket front fence. A concrete driveway spans from the street to the rear of the property which features several steel framed and clad structures, including a large carport. Colorbond steel fencing bounds the property to the east and rear, and a timber paling fence runs along the western boundary. Internally the owner reports that the fireplaces are intact although the chimney in the kitchen is in poor condition where a wall was removed during earlier renovations.

The building appears to be in a good condition and well-maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The verandah balustrading and infill lattice are more recent additions*
- The front steps and sub-base brick are a later infill
- Additions to the rear include a number of contemporary sheds
- Carport added
- An application was lodged for a garage in 1989
- DA lodged for a pool and enclosure in 1992

The cottage is intact and in good condition.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1920

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as the Goodlet and Smith Brickworks.

A large section of the suburb of Merrylands stands on the Church and School Estate, first offered for sale from 1871, and progressively re-subdivided after the opening of the Merrylands Railway Station in 1876. The site formed part of approximately 18 1/2 acres purchased by James Henderson in 1872, who also acquired other sections of the first subdivision of the Church and School Estate at this time.

The building, although not constructed until the early years of the 20th century, is located on part of the early subdivisions. St Ann Street was part of the first subdivision road pattern forming the boundary of the 1881 "Gough Town Estate" subdivision. The property was purchased by Henry Arthur Veron, estate agent, in 1910, who also purchased other allotments on St Ann's Hill Street and Meakin St, followed by Alfred Johnson in 1913, John Coleman in 1919, and Alfred Wines in 1932.

The exact date of construction of the cottage remains unknown, although its architectural style would indicate it was constructed in the early decades of the 20th century. The property is listed in the Sands Directory between 1922-24 as being occupied by Coleman. The building remains in use as a private residence.

Recommendations

Curtilage Map

Statement of Significance

The dwelling at 7 Villiers Street, Merrylands is of local significance for historic and aesthetic heritage values. The building is historically related to the residential development of Merrylands that followed the opening of the Merrylands station in 1876 and subdivision of the Church and School Estate. The residence is representative of the type of development which occurred in Merrylands during the 1920s. The building's aesthetic significance is somewhat compromised by contemporary modifications which have altered the form and landscape of the building. Nonetheless, the residence retains some aesthetic value for the arched Art Nouveau leadlight window to the front facade.

Criteria Assessment	
a) Historic	The building is historically related to the residential development of Merrylands that followed the opening of the Merrylands station in 1876 and subdivision of the Church and School Estate. The residence is representative of the type of development which occurred in Merrylands during the 1920s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building's aesthetic significance is somewhat compromised by contemporary modifications which have altered the form and landscape of the building. The residence retains some aesthetic value for the arched Art Nouveau leadlight window to the front facade.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The building is a modified single-storey Federation cottage with Art Nouveau detailing. The residence is clad in timber weatherboards and hardiplank boarding with a half-gabled roof clad in galvanised corrugated iron. The gablet features a circular window with a timber finial. The dwelling features a modified roof form with a projecting gabled wing at the rear and replaced roof sheets with solar panels affixed to the northern facing roof panels. The main roof changes pitch and extends to incorporate the front section of the house and an open verandah on the northern side. Tiled steps lead up to a small porch area on the street facing façade (east elevation). The porch, which features a central panelled timber door and tiled floor, is flanked by two infilled sections featuring timber weatherboard cladding and multipaned casement windows including an Art Nouveau styled window on the northern side. The northern section of the house features a new verandah, with concrete floor and simple timber posts as well as lace brackets which support the roof. The area is bordered by a gable roofed addition which also features an entry door. The side elevations feature a number of aluminium windows.

A brick paved driveway runs from the street boundary to the rear which features several structures including a hardiplank clad garage and a gabled roof carport. Another outbuilding, also clad in hardiplank, is located at the rear of the house. The property maintains a wide street frontage, however, it has a heavily modified front landscape which has had several plantings removed.

The residence appears to be in a fair condition overall.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Infilled front porch area on the east elevation*
- New gabled wing clad in Hardiplank
- Verandah added to the northern side of the cottage
- Altered roof form, which has been reclad roof in galvanised corrugated iron*
- Weatherboard cladding replaced by Hardiplank
- Replaced aluminium framed windows*
- Garage, carport and screened room added in 1986
- Outbuilding constructed c.1996
- Solar panels added to roof
- Altered front landscape*

This building has been heavily modified. The buildings integrity is considered to be low.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1919

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as the Goodlet and Smith Brickworks.

The site, Lots 35B-38, is part of a 25 acres Grant made to John Hodgson in January 1873. It had previously been part of the Church and School Estate (Section 46) which was subdivided in 1871-72. In 1875, the 25 acres were transferred to George Lovett. A year later the mortgagee sold the land to John Murphy. By 1882, the grant had been subdivided and Lots 31-36 were purchased by John Herlicky and Lots 7, 8, 37 and 38 were purchased by William Herlicky.

In 1918 Duncan Irvine purchased Lots 31-36 and in 1920 purchased Lot 7, 8, 37 and 38 consolidating the site. It is assumed that the cottage was constructed c. 1919. The Sands Directory lists Irvine from 1919-1933. In 1929 Vera Solomons purchased Lots 7, 8, 33-36. In 1941 Lots 37 and 38 were purchased by Felix and Alice Johnson who then purchased lots 33-36 in 1943.

In 1957, it appears the Johnsons sold part of their estate but retained Lots 35B-38. In 1978 Alice Johnson, now widowed, became the sole owner. The site was purchased by the current owners in 1983, who have since made a number of additions to the property. The property remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the landscape setting around the dwelling should be revised to include a more sympathetic heritage treatment.
- The current roof form appears to be modified from the original hipped form. Any future redevelopment which alters the form of the roof should consider the reinstatement of the original form.

Curtilage Map

Revised curtilage recommended - refer below.

Statement of Significance

The Federation Cottage at 33 Walker Street, Merrylands is of local significance for its historic, aesthetic and representative values. Built c.1913, the building historically relates to the initial 1871 residential subdivision of the Church and School Estate that was progressively re-subdivided after the opening of the Merrylands Railway Station in 1876. From 1913, the site is known as Elsinore Park Estate. The building has aesthetic significance as a well-kept and intact example of a Federation residence which presents well to the street. The residence demonstrates representative qualities of an intact Federation cottage built between 1913 and 1916.

Criteria Assessment	
a) Historic	Built in c.1913, the building historically relates to the initial 1871 residential subdivision of the Church and School Estate that was progressively re-subdivided after the opening of the Merrylands Railway Station in 1876. From 1913, the site is known as Elsinore Park Estate.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building has aesthetic significance as a well-kept and intact example of a Federation residence which presents well to the street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The residence demonstrates representative qualities of an intact Federation cottage built between 1913 and 1916.

Physical Description

The subject building is a single storey Federation cottage. The item is clad with rusticated weatherboards, and has a half gabled and hipped roof clad in corrugated iron. The verandah is open and L-shaped, and extends around the north-east corner. It has a bullnose roof clad in red Colorbond sheeting and is supported on simple timber posts with a timber frieze and simple timber slat balustrading. A number of steps with terrazzo treads lead up to the verandah timber floor which rests on brick infill footings. The front facade of the building features a central panelled door framed by two pairs of multipaned double hung windows with security screens. A portion of the northern verandah has been infilled and clad in Fibrous Cement sheeting. It adjoins a skillion roofed section. The main roof changes pitch and extends over the rear of the house, which also features a hipped roof wing and skillion roofed addition in the southern section of the house. The southern wing also features a face brick profiled chimney with two terracotta pots. The facades feature timber framed double hung sash windows with flyscreens attached to the lower sash and a security frame over the opening.

The cottage is set back from the street and is situated on a deep corner block. The property has a painted white timber picket fence along the front boundary and some hedging. While the property does not contain any significant plantings within its curtilage, the street trees are a prominent and aesthetic feature of the streetscape that contribute to the aesthetic of the residence.

The condition of the building is considered to be fair. The main roof shows signs of wear and the chimney brickwork has some biological growth on the southern elevation.

Condition	Good	**Fair**	Poor

Alterations and Additions

- All timber elements of the verandah have been stripped, primed and repainted. Timber posts likely replaced
- New verandah roof clad in Colorbond sheeting
- The roof shows some wear and is poorly maintained
- Rear additions with the inclusion of various cladding materials that may be a result of an application to convert the house into two flats made in 1964
- The Fibrous Cement infill on the northern verandah features a doorway*

Although the building has been modified, the item retains its overall scale and form.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1913-1916

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s. With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as the Goodlet and Smith Brickworks.

A large section of the suburb of Merrylands stands on the Church and School Estate, first offered for sale from 1871, and progressively re-subdivided after the opening of the Merrylands Railway Station in 1876. The subject site formed part of over 46 acres purchased by James Henderson in 1873, who also acquired other sections of the first subdivision of the Church and School Estate at this time. Henderson subsequently subdivided, forming Walker Street, and over 40 acres, including the site, was purchased by Philip Billingsley Walker in 1888.

The property was purchased by Major Carlton Stockwell, a builder, in 1913, who further subdivided this area and the area between Walker, Elsinore and Winchmore Streets. These lots were purchased by George Hembury in 1913. It is assumed that the cottage was constructed around this time. From 1913 the Sands Directory refers to the "Elsinore Park Estate". Hembury is not listed until 1916. Hembury sold the property in 1958 to Clarence Jones. The property was further subdivided and changed hands a further 4 times until it was purchased by the present owners in 1982. The item remains in use as a private residence.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the western portion of the current site now includes a modern dwelling of no heritage value, the heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The 'Carrington' has local and potential State significance for its historic, aesthetic and scientific values. The site relates to two early land grants in the area and is historically significant for its association with prominent residents in the district. In particular, the house has social significance as an example of the social standing of its owner, Robert Heath Rickard. The site contains a fine quality and largely intact example of an early residence in the Merrylands / Parramatta area, which has notable style and detailing. The visual quality of the property maintains its earlier importance as a Gentleman's residence and as one of the small group of major early homesteads in the district. This aesthetic significance is further supported by its location on a prominent corner site, and its setting on a large curtilage which still retains important early mature trees and plantings. The building holds scientific significance for both its archaeological and educational potential.

Criteria Assessment	
a) Historic	The site is historically significant for its links to two early land grants in the area and the early development of the suburb. It is historically significant for its relation to prominent residents in the wider area over time.
b) Associative	The site is associated with former owner Robert Heath Rickard, brother of Sir Arthur Rickard of Arthur Rickard and Co. Auctioneers and Realty Specialists, whose subdivisions in the 1810-1820s determined much of the settlement pattern still apparent in Western Sydney.
c) Aesthetic/Technical	The site contains a fine quality and largely intact example of an early residence in the area which has notable style and detailing. This

	aesthetic significance is further supported by its location on a prominent corner site, and its setting on a large curtilage which still retains important early mature trees and plantings. The visual quality of the property maintains its earlier importance as a Gentleman's residence and as one of the small group of major early homesteads in the district.
d) Social	The item does not meet this criterion.
e) Scientific	The site has the potential for significant archaeological remains and is likely to have importance as an educational resource in relation to early homesteads and living conditions and practices.
f) Rarity	The item is a rare early high-quality residence in the area.
g) Representativeness	The item does not meet this criterion.

Physical Description

'Carrington' is a Victorian Italianate residence that contains a single storey rendered brick house located on a large block and set back from the street. The house has a U-shaped plan with a hipped roof of slate tiles, two pairs of twin masonry chimneys with rendered neck mouldings and metal roof vents. A small gable marks the central entrance and has a decorative timber screen and turned finial. An ogee style verandah extends around the front and sides and is supported by pairs of cast iron lace posts and brackets. The verandah has rolled corrugated iron roof sheeting, tiled and slate floor and central slate steps with classical urns. The central door has glazed top and side lights and is obscured by a security screen. On either side are pairs of timber framed double hung windows with moulded render spandrel panels below and timber jalousies. Walls and chimneys also feature incised decoration. There is a fibro skillion lean-to at the rear of the south western corner of the house.

To the west is a single storey 1930s face brick garage with terracotta tiled hipped roof, typical of adjacent residences.

At the rear of the property is a two-storey contemporary brick house.

The house is partially obscured from the street by several mature palms and Camphor Laurels, a Silky Oak, a pine tree and a number of other plantings. A gravel driveway sweeps past the house and leads to a rendered masonry and concrete tile carport on the eastern side. There is a high brick and modern wrought iron palisade fence to the street boundary. All of these landscape elements contribute to the heritage significance of the property.

Overall, the condition of the dwelling and landscaping is considered to be good. The site appears to be well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Fibro skillion lean-to at the rear of the south west corner of the house.
- Brick and tile garage.

The building appears to be highly intact with a well-kept form, style and detailing.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1876

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The area surrounding the subject property was occupied from as early as 1793 and lies on the outskirts of the present-day suburb of Merrylands. The subject property is built on part of two land grants given to Richard Atkins, the colony's principal legal officer known for his alcoholism, immorality and insolvency. These two land grants were given to Atkins, the first in 1793, comprising 100 acres, and the second in 1798, of 145 acres. Other major land grants in the vicinity were given to John MacArthur, John Harris and Graham Blaxcell.

Built c.1876, the subject property, 'Carrington' residence was built for Robert H Rickard, brother of Sir Arthur Rickard of Arthur Rickard and Co. Auctioneers and Realty Specialists, whose subdivisions in the 1810-1820s determined much of the settlement pattern still apparent in Western Sydney. The property, comprising of over 12 acres bound by Auburn, Pitt and Victoria Streets, passed to Richard H Rickard in 1914. Several smaller subdivisions are noted along Victoria St at this time. The property passed to Joseph Crawley in 1923 and was leased back to Richard H Rickard until 1926, when it was further subdivided, and the house and grounds were purchased by Jane Stephens. Ledger, Crawley and Thomas Streets were created at this time. The property passed to Dorothy Leicester in 1947, to Francis and Nellie McMinn in 1953, and was further subdivided in 1960 and 1980, when the present boundaries formed. The property changed hands a further five times until 1985, when it was purchased by the current owners.

Today, the dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g.	**X**

				paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.	**X**	**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- A detailed archaeological assessment of the site should be undertaken to ascertain its research potential.
- The curtilage of the site should continue to encompass the dwelling as well as the landscaped grounds, maintaining key views and settings for the item.
- In addition to the dwelling itself, the landscaping should be maintained as a key feature of the heritage place.
- Update address for this item on the Cumberland LEP – it is located in the suburb of Merrylands, not Parramatta, as the former Holroyd LEP states.
- As the subject site is an early and intact homestead, consideration should be given to the nomination of this site as a State Heritage Register item. Further research is required to establish the comparative significance of the dwelling in relation to other homesteads in NSW.
- A Conservation Management Plan should be prepared for this site to understand in greater detail the history and significance of the place, as well as how to manage change and monitor conditions of the site.

Curtilage Map

Statement of Significance

The pair of semi-detached houses at 23-25 Augustus Street, Merrylands are of local significance for their historic, aesthetic and representative heritage values. Built c.1890, the item relates to the residential subdivision of Garnham Blaxcell's, Drainwell Estate, in 1883 by the Australian Mutual Investment and Building Company for the 'Granville Heights' subdivision. The cottage pair remain as some of the earliest residences built on the street and are associated with the 1880s development of the Granville area that occurred in conjunction with the increased industrial activity in the area. The semi-detached cottage retains its aesthetic significance as a highly intact Victorian cottage pair which present well to the street. They are representative examples of Victorian cottages in the area.

Criteria Assessment	
a) Historic	Built c.1890, the item relates to the residential subdivision of Garnham Blaxcell's, Drainwell Estate, in 1883 by the Australian Mutual Investment and Building Company for the 'Granville Heights' subdivision. The cottage pair remain as some of the earliest residences built on the street and are associated with the 1880s development of Granville.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The semi-detached cottage retains its aesthetic significance as a highly intact Victorian cottage pair which present well to the street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	They are representative examples of Victorian cottages in the area.

Physical Description

The item is a symmetrical single storey, semi-detached pair of brick Victorian cottages. The cottages have a gabled roof, both which have been reclad with Colorbond. The roof of No. 23 has been painted. The gable ends of the roof have decorative timber bargeboards and finial. The roof has two rendered brick chimneys with cornice detailing. The chimney of No.23 retains its terracotta chimney pots and has painted the cornice detailing. The chimney of No.25 is missing the terracotta pots and features no colour scheme, though the original lead flashing is evident. A rendered cornice with paired moulded brackets sits directly below the guttering the front façade. The front façade verandah has a bullnose roof of Colorbond, with hip corners. The verandah roof is supported on central rendered brick privacy wall with lacework frieze atop a concrete floor.

The front facade is rendered with ashlar markings, while the sides are of painted brick. The render on the front façade of No.25 is light pink and has cracking, impact damage and flaking paint. The render on No.23 appears to be in a better condition and is painted yellow. The cottage has Palladian style, timber framed sash window, with a Victorian label mould arche and decorative stops above the window arch on No. 23 only. The windows also feature rendered cast iron mullions and a rendered sill with cornice detail. The front door of No. 23 has a transom light above a Victorian timber four panel door with upper panels stencilled and bolection moulded panels below lock rail. No. 25 has a transom light above a six-panelled Victorian door.

From aerial imagery, the item appears to have several phases of rear extensions. They are not visible from the streetscape.

The item features a modest setback from the streetscape and is fronted by a painted timber picket fence and gate with acorn tops. There are no significant plantings within the curtilage.

The condition of the semi-detached cottage is varied. The dwelling No. 23 appears to be in a good condition and well maintained. The cottage at No. 25 is considered to be in a fair condition with some dilapidation to the front façade with cracking in the render and paint flaking.

Overall, the item appears to be in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Several rear extensions
- New roofing to main roof and verandah
- New colour scheme of No.23

The building retains a high level of significant detailing and original fabric. Where significant fabric has reached the end of its serviceable life, it has been sympathetically replaced on a like for like basis. Although the dwelling contains several rear extensions, they are a discrete and sympathetic addition to the dwelling that do not have an adverse impact on the heritage significance of the item. The item is considered to have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1890

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evidence and there is still a predominance of buildings dating to the 1880s – 1930s.

Although the property is firmly located within the current suburb of Merrylands on Augustus Street, the subject property was historically located on Wright Street, Granville. The property formed part of the land subdivided in 1883 by the Australian Mutual Investment and Building Company, known as 'Granville Heights'. It is likely the property was built in the 1890s. The property is shown on Water Board plan of October 1933. The street appears to have been renamed recently from Wright to Augustus Street. The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Investigation into the conservation of the brickwork and rendered elements of 25 Augustus Street, Merrylands should be undertaken to conserve significant fabric and detailing of the front facade.

Curtilage Map

Statement of Significance

The cottage at 29 Bertha Street, Merrylands is of local significance for its historic, associative and representative values. Built c.1917, the residence was the first cottage built by the Granville Voluntary Workers Association (VWA) established by John Nobbs, Richard E. Burns and Hector Kirkpatrick. The VWA was a body formed during World War One to erect houses for men incapacitated by the war or to house their widows. Although modified, the cottage retains key architectural features that demonstrates representative qualities of a late Federation cottage.

Criteria Assessment	
a) Historic	Built c.1917, the residence was the first cottage built by the Granville Voluntary Workers Association (VWA) established by John Nobbs, Richard E. Burns and Hector Kirkpatrick. The VWA was a body formed during World War One to erect houses for men incapacitated by the war or to house their widows
b) Associative	The item is historically associated with John Nobbs, Richard E. Burns and Hector Kirkpatrick.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item although modified, retains key architectural features that demonstrates representative qualities of a Federation cottage, built c.1917.

Physical Description

The item is a late Federation single storey cottage with rusticated weatherboard cladding. The cottage, now renovated, has an asymmetrical facade with a hipped roof and front projecting gable clad with concrete tiles. The gable end has a simple timber bargeboard and finial, with a timber framed double hung sash window with a bracketed awning is situated above. The front façade features a small verandah which extends from the gable to across the front façade. The verandah roof is an extension of the main roof and has exposed timber rafters. The verandah roof is supported on bracketed timber posts set on brick piers with an enclosed brick balustrade. The verandah is addressed by a mosaic tessellated tiled footpath. The windows are four paned timber framed double hung sash windows with a simple timber architrave and sill with a decorative skirt.

The item has a rear skillion extension and a carport added to the western elevation. This boundary is marked by a Colorbond sheeting fence. The front fence is new timber picket fence and gate framed by established low-lying hedges. The plantings are not significant, however do contribute to the aesthetic setting of the item.

Overall, the condition of the item is considered good. The item appears to be well-maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extension
- Carport added to western elevation
- Brick piers and balustrade to verandah replacing timber posts*
- New paint scheme
- New roof cladding

Although the building is modified it retains key characteristics of its building type and significant fabric. It is considered to have moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1917

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as the Goodlet and Smith Brickworks.

A large section of the suburb of Merrylands stands on the Church and School Estate, first offered for sale from 1871, and progressively re-subdivided after the opening of the Merrylands Railway Station

in 1876. The property was acquired by W.J. Baker by 1880s following the subdivision of the Church and School estate.

This allotment was donated to John Nobbs, Richard E. Burns and Hector Kirkpatrick, the trustees of the Granville Voluntary Workers Association (VWA) on 29 September 1917 for the nominal price of 10 shillings along with another allotment. The VWA was a body formed during World War One to erect houses for men incapacitated by the war or to house their widows. The price of the houses could then be paid off on liberal terms. This was the first cottage built by the Granville VWA and was presented to Private Charles Lewis after a gala procession with brass bands, and a parade leading from Good Street, Granville to this cottage on 15 December 1917. The cottage, worth 450 pounds, was erected at a cost of 250 pounds due to the use of voluntary labour. Lewis sold the cottage in March 1929. For some years, it was the only cottage on this side of the street. The dwelling remains in use as a residence.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. Curtilage Map

Statement of Significance

The cottage at 46 Bertha Street, Merrylands is locally significant for its historic, rarity and representative heritage values. Built c.1934, the residence is historically associated with the state government led initiative 'Homes for the Unemployed Trust' which provided assistance to those wishing to build or extend their home. The Trust had a series of standardised designs, all of which complied with the building regulations. The property is a representative example of the House type 5W design, which is quite rare to the local area.

Criteria Assessment	
a) Historic	Built c.1934, the residence is historically associated with the state government led initiative, Homes for the Unemployed Trust which provided assistance to those wishing to build or extend their home.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The Trust had series of standardised designs, all of which complied with the building regulations. The property is an example of the House type 5W design, which is quite rare to the local area.
g) Representativeness	The property is a representative example of the House type 5W design, which is quite rare to the local area.

Physical Description

The property includes an Inter-war cottage with weatherboard walls atop brick foundations, with a gable corrugated iron roof. The verandah is enclosed with fibro asbestos and aluminium windows. It is covered by an awning with a simple timber bracket awning with fibro awning. The residence features a skillion roof extension at the rear.

A carport is attached to the southern corner of the east elevation, which fronts a fibro sheet garage. This is addressed by a concrete strip driveway.

The properties boundary is marked by a front fence made of weldmesh panels attached to pipe posts. The front features some informal plantings in the front yard with a small tree and a tall Norfolk Island pine. The rear of the property features a large established gum tree.

The condition of the cottage is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Garage added c.1950s
- Side carport addition
- Potentially a modified rear addition

The item has a high degree of integrity.

Historical Notes

Construction years	c.1934

Merrylands
Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as the Goodlet and Smith Brickworks.

Housing for the Unemployed Trust
Following World War One there was a serious housing shortage due to a period of heavy immigration and family formation. Residential building was then hindered by the Great Depression and had not fully recovered. The state government was forced to intervene with the outbreak of the bubonic plague at the turn of the century which saw renewed efforts rectify the issue of appalling housing conditions. The Housing Board was established in 1912 with the brief to build good quality, affordable housing for the

workers. The housing board was dismantled in 1924, never fully achieving the ambitious program of building 1,437 houses.

During the interwar years, the situation remained quite dire as private investment in housing fell and rent controls were introduced. The government attempted to encourage the 'Aussie Dream' of home ownership through loans from the Government Saving Bank, but as unemployment was high, there were few takers. A more successful program employed was that known as the Homes for the Unemployed Trust.

The Homes for the Unemployed Trust was a government established initiative in 1934 that provided monetary assistance to those wishing to build themselves. The Trust lent money to men who were either going to builder or repair existing properties. The Trust built and sold 833 houses by 1943. It also financed the purchase of building materials which were used by borrowers to build or extent with their own labour. The Homes for the Unemployed was superseded by Housing Commission which was established in 1942.

The subject property was one such cottage that was built using the Homes for the Unemployed Trust. The Trust had series of standardised designs, all of which complied with the building regulations. In 1937, these houses usually cost £250 to £275 to build and were sold to eligible people on the terms of 6 shillings per week. This is an example of the House type 5W designed for the Trust. The dwelling remains in use as a private residence.

Statement of Significance

The semi-detached Victorian cottages at 14-16 Cohen Street, Merrylands are of local significance for their historic, aesthetic and representative values. Built c1885, the item relates to the residential subdivision of Garnham Blaxcell's Drainwell Estate in 1883 by the Australian Mutual Investment and Building Company for the 'Granville Heights' subdivision. The cottage pair remain as some of the earliest residences built on the street and are associated with the 1880s development of Granville that occurred in conjunction with the increased industrial activity in the area. The semi-detached cottage retains its aesthetic significance as a highly intact Victorian cottage pair which presents well to the street. They demonstrate representative qualities of fine Victorian cottages built in 1880s.

Criteria Assessment	
a) Historic	Built c1885, the item relates to the residential subdivision of Garnham Blaxcell's Drainwell Estate in 1883 by the Australian Mutual Investment and Building Company for the 'Granville Heights' subdivision. The cottage pair remain as some of the earliest residences built on the street and are associated with the 1880s development of Granville that occurred in conjunction with the increased industrial activity in the area.
b) Associative	The item does not meet this criterion.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item demonstrates representative qualities Victorian cottages, built c.1885s. This is enhanced by the intact nature of the items detailing.

Physical Description

The item is a brick, single storey, semi-detached Victorian cottage with a symmetrical facade. The cottage was constructed of brick with a rendered front. The dwelling has a hipped roof clad with corrugated iron and two painted brick chimneys with an expressed brick string course. The brick chimney of No.16 is rendered with cornice decoration and an incised pattern. The building has a bullnose verandah clad with corrugated iron sheeting supported on rendered brick walls with a cast-iron frieze and spandrels. The cottage has Palladian style windows with a Victorian label mould arches and decorative stops above the window arch. The window frames are painted timber sashes. The windows also feature rendered cast iron mullions and rendered sills. Window openings along the side elevations have curved brick arches and rendered sills with cornice detailing. The front façade of No.14 is painted yellow with a glazed fanlight over above the Victorian four panel front door with bolection moulds. The front façade of No.16 is rendered and painted, and has toplight above a Victorian style five panelled door.

Both residences have rear extensions. The rear addition of No.14 is a long, single storey projecting hip structure. The addition to No.16 is a flat roof structure clad in corrugated iron sheeting.

No.16 features a heavily vegetated informal garden space with many established plants in pots, while No.14 is visually screened by a front garden. The residence features a modest setback marked at the boundary by a painted timber picket fence.

The item shares a visual connection to the neighbouring heritage item at 18 -20 Cohen Street. The semi-detached cottages along Cohen Street share a consistent setback, form and materiality, reflecting the pattern of development of the 1883 subdivision.

The condition of the item is good. The building appears to be well-maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear additions and modified roof forms
- New paint scheme to No.14*
- New paint scheme to No. 16
- New roof cladding

The item appears to retain a high level of integrity, although modified with the inclusion of rear additions they are discrete additions to the item that do not adversely impact the significance of the item.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1885

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evidence and there is still a predominance of buildings dating to the 1880s – 1930s.

Although firmly established in the suburb of Merrylands, the subject property was historically located within Granville. The property formed part of land subdivided in c. 1883 for the Australian Mutual Investment and Building Company, known as 'Granville Heights'. The lots were purchased by entrepreneurial woman named Julia May Hackett in 1893. She appears to have built the cottages at 14-16 and 18-20 Cohen Street, which she held in her possession until her death in 1909. The item remains in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- A heritage paint analysis should be undertaken to inform an appropriate heritage paint scheme.

Statement of Significance

The semi-detached Victorian cottages at 18-20 Cohen Street, Merrylands are of local significance for their historic, aesthetic and representative values. Built c1885, the item relates to the residential subdivision of Garnham Blaxcell's Drainwell Estate in 1883 by the Australian Mutual Investment and Building Company for the 'Granville Heights' subdivision. The cottage pair remain as some of the earliest residences built on the street and are associated with the 1880s development of Granville that occurred in conjunction with the increased industrial activity in the area. The semi-detached cottage retains its aesthetic significance as a highly intact Victorian cottage pair which present well to the street. They demonstrate representative qualities of fine Victorian cottages built in 1880s.

Criteria Assessment	
a) Historic	Built c1885, the item relates to the residential subdivision of Garnham Blaxcell's Drainwell Estate in 1883 by the Australian Mutual Investment and Building Company for the 'Granville Heights' subdivision. The cottage pair remain as some of the earliest residences built on the street and are associated with the 1880s development of Granville that occurred in conjunction with the increased industrial activity in the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The semi-detached cottage retains its aesthetic significance as a highly intact Victorian cottage pair which present well to the street.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item demonstrates representative qualities Victorian cottages, built c1885. This is enhanced by the intact nature of the items detailing.

Physical Description

The item is a brick, single storey, semi-detached Victorian cottage with a symmetrical facade. The cottage is constructed of brick with a rendered front. The dwelling has a hipped roof clad with cement tiles and two painted brick chimneys, with an expressed brick string course. The building has a bullnose verandah clad with corrugated iron sheeting, supported on rendered brick walls, with a cast-iron frieze and spandrels atop a rendered concrete base. The cottage has Palladian style windows with Victorian label mould arches and decorative stops above the window arch. The window frames are painted timber sashes. The windows also feature rendered cast iron mullions and rendered sills. Window openings along the side elevations have curved brick arches and rendered sills with cornice detailing. Both dwellings feature a contemporary screen front door. The dwelling features an early rear extension with a flat roof clad in corrugated iron.

The item features a modest set back with minimal planting in the front yard. The property is bounded by an aluminium palisade fence and gate.

The item shares a visual connection to the neighbouring heritage item at 14 -16 Cohen Street. The semi-detached cottages along Cohen Street share a consistent setback, form and materiality, reflecting the pattern of development of the 1883 subdivision.

The condition of the item is good. The building appears to be well maintained.

Condition	**Good**	Fair	Poor

Curtilage Map

Statement of Significance

The residence at 3 Earl Street, Merrylands is of local significance for its historic, aesthetic and representative values. Built c.1917, the item relates to the development of the 'Park Hill Estate' subdivision which stemmed from Garnham Blaxcell's 'Drainwell Estate'. The residence remains one of the earliest residences built on the street and is associated with early twentieth century development of Granville that occurred in conjunction with industrial activity in the area and the movement of people away from Sydney. The residence retains its aesthetic significance as a highly intact Federation Ars and Crafts cottage which presents well to the street. The item demonstrates representative qualities of Federation Arts and Crafts cottages, built 1917.

Criteria Assessment	
a) Historic	Built c.1917, the item relates to the development of the 'Park Hill Estate' subdivision which stemmed from Garnham Blaxcell's 'Drainwell Estate'. The residence remains one of the earliest residences built on the street and is associated with early twentieth century development of Granville that occurred in conjunction with industrial activity in the area and the movement of people away from Sydney.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The residence retains its aesthetic significance as a highly intact Federation Ars and Crafts cottage which presents well to the street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item demonstrates representative qualities of Federation Arts and Crafts cottages, built 1917.

Physical Description

The item is a single storey Federation Arts and Crafts cottage, with a double fronted façade clad with rusticated weatherboard walls with a corrugated galvanised iron roof. The roofscape is gambrel with a projecting gable decorated by a timber ladder screen and finial. The brick chimney features a stepped brick course with two squat terracotta pots. The dwelling has a broken back verandah roof which extends across the front with a return to the western side which has been partially infilled with fibro sheeting and windows. The verandah roof is supported by paired timber posts set on tapered brick piers and spatter dash balustrade with rendered coping. The infilled western portion of the verandah retains a solid timber curved valance between posts.

The windows along the front façade and projecting gable are timber framed casement windows in a set of three with a toplight. The casement windowpane feature two smaller coloured windowpanes framed by a curved timber frame. The window on the projecting gable and along the east elevation have skillion awning supported by timber ladder brackets. The windows set in the infilled verandah on the western elevation are four paned timber framed windows. The front door has transom lights and sidelights. On the side of the front door is an oval plate with words "Cottage circa 1917".

The property features a modest setback with two established trees that are significant and some low-lying shrubs along the front fence. The front fence is a painted timber picket fence and gate. A paved brick driveway extends along the western elevation to the rear of the property.

The property appears to be in a fair condition, although there are some deteriorated timber elements will require repairs. In particular, the bargeboard and timber weatherboards of the east elevation are in poor condition.

Condition	Good	**Fair**	Poor

Alterations and Additions

- New roof cladding
- Infilled verandah along western elevation*

The item appears to have a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1917

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the

worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evidence and there is still a predominance of buildings dating to the 1880s – 1930s.

Although firmly established in the suburb of Merrylands, the subject property was historically located within Granville. The property formed part of the land subdivided as the 'Park Hill Estate' in the early 1880s. This house was shown on the Water Board plan of January 1937.

The item remains in use as a private residence.

Curtilage Map

Statement of Significance

The cottage at 30 Lansdowne Street, Merrylands is of local significance for its historic, aesthetic and representative values. Built c.1910, the cottage is historically associated with the 1881 land subdivision of the 'Brookvale Estate' which followed the opening of Merrylands Railway Station and facilitated the development of the surrounding area for housing and small farms. The residence retains its aesthetic significance a highly intact Federation cottage with fine detailing to the roof and verandah. The item is a good representative example of an intact Federation cottage.

Criteria Assessment	
a) Historic	Built c.1910, the cottage is historically associated with the 1881 land subdivision of the 'Brookvale Estate' which followed the opening of Merrylands Railway Station and facilitated the development of the surrounding area for housing and small farms.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The residence retains its aesthetic significance a highly intact Federation cottage with fine detailing to the roof and verandah.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representative example of an intact Federation cottage.

Physical Description

The item is a single storey Federation cottage with rusticated weatherboard walls and a corrugated iron roof. The roofscape is a gablet with a projecting gable to the front. It is clad in corroded corrugated iron. The timber barge board is highly decorative and includes a cross bar and a finial. There are two tall brick chimneys with two rows of saw-tooth bricks below the step and tall terracotta pots. A verandah extends across the front to the projecting gable with a return to west side. The verandah has a bullnose roof clad with corrugated iron supported on square tapered timber posts with scrolled valance between posts on the front side. The western edge of the verandah is infilled with timber panels and timber framed windows. The windows are timber framed casements with three multicoloured glazed panes along the base. They have scrolled timber undersills and reeded timber architraves. The window on the projecting gable has a timber shingled skillion awning supported by ladder brackets and turned posts. The front door has a transom light above a glazed square upper pane and three recessed vertical timber panels below lock rail.

The residence has a deep setback, with few plantings in the front yard. The property boundary is marked by a contemporary timber picket fence and gate.

Overall, the condition of the building is fair, with some elements in a poor condition. Elements in a poor condition include the roofing, guttering and some timber elements. The guttering and roof consist of highly corroded corrugated iron roof sheets and guttering. In some locations the guttering has corroded to such an extent that it is missing in sections. There are broken glass windowpanes and deteriorated timber shingles to window awning and timber verandah elements.

Condition	Good	**Fair**	Poor

Alterations and Additions

- No visible alterations.

The building retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1910

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as the Goodlet and Smith Brickworks.

A large section of the suburb of Merrylands stands on the Church and School Estate, first offered for sale from 1871, and progressively re-subdivided after the opening of the Merrylands Railway Station

in 1876. The land on which the property resides on was subdivided in c.1881 as 'Brookvale Estate' in 100 feet wide allotments. The property was built in c.1910 and remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.	X		

Other recommendations and/or comments:

- A qualified heritage trades specialist should be engaged to undertake the conservation repairs to the timber elements and roofing.

Curtilage Map

Statement of Significance

'The Lodge' at 56 Merrylands Street, Merrylands is of local significance for its historic, aesthetic, rarity and representative values. Built in 1881, the item is historically significant as the gatehouse to the Sutherland Estate, later known as Locksley Hall. While Locksley Hall was demolished in 1937, the gatehouse remains as tangible evidence of the former grand residence. The item is aesthetically significant as an intact Victorian Picturesque Gothic cottage that retains much of its original fabric and detailing. This is enhanced by the large curtilage that surrounds the item. The item is readily identifiable as part of historic building stock and strongly contributes to the streetscape. Although the item demonstrates representative values of a Victorian gatehouse cottage, the item is quite rare to the local area and more broadly in the Cumberland LGA.

Criteria Assessment	
a) Historic	Built in 1881, the item is historically significant as the gatehouse to the Sutherland Estate, later known as Locksley Hall. While Locksley Hall was demolished in 1937, the gatehouse remains as tangible evidence of the former grand residence.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as an intact Victorian Picturesque Gothic cottage that retains much of its original fabric and detailing. This is enhanced by the large curtilage that surrounds the item. The item is readily identifiable as part of historic building stock and strongly contributes to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item is quite rare to the local area and more broadly in the Cumberland LGA.
g) Representativeness	The item demonstrates representative values of a Victorian gatehouse cottage, built c.1881. This is demonstrated by the intact building form and detailing.

Physical Description

The item is a single storey Victorian Picturesque Gothic cottage with a slate roof atop painted brick walls. The gable roof has a projecting gable to the street, which has a semi-circular arch ventilator and two narrow semi-circular arched windows within the gable. The roof retains two rendered brick chimneys with stepped cornice decoration. A verandah is located across the front façade to the projecting gable. The verandah features a concave corrugated iron roof supported by cast iron columns and decorated with cast iron brackets and frieze, and a new tiled floor. The windows are semi-circular timber framed sash windows that have a painted sandstone sill and painted segmental arches. Contemporary security fly screens front the lower sashes of the windows. The front door has a transom light above Victorian timber four panel door with round tops in upper panels and bolection moulding. Beside front door is a rectangular plate which reads "The Lodge". The rear of the dwelling features a skillion addition with weatherboard cladding and contemporary window openings.

There are no significant plantings surrounding the residence. The property is bounded along Merrylands Road by an aluminium Fleur-de-lis palisade fence and gate, flanked either side with a section of painted timber pickets and a steel post and wire mesh. The item retains a significant curtilage.

The building appears to be in a good condition though some elements in a fair condition and in need of conservation repairs, including the original fence along Merrylands Road and the slate roof.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New paint scheme
- Security fly screens*

The building appears to retain a high level of integrity although some minor alterations such as the inclusion of contemporary screens to the lower sashes of the window detract from the heritage values of the item.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1881

The residence at 56 Merrylands Road, Merrylands known as The Lodge was the gatehouse to the 'Sutherland Estate' later renamed Locksley Hall which was built in 1881. The original owner of 'Sutherland Estate' was Andrew Sutherland Low, a wealthy mining investor who purchased a major portion of land at Merrylands originally granted to Richard Atkins in 1875. The architect was Albert Bond who "designed a two-storey villa in Victorian Filigree style featuring a decorative cast iron lace with ultra-thin classical columns on the upper storey verandah". Bond was prominent architect in the early colony and had been appointed the first full-time architect for the City of Sydney and was responsible for the design of the mansard roof and vestibule interiors of the Sydney Town Hall.

Low planted ornamental trees around the boundary of the estate, and a bowling green near the house, as well as extensive flower gardens and an orchard, irrigated by water pumped from a creek, which he

had excavated and widened to form a lake. The excavated earth was used to create an island, on which were erected a 'bathing house' and a boat house. Low named his home 'Sutherland House' but a later owner re-named it Locksley Hall, and it was demolished in 1937. The only part of the estate remaining is a cottage at 56 Merrylands Road Merrylands, which appears to have been a gatehouse.

After the sudden death of Low in 1894, Sutherland Estate was acquired by businessman Joseph Edmund Vance, a company director at Clyde Engineering Works. It was later sold to widower Matilda Harkness who renamed it 'Locksley Hall' in 1907 and stayed there until her death in 1916.

In 1918, the Inter-colonial Investment Company Limited purchased Locksley Hall and its 80 acres estate from the Harkness family and subdivided the land for housing. The first 56 allotments were sold at auction on Saturday 18 October 1919. At a second auction on Saturday 1 May 1920, the Commonwealth War Service Homes Commission bought ten blocks for World War I veterans. Further allotments were sold at auction on 12 May 1921 and 1 November 1924.

On 23 February 1937 Locksley Hall in Malvern Avenue, Merrylands was demolished. The lake was filled in during World War II and used as an army camp. The land became later known as Granville Park.

The gatehouse was constructed in 1881. It is shown on the subdivision plan for the Woodside Estate nearby, when it was subdivided in October 1880. This area was later subdivided as Locksley Hall Estate c. 1918. The gatehouse remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The item appears to require minor conservation works, including repairs to slate roof and original fence. Works should be undertaken by a suitably qualified heritage tradesperson.

Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential Buildings (private)	

Curtilage Map

Statement of Significance

The cottage at 59 Merrylands Roads, Merrylands is of local significance for its historic and representative values. Built c.1890s, the cottage is historically associated with the subdivision of Andrew Sutherland Low's 'Sutherland Estate'. The construction of the cottage in c.1890s is reflective of the residential subdivisions that followed the opening of the Merrylands Railway Station and facilitated the development of the surrounding area for housing and small farms. The item demonstrates representative qualities of an early Federation cottage and is enhanced by the level of intact fabric and detailing. This is however, compromised by the dwelling's current hoarding of materials which has an adverse physical impact to the structural integrity of the building.

Criteria Assessment	
a) Historic	Built c.1890s, the cottage is historically associated with the subdivision of Andrew Sutherland Low's 'Sutherland Estate'. The construction of the cottage in c.1890s is reflective of the residential subdivisions that followed the opening of the Merrylands Railway Station and facilitated the development of the surrounding area for housing and small farms.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion in its current condition and state.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an early Federation cottage, which is enhanced by the level of intact fabric and detailing,

	this is however, compromised by the dwelling current hoarding of materials at the front.

Physical Description

The item is a single storey Federation cottage with a corrugated iron roof on weatherboard walls. The front façade has rusticated weatherboards while the side elevations are ship lapped. The roof is gabled with a projecting gable to the rear containing two brick chimneys. A bullnose verandah with a corrugated iron roof with hip corners extends along the front façade. The verandah is supported on timber stop chamfered posts and decorated with turned timber brackets, a timber valance and a timber lattice infilled balustrade. The return is infilled. The windows are timber framed, double hung sash windows with timber sills and a timber architrave. Windows are fronted by flyscreens. The front door has a transom light above a Victorian timber four panel door with glazed upper panels. The front fence is timber post and rail fence on brick plinth. The dwelling is addressed by a paved driveway that extends along the eastern side of the property towards the rear.

Significant plantings within the site include a large palm tree and a large Camphor laurel. Views to the site and the setting of the item are compromised by the current state of the dwelling which is largely obscured by piles of rubbish and the stockpiling of materials.

Overall the residence appears to be in a fair condition, although there are some elements in a poor condition. Elements which are in a poor condition include the timber weatherboards along the east elevation and timber verandah elements which are severely deteriorated and show signs of timber rot. Although significant biological growth is evident along the front of the verandah, the guttering and roofing material appear to be sound.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Contemporary brick paved driveway
- Possible rear extension

The building appears to have a high level of integrity; however, this is compromised by the stockpiling of material at the front of the property and along the verandah.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Late 1890s – 1900s

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderately sized estates were advertised in the 1880s, using the

proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The residence at 59 Merrylands Road, Merrylands is located on the 'Sutherland Estate', originally owned by Andrew Sutherland Low, a wealthy mining investor who purchased a major portion of land at Merrylands originally granted to Richard Atkins in 1875. There is very little archival research available on the dwelling though it is known that it was eventually built on Bent's subdivision. The dwelling appears on the Water Board plan of 1914 though, due to the style of the structure, was likely built in the late 1890s or early 1900s.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The front yard and verandah should be removed of all stockpiled material which has an adversely impact to the significance of the item. There is also the potential for long term impacts to the verandah as the load bearing of such fabric outweighs the strength of the structure and hinders the repairing of fabric that needs conservation work.

Curtilage Map

Statement of Significance

The cottage at 25 Reid Street, Merrylands is of local significance for its historic, aesthetic and representative values. Built c.1894, the item relates to the residential subdivision of Garnham Blaxcell's, Drainwell Estate in 1883 by the Australian Mutual Investment and Building Company for the 'Granville Heights' subdivision. The cottage remains one of the earliest residences built on the street and is associated with the 1880s development of Granville that occurred in conjunction with the increased industrial activity in the area. The cottage retains its aesthetic significance as a highly intact Victorian cottage which makes a notable contribution to the streetscape. The item demonstrates representative qualities of a fine Victorian cottage, built c.1890s.

Criteria Assessment	
a) Historic	Built c.1894, the item relates to the residential subdivision of Garnham Blaxcell's, Drainwell Estate in 1883 by the Australian Mutual Investment and Building Company for the 'Granville Heights' subdivision. The cottage remains one of the earliest residences built on the street and is associated with the 1880s development of Granville that occurred in conjunction with the increased industrial activity in the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The cottage retains its aesthetic significance as a highly intact Victorian cottage which makes a notable contribution to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The cottage retains its aesthetic significance as a highly intact Victorian cottage which makes a notable contribution to the streetscape.

Physical Description

The item is a single storey brick Victorian cottage with a hip roof clad with corrugated iron. The roof has a projecting faceted bay on a Garden bond brick front elevation, with a rendered brick bay and side walls. The roof features new guttering and a tall circular gas vent. The residence features a verandah across the front to the projecting bay. The verandah has an Ogee roof clad with Colorbond sheeting, supported by a brick privacy wall with a blind arch. The verandah is decorated with a cast iron frieze and spandrels of an ivy leaf design. The verandah floor is made of quarry tiles with tessellated tiled steps. The front façade features Palladian windows with corniced rendered brick sills with bracket decoration around bay windows. The windows have painted timber frames, and along the side elevations there are segmental brick arches. The windows on the projecting bay are timber framed multipaned double hung sash windows with Victorian label mould and decorative stops above a bay window arch. The dwelling features a rear skillion extension with fibro sheet walls Colorbond sheet roofing.

The property has a formal garden space at the front with several established rose bushes that, although contemporary, makes a notable contribution to the overall aesthetic of the item. An established shrub that was located along the western elevation has been removed. An established conifer is located at the rear of the property. The property boundary is marked by painted acorn top timber picket fence and gate.

The previous listing sheet noted the residence had a plaque of “dubious authenticity” that read "Roseneath Cottage c. 1876". This was not visible or present at the site inspection.

Overall the building appears to be in a good condition. The corrugated iron roof features some corrosion in patches which may require conservation repair work.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear addition in fibro and Colourbond
- Replaced guttering
- Replaced verandah roof sheeting
- New paint scheme

The building retains a large amount of notable detailing and original fabric. Where significant fabric has reached the end of its serviceable life, it has been sympathetically replaced on a like for like basis. Although the dwelling features a rear extension, it is a discrete and sympathetic addition to the dwelling that does not adversely impact on the heritage significance of the item. The item is considered to have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1894

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evidence and there is still a predominance of buildings dating to the 1880s – 1930s.

Although the property is firmly located within the current suburb of Merrylands on Reid Street, the subject property was historically located in the suburb of Granville. The property formed part of the land subdivided in c.1883 for the Australian Mutual Investment and Building Company. The land was transferred to Henry George Swyny Jnr, a builder of Randwick, in 1894. The land was mortgaged in December 1894 to build this cottage. The item is shown on Water Board plan of June 1935. The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the roof require repairs, the fabric should be replaced on a like for like basis.

Curtilage Map

Statement of Significance

The Merrylands Remembrance Park is of local significance for its historic, aesthetic, social and rarity values. The obelisk monument is historically significant as a war memorial established in 1922 by the Prospect and Sherwood Soldiers Memorial Association, a volunteer led group that used funding from the local community to purchase a block of land opposite the Council Chambers in Arcadia Street for the establishment of a war memorial. The trophy gun is historically significant as a piece of German machinery captured by the NSW 17th Battalion of the Australian Imperial Force along the Western Front at Lamotte-Warfusee in France on the 8th August 1918. The item is of aesthetic significance as an evocative site, demonstrated through the trophy gun and obelisk which makes a striking contribution to the streetscape. The item has high social significance for not only commemorating the lives of those from the district that died in service or were killed in action during World War One, but to the local community who established the monument. The memorial is a rare example of its type within the Cumberland LGA, though it is typical of suburbs and country towns.

Criteria Assessment	
a) Historic	The obelisk monument is historically significant as a war memorial established in 1922 by the Prospect and Sherwood Soldiers Memorial Association, a volunteer led group that used funding from the local community to purchase a block of land opposite the Council Chambers in Arcadia Street for the establishment of a war memorial. The trophy gun is historically significant as a piece of German machinery captured by the NSW 17th Battalion of the Australian Imperial Force along the Western Front at Lamotte-Warfusee in France on the 8th August 1918.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is of aesthetic significance as an evocative site, demonstrated through the trophy gun and obelisk which makes a striking contribution to the streetscape.
d) Social	The item has high social significance for not only commemorating the lives of those from the district that died in service or were killed in action during World War One, but to the local community who established the monument.
e) Scientific	The item does not meet this criterion.
f) Rarity	The memorial is a rare example of its type within the Cumberland LGA, though it is typical of suburbs and country towns.
g) Representativeness	The item does not meet this criterion.

Physical Description

Merrylands Remembrance Park is a small landscaped area on the corner of Arcadia and Arthur Streets, Merrylands West, opposite the former Holroyd Council chambers. The park includes a large monument, cannon and rendered brick retaining wall for a garden space.

The monument is a solid blue stone obelisk with polished panels with gold lettering commemorating the loss of local men in World War One. The obelisk is situated atop a concrete and tile platform that is built into the landscape and steps down to a tiled path throughout the park that leads to the cannon.

The cannon is a German 'Trophy Gun', 105mm 4.1 Light Field Howitzer, model number 98/09. The serial number is 2701. The cannon features a protective coating to suppress the corrosion and is set into the paved ground. A rock with an anodised aluminium plaque affixed interprets the cannon.

Within the landscape there are several established trees providing coverage and shade. Although the western edge of the park is a small landscaped garden fronted by a cement rendered retaining wall. There are a variety of small flowers and hedges planted as well as several rosemary bushes. A small painted aluminium balustrade fence extends along the Arthur Street frontage. An Aleppo pine was planted in the park in 2018. A plaque on a stone plinth reads:

'Lone Pine
An Aleppo pine (Pinus halepensis) propagated from seeds collected from the Lone Pine Tree in the grounds of the Australian War Memorial, Canberra.

The Lone Pine was planted by Cumberland Council and Merrylands RSL sub-Branch on Remembrance Day 2018 in tribute to our courageous ANZACs.
11 November 2018
Lest We Forget'

The retaining wall reads 'Merrylands Remembrance Park' and has two plaques affixed.

The smaller plaque reads:

'*This plaque was unveiled on 10th November 2002*
to commemorate the naming of
Merrylands Remembrance Park
The improvements carried out to the memorial by
Merrylands RSL Sub-Branch
Merrylands RSL Club Ltd
And
Holroyd City Council
In memory of our local community members
Who gave their lives in
"The Great War of 1914-1918"

The larger plaque reads:

11th November 1997

We Will Remember Them
Merrylands R.S.L.
This stone was unveiled by Charles Mance
(W.W.1 Veterance ex 763A Private)
President W.W.1 Veterans Assoc. (NSW)
75th Anniversary
Re-dedication of this Memorial

The Merrylands Remembrance Park presents as a well-cared for landscaped area. The built elements within this landscape are in a good condition. There is some evidence of pit corrosion occurring in the joints of the cannon.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New fencing along Arthur Street frontage
- New landscaping, c.2002

The item retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1922

Merrylands
Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks and Sherwood Brick and Tile Works.

Merrylands Remembrance Park
Following World War I, communities around the country would build many monuments honouring the fallen. The day after the Armistice, Prospect and Sherwood Council decided that a 'suitable flagstaff' would be erected at the Council Chambers to proudly display the Empire's Grand flag. In addition, a group of local citizens led by Ald. Tucker Jones, Ald. William Freame and Mr J.J. Smith, formed the Prospect and Sherwood Soldiers Memorial Association. The Memorial Association was a purely voluntary effort that managed to raise sufficient funding from the local community to purchase a block of land opposite the Council Chambers in Arcadia Street for the establishment of a war memorial. The final cost of the land and monument was £500, enough to ensure that no public money was needed to establish the memorial. The unveiling ceremony was held on the 9th December 1922.

The monument is made of a solid blue stone obelisk with polished panels displaying the names of each man killed in action. The gun on display in the memorial is a 105mm German Howitzer, serial number 2701. It's believed the gun was manufactured in 1915. It was captured by the 17th Battalion, of the Australian Imperial Force at Lamotte-Warfusee, France on the 8th August 1918.

When unveiled, the memorial was surrounded by a neat cyclone fence constructed on a brick base. Over the years the memorial has seen some refurbishment, particularly in 2002 when new paving fencing and landscaping works were carried out. Originally known as Arthur Street Park, the park was renamed Remembrance Park in 2002.

The Municipality of Prospect and Sherwood was renamed Holroyd Municipal Council in 1927. Holroyd Council was amalgamated with Auburn Council and a portion of Parramatta City Council to form Cumberland Council in 2016.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Curtilage Map

Statement of Significance

The former Council Chambers is of local significance for its historic and aesthetic values. The building is historically linked to the development of the Prospect and Sherwood municipality in the early twentieth century. Built in 1914, the building operated as Holroyd's second Council Chambers for nearly fifty years between 1914 and 1962. The former Council Chambers building has some aesthetic significance as an example of relatively intact, late Federation period "institutional" architecture, enhanced by its visually prominent corner location.

Criteria Assessment	
a) Historic	The building is historically linked to the development of the Prospect and Sherwood municipality in the early twentieth century. Built in 1914, the building operated as Holroyd's second Council Chambers for nearly fifty years between 1914 and 1962.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The former Council Chambers building has some aesthetic significance for demonstrating relatively intact late Federation period "institutional" architecture, enhanced by its visually prominent corner location.

Physical Description

The former Council Chambers built in 1914 is a single storey brick building sited on the corner of Arcadia and Arthur Streets, Merrylands West. The building features a hipped roof of mixed cladding material. The main building features a slate roof with terracotta ridge capping and finials, while the rear wing of the building is clad in corrugated steel and appears to be later addition, possibly c.1920. The roof features replaced guttering, exposed rafters and timber soffits with modern lighting affixed to the eave. The entry to the building is marked by a small brick porch with a rendered gable end accessed off Arthur Street. The rendered gable end consists of a simple rendered pediment with a moulded stringcourse below. The windows are generally multipaned timber framed double hung sash windows with fanlights. The window openings feature a mix of segmented brick arches and rendered lintels and sills. The east elevation fronting Arcadia Street features a timber framed bay window with a multipaned double hung sash window. The bay window features timber shingle cladding above the window.

To the west of the former Council Chambers is an attached modern building that is occupied by Dunrossil Disability Services. The addition is a single storey brick building that features large metal framed windows with a horizontal cladded fascia and a brick square parapet at the east and west elevation of the building. The roofscape is predominately flat with a gabled roof at the eastern end.

The item features a heavily overgrown formal garden space along Arthur and Arcadia Streets with several established trees and hedges that are unmaintained. The site is bounded by a wire mesh fence with barbed wire along the southern and eastern boundary. There is also a steel palisade gate on the eastern boundary.

At present, the former Council Chambers are unoccupied and in a state of disrepair exacerbated by the building's disuse. Overall, its condition is fair with some elements in a poorer condition. Elements degrading, such as brick, timberwork and render, appear to be as a result of poor water management and salt attack. It is imperative that the landscaping is maintained to reduce the impacts of rising and falling damp resultant from the build-up of vegetation around the building. This is evident in the gutters which are overflowing with debris. The gutters are forcing water to fall down the facades which has larger conservation implications for the timberwork, render and bricks.

- Th guttering requires repair work along all elevations. Not only blocked with debris, the guttering is detached from sections of the roof and is in a poor condition.
- The timber shingles, fascia and soffits show signs of timber rot and are in a fair to poor condition. The timber windows appear to be in sound condition.
- The brickwork along the lower courses show signs of severe salt attack as a result of water ingress. This is particularly evident along the north elevation, next to the entry porch, where the bricks are significantly weathered, missing mortar and damp with some biological growth on brickwork.
- The cracking in the render and brickwork is a result of settlement movement.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear extension c.1920s
- Dunrossil building extension, c.1980s*
- Infilled former entry way
- Rear carport and parking area
- Contemporary fencing

The building appears to be quite intact, although modified. However, if the condition of the building is not carefully monitored and the condition issues addressed, the integrity of the building would be compromised.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1914

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by the 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The building was the second Holroyd Council Chambers established to served as the Council Chambers and Town Hall for the Municipality of Prospect and Sherwood. The chamber was officially opened on 8 February 1915 by the member for Granville, J.T Lang. A plaque on the building reads, "This building was erected in the year 1914. Geo. W. Brewer, Mayor". The site on Arcadia Street was resumed by the NSW Public Works Department in 1912 for £100. The five allotments were previously owned by J.Tosler, Amelia Perry, J.F Wables, and the Universal Land and Deposit Bank. The building was designed by architect, Donald Esplin. Esplin trained under the prominent architect, Sir John Sulman and was known for his use of the Arts and Crafts movement of architecture.

The building served as the Holroyd Council Chambers until 1962, when they relocated their office to Memorial Avenue, Merrylands. The building continued to be a temporary Overseers Office and lunchroom for the depot staff until the new Council depot was completed along Fairfield Road, Guildford West.

The building was sold and became a school for the Dunrossil Challenge Foundation. In 1968, it was used for administration and as an activity therapy centre for adults. The building's interior was modified c.1970s with new flooring, electrical work and structural alterations. It appears that the Dunrossil Challenge Foundation occupied the building into the early 2000s.

The building is at present unoccupied, however there is a development application submitted to Cumberland Council to redevelop the site for residential uses.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.	X		

Other recommendations and/or comments:

- Regular building maintenance works should be undertaken to reduce the impact of the overgrown vegetation and debris impacting the building.
- Investigation into the conservation of the brickwork and timber elements should be undertaken prior to the redevelopment of the site.
- It is noted that there is a current DA to redevelop the site. Should this not eventuate, opportunities for re-use should be sought to re-occupy the building. Any adaptation for reuse should be developed with the involvement of a heritage specialist.

Curtilage Map

Statement of Significance

Sherwood Scrubs has local and potential State significance for its historic, associative, aesthetic and representative values. Sherwood Scrubs is an important early homestead to the Cumberland LGA. The item is a large and relatively intact Victorian homestead, otherwise referred to as 'Cerdon', which forms part of the larger rural estate established by Arthur Todd Holroyd who founded the Sherwood Drain and Tile Works in the 1870s. Holroyd was also responsible for the establishment of Municipal government for the districts of Prospect and Sherwood, later named 'Holroyd' in his honour. The site contains a Summer House, service wing and various outbuildings which demonstrate advances in building technology, typical landscape design elements and a way of life associated with wealthy middle-class merchant families in the late nineteenth century. These buildings are located within an intact garden setting which is strongly defined by major tree and shrub plantings and other physical boundaries. Significant plantings include several Araucaria s.p, a cork tree, and a macadamia tree, with later plantings including Canary Island Palm and a row of conifers that contribute to the garden setting. The combination of buildings and landscape elements is strongly evocative of the late Victorian character of the original estate. The site demonstrates representative qualities of an intact Victorian homestead and landscape setting.

Criteria Assessment	
a) Historic	Sherwood Scrubs is an important early homestead to the Cumberland LGA. The item is a large and relatively intact Victorian homestead, otherwise referred to as 'Cerdon', which forms part of the larger rural estate established by Arthur Todd Holroyd in 1870s.
b) Associative	The item is associated with Arthur Todd Holroyd who founded the Sherwood Drain and Tile Works in the 1870s and was responsible for

	the establishment of Municipal government for the districts of Prospect and Sherwood, later named Holroyd in his honour.
c) Aesthetic/Technical	The site contains buildings and structures which demonstrate advances in building technology, typical landscape design elements and a way of life associated with wealthy middle-class merchant families in the late nineteenth century. These buildings are located within an intact garden setting which is strongly defined by major tree and shrub plantings and other physical boundaries. Significant plantings include several Araucaria s.p, a cork tree, and a macadamia tree, with later plantings including a Canary Island Palm and a row of conifers that contribute to the garden setting.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The site demonstrates representative qualities as an intact Victorian homestead.

Physical Description

Sherwood Scrubs is a homestead estate that consists of a residence, summer house, garden setting and outbuildings. The outbuildings were not visible from the public domain and have been excluded from the physical description.

Main Residence
The main residence is a traditional brick Victorian cottage with Georgian features. The residence has a hipped roof clad with a ceramic tile laid in a rare design featuring scalloped terracotta bands. The roof also has four tall brick chimneys with corniced details. A verandah runs along the front façade and is addressed by a shallow flight of stairs, marked by a pair of lion sculptures on low piers. The verandah has a skillion roof with hipped corners clad in corrugated iron. It is supported on circular cast iron columns with decorative cast iron brackets painted white. The southeast portion of the verandah features an eight-pane glazed privacy wall. The residence features a symmetrical façade, four timber French doors and a central timber doorway framed by sidelight and toplights.

Summer House
The summer house is a small square planned structure with a pyramidal hipped roof featuring decorative terracotta pantiles. The walls are constructed of beaded boarding with lattice work to front elevation and a set of doors with lattice. The summer house features decorative timber brackets and a decorative timber frieze below the eaves. The structure is fronted by a small garden bed lined with face brick. The Summer House is located to the southeast of the Main Residence

Landscape
The landscape has been substantially modified with the inclusion of several contemporary buildings in the vicinity. A carpark fronts the main residence. The summer house retains its garden setting which is a key element that contributes to the significance of the item. The garden setting contains established trees and shrub plantings. Significant plantings include several Araucaria s.p, a cork tree, and a macadamia tree, with later plantings include Canary Island Palm, row of conifers that contribute to the garden setting.

In the wider area, the former Estate has been heavily developed to include a range of retirement village housing. This has reduced the overall curtilage of Sherwood Scrubs over time.

Overall the buildings are in a good condition and are well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- There are several new buildings on site, as it is presently used as a Youth Centre. There is a loss of the original homestead layout.

Overall the extant historic buildings appear to have a high level of integrity from the exterior, though they have likely been modified on the interior for new uses over time. The landscape and setting of the item has been substantially modified.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1870s

The construction of Sherwood Scrubs, the home of Arthur Todd Holroyd, commenced in 1870s and was completed by the 1880s. The land in which the property was built upon was formerly on the 200-acre land grant given to Sargent Jonas Bradley, member of the New South Wales Corps, by Governor Macquarie on the 1st January 1810. The adjoining grants to were given to Moss, Lacey, Duggan and William Sherwin (Snr.) In 1822, William Sherwin, (Snr.) sought to consolidate a grant of 1165 acres which involved the renewal of his own grant as well as the acquisition of other grants previously given to Moss, Lacey and Duggan in 1810. Unfortunately, William Sherwin Snr died before the land grant was fulfilled. William Sherwin Snr was survived by his son William Sherwin. William Sherwin returned to New South Wales in 1829 after studying medicine in England. After negotiating with Governor Darling he received the consolidated grant of 1165 acres on the 15 November 1830 which he renamed 'Sherwood'. The estate was named Sherwood as the area was thickly forested. William Sherwin retained the property for some time, until her sold a large portion of it to Arthur Todd Holroyd in 1855. The area purchased by Holroyd was renamed Sherwood Scrubs.

A.T Holroyd was a very prominent man in public life. He was elected into the NSW Parliament in 1851, he was also Master-in-Equity (1866-85) and Acting Supreme Court (1879). Public life did not lessen his interest in the property Sherwood Scrubs. After purchasing the property A.T. Holroyd established a lucrative Drain and Tiles Works, as well as a model dairy and farmhouse.

After Holroyd's death in 1887, Sherwood Scrubs, was under the ownership of Isaac Ellis Ives in 1888, and then Kate Barry in 1905. In 1941 it was purchased by Ernest Edward Martin from whom the Marist Sisters obtained possession in January from 1945. The title of the property changed to Cerdon, after the birthplace of the Marist Sisters Congregation in France. The house at Sherwood Scrubs was originally bought as the house for the young Sisters during their years of formation. It has since become the residence of the elderly Sisters who were ill and of the staff of the two schools in Merrylands, conducted by the Marist Sisters; St Margaret Mary's Primary School and a secondary high school built adjacent to the property and called Cerdon College.

Two sections of the original 53 acres purchased by the Marist Sisters have since been sold, one to the Education Department and the other to the Knights of the Southern Cross for their establishment of the Gilroy Village for the Aged.

At present the site is used as a youth centre.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.	X	**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Due to substantial changes to the curtilage, landscape and built heritage setting of Sherwood Scrubs, it is recommended that a detailed fabric analysis is undertaken to better understand the physical setting and significance of the place. This should be undertaken as part of a review and update of the Conservation Management Plan, prepared by Architectural Projects Pty Ltd in 2002.

- The site should be further researched and considered for State Heritage Register nomination. Sherwood Scrubs is a highly important early homestead to the Cumberland LGA. It is associated with a prominent public figure Arthur Todd Holroyd, it contains buildings and structures which demonstrate advances in building technology, it has typical landscape design elements to early homesteads, and demonstrates a way of life associated with wealthy middle-class merchant families in the late nineteenth century.

- An updated Conservation Management Plan should be prepared for this site to understand in greater detail the history and significance of the place, as well as how to manage change and monitor conditions of the site.

Statement of Significance

The Late Victorian Cottage at 42 Paton Street, Merrylands West is of local significance for its historic and aesthetic values. Built c.1890, the property is historically associated with the residential subdivision William Sherwins c.1831 'Sherwood Estate' that was purchased by Arthur Holroyd in 1855 and further subdivided in the 1860s. The building is historically related to the residential development of Merrylands that followed the opening of the Merrylands Railway Station in 1876. The building has some aesthetic significance as a late Victorian cottage with a substantial landscape, however this is compromised by the large carpark fronting the residence. Although modified, the building is representative of the early substantial residences constructed in the centre of the early Merrylands settlement.

Criteria Assessment	
a) Historic	Built c.1890, the property is historically associated with the residential subdivision William Sherwins c.1831 'Sherwood Estate' that was purchased by Arthur Holroyd in 1855 and further subdivided in the 1860s. The building is historically related to the residential development of Merrylands that followed the opening of the Merrylands Railway Station in 1876.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building has some aesthetic significance as a late Victorian cottage with a substantial landscape, however this is compromised by the large carpark fronting the residence
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	Although modified, the building representative of the early substantial residences constructed in the centre of the early Merrylands settlement.

Physical Description

The site contains a large brick Late Victorian cottage. The item has facebrick walls and a hipped roof clad with terracotta tiles. The roof extends over to a broken back verandah roof. A tall brick chimney with a curved brick cowl is located on the southern ridge of the roof. The verandah extends along north, east and west elevations, and is supported on replaced timber posts. The verandah is addressed by five steps clad with tiles. The land immediately fronting the verandah has been landscaped to include garden beds with simple timber panel retaining walls. The windows are generally timber framed multi-paned casement, and do not appear to be original. A central entry door has glazed panels and side lights.

The subject house is located on large grounds with a deep setback from Paton Street. The front yard was formerly dominated by many established trees including She Oaks, Poplars and Camphor Laurels, and was fronted by a high timber picket fence along the street boundary. The landscape has been significantly altered for the residence's adaptive re-use as a day-care centre. The landscape is now dominated by a large carpark. The carpark features an entrance and exit which addresses Paton Street and consists of coloured concrete pavers and new retaining walls with low-lying plantings. The property is enclosed by a large steel palisade fence and gate. Some significant trees from the previous landscape have been retained.

The condition of the building is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The property was subdivided in 1992
- There appears to be a small infill of the verandah at the south western corner
- The present garage was constructed in 1980 replacing a previous garage
- Modified windows*
- Adaptive re-used as a Day-care centre, c.2018
- Substantial alterations to the landscape with the construction of the carpark*

Due to the current new use of the building it is likely to have undergone some internal modification. The item is considered to have low integrity overall considering the significant changes to the landscape and building.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1890

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks and Sherwood Brick and Tile Works.

The subject property formed part of the 1165 acres 'Sherwood Estate' acquired by Dr William Sherwin in 1831 and consolidated from earlier grants to William Sherwin (Snr) from 1810. Part of the Estate was purchased by Arthur Holroyd in 1855 and developed in the late 1860s. Paton Street (formerly Patonville) was subdivided in the late 1880s. The subject property formed part of over 4 acres at the corner of Paton and Sherwood Roads purchased by William Walters, a painter, in 1892. The property was subdivided and transferred several times, including in 1893 to John Thorpe and later Charles Crois, and in 1898 to Eliza Lawrence.

Although the construction date of the house remains unknown, its architectural style would suggest it was built during the late 19th century. The property was purchased by Alice Cross in 1909, and later that year by Samuel Crowther. Cross and Crowther are noted in residence in England, and the house was possibly leased to Daniel Cross, a relative, who is noted in the Sands Directory between 1909-1916. The property was purchased by Charles Richardson in 1916, and then by Harry Benson in 1919, who is listed in the Sands Directory at 'Sherwood' between 1918-33.

The property is now used as a Daycare Centre.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, such as a change of use, consideration should be given to the reinstatement of a more sympathetic landscape.

Curtilage Map

Statement of Significance

The Prospect Hill area has State significance due to its unique combination of significant landscape feature, potential archaeological site and association with important historical phases. As a dolerite outcrop rising to a height of 117 metres above sea level, Prospect Hill is a rare geological and significant topographic feature providing expansive views across the Cumberland Plain.

The site is significant as a major reference point for early explorers from 1788 and as the site of a number of the earliest farms in New South Wales, which were established in 1791. Prospect Hill is also associated with Aboriginal frontier warfare during the early days of the colony and as the site of one of the first Aboriginal/European reconciliation meetings, held in 1805, involving Samuel Marsden and Prospect Aboriginal groups.

Through its ongoing pastoral and rural use, the site has the potential to provide archaeological evidence of early farming practice and settlement. The landscape of Prospect Hill is likely to be one of the only remaining areas of rural land within the local and regional area that has retained its long-term pastoral use since the earliest days of the colony.

Criteria Assessment	
a) Historic	Prospect Hill is historically significant as the site of a number of the earliest farms in New South Wales, with a number of time-expired convicts settled on the land in 1791 by Governor Phillip. As a significant landmark on the Cumberland Plain, Prospect Hill provided an important reference point for early explorers from 1788 and played a role in the earliest exploration of the east coast of Australia. Prospect Hill is also associated with an important phase of Aboriginal/European contact; firstly through Pemulwuy's guerrilla warfare in the area between 1797 and 1802 and in 1805 as the site of a reconciliation meeting involving Samuel Marsden.
b) Associative	Prospect Hill has historical associations arising from the use of the site over time; including the Aboriginal frontier leader Pemulwuy, Samuel Marsden and those earliest former convicts who settled at Prospect Hill including William Butler, Samuel Griffiths and William Parish.
c) Aesthetic/Technical	Prospect Hill has aesthetic significance as Sydney's largest body of igneous rock, which rises to a height of 117 metres and provides expansive views across the Cumberland Plain. The large dolerite formation of Prospect Hill is a rare geological and landmark topographic feature, lying centrally within the Cumberland Plain. Through the long-term use of the site for pastoral use, the landscape retains an essentially rural character, which is becoming rare in the locality.
d) Social	Through its continued use for research purposes over the last forty years, the CSIRO complex, which is located at the foot of Prospect Hill, has significance for those employees who have worked at the research facility and in particular for those scientists who have carried out work which is of importance to Australia's cultural history.
e) Scientific	Through its continual pastoral/rural use since 1791, Prospect Hill has the potential to provide archaeological evidence of early historical settlement or agricultural techniques used.
f) Rarity	Prospect Hill is unique as a significant landmark site and through its ability to demonstrate historical links with early European exploration and settlement as well as Aboriginal conflict and reconciliation, with the landscape retaining its continual pastoral use since the early days of the colony.
g) Representativeness	The item does not meet this criterion.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Prospect Hill', dated 2018. As the description features a comprehensive physical description, no amendment has been made to the physical description.

Prospect Hill is Sydney's largest body of igneous rock and rises to a height of 117metres above sea level. The hill is located between the south-west corner of CSIRO Division of Animal Production site and the south-east corner of the Boral Resources (NSW) site at Greystanes. The CSIRO portion of Prospect Hill is generally cleared for pasture grasses, with remnant stands of native vegetation along a creek line that runs from north to south along the site. The portion of Prospect Hill located within the Boral site has remnant stands of trees and has been partially used as part of the Boral Brickworks operation.

The first settlement of the area occurred in 1791 on the eastern and southern slopes of Prospect Hill, however no buildings dating from the 18th or 19th centuries remain above ground (Higginbotham 2000). A number of the original boundaries of the Prospect land grants of 1791 can be identified when looking east across the CSIRO site from Prospect Hill (Ashton 2000). On the slope of Prospect Hill, north of the hilltop, is an abandoned quarry dating to the later part of the 19th century.

Condition

Due to the nature of the site and its location there was limited access to the landscape due to the presence of residential development and high security fencing. As a result, no built elements were visible from the public domain, therefore their condition could not assessed.

Condition	Good	Fair	Poor

Alterations and Additions

- Weldmesh fence boundary around the site.

As Prospect Hill remains relatively unchanged it has high integrity overall.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	N/A

The following history has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Prospect Hill', dated 2018.

Aboriginal & European settler history

The area of Prospect Reservoir is an area of known Aboriginal occupation, with favourable camping locations along the Eastern Creek and Prospect Creek catchments, and in elevated landscapes to the south. There is also evidence to suggest that the occupation of these lands continued after European contact, through discovery of intermingled glass and stone flakes in archaeological surveys of the place. The area was settled by Europeans by 1789.

Prospect Hill, Sydney's largest body of igneous rock, lies centrally in the Cumberland Plain and dominates the landscape of the area. Very early after first settlement, on 26 April 1788, an exploration party heading west led by Governor Phillip, climbed Prospect Hill. An account by Phillip states that the exploration party saw from Prospect Hill, 'for the first time since we landed Carmathen Hills (Blue Mountains) as likewise the hills to the southward'. Phillip's 'Bellevue' (Prospect Hill) acquired considerable significance for the new settlers. Prospect Hill provided a point from which distances could be meaningfully calculated, and became a major reference point for other early. When Watkin Tench made another official journey to the west in 1789, he began his journey with reference to Prospect Hill, which commanded a view of the great chain of mountains to the west. A runaway convict, George Bruce, used Prospect Hill as a hideaway from soldiers in the mid-1790s.

During the initial struggling years of European settlement in NSW, Governor Phillip began to settle time-expired convicts on the land as farmers, after the success of James Ruse at Rose Hill. On 18 July 1791 Phillip placed a number of men on the eastern and southern slopes of Prospect Hill, as the soils weathered from the basalt cap were richer than the sandstone derived soils of the Cumberland Plain. The grants, mostly 30 acres, encircled Prospect Hill. The settlers included William Butler, James Castle, Samuel Griffiths, John Herbert, George Lisk, Joseph Morley, John Nicols, William Parish and Edward Pugh.

The arrival of the first settlers prompted the first organised Aboriginal resistance to the spread of settlement, with the commencement of a violent frontier conflict in which Pemulwuy and his Bidjigal clan played a central role. On 1 May 1801 Governor King took drastic action, issuing a public order requiring that Aboriginal people around Parramatta, Prospect Hill and Georges River should be 'driven back from the settlers' habitations by firing at them'. Kings edicts appear to have encouraged a shoot-on-sight attitude whenever any Aboriginal men, women or children appeared.

With the death of Pemulwuy, the main resistance leader, in 1802, Aboriginal resistance gradually diminished near Parramatta, although outer areas were still subject to armed hostilities. Prompted by

suggestions to the Reverend Marsden by local Prospect Aboriginal groups that a conference should take place 'with a view of opening the way to reconciliation', Marsden promptly organised a meeting near Prospect Hill. At the meeting, held on 3 May 1805, local Aboriginal representatives discussed with Marsden ways of ending the restrictions and indiscriminate reprisals inflicted on them by soldiers and settlers in response to atrocities committed by other Aboriginal clans. The meeting was significant because a group of Aboriginal women and a young free settler at Prospect named John Kennedy acted as intermediaries. The conference led to the end of the conflict for the Aboriginal clans around Parramatta and Prospect. This conference at Prospect on Friday 3 May 1805 is a landmark in Aboriginal/European relations. Macquarie's 'Native Feasts' held at Parramatta from 1814 followed the precedent set in 1805. The Sydney Gazette report of the meeting is notable for the absence of the sneering tone that characterised its earlier coverage of Aboriginal matters.

From its commencement in 1791 with the early settlement of the area, agricultural use of the land continued at Prospect Hill. Much of the land appears to have been cleared by the 1820s and pastoral use of the land was well established by then. When Governor Macquarie paid a visit to the area in 1810, he was favourably impressed by the comfortable conditions that had been created.

Nelson Lawson, third son of explorer William Lawson (1774-1850), married Honoria Mary Dickinson and before 1837 built "Greystanes House" as their future family home on the western side of Prospect Hill. Lawson had received the land from his father, who had been granted 500 acres here by the illegal government that followed the overthrow of Governor Bligh in 1808.

Governor Macquarie confirmed the grant, where William Lawson had built a house, which he called "Veteran Hall", because he had a commission in the NSW Veterans Company. The house was demolished in 1928 and the site is now partly covered by the waters of Prospect Reservoir. Greystanes was approached by a long drive lined with an avenue of English trees - elms (Ulmus procera), hawthorns (Crataegus sp.), holly (Ilex aquifolium), and woodbine (Clematis sp.) mingling with jacarandas (J.mimosifolia). It had a wide, semi-circular front verandah supported by 4 pillars. The foundations were of stone ,the roof of slate, and the doors and architraves of heavy red cedar. It was richly furnished with articles of the best quality available and was the scene of many glittering soirees attended by the elite of the colony. Honoria Lawson died in 1845, Nelson remarried a year later, but died in 1849, and the property reverted to his father. Greystanes house was demolished in the 1940s (Pollon, 1988, 116, amended Read, S.,2006 - the house can't have been 'on the crest' of Prospect Hill as Pollon states, if its site was covered by the Reservoir).

By the 1870s, with the collapse of the production of cereal grains across the Cumberland Plain, the Prospect Hill area appears to have largely been devoted to livestock. The dwellings of the earliest settlers largely appear to have been removed by this stage. By the time that any mapping was undertaken in this vicinity, most of these structures had disappeared, making their locations difficult to pinpoint.

The land was farmed from 1806-1888 when the Prospect Reservoir was built. In 1867, the Governor of NSW appointed a Commission to recommend a scheme for Sydney's water supply, and by 1869 it was recommended that construction commence on the Upper Nepean Scheme. This consisted of two diversion weirs, located at Pheasant's Nest and Broughton's Pass, in the Upper Nepean River catchment, with water feeding into a series of tunnels, canals and aqueducts known as the Upper Canal. It was intended that water be fed by gravity from the catchment into a reservoir at Prospect. This scheme was to be Sydney's fourth water supply system, following the Tank Stream, Busby's Bore and the Botany (Lachlan) Swamps.

Designed and constructed by the Public Works Department of NSW, Prospect Reservoir was built during the 1880s and completed in 1888. Credit for the Upper Nepean Scheme is largely given to Edward Orpen Moriarty, the Engineer in Chief of the Habours and Rivers Branch of the Public Works Department from 1858-88.

Quarrying of the basalt plug at Prospect Hill was well underway by the mid-nineteenth century (Higginbotham 2000). By the early twentieth century, Prospect Hill land had been acquired by quarrying firms anxious to expand their land holdings near this valuable source of raw material. The bulk of the

present CSIRO site was acquired by the Commonwealth in 1946, and a further 15 hectares was acquired in 1963. In the early 1950s the site became operational and sheep were pastured for research purposes. In 2000, the CSIRO site has an area of 57.15 hectares and is the primary research centre of the Division of Animal Production, with some 40 buildings and sheds having been constructed over the last 40 years.

In 1998 Boral reviewed its holdings with a view to future redevelopment as its quarry neared the end of its life. SEPP59 was gazetted in 1999 applying to a number of Western Sydney holdings including Greystanes Estate, Nelsons Ridge, rezoning land on the hill's west for employment and on the hill's eastern side for housing and regional open space and providing precinct planning controls. Boral developed two precinct plans. Holroyd City Council adopted the residential precinct plan in 2002. The then Minister for Urban Affairs & Planning took over planning powers for the employment area in November 2000 and approved the Employment Precinct Plan in June 2001, approving subdivision and associated works in the northern employment lands later in June 2001. Since, parts of the employment land have been sold and further subdivideed and sold.

In 2002 Delfin Lend Lease entered a joint venture with Boral to develop the residential lands. This part of the estate is now known as Nelson's Ridge (after Nelson Lawson who owned the Greystanes Estate and commissioned Greystanes House in 1837). Nelson's Ridge is being developed by Lend Lease in two stages with the first comprising the northern employment and northern residential lands and the second comprising the southern equivalents.

The former CSIRO site to the north of Nelson's Ridge was vacated in 1/2002 and sold to Stockland in March 2002. SEPP 59 also rezoned it for residential and employment uses. This site has its own precinct plan, now adopted into the Holroyd City Council's Development Control Plan: Part P Pemulwuy Residential Lands. It will eventually be integrated with the Nelson's Ridge development through Driftway Drive as well as cycleways and pedestian links being established between the two (Whelans InSites, 2010, 5).

Prospect Hill was entered on the NSW State Heritage Register in October 2003. A conservation management plan prepared for the hill in 2006 has guided its staged development as a public parkland since. Staged subdivision of Boral lands into both housing areas and public parklands has proceeded in the past decade, c2006-2018.

In December 2018 Cumberland Council unveiled plans for future upgrades to Prospect Hill (Mar-Rong Reserve) as it seeks to prioritise upgrades and asset management (including visitor services provision, facililties for visitors and residents into the future).

Additional Historical Notes

Long-term pastoral use on much of Prospect Hill has ensured the site retains its historical links and archaeological potential. However, Prospect Hill is under immediate threat from development, which has the potential to impact upon the significance of the site. This includes the rezoning of the site as part of SEPP 59 and development for residential/employment purposes, the continual quarrying of the southern portion of the hill; and new development proposals including a proposed flagpole to be erected on Prospect Hill commemorating Federation.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	

2. Revised Curtilage recommended – refer below

Statement of Significance

The Greystanes Gates are of local significance for their historic and aesthetic values. They are historically significant as one of the few remnants of, Nelson Lawson's, 'Greystanes House' built in 1837 and provide evidence of the use of the area by pastoral landowners. Although modified, they retain their aesthetic significance and provide evidence of the grandeur of the original residence and are evocative of the character of its design.

Criteria Assessment	
a) Historic	Built in 1837, the gates remain as one of the few remnants of Nelson Lawson's 'Greystanes House' and provide evidence of the historic use of the area by pastoral landowners.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Although modified, they retain their aesthetic significance and provide evidence of the grandeur of the original residence and are evocative of the character of its design.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The remnant gates of the former Greystanes House are located on Greystanes Road, between Watkin Tench Drive and Butu Wargun Drive, in the suburb of Pemulwuy. While Greystanes House was demolished in late 1940s, the gates remain their original location. This is not well interpreted due to the orientation of the new development behind. The gates now front a pedestrian footpath that runs adjacent to Greystanes Road with a modern retirement village behind, which has removed the original driveway. Within this setting along Greystanes Road the landscape features small garden bed and many established revegetated Gum trees and a pine tree. The revegetated landscape contribute to the setting of the Gates.

The gates appear to be constructed from rendered brick pillars with decorative wrought iron and steel palisade inserts. The rendered pillars give the impression the material is sandstone; however, they consist of a course sandy aggregate with a light painted coating over. It appears the inserts to the south are original wrought iron, while the northern inserts are painted steel replacements.

Overall, the condition of the item is fair although there is some deterioration of the render with signs of efflorescence, differential movement, and the corrosion of wrought iron inserts and peeling paint from the likely replacement of wrought iron inserts with steel. The metal elements are in varying states of deterioration due to their materiality.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Decorative painted steel inserts, likely replacements of original wrought iron inserts.
- Replaced sandstone piers with rendered elements.

The gates are substantially altered from their original construction with the replacement of metal inserts and sandstone piers. They are considered to have moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1837

Pemulwuy
The suburb of Pemulwuy occupies much of Nelson Lawson's 'Greystanes Estate'. The suburb gains its name from the Aboriginal historical figure Pemulwuy, the Bidjigal clan leader who resisted the spread of European settlement in the area between the 1790s and early 1800s. The attacks and retaliations by both sides continued for 12 years until Pemulwuy was shot dead in 1802.

The modern suburb of Pemulwuy was partially built over the site of a former CSIRO research station which began in 1946-1947 when it was called CSIR (Council for Scientific and Industrial Research).The station was built as part of a post-war initiative to fund the promotion of and research into wool, a major Australian export at the time. The facility was renamed the Ian Clunies Ross Animal Research Laboratory after its Chairman Ian Clunies Ross who died in 1959. The research facility was further developed and upgraded to the Division of Animal Physiology. There were many redevelopments and expansions of the facility particularly in 1993 with a major redevelopment project to create new research laboratories, sheep and poultry facilities, a lecture theatre and an expanded library. This cost $11.6 million and was expected to increase job numbers to 230. However, by 2000, the CSIRO had closed the Prospect facility and by 2003 the land was sold to create the suburb of Pemulwuy in 2004.

Greystanes Gates
The site is located on the 1799 land grant received by Lt. William Cummings. The gates originally fronted the entrance to the Greystanes Estate. Nelson Simmons Lawson, third son of explorer William

Lawson, established an extensive Georgian house called Greystanes House. The name is derived from the Scottish word for 'stones' (stanes) which relates to the colour of the local stone on Prospect Hill.

Greystanes House and gates was established in 1837 and was designed by architect Edward Hallen, who married Nelson Lawson's sister, Sophia Lawson. The residence was built of stone with a slate roof and fitted with Italian marble fireplaces and cedar doors and architraves. The residence had a wide, semi-circular front verandah supported by four pillars. The site also contained stables and a coach house.
The grounds and garden of Greystanes House were described as typically Old English with a steep avenue lined with a post and chain fence on which trailed briar and wild roses, skited by avenues of olives, scented wild woodbine, 90-year-old elms, hawthorns, jacarandas and English holly.

From 1868 to c.1925, the property had a series of notable occupants. These included: Richard Cox, son of William Cox who built the first European road over the Blue Mountains; Walter Lamb, the founder of the fruit canning industry at Plumpton; Fitzwilliam Wentworth, son of the explorer William Charles Wentworth, Wentworth is thought to have made some extensions to the house; John Wetherill, after whose family the suburb of Wetherill Park was named; Arthur Frederick Smart, who expanded the estate from 75 acres to 464 acres; Major Philip Charley, a horse breeder; and Dr Stewart McKay, a lessee of the property.

During the 1930s, Greystanes Estate was sold to the NSW Blue Metal Company for quarrying. For a brief period during World War Two, the house was occupied by Australian and American Armed Forces. The owners, Blue Metal Industries, resumed control of the property in 1946. The house was demolished soon after due to considerable deterioration and damage.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the former heritage curtilage for Greystanes Gates does not accurately capture the Lot 141, DP 1061621 in which the item is located within, it is recommended the revised curtilage shown below is updated as the heritage curtilage for Greystanes Gates in the Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Statement of Significance

The following statement of significance has been adapted from the *Bonds Factory Site, Dunmore Road, Wentworthville Conservation Management Plan* (2014) prepared by MUSEcape, Orwell and Peter Phillips Architects, Roslyn Burge and Meredith Hutton.

The Bonds factory site is of local and potentially state significance for the historic, aesthetic, social, rarity and representative values the site embodies.

The Bonds factory site is historically significant at a State level as a major industrial complex in the Cumberland Council LGA where the iconic Australian clothing brands, Bonds, were produced for more than eighty years. The site provides evidence for the evolution of the site in response to changing manufacturing methods, market trends and economic circumstances. From its inception, the factory influenced the development of the neighbouring suburbs of Wentworthville and Pendle Hill, including the construction of Pendle Hill Railway Station and the expansion of residential and retail development to serve the large Bonds workforce. The site has strong associations with George A. Bond who founded the company and established Australia's first cotton spinning mill.

Parts of the factory complex demonstrate a high degree of technical achievement. However, much of that technical significance was embodied in the machinery that the company used over the years and which in many cases was leading edge technology in the cotton spinning and weaving industry, however, these have been largely removed from site. The brick facade to Dunmore Street retains aesthetic value as an example of the formal administrative front to the factory.

It is likely the site has some social value to past employees of Bonds that have a strong attachment to the site as the place where they had their first job, learned new skills, met their partner, made special friends, spent their working career or participated in the sporting teams and social activities such as the regular dances which the company put on for its staff.

The Bonds factory is a relatively rare example of an industrial building typology that is representative of a large manufacturing complex in the spinning and weaving industries.

Criteria Assessment	
a) Historic	The item is historically significant as a major industrial complex in the Cumberland Council local government area where the iconic Australian clothing brands were produced for more than eighty years, showing evidence of the evolution of the site in response to changing manufacturing methods, market trends and economic circumstances. From its inception, the factory influenced the development of the neighbouring suburbs of Wentworthville and Pendle Hill, including the construction of Pendle Hill Railway Station and the expansion of residential and retail development to serve the large Bonds workforce.
b) Associative	The Bonds site has historical associational value through its links with George Alan Bond, the founder of the company, who reputedly established Australia's first cotton spinning mill in the paddocks near 'Dunmore House'. There are also associations with other significant individuals such as Hermon Slade and with the many thousands of employees who worked on the site from the 1920s onwards and made a variety of contributions to the development of the area.
c) Aesthetic/Technical	Parts of the factory complex demonstrate a high degree of technical achievement. However, much of that technical significance was embodied in the machinery that the company used over the years and which in many cases was leading edge technology in the cotton spinning and weaving industry. The plant was regularly upgraded so that manufacturing kept abreast of the times. Little machinery remains on site – most has been either replaced, scrapped or sold for parts. The brick facade to Dunmore Street has aesthetic value as an example of the formal administrative front to the factory. There is aesthetic value in the older sections of the factory, particularly parts of the cutting rooms that retain their massive timber posts and roof trusses. The John Austin Centre, currently used as a training centre, is a former store with architectural merit, sympathetically adapted to its new use.
d) Social	Social value is hard to quantify without detailed surveys of those who have been associated with a place, but it is highly likely that many past and present employees of Bonds will have strong opinions about the factory – some positive, some negative. It is likely that some will have strong attachments to the site as the place where they had their first job, learned new skills, met their partner, made special friends, spent their working career or participated in the sporting teams and social activities such as the regular dances which the company put on for its staff. The former 'dance room', later converted to a staff cafeteria, probably has social significance for a number of past employees.
e) Scientific	While the entire site is listed as an Archaeological Site the disturbance associated with the concrete slab construction of the buildings is likely to have reduced the potential for sub-surface relics to low. The item therefore does not meet this criterion as it is likely the area has been compromised by the extensive earth works associated with the construction of additional factory buildings and bitumen car parks throughout the late twentieth century.
f) Rarity	The use of reinforced concrete for walls (as in the Cutting Room) seems to have been relatively rare for industrial buildings at a State level, although it had been used for other building types in NSW

	previously (such as the Manson & Pickering designed office building Union House, 1919). The Administration Building and Fabric Store and old Spinning Mill fronting Dunmore Street, the saw-tooth roofed early sections of the factory including the Cutting Room, the John Austin Centre, the bale stores and other early structures on site are all rare in the former Holroyd local government area and probably in NSW generally.
g) Representativeness	The Bonds factory is representative of a large manufacturing complex in the spinning and weaving industries but its ability to demonstrate its former uses has been severely reduced by the removal of most plant and equipment with the decision to transfer garment manufacture offshore and to close the factory.

Physical Description

The following physical description has been adapted from the *Bonds Factory Site, Dunmore Road, Wentworthville Conservation Management Plan* (2014) prepared by MUSEcape, Orwell and Peter Phillips Architects, Roslyn Burge and Meredith Hutton:

Setting

The Bonds factory occupies a rectangular site bounded on its northern side by Dunmore Street, on its eastern side by Jones Street, by residential properties on its southern side and by the curtilage of the heritage item "Dunmore" and residential properties on the western side.

Much of the original clothing production areas are under a saw-toothed roof behind the facade. Parts of the factory, including former cutting rooms, retain their original hardwood timber posts and roof trusses, although some structural elements have been replaced with steel. Other built elements from the earlier phases of site development include a former store with clerestory roof (converted in recent years into the John Austin Centre), a training and conference facility, a row of concrete roofed cotton bale stores with sliding metal doors counterbalanced with heavy weights, a pitched roof building possibly built as a storage shed and used for company dances but converted to a staff cafeteria in 1949. Also, on site are parts of the former boiler house, a carpentry workshop, electrical substation, recent office buildings and extensive areas of car parking. Within this landscape of the Bonds site, the significant heritage buildings are generally concentrated in the northern portion of the site, with the southern portion of the site is dominated by later warehouses of lesser significance.

At present the site is under a Development Application to redevelop the site. Key buildings to be retained include; the cutting room (c.1925 warehouse), the dance hall (c.1930 hall), the cotton bale stores (c.1920), and the new boiler house and store (c.1950s – 1960s).

Buildings proposed for demolition include; The Yarn Store, Old Spinning Mill, Compressor Room, Carpenters Workshop, Amenities, Substation, Store and Loading Dock, Covered Roadway, Offices, New Bale Stores, Spin Dispatch, Electricians Workshop, New Spinning Mill, Dye House, Store, Canopy, Warehouse Extension, Spinning Mill Extension, Dye House Extension, and Loading Dock.

Yarn Store

It is likely the building relates to the second phase of development of the Bonds site that occurred in the 1930s. The building is a large brick building with a sawtooth roof clad in corrugated iron. The roof is supported on steel trusses and featuring an asbestos cement ceiling. It has a concrete floor, steel roller door shutters and steel framed windows.

Old Spinning Mills

It is likely this building relates to the first phase of development of the George. A. Bond & Co, c.1920s. The building has concrete walls, with a corrugated iron saw tooth roof. The building contains early mechanical ventilation ductwork, possibly dating from the introduction of air-conditioning to the mill in the 1950s. The western-most bay is topped by ventilation towers and a water tank which retains remnants of its early signage. The interiors feature steal column and beams, timber trusses, steel framed windows, and brick internal partitions, with some later steel stud partitioning.

Administration and Fabric Store
It is likely the building relates to the second phase of development of the Bonds site that occurred in the 1930s. The style of the brick frontage suggests the 1930s period but may incorporate earlier structures. Aerial photographs indicate the building was constructed in at least three stages, and contains a number of different structural systems including clear span steel trusses (with south lights) between masonry walls (the western-most section), steel columns and beams similar to the old Spinning Mill (the south-east corner) and hollow section steel columns made from pairs of welded steel angles.

The northern-most bay of the factory building is constructed of face brick walls with a gabled roof clad with Marseilles tiles. This portion of the building incorporates a projecting bay entrance, marked by a brick square parapet framed either side with tall brick piers and stepped string course above the entrance with the original door. The entrance also has metal lettering which reads 'Bonds Industries Limited' and is addressed by three brick steps. Along the north elevation are expressed brick beneath the eave.

This part of the building may be the addition constructed in 1939 to house additional yarn plant. The facade was altered in 1989 to designs by in house engineer with the enlargement of some openings and replacement of all window frames with aluminium frames; the concrete tables along the street frontage may have been added at the same time. Other alterations included new aluminium framed doors, a new metal-clad east façade treatment, and refurbished interiors including false ceilings and partitions.

Buildings not visible from the Public Domain
There are several other workshops with the curtilage, however they were not visible from the public domain. They include the former store, cutting room, cotton bale store, compressor room, carpenters' workshop, the amenities building, substation, John Austin Centre, several workshops and offices.

The following descriptions are quoted from the CMP prepared by Musecape, Orwell and Peter Phillips Architects, Roslyn Burge and Meredith Hutton (2016).

Cutting room

> The Cutting Room was part of the original factory premises at Wentworthville designed by Robertson and Marks Architects, and may have housed the first cotton spinning mill. A drawing (the only one found from the earliest phase of development) showing the plan of the building, dated November 1922, is held in the Pacific Brands plan collection; this drawing also shows the outlines of a Mercerising Plant building, with dimensions of 14 feet x 25 feet in plan, and a Lavatory and Luncheon Rooms block, and refers to other drawings which appear not to have survived. The Robertson & Marks records indicate that "Cotton mills, Machine Shop and Mercerising House" were completed in 1925.
>
> The Cutting Room building combined traditional and modern construction techniques, hardwood being used for the columns and reinforced concrete for the main walls.
>
> The sawtooth roof was constructed with composite trusses mainly of timber, with steel rods for the tension members. Timber framed windows were constructed along most external walls.
>
> The condition of the original building is generally fair to good. Most of the windows have been painted over, as the original building has progressively been surrounded by later structures. The hardwood structure appears sound, although some supplementary steel members have been added and some posts have warped and twisted, apparently without any effect on their structural capacity. The concrete

walls also appear sound, despite some physical damage at penetrations for services.

Cotton Bale Store

These small structures were designed as fire-proof stores for cotton bales and were probably built in the 1920s during the first phase of development. There are six surviving stores in different states of intactness; all originally had reinforced concrete floors, walls and roofs, and metal-clad sliding fire doors with counterweights. The stores have most recently been used for general storage and work areas. A seventh store, at the western end of the row, was converted to a vehicular passageway, providing access to larger bale stores to the south, constructed sometime after 1945.

Compressor Room

This building was probably built during the first phase of development (G A Bond & Co) around 1920s, as its construction materials are similar to other buildings of that period. Its original use is unknown, but it may have been the building housing the mercerising plant referred to on the 1922 drawing for the cutting room. It has more recently been used to house compressor equipment. The building has a concrete floor and concrete walls, steel framed windows, and has steel trusses supporting the monoslope roof.

Carpenters' Workshop

The present Carpenters' workshop was probably built during the second phase of development (Bond Industries), as the style of its brick frontage suggests the late 1930s period. It is connected to the nearby amenities block, which may have occurred at a later date. The building has a concrete floor, face brick walls, timber framed doors and windows, and timber trusses supporting the roof.

The Amenities Building

The Amenities building was probably built at the same time as the similarly constructed Compressor Room nearby, during the first phase of development (G A Bond & Co) around the 1920s. It is possible that this building is the Luncheon room and Lavatories building referred to on the 1922 drawing for the cutting room. The building has concrete floor and walls, timber framed glass louvered highlights, later aluminium framed louvre windows, and timber rafters and ceiling linings above.

Substation

Although not mentioned in documentation, the substation is likely to have been built during the first phase of development (G A Bond & Co) around the 1920s, to supply power to the spinning mill. The original L-shaped building surrounds a later open-air transformer enclosure. The building has a raised concrete floor, brick walls with small high-level openings, and a concrete slab roof. External steel frames originally carried power lines serving factory buildings and retain some porcelain insulators. Electrical equipment in use within the main substation dates from the 1950s and later; the small attached store to the north of the substation building contains significant earlier redundant electrical equipment.

John Austin Centre

This building was known as the storage building at the time it was included in the list of significant elements on the site by the former Holroyd City Council. It was probably built during the first phase of development on the site (G A Bond & Co) around 1920s, as it has concrete walls with horizontal board marking from formwork, similar to those on other early buildings. Its original use is unknown, although

surviving parts of the timber-louvered lantern on the eastern section suggest a possible storage use, perhaps in connection with the original boiler house which was located to the east. It was shown on drawings from the 1970s as a store and first aid centre. The building is L-shaped in plan, with concrete floor and walls and a timber trussed clerestory roof. The original clerestory evidently had timber and glass louvres, some bays of which remain at the eastern end. The northern wing of the building was completely refurbished internally in 2004 as a meeting room / staff training centre with associated kitchen, eating area and lavatories, and most of the clerestory louvre panels have been replaced with aluminium-framed windows. Aluminium framed doors and windows also date from this period.

Stores and Loading Dock

This infill building seems likely to have been built during the third phase of development (1950s-60s), over the original roadway between the Old Spinning Mill and Cutting Room to the east, and the Yarn Store and former Staff Cafeteria / Dance Hall to the west. It has a concrete floor and columns, brick walls, and steel trusses supporting south lights.

Offices

This two-storey building was completed in about 1964 as new administration offices and was designed and constructed by Civil and Civic. It has concrete floors and stairs, brick walls, aluminium framed doors and windows, and a steel deck roof. The building has been refurbished internally since construction.

New Bale Stores

These buildings were probably built during the third phase of development (1950s/60s) To increase cotton storage capacity for the additional spinning mills. They have concrete floors, brick walls (except for the concrete northern wall to the original bale stores), and steel trusses supporting sawtooth roofs with steel framed south lights.

Spin Dispatch

The building now known as the yarn store was probably built as an additional bale store towards the end of the third *phase* of development (1950s-60s). It was later used as spin dispatch (according to drawings in the Pacific Brands plan room). It has a concrete floor, concrete block walls, and open web steel joists supporting the roof.

Electricians' Workshops

The workshop was probably built during third phase of development (1950s-60s), as its structure matches other smaller buildings form this period. It was later used

as a lunchroom in the 1980s, and most recently as an engineering workshop. It has a concrete floor, framed and sheeted walls, steel framed highlight windows, and steel trusses supporting the roof.

Boiler House

The boiler house appears likely to have been built during the third phase of development (1950s-60s). It has a concrete floor, brick walls, and steel trusses supporting a sawtooth roof with steel framed south lights. The building contains the lower sections of the two remaining steel flues and some associated pipework; other equipment (including a third flue) has been removed. Adjoining the boiler house is a brick oil tank room with a steel feeder water tank on its flat concrete roof.

New Spinning Mill

The new spinning mill was the first major building to be constructed during the fourth phase of development (1970s-1990s). It was originally designed as a spinning mill, and later used as a knitting mill and bra factory. The mill is a two-storey structure at the northern end, with the ground floor cut into the slope of the site, and the first floor at ground level on the southern end of the site. It has concrete floors and columns (flat plate structure), brick walls, and aluminium framed windows. The roof structure is presumably steel trusses, concealed by a false ceiling.

The southern extension to the New Spinning Mill was built about 1995, to a design by Quanstruct Pty Ltd. It is a single storey building at the upper level of the mill, and has a concrete floor, and steel portal frames supporting steel cladding to roof and walls.

Warehouse

This utilitarian building was probably built towards end of the third phase of development (1950s-60s) as a warehouse and was later extended to form part of the dye house. It has a concrete floor, steel columns, and sloping open web steel joists (typical of this period of construction) supporting the roof.

The northern extension to the warehouse (subsequently incorporated into the Dye House) was built about 1991 to a design by architects Peter Crowley and Partners. It has a concrete floor, precast concrete panel walls, and steel columns and beams supporting the roof.

Covered Roadway

This structure was built during the fourth phase of development (1970s-1990s) over the former roadway between the new bale stores and new spinning mill. It has a concrete floor, steel columns, and steel trusses supporting the roof.

Canopy

The extensive canopy, U-shaped in plan, was built about 1995 on the site of the original powerhouse, to a design by Quanstruct Pty Ltd. It has steel columns, beams and trusses supporting the steel deck roof, with fiberglass panels for daylighting.

Dye House Extension

The extension to the former warehouse to create the Dye House was built about 1987, to a design by in-house engineer Phil Bathie. It has an L-shaped plan which wraps around the former warehouse to the south and east, with a mezzanine floor at the southern end. The building has concrete floors, steel portal frames, brick walls, and aluminium framed doors and windows. While the majority of the building is an open space, the eastern bay contains offices and laboratories associated with the Dye House.

Landscape
The site generally features minimal plantings within the site, with most plantings located along the perimeter of the site. The northern boundary along Dunmore Street consist of a several established plantings, that consist of a mix of native species including eucalypts and casuarinas.

Condition
The condition of the buildings is varied. As the site has remained unoccupied for some time, there are some that building are in a more deteriorated state than others. Generally, the condition is considered fair.

Condition	Good	**Fair**	Poor

Alterations and Additions

Externally, the buildings appear to have a high level of integrity. However, due to the nature of the sites continued use from 1922 to 2010, it is likely the interiors have undergone substantial modification with the upgrading of technology in line with operational standards and procedures. The site also contains a number of later twentieth century warehouses. The site is considered to have a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1922

The following history has been summarised from the Bonds *Factory Site, Dunmore Road, Wentworthville Conservation Management Plan* prepared by Musecape, Orwell and Peter Phillips Architects, Roslyn Burge and Meredith Hutton:

In 1819 D'Arcy Wentworth, brother of William Charles Wentworth was given a Crown Grant of 2,200 acres west of Parramatta including the future site of "Dunmore" and the Bonds factory. By 1883 part of the Wentworth land known as the 'Wentworthville Estate' was owned by William Charles Wentworth's fourth child, Fitzwilliam Wentworth. In that year he sold 8 acres to William McMillan, then a Sydney merchant and a partner in A McArthur and Co., importers and warehousemen.

On 5 February 1884 William McMillan mortgaged his property at Wentworthville to secure a loan for the construction of 'Dunmore' and on 18 August he purchased the adjacent major portion of the property, with the remaining 27 acres of the Dunmore property purchased in July the following year. The railway station was renamed Wentworthville.

In 1886, a Sydney Morning Herald article indicated the development of the township of Wentworthville, advertising the sale of land allotments as part of a 500-acre picturesque estate (a portion of the D'Arcy Wentworth 2200-acre grant). The following year William McMillan was elected to the NSW Legislative Assembly for the electorate of East Sydney. He divorced his wife Ada Charlotte and moved out of 'Dunmore'. By 1889 he was Colonial Treasurer of NSW.

In 1906 American George Alan Bond was operating a small trading firm in New Jersey when he decided to emigrate to Australia. Thirty years old at this stage, Bond had been born on 22 May 1876 at Louisville, Kentucky, USA, to George Henry Bond, a Scottish horticulturist and his wife Jane, née Redman. In 1915 he established a small hosiery and glove importing business, called George A Bond & Co. on the fourth floor of Aberdeen House, Clarence Street, Sydney and around December that year he moved his business to Pomeroy House in York Street, Sydney, taking over a whole floor for sales showrooms and a warehouse.

The First World War had started in 1914 and by 1917 shortages in the supply of locally produced clothing prompted Bond to go into manufacturing, establishing his first hosiery plant at Redfern. At this stage he was producing only black, white and tan cotton hosiery, not yet lisle and was possibly using imported art silk yarn.

In 1918 George Bond retained Pomeroy House for showrooms, and commenced underwear manufacturing in premises at Mallett Street, Camperdown. His warehouse was moved to a large shop at the corner of Parramatta Road and Mallett Street. Goods were dispatched from Camperdown until larger premises became available. During these early years, men's cotton athletics were manufactured under the name of Bonds Athletics.

"Dunmore" at Wentworthville had been sold by William McMillan in 1912 to Percival Edgar Thompson of Gosford and on 31 January 1920 George Bond purchased the property from Thompson. With the enterprise now flourishing, Bonds became a public company, George. A. Bond & Co Ltd, with an issued capital of about £200,000 and Bond as Managing Director.

George Bond became an Australian citizen in 1922. Between 1921 and 1923 all Bonds facilities had been consolidated at Camperdown where the well-known Sydney-based architectural firm of Robertson & Marks Designed an additional four floors of the premises. In 1922 the same firm was commissioned to design new factory premises at Wentworthville.

In 1923 Bond established Australia's first cotton spinning and weaving operation on his property at Wentworthville, the first in the Southern Hemisphere and commenced the manufacture of lisle stockings from Australian cotton. Bond persuaded the railway authorities to build a platform on the western railway line so his employees would be within easy walking distance of the Pendle Hill station, that opened on 12 April 1924.

When construction of the Bonds factory started, the area was still semi-rural, with remnant stands of native woodland and only limited residential development, mostly around the railway stations. By the 1930s the factory occupied a considerable area and residential development had expanded nearby.

By 1925, Bonds were producing about a quarter of the total Australian output of hosiery and knitted goods. From 1926 Bonds received a bounty for manufacturing yarn from local cotton and George Bond formed a subsidiary company, George A Bond Cotton Mills Ltd. By the following year, the company was spinning cotton, throwing silk and manufacturing full fashioned hosiery, half hose, knitted underwear and woven towels and was described by The Bulletin as being the largest hosiery manufacturer in the British Empire. At this time the company employed some 2,600 people and had assets valued at £1,582,000.

The Great Depression was looming and in 1929 George A Bond & Co. went into liquidation, a victim of the impending downturn in world trade and United Kingdom import policies. In August that year Bond's Industries Ltd was formed after offers were made by a group of creditors to the liquidators of George. A. Bond & Co. and George. A. Bond Cotton Mills. The new company was listed on the NSW and Sydney Stock Exchange on 27 February 1930, with paid up capital of £171,009. The loss involved in the liquidation was probably the largest suffered by a manufacturing company to that date – all the share capital to the value of £700,000 had to be written off. George Bond was forced to sell "Dunmore" at a low price to an organisation operated by the Churches of Christ.

A satisfactory turnover was achieved in 1930 even though prices of commodities were reduced due to the Depression which continued into the late 1930s, forcing other states to cut prices, making it

impossible for Bonds to retain a margin of profit. In April 1931 George Bond was declared bankrupt. Bond's Industries purchased Ladderproof Textiles Ltd and by this time had 3,000 employees.

Severe competition in 1932 forced further reduction in prices, offsetting losses and major changes were made to merchandising policies. Bonds Industries by now were producing 7,000 garments per hour, using 5 million pounds of cotton annually, including 70% of the Queensland crop. Bonds machinery then covered a total of 10 acres (4 hectares) at Wentworthville although company records do not indicate the locations for this machinery.

There was a heavy operating loss in 1934, largely due to stock write-downs. The cotton spinning industry was brought under Federal awards. A small net loss was incurred, mainly due to a falling market and reorganisation of the company's manufacturing and distribution methods. Hungerford, Spooner & Co were appointed auditors and W H 'Hermon' Slade became Chairman of the Board.

The effects of the Great Depression had begun to wane in 1934 and although sales volume declined, progress was achieved through cleaning up of stock and reduction of manufacturing and trading losses. A meeting of debenture holders was held to discuss temporary alleviation of the annual debenture interest charge. Bonds Industries returned to profitability in 1935 and arrangements were made with the Australian Investment Trust Ltd for the liquidation of its indebtedness for calls on shares. George Bond was discharged from bankruptcy in April 1935 and became manager of a small hosiery firm at Summer Hill, Jeanette Manufacturing Co., founded by his wife in 1928.

In 1939, Bond's iconic company identity came into being with the creation of Chesty Bond as part of a merchandising campaign to sell men's underwear, and the singlet in particular. The character was a co-creation of cartoonist Syd Miller and Ted Maloney, the Bond's account executive at advertising agency, J. Walter Thompson.

Bonds continued to expand throughout the 1940s with mills established in Rosebery and Five Dock to supplement the Wentworthville Mill. In 1952 a trade recession occurred, and Bonds was unable to pass on to its customers the higher costs incurred for raw materials, labour and other expenses. There was a reduction in output at Camperdown, Dubbo and Wentworthville due to reduced market demand, partly caused by the inability of manufacturers and retailers to finance purchases. A reduction in overseas and local prices of raw materials necessitated the writing down of stocks to market value. There was a reduction in output at the Wentworthville mill.

In 1960 a new extension to the Wentworthville mill was opened and alterations to the Five Dock plant were under construction. By 1967 employees of the Bonds group numbered 4,070. Sales of apparel rose substantially in 1968 and there were big improvements to warehouse and dispatch facilities which helped in the servicing of customers' orders. Bonds products at this stage were more than 90% cotton and trading was affected by increased cotton prices, higher labour costs, wage increases and additional costs associated with the establishment of the Lithgow Production Unit.

Bonds was taken over by Pacific Dunlop in June 1987 and company name changed to Bonds Industries Ltd. The Wentworthville site continues to operate, and the company continues to acquire various hosiery companies. In 2009, Pacific Brands announces it will lay off 1,850 staff and close most manufacturing sites in Australia, claiming they are no longer economically viable. The company announces it will move manufacturing operations to China.

In 2010 Pacific Brands cuts 1850 jobs and ceases manufacturing in Australia by September to reduce manufacturing costs. After public outrage and media coverage of the sacked staff a group of former employees band together to form Tuffys & Tuffetts underwear, buying some of Bonds old equipment and rehiring sacked staff.

The site was sold to Rainbow Force Pty Ltd in 2012. At present the site remains unused and unoccupied.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.	X	**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The site should be investigated further for its potential to be listed on the State Heritage Register (SHR). It appears to be of State significance for its historic, aesthetic, social, rarity and representative values, being a former major industrial complex where the iconic Australian clothing brands, Bonds, were produced for more than eighty years.
- The assessment of heritage significance in the for the *Bonds Factory Site, Dunmore Road, Wentworthville Conservation Management Plan* (2014) prepared by MUSEcape, Orwell and Peter Phillips Architects, Roslyn Burge and Meredith Hutton, should be used to assist the nomination for the site to the State Heritage Register (SHR).
- The Conservation Management Plan should be used as the guiding document for future works regarding the site's redevelopment.
- This item has been converted from an Archaeological Item to just a Heritage Item. The former LEP has classified a series of items of an industrial nature, including railway, road and water infrastructure, as 'archaeological' sites. This classification is historical and relates to the former use of the term 'Industrial Archaeology', which refers to the study of industrial and engineering history. The use of the term 'Industrial Archaeology' is no longer used and the term 'Industrial Heritage' is now preferred. Archaeological sites are legally defined as sites which contain one or more 'relics' and, in NSW, relics are specifically protected by the Sections 138 -146 of the Heritage Act 1977. The classification of a site as 'archaeological' consequently affects the statutory controls and

procedures, including the need for excavation permits and pre-excavation procedures, triggered by Development Applications.

- The listing of the Former Bonds Factory Site as a heritage item is the appropriate statutory listing relevant to the item.

Revised curtilage recommended – refer below

Statement of Significance

The Former Bonds Bobbin Mill Façade is of local significance for its historic, associative and rarity values. The façade is historically related to the cotton spinning operation at the Bonds factory site, located at 190–220 Dunmore Street. The building was an integral part of the operations of Bonds Factory, which manufactured the bobbins, cones and other wooden items used in the spinning process. The façade is an element of one of the original Bonds buildings and is now one of the few surviving industrial / manufacturing buildings of this period in the area.

Criteria Assessment	
a) Historic	The façade is historically related to the cotton spinning operation at the Bonds Site, located at 190–220 Dunmore Street, being the place where bobbins, cones and other wooden items used in the spinning process were made.
b) Associative	The item is associated with the Bonds factory site located at 190–220 Dunmore Street.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The façade is an element of one of the original Bonds buildings and is now one of the few surviving industrial / manufacturing buildings of this period in the area.
g) Representativeness	The item does not meet this criterion.

Physical Description

The former Bond's Bobbin Mill includes the front façade of the former structure which has been incorporated into a brick residential apartment block. The façade is constructed of dark brick with expressed brick piers dividing the façade into eight bays with a central entrance. The central entrance consists of a coated steel gate with a stepped brick lintel. Each bay features a six-paned window with a metal frame and textured glass panes. The windows have sloped brick sills and stepped brick lintels. The upper façade reads 'Bonds Industries Limited' with a single string course of expressed brick, capped with a coloured concrete strip. The lower façade features a plaque that reads 'Wormald Brothers Grinnell Sprinkler Stop Valve Inside'. Each end of the façade features a recessed drain with a covered hood.

The façade has been incorporated into a three-storey residential apartment block, built c.1997. The apartment is constructed of brick and has made a conscious effort to follow the form of the façade with the use of expressed brick piers and fenestration of a similar scale. There are steel inserts supporting to Bobbin Mill façade which operates as an entrance to this residential complex.

The façade is framed either side with a fence. The fence consists of brick piers capped with concrete with a low brick balustrade topped with steel ladder inserts. Behind each fence is an informal hedge.

Overall, the condition of the item is fair. The brickwork appears to show some signs of salt attack.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Entire factory demolished in c.1997, construction of new residential development*
- Front façade retained and incorporated into residential development
- New entrance gate
- New landscaping

Although the immediate landscape Former Bobbin Mill is highly modified, the item retains a moderate level of integrity for its relationship to the Bonds Factory site and level of intact fabric retained on the front façade.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1939-1941

Bonds Site

The following history of the Bonds Site has been summarised from the CMP prepared by Musecape, Orwell and Peter Phillips Architects, Roslyn Burge and Meredith Hutton:

In 1819 D'Arcy Wentworth, brother of William Charles Wentworth was given a Crown Grant of 2,200 acres west of Parramatta including the future site of "Dunmore" and the Bonds factory. By 1883 part of the Wentworth land known as the 'Wentworthville Estate' was owned by William Charles Wentworth's fourth child, Fitzwilliam Wentworth. In that year he sold 8 acres to William McMillan, then a Sydney merchant and a partner in A McArthur and Co., importers and warehousemen.

On 5 February 1884 William McMillan mortgaged his property at Wentworthville to secure a loan for the construction of 'Dunmore' and on 18 August he purchased the adjacent major portion of the property, with the remaining 27 acres of the Dunmore property purchased in July the following year. The railway station was renamed Wentworthville.

In 1886, a Sydney Morning Herald article indicated the development of the township of Wentworthville, advertising the sale of land allotments as part of a 500-acre picturesque estate (a portion of the D'Arcy

Wentworth 2200-acre grant). The following year William McMillan was elected to the NSW Legislative Assembly for the electorate of East Sydney. He divorced his wife Ada Charlotte and moved out of 'Dunmore'. By 1889 he was Colonial Treasurer of NSW.

In 1906 American George Alan Bond was operating a small trading firm in New Jersey when he decided to emigrate to Australia. Thirty years old at this stage, Bond had been born on 22 May 1876 at Louisville, Kentucky, USA, to George Henry Bond, a Scottish horticulturist and his wife Jane, née Redman. In 1915 he established a small hosiery and glove importing business, called George A Bond & Co. on the fourth floor of Aberdeen House, Clarence Street, Sydney and around December that year he moved his business to Pomeroy House in York Street, Sydney, taking over a whole floor for sales showrooms and a warehouse.

The First World War had started in 1914 and by 1917 shortages in the supply of locally produced clothing prompted Bond to go into manufacturing, establishing his first hosiery plant at Redfern. At this stage he was producing only black, white and tan cotton hosiery, not yet lisle and was possibly using imported art silk yarn.

In 1918 George Bond retained Pomeroy House for showrooms, and commenced underwear manufacturing in premises at Mallett Street, Camperdown. His warehouse was moved to a large shop at the corner of Parramatta Road and Mallett Street. Goods were dispatched from Camperdown until larger premises became available. During these early years, men's cotton athletics were manufactured under the name of Bonds Athletics.

With the enterprise now flourishing, Bonds became a public company, George. A. Bond & Co Ltd, with an issued capital of about £200,000 and Bond as Managing Director. George Bond became an Australian citizen in 1922. Between 1921 and 1923 all Bonds facilities had been consolidated at Camperdown where the well-known Sydney-based architectural firm of Robertson & Marks Designed an additional four floors of the premises. In 1922 the same firm was commissioned to design new factory premises at Wentworthville.

In 1923 Bond established Australia's first cotton spinning and weaving operation on his property at Wentworthville. George Bond resided in the grand Victorian mansion known as 'Dunmore' at 222-266 Dunmore Street, Wentworthville. Bonds cotton spinning and weaving operation was the first in the Southern Hemisphere and commenced the manufacture of lisle stockings from Australian cotton. Bond persuaded the railway authorities to build a platform on the western railway line so his employees would be within easy walking distance of the Pendle Hill station, which opened on 12 April 1924.

When construction of the Bonds factory started, the area was still semi-rural, with remnant stands of native woodland and only limited residential development, mostly around the railway stations. By the 1930s the factory occupied a considerable area and residential development had expanded nearby.

By 1925, Bonds were producing about a quarter of the total Australian output of hosiery and knitted goods. From 1926 Bonds received a bounty for manufacturing yarn from local cotton and George Bond formed a subsidiary company, George A Bond Cotton Mills Ltd. By the following year, the company was spinning cotton, throwing silk and manufacturing full fashioned hosiery, half hose, knitted underwear and woven towels and was described by The Bulletin as being the largest hosiery manufacturer in the British Empire. At this time the company employed some 2,600 people and had assets valued at £1,582,000.

The Great Depression was looming and in 1929 George A Bond & Co. went into liquidation, a victim of the impending downturn in world trade and United Kingdom import policies. In August that year Bond's Industries Ltd was formed after offers were made by a group of creditors to the liquidators of George. A. Bond & Co. and George. A. Bond Cotton Mills. The new company was listed on the NSW and Sydney Stock Exchange on 27 February 1930, with paid up capital of £171,009. The loss involved in the liquidation was probably the largest suffered by a manufacturing company to that date – all the share capital to the value of £700,000 had to be written off. George Bond was forced to sell "Dunmore" at a low price to an organisation operated by the Churches of Christ.

A satisfactory turnover was achieved in 1930 even though prices of commodities were reduced due to the Depression which continued into the late 1930s, forcing other states to cut prices, making it impossible for Bonds to retain a margin of profit. In April 1931 George Bond was declared bankrupt. Bond's Industries purchased Ladderproof Textiles Ltd and by this time had 3,000 employees.

Severe competition in 1932 forced further reduction in prices, offsetting losses and major changes were made to merchandising policies. Bonds Industries by now were producing 7,000 garments per hour, using 5 million pounds of cotton annually, including 70% of the Queensland crop. Bonds machinery then covered a total of 10 acres (4 hectares) at Wentworthville although company records do not indicate the locations for this machinery.

There was a heavy operating loss in 1934, largely due to stock write-downs. The cotton spinning industry was brought under Federal awards. A small net loss was incurred, mainly due to a falling market and reorganisation of the company's manufacturing and distribution methods. Hungerford, Spooner & Co were appointed auditors and W H 'Hermon' Slade became Chairman of the Board.

The effects of the Great Depression had begun to wane in 1934 and although sales volume declined, progress was achieved through cleaning up of stock and reduction of manufacturing and trading losses. A meeting of debenture holders was held to discuss temporary alleviation of the annual debenture interest charge. Bonds Industries returned to profitability in 1935 and arrangements were made with the Australian Investment Trust Ltd for the liquidation of its indebtedness for calls on shares. George Bond was discharged from bankruptcy in April 1935 and became manager of a small hosiery firm at Summer Hill, Jeanette Manufacturing Co., founded by his wife in 1928.

In 1939, Bond's iconic company identity came into being with the creation of Chesty Bond as part of a merchandising campaign to sell men's underwear, and the singlet in particular. The character was a co-creation of cartoonist Syd Miller and Ted Maloney, the Bond's account executive at advertising agency, J. Walter Thompson.

Bonds continued to expand throughout the 1940s with mills established in Rosebery and Five Dock to supplement the Wentworthville Mill. In 1952 a trade recession occurred, and Bonds was unable to pass on to its customers the higher costs incurred for raw materials, labour and other expenses. There was a reduction in output at Camperdown, Dubbo and Wentworthville due to reduced market demand, partly caused by the inability of manufacturers and retailers to finance purchases. A reduction in overseas and local prices of raw materials necessitated the writing down of stocks to market value. There was a reduction in output at the Wentworthville mill.

In 1960 a new extension to the Wentworthville mill was opened and alterations to the Five Dock plant were under construction. By 1967 employees of the Bonds group numbered 4,070. Sales of apparel rose substantially in 1968 and there were big improvements to warehouse and dispatch facilities which helped in the servicing of customers' orders. Bonds products at this stage were more than 90% cotton and trading was affected by increased cotton prices, higher labour costs, wage increases and additional costs associated with the establishment of the Lithgow Production Unit.

Bonds was taken over by Pacific Dunlop in June 1987 and company name changed to Bonds Industries Ltd. The Wentworthville site continues to operate, and the company continues to acquire various hosiery companies. In 2009, Pacific Brands announces it will lay off 1,850 staff and close most manufacturing sites in Australia, claiming they are no longer economically viable. The company announces it will move manufacturing operations to China.

In 2010 Pacific Brands cuts 1850 jobs and ceases manufacturing in Australia by September to reduce manufacturing costs. After public outrage and media coverage of the sacked staff a group of former employees band together to form Tuffys & Tuffetts underwear, buying some of Bonds old equipment and rehiring sacked staff. The site was sold to Rainbow Force Pty Ltd in 2012. The site remains unused and unoccupied.

Former Bobbin Mill

Directly across Dunmore Street from the Bonds factory is the site of the former bobbin mill, where bobbins, cones and other wooden items used in the spinning process were made. In 1941, it was reported in the Sydney Morning Herald that due to the improved profit brought by a larger turnover of products, Bonds Industries was carrying large stocks of imported raw cotton and other materials. It was found necessary to begin the manufacture of cotton reels, bobbins, spools and other wooden articles required in the mills, in house. This enabled the company to deliver products without interruption. The Bond's Bobbin Mill made bobbins for the spinning mills and also cotton reels for domestic use. Orders for Bonds were wheeled by trolley across the road to the main factory. The bobbin mill closed in 1978.

This building was later converted to a bicycle store at a time when the company's products included Malvern Star bikes. It was demolished in the 1997 to make way for an apartment building. Part of the brick facade was retained, and the building's former use is interpreted on a small metal plaque affixed to the wall. The area is now rezoned from light industrial to medium to high density residential.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Due to the modern residential development to the rear of the façade the curtilage shown below should be considered as a revised curtilage for the 'Former Bobbin Mill Façade' in the Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

Dunmore House is of local and potential State heritage significance for its historical, aesthetic, associative and rarity values. Historically, the site is of significance through its origins as part of D'Arcy Wentworth's 1819 land grant as well as through its associations with Colonial Treasurer Sir William MacMillan who built the residence in 1887. It is also associated with George Alan Bond who later occupied the residence and reputedly established the country's first cotton spinning mill in the paddocks near the house. The building is also significant for its association with the neighbouring Ashwood House. The Churches of Christ Homes Trust purchased Dunmore House as a home for orphans in 1934 and Ashwood House was constructed and opened in 1938 as an "Aged Ladies Nursing Home". The contextual relationship between historic Dunmore House and Ashwood House is significant in that they are both part of the religious community development and associated with the Ashwood family and Churches of Christ.

The residence has aesthetic significance as neat and well-kept example of a late Victorian style mansion with well-maintained filigree detailing. It retains its deep setback from the street and a substantial amount of its original grounds and mature early trees. The house is also one of the few remaining examples in the Cumberland LGA of the large Late Victorian residences erected in the prosperous years of the late 19th century.

Criteria Assessment	
a) Historic	The item is of historic significance through its origins as part of D'Arcy Wentworth's 1819 land grant as well as through its historical associations with Colonial Treasurer Sir William MacMillan who built the house in 1887 and George Alan Bond who later occupied the residence.

b) Associative	The item is associated with Colonial Treasurer Sir William MacMillan who constructed Dunmore House in 1887 and George Bond who later occupied the residence and reputedly established the country's first cotton spinning mill in the paddocks near the house.
c) Aesthetic/Technical	The item is of aesthetic significance as neat and well-kept example of a late Victorian style mansion with well-maintained filigree detailing. It retains its deep setback from the street and a substantial amount of its original grounds and mature early trees.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is rare as one of the few remaining examples in the Cumberland LGA of the large late Victorian residences erected in the prosperous years of the late 19th century and retains significant original fabric and fine detailing.
g) Representativeness	The item does not meet this criterion.

Physical Description

Dunmore House is a large rendered brick Victorian filigree residence with a deep setback on an elevated rise with substantial grounds fronting Dunmore Street, giving the building visual prominence within the landscape. The residence features a hipped slate roof with terracotta ridge capping, and a small projecting bay. The roofscape features four rendered brick chimneys with rendered cornice detailing and replaced guttering. The building has rendered quoins and decorative cornices below the eaves. The elevation to Dunmore Street features a two-storey verandah with decorative cast iron columns, valance and brackets. The verandah features a replaced bullnose awning and a filigree iron railing. At the ground level the verandah encircles three sides of the residence.

The front entrance is located on the western elevation of the building and is framed by an entrance portico with square columns and two spherical vase urns which sit atop the portico. Four sash windows frame the front entrance portico that are matched on the second storey. The elevation to Dunmore Street has three sash windows on the projecting bay on each storey. Two large sash windows sit on either side of the bays which are modern replacement to original French doors. The residence features a new paint scheme. The current colour scheme of the residence is beige, green and red.

To the rear and eastern elevations of the building there is a later single storey rendered brick addition with hipped roof and small four paned windows. The residence is approached by a circular paved driveway at the front entrance to the residence that circles to the rear of the property where there is a second carpark. The driveway is lined by rose bushes and hedges. The grounds of the residence consist of mature gums and new plantings and hedges. Some new palms have been added at the front entrance to the residence.

The building has been well-maintained and is highly intact. It is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- A carpark added near Dunmore Street
- New bullnose verandah roof
- Windows have been replaced
- French door to street facing elevation have been altered to windows
- Slate roof has biological growth
- Recently repainted to a refreshed colour scheme- green, orange and beige
- Guttering replaced
- New tree and hedge plantings around the property

- Handrails added at front entrance stairs

Dunmore House retains both its deep setback from the street and its original form and design. The modifications and refreshed colour scheme are sympathetic to the original heritage fabric. It is of high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1884

Pendle Hill
Pendle Hill began as a locality within Wentworthville and became a suburb in 1917, changing its name from Wentworthville West to Pendle Hill. This new subdivision opened in 1927 and rapidly grew in popularity for its neat cottages and attractive gardens.

The suburb sits on land that was part of Darcy Wentworth's land grant. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the present-day suburbs of Wentworthville, Pendle Hill and Girraween.

The urban growth and population of the area is attributed to the establishment of the Bonds Industries Limited. George Bond's company, George A. Bond & Co opened the first cotton spinning mill in Australia in 1923. The company prospered and in June 1920, Bond converted his enterprise into a public company which led to an increase of jobs within the area. In the 1920s, there were 500 people employed at the mill, with the majority being women. By the mid-1930s there were almost a thousand staff in the Cumberland area employed. Along with the increase of jobs and residences in the area, the success of Bond's company also led to the construction of a railway station at Pendle Hill which opened in 1924 to service the employees at the mill.

Dunmore House
The following history has been summarised from the CMP prepared by Musecape, Orwell and Peter Phillips Architects, Roslyn Burge and Meredith Hutton:

In 1819 D'Arcy Wentworth, brother of William Charles Wentworth was given a Crown Grant of 2,200 acres west of Parramatta including the future site of "Dunmore" and the Bonds factory. By 1883 part of the Wentworth land known as the 'Wentworthville Estate' was owned by William Charles Wentworth's fourth child, Fitzwilliam Wentworth. In that year he sold 8 acres to William McMillan, then a Sydney merchant and a partner in A McArthur and Co., importers and warehousemen. McMillian would go on to be elected as member for East Sydney for the NSW legislative Assembly for the Free Trade Party from 1887-1894s and also become the Colonial Treasurer from 1889-1891.

On 5 February 1884 William McMillan mortgaged his property at Wentworthville to secure a loan for the construction of "Dunmore House" and on 18 August he purchased the adjacent major portion of the property, with the remaining 27 acres of the Dunmore property purchased in July the following year. The railway station was renamed Wentworthville.

In 1886, a Sydney Morning Herald article indicated the development of the township of Wentworthville, advertising the sale of land allotments as part of a 500-acre picturesque estate (a portion of the D'Arcy Wentworth 2200-acre grant). The following year William McMillan was elected to the NSW Legislative Assembly for the electorate of East Sydney. He divorced his wife Ada Charlotte and moved out of "Dunmore House". By 1889 he was Colonial Treasurer of NSW.

In 1906 American George Alan Bond was operating a small trading firm in New Jersey when he decided to emigrate to Australia. Thirty years old at this stage, Bond had been born on 22 May 1876 at Louisville, Kentucky, USA, to George Henry Bond, a Scottish horticulturist and his wife Jane, née

Redman. In 1915 he established a small hosiery and glove importing business, called George A Bond & Co. on the fourth floor of Aberdeen House, Clarence Street, Sydney and around December that year he moved his business to Pomeroy House in York Street, Sydney, taking over a whole floor for sales showrooms and a warehouse.

The First World War had started in 1914 and by 1917 shortages in the supply of locally produced clothing prompted Bond to go into manufacturing, establishing his first hosiery plant at Redfern. At this stage he was producing only black, white and tan cotton hosiery, not yet lisle and was possibly using imported art silk yarn.

In 1918 George Bond retained Pomeroy House for showrooms, and commenced underwear manufacturing in premises at Mallett Street, Camperdown. His warehouse was moved to a large shop at the corner of Parramatta Road and Mallett Street. Goods were dispatched from Camperdown until larger premises became available. During these early years, men's cotton athletics were manufactured under the name of Bonds Athletics.

'Dunmore' at Wentworthville had been sold by William McMillan in 1912 to Percival Edgar Thompson of Gosford and on 31 January 1920 George Bond purchased the property from Thompson. With the enterprise now flourishing, Bonds became a public company, George. A. Bond & Co Ltd, with an issued capital of about £200,000 and Bond as Managing Director.

George Bond became an Australian citizen in 1922. Between 1921 and 1923 all Bonds facilities had been consolidated at Camperdown where the well-known Sydney-based architectural firm of Robertson & Marks Designed an additional four floors of the premises. In 1922 the same firm was commissioned to design new factory premises at Wentworthville.

In 1923 Bond established Australia's first cotton spinning and weaving operation on his property at Wentworthville, the first in the Southern Hemisphere and commenced the manufacture of lisle stockings from Australian cotton. Bond persuaded the railway authorities to build a platform on the western railway line so his employees would be within easy walking distance of the Pendle Hill station, that opened on 12 April 1924.

When construction of the Bonds factory started, the area was still semi-rural, with remnant stands of native woodland and only limited residential development, mostly around the railway stations. By the 1930s the factory occupied a considerable area and residential development had expanded nearby.

By 1925, Bonds were producing about a quarter of the total Australian output of hosiery and knitted goods. From 1926 Bonds received a bounty for manufacturing yarn from local cotton and George Bond formed a subsidiary company, George A Bond Cotton Mills Ltd. By the following year, the company was spinning cotton, throwing silk and manufacturing full fashioned hosiery, half hose, knitted underwear and woven towels and was described by The Bulletin as being the largest hosiery manufacturer in the British Empire. At this time the company employed some 2,600 people and had assets valued at £1,582,000.

The Great Depression was looming and in 1929 George A Bond & Co. went into liquidation, a victim of the impending downturn in world trade and United Kingdom import policies. In August that year Bond's Industries Ltd was formed after offers were made by a group of creditors to the liquidators of George. A. Bond & Co. and George. A. Bond Cotton Mills. The new company was listed on the NSW and Sydney Stock Exchange on 27 February 1930, with paid up capital of £171,009. The loss involved in the liquidation was probably the largest suffered by a manufacturing company to that date – all the share capital to the value of £700,000 had to be written off. George Bond was forced to sell "Dunmore" at a low price to an organisation operated by the Churches of Christ NSW.

When the Homes Trust purchased the property in 1934, they established Dunmore House as a home for orphans in 1936. From 4 April 1936 Dunmore House operated as a boys' orphanage and school by Thomas E. Rofe, conference president of the Churches of Christ. By the 1970s the Churches of Christ were using the building as a secondary school and in 1987 it was used temporarily as a secondary school by the Toongabbie Baptist Christian community School and then as their office.

Soon after, 'Ashwood House' was constructed and opened in 1938 as an "Aged Ladies Nursing Home". Ashwood House was donated to the Women's Conference of Churches of Christ in NSW by Miss Florence May Ashwood in memory of her mother. The site has subsequently been subdivided and Ashwood House incorporated into a retirement village.

Presently, Dunmore House, along with Ashwood House, forms part of an aged care facility owned by Living Care, a service operated by the Churches of Christ NSW.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Dunmore House should be investigated further for its potential to be listed on the State Heritage Register (SHR). It appears to be of State significance for its historic, associative, aesthetic and rarity values. In particular, it has a special association with Colonial Treasurer Sir William MacMillan as well as George Alan Bond. It also has State level aesthetic significance as neat and well-kept example of a late Victorian style mansion.

- A Conservation Management Plan should be prepared for this site to understand in greater detail the history and significance of the place, as well as how to manage change and monitor conditions of the site.

Statement of Significance

'Ashwood House' at 268-280 Dunmore Street, Pendle Hill is of local and potential State heritage significance for its historic, aesthetic, social and rarity values. The Churches of Christ Homes Trust purchased Dunmore House as a home for orphans in 1934 and constructed Ashwood House in 1938 as an "Aged Ladies Nursing Home". Ashwood House was donated to the Women's Conference of Churches of Christ in NSW by Miss Florence May Ashwood in memory of her mother. The building is significant for this long association with the district as a church facility and for the part it has played in the continuing development of care facilities within the district. The contextual relationship between historic Dunmore House and Ashwood House is significant in that they are both part of the religious community development and associated with the Ashwood family. The building also has aesthetic and rarity significance as a unique Inter-war Georgian style and purpose-built nursing home with fine detailing.

Criteria Assessment	
a) Historic	The Churches of Christ Homes Trust purchased Dunmore House as a home for orphans in 1934 and constructed Ashwood House in 1938 as an "Aged Ladies Nursing Home". Ashwood House was donated to the Women's Conference of Churches of Christ in NSW by Miss Florence May Ashwood in memory of her mother.
b) Associative	The building is significant for this long association with the district as a church facility and for the part it has played in the continuing development of care facilities within the district. The contextual relationship between historic Dunmore House and Ashwood House is

	significant in that they are both part of the religious community development and associated with the Ashwood family.
c) Aesthetic/Technical	The building has aesthetic and rarity significance as a unique Inter-war Georgian style and purpose-built nursing home with fine detailing.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The building has aesthetic and rarity significance as a unique Inter-war Georgian style and purpose-built nursing home with fine detailing.
g) Representativeness	The item does not meet this criterion.

Physical Description

Ashwood House is a single-storey red brick building with an E-shaped layout. The building has a hipped terracotta tiled roof that features a centrally located cupola over the main entry. The central entry is accentuated by a broken pedimented cover supported by simple columns and features a doorway with typically detailed Georgian semi-circular fanlight and sidelights. The facade also features timber framed double hung windows with timber shutters and a prominent western wing with a curved, semi-circular facade featuring multi-paned tinted glazing. There are two face brick chimneys to the western wing. The front of the building has remained essentially intact from its original construction. Extensive additions to the rear and eastern side of the subject building are single storey, featuring face brick walls and a hipped tiled roof. Their floor space is double the original building.

The building is visually prominent with a deep setback and sited on an elevated ridge with a large grassed area and circular driveway in front. Garden beds include European plantings such as roses. There are some substantial trees on the site which contribute to the overall aesthetic significance of the place.

The subject building presently forms part of the Churches of Christ Retirement Village.

Ashwood House and grounds are well maintained and are in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

A number of modifications have been carried out to the western and southern sections of the building to incorporate and connect ramps and disabled access, as well as additional structures south of the building. The majority of the additions and additional structures do not read from Dunmore Street.

Ashwood House has high integrity, retaining original form, fabric and setback.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1938

Pendle Hill
Pendle Hill began as a locality within Wentworthville and became a suburb in 1917, changing its name from Wentworthville West to Pendle Hill. This new subdivision opened in 1927 and rapidly grew in popularity for its neat cottages and attractive gardens.

The suburb sits on land that was part of Darcy Wentworth's land grant. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres,

2200 acres of which were located in the present-day suburbs of Wentworthville, Pendle Hill and Girraween.

The urban growth and population of the area is attributed to the establishment of the Bonds Industries Limited. George Bond's company, George A. Bond & Co opened the first cotton spinning mill in Australia in 1923. The company prospered and in June 1920, Bond converted his enterprise into a public company which led to an increase of jobs within the area. In the 1920s, there were 500 people employed at the mill, with the majority being women. By the mid-1930s there were almost a thousand staff in the Cumberland area employed. Along with the increase of jobs and residences in the area, the success of Bond's company also led to the construction of a railway station at Pendle Hill which opened in 1924 to service the employees at the mill.

Ashwood House
Ashwood House stands on land originally granted to D'Arcy Wentworth in August 1819. Prior to 1883 the Estate passed to Fitzwilliam Wentworth and was part of the subdivision called the "Wentworthville Estate". In January 1884 Wentworth conveyed 8 acres to SW McMillan, MP and Sydney Merchant, partner in A McCarthur and Co importers and warehousemen. In the same year McMillan mortgaged the property to construct a residence, "Dunmore House" located to the SE of the subject property. In July 1885 McMillan went on to purchase the adjoining 27 acres of land.

In December 1912 the property was sold to Percival Edgar Thompson, and in 1920 to George Allan Bond. Bond, founder of Bond Cotton Mills, also established a factory (now Bonds Industries Ltd) in the area at this time. During the 1930s Depression Bond was forced to sell the house and grounds.

In 1934 the Churches of Christ Homes Trust purchased the property, establishing Dunmore House as a home for orphans. Ashwood House was constructed and opened in 1938 as an "Aged Ladies Nursing Home". donated to the Women's Conference of Churches of Christ in NSW by Miss Florence May Ashwood in memory of her mother. The site has subsequently been subdivided and Ashwood House incorporated into a retirement village.

Curtilage Map

Statement of Significance

Pendle Hill Railway Station is of local significance for its direct associations with mid-20th century development of the local area and as part of the railway station redevelopment that took place during the quadruplication of the Main Western Line between Lidcombe and St Marys in 1943. The station buildings are of aesthetic significance as good examples of mid-20th century railway construction in an urban context displaying distinctive elements of Inter War Stripped Functionalist style. They are competently executed and display many typical stylistic elements of similar station buildings throughout New South Wales and in the suburbs of western Sydney share similar construction techniques and design, such as the neighbouring stations of Wentworthville, Toongabbie, Westmead (now demolished) and Seven Hills. These group of station buildings show effects of war time financial constraints. The site has historical significance for its association with the iconic Australian company Bonds, and the company's founder George. A. Bond who was responsible for the naming of the station and the suburb and starting a business in the local area, which would continue to contribute to the local economy from the 1920s and into the twenty-first century.

Criteria Assessment	
a) Historic	Pendle Hill Railway Station has historical significance as being established following a request to the railways by the local cotton mill owner and Bonds company founder George. A. Bond for a railway platform to service the mill employees. The station is also of historical significance as one of several stations constructed as part of the quadruplication of the line from St Marys to Lidcombe in the 1940s reflecting the need to upgrade the buildings in response to the development of the locality.

b) Associative	Pendle Hill Railway Station has strong historical associations with George. A. Bond founder of the Bonds manufacturing empire and the person responsible for the inspiration in naming Pendle Hill.
c) Aesthetic/Technical	Pendle Hill Railway Station is of aesthetic significance as an example of mid-sized Inter-War Stripped Functionalist station buildings in an urban setting. The buildings are noted for their use of bonded brickwork, Art Deco influenced parapet detailing, strong horizontal planes and steel awnings, and their simple style reflecting the simplicity of the nearby Joyce Street shops.
d) Social	The place has the potential to contribute to the local community's sense of place and can provide a connection to the local community's history.
e) Scientific	Pendle Hill Railway Station is of technical significance for its ability to demonstrate design and construction techniques of the mid-20th century railway structures and for its ability to provide evidence of the use of Inter War Stripped Functionalist elements in a railway setting. The station buildings provide opportunities together with Toongabbie, Wentworthville and Seven Hills stations to study and understand mid-20th century building techniques, though these can be observed at many other locations.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Pendle Hill Railway Station is a representative example of a small, mid-20th Century railway station that is designed in the Inter War Stripped Functionalist style in an urban context, similar to Toongabbie, Wentworthville and Seven Hills.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Pendle Hill Railway Station Group', dated 2017. The description is comprehensive and matches the condition visible during the site inspection.

BUILDINGS
Station Building Platform 1/2, brick, type 13 (1943-44)
Station Building Platform 3/4, brick, type 13 (1943-44)

STRUCTURES
2x island platforms, brick faced (1943)
Footbridge, steel beam with RSJ steel supports (1944)
Kiosk, (c1954)

STATION BUILDING PLATFORM 1/2 (1943-44)
External: The station building on Platform 1/2 is larger than the Platform 3/4 building and is an Inter War Stripped Functionalist style railway building. It is of face brick construction with low pitched gabled roof and brick parapets at each end with courses of recessed heeler bricks capped by a course of bullnosed bricks. The western end of the building is defined by a curved masonry bay with a single door. Centrally located on each parapet is an Art Deco style projecting vertical masonry fin constructed of heeler bricks in a contrasting colour. The parapets step down on each side from the fin. The roof is clad with Colorbond, which extends as an awning on all four sides of the building. The awning on the eastern end, which provides shelter to passengers purchasing tickets from the ticket window and the machine, is supported by two rectangular brick columns with curved corners. On Platform 1/ 2, one ticket window remains in use while the other is bricked up. Steel framed windows with three horizontal hopper panels are vertically proportioned and placed regularly on both platform elevations. A contemporary canopy connects the building from the underside of the original awning to the stairs and footbridge.

Internal: Internally the building has a linear floor layout with a series of rooms in various sizes including from east to west combined former booking/parcels office (now booking office and staff area), general waiting room, ladies room and toilets, men's toilets with a store room in the curved bay. The doors are secured by metal grill gates while the windows covered with security mesh. The entire original interior fit-out has been removed.

STATION BUILDING PLATFORM 3/4 (1943-44)
External: The station building on Platform 3/4 is approximately half the size of the Platform 1/2 building featuring the same detailing and architectural style with the exception of the curved bay at one end. It is of face brick construction with low pitched gabled roof and brick parapets at each end with courses of recessed heeler bricks capped by a course of bullnosed bricks. Centrally located on each parapet is an Art Deco style projecting vertical masonry fin constructed of heeler bricks in a contrasting colour. The parapets step down on each side from the fin. The roof is clad with Colorbond which extends as an awning on all four sides of the building. The awning on the eastern end, which provides shelter to passengers purchasing tickets from the ticket machine, is supported by two rectangular brick columns with curved corners. The building had two ticket windows, which are now blocked. The central pane is fixed. Early timber doors are extant. The standard steel framed windows with three horizontal hopper panels are vertically proportioned and placed regularly on both platform elevations between the solid metal doors. A contemporary canopy connects the building from the underside of the original awning to the stairs and footbridge.

Internal: Internally the building has a linear floor layout consisting of a booking office and general waiting room. The doors are secured by metal grill gates while the windows are covered by security mesh. The building is currently used for storage purposes. The internal finishes are the same as the other platform building with plasterboard panelled ceilings, hardboard flooring (booking office) and tile flooring (waiting room). The waiting room interior has been upgraded.

PLATFORMS (1943)
Both island platforms have brick faces with concrete deck. The top surfaces are covered with concrete with concrete coping. Modern aluminium palisade fencing, timber bench seating, lighting and signage are located on both of the platforms.

FOOTBRIDGE (1944)
The footbridge is a steel beam structure with concrete deck and RSJ steel supports over the platforms and main lines with stairs to each of the platforms, and a ramp to street level on each side. It is a simple structure with no ornamentation representing economic policies of the time. The footbridge and associated stairs and ramps are covered with Colorbond awnings.

KIOSK (c1954)
The small originally timber clad (now metal) and gable roofed kiosk is located on a cantilevered concrete slab supported by steel trestles opposite the stairs to Platform 1/2.

MOVABLE
Heritage-style platform lamp posts
Blue and yellow station entrance sign – Mode ID
Green cast iron Milner safe
Booking office machine (BOM) including dispenser, computer, monitor, keyboard and associated equipment such as plastic coin trays etc
Small timber coin tray / box
Timber-framed historical print of Pendle station in c1924
Tall, two-door timber cupboard, polished, with interior shelving
Tall, two-door timber cupboard, painted green, with interior shelving and including SRA list of telegraphic codes attached to inside door
Timber desk stationery organiser
Metal sign – "Attention – Valid ticket etc"
Red and white "Emergency Response" box including contents and contents list
Two timber-framed mirrors in women's toilets
Fitted timber ticket desk in former booking office on Platform 3-4

POTENTIAL ARCHAEOLOGICAL FEATURES
Pendle Hill Station has low archaeological potential with no evidence of the 1920s station buildings remaining.

The station buildings are in good condition externally.

Condition	**Good**	Fair	Poor

Alterations and Additions

The following modifications have been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Pendle Hill Railway Station Group'.

- 1942 – Construction of new station buildings replaced the original 1920s structures.
- c1997 – An internal fitout and some small cosmetic changes made to the facade such as the roof sheeting.
- 2010 – Platform resurfacing
- 2018 – TAP upgrade including four new lifts, a new station concourse and footbridge, new stairs and platform canopies and a commuter carpark.
- No date – The kiosk appears to have been changed from a skillion roof to a gabled roof and reclad.

The station has a moderate degree of integrity and intactness.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1924

The western railway line was opened in 1860 and duplicated in 1886. Pendle Hill Station opened in 1924, mainly servicing the Bonds cotton mill employees. The suburb was originally part of the acreage owned by D'Arcy Wentworth. Mr George A. Bond purchased a large part of the farm, bounded by Pendle Way, Dunmore Street and Jones Street and lived in what is now Dunmore House.

Bond was a young American who established a company in 1915 to import ladies hosiery and gloves to Sydney. Two years later he began manufacturing hosiery in Redfern and a year after that, underwear in Camperdown. The business quickly developed into the well-known Bonds business, aided in part by the iconic 'Chesty Bond' men's athletic singlet.

In 1923, he established a cotton spinning mill on his property at Pendle Hill and persuaded the railway authorities to build a platform so his employees would have easy walking from the railway station. Bonds continues to operate in the locality. He is believed to have requested that the area be named after Pendleton in Lancashire, the centre of England's cotton industry, and the name Pendle Hill was the result. In March 1927 the over bridge near the station opened.

The "Inter War Stripped Functionalist" brick station buildings were designed in 1942 as part of the quadruplication of the line between Lidcombe and St Marys. It was constructed c1943-4, replacing the 1920s structures. The steel beam pedestrian footbridge dates from c1944. The bookstall (now kiosk) was designed in 1954 and presumably added soon after.

Today, the site remains in use as an active railway station.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).

Curtilage Map

The Cumberland Council LGA includes one small portion of the whole Prospect Reservoir State Heritage Register item.

Revised curtilage recommended – refer below.

Statement of Significance

Prospect Reservoir is historically significant at the state level as it is a central element of the Sydney water supply system. As a part of the Upper Nepean Scheme, the Reservoir has continued to supply water to Sydney for over 120 years, and generally still operates in the same way as it was originally constructed. That it has continued to be used since its construction reflects the inventive and progressive way in which the reservoir was designed and built, and this contributes to its significance greatly.

The Reservoir reflects three significant changes in municipal life during the late 19th century; the development of water and general public utility services; the importance of ensuring an adequate and dependable centralised water supply; and the collective bureaucratic response to the delivery of capital works of this nature.

Built between 1882 and 1888, it was an outstanding achievement in civil engineering technology at the time, using innovative design and construction methods. It has a high level of historical engineering significance.

Prospect Reservoir is strongly associated with the Harbours and Rivers Branch of the NSW Public Works Department, particularly Edward Orpen Moriarty, Head of the branch at the time of the Reservoir's construction, and later with the Board of Water Supply and Sewerage (later the Metropolitan Water and Sewerage Board) and most recently, with the Sydney Catchment Authority.

The Reservoir area is aesthetically significant, as a picturesque site with a large expanse of water, parklands, landscaping and bush. The place is valuable for its recreational amenity for passive recreation, punctuating the monotony of the surrounding urban landscape. It has been used for recreation by the community for generations.

It continues to regulate the release of water from Prospect Reservoir to the Lower Canal and the Sydney Distribution system.

The place also contains examples of functional colonial architecture.

The listing includes Prospect Reservoir, landscape elements and all associated structures, including pumping stations, to the property boundary. The environs of the reservoir and hence this listing also include a wide range of items, which relate to later amplification of water supply. These include examples of 1920s and 30s pumping stations, a residence, and the 72" (1,800 mm) main, constructed between the Upper Canal and Pipe Head in 1937. Later items associated with the Warragamba Supply Scheme and more modern developments include several more recent pumping stations, screening and boosting plants on the eastern and southern sides of the Reservoir, and the 84 inch (2,100 mm) water main from Prospect, to Pipe Head, completed in 1958.

Criteria Assessment	
a) Historic	Prospect Reservoir is historically significant at the state level as it is a central element of the Sydney water supply system. As a part of the Upper Nepean Scheme, the Reservoir has continued to supply water to Sydney for over 120 years, and generally still operates in the same way as it was originally constructed. That it has continued to be used since its construction reflects the inventive and progressive way in which the reservoir was designed and built, and this contributes to its significance greatly. The Reservoir reflects three significant changes in municipal life during the late 19th century; the development of water and general public utility services; the importance of ensuring an adequate and dependable centralised water supply; and the collective bureaucratic response to the delivery of capital works of this nature.
b) Associative	Prospect Reservoir is strongly associated with the Harbours and Rivers Branch of the NSW Public Works Department, particularly Edward Orpen Moriarty, Head of the branch at the time of the Reservoir's construction, and later with the Board of Water Supply and Sewerage (later the Metropolitan Water and Sewerage Board) and most recently, with the Sydney Catchment Authority.
c) Aesthetic/Technical	The Reservoir area is aesthetically significant, as a picturesque site with a large expanse of water, parklands, landscaping and bush. The place is valuable for its recreational amenity for passive recreation, punctuating the monotony of the surrounding urban landscape. It has been used for recreation by the community for generations.
d) Social	The item does not meet this criterion.
e) Scientific	Built between 1882 and 1888, it was an outstanding achievement in civil engineering technology at the time, using innovative design and construction methods. It has a high level of historical engineering significance.
f) Rarity	This item is assessed as historically rare state-wide.
g) Representativeness	The item does not meet this criterion.

Physical Description

The portion of Prospect Reservoir which sits within the Cumberland Council Local Government Area is a heavily vegetated hill on the eastern side of the reservoir. The area is not accessible by road and is fenced off from the public.

The following physical description for the bushland surrounding the reservoir has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Prospect Reservoir and Surrounding Area'.

The bushland surrounding Prospect Reservoir is classified as Cumberland Plain Woodland (CPW). Less than 13% of CPW remains and a high proportion of this figure is heavily degrade through weed invasion, rubbish dumping, illegal vehicle use and overgrazing. In the protected catchment these degrading influences are largely absent and this is reflected in the excellent bushland condition.

Cumberland Plain Woodland is listed at state and federal levels as an endangered ecological community. Legislation at both levels provides a framework for the protection of ecological communities under threat.

Bushland condition is best in the northern section and decreases in the southern areas. A rapid flora survey of Prospect Reservoir (approximately 1km North from spoil site) revealed over fifty native species.

Prospect Reservoir is an important refuge for many fauna species in Western Sydney. Mammals such as wombats, echidnas and eastern grey kangaroos are listed as recent sightings in the National Park species atlas. Importantly, over 12 species of bats (including threatened species) have been recorded within the vicinity of the reservoir.

The bushland near the filtration plant is less diverse and more degraded than in the immediately adjacent Sydney Catchment Authority land. A similar but much more restricted suite of native species can be found there. Exotic species including Chloris gayana (Rhodes grass), Setaria gracilis (pigeon grass) and Eragrostis curvula (African love grass) dominate. These species are indicators of significant soil disturbance. The vegetation condition varies from a young eucalypt canopy with a low diversity understorey to eucalypt regrowth in a largely exotic pasture. Other areas are exotic pastures with no native element present.

Despite the lower quality of bushland this site still has significant ecological importance. If rehabilitated, it would significantly improve ecological connectivity, especially between Prospect Reservoir and the riparian vegetation along Eastern Creek.

As the site was inaccessible, a condition grading has not been provided.

Historical Notes	
Construction years	1888

The following history has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Prospect Reservoir and Surrounding Area'.

In 1867, the Governor of NSW appointed a Commission to recommend a scheme for Sydney's water supply, and by 1869 it was recommended that construction commence on the Upper Nepean Scheme. This consisted of two diversion weirs, located at Pheasant's Nest and Broughton's Pass, in the Upper Nepean River catchment, with water feeding into a series of tunnels, canals and aqueducts known as the Upper Canal. It was intended that water be fed by gravity from the catchment into a reservoir at Prospect. This scheme was to be Sydney's fourth water supply system, following the Tank Stream, Busby's Bore and the Botany (Lachlan) Swamps.

Designed and constructed by the Public Works Department of NSW, Prospect Reservoir was built during the 1880s and completed in 1888. Credit for the Upper Nepean Scheme is largely given to Edward Orpen Moriarty, the Engineer in Chief of the Habours and Rivers Branch of the Public Works Department from 1858-88 (B Cubed Sustainability, 2005, 7).

The quintessential feature of the scheme was the diversion of the Nepean River below its junction with the Avon and Cordeaux Rivers. The Peasant's Nest weir, near the township of Wilton, diverts the water through a 7km long tunnel to the Cataract River at Broughton's Pass, near the township of Appin, where a similar weir diverts the flow of the four rivers through a 58km system of tunnels, aqueducts and open channels to Prospect Creek upon which the earthen dam wall is located. When it was completed in 1888, Prospect reservoir provided the storage component of the scheme, as the weirs did not have the capacity to store water.

Between 1893 and 1916, extensive remedial works were carried out in order to correct slumps in the upstream face.

With completion of Warragamba Dam in 1960, Prospect Reservoir continued to play an important role in storing Sydney's water. A second pipeline linking Warragamba and Prospect was completed in 1966, significantly increasing the volume of water that could be transferred during peak demand periods. In 1979-80, a major strengthening programme on the reservoir wall was completed by increasing the volume of its downstream side. The upstream face was strengthened in 1997 (Sydney Water Corporation) (Caitlin Allen, Dept. of Commerce/Heritage Group, 2006).

With the commissioning of the Prospect Water Filtration Plant in 1996, raw water transferred from Warragamba and the Upper Nepean Dams was sent directly to the treatment facility, by-passing the Reservoir. However the filtration plant can draw water directly from the Reservoir if needed. This is one of the largest such facilities in the world and it has changed the role of the Reservoir to that of a service reservoir and large off-line settling basin for the Warragamba & Upper Canal systems in the event of a water quality problem, covering daily fluctuations of demand in the distribution system. Since its construction, parts of the area surrounding the reservoir have formerly been used for passive community recreation, and consequently the Water Board provided numerous parks and picnic facilities, primarily on its eastern side (B Cubed Sustainability, 2007,3)

From 2006 a new raw water pumping station and associated infrastructure were built on the reservoir's south-eastern side, including pipeline, power supply and access road.

It was formerly the major distribution reservoir for Sydney's main water supply system until the commissioning of the Prospect Water Filtration Plant in 1996. The reservoir's role has since been changed to that of an off-line storage service reservoir, which covers daily fluctuations of demand in the distribution system. The reservoir can now be drawn on when needed to supplement the Warragamba Pipeline and Upper Canal inflows into the Filtration Plant. It remains an essential component of Sydney's water supply system and therefore is critical Government infrastructure.

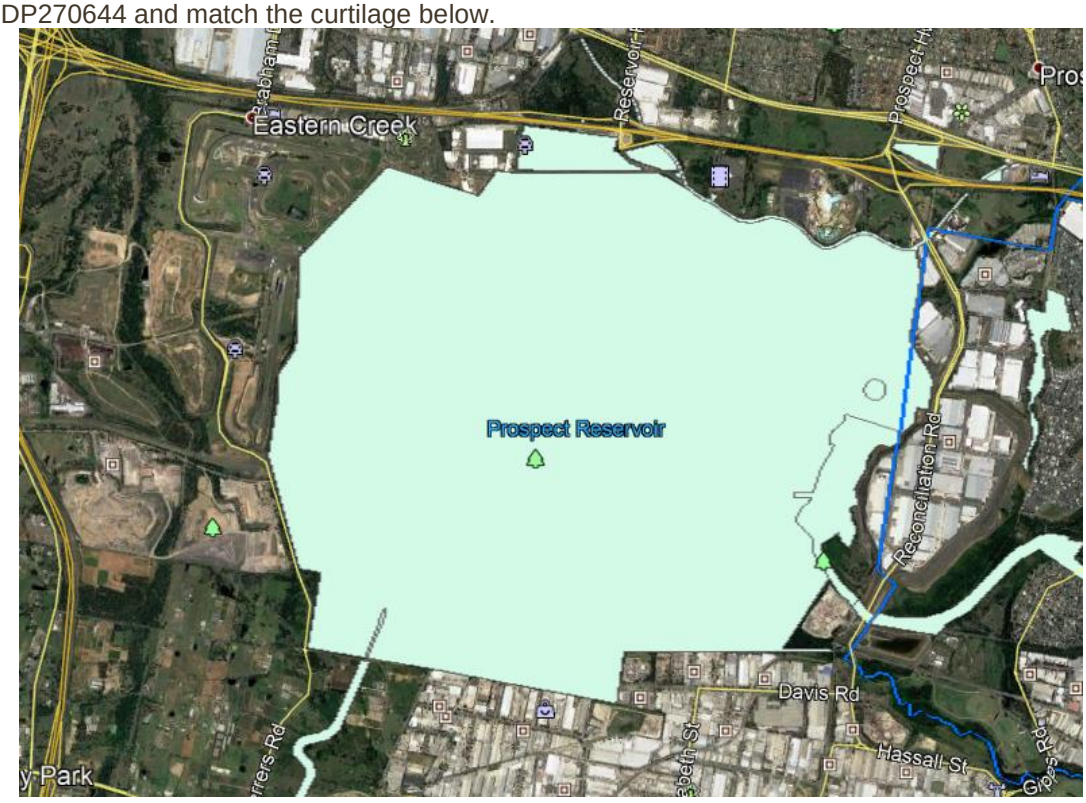
Scour/Outlet System:

Prior to construction of the Prospect Water Filtration PLant, the water supply was delivered to the Lower Canal via the scour/outlet system, which consists of a number of components (including submerged inlet pipelines, outlet tower with access walkway, lower valve house with outlet to the Lower Canal, scour pipelines, various control and guard valvevs, brick-lined interconnecting tunnel between outlet valve and lower valve house, with ventilation shaft and access shaft/manhole, dischange pipelines under the Sydney Water Corporation-owned picnic area and an outlet structure.

The Outlet Tower is a small octagonal brick structure standing in the Reservoir waters with access by a small riveted iron footbridge. The tower extends below water with three main platforms accessed by ladders. The interconnecting tunnel is routed in a large U running from the Outlet Tower, into the hillside, then curving back to skirt the end of the Reservoir wall.

The Lower Valve House is similar in style to the Outlet Tower and originally controlled water entering the Lower Canal. The Lower Canal was decommissioned in the 1980s, but the original equipment in the Lower Valve House remains largely intact. The tunnel extends a short distance beyond the Lower Valve House.

The Scour/Outlet system originally terminated at the end of the tunnel, with a simple brick headwall with wing-walls and iron grill gate. In the late 1970s the scour system was extended with twin concrete pipes and a new outlet structure constructed closer to Prospect Creek. At that time the area downstream and east of the Reservoir wall was re-shaped to form a public picnic area, burying the end of the tunnel and new concrete pipes.



Since decommissioning of the Lower Canal, the sole purpose of the Scour/Outlet system is to allow scouring or draining of the Reservoir. This is critical to ensure dam safety and consequently the system must be adequately maintained. The primary control valves were imported from England in 1887 and are believed to be the last remaining examples of their type in the world. They are in poor condition and at high risk of failure if operated to drain the Reservoir. They are beyond their operational life and cannot be refurbished. Consequently, SCA can no longer test the system as required or safely dewater the Reservoir under emergency conditions (SCA, 2009, 1).

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	

4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- For the purposes of consolidation and consistency, and because the two items directly relate to one another, items I01370 and A8 should be amalgamated to form one item on the Cumberland LEP. This item should be given the LEP ID I01370 in line with the State Heritage Register listing ID which can cover any relevant built, landscape and archaeological values.
  The curtilage for the Cumberland LEP will require a revised curtilage to match the SHR curtilage located inside the Cumberland LGA boundary. The revised curtilage should include Lot 37, DP270644 and match the curtilage below.

Curtilage Map

Statement of Significance

The commercial building at 20 Amy Street, Regents Park is locally significant for its historic and aesthetic values. The site has local historic significance having served as a corner retail building since the early twentieth century. It provides evidence of the major population boom during the Federation period when residential development and the associated civic infrastructure grew apace in the area. The corner building has aesthetic significance as a detailed and largely intact example of a Federation commercial building. The siting of the building on the street corner makes it a notable landmark in its local area.

Criteria Assessment	
a) Historic	The site has local historic significance, having served as a corner retail building since the early twentieth century. It provides evidence of the major population boom during the Federation period when residential development and the associated civic infrastructure grew apace in the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The corner building also has aesthetic significance as a detailed and largely intact example of a Federation commercial building. The siting of the building on the street corner also makes it a notable landmark in its local area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The subject building is a two-storey face brick commercial building in the Federation style, located on a street corner. The building is situated on the main street of Regents Park town centre, addressing Amy Street to the north and Kitchener Avenue to the east.

The ground floor elevation is cement rendered, with aluminium framed shop windows and an entrance on the canted corner. The ground floor features modified window and door openings with metal door and window frames and contemporary windows and doors. Modern signage has been added in the windows. The ground floor is sheltered by a suspended awning over the footpath, which is lined with modern signage and has two hanging signs. The first floor of the building contains a fairly uniform set of timber framed double hung sash windows with rendered lintels between regularly spaced brick pilasters. An air conditioning unit has been installed in one of the windows.

The geometric parapet of varying heights along the roof line emphasises the corner sitting of the building. Each parapeted bay at the higher corner of the building features some decorative polychromatic brickwork. Two string courses of dark brick mark the floor and ceiling levels of the first floor.

The building is well maintained as a functioning commercial building and is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Modern signage*
- Replacement of display windows with aluminium frames*
- Replacement of entry door and frame*
- Strip lighting to underside of awning*
- One air conditioning unit to one window on first floor*

While the ground floor of the building has been modified, the first floor is relatively intact. The building appears to retain a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Between 1900 - 1925

Regents Park lies on the land that was originally part of the Hyde Park Estate, a grant of 1,110 acres given to HG Douglas in 1833. A large part of this estate was purchased by Joseph Hyde Potts in 1834 and 1835 who subdivided the area into farm lots and subsequently into residential lots. Regents Park was first subdivided in the 1880s.

On 11 November 1912, a single line on the railway was opened at Regents Park. With the coming of the railway, Regents Park expanded as a residential suburb along with the neighbouring suburb of Berala. The commercial building at 20 Amy Street would have been constructed between 1900 and 1925, as a direct consequence of this growth and expansion of the retail centre. Today, the building remains in use as a commercial property.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

Regents Park Railway Station has local significance for its historic, aesthetic, social and representative values. The station represents the significant reconstruction of the original Lidcombe-Regents Park line and its extension to Cabramatta that occurred in 1924. The 1920s platform building has been altered but it retains the basic architectural features which characterise station buildings of this period. The overall station complex has, however, been impacted by modern developments which have reduced its ability to effectively demonstrate the era of travel between the 1920s and 1930s. The station has aesthetic significance with its 1920s 'initial island' platform building which exhibits characteristic features of this design of station building, namely the linear form, gable roof and integrated awnings. The extant platform building retains characteristic features of this type of standard railway design platform building and is therefore representative of this type. The place has the potential to contribute to the local community's sense of place and can provide a connection to the local community's past.

Criteria Assessment	
a) Historic	Regents Park Railway Station is historically significant at the local level as a station which is part of the significant reconstruction of the original Lidcombe-Regents Park line and its extension to Cabramatta in 1924. The extant early 20th century platform building and the 1920s footbridge superstructure date from the opening of the station and demonstrate the 1920/1930s period of suburban railway travel. However, the highly altered former overhead booking and parcels office, the alterations to the footbridge and the addition of canopies to the platform and footbridge reduce the ability of the station to demonstrate this era comprehensively.

b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Regents Park Railway Station has local aesthetic significance with its 1920s 'initial island' platform building which has retained characteristic features of this design of station building, namely the linear form, gable roof and integrated awnings. The 1920s footbridge with stairs leading down the platform and street has been altered considerably in terms of the replacement of the timber deck and stairs with in-situ concrete, modern steel handrails and modern awnings. However, the superstructure of the footbridge comprising of steel beams, columns and trestles is the original 1920s fabric and is typical of such footbridges within the suburban network. The form, fabric and detailing of the platform building and footbridge characterises the type of construction and architectural style employed in early 20th century railway station buildings in the Sydney region. The 1920s former overhead booking and parcels office has little significance as it has been altered extensively and it no longer retains any characteristic features of this type of building.
d) Social	The place has the potential to contribute to the local community's sense of place and can provide a connection to the local community's past.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Regents Park Railway Station has a platform building which has been altered but retains characteristic features of this type of standard railway design platform building and is therefore representative of this type. Although the footbridge has been altered, it retains a characteristic superstructure and is representative of standard railway footbridge design. The footbridge was identified as an item of little heritage significance in the 2016 'Railway Footbridges Heritage Conservation Strategy'. However, the strategy recommended detailed physical analysis prior to any change to confirm the significance of the structure. The former overhead booking office has been altered extensively and it does not retain any characteristics features of this type it is not a good representation of this type of railway structure. The Overhead Booking Office at Regents Park was identified as an item of little heritage significance in the 2014 'Railway OHBO Heritage Conservation Strategy'. The overhead booking office has been altered to such an extent that it no longer retains characteristic features of the type and has little or no aesthetic significance or representative value.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Regents Park Railway Station Group' (2009). The description is comprehensive and matches the condition visible during the site inspection.

BUILDINGS
Platform building, Platform 1/2 (Type 11) (1924)
Former Overhead Booking & Parcels Office, (c.1920)

STRUCTURES
Platform 1-/2, (1924)
Canopies, (1999)

Footbridge, (1922, 1999)

CONTEXT
Regents Park Railway Station is accessed from the west from the junction of Rose Street, Carlingford Street and Park Road and from the east from Auburn Road and Amy Street. It has one island platform, a footbridge and a building on the platform which incorporates the booking office. There are commercial strips on either side of the station.

PLATFORM BUILDING (1924)
External: Rectangular building six bays long with stretcher bond brickwork. The bays are defined by engaged brick piers that have decorative concrete corbels and standard steel double bowed brackets which support cantilevered awnings. The awnings which have curtain board fascia are integrated with the gable roof of the building and the roofing material for both the awning and the roof is corrugated steel. The roof has original timber finials.

The external walls rise from a projecting brick plinth with a decorative two part cement dado moulding which is continuous between door and window openings. Cement window and door frames rise from the dado moulding. Most of the door and window openings are original and the windows feature a decorative moulded cement sill. The original timber windows were double hung with a double paned lower sash and a multi-paned upper sash. This detail continued through in the fanlights above the doors. The doors were timber panelled. The northern end brick gable wall feature a louvre within a round brick window framed in voussoir shaped bricks, with four cement keystones. Some of the original windows have been retained with aluminium framed safety wire meshes fitted to their outer side. Others have been altered, some windows have been removed and openings have been bricked in, whereas other windows have been boarded up and fitted with steel grills and some have been fixed with opaque, safety wire mesh incorporated glass. All the doors have all been replaced with flat panelled timber doors, and some have additional steel grill gates fitted to the outer edge of the door opening. One of the doors has an original fanlight whereas others have been refitted with opaque, safety wire mesh incorporated glass and one has an air-conditioning unit fitted within it. The original door opening to the northern end of the building has been removed and replaced by two flat panelled timber doors. The upper part of the original cement door frame has been retained and a new continuous cement door frame bridging the two new doors has been inserted below it.

Internal: The building comprises a booking office, a Station Manager's room, a general waiting area with a family accessible toilet and ladies toilet, a store, a unisex toilet and a staff toilet. The original internal configuration of the building is not known as there is no documentary evidence available. Original cast iron ventilators and pressed metal ceilings with square ceiling ventilators have been retained.

FORMER OVERHEAD BOOKING & PARCELS OFFICE (c.1920)
External: The former overhead booking and parcels office is located on the footbridge north-east of the stairs that lead down to the platforms. It currently accommodates a newsagent's kiosk. Originally constructed of timber the existing building (which was refurbished in 1945) comprises of a timber framed structure with fibre cement sheet walls and a flat corrugated metal roof with wide metal fascia. The position of the original window openings has been retained but original door openings have been blocked up and a new opening has been made at the centre of the western face of the building. The windows are small, aluminium horizontal sliding winnows with steel safety grills fitted to the outside.

Internal: The kiosk has been altered completely internally and has no original fabric.

Extensively remodelled prior to installation of lift access to platforms; Booking office function removed from building and space converted to concession; Dutch gable roof replaced with flat roof, siding replaced; Ticket windows removed; Doors and windows removed; new windows unsympathetic to original style and character of building.

PLATFORM (1924)
Platform 1 (Up) and Platform 2 (Down) have in-situ concrete faces and form an island platform arrangement. Both the platforms have asphalt surfaces and steeped brick coping.

CANOPIES (1999)
There is a modern canopy at the edge of the stairs that leads down from the footbridge onto the platform and it provides shelter to the space between the stairs and the booking office ticket window located on the south face of the original building. The canopy has three roof sections, with two skillion roofs on either sides of a curved roof and all the roofs are made of Colorbond steel resting on steel I beam and columns. A smaller version of this three section canopy covers the area between the footbridge and the lift.

FOOTBRIDGE (1922, 1999)
The footbridge comprises of a bridge connecting either sides of the station, a set of stairs that lead down to the platform, entrance canopies and a disabled access ramp from Carlingford Street. The entire structure rests on the original 1920s superstructure of steel columns, beams and trestles. The stairs and the deck are constructed of in-situ concrete and have painted steel handrails. There are a series of gable roof awnings made of Colorbond steel that cover the footbridge, the stairs, the entrances to the station and the ramp.

ARCHAEOLOGICAL POTENTIAL
Based on the surviving documentation and the evidence on site it is unlikely there would be any potential archaeological remains at Regents Park Railway Station.

All elements were noted to be in good condition during the site visit.

Condition	**Good**	Fair	Poor

Alterations and Additions

The following modifications have been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Regents Park Railway Station Group' (2009).

- *1922: station footbridge constructed.*
- *1924: new station on line deviation.*
- *1929: railway electrified.*
- *1945: overhead parcels office constructed.*
- *1995: footbridge constructed.*
- *2000: access upgrade, including footbridge modifications.*

The overall station complex has been impacted by modern developments which have reduced its ability to effectively demonstrate the era of travel between the 1920s and 1930s. The site has moderate integrity overall.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1912; reconstructed in 1924

The following history has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Regents Park Railway Station Group'.

The Lidcombe to Regents Park line was originally built by the Public Works Department as a tramway to service construction of the second Potts Hill reservoir. The line was opened as such in 1912 and was part-funded by the Metropolitan Water Sewerage and Drainage Board. Industrial and suburban development along the line caused it to transform into a general freight and passenger line. By the 1920s a decision had been made to extend the railway from Regents Park to Cabramatta as a relief to

the Main West and Main South via Granville and this was completed in 1924. The work involved major reconstruction of the original Lidcombe-Regents Park section of the line.

A station was opened at Regents Park on 11 November 1912. The line reconstruction in 1924 involved a deviation and, accordingly, a new station was opened on the deviated line on 8 October 1924. The old station was demolished. The new station featured an island platform and brick platform building. A footbridge was constructed in 1922, being a steel beam structure with stairs down to an island platform.

The station was once the junction for a branch line to Potts Hill reservoir and for a series of sidings that served an adjacent large factory complex belonging to the Commonwealth Government.

A new overhead parcels office (now a kiosk) was constructed in 1945 and the platform building modified. The station was upgraded c.2000 with a new lift and platform canopies.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The heritage curtilage should be revised to match the RailCorp Section 170 Heritage and Conservation Register curtilage for the station; see item #4802060 and plan below. Should the

revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Statement of Significance

The 'Rookwood Cemetery and Necropolis, No 1 Section Buildings, Relics and Place' item has State heritage significance. The following Statement of Significance has been quoted from the *Rookwood - Conservation Management Plan* prepared by GML (2016):

- *Rookwood Necropolis is one of the largest burial grounds in the world and contains the largest 19th century cemetery in Australia;*
- *The scale of design, design features, use of plants, gardenesque layout, high quality and diversity of structures, monuments and details of Rookwood represent a rare surviving example of mid-late 19th century ideals for a major public cemetery. The choices of plants in these sections also demonstrate 19th century funerary etiquette and fashion by way of plant symbolism;*
- *The imagination and expertise of a number of prominent individuals are manifest in the historic fabric and design of Rookwood …This includes its original design and subsequent development over almost 150 years. The Necropolis was designed as a pleasant setting both for the dead and a comforting site for visiting mourners. The landscape was equipped with visitor amenities such as carriageways, paths, plantings, fences, signs, chapels, shelters and drainage.*
- *The historical archaeological resource of Rookwood is vast and represents a wide array of domestic, industrial, spiritual and recreational activities for the greater Sydney population from the mid-nineteenth century onwards. Structural remains and sealed artefact deposits*

associated with use of the site have the potential to provide insight into the more intricate details of lifeways for those living, working and burying friends and family at Rookwood. Internments themselves can provide a rich source of data and coffins, other grave hardware, burial goods, and burial styles can inform our understandings of life and death for a cross-section of cultural groups within Sydney.

- *Rookwood's memorials form a collection of architectural and monumental craftsmanship without parallel in Australia. They include examples that are unique in themselves or display a high degree of technical accomplishment, and others which represent changes in social burial customs since 1867; Rookwood contains a number of significant buildings, including the Frazer mausoleum, a rare example of mausoleum architecture in NSW.*
- *As a social document and genealogical resource, Rookwood is unique in its scale and comprehensiveness. The Necropolis is the burial place of a large number of noteworthy individuals; the Necropolis contains a rare collection of memorials moved from the Devonshire Street burial ground in the city (1901), and the old Petersham cemetery in the (1926-7). Headstones record members of the First Fleet, convicts, bushrangers, artists, scientists, businessmen and politicians alongside victims of accident, drowning, fire, epidemics and mass disasters. The cemetery has served a diverse range of faith communities throughout its history and is an important repository of the history of multicultural Sydney and resource for present day communities.*
- *Rookwood is of significance in providing habitats for two Threatened Ecological Communities (Cumberland Plain Woodlands and Cook's River Castlereagh Ironbark Forest) as well as threatened flora of Commonwealth and/or State significance. It also contains an unusual ecotone where a pocket of Sydney sandstone associated vegetation occurs in the midst of predominantly Wianamatta shale associated vegetation.*

Criteria Assessment	
a) Historic	Rookwood is one of the largest burial grounds in the world and contains the largest 19th century cemetery in Australia. The scale of design, gardenesque layout, high quality and diversity of structures, monuments and details of the oldest sections of Rookwood represent a rare surviving example of mid to late 19th century ideals for a major public cemetery.
b) Associative	Rookwood is the known burial place of almost a million citizens, including scores of noteworthy individuals of importance to the growth and development of the city and suburbs of Sydney and NSW. Rookwood has strong associations with the diverse religious, social and ethnic communities of Greater Sydney and the presence, growth and impact of these communities on the society and culture of NSW.
c) Aesthetic/Technical	Many of the monuments are of outstanding aesthetic quality. Rookwood is so large that vistas can be found within it that are completely contained within the cemetery landscape, providing an aesthetic retreat for the senses of the viewer.
d) Social	Rookwood is a diverse cultural landscape that has provided a setting for burial and memorial traditions of many different faiths and denominations. Rookwood is a tangible manifestation of the social history of Sydney, documenting the cultural and religious diversity of Australian communities since 1867. Prominent individuals and families are recorded in memorials containing significant biographical information. The progressive layering, development and diversity of styles of memorialisation document the conceptual move away from the nineteenth century perception of death and dying to the more rationalist view prevailing at the present time. As a social document and genealogical resource Rookwood Necropolis is unique in its scale and comprehensiveness.
e) Scientific	The monumental masonry and other types of craftsmanship, including cast and wrought ironwork are fine examples of craft processes and reflect social attitudes to death and fashions in funerary ornamentation

	since 1867. The Necropolis provides a habitat for two rare and endangered plant species. As an extensively used internment site, Rookwood Necropolis has exceptional research potential. The site's historical archaeological resource has the potential to answer a wide range of research questions that would provide insight into the treatment of life and death by a cross-section of cultural groups in the greater Sydney region from the mid-nineteenth century through to the present.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Rookwood Cemetery and Necropolis' (2015). As the description features a comprehensive physical description, no amendment has been made to the physical description.

Rookwood Necropolis is the largest cemetery in Australia, the Southern Hemisphere (Jacquet, 2015, 8) and one of the largest in the world, having an area of 288 hectares and approximately 1,000,000 epitaphs recorded on 600,000 graves and 200,000 crematoria niches. It is a multi-denominational cemetery dating from 1867 onwards, with landscaped layout with a focus of a circular hub or roadway.

It is a suburb in its own right, perched on ridges 15km west of the Sydney CBD (ibid, 2015, 8).

Early Design
The original 200 acre layout is located in the north-western corner of the site. The road pattern radiates from a central hub and two different approaches to design are exemplified. The Wesleyan, Presbyterian, Independent, General and Catholic Cemeteries uses a curvilinear layout whereas the Anglican Cemetery uses a grid layout. The original designers followed a garden design, which was continued in the layout of individual sections.

Located in the Church of England No.1 Cemetery is an extensive system of serpentine drains and ponds The open drain is brick-lined and approximately 1800mm deep. Extensive shelters, urns, bridges, fountains, and gardens ornament the serpentine drains. The paths, gardens and carriageways throughout the older sections are formed between finely detailed brick gutters which remain largely intact.

The Crematorium
The grounds are dominated by the Spanish Mission style building which is laid out in cruciform pattern to accommodate three separate chapels. The earlier parts of the garden are enclosed by a rendered brick wall with tiles capping that gives it an attractive unified appearance as viewed from the rest of the cemetery. Within the wall, formal gardens are laid out in an axial pattern using brick and stone to negotiate changes of levels. Ponds mark the intersection of the main pathways. The major axes terminate in wrought iron gates which afford attractive views over the rest of the cemetery.

Plants and Design
What remains on the site is an accretion of introduced and remnant native plants. Some of the introduced planting dates from the original layout of the cemetery. These include Araucaria pines (A.cunninghamii - hoop pine; A.bidwillii - Bunya pine; A.columnaris - Cook's pine; A.heterophylla - Norfolk Island pine), Magnolia grandiflora - evergreen magnolia / bull bay and Pinus spp. trees and Phoenix (P.canariensis - Canary Island date palms); P.dactylifera - date palm); P.senegalensis - clumping date) palms and Washingtonia robusta (Californian desert fan) palms. These have been planted in an ordered goemetric grid which is transected by gardenesque curvilinear roads in turn bordered by avenue planting. Within this layout are pavilions, fountains and shelters that are important elements in the landscape.

The more recent cemetery areas in the south and eastern portions of the site revert to informal arrangements of native trees and shrubs. The cemetery provides a habitat for two rare and endangered plant (shrub) species, Acacia pubescens and Dillwynia parvifolia. It also contains an unusual ecotone where a pocket of Sydney sandstone associated vegetation occurs in the midst of predominantly Wianamatta shale associated vegetation. It also supports populations of 19 species of frogs and reptiles and a large number of bird species. (CALM) (National Trust 1988)

Archaeological potential
The main features of archaeological significance include:
- monumental masonry;
- former railway siding and site of Mortuary Station, sites of 3 other Stations;
- cast iron section markers on Necropolis Circuit;
- drainage channels, roads, bridges, paths;
- other buildings, works and sites. (Schwager Brooks et al, 1996).

Condition	Good	**Fair**	Poor

Alterations and Additions

The following alterations and additions have been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Rookwood Cemetery and Necropolis' (2015).

- 1862 - Government purchases 200 acres near Haslem's Creek station (later Lidcombe) (in north west of current Necropolis lands). Originally six denominations: Roman Catholic, Anglican, Wesleyan, Presbyterian, Jews and Independent (Schwager Brooks et al, 1996)
- 1866 - Entire cemetery enclosed, access roads built and denominational subsections cleared.
- 1864 - branch railway line to cemetery handed over - first record of funeral train 4/1864
- 1867 - Necropolis first dedicated (Schwager Brooks & Partners, 19..), Necropolis Act and burials commenced, railway line and siding provided, and opens. 7th April 1868 - All land dedicated as cemetery.
- 1869 Mortuary Station number one opens.
- 1874-1882 - Serpentine drain constructed in Church of England Section.
- 1878-9 Necropolis enlarged with purchase of additional 577 acres to accomodate demand for burial plots (Schwager Brooks et al, 1996)
- 1869 - two sandstone receiving houses (for funeral trains) built, one at Regent St., Redfern, one in the Necropolis
- 1879 - Government purchases 577 acres of adjoining land.
- 1890 - St Michael the Archangel Chapel built.
- 1897 - Railway branch line extended.
- 1901 - Railway branch line extended with (now) four cemetery stations.
- 1908 - Railway branch line extended
- 1923 - Crematorium opens.
- 1948 - Railway branch line closes - Lidcombe station services Mortuary trains
- 1952 - Railway line pulled up and stations sold.
- 1957 - No 1 Mortuary Railway Station removed (to become the North Ainslie Anglican Church, Canberra, ACT)
- 1980s - construction of Railway Street on the Necropolis and Cemetery's northern side alongside the main western railway. 1990s - new East Street main entrance constructed
- 2006 9 mature maritime pines (Pinus pinaster) removed, Independent Cemetery near Haslem's Drive, West. Also 28 matured (1989) she oak (Casuarina sp.) trees removed between southern wall of NSW Garden of Remembrance and AWG Boundary with Section 20 of the Anglican Cemetery (JCNTrustees, meeting 10-01, Executive Manager's Report, 5/7/06).

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1862

The following history is comprehensive and has therefore been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Rookwood Cemetery and Necropolis' (2015).

Prior to European settlement, the traditional owners of the area now occupied by Rookwood were the Wangal people, a Darug language-speaking 'clan' group. The Wangal group original extended from Sydney Cove westerly to Parramatta (POM, 23). Aboriginal occupation of this region dates back well into the Pleistocene period (over 10,000 years ago)(Jacquet, 2015, 27).

The Haslem Creek Cemetery, as Rookwood was originally known, was the result of urban encroachment. By the 1840s, only half a century after the arrival of the First Fleet, Sydney's third cemetery at Devonshire Street (now the site of Central Station and railway yards) was facing the same fate as its predecessors: it was running out of space and suffering from urbanisation. Land values were increasing, and for a young city there were better uses for the space it occupied (DPI, 23).

By the mid 1850s the need for a new cemetery was becoming urgent. In response the NSW Government embarked on a great Victorian enterprise - mirrored only 10 years earlier at Brookwood outside London - the search for a large-enough parcel of land to bury Sydney's dead in perpetuity (DPI, 23). In 1860 the Government advertised that it wanted to purchase land along the railway for a cemetery. After a number of site inspections the Government had narrowed its choice to two possible sites, the Wentworth's Homebush Estate and the Hyde Park Estate.

On the 18th September 1862 the Government of New South Wales purchased 200 acres of the Hyde Park Estate owned by Mr Edward Cohen. During the same month Surveyor Heady sketched the site for the cemetery. By November 1862 Charles Moore, Director of the Botanical Gardens had begun supervising the fencing of the land. In 1863 the Lands Department invited the major denominations to nominate trustees for portions of the cemetery. The area was divided among the denominations according to their proportion in the population in the 1861 census. Roman Catholic, Church of England, Independent (Congregational), Wesleyan, Presbyterian and Jews were invited to name their trustees. Within the area allocated, preparation of the cemetery grounds was to be at the expense of each denomination. At this time the area was known as Haslem's Creek Necropolis.

In June 1864 Colonial Architect, James Barnet, submitted plans for the construction of a lodge for a manager and this was constructed by mid 1865. In December 1865 the Government surveyor, John Armstrong, surveyed the route for the railway into the cemetery and it was opened in April 1867. Rookwood was unusual internationally in having two specially designed 'necropolis' railway stations to cater for funerals and visitors - one at Sydney (Regent Street), which still survives and one in the cemetery, since dismantled and re-erected as a church in Ainslie, Canberra.

Management of the Haslem's Creek Necropolis was resolved by the passing of the Necropolis Act of 1867, which specified that the internal arrangements and ornamentation of each section of the cemetery were to be managed by the nominated trusts. Burials commenced in January 1867 under the authority of this Act.

David Jones, (b.1793) founder of the well-known department store, died in 1873 and was buried at Rookwood.

Between 1874 and 1882 the serpentine drain was constructed in the Church of England No.1 cemetery.

More ground was soon needed so in July 1879 the government purchased 577 acres of adjoining land to the south and east. The new trust areas were gazetted in February 1889. As a result of the cemetery expansion, the railway was extended in 1897 and again in 1908.

In 1881 bushfire caused extensive damage to property at Rookwood. (Daily Telegraph archive)

By 1890 one of the most impressive buildings was the St Michael the Archangel Chapel built by Sims and Devitt.

A major change to the Necropolis was the introduction of facilities for cremation. After ten years of lobbying against public opposition - not just to a crematorium in Rookwood but to the very idea of creation itself (GML, 2017, 23).

The scale of loss in World War 1 had been attributed as contributing to a decline in the elaborate memorialisation and rituals that had been a feature of Victorian-era cemeteries like Rookwood, while the regimented rows of graves adopted by the Commonwealth War Graves Commission for the vast war cemeteries in Europe also promoted a simpler style of graves in civil ceremonies in Australia. In this atmosphere, the NSW Cremation Co., Ltd., formed in 1915, was able to convince the government that as part of amendments to the Necropolis Act in 1923, four acres were set aside at Rookwood for a crematorium. Designed by architect F. l'Anson Bloomfield, the crematorium was to include a Spanish mission or Mediterranean style building, with red-tiled roof and white-rendered walls. The chimney was disguised as a belltower, with chapel, and columbarium inside and an entrance loggia opening into a garden at the rear. It opened in 1925 and was the first crematorium in Australia. Bloomfield had detailed designs for the building and landscaped gardens, which were implemented as money became available. In 1926 the chapel, known as the East Chapel, was completed, devoid of overt religious symbolism so it would be appropriate for all denominations. In the first year of operation there were 122 cremations. By 1929 there were 500. A sale of shares in the company in 1928 and 1929 raised funds to enable completion of much of the design, with the columbarium, furnace room extended (including two new furnaces), and completion of the Garden of Remembrance. Such was its popularity a second chapel was added in 1934, with a special AIF Memorial columbarium unveiled in 1936. This was reserved for returned servicemen of WW2 who had died of wounds or illness since their return (ibid, 2017, 23).

In 1943 a section on the cemetery's western boundary was set aside to serve as a war cemetery, maintained by the Army Graves registration unit. At first graves were marked by simple wooden crosses, but after the war these were replaced with standard marble headstones, representing equality in death of all soldiers that the Imperial War Graves Commission, later the Commonwealth War Graves Commission, had set forth on their establishment in 1918. Rookwood's war cemetery was primarily the resting place for servicemen and women who died at nearby Concord Military hospital from wounds received in combat or from illness. In total 732 burials from WW2 were carried out here. Rookwood was used as temporary cemetery for American service personnel, with 466 buried there during WW2 years. Their remains were removed to America from Rookwood in 1947 (ibid, 2017, 24).

The years after WW2 saw a change in burial practice in Australia away from the elaborate memorialisation of the Victorian and Edwardian eras, with large imposing monuments in the older sections of Rookwood. A new style of low, unpretentious monument became prevalent throughout newer sections. From the 1920s on, these graves, known as 'slab and desk' (with details of the deceased inscribed on a low headstone) allowed long lines of sight over an ordered, uncluttered landscape. From the 1950s, as well as this style of monuments, new lawn cemetery areas were being used at Rookwood, further distancing the new styles from those of the 19th century (ibid, 2017, 25).

With the advent of motor cars and buses the cemetery railway closed in 1948 and the line and station buildings were sold in 1952 (CALM 1993) (National Trust of Australia (NSW), 1988).

New migrant communities began to be buried together, much as denominational groups had from the beginning. Russian and Greek Orthodox, Croatians, Vietnamese and Muslim sections all appeared, reflecting ever-increasing diversity of Sydney's population in the second half of the 20th century. A growing Chinese community expanded the Chinese section away from the small area set aside in the 1870s with small, austere headstones, to larger monuments often in red or black granite and marble. Many of the recent graves from the 1980s have also appropriated the Italian custom of inserting a photograph of the deceased into the headstone, showing a divergence of cultural practices in the

cemetery landscape. The three-barred crosses of the Orthodox faith and extensive garden plantings on Muslim graves also add distinctive character to these sections (ibid, 2017, 26).

In 1987 the entire cemetery was enclosed behind secure fencing for the first time, which led to a drop off in illegal dumping in the grounds. The same year a second Necropolis Amendment Act (1987) saw the formation of a Joint Committee, with representatives of the state government, the National Trust of Australia (NSW), the Heritage Council of NSW, the crematorium and members of the seven trusts to manage the upkeep, maintenance and heritage values of the cemetery. One of their first tasks was commissioning a plan of management for the Necropolis to assess its heritage significance and begin coordinated planning for protection and growth of the site. The growing awareness of the cemetery as a site of heritage value saw it classified by the National Trust of Australia (NSW) in 1981. Formal government recognition followed in 1989 with a Permanent Conservation Order gazetted under the NSW Heritage Act by the Heritage Council of NSW, upgraded in 1999 to State Heritage Register listing (ibid, 2017 27-28).

In 1993 the Friends of Rookwood was formed by concerned and interested community members keen to help restore and preserve the Necropolis. They set about raising funds to conserve important monuments, restoring landscape and garden areas and promoting the cemetery to a wider public. By instigating a series of walking tours through the cemetery, the Friends highlighted the site's importance via the social history of its inhabitants and raised the profile of Rookwood as a place to visit and contemplate, as had been the idea behind its earliest incarnation as a gardenesque public landscape (ibid, 2017, 28).

In 1993 the East Street new entry/gates were built and primary road implementation - Necropolis Drive and Cohen Avenue were upgraded with avenue tree plantings. That year the indigenous vegetation of the cemetery was surveyed, and identified as significant (POM, 15).

In 1996 a boundary planting program commenced and the road heirarchy was confirmed - Hawthorne Avenue (part) was upgraded including avenue tree plantings (POM, 15).

In 1998 the Catholic Trust Mausoleum opened. In 1999 the Independent Trust Mausoleum opened and the Flora & Fauna Survey of the cemetery was updated. From 1999-2001 the Serpentine Drain was restored in the No. 1 Anglican cemetery. An interpretive structure was installed at Mortuary Station No. 1, with grant funding. Also in 2001 Memorial Avenue (part) Primary Road was upgraded including avenue tree plantings. In 2002 cemetery identified Vegetation Conservation Areas were ground-truthed - and a Property Management Plan (for vegetation) was adopted. Bush regeneration works continued (POM, 15).

In 2006 the Quong Sin Tong monument was restored. In 2007 part of Necropolis Drive was upgraded including avenue tree plantings. Also that year the Catholic Trust Crematorium started operating. In 2008 the Catholic Trust John Paul 11 Cryp0t on Sheehy Avenue was completed. In 2009 Sheehy Avenue was upgraded. That year the Jewish Trust commenced restoration of No.1 Jewish cemetery areas, Reflections Cafe and flower shop opened near the Strathfield entry gate. In 2010 Lot 10 construction commenced and in 2011 crypts were completed in the Independent Trust area and the Jewish Trust office opened (POM, 15).

The Necropolis' management has also evolved. In 2012 the Rookwood General Cemeteries Reserve Trust (RGCRT) was formed, amalgamating the former Anglican, General, Independent, Jewish and Muslim Trusts into one management unit, with the Catholic Metropolitan Cemeteries Trust (CMCT) managing the Catholic sections and new Catholic crematoria. Between them these two Trusts manage over 90 different religious and cultural groups that use the cemetery grounds (ibid, 2017, 28).

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Manage in accordance with the *Heritage Act 1977* (NSW).

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Statement of Significance

The following statement of significance has been adapted from GML Heritage (2016) *Rookwood - Conservation Management Plan*:

Rookwood Cemetery and Necropolis is a significant cultural landscape at the local and State level for its historic, associative, aesthetic, social and scientific heritage values. The cemetery is the largest cemetery in Australia and one of the largest in the world, covering an area of 280 hectares with approximately 1,000,000 epitaphs recorded on 600,000 graves and 200,000 crematoria niches. The site contains significant buildings and structures that date from all of Rookwood's history. They have historical significance for being representative of the growth and development of the Necropolis; aesthetic significance as landmarks or important examples of architecture in their own right, and are associated with cultural landscape areas that reflects the spiritual significance of the place to the different faith communities represented there.

The original 200-acre layout followed a gardenesque design, which was continued in the layout of individual sections is historically and socially significant as emblematic features of a nineteenth-century commemorative garden landscape. The remainder of the cemetery includes a great variety of commemorative landscapes and structures illustrating an evolution of visual languages of death and mourning. It is a major natural, archaeological and genealogical resource, containing unique records of early colonial Sydney such as monuments transplanted from pre-existing burial grounds. It contains innovative engineering, including a system of canals and ponds, and landforms and historical archaeology that clearly reveal the original railway link to the city and changing patterns of use, growth and occupation.

The area outside the SHR curtilage also contains cultural landscapes and memorials, which have been created and sustained by a host of different ethnic and religious communities, and is representative of the exceptional cultural diversity of Sydney. Rookwood is a tangible manifestation of the social history of Sydney, documenting the cultural and religious diversity of Australian communities since 1867 to present-day. It is one of Sydney's largest public open spaces and a major resource in terms of biodiversity.

Criteria Assessment	
a) Historic	Rookwood is one of the largest burial grounds in the world and contains the largest 19th century cemetery in Australia. The scale of design, gardenesque layout, high quality and diversity of structures, monuments and details of the oldest sections of Rookwood represent a rare surviving example of mid to late 19th century ideals for a major public cemetery.
b) Associative	Rookwood is the known burial place of almost a million citizens, including scores of noteworthy individuals of importance to the growth and development of the city and suburbs of Sydney and NSW. Rookwood has strong associations with the diverse religious, social and ethnic communities of Greater Sydney and the presence, growth and impact of these communities on the society and culture of NSW.
c) Aesthetic/Technical	Many of the monuments are of outstanding aesthetic quality. Rookwood is so large that vistas can be found within it that are completely contained within the cemetery landscape, providing an aesthetic retreat for the senses of the viewer.
d) Social	Rookwood is a diverse cultural landscape that has provided a setting for burial and memorial traditions of many different faiths and denominations. Rookwood is a tangible manifestation of the social history of Sydney, documenting the cultural and religious diversity of Australian communities since 1867. Prominent individuals and families are recorded in memorials containing significant biographical information. The progressive layering, development and diversity of styles of memorialisation document the conceptual move away from the nineteenth century perception of death and dying to the more rationalist view prevailing at the present time. As a social document and genealogical resource Rookwood Necropolis is unique in its scale and comprehensiveness.
e) Scientific	The monumental masonry and other types of craftsmanship, including cast and wrought ironwork are fine examples of craft processes and reflect social attitudes to death and fashions in funerary ornamentation since 1867. The Necropolis provides a habitat for two rare and endangered plant species. As an extensively used internment site, Rookwood Necropolis has exceptional research potential. The site's historical archaeological resource has the potential to answer a wide range of research questions that would provide insight into the treatment of life and death by a cross-section of cultural groups in the greater Sydney region from the mid-nineteenth century through to the present.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Rookwood Cemetery and Necropolis' dated 2015. As the description features a comprehensive physical description, no amendment has been made to the physical description.

Rookwood Necropolis is the largest cemetery in Australia, the Southern Hemisphere (Jacquet, 2015, 8) and one of the largest in the world, having an area of 288 hectares and approximately 1,000,000 epitaphs recorded on 600,000 graves and 200,000 crematoria niches. It is a multi-denominational cemetery dating from 1867 onwards, with landscaped layout with a focus of a circular hub or roadway.

It is a suburb in its own right, perched on ridges 15km west of the Sydney CBD (ibid, 2015, 8).

Early Design
The original 200 acre layout is located in the north-western corner of the site. The road pattern radiates from a central hub and two different approaches to design are exemplified. The Wesleyan, Presbyterian, Independent, General and Catholic Cemeteries uses a curvilinear layout whereas the Anglican Cemetery uses a grid layout. The original designers followed a garden design, which was continued in the layout of individual sections.

Located in the Church of England No.1 Cemetery is an extensive system of serpentine drains and ponds The open drain is brick-lined and approximately 1800mm deep. Extensive shelters, urns, bridges, fountains, and gardens ornament the serpentine drains. The paths, gardens and carriageways throughout the older sections are formed between finely detailed brick gutters which remain largely intact.

The Crematorium
The grounds are dominated by the Spanish Mission style building which is laid out in cruciform pattern to accommodate three separate chapels. The earlier parts of the garden are enclosed by a rendered brick wall with tiles capping that gives it an attractive unified appearance as viewed from the rest of the cemetery. Within the wall, formal gardens are laid out in an axial pattern using brick and stone to negotiate changes of levels. Ponds mark the intersection of the main pathways. The major axes terminate in wrought iron gates which afford attractive views over the rest of the cemetery.

Plants and Design
What remains on the site is an accretion of introduced and remnant native plants. Some of the introduced planting dates from the original layout of the cemetery. These include Araucaria pines (A.cunninghamii - hoop pine; A.bidwillii - Bunya pine; A.columnaris - Cook's pine; A.heterophylla - Norfolk Island pine), Magnolia grandiflora - evergreen magnolia / bull bay and Pinus spp. trees and Phoenix (P.canariensis - Canary Island date palms); P.dactylifera - date palm); P.senegalensis - clumping date) palms and Washingtonia robusta (Californian desert fan) palms. These have been planted in an ordered goemetric grid which is transected by gardenesque curvilinear roads in turn bordered by avenue planting. Within this layout are pavilions, fountains and shelters that are important elements in the landscape.

The more recent cemetery areas in the south and eastern portions of the site revert to informal arrangements of native trees and shrubs. The cemetery provides a habitat for two rare and endangered plant (shrub) species, Acacia pubescens and Dillwynia parvifolia. It also contains an unusual ecotone where a pocket of Sydney sandstone associated vegetation occurs in the midst of predominantly Wianamatta shale associated vegetation. It also supports populations of 19 species of frogs and reptiles and a large number of bird species. (CALM) (National Trust 1988)

Archaeological potential
The main features of archaeological significance include:
- monumental masonry;
- former railway siding and site of Mortuary Station, sites of 3 other Stations;
- cast iron section markers on Necropolis Circuit;

- drainage channels, roads, bridges, paths;
- other buildings, works and sites. (Schwager Brooks et al, 1996).

In addition to above, the follow areas are located outside of the SHR listed area. This text has been quoted from the GML Heritage (2016) *Rookwood - Conservation Management Plan*:

Moving east from Necropolis Drive towards the Strathfield Gates, Rookwood is made up of the following areas:

Northeastern Area

- *Anglican Unit 4, which continues the characteristics and patterns of Old Anglican No. 1. Its grid arrangement is punctuated by circular nodal features sometimes occupied by rest houses, these becoming smaller and less decorative moving further east. This area also contains long axial views towards Necropolis Drive, and towards the Anglican buildings and chapel along Hawthorne Avenue.*
- *Anglican Unit 5, which is predominantly open in character. It has 'slab and desk' burials dating from 1940–1970 and is also the site of:*
    - *Mortuary Station 4;*
    - *the 1940's US War Cemetery and former office;*
    - *the merchant navy walled burial area; and*
    - *the RGCRT monuments and maintenance staff shed, which is found at the base of this*
    - *area.*
- *Anglican, Russian/Serbian Orthodox Unit 6, which is visible from Necropolis Drive adjacent to the entry gates and is characterised by mid-twentieth-century slab and desk burials in gridded formation.*
- *Jewish (Unit 14 A, B and C), which has a finer grain enclosed character necessitated by the surrounding circulation network and features a .variety of highly significant early and twentieth century Jewish burials and an intimate war memorial*

Southwestern Area

Moving south from Necropolis Circuit out of the SHR area and into the southwestern portion of the site there is a distinct transition of cemetery character as burials and layouts become notably twentieth century in style and form.

The main precincts of the southwestern portion of the site are:

- *Unit 10 Independent, which retains distinct characteristics in its various areas, including a gentle modified grid and original circular gardenesque layouts, but also marks a transitional area of Rookwood as it opens up in the southern area of the unit, leading into the dominant twentieth century character of the area beyond.*
- *Unit 11 Independent and Catholic, which is a low-rise area dominated by burials dating from the 1940s–1960s in slab/desk form. It also contains a biodiversity pocket of protected vegetation at its centre up to where it borders with Independent Unit 10 (Cooks River Castlereagh Ironbark Forest).*
- *Unit 13 and 13C Independent, which occupies the centre of Rookwood and contains a vast variety of monument typologies from many ethnicities including Russian Orthodox, Muslim, Ukrainian and Greek Orthodox originating from throughout the twentieth-century.*
- *Unit 9 Catholic No 2, which is characterised by dense twentieth-century burial patterns laid out in a north to south and east to west grid pattern within the main road alignment. A significant Canary Island palm avenue is located along Freeman Street and the Southern Canal.*
- *Unit 16 Lutheran, which adopts a rectilinear mid-twentieth century burial pattern within which intricate planting schemes create 'outdoor rooms', with a focus around a central tree-lined avenue leading to the World War I memorial.*
- *Unit 17 Catholic and Lutheran, which is punctuated by the Catholic Crown of Thorns shrine built in late-twentieth century Ecclesiastical style. It includes a semicircular lawn burial area, the Sacred Heart Chapel, the Catholic Crematorium and the former site of Mortuary Station 3.*
- *Unit 18 Catholic (A, B and C), which forms three subsections that dominate the southern end of Rookwood and contains predominantly post-1940 burials and memorials. These are laid out*

in a skewed grid form of northeast and southeast alignment, with rhomboid shapes between intersections that are legible when viewed from on high elsewhere in the site.

Southeastern Area

Moving back up north from the Catholic administrative hub and large southern Catholic sections, the southeastern portion of Rookwood splits again into a wide variety of denominational sections and burial styles, branching out from the central spine of Memorial Avenue and the notable activity hub made up by Rookwood Crematorium and Gardens. This portion of the site is made up of:

- *Unit 15 Crematorium and Gardens, which is characterised by the intricate landscape pattern of the 1930s-era walled and sunken gardens filled with ornamental shrubs, clipped bushes and flowering plant forms that surround the Interwar Mediterranean style crematorium building (the oldest of its kind in Australia).*
- *Unit 19 Catholic, which is directly south of Memorial Avenue and is one of the newest areas of burial at Rookwood being generally open and low-rise with uniform lawn burials and looping circulation routes delineated by recent planting schemes.*
- *Unit 20 Anglican (A, B and C), which is predominately modern in character and form, contains subsets of Chinese, Serbian and Muslim burials displaying a cross-section of recent monumental trends.*
- *Unit 21 Sydney War Cemetery and NSW Garden of Remembrance, which is defined by an entrance off Memorial Avenue via a sandstone-clad loggia with pointed arch entryways and uniform white marble headstones, set in a manicured lawn landscape.*
- *Unit 22 Anglican, one of the most recent burial areas defined by a cross-section of recent monumental trends in a gridded layout.*
- *Unit 23 Muslim, which is defined by medium densities of burials oriented to Mecca (northwest) and also contains the Muslim office.*
- *Unit 24, known as Lot 10, which is a narrow corridor of land at the southern extremity of Rookwood half of which is Vegetation Conservation Area whilst the other half has been allocated for new burials which have commenced at the time of writing.*

Appended to the listing sheet for this item are two maps prepared by GML Heritage (2016) for *Rookwood- Conservation Management Plan* showing significant cultural landscapes and heritage items, and an assessment of archaeological potential for the entirety of Rookwood Cemetery.

Condition	Good	**Fair**	Poor

Alterations and Additions

The following alterations and additions have been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Rookwood Cemetery and Necropolis' (2015).

- 1862 - Government purchases 200 acres near Haslem's Creek station (later Lidcombe) (in north west of current Necropolis lands). Originally six denominations: Roman Catholic, Anglican, Wesleyan, Presbyterian, Jews and Independent (Schwager Brooks et al, 1996)
- 1866 - Entire cemetery enclosed, access roads built and denominational subsections cleared.
- 1864 - branch railway line to cemetery handed over - first record of funeral train 4/1864
- 1867 - Necropolis first dedicated (Schwager Brooks & Partners, 19..), Necropolis Act and burials commenced, railway line and siding provided, and opens. 7th April 1868 - All land dedicated as cemetery.
- 1869 Mortuary Station number one opens.
- 1874-1882 - Serpentine drain constructed in Church of England Section.
- 1878-9 Necropolis enlarged with purchase of additional 577 acres to accomodate demand for burial plots (Schwager Brooks et al, 1996)
- 1869 - two sandstone receiving houses (for funeral trains) built, one at Regent St., Redfern, one in the Necropolis
- 1879 - Government purchases 577 acres of adjoining land.
- 1890 - St Michael the Archangel Chapel built.
- 1897 - Railway branch line extended.

- 1901 - Railway branch line extended with (now) four cemetery stations.
- 1908 - Railway branch line extended
- 1923 - Crematorium opens.
- 1948 - Railway branch line closes - Lidcombe station services Mortuary trains
- 1952 - Railway line pulled up and stations sold.
- 1957 - No 1 Mortuary Railway Station removed (to become the North Ainslie Anglican Church, Canberra, ACT)
- 1980s - construction of Railway Street on the Necropolis and Cemetery's northern side alongside the main western railway.
  1990s - new East Street main entrance constructed
- 2006 9 mature maritime pines (Pinus pinaster) removed, Independent Cemetery near Haslem's Drive, West. Also 28 matured (1989) she oak (Casuarina sp.) trees removed between southern wall of NSW Garden of Remembrance and AWG Boundary with Section 20 of the Anglican Cemetery (JCNTrustees, meeting 10-01, Executive Manager's Report, 5/7/06).

This area of the cemetery has high heritage integrity, as shown by the landscape and intactness of historic elements.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1862

The following history is comprehensive and has therefore been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Rookwood Cemetery and Necropolis', dated 2015. This includes a brief summary of the history of the entire site.

Prior to European settlement, the traditional owners of the area now occupied by Rookwood were the Wangal people, a Darug language-speaking 'clan' group. The Wangal group original extended from Sydney Cove westerly to Parramatta (POM, 23). Aboriginal occupation of this region dates back well into the Pleistocene period (over 10,000 years ago) (Jacquet, 2015, 27).

The Haslem Creek Cemetery, as Rookwood was originally known, was the result of urban encroachment. By the 1840s, only half a century after the arrival of the First Fleet, Sydney's third cemetery at Devonshire Street (now the site of Central Station and railway yards) was facing the same fate as its predecessors: it was running out of space and suffering from urbanisation. Land values were increasing, and for a young city there were better uses for the space it occupied (POM, 23).

By the mid-1850s the need for a new cemetery was becoming urgent. In response the NSW Government embarked on a great Victorian enterprise - mirrored only 10 years earlier at Brookwood outside London - the search for a large-enough parcel of land to bury Sydney's dead in perpetuity (POM, 23). In 1860 the Government advertised that it wanted to purchase land along the railway for a cemetery. After a number of site inspections the Government had narrowed its choice to two possible sites, the Wentworth's Homebush Estate and the Hyde Park Estate.

On the 18th September 1862 the Government of New South Wales purchased 200 acres of the Hyde Park Estate owned by Mr Edward Cohen. During the same month Surveyor Heady sketched the site for the cemetery. By November 1862 Charles Moore, Director of the Botanical Gardens had begun supervising the fencing of the land. In 1863 the Lands Department invited the major denominations to nominate trustees for portions of the cemetery. The area was divided among the denominations according to their proportion in the population in the 1861 census. Roman Catholic, Church of England, Independent (Congregational), Wesleyan, Presbyterian and Jews were invited to name their trustees. Within the area allocated, preparation of the cemetery grounds was to be at the expense of each denomination. At this time the area was known as Haslem's Creek Necropolis.

In June 1864 Colonial Architect, James Barnet, submitted plans for the construction of a lodge for a manager and this was constructed by mid 1865. In December 1865 the Government surveyor, John Armstrong, surveyed the route for the railway into the cemetery and it was opened in April 1867. Rookwood was unusual internationally in having two specially designed 'necropolis' railway stations to cater for funerals and visitors - one at Sydney (Regent Street), which still survives and one in the cemetery, since dismantled and re-erected as a church in Ainslie, Canberra.

Management of the Haslem's Creek Necropolis was resolved by the passing of the Necropolis Act of 1867, which specified that the internal arrangements and ornamentation of each section of the cemetery were to be managed by the nominated trusts. Burials commenced in January 1867 under the authority of this Act.

David Jones, (b.1793) founder of the well-known department store, died in 1873 and was buried at Rookwood.

Between 1874 and 1882 the serpentine drain was constructed in the Church of England No.1 cemetery.

More ground was soon needed so in July 1879 the government purchased 577 acres of adjoining land to the south and east. The new trust areas were gazetted in February 1889. As a result of the cemetery expansion, the railway was extended in 1897 and again in 1908.

In 1881 bushfire caused extensive damage to property at Rookwood. (Daily Telegraph archive)

By 1890 one of the most impressive buildings was the St Michael the Archangel Chapel built by Sims and Devitt.

A major change to the Necropolis was the introduction of facilities for cremation. After ten years of lobbying against public opposition - not just to a crematorium in Rookwood but to the very idea of creation itself (GML, 2017, 23).

The scale of loss in World War 1 had been attributed as contributing to a decline in the elaborate memorialisation and rituals that had been a feature of Victorian-era cemeteries like Rookwood, while the regimented rows of graves adopted by the Commonwealth War Graves Commission for the vast war cemeteries in Europe also promoted a simpler style of graves in civil ceremonies in Australia. In this atmosphere, the NSW Cremation Co., Ltd., formed in 1915, was able to convince the government that as part of amendments to the Necropolis Act in 1923, four acres were set aside at Rookwood for a crematorium. Designed by architect F. l'Anson Bloomfield, the crematorium was to include a Spanish mission or Mediterranean style building, with red-tiled roof and white-rendered walls. The chimney was disguised as a belltower, with chapel, and columbarium inside and an entrance loggia opening into a garden at the rear. It opened in 1925 and was the first crematorium in Australia. Bloomfield had detailed designs for the building and landscaped gardens, which were implemented as money became available. In 1926 the chapel, known as the East Chapel, was completed, devoid of overt religious symbolism so it would be appropriate for all denominations. In the first year of operation there were 122 cremations. By 1929 there were 500. A sale of shares in the company in 1928 and 1929 raised funds to enable completion of much of the design, with the columbarium, furnace room extended (including two new furnaces), and completion of the Garden of Remembrance. Such was its popularity a second chapel was added in 1934, with a special AIF Memorial columbarium unveiled in 1936. This was reserved for returned servicemen of WW2 who had died of wounds or illness since their return (ibid, 2017, 23).

In 1943 a section on the cemetery's western boundary was set aside to serve as a war cemetery, maintained by the Army Graves registration unit. At first graves were marked by simple wooden crosses, but after the war these were replaced with standard marble headstones, representing equality in death of all soldiers that the Imperial War Graves Commission, later the Commonwealth War Graves Commission, had set forth on their establishment in 1918. Rookwood's war cemetery was primarily the resting place for servicemen and women who died at nearby Concord Military hospital from wounds received in combat or from illness. In total 732 burials from WW2 were carried out here. Rookwood

was used as temporary cemetery for American service personnel, with 466 buried there during WW2 years. Their remains were removed to America from Rookwood in 1947 (ibid, 2017, 24).

The years after WW2 saw a change in burial practice in Australia away from the elaborate memorialisation of the Victorian and Edwardian eras, with large imposing monuments in the older sections of Rookwood. A new style of low, unpretentious monument became prevalent throughout newer sections. From the 1920s on, these graves, known as 'slab and desk' (with details of the deceased inscribed on a low headstone) allowed long lines of sight over an ordered, uncluttered landscape. From the 1950s, as well as this style of monuments, new lawn cemetery areas were being used at Rookwood, further distancing the new styles from those of the 19th century (ibid, 2017, 25).

With the advent of motor cars and buses the cemetery railway closed in 1948 and the line and station buildings were sold in 1952 (CALM 1993) (National Trust of Australia (NSW), 1988).

New migrant communities began to be buried together, much as denominational groups had from the beginning. Russian and Greek Orthodox, Croatians, Vietnamese and Muslim sections all appeared, reflecting ever-increasing diversity of Sydney's population in the second half of the 20th century. A growing Chinese community expanded the Chinese section away from the small area set aside in the 1870s with small, austere headstones, to larger monuments often in red or black granite and marble. Many of the recent graves from the 1980s have also appropriated the Italian custom of inserting a photograph of the deceased into the headstone, showing a divergence of cultural practices in the cemetery landscape. The three-barred crosses of the Orthodox faith and extensive garden plantings on Muslim graves also add distinctive character to these sections (ibid, 2017, 26).

In 1987 the entire cemetery was enclosed behind secure fencing for the first time, which led to a drop off in illegal dumping in the grounds. The same year a second Necropolis Amendment Act (1987) saw the formation of a Joint Committee, with representatives of the state government, the National Trust of Australia (NSW), the Heritage Council of NSW, the crematorium and members of the seven trusts to manage the upkeep, maintenance and heritage values of the cemetery. One of their first tasks was commissioning a plan of management for the Necropolis to assess its heritage significance and begin coordinated planning for protection and growth of the site. The growing awareness of the cemetery as a site of heritage value saw it classified by the National Trust of Australia (NSW) in 1981. Formal government recognition followed in 1989 with a Permanent Conservation Order gazetted under the NSW Heritage Act by the Heritage Council of NSW, upgraded in 1999 to State Heritage Register listing (ibid, 2017 27-28).

In 1993 the Friends of Rookwood was formed by concerned and interested community members keen to help restore and preserve the Necropolis. They set about raising funds to conserve important monuments, restoring landscape and garden areas and promoting the cemetery to a wider public. By instigating a series of walking tours through the cemetery, the Friends highlighted the site's importance via the social history of its inhabitants and raised the profile of Rookwood as a place to visit and contemplate, as had been the idea behind its earliest incarnation as a gardenesque public landscape (ibid, 2017, 28).

In 1993 the East Street new entry/gates were built and primary road implementation - Necropolis Drive and Cohen Avenue were upgraded with avenue tree plantings. That year the indigenous vegetation of the cemetery was surveyed, and identified as significant (POM, 15).

In 1996 a boundary planting program commenced and the road hierarchy was confirmed - Hawthorne Avenue (part) was upgraded including avenue tree plantings (POM, 15).

In 1998 the Catholic Trust Mausoleum opened. In 1999 the Independent Trust Mausoleum opened and the Flora & Fauna Survey of the cemetery was updated. From 1999-2001 the Serpentine Drain was restored in the No. 1 Anglican cemetery. An interpretive structure was installed at Mortuary Station No. 1, with grant funding. Also in 2001 Memorial Avenue (part) Primary Road was upgraded including avenue tree plantings. In 2002 cemetery identified Vegetation Conservation Areas were ground-truthed - and a Property Management Plan (for vegetation) was adopted. Bush regeneration works continued (POM, 15).

In 2006 the Quong Sin Tong monument was restored. In 2007 part of Necropolis Drive was upgraded including avenue tree plantings. Also that year the Catholic Trust Crematorium started operating. In 2008 the Catholic Trust John Paul 11 Cryp0t on Sheehy Avenue was completed. In 2009 Sheehy Avenue was upgraded. That year the Jewish Trust commenced restoration of No.1 Jewish cemetery areas, Reflections Cafe and flower shop opened near the Strathfield entry gate. In 2010 Lot 10 construction commenced and in 2011 crypts were completed in the Independent Trust area and the Jewish Trust office opened (POM, 15).

The Necropolis' management has also evolved. In 2012 the Rookwood General Cemeteries Reserve Trust (RGCRT) was formed, amalgamating the former Anglican, General, Independent, Jewish and Muslim Trusts into one management unit, with the Catholic Metropolitan Cemeteries Trust (CMCT) managing the Catholic sections and new Catholic crematoria. Between them these two Trusts manage over 90 different religious and cultural groups that use the cemetery grounds (ibid, 2017, 28).

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- A comparison between the Auburn LEP heritage curtilage (A00718) and the curtilage identified in the GML Heritage "Rookwood Conservation Management Plan" shows that the Auburn LEP curtilage excludes a small section of the cemetery to the south. Refer below for the study area shown in the CMP. The heritage curtilage may need to be extended for the Cumberland LEP. As this includes new land not previously covered by an LEP, this will form part of the Stage 2 assessment of Cumberland Heritage Study.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Statement of Significance

Colquhoun Park is of local significance for its historic, associative, aesthetic and social values. The item is historically significant as an open space, opened under the patronage of Mayor John Colquhoun in 1926. Its use as an open community park has been maintained since its opening. The item is associated with John Colquhoun. He served as a Granville Municipal alderman for a number of years, and Mayor of Granville four times. John Colquhoun was patron of the park, but unexpectedly died on the day of its opening. The item is locally significant for its aesthetic values as a picturesque park with a remnant avenue of trees and a varied collection of plantings including tall palms, silky oak, fig and jacaranda. The park is socially significant as the community's representation of its regard for Mayor John Colquhoun. The memorial, erected in commemoration of him, was built by public subscription. The park also represents the rapid growth and subdivision of the area following WW1, forcing the need to reserve areas for public recreation.

Criteria Assessment	
a) Historic	The item is historically significant as an open space, opened under the patronage of Mayor John Colquhoun. Colquhoun saw that as a result of the rapid growth and subdivision of the area in the Inter-War period, the provision of parklands for children and families in the community

	was lacking. Its use as an open community park has been maintained since its opening.
b) Associative	The item is associated with John Colquhoun, a Scottish immigrant who came from humble beginnings to build the successful Colquhoun's Bag Company. He served as a Granville Municipal Alderman for a number of years, and Mayor of Granville four times. A prominent and well-respected member of the Granville community, the park is directly connected to the life and death of Mayor John Colquhoun, who was patron of the park but had unexpectedly died on the day of its opening.
c) Aesthetic/Technical	The item is locally significant for its aesthetic values as a picturesque park with a remnant avenue of trees and a varied collection of plantings, including tall palms, silky oak, fig and jacaranda.
d) Social	The item is socially significant as the community's representation of its regard for Mayor John Colquhoun. The memorial, erected in commemoration of him, was built by public subscription. The park also represents the rapid growth and subdivision of the area following WW1, forcing the need to reserve areas for public recreation.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item consists of two key components:

The park itself is a large open area reserved for public recreation. The park offers significant landscaping elements such as an avenue of landscaped exotic trees including tall palms, silky oak, one fig and recent complementary replacement planting of two jacarandas, which all appear to be complementary to the memorial in the front of the park. The park also features asphalted netball courts, concreted footpaths, a children's playground, cricket nets, and an amenities building.

At the eastern boundary of the park by Blaxcell Street is a rotunda style memorial constructed locally of Benedict stone, a polished pebbled concrete material. The memorial is an open classical temple form with a domed roof supported by five columns, set on a pebble concrete circular pedestal raised on four steps. A new aluminium dedication plaque has been applied which reads:

"To the memory of Alderman John Colquhoun
A worthy citizen and public benefactor
An Alderman of the Municipality of Granville for 18 years and 4 times Mayor
Born 18th October 1857
Died on 12 May 1929
This memorial erected by citizens of Granville"

Both the memorial and park appear to be in good condition, the memorial has recently had a new aluminium dedication plaque affixed.

Condition	**Good**	Fair	Poor

Alterations and Additions

- A new replacement aluminium dedication plaque has been installed on the memorial.
- Elements such as playground equipment and amenities are modernised.
- Some plantings have been replaced; others potentially removed.

The integrity of the park is intact, the thoroughfare through the park appears to follow its original alignment.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1926-1935

This land was acquired for Colquhoun Park in 1926. An aerial photograph of 1930 shows what appears to be an access way into the park. In 1932, in reply to a request for the planting of Australian native trees in the park, Granville Council noted that many trees had already been planted in the park and that they would consider planting more at a future date.

The memorial is dedicated to memory of former Mayor, John Colquhoun, born 18 October 1857 and died 12 May 1929. He was a Scottish immigrant who arrived in Australia as a miner with no wealth. He started selling second-hand bags, bottles, cans and other goods. The bags were bought from the produce markets and re-sold to the public. Once John had generated some money, he was able to send for his family in Scotland. They arrived in 1890 and amongst his children was Alexander, who would go on to inherit the company.

The second-hand bag business grew ever larger as the NSW and Australian agricultural sectors found their feet. Around the turn of the century, John Colquhoun and his son Alexander Colquhoun were not only purchasing the second-hand bags from the markets. When the shipments of jute bags arrived from the sub-continent, ships carrying the goods were not always watertight. John Colquhoun and Alexander Colquhoun were able to purchase the wet and damaged items directly from the wharf. The bags were then dried out and repaired if necessary. These repaired bags were then sold to the public to satisfy the ever-increasing demand. Alexander Colquhoun took over the day to day running of the business in 1920, whilst John Colquhoun moved into politics. During the first of John Colquhoun's four (4) terms as mayor of Granville, he built the company's first ever premises located on Parramatta Road in Granville.

John Colquhoun saw that as a result of the rapid growth and subdivision of the area in the inter-war period, the provision of parklands for children and families in the community was lacking. He purchased the land to be reserved as a park for the recreational use of the many residents in the area in 1926. On the day of the park's official opening, John Colquhoun suddenly died at St Joseph's Hospital in Auburn one hour before the park was to be opened.

A monument was erected in 1935, designed by architect Sir Charles Rosenthal. The monument was built of Benedict Stone, an artificial stone produced by Goodlet and Smith in Merrylands in the early 1930s. The 5 September 1935 edition of the *Cumberland Argus and Fruitgrowers Advocate (Parramatta, NSW)* contains details of the dedication ceremony:

The romance of the Colquhoun bag industry, which started in a humble way and became the largest of its kind in Australia, was recalled at the dedication of the John Colquhoun memorial at Granville on Saturday afternoon. Executed in Benedick stone, the monument stands in an attractive garden plot near the railway station. It was built by public subscription. Mr. John Colquhoun's name is a household word in Granville. He lived there about 35 years. He played a prominent part in public affairs, was an alderman for sixteen years and Mayor on four occasions, and was noted for his philanthropy.

At the dedication ceremony, the secretary of the Colquhoun Memorial Committee (Alderman Brophy), who presided, read apologies from Sir Charles Rosenthal (designer of the monument), Sir Joseph Cook (an old friend of Mr. Coquhoun), and Alderman W. S. Kay (president of the memorial committee). Dedicating the memorial, the Mayor (Alderman Fielding) paid a warm tribute to Mr. Colquhoun's work for the town. His record of public service was an honourable one. An example of his generosity was his gift of Colquhoun Park to the town. Even in retirement he continued to take a keen interest in local affairs.

Documents within the National Trust (Parramatta Branch) state that it is possible the dedication plaque has been renewed. The 'chrome metal plaque' appears to have been placed with an aluminium plaque, stating:

"To the memory of Alderman John Colquhoun
A worthy citizen and public benefactor
An Alderman of the Municipality of Granville for 18 years and 4 times Mayor
Born 18th October 1857
Died on 12 May 1929
This memorial erected by citizens of Granville"

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The dwellings at 347-361 Blaxcell Street, South Granville are locally significant for their historical, associative and social values. Alongside the houses in Montgomery Avenue, Oakleigh Avenue, Clyde Street and Chiswick Road, this group of cottages were part of the first group developments constructed by the newly formed Housing Commission in 1944. As opposed to the brick houses within the area, the fibro houses are reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program. The item is associated with the Government Housing Commission, who built the cottages. The Blaxcell Street cottages have social value to the community as public housing. As the dwellings have been heavily modified with respect to fabric, they are generally not representative of Government Housing Commission dwellings other than through their overall form.

Criteria Assessment	
a) Historic	Alongside the houses in Montgomery Avenue, Oakleigh Avenue, Clyde Street and Chiswick Road, this group of cottages were part of the first group developments constructed by the newly formed Housing Commission in 1944. As opposed to the brick houses within the area, the fibro houses are reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program.
b) Associative	The item is associated with the Government Housing Commission, who built the cottages.
c) Aesthetic/Technical	The item does not meet this criterion.

d) Social	The Blaxcell Street cottages have social value to the community as public housing.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	As the dwellings have been heavily modified with respect to fabric, they are generally not representative of Government Housing Commission dwellings other than through their overall form.

Physical Description

The subject site consists of eight (8) Housing Commission dwellings in fibro with tiled roofs. The Housing Commission style from the 1940s is distinguished by its materiality and form which consist of brick, fibro-sheeting and weatherboard clad single storey dwellings, in either an L shape or rectangular form. Many of the dwellings have been re-clad in Hardiplank or aluminium imitation 'weatherboards' and most now have aluminium windows as opposed to timber. They do however generally retain their scale and form.

347 Blaxcell Street
The dwelling at 347 Blaxcell Street is an L shaped Inter-War bungalow in the Housing Commission style. The dwelling is located on a street corner between Blaxcell Street and Oakleigh Avenue and features a deep setback from the street, in alignment with other dwellings.

The dwelling has fibro sheet walls and a cement tiled hipped roof with a face brick chimney, cement tile ridging and modern guttering. Windows are timber double hung with flyscreens and four long panes of glass to each. The entrance has a square face brick arch over the doorway, a concrete porch with two concrete steps leading from the yard, a raised concrete garden bed with succulents and a fly screen over the door.

A concrete footpath leads from the gate, along the front of the dwelling to the porch. The front yard is neat and tidy, containing several mature trees and grassed areas. The property is bound by a wire mesh loop top fence.

The dwelling is in a good condition.

349 Blaxcell Street
The dwelling at 349 Blaxcell Street presents a highly modified rectangular shaped Inter-War dwelling in the Housing Commission style. The dwelling faces Blaxcell Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has contemporary stone clad walls and a cement tiled gabled roof with a rendered brick chimney, cement tile ridging and modern guttering. The gable ends contain aluminium cladding imitating weatherboard. Windows are rectangular and aluminium framed, with flyscreens. The front entrance is centred on the façade and is framed by stone cladding. It is entered via a new concrete porch which is painted. The dwelling has been extended to the rear with a large single-storey skillion. The dwelling has been given a modern colour scheme.

A concrete driveway has been provided along the southern boundary, leading to an open carport with a flat metal roof. A footpath leads from the driveway to the front porch. The front yard is neat and tidy, containing only a grassed area. The property is bound by a rendered brick fence with timber slat inserts. The fence has been given a modern colour scheme.

The dwelling is in a good condition.

351 Blaxcell Street
The dwelling at 351 Blaxcell Street presents a highly modified rectangular shaped Inter-War dwelling in the Housing Commission style. The dwelling faces Blaxcell Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has painted fibro sheeting walls (recently replaced) and a modern roof with black tiles and modern guttering. There is no chimney extant. There are large aluminium framed windows to the facade. Four small lights have been fixed to the front façade either side of the windows. The front entrance is centred on the façade and is covered by a security door. It is entered via a new concrete porch which is painted and sheltered by a flat roof metal awning. The dwelling has been extended to the rear with a large hipped roof extension. A modern granny flat has also been provided in the back yard. The dwelling has been given a modern colour scheme.

The front setback has been paved. There is no landscaping to the front. The property is bound by a rendered brick fence with timber slat inserts. The fence has been given a modern colour scheme.

The dwelling is in a good condition.

353 Blaxcell Street
The dwelling at 353 Blaxcell Street is an L shaped Inter-War bungalow in the Housing Commission style. The dwelling is located on a street corner between Blaxcell Street and Montgomery Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has aluminium or vinyl clad walls to imitate weatherboard, and a cement tiled gable roof with a projecting gable to the front. The roof contains a face brick chimney, cement tile ridging and modern guttering. Windows are aluminium framed with steel security screens, all painted white. The entrance has a concrete porch, covered with a flat metal roof held up on one steel pole. The front door is a modern four panelled door with a security screen. A flat roof extension has been added to the rear of the dwelling which is visible from Montgomery Street.

A concrete footpath leads from the gate directly to the porch. The front yard is neat and tidy, containing several mature trees and grassed areas. The property is bound by an aluminium loop and spearhead palisade fence.

The dwelling is in a fair condition.

355 Blaxcell Street
The dwelling at 355 Blaxcell Street is an L shaped Inter-War bungalow in the Housing Commission style. The dwelling is located on a street corner between Blaxcell Street and Montgomery Street and features a deep setback from the street, in alignment with other dwellings. The site has been subdivided at the rear and a new single-storey dwelling constructed at the rear facing Montgomery Street.

The dwelling has asbestos fibro sheet walls and a cement tiled hipped roof with a face brick chimney, cement tile ridging and modern guttering. Windows are timber double hung with flyscreens and four long panes of glass to each. The entrance has a modern concrete porch, covered with a modern flat roof shelter attached to the dwelling. It is unclear if the front door has been replaced.

A concrete footpath leads from the corner of the property straight to the concrete porch. The front yard is neat and tidy, containing a large low-lying palm street and grassed areas. The property is bound by a wire mesh loop top fence.

The dwelling is in a fair condition.

357 Blaxcell Street
The dwelling at 357 Blaxcell Street is a rectangular shaped Inter-War dwelling in the Housing Commission style. The dwelling faces Blaxcell Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has aluminium or vinyl clad walls (painted yellow) to imitate weatherboard, and a cement tiled gable roof with a small projecting hip to the front. The roof features modern guttering, cement tile ridging and a face brick chimney which extends down the front the façade to the ground. Windows are rectangular and aluminium framed, with flyscreens and aluminium awnings/shutters. The front entrance

is off-set from the centre of the façade and sits adjacent to the chimney breast. The front porch is brick topped with concrete, sheltered by a flat metal roof on three poles. The dwelling has been extended to the rear with a small flat roof extension.

A concrete driveway has been provided along the southern boundary. A footpath leads from the driveway to the front porch. The front yard is neat and tidy, containing one established tree and a large grassed area. There is no front boundary fence.

The dwelling is in good condition.

359 Blaxcell Street
The dwelling at 359 Blaxcell Street is a rectangular shaped Inter-War dwelling in the Housing Commission style. The dwelling faces Blaxcell Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has aluminium or vinyl clad walls (painted white) to imitate weatherboard, and a cement tiled gable roof with a small projecting hip to the front. The roof features modern guttering, cement tile ridging and a face brick chimney which extends down the front the façade to the ground. The chimney breast is clad with stone. Windows are rectangular and aluminium framed, with flyscreens and aluminium awnings. The front entrance is off-set from the centre of the façade and sits adjacent to the chimney breast. The front porch is brick topped with terracotta coloured tiles. It is sheltered by a flat metal roof on three Corinthian style poles. The dwelling has not been extended to the rear.

A concrete driveway has been provided along the northern boundary which leads to a Colourbond garage at the rear. A footpath leads from the driveway to the front porch. The front yard is neat and tidy, containing some hedges and a large grassed area. There is no front boundary fence.

The dwelling is in good condition.

361 Blaxcell Street
The dwelling at 361 Blaxcell Street is an L shaped Inter-War bungalow in the Housing Commission style. The dwelling is located on a street corner between Blaxcell Street and Chiswick Road and features a deep setback from the street, in alignment with other dwellings.

The dwelling has aluminium or vinyl clad walls to imitate weatherboard, and a cement tiled gable roof with a projecting gable to the front. There is no chimney extant, though the roof contains cement tile ridging and modern guttering. Windows are aluminium framed with flyscreens. The entrance has a concrete porch accessed by three concrete stairs and a steel balustrade. The door is framed by a square brick arch. The dwelling has a large skillion extension in fibro to the side (north) which is visible from Blaxcell Street. It is considered to be an intrusive addition with regards to form which reduces the overall significance of the dwelling and group of dwellings in general.

A concrete footpath leads from the street corner to the porch. The front yard is neat and tidy containing only grassed areas. The property is bound by an aluminium loop and spearhead palisade fence.

The dwelling is in fair condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

347 Blaxcell Street

- Wire mesh loop top fence*
- Integrity = High

349 Blaxcell Street

- Aluminium windows*
- New guttering
- Stone cladding*
- Imitation weatherboard to gable ends*
- New paint scheme
- Rendered front boundary fence with timber slat inserts*
- Single-storey rear extension
- Integrity = Low

351 Blaxcell Street

- New fibro wall sheeting
- New roof and guttering
- Aluminium windows*
- Façade lights x 4*
- New paint scheme
- Paved front setback*
- Rendered front boundary fence with timber slat inserts*
- Single-storey rear extension
- Granny flat to the rear
- Integrity = Low

353 Blaxcell Street

- Aluminium windows, painted white, with security screens*
- Front door replaced
- Flat roof, single-storey extension
- Aluminium loop and spearhead palisade fence*
- Integrity = High

355 Blaxcell Street

- New guttering
- Contemporary flat roof porch shelter*
- Wire mesh loop top fence*
- Subdivision of site and construction of a new single-storey dwelling at the rear, facing Montgomery Street*
- Integrity = High

357 Blaxcell Street

- Imitation weatherboard*
- Aluminium windows*
- Flat roof porch shelter*
- Rear extension
- Integrity = Moderate

359 Blaxcell Street

- Imitation weatherboard*
- Stone cladding to chimney breast*
- Aluminium windows*
- Flat roof porch shelter and Corinthian posts*
- Tiled porch
- Garage at rear
- Integrity = Moderate

361 Blaxcell Street

- Fibro skillion extension*
- Imitation weatherboard*
- Aluminium windows*
- Aluminium loop and spearhead palisade fence
- Balustrade to stairs

- Integrity = Moderate

Overall, the integrity of the item is considered to be moderate. Many of the dwellings have undergone significant alterations to fabric, although they generally retain their form and scale.

349 Blaxcell Street and 351 Blaxcell Street have a significantly lower grading of integrity due to the level of external modifications that have been undertaken. The buildings have a low level of integrity and are no longer demonstrative of this building type.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1944

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east., Guildford to the west and Chester Hill to the south. Westwards from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided.

To the east of Clyde Street, lies part of 250 acres of land by the Duck River that was granted to Darcy Wentworth, an Irish medical practitioner and public servant who settled in Australia in June 1790. Other early land grants to the south of the area were given to James Chisolm and Charles Frazer.

In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared which included the suburb of South Granville. Many of the first buyers in the area were orchardists and farmers, although there were also some men who built middle-class villas.

Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the post-war period there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

The land on which the Blaxcell Street cottages are located on had been privately acquired and subdivided as early as 1922, but very few of the lots had sold. The Commission bought a portion of Blaxcell Estate, kept the proposed street pattern, re-subdivided the lots, leaving a few private lots (all at the end of streets). This was the first of the Commission's group developments in New South Wales and the buildings in Montgomery Street were completed in December 1944. They were constructed in full double brick with Marseilles tiled roofs, decorative use of bricks around front porches and identical front fences.

This item on Blaxcell Street, alongside the houses in Montgomery Avenue, Oakleigh Avenue, Clyde Street and Chiswick Road, represents one of the earliest Housing Commission group developments. The fibro houses are reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program. All of these dwellings are shown on the Water Board plan of December 1944. The dwellings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The fibro extension to 361 Blaxcell Street is visible from Blaxcell Street and is considered to be a highly intrusive addition which reduces the overall significance of the dwelling and group of dwellings in general. Should the opportunity arise, this should be removed, and a sympathetic addition provided in its place.

- Due to a range of modern alterations and additions, the dwellings at 349 and 351 Blaxcell Street have low heritage integrity. While they can continue to contribute to the overall significance of the Blaxcell Estate Conservation Area, their inclusion as part of an individual heritage item is no longer warranted due to the extensive changes to both places on the façades, to the landscapes and to the rears. Therefore, the heritage curtilage shown below should be considered as a revised curtilage for the 'Houses built for Housing Commission' on Blaxcell Street in the Cumberland LEP. The dwellings at 349 and 351 Blaxcell Street should continue to be managed as part of the conservation area. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Heritage Inventory Sheet

Item Name	Electrical Substation		
Recommended Name	Electricity Substation		
Site Image			
Address	415-417 Blaxcell Street, South Granville		
Lot/Section/DP	19	-	11886
Current LEP ID	I236 (Cumberland LEP)		
Former LEP ID	I602 (Parramatta LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Utilities - Electricity	

Curtilage Map

Statement of Significance

The Blaxcell Street Electricity Substation is of local significance for its historic, aesthetic, technological and representative heritage values. The item illustrates the early-mid twentieth century technology utilised in the generation and distribution of electricity supply in the area by the former Parramatta & Granville Electricity Supply Co. The item has technical value as it illustrates the early-mid twentieth century technology utilised in the generation and distribution of electricity supply in the area. The item is an intact and representative example of the standardised electrical substations constructed in the Inter-War period, designed and built to harmonise with surrounding houses.

Criteria Assessment	
a) Historic	The item illustrates the early-mid twentieth century technology utilised in the generation and distribution of electricity supply in the area by the former Parramatta & Granville Electricity Supply Co.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The substation illustrates the early-mid twentieth century technology utilised in the generation and distribution of electricity supply in the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is an intact and representative example of the standardised electrical substations constructed in the Inter-War period, designed and built to harmonise with surrounding houses.

Physical Description

The substation is a single-storey shed-form common brick building, with a gabled roof of terracotta tile. It has a central front entry door with a triple vent above and tumbled courses of one and half bricks of soldiers standing to tiled line of roof edge. Plaques to each side of the door and the central shield/escutcheon indicate creation by "P & GES Co Ltd" (Parramatta and Granville Electricity Supply Co Ltd). Later additions include attached mono-pitch skillion form to the Rawson Street side and exposed machinery and units between substation and Blaxcell street.

A black open-mesh steel security fence has been installed between the substation and Blaxcell Street, topped with barbed wire. Signage has been installed on this fence to dissuade access and to warn of high voltage, and several steel light poles have been installed adjacent to the item.

The electrical substation is still in operation. The brickwork and terracotta tiling all appear to be in very good condition. The item is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Weatherboard extension to site
- Black open-mesh steel security fence*
- Brick skillion roof extension

Although the security fencing detracts from the overall significance of the item, the building itself retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1934

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east., Guildford to the west and Chester Hill to the south. Westward from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided.

Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the post-war period there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

The substation is not visible on a 1930 aerial photograph. In 1938, the Parramatta and Granville Electricity Supply Co Ltd stated in their advertising that "Substations [were] built to harmonise with

surrounding houses." This policy is evident in the attempt to design a pleasant sub-station on this site, utilising brickwork and terracotta tiling.

Parramatta and Granville Electricity Supply Co Ltd acquired this site in March 1933. On 9 April 1934, Parramatta builders Muston and Lavor applied to Granville Council to erect a brick sub-station on this site worth 350 pounds. The building remains in use as an electricity substation.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- It is understood that as the substation is still operational, some unsympathetic alterations such as open-mesh steel security fencing are unable to be removed or altered. If possible, in future, any additions and/or alterations should respect the historic aesthetic of the item.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The dwellings at 27, 29, 33, 35, 37, 39, 41, 43 and 47 Chiswick Road, South Granville are locally significant for their historic, associative, social and representative values. Alongside the houses in Montgomery Avenue, Oakleigh Avenue, Clyde Street and Blaxcell Street, this group of cottages were part of the first group development constructed by the newly formed Housing Commission in 1944. As opposed to the brick houses within the area, the fibro houses are reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program. The item is associated with the Government Housing Commission, who built the cottages. The Chiswick Road Houses have social value to the community as public housing. As dwellings retain much of their original fabric and form and are therefore representative of Government Housing Commission dwellings.

Criteria Assessment	
a) Historic	Alongside the houses in Montgomery Avenue, Oakleigh Avenue, Clyde Street and Blaxcell Street, this group of cottages were part of the first group development constructed by the newly formed Housing Commission in 1944. As opposed to the brick houses within the area, the fibro houses are reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program.
b) Associative	The item is associated with the Government Housing Commission, who built the cottages.
c) Aesthetic/Technical	The item does not meet this criterion.

d) Social	The Chiswick Road Houses have social value to the community as public housing.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	As dwellings retain much of their original fabric and form, and are therefore representative of Government Housing Commission dwellings.

Physical Description

The subject site consists of nine (9) Housing Commission dwellings in fibro with tiled roofs and brick features. The Housing Commission style from the 1940s is distinguished by its materiality and form which consist of brick, fibro-sheeting and weatherboard clad single storey dwellings, in either an L shape or rectangular form. The group generally retains their scale, form and materiality.

27 Chiswick Road
The building at 27 Chiswick Road is unlike any of the other housing commission dwellings on the street. This single-storey building includes four separate apartments, orientated to the east and addressing the park adjacent to the site rather than Chiswick Road. The building includes a cement tile gable roof timber with vertical timber boards to the gable end, double-hung sash windows, fibro sheeting walls, concrete steps (some of which have been tiled) and unornamented timber doors with modern flyscreens. The building has been modified with the inclusion of a large concrete ramp along the western elevation, set on top of a brick base. The ramp includes a painted steel balustrade. Due to the style of the building, it is likely that it was constructed at a later date than the other commissioning housing dwellings on the street.

A modern, single-storey brick dwelling is currently under constructed on the site, between the original dwelling and 29 Chiswick Road.

The dwelling is in a good condition.

29 Chiswick Road
The dwelling at 29 Chiswick Road is a rectangular shaped Inter-War bungalow in the Housing Commission style. The dwelling has a consistent setback with other dwellings along the street.

The dwelling has been built on a brick base, with fibro sheet walls and a cement tiled gabled roof with cement tile ridge capping. Windows are timber double hung with flyscreens and four long panes of glass to each. One window on the eastern (side) elevation has a mounted air conditioning unit. The porch is tiled and has been partially enclosed with fibro sheeting and two large sections of clear acrylic. The porch is sheltered by a flat Corrugated iron roof and is entered via three stairs which lead from the footpath. The dwelling has a small, single-storey extension with a flat roof.

The concrete footpath leads from a concrete driveway which runs along the eastern boundary of the site. There are several established trees in the front yard, though it is largely a grassed area. There is no front boundary fence.

The dwelling is in a good condition.

33 Chiswick Road
The dwelling at 33 Chiswick Road is a rectangular shaped Inter-War bungalow in the Housing Commission style. The dwelling has a consistent setback with other dwellings along the street.

The dwelling has been built on a brick base, with fibro sheet walls and a cement tiled gabled roof with cement tile ridge capping. There is a single face brick chimney to the eastern side of the roof. Windows are timber double hung with flyscreens and four long panes of glass to each. There is no covered porch, though the front entrance is located just inside an enclave. The dwelling has been extended to the rear with a single-storey flat roof structure.

The front yard is not well maintained, with overgrown grass and tree cuttings. Two circular, painted brick garden beds are located on either side of the entrance, containing overgrown plantings. There are several established trees adjacent to the street which screen views of the building. There is no front boundary fence.

The dwelling is in a fair condition, with some elements such as the fibro noted to be in poor condition.

35 Chiswick Road
The dwelling at 35 Chiswick Road is a rectangular shaped Inter-War bungalow in the Housing Commission style. The dwelling has a consistent setback with other dwellings along the street.

The dwelling has been built on a brick base, with aluminium clad walls to imitate wide weatherboards and a modern tiled hipped roof. The roof also has a new guttering system. There is a single face brick chimney to the front of the roof, with a chimney breast visible down the front elevation that has been recently repointed. It is unclear if the timber windows are extant as they are now covered by modern fly screens with aluminium framing. There is no covered porch, although the front entrance is located just inside a brick enclave that appears to have been recently repointed. The dwelling has been extended to the rear with a single-storey flat roof structure. It appears as though a granny flat has also been added to the rear yard.

The front yard is well maintained. There are no established plantings though the front yard contains several small garden beds. There is no front boundary fence.

The dwelling is in a good condition, having undergone renovations recently.

37 Chiswick Road
The dwelling at 37 Chiswick Road is a rectangular shaped Inter-War bungalow in the Housing Commission style. The dwelling has a consistent setback with other dwellings along the street.

The dwelling has been built on a brick base, with fibro sheet walls and a terracotta tiled gabled roof with a projecting gable to the front. There is a single face brick chimney to the western side of the roof and the chimney breast is visible down the western elevation. Windows are timber double hung, with four long panes of glass to each. There is a concrete porch next to the front door, partially covered by a circular awning. The dwelling has not been extended to the rear.

The front yard is well maintained grass with a concrete footpath leading to the front door. There are no established plantings. There is no front boundary fence.

The dwelling is in a good condition.

39 Chiswick Road
The dwelling at 39 Chiswick Road is a rectangular shaped Inter-War bungalow in the Housing Commission style. The dwelling is setback closer to the street than most buildings along Chiswick Road.

The dwelling has been built on a brick base, with fibro sheet walls and a cement tile gabled roof. There is a single face brick chimney to the eastern side of the roof and the chimney breast is visible down the western elevation. The original timber windows to the front facade have been replaced with three large aluminium frames which is disproportionate to the scale of the dwelling. The front porch is set on a brick base with a concrete topping. The porch is covered by a recent flat roof awning set on two brick piers. The dwelling has been extended to the rear with a large flat-roof extension which is a similar size to the original dwelling.

The front yard is well maintained grass with a concrete footpath leading to the front door. There are no established plantings. Unlike most dwellings along the northern side of Chiswick Road, the site has a face brick boundary wall.

The dwelling is in a good condition.

41 Chiswick Road
The dwelling at 41 Chiswick Road is a rectangular shaped Inter-War bungalow in the Housing Commission style. The dwelling has a consistent setback with other dwellings along the street.

The dwelling has been built on a brick base, with fibro walls and a cement tile hipped roof. There is a single face brick chimney to the front of the roof, with a chimney breast visible down the front elevation. The chimney breast appears to have been cleaned and repointed recently, otherwise the brick has been replaced. Windows are timber double hung with aluminium framed flyscreens and four long panes of glass to each window. There is no covered porch, though the front entrance is located just inside a brick enclave. The dwelling has not been extended to the rear.

The front yard is well maintained. There are no established plantings though the front yard contains a garden bed which runs along the front of the building. There is no front boundary fence.

The dwelling is in a good condition.

43 Chiswick Road
The dwelling at 43 Chiswick Road is a rectangular shaped Inter-War bungalow in the Housing Commission style. The dwelling has a consistent setback with other dwellings along the street.

The dwelling has been built on a brick base, with fibro walls and a cement tile gable roof. There is a single face brick chimney to the eastern side of the roof and the chimney breast is visible down the eastern elevation. Windows are timber double hung with aluminium framed flyscreens and four long panes of glass to each window. There is no covered porch, though the front entrance is located just inside an enclave. The dwelling has been extended to the rear with a single-storey, flat roof addition.

The front yard is well maintained. There are several young trees in the front yard as well as a garden bed directly in front of the dwelling. There is no front boundary fence.

The dwelling is in a good condition.

47 Chiswick Road
The dwelling at 47 Chiswick Road is a rectangular shaped Inter-War bungalow in the Housing Commission style. The dwelling has a consistent setback with other dwellings along the street.

The dwelling has been built on a brick base, with fibro walls and a cement tile hipped roof. There is a single face brick chimney to the front of the roof, with a chimney breast visible down the front elevation. Timber windows have been replaced with wide aluminium framed windows. There is no covered porch, though the front entrance is located just inside a brick enclave. There is a set of five tiled stairs leading up to the front entrance with a simple steel balustrade. The dwelling has been extended several times to the rear. A large granny flat or shed has also been added to the rear north west corner of the site.

The front yard is well maintained. There are no established plantings though the front yard contains a garden bed which runs along the front of the building. There is no front boundary fence.

The dwelling is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

27 Chiswick Road

Historical Notes	
Construction years	1944

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east, Guildford to the west and Chester Hill to the south. Westwards from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided.

To the east of Clyde Street, lies part of 250 acres of land by the Duck River that was granted to Darcy Wentworth, an Irish medical practitioner and public servant who settled in Australia in June 1790. Other early land grants to the south of the area were given to James Chisolm and Charles Frazer.

In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared which included the suburb of South Granville. Many of the first buyers in the area were orchardists and farmers, although there were also some men who built middle-class villas.

Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the post-war period there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

The land on which the Chiswick Road Houses are located on had been privately acquired and subdivided as early as 1922, but very few of the lots had sold. The Commission bought a portion of the Blaxcell Estate, kept the proposed street pattern, re-subdivided the lots, leaving a few private lots (all at the end of streets). This was the first of the Commission's group developments in New South Wales and the buildings in Montgomery Street were completed in December 1944. They were constructed in full double brick with Marseilles tiled roofs, decorative use of bricks around front porches and identical front fences.

This item on Chiswick Road, alongside the houses in Montgomery Avenue, Oakleigh Avenue, Clyde Street and Blaxcell Street, represents one of the earliest Housing Commission group developments. The fibro houses are reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program. All of these dwellings are shown on the Water Board plan of December 1944. The dwellings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- A new dwelling has been constructed at 27 Chiswick Road, adjacent to an original but highly modified Housing Commission dwelling. The heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The houses at 286 and 288 Clyde Street, South Granville are of significance for the local area for historic and social reasons, and as a representative example of Government provision of housing undertaken by the Housing Commission. Alongside the houses in Montgomery Avenue, Oakleigh Avenue, Chiswick Road and Blaxcell Street, this group of cottages were the first group development constructed by the newly formed Housing Commission in 1944. This group of houses show the standard of early Housing Commission development. The item is socially significant for its connection to the Government Housing Commission, who built the cottages.

Criteria Assessment	
a) Historic	The item is of significance as part of the first group development constructed by the newly formed Housing Commission in 1944.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item is socially significant for its connection to the Government Housing Commission, who built the cottages.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item meets the local criteria as a representative example of Government provision of housing undertaken by the Housing Commission.

Physical Description

The houses on Clyde Street form part of an estate of Housing Commission houses which includes both brick and fibro dwellings. The Housing Commission style from the 1940s is distinguished by its materiality and form which consist of brick, fibro-sheeting and weatherboard clad single storey dwellings, in either an L shape or rectangular form. There were originally six houses, all of which were fibro clad, however, only two remain extant.

278 Clyde Street
The original dwelling at 278 Clyde Street has been demolished and replaced with a modern dwelling. The new dwelling built c. 2014 is not a heritage item and should be removed from the listing.

286 Clyde Street
The dwelling at 286 Clyde Street has stretcher bond brick walls with a terracotta tiled roof. The roof has a gable with projecting gable front, with a brick external chimney with steps and string line. A vent is installed within the wall underneath the projecting gable. The original low brick fence with bullnose brick coping and dentils below with a wrought iron gate has been added to, with a horizontal aluminium slat fence adding height to the fencing. Heavy vegetation cover within the road-facing portions of the house impede the view from the public domain.

288 Clyde Street
The dwelling at 288 Clyde Street has stretcher bond brick walls with a terracotta tiled roof. The roof has a gable with weatherboard boxed ends and a brick external chimney with steps and string line. The original low brick fence with bullnose brick coping and dentils below with a wrought iron gate is extant, and a box hedge has been planted behind this fence to provide an additional visual buffer. A weatherboard extension has been erected to the rear of the dwelling.

Overall, the two dwellings are well maintained, and their condition is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

No. 286

- Aluminium slat fence*
- Heavy vegetation

No. 288

- Rear weatherboard extension

Overall, the integrity of 286 and 288 Clyde Street, South Granville is high. With the exception of the installation of the aluminium slat fence at 286 Clyde Street, modifications have been sympathetic in nature and do not detract from the significance of the group of items.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1944

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east., Guildford to the west and Chester Hill to the south. Westwards from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided.

To the east of Clyde Street, lies part of 250 acres of land by the Duck River that was granted to Darcy Wentworth, an Irish medical practitioner and public servant who settled in Australia in June 1790. Other early land grants to the south of the area were given to James Chisolm and Charles Frazer.

In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared which included the suburb of South Granville. Many of the first buyers in the area were orchardists and farmers, although there were also some men who built middle-class villas.

Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the post-war period there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

The land on which the two houses at 286 and 288 Clyde Street, South Granville are located on had been privately acquired and subdivided as early as 1922, but very few of the lots had sold. The Commission bought a portion of Blaxcell Estate, kept the proposed street pattern, re-subdivided the lots, leaving a few private lots (all at the end of streets). This was the first of the Commission's group developments in New South Wales and the buildings in Montgomery Street were completed in December 1944. They were constructed in full double brick with Marseilles tiled roofs, decorative use of bricks around front porches and identical front fences.

This item on Clyde Street, alongside the houses in Blaxcell Street, Oakleigh Avenue, Montgomery Avenue and Chiswick Road, represents one of the earliest Housing Commission group developments. The brick houses within this estate demonstrate the ideals of the Housing Commission which was established to build comfortable and well-appointed dwellings within the resources and capacity of the state. Many of these dwellings are shown on the Water Board plan of December 1944. The dwellings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The original dwelling at 278 Clyde Street has been demolished and replaced and the new build has no heritage significance. The heritage curtilage shown below should be considered as a revised curtilage for the 'Houses built for Housing Commission' on Clyde Street in the Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

	Level 2	Retail and Wholesale	

Curtilage Map

Statement of Significance

The Dellwood Shopping Centre is of local significance for its historic and social values. The item is historically significant as a local shopping centre built during the Post-War period to service the growing local community placed in housing commission residences, and as the first planned shopping centre built by the Housing Commission of NSW. The item is historically associated with the Post-War and baby boomer period where there was a sudden growth in population and the need for public housing was high. The item is socially significant for its connection to the Government Housing Commission who built the shops for the local community.

Criteria Assessment	
a) Historic	The item is historically significant as a local shopping centre built during the Post-War period to service the growing local community placed in housing commission residences, and as the first planned shopping centre built by the Housing Commission of NSW. The item is associated with the Post-War and baby boomer period where there was a sudden growth in population and the need for public housing was high.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item is socially significant for its connection to the Government Housing Commission who built the shops for the local community.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item is a Post-War (c. late-1940s) two-storey brick-veneer building with a shopping strip on the ground floor and apartment-style residences above. The building exterior features decorative banded brick walls with a gabled terracotta tile roof. The main long building is intersected at the western end by a gable-ended L-shaped wing. There is a flat cantilevered awning running the length of the main building. There is a mix of original and modern elements along the façade fenestration, including modern aluminium infill windows, window grilles, air conditioning units, signage and steel roller shutters. Signage on the awnings and glazed shopfronts have been provided directly onto the brickwork, detract from the significance of the building.

Along the Dellwood Street frontage, there is a wide-open verge with rectangular garden beds planted with perennial maples. On the northern side of Dellwood Street is William Lamb Park, an open public park with a set of typical, Post-War three-storey housing commission apartment block.

There are detached garages at the rear of main building accessed by a rear lane parallel to Dellwood Street. Many of these have been infilled with carports and shelters to enclose the rear yards completely.

The item appears to be in fair condition, with a number of later additions and alterations.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Modern elements including modern aluminium infill windows, window grilles, air conditioning units, signage and steel roller shutters*.
- Signage on the awnings, glazed shopfronts and directly onto the brickwork*.
- Structures enclosing the yards in the rear of the building

While the building maintains its original form, there are many modern accretions that detract from the significance of the building. The integrity is noted as moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1948

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east, Guildford to the west and Chester Hill to the south. Westwards from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided.

To the east of Clyde Street, lies part of 250 acres of land by the Duck River that was granted to Darcy Wentworth, an Irish medical practitioner and public servant who settled in Australia in June 1790. Other early land grants to the south of the area were given to James Chisolm and Charles Frazer.

In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared which included the suburb of South

Granville. Many of the first buyers in the area were orchardists and farmers, although there were also some men who built middle-class villas.

Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the Post-War period, there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

The Dellwood Street Shopping centre was the first planned shopping centre built by the Housing Commission of NSW. It was designed by architect, W. Watson Sharp for the Housing Commission, as a set of ten shops with flats overhead. The design was influenced by the New Towns development in United Kingdom. It was built in 1948. Today, the site remains in use as for commercial premises.

Recommendations

Heritage Conservation Area	Not included		
Date Updated	October 2019		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Commercial	

Curtilage Map

Statement of Significance

The Acrow Building is of local significance for its aesthetic and rarity values. The Acrow Building retains its aesthetic significance as a Post-War modernist commercial building of pronounced styling, that represents a major design effort in presentation by the company, Felt & Textiles of Australia Ltd in 1948. The item's aesthetic significance is enhanced by the landmark qualities of the building reflected in the architectural form. The item is a rare example of a Post-War modernist commercial building. There are very few industrial sites built in the Post-War modernist style in South Granville and more broadly in the Cumberland LGA.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The Acrow Building retains its aesthetic significance as a Post-War modernist commercial building of pronounced styling that represents a major design effort in presentation by the company, Felt & Textiles of Australia Ltd in 1948. The item's aesthetic significance is enhanced by the landmark qualities of the building reflected in the architectural form.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is a rare example of a Post-War modernist commercial building. There are very few industrial sites built in the Post-War modernist style in South Granville and more broadly in the Cumberland LGA.

g) Representativeness	The item does not meet this criterion.

Physical Description

The Acrow factory complex is presented as an elongated two storey form spread north/south along the site, with the central landmark tower bearing vertical strip windows under a clock face on the main front. The main features are the rendered wall surfaces with lifts visible in the tower, and the horizontal tower fins. The ground floor windows have vertical proportions with squared steel frames inset with green glass. The windows are sheltered by a continuous strip hoop façade, which is plain with string courses to give shadow lines.

The heritage item was identified as having a large, formally planted and grassed forecourt of palms cypress, eucalypts and brush box. It appears as if part of this landscaping has been removed for the construction of a carpark.

The item is in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Carpark and carpark shelters
- Palisade fence
- Signage
- Extension to original set of buildings along South Ferndell Street

The integrity of the item is moderately intact. The extension to the original set of buildings along South Fernadell Street is of sensitive design. However, the installation of a carpark and carpark shelters appears to have removed part of the large formally planted and grassed forecourt mentioned in pervious documentary evidence. The overall integrity of the item is moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1948

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east., Guildford to the west and Chester Hill to the south. Westwards from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided.

To the east of Clyde Street, lies part of 250 acres of land by the Duck River that was granted to Darcy Wentworth, an Irish medical practitioner and public servant who settled in Australia in June 1790. Other early land grants to the south of the area were given to James Chisolm and Charles Frazer.

In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared which included the suburb of South Granville. Many of the first buyers in the area were orchardists and farmers, although there were also some men who built middle-class villas.

Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the post-war period there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

This site was transferred to Felt & Textiles of Australia Ltd in June 1948. In March 1948, the company had expanded its capital by the issue of an additional 1,260,000 shares valued at £1 each, which was likely used to finance expansion. An aerial photo from May 1951 shows a range of saw-toothed industrial buildings on this site, though the characteristic tower does not appear to be part of this building. In 1953 and 1955, the company took out mortgages over this site, likely to finance further expansion. The company was the manufacturer of Feltex, an inexpensive floor covering which was very popular in the 1950s and 1960s.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		

		11. The condition of this item is poor. Condition and maintenance should be monitored.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Revised curtilage recommended – refer below

Statement of Significance

The dwellings at 2–24 and 7–29 Montgomery Avenue, South Granville are locally significant for their historic, associative, social and representative values. Alongside the houses in Oakleigh Avenue, Clyde Street and Chiswick Road, this group of cottages form part of the first group development constructed by the newly formed Housing Commission in 1944. The brick houses within this estate demonstrate the ideals of the Housing Commission which was established to build comfortable and well-appointed dwellings within the resources and capacity of the state. The item is associated with the Government Housing Commission, who built the cottages. The Montgomery Street houses have social value to the community as public housing. The area is remarkable for the totally intact core area of Montgomery Street which has kept all its fencing and all original houses without second storey additions, which are representative of Government Housing Commission dwellings.

Criteria Assessment	
a) Historic	Alongside the houses in Montgomery Avenue, Oakleigh Avenue, Clyde Street and Chiswick Road, this group of cottages were part of the first group development constructed by the newly formed Housing Commission in 1944. The brick houses within this estate demonstrate the ideals of the Housing Commission which was established to build comfortable and well-appointed dwellings within the resources and capacity of the state.
b) Associative	The item is associated with the Government Housing Commission, who built the cottages.
c) Aesthetic/Technical	The item does not meet this criterion.

d) Social	The Montgomery Street houses have social value to the community as public housing.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The area is remarkable for its totally intact core area of Montgomery Street which has kept all its fencing and all original houses without second storey additions, which are representative of Government Housing Commission dwellings.

Physical Description

The subject site consists of twenty-four (24) dwellings in the brick Housing Commission style. The Housing Commission style from the 1940s is distinguished by its materiality and form which consist of brick, fibro-sheeting and weatherboard clad single storey dwellings, in either an L shape or rectangular form. Dwellings along both the northern and southern sides of the road have a consistent setback with their neighbours which creates a consistent streetscape setting, though the dwellings on the northern side are generally setback closer to the street. While some dwellings have undergone alterations and additions to the fabric, they are highly intact and generally retain their form and scale.

SOUTH SIDE OF STREET

2 Montgomery Avenue
The dwelling at 2 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles. The dwellings feature a tall face brick chimney on the east (side) elevation which include patterned bricks, visible chimney breasts on the east elevation and a brick entrance accessed by a small brick porch. Some dwellings retain their original timber windows with brick window boxes. In many instances timber windows have been replaced with painted aluminium sliding sash windows, either in the same size as existing or in larger sizes which has resulted in the loss of some brickwork to install.

The front yard is neat and well maintained, with a small a grassed front lawn and small garden beds. The property boundary is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

4 Montgomery Avenue
The dwelling at 4 Montgomery Avenue is a highly intact single storey L shaped brick dwelling, laid in the stretcher bond pattern. The roof form is a projecting gable clad with Marseilles tiles. There is no chimney present on this building. The dwelling has two projecting gables with a triple set timber framed sash window fronted by lightweight aluminium flyscreens. A pressed metal awning is cantilevered over the windows on each projecting gable. A vent is located at the apex of the gable end. The entrance was not visible from the public domain.

The dwelling has a well-maintained garden setting with an established row of conifers along the western boundary of the property. A concrete slab driveway is also located along the west elevation of the property and leads to a concrete ramp with steel post balustrade at the rear of the property. The property boundary is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

6 Montgomery Avenue
The dwelling at 6 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles and a replaced guttering system. The dwelling features a tall face brick chimney on the west (side) elevation which include patterned bricks, visible chimney breasts on the west elevation and a brick entrance accessed by a small brick porch. The brick porch has a flat roof with a boxed eave and is accessed by two steps clad in contemporary tiles. Some dwellings retain their original timber windows with brick

window boxes. In many instances timber windows have been replaced with painted aluminium sliding sash windows, either in the same size as existing or in larger sizes which has resulted in the loss of some brickwork to install. The residence at 6 Montgomery Avenue retains its timber framed sash windows, which are now fronted by lightweight flyscreens. The front door is a contemporary security screen door. An air conditioning unit is affixed to the front facade.

The front yard is neat and well maintained, with a small a grassed front lawn, small garden beds and a concrete footpath leading to the front porch. The property shares established row of conifers with 4 Montgomery Avenue. A concrete strip driveway is located along the western boundary of the property with a lightweight pressed metal carport at the rear. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

8 Montgomery Avenue
The dwelling at 8 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a hipped roof clad with Marseilles tiles and a replaced guttering system. The dwelling features a tall face brick chimney on the east (side) elevation which include patterned bricks, visible chimney breasts on the east elevation and a brick entrance accessed by a small brick porch with a flat roof and boxed eave. The porch of 8 Montgomery Avenue is fronted by a painted brick patio with a steel balustrade that matches the windows and doors. Some dwellings retain their original timber windows with brick window boxes. The timber windows at 8 Montgomery Avenue have been replaced with painted aluminium sliding sash windows and are fronted by painted steel bars. An air conditioning unit is fixed through a window on the front facade. The front door has a matching security screen door.

The dwelling has a small rear extension and a battle axe subdivision at the rear.

The front yard is neat and well maintained, with a small a grassed front lawn and a concrete footpath leading to the front patio/porch. A concrete strip driveway is located along the eastern boundary of the property leads to a weatherboard garage with a gabled roof. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below with a similar steel gate, matching the pattern on the windows, door and patio balustrade.

The condition of the building is good.

10 Montgomery Avenue
The dwelling at 10 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a hipped roof clad with Marseilles tiles and a small projecting gable to Montgomery Street. The roof has a replaced guttering system. The dwelling features a tall face brick chimney on the front elevation which include patterned bricks and a visible chimney breast. The front façade features a brick entrance accessed by a small brick porch with a flat roof and boxed eave. The porch of 10 Montgomery Avenue is fronted by a glazed brick patio. The timber windows at 10 Montgomery Avenue have been replaced with painted aluminium sliding sash windows. The window on the projecting gable has a pressed metal awning cantilevered over. An air conditioning unit is fixed to the front façade.

The front yard is neat and well-maintained, with a large established Norfolk Island Pine. A large portion of the front yard is dominated by a new concrete slab driveway along the east elevation. The dwelling has a small rear extension and a battle ace subdivision at the rear not visible from the public domain. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good overall, however has a deteriorated timber fascia.

12 Montgomery Avenue
The dwelling at 12 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a hipped roof clad with Marseilles tiles and a small

projecting gable to Montgomery Street. The roof guttering has been replaced. The dwelling features a tall face brick chimney on the front elevation which include patterned bricks and a visible chimney breast. The front façade features a brick entrance accessed by a small brick porch with a flat roof and boxed eave. The porch of 12 Montgomery Avenue is fronted by a glazed brick patio area accessed via two brick steps. The dwelling retains its original timber framed sash windows with brick window boxes. An air conditioning unit is located in window on front facade.

The front yard is neat consisting of a grassed lawn and no plantings. A concrete strip driveway is located along the eastern boundary and a small concrete footpath that leads to the porch. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

14 Montgomery Avenue
The dwelling at 14 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles and a new guttering system. The dwelling features a short brick chimney on the east elevation which includes patterned bricks and a visible chimney breast. The front façade features a brick entrance accessed by a small brick porch with a flat roof and boxed eave. The brick porch entry features decorative brick inserts. The dwelling retains its original timber framed sash windows with brick window boxes. They are fronted by lightweight flyscreens. The east and west gable ends are part brick and part timber weatherboard at the gable end.

A concrete slab driveway is located along the east elevation. The front yard is neat, consisting of a grassed lawn and no planting and a small concrete footpath that leads to the porch. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

16 Montgomery Avenue
The dwelling at 16 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles and a new guttering system. The dwelling features a short brick chimney on the east elevation which include patterned bricks and a visible chimney breast. The front façade features a brick entrance accessed by a small brick porch with a flat roof and boxed eave. The brick porch entry features recessed brick inserts. Some dwellings retain their original timber framed sash windows with brick window boxes. The timber windows at 16 Montgomery Avenue have been replaced with painted aluminium sliding sash windows. They are fronted by lightweight flyscreens. The east and west gable ends are part brick and part timber weatherboard at the gable end.

A concrete slab driveway is located along the east elevation. The front yard consisting of a grassed lawn, some informal plantings and a small concrete footpath that leads to the porch. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good overall, although some paint is peeling from the gable end.

18 Montgomery Avenue
The dwelling at 18 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a hipped roof clad with Marseilles tiles, with a replaced guttering system. The roof also features solar panels and a large aerial. The dwelling features a tall face brick chimney on the east elevation which include patterned bricks and a visible chimney breast. The front façade features a brick entrance accessed by a small brick porch with a flat roof, boxed eave and glazed tile flooring. The timber windows at 18 Montgomery Avenue have been replaced with painted aluminium sliding sash windows with security screens.

The rear of the dwelling has a large flat roofed brick extension. The east elevation features a brick garage. A large portion of the front yard is dominated by a new concrete slab driveway along the east elevation. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

20 Montgomery Avenue
The dwelling at 20 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a hipped roof clad with Marseilles tiles and a small projecting gable to Montgomery Street and a replaced guttering system. The dwelling features a tall face brick chimney on the front elevation which include patterned bricks and a visible chimney breast. The front façade features a brick entrance accessed by a small brick porch with a flat roof clad with pressed metal sheets and a rendered brick floor. The dwelling retains its original painted timber sash windows with brick window boxes. The timber windows at 20 Montgomery Avenue have been fronted by lightweight flyscreens. An air conditioning unit is fixed to the front façade.

The front yard is neat and well-maintained with a low-lying hedge along the front façade and small garden beds. A new garden bed with red gravel surrounds a palm tree stump. A large portion of the front yard is dominated by a new concrete slab driveway along the east elevation. The property's boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

22 Montgomery Avenue
The dwelling at 22 Montgomery Avenue is a highly intact single storey L shaped brick dwelling, laid in the stretcher bond pattern. The roof form is a projecting gable clad with Marseilles tiles. A tall brick chimney is located on the front façade with patterned bricks and a visible chimney breast. The projecting gable to Montgomery Avenue has a triple set timber framed sash window. The projecting gable to the west has a corner window that consists of timber framed sash windows fronted by lightweight flyscreens. The front façade features a brick entrance accessed by a concrete ramp.

The dwelling has a well-maintained garden setting, with a concrete strip driveway located along the west elevation of the property. The property's boundary is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

24 Montgomery Avenue
The dwelling at 24 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles and a new guttering system. The east and west gable ends are part brick and part timber weatherboard at the gable end. The dwelling features a short brick chimney on the east elevation which include patterned bricks and a visible chimney breast. The front façade features a brick entrance accessed by a small brick porch with a flat roof and boxed eave. The brick porch entry is accessed via a concrete ramp. The dwelling retains some original timber framed sash windows with brick window boxes. They are fronted by lightweight flyscreens. The larger window opening on the front façade consists of a fixed aluminium framed window.

A concrete strip driveway is located along the east elevation and joins a concrete footpath that leads to the porch. The front yard is neat, consisting of a grassed lawn with several plantings along the property boundary. Several pot plants are located along the porch.

The condition of the building is good overall, although there is paint peeling from weatherboards at the gable ends.

NORTH SIDE OF STREET

7 Montgomery Avenue
The dwelling at 7 Montgomery Avenue is a highly intact single storey L shaped brick dwelling, laid in the stretcher bond pattern. The roof form is a projecting hip clad with Marseilles tiles, with a Colorbond guttering system. A tall simple brick chimney is located on the front façade with a visible chimney breast. The projecting hip to Montgomery Avenue has a triple set timber framed, sash window with the easternmost sash fronted by a lightweight flyscreen. The projecting gable to the west also has a triple set timber framed sash window. The southern elevation of the western projecting hip has a single timber framed sash window. The front façade features a brick entrance accessed by a curved brick step.

The dwelling has a well-maintained garden setting with a concrete strip driveway located along the west elevation of the property. The property boundary is marked by an established garden bed with young trees. The garden bed is constructed of roughly spaced, jiggered stones.

The condition of the building is good.

9 Montgomery Avenue
The dwelling at 9 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles and a new guttering system. The east and west gable ends are construction of just brick with two window openings. A tall brick chimney on the front façade which includes patterned bricks and a visible chimney breast. The front façade features a brick entrance accessed by a small brick porch with a flat roof and boxed eave. The porch is enclosed with a low-lying, black steel balustrade (matching front fence) and large grey tiles. The timber windows at 9 Montgomery Avenue have been replaced with aluminium framed slide windows. The windows are fronted by decorative steel bar, painted white.

A large portion of the front yard is dominated by a new concrete slab driveway encircling the building which has removed the garden setting of the item. The property's boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below. A visually intrusive black metal gate is affixed atop the brick boundary fence.

The condition of the building is good.

11 Montgomery Avenue
The dwelling at 11 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a gabled roof with a small central projecting hip over the entrance, clad in Marseilles tiles and a new guttering system. A tall brick chimney is located on the west elevation of the building which includes patterned bricks and a visible chimney breast. The front façade features a stepped brick entrance with a small brick porch accessed by four brick steps. The dwelling retains its original timber framed sash windows with brick window boxes. The front façade features two triple sets of sash windows, fronted by lightweight flyscreens. An air conditioning unit is fixed to the lower sash opening of one window.

The front yard is neat, consisting of a grassed lawn with some informal plantings. A concrete slab driveway is located along western boundary and lead to a flat roof carport at the rear. A small concrete footpath leads from the driveway to the porch. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

13 Montgomery Avenue
The dwelling at 13 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a gabled roof with a projecting hip to Montgomery Avenue, clad in Marseilles tiles and a new Colorbond guttering system. A tall brick chimney is located on the front elevation of the building which includes patterned bricks and a visible chimney breast. The front façade features a brick entrance with a small brick porch accessed by four brick steps. The dwelling retains its original timber framed sash windows with brick window boxes. The front façade

features two double sets of sash windows, fronted by lightweight flyscreens. An air conditioning unit is fixed to the lower sash of the window on the projecting gable.

The front yard is neat, consisting of a grassed lawn with a garden bed along the front façade and porch. A concrete slab driveway is located along western boundary and lead to a skillion roof carport at the rear. Pressed metal sheets fronting the carport have been retrofitted as a gate. A small concrete footpath leads from the driveway to the porch. The property's boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

15 Montgomery Avenue
The dwelling at 15 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles and a new guttering system. The east and west gable ends are construction of just brick. A tall brick chimney on the west elevation which includes patterned bricks and a visible chimney breast, cutting into the gable end. The front façade features a central brick entrance accessed by a small brick porch with a flat roof and boxed eave. The brick entrance features a later lacework corner. The porch is accessed by three brick steps. The dwelling retains its original timber framed sash windows with brick window boxes, fronted by lightweight flyscreens.

The rear of the property appears to have a number of garages and free standing structures.

A large portion of the front yard is dominated by a concrete slab driveway along the west elevation, dissected by a white arrow topped palisade gate on wheels. The remaining front yard retains a grassed front lawn with a small garden bed. A concrete footpath leads from the driveway to the front porch. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below. Part of the fence has been impacted.

The condition of the building is good.

17 Montgomery Avenue
The dwelling at 17 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles and a new guttering system. A tall brick chimney is located on the front façade and includes patterned bricks and a visible chimney breast. The front façade features a central brick entrance accessed by a small brick porch with a flat roof and boxed eave. The porch is accessed by three brick steps. The dwelling retains its original timber framed sash windows with brick window boxes, fronted by lightweight flyscreens.

The front yard is neat, consisting of a grassed lawn with a garden bed along the front façade. Lemon trees line the boundary fence. A flat roofed carport is located at the front of the house over a concrete slab driveway on the western boundary. A small concrete footpath leads from the driveway to the porch. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good overall. A section of the boundary fence is in a fair condition with a missing brick and visible crumbling.

19 Montgomery Avenue
The dwelling at 19 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles and a new guttering system. The gable ends on the east and west elevations have timber weatherboard cladding. An air conditioning unit is located on the west elevation. A tall brick chimney is located on the front façade and includes patterned bricks and a visible chimney breast. The front façade features a central brick entrance accessed by a small brick porch with a flat roof and boxed eave. The porch is accessed by three brick steps. The dwelling retains one original double set timber framed sash window

with brick window boxes on the front facade, fronted by lightweight flyscreens. The other window on the front façade has a replaced aluminium framed slide window.

The front yard is neat, consisting of a grassed lawn with a garden bed along the front façade and a dwarf conifer. A concrete strip driveway is located along the western boundary of the property and leads to a large gabled roof garage with fibro walls and two timber tongue and groove doors. A small concrete footpath leads from the driveway to the porch. The property's boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

21 Montgomery Avenue
The dwelling at 21 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a gabled roof with a projecting hip to Montgomery Avenue, clad in Marseilles tiles and a new Colorbond guttering system. The front façade features a brick entrance with a small brick porch accessed by four brick steps.

Some dwellings retain their original timber framed sash windows with brick window boxes. The windows of 21 Montgomery Avenue have been replaced with aluminium slide windows.

The front yard is neat, consisting of a grassed lawn with formal garden beds along the front façade and boundary fence. The garden beds have a small sandstone retaining wall two courses high. The garden beds contain a number of established plants and trees. The driveway consists of contemporary brick paving and leads to a flat roof carport, which fronts a brick garage (later addition to the house). A small curved brick paved footpath leads from the driveway to the porch. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good.

23 Montgomery Avenue
The dwelling at 23 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a hipped roof with a projecting hip to Montgomery Avenue, clad in Marseilles tiles and a new Colorbond guttering system. A tall brick chimney is located on the front façade and includes patterned bricks and a visible chimney breast. The front façade features a central brick entrance accessed by a small brick porch with a flat roof and boxed eave. The small porch accessed by three tiled steps. The windows of 23 Montgomery Avenue have replaced aluminium slide windows.

The front yard features a garden bed along the front façade, however, is dominated by a large contemporary concrete paved driveway which extends along the west elevation and front facade. A Colorbond fence is dissects the driveway. A large garage is located in the northwest corner of the property. The garage has a gabled roof clad in a corrugated metal. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below.

The condition of the building is good overall, although there is scattered debris in the front yard that impact on the visual aesthetic of the property.

25 Montgomery Avenue
The dwelling at 25 Montgomery Avenue is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a traverse gable roof clad with Marseilles tiles and a new guttering system. A tall brick chimney is located on the front façade and includes patterned bricks. The front façade features a central brick entrance accessed a small tiled porch with a flat roof and boxed eave. The porch is accessed by two tiled brick steps. The windows of 25 Montgomery Avenue have replaced aluminium slide windows to all elevations.

To the rear, there is a small single storey extension and granny flat/shed which appears to be a later addition.

The front yard is neat, consisting of a grassed lawn with garden beds along the front façade and front fence. Several small trees are located on the eastern side of the property. A flat roofed carport of corrugated metal is located at the front of the house over a red concrete slab driveway on the western boundary. This incorporates a footpath which surrounds the porch. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils, and a cast iron decorative rail.

The condition of the building is good overall.

27 Montgomery Avenue
The dwelling at 27 Montgomery Avenue is a later dwelling that is similar in scale although not form to the earlier dwellings on Montgomery Street. The residence is rendered brick, triple fronted with a hip and valley roof clad in grey Marseilles tiles and a new guttering. A thin metal chimney sits on the western side of the dwelling towards the rear. The front façade features a wide verandah with a flat modern metal roof supported by square metal verandah posts and surrounded by a glass and steel balustrade. The verandah is accessed by a set of stairs the foundations are clad in faux stacked stone. The dwelling has large aluminium-framed modern sliding and sash windows to all elevations.

The front yard is neat and entirely paved in concrete. There is large red concrete paved footpath leading to the front verandah and an older concrete driveway to the east. The property boundary is marked by a hip height sandstone block boundary fence and hedging. The rear of the property is accessed via a Colorbond fence and consists of a small single-storey extension and a single-storey granny flat.

The condition of the building is good overall, although there is some loss of mortar to the sandstone block boundary fence.

29 Montgomery Avenue
The dwelling at 29 Montgomery Street is a highly intact single storey rectangular brick dwelling, laid in the stretcher bond pattern. The residence has a triple fronted façade with hipped roof and a projecting hip to Montgomery Avenue which is clad in Marseilles tiles and a new Colorbond guttering system. A tall brick chimney is located to the western elevation and includes patterned bricks and a visible chimney breast. The front façade features a central brick entrance framed by a landscaped archway and accessed by a small brick porch with three brick steps and aluminium picket balustrade. The front door has modern security grills. The windows of 29 Montgomery Avenue retain their original sash windows.

To the rear there is a large single-storey extension to the rear in addition to other ancillary structures.

The front yard features an extensive landscaping including garden beds along the front façade, and to the east and west elevations. There are a mixture of mature trees and hedging. A narrow concrete footpath leads from the west of the property to the central front entrance. The property boundary to Montgomery Avenue is marked by a low brick wall with a bullnose brick coping and dentils below. There is a modern steel double rail fence with mesh wire constructed on top of the original brick fence.

The condition of the building is good overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

SOUTH SIDE OF STREET
2 Montgomery Avenue

- Painted aluminium windows*
- Air-conditioning unit to window on front façade*
- Integrity = High

4 Montgomery Avenue

- Awning on front window
- Balustrade and ramp to the rear, accessed from the concrete driveway
- Integrity = High

6 Montgomery Avenue

- Air-conditioning units to western elevation*
- Lightweight flyscreens to windows on the front facade
- New guttering
- Integrity = High

8 Montgomery Avenue

- Small single-storey extension to the rear
- Battle axe subdivision at the rear with new dwelling*
- Air-conditioning unit to window on front façade*
- Security grills to front windows and door*
- Painted aluminium sliding windows*
- Integrity = High

10 Montgomery Avenue

- Small single-storey extension to the rear
- Battle axe subdivision at the rear with new dwelling*
- Air-conditioning unit to side of chimney breast on front façade*
- Concrete driveway
- Small garage to the rear building brick and tile
- Security screen to front door*
- Awning over front window
- Satellite dish to roof*
- Aluminium windows*
- Integrity = High

12 Montgomery Avenue

- Air-conditioning unit to window on front façade*
- Satellite dish to roof*
- Integrity = High

14 Montgomery Avenue

- Air-conditioning unit to window on front façade*
- Air-conditioning unit to window on eastern elevation*
- New guttering
- Integrity = High

16 Montgomery Avenue

- Aluminium windows to front façade and side elevations*
- New guttering
- Antenna to roof
- Integrity = High

18 Montgomery Avenue

- Large single-storey extension to the rear
- Solar panels to front roof plane
- Solar panels to rear extension
- Satellite dish to rear roof plane
- Aluminium windows to front façade with security grills*
- Flat roof metal shelter of front door and porch*
- New concrete driveway and front yard
- Integrity = Moderate

20 Montgomery Avenue

- Small single-storey extension to the rear
- Flat roof metal shelter over front door and porch*
- Re-landscaped front yard
- Integrity = Moderate

22 Montgomery Avenue

- Ramp with balustrade to front entry
- Colourbond fence section between front and rear yard
- Integrity = High

24 Montgomery Avenue

- Small single-storey extension to the rear
- Aluminium windows to one section of front façade*
- Re-landscaped front yard
- Satellite dish*
- Integrity = High

NORTH SIDE OF STREET

7 Montgomery Avenue

- None
- Integrity = High

9 Montgomery Avenue

- Moderately sized single-storey extension to the rear
- Security bars to windows*
- Concrete front yard and driveway
- Timber panelling (painted black) on top of front boundary fence*
- Integrity = Moderate

11 Montgomery Avenue

- Air-conditioning unit to window on front façade*
- Antenna to roof
- Flat roof metal carport to rear
- Integrity = High

13 Montgomery Avenue

- Air-conditioning unit to window on front façade*
- New guttering
- Timber gate to driveway
- Integrity = High

15 Montgomery Avenue

- Large single-storey extension to the rear, in addition to other ancillary structures
- Three large aluminium windows to front façade*
- Flume along front façade and through roof tiles
- Metal palisade gate to driveway*
- Decorative brackets to entry*
- Air-conditioning unit to western elevation*
- Part of brick front boundary fence removed*
- Integrity = Moderate

17 Montgomery Avenue

- Painted brick porch*
- Flat roof metal carport
- Integrity = High

19 Montgomery Avenue

- Air-conditioning unit to eastern elevation*
- Air-conditioning unit to window on western elevation*
- Satellite dish to roof*
- Two aluminium windows to front façade*
- Integrity = High

21 Montgomery Avenue

- Small single-storey extension to the rear
- Shed or granny flat to rear yard
- Pool to rear yard
- Flat roof metal carport
- Re-landscaped front yard, including faux sandstone garden bed edging*
- Aluminium windows*
- Integrity = High

23 Montgomery Avenue

- Small single-storey extension to the rear
- Ancillary structures to the rear yard
- Security grills to windows*
- Re-landscaped front yard (in progress)
- Lattice fence between eastern side of the house and rear yard*
- Air-conditioning unit to front elevation*
- Integrity = Moderate

25 Montgomery Avenue

- Small single-storey extension to the rear
- Air-conditioning unit to front elevation*
- New concrete driveway, including part of front yard
- Colourbond fence between eastern side of the house and the rear yard
- Antenna to roof
- Integrity = High

27 Montgomery Avenue

- Small single-storey extension to the rear
- Single-storey granny flat to the rear yard
- Modern renovation including new aluminium framed windows, a glass and steel balustrade to a front verandah, rendered brick and a modern paint scheme*
- Sandstone block boundary fence*
- Integrity = Low

29 Montgomery Avenue

- Large single-storey extension to the rear, addition to other ancillary structures
- Modern steel double rail fence with mesh wire
- Integrity = High

While there have been many small changes to the dwellings, in addition to some large rear extensions, the buildings all have high integrity with respect to form, fabric and detailing.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1944

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east., Guildford to the west and Chester Hill to the south. Westwards from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided.

To the east of Clyde Street, lies part of 250 acres of land by the Duck River that was granted to Darcy Wentworth, an Irish medical practitioner and public servant who settled in Australia in June 1790. Other early land grants to the south of the area were given to James Chisolm and Charles Frazer.

In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared which included the suburb of South Granville. Many of the first buyers in the area were orchardists and farmers, although there were also some men who built middle-class villas.

Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the post-war period there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

The land on which the Montgomery Street houses are located were privately acquired and subdivided as early as 1922, but very few of the lots had sold. The Commission bought a portion of the Blaxcell Estate, kept the proposed street pattern, re-subdivided the lots, leaving a few private lots (all at the end of streets). This was the first of the Commission's group developments in New South Wales and the buildings in Montgomery Street were completed in December 1944. They were constructed in full double brick with Marseilles tiled roofs, decorative use of bricks around front porches and identical front fences.

This item on Montgomery Avenue, alongside the houses in Blaxcell Street, Oakleigh Avenue, Clyde Street and Chiswick Road, represents one of the earliest Housing Commission group developments. The brick houses within this estate demonstrate the ideals of the Housing Commission which was established to build comfortable and well-appointed dwellings within the resources and capacity of the state. Many of these dwellings are shown on the Water Board plan of December 1944. The dwellings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Due to a range of modern alterations and additions, the dwelling 27 Montgomery Avenue has low heritage integrity. While it can continue to contribute to the overall significance of the Blaxcell Estate Conservation Area, its inclusion as part of an individual heritage item is no longer warranted due to the extensive changes to façade, landscapes and rear. Therefore, the heritage curtilage shown below should be considered as a revised curtilage for the 'Houses built for Housing Commission' on Montgomery in the Cumberland LEP. The dwellings 27 Montgomery Avenue should continue to be managed as part of the conservation area. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Heritage Inventory Sheet

Item Name	Stone Cottage		
Recommended Name	Stone Cottage		
Site Image			
Address	24 Nobbs Street, South Granville NSW 2124		
Lot/Section/DP	35	-	1305
Current LEP ID	I242 (Cumberland LEP)		
Former LEP ID	I609 (Parramatta LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential Buildings (private)	

Curtilage Map

Statement of Significance

The cottage at 24 Nobbs Street, South Granville is of local significance for its historical, rarity and representative values. Built c.1892, the cottage is historically linked with the residential development of South Granville in association with the industrial and commercial improvement of Granville from 1880 onwards. The building has rarity values for its sandstone construction, which is an uncommon building material in Granville. There were very few stone cottages built in Granville, as brick and timber weatherboards were the predominate materials used. Although rare for its use of sandstone, the item demonstrates representative qualities as a Victorian period cottage.

Criteria Assessment	
a) Historic	Built c.1892, the property is historically linked with the early residential development of South Granville in association with the industrial and commercial improvement of Granville from 1880 onwards.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The cottage is a rare example of stone cottage built in Granville.
g) Representativeness	The item is a representative example of a Victorian period cottage.

Physical Description

The item is a single storey rendered stone masonry cottage with a gabled roof. The roofing material appears to have been replaced with pressed metal sheets, imitating concrete tiles. The gabled roof extends to cover the verandah. The verandah roof is supported on stop-chamfered posts with a metal valance and a simple timber spandrel, atop a coloured concrete floor. The roof also extends over the rear skillion addition. The house has two 12-paned sash windows on the front facade (which may be original) and a mix of replacement 12-pane sash windows at the side.

Alterations and additions include a rear extension, later shutters to the front windows, metal cladding to the gable end and verandah spandrel, and modern tubular palisade fence and letterbox. The small front garden comprises of a lawn and mature shrubs located along the palisade fencing.

The cottage appears to be in good condition, with a number of later alterations and additions.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extension
- Replaced roof cladding
- Replaced verandah spandrel
- Shutters installed on front windows
- Modern tubular white palisade fence and letterbox*
- Electric box*
- AC unit to the side of the building*
- Barge boards to side

The integrity of the item is impacted and reduced by the accumulative impacts of minor alterations to the front façade and the installation of a modern white palisade fence and letterbox. Overall, the integrity of the item is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1892

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east, Guildford to the west and Chester Hill to the south. Westwards from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s, when it was subdivided.

In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and, in 1885, the Municipality of Granville was declared which included the suburb of South Granville. Many of the first buyers in the area were orchardists and farmers, although there were also some men who built middle-class villas. Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde.

For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the post-war period there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

This allotment was transferred to William Muston of the North Shore in 1888. A house is listed in the Sands Directory as being occupied by tenants in 1892. Sometime between 1892 and 1895, the property was mortgaged; it was described as a 'stone cottage' in March 1895 when the mortgagee offered it for sale. Stone was an uncommon building material in Granville. Thomas Fowlie, in his 'The History of Granville' wrote that after Elizabeth Farm House, this residence was the next stone cottage to be built in Granville.

The dwelling remains in use as a residential property.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the palisade fence should be removed and replaced with a more historically sympathetic fencing style, e.g. a timber picket fence.

Curtilage Map

Statement of Significance

The houses at 6-16 and 26 Oakleigh Avenue are of local significance for their historic, social and representative values. Alongside the houses in Montgomery Avenue, Blaxcell Street, Clyde Street and Chiswick Road, this group of cottages was the first group development constructed by the newly formed Housing Commission in 1944. This group of houses show the standard of early Housing Commission development. The use of fibro sheeting opposed to brick is reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program. The item is socially significant for its connection to the Government Housing Commission, who built the cottages. The item demonstrates representative qualities of the types of housing provided by the Housing Commission during the 1940s.

Criteria Assessment	
a) Historic	The item is of significance as part of the first group development constructed by the newly formed Housing Commission in 1944. This group of houses show the standard of early Housing Commission development. The use of fibro sheeting opposed to brick is reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item is socially significant for its connection to the Government Housing Commission, who built the cottages.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of the types of housing provided by the Housing Commission during the 1940s.

Physical Description

The houses at 6-16 and 26 Oakleigh Avenue are a row of seven (7) housing commission style cottages. The Housing Commission style from the 1940s is distinguished by its materiality and form which consist of brick, fibro-sheeting and weatherboard clad single storey dwellings, in either an L shape or rectangular form. The items along Oakleigh Avenue are representative of the Housing Commission style built with fibro sheeting.

6 Oakleigh Avenue

The dwelling at 6 Oakleigh Avenue is an L-shaped cottage in the Housing Commission style. The dwelling faces Oakleigh Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has fibro walls and a cement-tiled gable roof with projecting gable to the front. The roof features modern guttering, a face brick chimney with terracotta chimney pot, with a television antenna attached to the chimney. The chimney flashing is in poor condition and is covered with lichen. Windows are rectangular and aluminium framed, with flyscreens and aluminium awnings. The exterior window architrave is timber. The front entrance is off-set from the centre of the façade, with a front porch of brick. This porch is sheltered by a flat metal roof. The porch steps have been replaced with modern tile. The dwelling has not been extended to the rear, however a 'sleep-out' secondary dwelling has been constructed to the rear of the property boundary, separate from the main house.

A concrete wheel-track driveway runs from Oakleigh Avenue alongside the dwelling. A footpath leads from the driveway to the front porch. The front yard is neat and tidy, containing a large grassed area. A timber box-planter and small tiled planter box have been installed to either side of the porch containing small box hedges and flowers. A horizontal palisade fence has been installed along the front property boundary and around the porch.

Overall the dwelling is in a good condition, however there are elements such as the chimney flashing which are in a poor condition.

8 Oakleigh Avenue

The dwelling at 8 Oakleigh Avenue is an L-shaped cottage in the Housing Commission style. The dwelling faces Oakleigh Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has fibro walls and a cement-tiled gable roof with projecting gable to the front. The roof features modern guttering and a face brick chimney with a television antenna attached. The chimney flashing is in poor condition and is covered with lichen. Windows are rectangular and timber framed, with flyscreens and AC units installed to the exterior of the front-facing windows. The front entrance is off-set from the centre of the façade, with a front porch of brick. The porch steps have been replaced with modern tile and a metal handrail, and a canvas porch awning has been installed. The dwelling has been extended to the rear with the construction of a rear shed. The fibro dwelling sits on brick footings.

A concrete wheel-track driveway runs from Oakleigh Avenue alongside the dwelling. A concrete footpath leads from the driveway to the front porch. The front yard is neat and tidy, containing a large grassed area. Two timber box-planters have been installed to either side of the porch containing overgrown hedges, obscuring a view to the porch, and an additional two timber box planters containing juvenile shrubs have been constructed in the front yard. A metal cyclone fence has been installed along the front property boundary.

Overall the dwelling is in a good condition, however there are elements such as the chimney flashing which are in a poor condition.

10 Oakleigh Avenue

The dwelling at 10 Oakleigh Avenue is a rectangular shaped cottage in the Housing Commission style. The dwelling faces Oakleigh Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has fibro walls and a cement-tiled gable roof. The roof features modern guttering. Unlike the other dwellings along Oakleigh Avenue, the dwelling at 10 Oakleigh Avenue does not appear to have a chimney. Windows are rectangular and aluminium framed, with flyscreens installed. The exterior window architrave is timber. The front entrance is constructed in the centre of the façade, with a brick-walled front porch. The porch steps are in poor condition, evidence by cracking in the brick and mortar. The porch is cement with a metal handrail and fence installed. The fibro dwelling sits on brick footings.

A concrete wheel-track driveway runs from Oakleigh Avenue alongside the dwelling. A concrete footpath leads from the driveway to the front porch. The front yard is neat and tidy, containing a large grassed area.

The dwelling is in a fair condition.

12 Oakleigh Avenue

The dwelling at 12 Oakleigh Avenue is a rectangular shaped cottage in the Housing Commission style. The dwelling faces Oakleigh Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has fibro walls and a cement-tiled gable roof. The roof features modern guttering. Unlike the other dwellings along Oakleigh Avenue, the dwelling at 12 Oakleigh Avenue does not appear to have a chimney. Windows are rectangular and aluminium framed, with flyscreens installed. The exterior window architrave is timber. The front entrance is constructed in the centre of the façade. The porch steps have been removed and replaced with a concrete ramp and guardrail, and an aluminium handle has been installed within the porch wall. The fibro dwelling sits on brick footings.

A concrete wheel-track driveway runs from Oakleigh Avenue alongside the dwelling. A concrete footpath leads from the driveway to the porch ramp. The front yard containing a large grassed area that is overgrown in several places, particularly around the porch ramp. A low single-brick fence has been laid at the front of the property boundary.

The dwelling is in a fair condition.

14 Oakleigh Avenue

The dwelling at 14 Oakleigh Avenue is an L-shaped cottage in the Housing Commission style. The dwelling faces Oakleigh Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has fibro walls and a cement-tiled gable roof with projecting gable to the front. The roof features modern guttering and a face brick chimney with a television antenna attached. The chimney flashing is in fair condition. Windows are rectangular and timber framed, with interior blinds and exterior flyscreens. The front entrance is located in the centre of the façade and does not have a porch. The stairs appear to be original, however a metal handrail has been installed. The fibro dwelling sits on brick footings. An awning has been erected to the east of the dwelling made of a corrugated iron roof and metal poles. A view down the eastern line of the dwelling indicated that the rear of the building sits on brick piles. An external AC unit has been connected to the exterior of the eastern window.

A concrete wheel-track driveway runs from Oakleigh Avenue alongside the dwelling. A concrete footpath leads from the driveway to the front porch. The front yard is slightly overgrown with grass and weeds, two large flowering box-shrubs have been planted at the front of the cottage to obscure sightlines to the front exterior of the building. A brick box-planter has been installed to the western side of the porch and contains overgrown weeds and hedges. Two timber box planters have been constructed in the front yard, one of which contains several small shrubs and the other containing a mature palm. A low single-brick fence has been laid at the front of the property boundary. To the rear, outside of the property boundary is a large mature box-brush.

The dwelling is in a fair condition.

16 Oakleigh Avenue

The dwelling at 16 Oakleigh Avenue is a T-shaped cottage in the Housing Commission style. The dwelling faces Oakleigh Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has fibro walls and a cement-tiled gable roof with projecting gable to the front. The roof features modern guttering and a face brick chimney. The chimney flashing is in poor condition and is covered with lichen. Windows are rectangular and timber framed. The front entrance is located in the centre of the façade and has a brick walled porch. The stairs appear to be original brick with concrete finish. A half-height wooden lattice wall has been installed on the porch. The fibro dwelling sits on brick footings and a view down the eastern line of the dwelling indicated that the rear of the building sits on brick piles. An external AC unit has been installed at the front of the dwelling, attached to a window.

A concrete wheel-track driveway runs from Oakleigh Avenue alongside the dwelling. A concrete footpath leads from the driveway to the front porch. The front yard is slightly overgrown with grass and weeds, a large flowering box-shrub has been planted at the front of the cottage to obscure sightlines to the front exterior of the building. A wooden box planter has been constructed against the front wal of the building and contains small flowering shrubs and pot plants. A mature bottlebrush (genus. *Callistemon)* is located in the front yard. To the west of the front yard is a stump where a mature free has been felled. To the rear, outside of the property boundary is a large mature box-brush. The front property boundary does not have a fence, however, overgrown weeds and shrubs have created a barrier between the front yard and the street.

The dwelling is in a fair condition.

26 Oakleigh Avenue

The dwelling at 26 Oakleigh Avenue is an L-shaped cottage in the Housing Commission style. The dwelling faces Oakleigh Street and features a deep setback from the street, in alignment with other dwellings.

The dwelling has fibro walls and a cement-tiled gable roof with modern guttering. Windows are rectangular and timber framed. The front entrance is located in the centre of the façade and has a brick walled porch. The stairs appear to be original brick with concrete finish. Two remnant brick piers are extant on the porch and likely held up an original porch awning, this awning is now held up by two metal poles. An external AC unit has been installed on the eastern wall of the dwelling.

The property has a contemporary dwelling located at the rear of the property, not visible from the streetscape. A concrete slab driveway runs from Oakleigh Avenue alongside the dwelling to a single storey contemporary dwelling. A concrete footpath leads from the driveway to the front porch. The front yard is neat and tidy with a large grassed portion containing one small shrub. A metal cyclone fence has been installed along the front property boundary.

The dwelling is in a fair condition.

The overall condition of these items ranges from a fair to good condition.

Condition	Good	Fair	Poor

Historical Notes

Construction years	1950

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east., Guildford to the west and Chester Hill to the south. Westwards from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided.

To the east of Clyde Street, lies part of 250 acres of land by the Duck River that was granted to Darcy Wentworth, an Irish medical practitioner and public servant who settled in Australia in June 1790. Other early land grants to the south of the area were given to James Chisolm and Charles Frazer.

In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared which included the suburb of South Granville. Many of the first buyers in the area were orchardists and farmers, although there were also some men who built middle-class villas.

Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the post-war period there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

The land on which the Oakleigh Avenue houses are located had been privately acquired and subdivided as early as 1922, but very few of the lots had sold. The Commission bought a portion of the Blaxcell Estate, kept the proposed street pattern, re-subdivided the lots, leaving a few private lots (all at the end of streets). This was the first of the Commission's group developments in New South Wales and the buildings in Montgomery Street were completed in December 1944. They were constructed in full double brick with Marseilles tiled roofs, decorative use of bricks around front porches and identical front fences.

This item on Oakleigh Avenue, alongside the houses in Montgomery Avenue, Blaxcell Street, Clyde Street and Chiswick Road, represents one of the earliest Housing Commission group developments. The fibro houses are reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program. All of these dwellings are shown on the Water Board plan of December 1944. The dwellings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- A number of houses within this listing require minor conservation repairs. They include:
  - 10 Oakleigh Avenue – Brickwork to the base of the front porch require repointing.
  - 26 Oakleigh Avenue – Brickwork to the base of the front porch requires repointing and replacement.
  - 6 and 8 Oakleigh Avenue – repair chimney flashings.

Curtilage Map

Statement of Significance

The Victorian Residence, known as 'The Wattles' at 245 Great Western Highway, South Wentworthville, is locally significant for its historic, associative, aesthetic and rarity values. Built between 1851 and 1875 as a private residence, originally known as 'Willow Cottage' and later as 'The Wattles,' is historically significant through its associations with William Fullagar, one of Cumberland's prominent pioneer settlers and developers. The dwelling is historically significant as one of the earliest houses in the Cumberland LGA and is relatively rare. The item retains some aesthetic significance as a moderately intact early Victorian residence; however, this has been compromised to some degree by later alterations and removal of original fabric, such as the construction of dormer windows on the first floor.

Criteria Assessment	
a) Historic	Built between 1851 and 1875, the building is historically significant as one of the earliest houses in Cumberland.
b) Associative	It is locally significant through its associations with William Fullagar, one of Cumberland's prominent pioneer settlers and developers.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a moderately intact, early Victorian residence; however, this has been compromised to some degree by later alterations and removal of original fabric.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is locally significant as a rare example of its particular architectural style (early Victorian) within the local area.
g) Representativeness	The item does not meet this criterion.

Physical Description

'The Wattles' is a large brick Victorian cottage located along the Great Western Highway. The residence is well hidden from the road and marooned between the M4 Motorway and Great Western Highway. The residence has a hipped gable roof clad with a concrete tile roof. The roofscape features small gabled dormers with simple painted timber bargeboards and four tall brick chimneys with a stepped course detail located on the east and west elevations. The dormers are not original elements but a later addition to the building, post 1943. A verandah extends along the north, east and west elevations. The verandah roof is skillion clad with tile profile sheeting, supported on paired timber posts.

Remnant original windows include two six-pane double hung sash windows, the windows to front elevation have louvred timber. The walls along the lower façade are rendered while the upper storey is face brick. The building appears to have a rear addition.

Due to the later construction of the M4 and the accessway to the M4, the landscape and orientation of the building changed. The item no longer fronts the Great Western Highway and is accessed via a driveway that extends along the northeast boundary created by the accessway to the M4. The landscape now features established plantings primarily located along the northeast boundary framing the driveway and the southern boundary. The remaining landscape consists of long grass with sections separated by a tall wire mesh fence that is a detracting element.

The condition of the dwelling appears to be fair. It appeared to be under renovation at the time of the site inspection.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Reduced allotment due to the construction of the M4, M4 accessway and widening of the Great Western Highway
- Concrete tiled roof
- Modern wire mesh fence*
- New timber verandah posts
- Revegetated landscape along the northeast and southern boundary
- Alteration of first floor with the inclusion of dormer windows*

Due to the limited visibility and access to site, the property appears to have a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1851-1875

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of their proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents

to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

Previously known as 'Willow Cottage' in the suburb of Mays Hill, The Wattles was home to William Fullagar. Fullagar was the son of convicts John Fullagar and Esther Leadham, Fullagar was a butcher and publican turned stock agent and became a prominent early settler who opened the 'Star Inn' and cattle yards on the Western Road on the Wentworth estate in the 1840s. He later bought up large tracts of land from the subdivision of the Government Domain in present day Westmead.

William Fullagar purchased a 30-acre convict grant (to the south of Essington) in 1849, which he fenced and built his residence upon. William Fullagar went on to continuously live at this residence until the later 1880s. When he bought the 30 acres, Fullagar was the lessee of the neighbouring Burder Park estate (later Finlayson's Estate) a 95-acre property immediately west of James's grant belonging to descendants of Rowland Hassall, William Davis and John Bolger. These are all marked on a 1908 map of the Parish of St. John. He then purchased land from the Burder Park estate in two (2) lots of 67 1/4 acres in 1851 and 1854, the last section of 33 acres on the south-west corner was not acquired until 1866. He used the property as part of his business for cattle grazing and in later years for agistment as well as growing hay and other feed crops, timber cutting, making bricks and cultivating part of it as an orchard.

By the 1870s, Fullagar was one of the major landholders in the Parramatta district. The lots he acquired in 1859-61 were during the sale of an extensive portion of the Government Domain (by the 1850s 'Parramatta Park'). In fact, Fullagar owned much of present-day Wentworthville.

Although continuing his stock auction activities, Fullagar aspired to the status of a gentleman. He had time to pursue the hounds in fox hunts organised apparently under his patronage. He was reputedly a crack rider whose long riding stick is clearly visible in a portrait. He was also, for a time, one of the trustees of Parramatta Park. Fullagar's Paddock was occasionally used by others, e.g.: cadets from Sydney Grammar and The King's School combined for an encampment there on the Queen's Birthday, 22 May 1875.

Once he moved to Willow Cottage, Fullagar never lived anywhere else until he built his new residence opposite the 201-acre property some few years before he died in 1894. The date he moved over the road to his new house in Essington is vague from existing records. This move appears to have occurred in the late 1880s as his wife, Sarah Fullagar, died at Essington on 24 March 1889. At the time of the 1891 census there were two males and five females listed at Essington. William Fullagar died there on 8 August 1894, a week after signing his last will and testament. The will offers a convenient summary of his property: it required the sale of three parcels of land - the 201-acre site of his former residence, Willow Cottage; 40 acres adjoining Bailey's Orchard near Parramatta north of the railway line; and the site of Essington together with neighbouring allotments, the extensive holdings purchased from Parramatta Park. After costs the money was to be distributed, first in defined bequests - to William Fullagar the younger, to married daughters Hannah Barnes and Sarah Houison, to his grandson Thomas Barnes and to Adah Rebecca Harrex, (Sarah's cousin and possibly the family retainer). Any balance of the sale was to be divided equally between the eight surviving children from his second marriage - five daughters and three sons.

It appears it was last on the housing market in 2010 when it sold for approximately $1.6 million. A Development Application submitted in 2013 for the reconstruction of the residence and construction of a café and motel was withdrawn. The item appears to remain in use as a private residential dwelling.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- A detailed fabric analysis should be undertaken to be understand the intactness and significance of individual elements of the site.

Curtilage Map

Statement of Significance

The dwelling at 50 Jersey Road, South Wentworthville is of local significance for its historic and representative values. The item is historically significant as a fine and largely intact external example of a residence from a semi-rural subdivision development of the area of "Cumberland Model Farms" in c. 1890. The residence is representative of many similar style houses constructed in the period but the location of this building on the model farms estate gives it further significance. The item has some aesthetic significance as a fine and largely intact example of a Late Victorian period residence.

Criteria Assessment	
a) Historic	The property is historically significant as an early residence associated with the semi-rural subdivision development of the area of "Cumberland Model Farms" in c. 1890.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has some aesthetic significance as a fine and largely intact example of a Late Victorian period residence.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The residence is representative of many similar style houses constructed in the period but the location of this building on the model farms estate gives it further significance.

Physical Description

The dwelling is a single storey brick cottage with a single steep hipped roof. The roof was originally recorded as being of Late Victorian period corrugated iron but has since been replaced with a blue Colourbond sheet roofing.

A gabled dormer extends to the south with a triple awning window and weatherboard cladding. The symmetrical front facade is face brick and features polychromatic quoins to window and door openings. The central front door is timber panelled. Adjacent to the door opening is name plate inscribed 'Rosedale'. Windows are generally timber framed double hung and have flat arched heads, however, the windows to the front only have arched timber frames to top panes and rendered stone sills.

The side walls have been painted. A curved verandah extends along the front facade and has simple timber posts and a new concrete base. A wide glazed opening on northern wall is later and opens onto a small paved courtyard sheltered by a timber pergola. A gabled extension at the south eastern corner has similar painted brick walls and corrugated iron roof cladding and two smaller windows with similar flat arched heads.

The cottage is set back approximately eight metres from the road. There is no fence, however low planter-boxes containing a *Buxus*, likely *Buxus microphylla* are located along the properties edge. There is a gravel and stone paving path to the cottage and an asphalt driveway to the rear pergola, which is in use as a carport.

The item is in fair condition overall.

Condition	Good	**Fair**	Poor

Alterations and Additions

- New roof to main house and verandah; blue Colourbond
- Painted rear and dormer
- Contemporary landscaping
- New carport with timber roof and brackets untreated
- New front-yard planter boxes with timber and brackets untreated

The item retains its scale and form but has been modified, including new concrete base to verandah, gabled dormer to roof and gabled and flat roofed extensions at the rear. The wide opening and timber pergola on northern wall are from a later period. The item is generally in good condition and well maintained though some mortar has eroded from the front façade.

Applications for building work have included unknown additions in 1957 and 1964, air conditioning in 1958, septic tank and awning in 1960 and shed in 1970.

The overall integrity of the item is moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Likely c.1890s

The subject property formed part of 30 acres originally granted to Stephen Shore in 1810. Shore's estate formed part of 338 acres, comprising six separate Crown Grants dating from 1810-1818, which were purchased by George Mobbs, auctioneer, in 1892. Mobbs subsequently subdivided the land into approximately 2-4-acre allotments, which were sold as the "Cumberland Model Farms".

Lots 6, 7 & 8 of Section A of the subdivision, measuring approximately eight acres, were purchased by Henry Wilson in 1894 and by Charles Shepard in 1902. The property subsequently changed hands several times, including in 1906 to Henry Milson, 1907 to Sarah Wood, 1909 to Clyde Finlay, 1910 to Irene Jennings, 1917 to Hugh and Charles Naylor and 1920 to William Reidy.

Reidy is listed in the Sands Directory between 1923-33. Lot 7 (1 acre) was individually sold in 1938 to Max Loewenstein and changed hands a further five times until 1973, when it was purchased by Samuel Zammit, the lot was subdivided and the present boundaries formed. The date of construction of the cottage is unknown, although its style suggests it was constructed as part of the semi-rural "Cumberland Model Farms" subdivision in the 1890s. It has been claimed that the cottage dates from the 1840s, however, there has been no evidence to date to confirm this.

The building remains in use as a private residence.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Consideration should be given to the repointing of brickwork on front façade with an appropriate lime based mortar.

Curtilage Map

Statement of Significance

The St Enda's Hall is of local heritage significance for its historic and social values. The Church hall has been historically associated with the Catholic Church since 1929. It has social and historical associations with the early development of religion in the Toongabbie area. Further, it provides evidence of the evolution of the community and religious facilities since these early years. The place has social significance to the local community as a place for religious activities built by the local community parishioners. The Church and Presbytery retains some aesthetic significance as a twentieth century modernist ecclesiastical building and demonstrates representative qualities of this building type. The aesthetic significance of Edna's Hall has been heavily reduced to the number of modifications that have occurred over time.

Criteria Assessment	
a) Historic	The hall has been historically associated with the Catholic Church since 1929. It has associations with the early development of religion in the Toongabbie area. Further, it provides evidence of the evolution of the community and religious facilities since these early years.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building has been heavily modified and now retains little aesthetic significance. The church hall retains some aesthetic significance as a twentieth century modernist ecclesiastical building.
d) Social	The building has social significance as a place for religious activities by the community.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The Church and Presbytery demonstrate representative qualities as an intact Post-War ecclesiastical building.

Physical Description

Hall
The site contains a single storey timber framed church hall dating from the Inter-War period. Forming part of the St Anthony's Roman Catholic Church complex, it is presently used by several parish and community groups.

The building has a single gable roof of corrugated steel and exposed rafters. The gable end to the street features decorative timber barge boards and cross elements. The roof has several whirly birds along the roof ridge, a simple barge board to the gable end and modern roof guttering and downpipes. All original wall cladding appears to have been replaced, with weatherboards to the western side and rear, and profiled hardiplank to the front. A series of five timber framed double hung windows on the western side remain intact.

A skillion addition extends along the entire eastern side of the building, which appears to have been constructed in several stages. It has weatherboard cladding to waist height, battened fibro above and aluminium sliding windows.

A face brick toilet block and portico has been added at the front, with entry through a single door skillion addition. The roof is corrugated sheet metal. The addition contains some 'Piety Shop' signage and a utilities box.

Church and Presbytery
Located to the east is a tall 1950-60s modern church building with steep gabled roof of cement tiles and a striking, tiled façade to the street. The hall and church building are connected by a paved courtyard along the entire length and a small covered walkway at the southern end. To the north (rear) are single and two storey face brick church buildings. There is a bitumen carpark to the west.

The presbytery was not viewed from the public domain. It is located at the rear of St Enda's Church Hall. Appears to be a flat roofed structure clad in corrugated iron.

Landscape
The site contains two mature trees fronting the modern church. Though the plantings are dominant street elements which contribute towards the character of the site, the landscaping is not historically significant as related to the original landscape setting of the hall which was originally a bush setting as shown on the 1943 aerial (see LPI SIX Maps). This vegetation has been removed.

Condition
The hall is in fair condition overall. It appears the bargeboard and guttering has been replaced in the recent past, the brick extension demonstrates poor drainage with the presence of biological growth along the upper courses of brickwork.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Skillion addition to the side*
- Removal and replacement of wall cladding
- Addition of face brick toilet block to front façade*
- Addition of whirly birds and likely replacement of roof material
- Replaced guttering
- Addition of air conditioning units*
- New church building to the east
- Addition of other smaller church buildings to the rear

- Bitumen carpark

The scale, form, setting and materials of the building have been highly modified and negatively impacted by the various alterations and additions made to the item. The brick addition to the east elevation and the weatherboard extension to the north of the hall have an adverse impact to the integrity and intactness of the item. The inclusion of the Church does not adversely impact the St Enda's Church Hall.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1928-29 (Hall), c.1960s (Presbytery and Church)

Toongabbie was originally the name of an extension to the Rose Hill farm, which opened in 1791, being named New Grounds and later Toongab-be. This is an Aboriginal word thought to have meant the junction of two creeks, or meeting of the waters or near the water.

A small section of the present-day suburb of Toongabbie lies in the municipality of the Cumberland Council. This area was part of the second-settlement of Toongabbie in 1792, which occurred further up Toongabbie Creek and began on land that was granted to individuals such as John Silverton, William Eggleton and John Martin. These smaller land grants ranged between 30-60 acres which sat directly west of Darcy Wentworths 2,200 acres grant.

This portion of the suburb consists of Toongabbie railway, which the suburb developed around. The railway line opened through Toongabbie in 1860 and was duplicated in 1886 with the station opening in 1880. There was a gradual relocation of public utilities towards the town that grew up beside the station, mainly on the south side.

In 1928, Lot 45/43 was purchased for approximately £400 by Monsignor O'Gorman, Father Furlong and parishioners. Money for the land purchase was raised by Monsignor O'Gorman, Father Furlong and a Ladies Social Committee who raised money through regular collections and social functions for the acquisition of land for the purpose of constructing a church.

A committee was formed by Monsignor O'Gorman to oversee the building of the Enda's Hall. The e layout of the hall included a large floor area, stage, kitchen supper and cards room, balcony and ticket office. Don Cameron was an Engineer and he is the one who drew up all the plans for St. Enda's Hall. They also had to choose a builder and they chose Ed Fitzgerald who was a local builder, a parishioner and a committee member. The total cost to build the hall was about £400.

On Saturday 27th November 1928 the symbolic first sod was turned and a "tree cutting bee" commenced clearing the site of the hall. On Saturday 23rd March 1929, the Hall opened to the public and on Sunday 31st March 1929, the first Mass was celebrated at 9.15am. The official opening of St. Enda's Church Hall took place on Sunday 19th May 1929 by Archbishop Kelly and Monsignor O'Gorman also presided.

In January 1950 some 21 years after St. Enda's Hall had been built, a primary school commenced in the Hall. The first year's enrolment at the school in St. Enda's was 179 children, so there was an obvious need for the school to commence. Classes taught at this time were Kindergarten to Year 4. For the first few weeks of school there were no desks or blackboards in the Hall but eventually they got what they needed. Every Sunday, after the last Mass, men would move the church pews to one side and replace them with the desks and they would reverse this exercise on the following Saturday.

Sister Juliana was the first Principal of the school and together with another nun they travelled to St. Enda's from the Mercy Convent in Parramatta by bus. As time went by, generous parishioners would drive the Sisters to and from Parramatta.

St. Enda's became a Parish in its own right with the arrival of Father Canavan on 1st February 1951. Before this time, Wentworthville was responsible for St. Enda's.

On 16th December 1958 Father Canavan officially changed the name of the parish from St. Enda's to St. Anthony of Padua. Apparently, this was his own decision as he did not like the name St. Enda.

In 1960 Father Les Bagot became our Parish Priest and in 1962 he was given permission to build a Church and a presbytery, which officially opened on 3 February 1963.

In 1995 Father Bill Moore undertook major refurbishments of the Church, changing the way the Altar faced and where the parishioners were seated. It also added two doorways on each side of the church and transferred some of the stained glass windows which were only on the side facing St. Enda's to either side of where the Altar now stands. He also arranged for landscaping in the courtyard and also had built the Sacristy and music room at the back of the church. During the renovation of the church, mass was held in the Enda's Hall.

Since 1989, a number of alterations and additions have been undertaken on the hall, including the construction of an awning and garages. Today, the hall remains in use for religious activities.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Future development should respect the overall form and style of the simple rectangular church building.

Statement of Significance

Toongabbie Railway Station and Underbridge is of local heritage significance for its historic, aesthetic, social, scientific/research, rarity and representative values. The station provides evidence of the railway station redevelopment that took place during the quadruplication of the Main Western Line between Lidcombe and St Marys in 1946. The Greystanes Creek Underbridge has historic significance for its ability to demonstrate the expansion of the railways and the historical stages of railway development in Toongabbie. The station buildings are of aesthetic significance as good examples of mid-20th Century railway construction in an urban context, displaying distinctive elements of the Inter War Stripped Functionalist style. They are competently executed and display many typical stylistic elements of similar station buildings throughout New South Wales and in the western suburbs generally. They are of the same construction as those of the neighbouring stations Pendle Hill, Wentworthville and Westmead (demolished). This group of buildings shows effects of war time financial constraints.

The Toongabbie Underbridge Archaeological Site, located under the Greystanes Creek Underbridge, is of local significance for its historical and research values. The site has the ability to demonstrate the expansion of the railways and the historical stages of railway development in Toongabbie. The archaeological site is of research significance as it provides evidence of previous types of railway bridges used for creek crossings between 1860 and 1946.

Criteria Assessment	
a) Historic	Toongabbie Railway Station is of historical significance as one of several stations constructed as part of the quadruplication of the line from St Marys to Lidcombe in the 1940s. The underbridge and archaeological remains under the Greystanes Creek Underbridge have historical significance for their ability to demonstrate the expansion of the railways and the historical stages of railway development in Toongabbie.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Toongabbie Railway Station is of aesthetic significance as an example of mid-sized Inter-War Stripped Functionalist station buildings in an urban setting. The buildings are noted for their use of bonded brickwork, Art Deco influenced parapet detailing, strong horizontal planes and steel awnings. The archaeological remnants of previous bridges, together with the existing underbridge provide a visually interesting landscape.
d) Social	The place has the potential to contribute to the local community's sense of place and can provide a connection to the local community's past.
e) Scientific	Toongabbie Railway Station is of research significance for its ability to demonstrate design and construction techniques of the mid-20th century railway structures and for its ability to provide evidence of the use of Inter War Stripped Functionalist elements in a railway setting. The station buildings provide opportunities, together with Wentworthville, Pendle Hill and Seven Hills stations, to study and understand mid-20th century building techniques. The archaeological site has research significance in providing evidence of previous types of railway bridges used for creek crossings and opportunity for comparison between bridge construction techniques between 1860 and 1946.
f) Rarity	The archaeological remains of the former bridge structures are one of two early railway viaducts surveyed in the Holroyd Municipality, though the bridge's integrity is reduced due to refurbishment.
g) Representativeness	Toongabbie Railway Station is a representative example of a small, mid-20th century railway station that is designed in the Inter War

	Stripped Functionalist style in an urban context, similar to Pendle Hill and Wentworthville stations. The footbridge was identified as an item of moderate heritage significance in the comparative analysis from the 2016 'Railway Footbridges Heritage Conservation Strategy' as it demonstrates representative qualities as a steel beam structure supported on RSJ steel trestles. However, contemporary modifications have reduced the items representative qualities.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, RailCorp Section 170 Heritage and Conservation Register listing sheet for 'Toongabbie Railway Station Group, Underbridge & Archaeological Remains', dated 2008. As the description features a comprehensive physical description which matches the condition visible during the site inspection, no amendment has been made to the physical description.

BUILDINGS
Station Buildings, Platform 1/2, brick, type 13 (1943)
Station Buildings, Platform 3/4, brick, type 13 (1943)

STRUCTURES
2x Island Platforms, brick faced (1943)
Footbridge, steel beam with RSJ steel supports, stairs and ramps (1946)
Underbridge and Archaeological Remains (c1860, c1880, 1946, 2013)

STATION BUILDING PLATFORM 1/2 (1943)
External: The building on Platform 1/2 is larger than Platform 3/4 building and is a post war Functionalist style railway building. It is of face brick construction with low pitched gabled roof and brick parapets at each end with courses of recessed heeler bricks capped by a course of bullnosed bricks. The northern end of the building is defined by a curved masonry bay with a single door. Centrally located on each parapet is an Art Deco style projecting vertical masonry fin constructed of heeler bricks in a contrasting colour. The parapets step down on each side from the fin. The roof is clad with Colorbond, which extends as an awning on all four sides of the building. The awning on the southern end, which provides shelter to passengers purchasing tickets from the ticket window and the machine, is supported by two rectangular brick columns with curved corners. On Platform 1/ 2, one ticket window remains in use while the other is bricked up. Steel framed windows with three horizontal hopper panels (central panel fixed) are vertically proportioned and placed regularly on both platform elevations. A contemporary canopy connects the building from the underside of the original awning to the stairs and footbridge.

Internal: Internally the building has a linear floor layout with a series of rooms in various sizes including combined former booking/parcels office (now booking office and staff area) with storeroom, general waiting room, ladies room and toilets, men's toilets with a store room in the curved bay. The doors are secured by metal grill gates while the windows are covered with security mesh. All of the original interior fit-out has been removed.

STATION BUILDING PLATFORM 3/4 (1943)
External: The station building on Platform 3/4 is approximately half the size of the Platform 1/2 building featuring the same detailing and architectural style with the exception of the curved bay on one end. It is of face brick construction with low pitched gabled roof and brick parapets at each end with courses of recessed heeler bricks capped by a course of bullnosed bricks. Centrally located on each parapet is an Art Deco style projecting vertical masonry fin constructed of heeler bricks in a contrasting colour. The parapets step down on each side from the fin. The roof is clad with Colorbond which extends as an awning on all four sides of the building. The awning on the southern end, which provides shelter to passengers purchasing tickets from the ticket machine, is supported by two rectangular brick columns with curved corners. The building has one ticket window, unlike Pendle Hill (and formerly Westmead)

which had two. Early timber doors are extant. The standard steel framed windows with three horizontal hopper panels (central panel fixed) are vertically proportioned and placed regularly on both platform elevations between the solid timber doors. A contemporary canopy connects the building from the underside of the original awning to the stairs and footbridge.

Internal: Internally the building has a linear floor layout consisting of a former booking office and a waiting room. The doors are secured by metal grill gates while the windows are covered by security mesh. The former booking office is currently used for storage purposes. The internal finishes are the same as the other platform building.

PLATFORMS (1943)
Both island platforms have brick faces with concrete deck and asphalt surfaces. Some sections are steel rail post and concrete panel cast in situ. Modern aluminium palisade fencing, timber bench seating, lighting and signage are located on both of the platforms.

FOOTBRIDGE (1946)
The footbridge is a steel beam structure supported on RSJ steel trestles with concrete deck over the platforms and main lines with stairs to each of the platforms, and a ramp to street level on each side. It is of a simple structure with no ornamentation representing economic policies of the time. The footbridge and associated stairs and ramps are covered with corrugated metal awnings.
The width of the footbridge was extended for the construction of the new concourse, c.2016. The construction of the new concourse saw the replacement of a later concrete ramp and reinstatement of similar handrails to the originals removed.

ARCHAEOLOGY (1946)
The visible areas of the underbridge consists of a 1946 four rail line crossing over Greystanes Creek with wooden sleepers over riveted steel girder with steel box and Pratt truss transoms supported on 1946 dry-pressed brick foundations. Underneath and at the edges of this underbridge are the piers of two previous bridges including top sections of c1860 sandstone aggregate piers and at the edges remnants of c1880 concrete pylons with blue metal aggregate. The present bridge replaced the c1880 underbridge with concrete pylons. The water level and weed growth obscures much of the view of the remains. In 2013 the transom top underbridge was converted to ballast top. The timber footings from remain. Due to the overgrown nature of the creek area, condition of the archaeological remains under the railway viaduct could not be identified.

The station is in a fair condition and appears to be well maintained.

Condition	Good	**Fair**	Poor

Alterations and Additions

The following modifications have been quoted from the NSW Office of Environment and Heritage, RailCorp Section 170 Heritage and Conservation Register listing sheet for 'Toongabbie Railway Station Group, Underbridge & Archaeological Remains'.

- 1947 - Unspecified improvements to station building. Subsequent modifications not known.
- 1997 - Modifications to booking office.
- 1946 - Bridges supporting the two tracks crossed Greystanes Creek near Portico Parade demolished and replaced.
- N.d - Internal modifications to station building.
- 2013 - Underbridge converted from transom top to ballast top.
- 2016 - Kiosk (c1954) demolished.
- N.d – TAP Upgrade, new lifts, stairs and canopies

The station buildings and their setting have retained a moderate degree of integrity externally due to modern additions to the site. The TAP Upgrade to the improve station accessibility has modified the ramps and stairs associated with the footbridge, although the footbridge has a reduced integrity grading, the station precinct collectively retains a moderate level of integrity.

The railway refurbished underbridge over Greystanes Creek has a low level of integrity though the timber footing remains.

The archaeological potential for the remains below the underbridge is likely to be high as there is no evidence that suggests they have been removed, rather than simply overgrown.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1860 (railway line),1946 (station buildings) and 1946 (underbridge)

The following history has been quoted from the NSW Office of Environment and Heritage, RailCorp Section 170 Heritage and Conservation Register listing sheet for 'Toongabbie Railway Station Group, Underbridge & Archaeological Remains', dated 2008.

Toongabbie was originally the name of an extension to the Rose Hill farm, which opened in 1791, being named New Grounds and later Toongab-be and it was the second white settled area to be given an Aboriginal name. The word may have meant the junction of two creeks, or meeting of the waters or near the water. The railway line opened through Toongabbie in 1860 and was duplicated in 1886 with the station opening in 1880.

On 4 October 1901 a junction was laid in for siding to Emu Gravel & Prospect Company's quarry. The line to the quarry left the main line just before the station. The line then proceeded slightly west of Girraween Road and across Teague Street east of Toongabbie Road. The line crossed the latter road just past the northern end of Okalahoma Avenue, west of Toongabbie Road, then across the Great Western Highway and along Quarry Road to the quarry site, situated east of the Prospect Reservoir wall.

In 1913, the platforms were reconstructed and in 1920 a new station building was constructed in concrete. Quadruplication of the line occurred between Lidcombe and St Marys in 1946. The original station buildings were demolished, and present buildings including a footbridge formed by steel beams were erected. The use of ramps instead of footways was a common feature of footbridges between 1930 and 1960. They were opened on 30 October 1946.

Bridges supporting the two tracks crossed Greystanes Creek near Portico Parade were also demolished and replaced in 1946 in conjunction with quadruplication. The support piers of the earlier bridges are extant beneath the deck of the 1946 bridges. The present bridge replaced one with concrete pylons with blue metal aggregate. The initial bridge had wooden piers set in sandstone aggregate concrete. Their form is the same as hundreds of other bridges.

A pedestrian bridge was also built over the railway line at McCoy Street north of the station and Greystones Creek in c1946. It was replaced with a new structure c1996.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Any proposed ground disturbance work should be assessed by a qualified historical archaeologist for archaeological potential and heritage impact mitigation.
- Items I102, I104 and A9 should be amalgamated to form one item, consistent with the RailCorp Section 170 State Agency Heritage and Conservation Register.
- The heritage curtilage for the Cumberland LEP should be revised to match the RailCorp Section 170 Heritage and Conservation Register curtilage for the station; see item #4800268 and plan below. This curtilage would retain the subway. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Section 170 Heritage and Conservation Register curtilage (Source: RailCorp Section 170 Heritage and Conservation Register curtilage for 'Toongabbie Railway Station Group, Underbridge & Archaeological Remains').

Statement of Significance

Portico Park is of local heritage significance for its historic values. Portico Park was part of the original c1920 Portico Estate subdivision by Arthur Rickard and Co. Though the park itself has been altered over time with the inclusion of new plantings and amenities, it retains its original layout and use.

Criteria Assessment	
a) Historic	Portico Park was part of the original c1920 Portico Estate subdivision by Arthur Rickard and Co. Though the park itself has been altered over time with the inclusion of new plantings and amenities, it retains its original layout and use.
b) Associative	The item does not meet this criterion.

Physical Description

Portico Park is located on the western side of Toongabbie Railway Station and is framed by Portico Parade to the east, The Portico to the north, Aurelia Street to the south and a motel to the west.

The park is a small urban square, consisting of a diagonal footpath from the north east corner through to the south west corner. The footpath widens into a large circular seating area its centre. The main entry to the park is from the north east corner, which contains a brick plinth arbour framing the footpath and a brick lavatory building which is heavily covered with vines. The lavatory building is also accessed from a small footpath leading from Aurelia Street. The site contains several timber benches, some located along the footpath and others along the fence boundary. The site also contains a small children's playground, square metal bins, low brick retaining walls, garden beds with brick edging and a low powder coated steel palisade fence.

The park has a large grassed area on either side of the footpath, containing several young Box trees (*lophostemon confertus*), mostly lining the northern and southern boundaries. These were planted after 1943, as shown on the aerial imagery for the site.

The park contains two memorial plaques placed on low lying stones located on the northwest corner stating:

'The plaque was unveiling on 13 November 2010 by Clr Peter Monaghan Mayor of Holroyd City Council In Memory Of Karl Hofer APM 25 January 1943 – 20 February 2009. In recognition of his contribution to the Holroyd Community through his extensive charity work which included walking 1269 kilometres from Cockburn South Australia to Old Government House in Parramatta whilst pushing Joe Gray in his wheelchair and raising $150,000 for the Cripped Children's Society, the estimate of the Holroyd Mobile Community Police Station in 1993 and his involvement with the Toongabbie 3rd Settlement project.'

'In Memory of Wendy Tunks 1 July 1938 to 20 March 2016. This plaque, laid in November 2016, commemorates Wendy's dedication and generous contributions to the Toongabbie community. Wendy has given extensively to charity and fundraising activities for Barnardos, House with No Steps, School Drug Education, Victim Support, Youth Off The Streets, Toongabbie 3rd Settlement and Carols by Candlelight. Her tireless efforts include four months retrofitting a bus for the Holroyd Mobile Community Police Station with Inspector Karl Hofer APM (Wentworthville Police) in 1993. Wendy's work enriched the lives of many.'

The park is well maintained and appears to be in good condition, though the lavatory building is considered to be in fair condition due to the large amount of vegetation growth around the structure.

Condition	**Good**	Fair	Poor

Alterations and Additions

Since 1943, the park has had the following additions:

- Footpath paving (along original alignment) and arbour
- Trees
- Playground
- Brick lavatory Building
- Bins
- Garden beds
- Fence

While the park has retained its original boundaries and the alignment of the primary footpath through the centre, there have been many changes to the setting of the park through the addition of trees and amenities. The integrity is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c1923

Toongabbie was originally the name of an extension to the Rose Hill farm, which opened in 1791, being named New Grounds and later Toongab-be. This is an Aboriginal word thought to have meant the junction of two creeks, or meeting of the waters or near the water.

A small section of the present-day suburb of Toongabbie lies in the municipality of the Cumberland Council. This area was part of the second-settlement of Toongabbie in 1792, which occurred further up Toongabbie Creek and began on land that was granted to individuals such as John Silverton, William Eggleton and John Martin. These smaller land grants ranged between 30-60 acres which sat directly west of Darcy Wentworths 2,200 acres grant.

This portion of the suburb consists of Toongabbie railway, which the suburb developed around. The railway line opened through Toongabbie in 1860 and was duplicated in 1886 with the station opening in 1880. There was a gradual relocation of public utilities towards the town that grew up beside the station, mainly on the south side.

Portico Park was subdivided in c1920 as part of the Portico Estate subdivision. The subdivision was carried out by Arthur Rickard and Co. The Park is marked as 'The Portico' on the subdivision plan, acting as an entry/gateway to the railway station. It was framed by Cornelia Road and Aurelia Street on either side. This arrangement and its original subdivision boundary still exist today.

Curtilage Map

Statement of Significance

The dwelling at 3 Bennett Street, Wentworthville is locally significant for its historic and aesthetic values. Although built c.1924 as a private residence, the building is historically significant as the first private community hospital in the area, previously known as Malabar Private Hospital. This hospital operated from the 1930s until 1946. The dwelling has some aesthetic significance as an intact Federation bungalow that, although modified, retains much of its original and significant fabric.

Criteria Assessment	
a) Historic	The item is historically significant as the first private community hospital in the area, known as Malabar Private Hospital, which operated from the 1930s until 1946.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has some aesthetic significance as an intact Federation bungalow that, although modified, retains much of its original and significant fabric.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The dwelling is a single storey L-shaped residence of weatherboard Federation style construction. It features a hipped roof clad in Colorbond sheeting with a gable roof bay extending towards the street. The gable end has a battened fibro sheeting and a decorative ventilator panel. A verandah extends around the front, eastern and western sides and has a low-pitched skillion form clad with Colorbond sheeting supported on pairs of timber posts on single skin painted brick piers with brick balustrade. It features a solid timber valance around its full perimeter and exposed timber rafters. The eastern side of the verandah has been infilled with battened fibre cement sheeting and has modern aluminium sliding windows, however the original timber work to the verandah appears to remain intact. It would appear the verandah was originally used as outdoor rooms for the hospital. The front facade features a timber and glass panelled door which appears to be original, with glazed side lights. It is flanked by a timber framed double hung window on either side, with deep profiled architraves. There is a flat roofed weatherboard extension at the rear of the property.

The dwelling features a deep setback and is positioned below the streetscape level with a grassed embankment along Bennett Street. The dwelling is also partially obscured by mature plantings of little heritage value. An unsealed driveway runs along the eastern side of the dwelling.

The condition of the building is good, although the roof sheeting is worn and there are some deteriorated timber panels on the ventilator at the gable end.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The verandah supports appear to have been altered, and the brick piers added. The eastern section of the verandah has been enclosed with fibre cement sheeting and modern aluminium windows installed*
- Flat roof weatherboard extension at the rear of the house
- The roof sheeting replaced c.1990s
- Dwelling divided into four flats on the interior*

Although modified, the building retains its scale and form as well as original detailing along the verandah. The verandah infill is considered to be intrusive. The buildings integrity is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1924

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station slowly attracted residents to the area, and Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The urban growth and rise in population of the area is attributed to the establishment of the Bonds Industries Limited. George Bond's company, George A. Bond & Co opened the first cotton spinning mill in Australia in 1923. The company prospered and in June 1920, Bond converted his enterprise into a public company which led to an increase of jobs within the area. In the 1920s, there were 500 people employed at the mill, with the majority being women. By the mid-1930s there were almost a thousand staff in the Cumberland area employed.

In 1917, the present site was transferred to Frederick Jenner. It is at this time that the name Bennett Street was first used. In 1924 the property was transferred to John Johnson. It seems that the house was constructed by this time as the Sands Directory lists Johnson as a resident from 1925. In 1930 the property was bought by May Thomas who was wife to the Post Master at Wentworthville. The building was once a private hospital, run by Miss A. Ricketts in the 1930's and called "Malabar Private Hospital". It is reputedly the area's original community hospital. From 1946 onwards, the property was sold several times before the current owners purchased it. It has since been divided into four flats and remains in use as private residential spaces.

Curtilage Map

Statement of Significance

"Yoorooga" is of local significance for its historic and aesthetic values. Although the exact date for construction is unknown, the dwelling was likely built between 1876-1900, possibly as a residence associated with the Fullagar Estate. The dwelling may be one of the earliest remaining houses located on Bridge Road, which was an early road established as part of the first subdivision of the Government Domain in 1859-61. Resources also suggest that the dwelling may have also been constructed as the city residence of a former Mayor of Dubbo. Although modified, the dwelling retains aesthetic significance in its external detailing and, situated on a prominent street corner, makes a notable contribution to the character of Bridge Road generally.

Criteria Assessment	
a) Historic	Although the exact date for construction is unknown, the dwelling was likely built between 1876-1900, possibly as a residence associated with the Fullagar Estate. The dwelling may be one of the earliest remaining houses located on Bridge Road, which was an early road established as part of the first subdivision of the Government Domain in 1859-61. Resources also suggest that the dwelling may have also been constructed as the city residence of a former Mayor of Dubbo.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Although modified, the dwelling retains aesthetic significance in its external detailing and, situated on a prominent street corner, makes a notable contribution to the character of Bridge Road generally.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	Due to a series of alterations, the item does not meet this criterion..

Physical Description

The item is a large sandstock brick house, with walls set in a flemish bond pattern on a sandstone base. The roof features a steep hipped roof clad in concrete tiles and two face brick chimneys on either side with their terracotta chimney pots. An early weatherboard extension at the southeast corner of the dwelling features a hipped roof that extends from the main roof and is clad in the same tiles. The verandah extends from the main roof along the northern and eastern sides of the dwelling and is supported by cast iron posts. The verandah features a raked ceiling, exposed timber rafters, fibro cladding, and a ceramic tiled floor. The front façade features a modern timber and glass panelled door in the centre with an aluminium security screen door, flanked either side by windows. The fanlight to door has the name "Yoorooga" etched on glass, as does the adjacent brass plague. The windows on the northern and eastern elevations are timber framed double hung with segmental arched heads, sandstone sills and timber shutters. The weatherboard extension has a projecting bay with pairs of double hung multi-paned windows with profiled architraves. The second door is a later addition. The weatherboards along the eastern elevation are stained and painted brown.

A brick skillion at the rear appears to be original or very early and is constructed in similar sandstock bricks on a stone base with a corrugated iron roof. The large windows to the rear are not original. Later additions to the rear include a second smaller brick lean-to and a concrete platform and ramp. A driveway along the western boundary leads to a fibro double garage.

The dwelling is located on a large corner block and forms a prominent element in the streetscape. The building features a deep setback and a highly vegetated landscape at the southeast corner of the property, as well as along the northern and western elevations. There is no boundary fence, though the site had a timber picket fence followed by a brick boundary fence, both of which have been removed. An established conifer and various other mature plantings remain.

Overall, the condition of the building is considered to be poor. The building appears to have substantial water issues with high vegetation growth over the roof and chimney, and no guttering. There are sections of exposed brickwork that are weathered, with some bricks badly eroded. Paint is severely flaking from the southern wall of weatherboard extension, and there is some cracking and flaking of paint to timberwork of windows and verandah elements.

Condition	Good	Fair	**Poor**

Alterations and Additions

- Weatherboard extension at the south eastern corner is early, dating from approximately 1930s
- Roof has been retiled with concrete tiles*
- Corrugated iron sheeting to bullnose verandah has been replaced with concrete tiles*
- Verandah floor covered with ceramic tiles
- Some windows have been reglazed with concave glass sections
- Window and door openings at rear have been reconfigured and enlarged
- Early or original timber picket fence removed (see historic image below). A later brick boundary fence was also subsequently removed (see historic image below).

The recladding of the roof and verandah has altered the overall form of the building and is an unsympathetic addition. The integrity of the item is considered to be moderate as the dwelling, although modified, retains most of its original fabric.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1876-1900 – exact date unknown

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, and appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject area is originally part of the 1065 acre Government Domain which came to form part of land acquired by William Fullagar in 1859. By the 1870s Fullagar was one of the major landholders in the district. The lots he acquired in 1859-61 were during the sale of an extensive portion of the Government Domain (by the 1850s 'Parramatta Park') and Fullagar owned much of present-day Wentworthville.

In 1913 approximately 89 acres along the western side of Bridge Road were purchased by Charles Veron, a grazier of the area, and subdivided in 1914 to form Hudson Road. Over 1 acre comprising 6 lots along Bridge Raod were purchased by Florence Beater at this time. Between 1916-26 George Graham is listed in the Sands at the property. The property was purchased by Joseph Rutter in 1926, who appears in the Sands Directory from 1927 at 'Yarooga'.

Although its construction date is unknown, its architectural style suggests it dates prior to 1914, possibly as an early residence associated with the Fullagar Estate from 1876. The house was reputably constructed as the city residence of a former Mayor of Dubbo and was also known as 'Kinross' for a short time. A number of properties are listed on Bridge Road prior to 1914, and it is difficult to determine which one is the subject property. The land at the rear reputably formed a market garden which remained until the 1950s. The land was slow to subdivide from 1913 onwards. The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.	**X**		

Other recommendations and/or comments:

- To protect the building from further damage, the dwelling requires work to remediate the vegetation overgrowth on the roof and chimney, as well as the water ingress issues.
- Should the opportunity arise, it is recommended the roof and verandah be reinstated to its former materiality (corrugated iron) and form (a bullnose verandah). Refer to historic images below.
- Should opportunity arise, the original timber picket fence should be reinstated along the boundary of the item. Refer to historic images below.

Curtilage Map

Statement of Significance

The Former Wentworthville Post Office has local historic and social significance as one of the suburb's early, purpose-built post offices. Located in Wentworthville's main commercial centre, this building provides evidence of the notable growth of population and associated development of civic infrastructure which occurred in the area in the inter-war period. The building also has local aesthetic significance as a modest but relatively intact example of intact Inter-War Georgian Revival vernacular and is a notable landmark in the commercial centre, which has lost much of its early historic fabric.

Criteria Assessment	
a) Historic	The item has historical significance as one of the suburb's early purpose-built post offices, evidence of the historical growth of the suburb and of civic infrastructure.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as an example of Inter-War Georgian Revival architecture in a highly developed streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of local civic infrastructure in areas of interwar population growth.

Physical Description

The site consists of a single-storeye brick building with hipped terracotta-tiled roof, and an asymmetric, single-fronted principle elevation. There is a single brick chimney with terracotta cowl in the northeast corner of the building. The corners of the building have brick quoin courses. There is a rendered profiled skirting around the base of the building. There are three double-hung sash timber windows, with six-pane top sashed. Steel grilles have been fitted to the brickwork in front of each window. The entry porch is a recessed tiled foyer framed by "classical" tapered rendered columns. There is a steel mesh roller screen to the entry porch. The sides and rear of the building are generally intact, with modern steel window grilles, air conditioner condenser units, and a small lightweight steel awning over the rear windows.

The property is enclosed with a steel cyclone mesh fencing. There appears to be a small single-storey shed structure in the northwest corner of the property and a modern concrete carpark. The building is situated close to the street with a paved footpath to the front and one mature tree.

Overall the building is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Timber-framed fibro wall divider blocking narrow passage between item and adjacent building at 63-65 Dunmore Street*
- Small shed structure in northeast corner of property
- Window grilles to all elevations
- Roller mesh screen to entrance foyer*
- Air conditioner condenser units to west elevation*
- Lightweight steel awning over rear elevation northwest windows*

The building maintains its general form and structure however, there have been a number modifications and additions to the building that are not sympathetic to the heritage values of the building, such as the roller mesh screen to entrance foyer. Overall the building is of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1926

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. In accordance with normal custom, Wentworth's salary as a medical officer was supplemented with land grants from the Colonial Government. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The first post office servicing the area was opened in the 1890s at Wentworthville Railway Station until this purpose-built office was built in the mid-1920s to accommodate the growing community. This building served its function until the larger post office building adjacent was built in the 1960s.

The building is currently unoccupied.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the large tree in front of the item should be trimmed as it is obscuring views of the item and may be depositing litter into roof drainage.
- Explore potential for adaptive reuse of this building in order to maintain its continued use within the community.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Statement of Significance

The Fullagar Road War Service Homes Group is of local, and potential State significance for its historic, aesthetic, social and representativeness values. The fourteen houses are historically associated with a post World War I Commonwealth government initiative, under the *War Services Act* 1919, to provide affordable housing for returned servicemen and their families. The War Service Homes Act was one Commonwealth policy of rehabilitating ex-servicemen and their dependants. Built in 1920, the Fullagar Road War Service Homes Group forms one of the earliest War Service Homes estates built in Western Sydney by the War Services Homes Commission. Collectively, the group forms a visually cohesive and aesthetically significant collection of Inter-War style dwellings that illustrate the use of standardised designs prepared by the Commission. The Group provides evidence of the architectural attitudes to housing service personnel in the years immediately following World War I. The Group is a large and intact representative example of Inter-War service homes in Western Sydney. The group is also socially significant to the local community and commemorates the local veterans that occupied the houses, providing a vital contextual link to the local community of Wentworthville and World War I.

Criteria Assessment	
a) Historic	Built in c.1920, the group forms one of the earliest War Service Homes estates built in Western Sydney by the War Services Homes Commission. The houses are historically associated with a post World War I Commonwealth government initiative, under the *War Services Act* 1919, to provide affordable housing for returned servicemen and their families. The War Service Homes Act was one Commonwealth policy of rehabilitating ex-servicemen and their dependants.
b) Associative	The group is associated with the War Services Homes Commission.

c) Aesthetic/Technical	Built in 1920, the Fullagar Road War Service Homes Group forms one of the earliest War Service Homes estates built in Western Sydney by the War Services Homes Commission. Collectively, the group forms a visually cohesive and aesthetically significant collection of Inter-War style dwellings that illustrate the use of standardised designs prepared by the Commission. The Group provides evidence of the architectural attitudes to housing service personnel in the years immediately following World War I.
d) Social	The group is socially significant to the local community and commemorates the local veterans that occupied the houses, providing a vital contextual link to the local community of Wentworthville and World War I.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The Group is a large and intact representative example of Inter-War service homes in Western Sydney.

Physical Description

The War Service Homes Group consists of a group of fourteen 1920 Inter-War Bungalows of two distinct styles; rendered or face brick with classical style details, or face brick with Federation style details. The majority of the group contain deep setbacks along the Fullagar Road frontage and retain their original subdivision boundaries, excluding No.38 which has been subdivided to include a contemporary residence at the rear of the property known as No.38A.

No.6
The dwelling at 6 Fullagar Road is an L-shaped Inter-War bungalow with rendered brick walls on a face brick base with a hipped roof clad with terracotta tiles. The roof features wide eaves, exposed timber rafters and a rendered brick chimney. Windows are generally multi-paned timber casement, located individually or grouped in pairs, and have painted brick sills. The projecting bay to the street features a group of three casement windows. The front entrance has been modified and is a single modern timber panelled door with aluminium security grill. A verandah extends along the front façade, containing a pair of rendered classical style columns with simple capitols and bases. The verandah retains its original metal sheeting and has a pebblecrete floor. French doors on the eastern elevation that have been removed, and original casement windows on the western elevation have been replaced with aluminium sliding windows. A rear skillion roof extension extends along the entire facade and has rendered brick walls supported on open brick piers, similar roof tiles and timber awning windows.

A driveway is located along the western boundary and leads to a small fibro garage at the rear of the property. A concrete path zig zags across the front lawn to the verandah. A low timber paling fence extends along the Fullagar Road boundary.

The item is situated on a large block of land that slopes down from the Northeast corner to the southwest and retains its original subdivision boundaries. The dwelling features a deep setback that contains some plantings along the dwelling's boundary.

No.8
The dwelling at 8 Fullagar Road is a single storey face brick Inter-War bungalow. The dwelling features a single hipped roof clad in terracotta tiles with a wide hipped verandah at the front, which is an extension of the main roof at a lower pitch. There are no chimneys evident. The originally exposed rafters have been enclosed in fibro boxed eaves and the verandah is supported on four rendered classical style columns, with a concrete floor. The dwellings front façade is symmetrical with a central entrance, modern timber and glass panelled door with an aluminium security screen, and a timber framed multi-paned casement window either side of the door. All window openings have painted concrete lintels and bullnose profile brick sills.

A sympathetic addition at the rear has a similar face brick wall with timber casement windows. The rear addition is an extension of the main roof and features a skillion verandah around the rear southeast corner. The allotment features a driveway on the western side leads to a small hipped garage of face brick and terracotta tiles.

The item is situated on a large block that has retained its original subdivision boundaries. The dwelling features a deep setback and some established plantings in the front yard.

No.10
The dwelling at 10 Fullagar Road is a single storey Inter-War bungalow with rendered brick painted in light blue. The dwelling features a hipped roof with a pair of hipped bays projecting to the street. The roof is clad in terracotta tiles and features a gas heater penetration through the roof. A central flat roofed verandah extends from the hipped bay and is supported on a pair of rendered classical style columns. The verandah has retained the original metal sheeting and has a tile floor, replacing a pebblecrete floor. A central door is fronted by a modern aluminium security screen. Each hipped bay features a pair of timber framed casement windows. The window openings feature painted bullnose brick sills, and have small fixed awnings above, which are a later addition.

A rear extension has similar rendered brick walls and has been incorporated under the main roof. The extension has similar casement windows which are possibly original windows that have been reused. A pair of multi-paned casement French doors to the east open onto a small enclosed porch and have a fixed metal awning above in a similar style.

There are overgrown plantings to the street boundary and a bricked driveway along the eastern boundary, replacing an earlier concrete driveway. A large tree appears to have removed from the front eastern corner of the property.

No.12
The dwelling at 12 Fullagar Road is a single storey Inter-War bungalow constructed of face brick with classical details. The dwelling has a single hipped roof clad in terracotta tiles and exposed rafters. A wide hipped verandah is situated at the front and is an extension of the main roof, although at a lower pitch. The verandah is supported by four rendered classical style column and features a tiled floor. There is a single painted brick chimney on the western side. The symmetrical facade has a central door with security screen and pairs of timber framed multi-paned casement windows on either side. The window openings feature concrete lintels and bullnose profile brick sills. A rear skillion roofed addition is clad in fibro sheeting with aluminium window frames and a verandah are later additions.

No.14
The dwelling at 14 Fullagar Road is a single storey Inter-War bungalow constructed of face brick with classical details. The dwelling features a large gabled roof with a hipped projection to the street. The roof features terracotta tiles, wide timber boarded eaves, timber brackets, exposed rafters and has a single face brick chimney on the eastern side. The gable ends have timber weatherboards. The verandah is recessed under the main gable, which extends in front of the hipped bay, and is supported on two pairs of timber columnettes on high face brick piers, with a partially infilled brick balustrade. The windows are timber framed multi-paned casement windows with rendered heads and sills. The hipped bay features an off-centre window pair. The front door is a single timber panelled door with multi-paned (9) top panel and modern aluminium security grille. A driveway is located along the eastern boundary and leads to an early fibro and timber garage with a flat roof. The property is bounded along Fullagar Road with a timber picket fence.

The item is situated on a large block that has retained its original subdivision boundaries. The dwelling features a deep setback with some non-significant plantings in the front garden.

No.16
The dwelling at 16 Fullagar Road is a single storey Inter-War bungalow constructed of face brick with classical details. The dwelling features a recessed front verandah beneath a gable roof with a hipped projection to the street. The main roof features terracotta tiles, a centrally located face brick chimney and gable ends that are finished with weatherboards. The main roof extends to cover the verandah

and is supported on paired timber columns with lattice detailing on brick columns. The facades feature multi-paned timber casement windows with painted cement heads and bullnose brick sills. The front door features glazed panels. The main roof also extends over a rear section that features some fibro cement cladding.

The item is situated on a large block that has retained its original subdivision boundaries. The house is bounded by a wire fence and gate, with an established hedge along the fence. A large gravel driveway is located along the eastern boundary. The front garden is highly modified and does not contain any significant plantings.

No.18
The dwelling at 18 Fullagar Road is a single storey Inter-War bungalow constructed of rendered brick with classical details. The dwelling features a hipped roof clad in terracotta tiles and a wide hipped verandah at the front. The roof retains the original rendered brick chimney on the western side. The verandah roof is an extension of the main roof, although at a lower pitch, and is supported by four rendered classical style columns on a concrete floor. The originally exposed rafters have been enclosed in fibro boxed eaves, and the guttering has been replaced with modern Colorbond. The façade is symmetrical with a central timber panelled front door with an aluminium framed security screen, and a later side light. The window openings on either side have square brick sills and aluminium framed security blinds. Matching blinds have been installed to all openings.

The dwelling features a rear rendered brick extension with a hipped roof of similar terracotta tiles that continues past the eastern building alignment. A Colorbond carport has been added at the rear of the property to the southeast and large concrete stencilled driveway along the western boundary leads to a rendered brick garage adjacent to the house.

The item is situated on a large block that has retained its original subdivision boundaries and contains an established garden setting.

No.20
The dwelling at 20 Fullagar Road is a single storey Inter-War bungalow constructed of rendered brick with classical details. The dwelling features a hipped roof with two hipped bays projecting to the street clad in concrete tiles. The roof retains the original rendered chimney on the western side. A flat roofed verandah is centrally located between the two projecting hip bays and is supported by two pairs of rendered classical style columns. The verandah has retained the original metal sheeting roof and contains a pebblecrete floor. Within the verandah is a centrally located recessed double door front by an aluminium fly screen. Each hipped bay features a pair of timber framed casement windows located off centre to the bay, with painted brick sills and non-original timber shutters.

A building contains a rear flat roofed extension and a garage conversion to a granny flat at the southeast of the property. A driveway along the eastern boundary swings in front of the house. The property retains its original boundaries and contains an early decorative concrete fence to the street boundary. The front landscape appears to be well-maintained.

No.22
The dwelling at 22 Fullagar Road is a single storey face brick Inter-War bungalow with classical details. The bungalow has a hipped roof clad in terracotta tiles, with a wide hipped verandah extending from the main roof with a lower pitch. The verandah roof is supported by four rendered classical style columns and features exposed rafters. There is a single face brick chimney on the western side. The symmetrical facade features a modern central timber and glass panelled door with aluminium security screen, and pairs of timber framed multi-paned casement windows on either side. The window openings have painted concrete lintels and bullnose profile brick sills. A plaque adjacent to the main entrance is inscribed "Rosewood Cottage".

The building is not presently used as a single house, but rather, an aged care centre. Due to the changed use this building presents more modifications than the others. There is a large weatherboard extension at the rear with a hipped roof of corrugated iron, and a face brick base, and a large yard has been largely developed for carparking. A concrete ramp extends along the western elevation of the

building to the extension at the rear. The property is bounded by modern looptop fencing. Although modified the item retains a mature tree in the front yard and other established plantings.

No.24
The dwelling at 24 Fullagar Road is a single storey rendered brick L-shaped Inter-War bungalow with classical details. The bungalow has a hipped roof clad in concrete tiles with wide eaves, exposed timber rafters, and a face brick chimney. The projecting hipped bay to the street features a group of three timber framed multipaned casement windows. The windows are generally multi-paned timber casement located individually or grouped in pairs. Windows have painted brick sills.

The verandah extends along the front façade, is flat roofed and clad in its original metal sheeting. The roof is supported on two pairs of rendered Doric columns with simple capitols and bases. The verandah retains a timber panelled ceiling and has a pebblecrete floor. A single timber and glass panelled door with metal fly screen forms the front entrance and a pair of multi-paned timber French doors are located on the western facade.

The dwelling features a large skillion roof extension along the entire rear facade projecting past both side facades. This addition is constructed of fibro and concrete tile construction with timber casement and aluminium sliding windows. A fibro garage to the east of the house is of a similar age, with similar timber windows and gabled roof of Colorbond sheeting. A small timber porch spans between the garage and the verandah with a flat roof.

The property retains its original subdivision boundaries and the landscape contains several mature trees at the rear and along the low concrete block fence to the street boundary.

No.26
The dwelling at 26 Fullagar Road is a single storey rendered brick L-shaped Inter-War bungalow with classical details. The bungalow has a hipped roof clad in terracotta tiles with rendered brick walls on a painted brick base. The roof features wide eaves, exposed timber rafters, and a rendered brick chimney with a pair of terracotta chimney pots. The windows are generally multi-paned timber casement located individually or grouped in pairs. The projecting hip to the street has a group of three such windows. Windows have painted brick sills. The corner entrance has been modified to form a single standard width door and narrow side light, both with modern aluminium security screens. The splayed verandah is supported by two pairs of rendered Doric columns with simple capitols and bases. The verandah roof features modern klip lok roof sheeting and a pebblecrete floor. A painted brick veneer extension extends along the entire rear facade and has sliding aluminium windows.

A concrete driveway extends along the western boundary and leads to a small gabled fibro garage adjacent to the house. A large backyard has two tall trees and a number of small sheds. There is a low timber and wire mesh fence to the street boundary. The property retains its original subdivision boundaries.

No.30
The dwelling at 30 Fullagar Road is a single storey rendered brick L-shaped Inter-War bungalow with classical details. The bungalow features a hipped roof with a projecting gable clad in terracotta tiles and rendered brick walls on a face brick base. The roof has wide eaves, exposed timber rafters, a rendered brick chimney with a single terracotta chimney pot, and new guttering. The windows are generally multi-paned timber casement located individually or grouped in pairs and have painted brick sills. The projecting gable features a group of three such windows. The windows have been stripped of paint as part of the present renovation works. The corner entrance has retained the original narrow timber framed multi-paned double doors. The splayed verandah is supported by two pairs of rendered Doric columns with simple capitols and bases. The verandah retains the original flat roof clad with metal roof sheeting and terracotta tiled floor. A single mature frangipani flanks the entrance. The western facade has a pair of multi-paned timber French doors. Severe cracking on the western wall above window openings is possibly caused by differential movement.

A driveway along the eastern boundary leads to a large rear yard with several mature trees. In particular, the size of the frangipani tree and its located near the dwelling entrance indicates that it is

likely to relate to the construction of the dwelling (as seen at 32 and 38). The property is bounded along Fullagar Road by a low timber paling fence with several mature trees lining along the fence. The dwelling does not contain a rear extension retaining its original form and subdivision boundaries.

No.32
The dwelling at 32 Fullagar Road is a single storey rendered brick L-shaped Inter-War bungalow with classical details. The bungalow features a hipped roof clad in terracotta tiles and rendered brick walls on a painted brick base. The roof features wide eaves, exposed timber rafters, a rendered brick chimney, and a pair of terracotta chimney pots. The window openings contain modern aluminium sliding windows that have replaced the original timber casement, they have however retained the multi-paned detail and general individual or paired groupings. The original narrow multipaned timber double doors to the corner entrance are behind a modern aluminium security screen. The splayed verandah is supported by two pairs of rendered classical Doric columns with simple capitols and bases. The verandah roof retains a flat roof and is clad in modern Klip Lok roof sheeting. It also features a raised concrete verandah floor and steps. The eastern facade features a pair of multi-paned timber French doors.

The dwelling contains a rear rendered brick skillion addition. A driveway located along the western boundary leads to a modern double garage at the rear of the property, fronted by a flat roof carport. The property appears to retain its original subdivision boundaries. The garden landscaping of the front yard features some established plantings along its boundary however is minimally landscape. In particular, the size of the frangipani tree and its located near the dwelling entrance indicates that it is likely to relate to the construction of the dwelling (as seen at 30 and 38).

No.38
The dwelling at 38 Fullagar Road is a single storey rendered brick L-shaped Inter-War bungalow with classical details. The bungalow features a hipped roof clad with terracotta tiles on rendered brick walls with a painted brick base. The roof has wide eaves, exposed timber rafters, and a rendered brick chimney with a pair of terracotta chimney pots. Windows are generally multi-paned timber casement located individually or grouped in pairs and have painted brick sills. The projecting bay to the street features a group of three such windows. The corner entrance has been modified and is hidden behind a modern aluminium security screen. The splayed verandah is supported by two pairs of rendered classical style columns with simple capitols and bases. The roof features a flat roof clad with sheet metal and a tiled floor. The western facade features a pair of multi-paned timber French doors.

The rear of the property features a large skillion extension that extends along the entire rear facade and is of fibro construction with aluminium sliding windows. A second smaller skillion extension extends past the western facade. A driveway on the east leads to a small fibro garage at the rear. The garage has a low skillion roof and timber panelled double doors. A concrete block fence with a steel balustrade infill is along the street boundary.

The property contains a modified front landscape that appears to be below street level and contains a new drainage line. The landscape consists of contemporary elements except for two frangipani trees. The size of the frangipani trees and their location near the dwelling entrance indicates that they likely to relate to the construction of the dwelling (as seen at 30 and 32). The property retains the deep setback, but not the original subdivision allotment.

The allotment has been subdivided and has a contemporary residence at the rear of 38 Fullagar Road.

Condition

Overall the group is well maintained, and their condition is generally known to be good. There is some deteriorated timberwork and fencing elements that require repair work.

Condition	**Good**	Fair	Poor

Alterations and Additions

No.6
- Front door and single aluminium sliding window have been installed in the original casement window opening on the western elevation*
- French doors on the eastern elevation have been partially infilled to form a window*
- Garage constructed 1969

No.8
- Extension at the rear, including the rear skillion verandah which was constructed between 1990-1992 and a pergola which was constructed in 1992

No.10
- A large extension to the rear appears to have reused the original casement windows and doors
- Garage was constructed in 1963
- Granny flat constructed in 1993

No.12
- Rear skillion extension and verandah

No.14
- Fibro cladding to eaves
- Verandah balustrade infilled*
- New door at the rear
- Garage construction in 1967

No.16
- Modified landscaping
- Removal of some screen accretions to the verandah

No.18
- New concrete driveway
- Rear extensions built in 1977 and 1987
- Inclusion of security roller blinds*
- Carport constructed in 1993

No.20
- Inclusion of timber shutters to the front windows
- New paint scheme
- Pool constructed at the rear of the property

No.22
- The building was extensively modified for its adaptive reuse as an aged care facility in 1996
- A large weatherboard extension and concrete carpark has been provided at the rear
- New guttering has been installed
- A concrete ramp extends along the western elevation of the building*
- Modern looptop fencing*

No.24
- New paint scheme
- Rear skillion addition constructed in 1958
- Garage constructed in 1955
- Roof retiled with concrete tiles c1980s*
- Flat roof connecting verandah to garage

No.26
- New paint scheme

No.30
- Timber to windows have been paint stripped
- Single chimney pot removed*
- Guttering has been replaced

No.32
- Replacement of timber casement windows with aluminium sliding windows featuring similar multi-paned detail and grouping*
- Possible new paint scheme
- Rear extension constructed in 1972, and the second extension in 1990
- Garage built in 1977

No.38
- Original allotment subdivided*

- New contemporary dwelling constructed to the rear of the property*
- New landscaping to the front yard including drainage
- New fence*
- New paint scheme
- New guttering installed

Collectively, the group is considered to have high integrity. Although some dwellings have had some modifications, they have been sympathetic in nature and do not detract from the significance of the item. With the exception of No. 22, the group is largely intact.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1919-1923

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject property formed part of the 1065-acre Government Domain that was subdivided into a mix of 20 acre and 50 acre allotments. In 1859, William Fullagar purchased over 37 acres between Fullagar Road, the Great Western Highway, Toongabbie Creek and Bridge Road. Fullagar purchased extensive tracts in the present-day Westmead and Wentworthville at this time.

In 1920, the land along Fullagar Road was subdivided and purchased by the War Service Homes Commission. The War Services Homes Commission was a Commonwealth government initiative established under the *War Services Act* 1919 to assist the rehousing of returned soldiers and their families. The Commission aided veterans through low interest rate loans to construct a new house, purchase or complete an existing house, or discharge an existing mortgage. The focus of the Commission during the first two years was focused on the construction of new houses, a measure "designed to help solve, and not accentuate the national housing problem". The houses built by the Commission were to a standard design under the direction of their principal architect.

By 1923, the collection of bungalows along Fullagar Road had been completed. The houses constructed by the Commission had a distinct style based on Colonial Revival and Californian Bungalow designs. The sudden increase in settlement along Fullagar Road during the 1920s is illustrated in the Sands Directory.

A number of the properties were individually purchased throughout the 1940s and 1950s. A summary of purchases is listed below:

- The property at No.6 was individually purchased by William Keary in 1947.
- A commemorative plaque notes the Anzac Residents of 8 Fullagar Road included Thomas Henry Walmsley (1921), Robert Colin Tinker (1927) and Alfred Weller (1928).
- The property at No.6 was individually purchased by Lionel Anthes in 1951.
- The property at No.12 was individually purchased by Victor Fear in 1942. However, the commemorative plaque notes the Anzac Resident of 12 Fullagar Road was John Patrick Golding (1924-1926).

- The property at No.14 was individually purchased by William Kelly in 1949.
- The Sands Directory notes that Clyde Johnstone Young occupied the property at No.16. This is also noted on the commemorative plaque fronting the dwelling. In 1976, the property was transferred to Young's widow.
- The property at No.18 was individually purchased by James Sutton in 1951. Sutton was in living in the residence from 1926.
- The property at No.20 was individually purchased by James Arkins in 1949.
- The property at No.22 was individually purchased by Caradog Davies in 1942. The dwelling is currently occupied by a community health centre, known as Rosewood Cottage. Rosewood Cottage provides aged respite to people from English and Arabic speaking backgrounds.
- The property at No.24 was individually purchased by Frank Palister in 1958, who also purchased other properties on Fullagar Road at this time. The commemorative plaque notes Roland Bernard Elliot was the Anzac resident living at the property from 1925.
- The property at No.26 was individually purchased by Bessie More in 1949.
- The property at No.30 was individually purchased by Frank Pallister in 1958.
- The property at No.32 was individually purchased by Reinne Herbert in 1959. The commemorative plaque notes the Anzac Resident of No.32 was Luke Sanders Deviland from 1922 to 1923.
- The property at No. 38 was individually purchased by Frederick Bridges in 1951.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.	X	**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.	X	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.		

Other recommendations and/or comments:

- The dwellings should be further researched and considered for State Heritage Register nomination. As a set, the dwellings form one of the earliest War Service Homes estates built in Western Sydney by the War Services Homes Commission. Collectively, the group forms a visually cohesive and aesthetically significant collection of Inter-War style dwellings that illustrate the use of standardised designs prepared by the Commission.
- As the dwellings are best identified as a group, the heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP. This will negate the need for individual listings and listing sheets, allowing the items to be managed equally. This group listing will be coupled with the Fullagar Road Heritage Conservation Area, which we note will be revised to cover the street trees, footpath, bronze plaques, streetscape and setting directly in front of the building is conserved.

Curtilage Map

Statement of Significance

The dwelling at 7 Fullagar Road, Wentworthville is of local significance for its historic and aesthetic values. The item has some historic significance for its location on the former original Government Domain, first subdivided 1859-61 and acquired and subdivided by William Fullagar. The cottage retains the original form, style and detailing of a relatively modest weatherboard cottage from the early 19th century. Although the building has been modified, it still retains its aesthetic significance as a modest late Victorian cottage which contributes positively to the streetscape as part of the historic building stock.

Criteria Assessment	
a) Historic	The item is located on the original Government Domain, first subdivided 1859-61 and acquired by William Fullagar.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The cottage retains the original form, style and detailing of a relatively modest weatherboard cottage from the early 19th century. Although the building has been modified, it still retains its aesthetic significance as a modest late Victorian cottage which contributes positively to the streetscape as part of the historic building stock.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item is a late Victorian cottage constructed of rusticated weatherboards, with a hipped roof of corrugated galvanised iron. The house is supported on open brick piers and the verandah on a face brick base. The roof also features the original face brick chimney with two terracotta chimney pots, new galvanised iron sheeting and recent Colorbond guttering. The bullnose verandah is reclad in corrugated galvanised iron and is supported on contemporary turned timber posts with a timber panel infilled balustrade. The timber posts have been stained, whereas the balustrade is painted white. The verandah features timber flooring and is entered by tiled stairs. The front façade is symmetrical with a central door and leadlight top light, as well as timber framed double hung windows on either side. All window openings feature profiled timber architraves and sills. The door is a modern timber panelled door with leadlight panel and a profiled timber architrave. The new window and door openings are also timber framed. The dwelling features a rear extension which has a corrugated iron hipped roof and fibro and weatherboard clad walls.

The house is located on a large block set above the street level. The front landscape features an established garden setting with a contemporary drywall retaining wall and timber slab retaining wall. The landscaping features several mature trees at the rear of the property, including a palm. A driveway extends along the western boundary.

The dwelling is well maintained and in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Roof sheeting and guttering replaced on main roof and verandah
- Verandah posts replaced with contemporary turned timber posts*
- Contemporary landscaping and retaining walls
- Replaced timber architraves on door and windows
- Contemporary door

Although the building is highly modified having undergone a renovation in the early 1990s, the item respectfully retains its scale, form and some detailing. Unless otherwise advised above, alterations have been sympathetic in nature and respectfully replace fabric on a like for like basis to retain the buildings aesthetic.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1915

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject property formed part of the 1065-acre Government Domain, which was primarily used for grazing, with some orchards and vineyards. Subdivision of this estate allowed existing owners to increase their holdings. The property formed part of land acquired by William Fullagar in 1859. Fullagar was the son of ex-convicts who opened the Star Inn near Ettalong Road and cattle yards in the Wentworth Estate in 1845. Fullagar acquired extensive tracts of land in the present-day area of Westmead and Wentworthville, particularly during the subdivision of the Government Domain.

In 1913 approximately 89 acres were purchased by Charles Veron, a grazier who subsequently subdivided his property in 1914. The subject property formed Lot 23 in Veron's 1914 subdivision and was purchased by James Rymer in 1915. Rymer was an engine fitter and is listed to have been in occupation of the property in the Sands Directory between 1917-33. The property was transferred to Ellen Rymer in 1934. An application for building works in 1997 was made for an addition to the dwelling, which is most likely the existing rear extension. The building remains in use as a private residence.

Recommendations

	Level 2	Utilities - Electricity	

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The Electricity Substation at 62 Fullagar Road, Wentworthville is locally significant for its historic, technical and representative values. Built in 1928, illustrates the early twentieth century technology utilised in the generation and distribution of electricity supply in the area. This type of technology is now redundant; however, this substation is one of a small group of remaining intact industrial infrastructure items representing a specific function for the community. The item is an intact and representative example of the standardised electrical substations constructed in the 1920s.

Criteria Assessment	
a) Historic	The item illustrates the early twentieth century technology utilised in the generation and distribution of electricity supply in the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The substation illustrates the early twentieth century technology utilised in the generation and distribution of electricity supply in the area. This type of technology is no longer being used.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is an intact and representative example of the standardised electrical substations constructed in 1920s.

Physical Description

The substation, at the corner or Fullagar Road and Lane Street, is a single storey brick building with a single wide opening on its principle façade to Fullagar Road. The principle façade features the original double wooden entrance door and rendered lintel with expressed brick piers. The building has a gabled roof clad in terracotta tiles with a timber barge board and rendered gable infill with "Electrical Supply 1928" in the gable end relief. The rear elevation and barge board on the principle elevation feature the former insulators, indicating how the structure was connected to the electrical grid. The window opening on the west elevation features a 4-pane, double-sash casement window with a brick sill and sandstone lintel. The window is fronted by a contemporary security grill.

The substation is set within a heavily developed area, with multi-storey residential developments encroaching the structure from most sides. A tall brick boundary fence, which relates to the residential development for “The Peninsula”, now screens views of the building from the street.

The building appears to have been recently repainted and is in a good condition, however, there is an extensive amount of leaf litter deposited on the roof and in the guttering which is causing damp issues. The sandstone lintel shows signs of sandstone delamination.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Contemporary security grill to window on the west elevation
- Appears to have been repainted recently
- Addition of brick boundary fence in front of property*
- Removal of transformer equipment from the former yard*

Although the heritage curtilage of the item is heavily impacted by medium density development to the rear, the building itself retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

In 1819, after European settlement, the Wentworthville area came under the tenure of D’Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith’s Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth’s holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The Sydney Municipal Council’s Electric Lighting Bill was passed in October 1896 and a power station was built in Pyrmont in 1900. Meanwhile, the NSW Railways and Tramways had commenced generating power at Ultimo in 1899. Both organisations quickly moved into supplying electrical power in bulk to local councils, for local reticulation. However, many local councils established municipal electrical supplies and Parramatta and Granville Electrical Supply Company commenced operation in 1913. It ceased generating for itself after 1917, taking bulk supply from the Sydney Municipal Council

via a substation at Merrylands. It later swapped to supply from the Railways and was purchased by the Electrical Light Power Supply Corporation (ELPSC) in the 1940s, with supply then provided from Balmain power station. In 1957, the ELPSC was acquired by the Electricity Commission of New South Wales.

In the eastern part of Cumberland, supply was generally acquired from the Sydney Municipal Council and several substations were constructed in Auburn, Lidcombe, Guildford, Wentworthville, Merrylands and Westmead to a standardised design.

These supply arrangements changed very little when the Electricity Commission was formed in 1950 and took control of all generation facilities and became the bulk supplier to county councils and municipalities. The supply from individual generation authorities ceased and supply was acquired from the NSW State electricity grid.

The former Holroyd local government commenced supplying electricity to its municipality in 1923. The local authority purchased its supply in bulk from the Sydney Municipal Council at 5.5kV. The substation located in Auburn (No. 167) was the former bulk supply receiving station. The number of substations constructed in the Sydney region increased dramatically from the late 1920s, with dozens of substations being constructed to cope with the expanding demand. While in the early years of network construction many substations had unique characteristics and were sited in response to demand. However, from the late 1920s onwards a standardised design was employed, and expansion was based on the need to establish and expand the electricity grid rather than in response to localised or site-specific issues.

The substation located on the corner of Fullagar Road and Lane Street Wentworthville is one of many built during this period to service the expanding population of the district and shares a similar design, size, and construction to other electrical substations provided in the former Holroyd municipality during the 1920s. The building has been decommissioned and is no longer in use.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development			

		(form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the land surrounding the electricity substation has been heavily redeveloped for the inclusion of a medium-density residential apartment blocks, the heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The building at 17 Garfield Street, Wentworthville on the corner of Pritchard Street East, is locally significant as a good example of a corner shop building design typical on many suburban street corners in Sydney. The item has aesthetic significance as a typical Federation corner store in the Arts and Craft style. The building is quite intact and retains high integrity with most of its original fabric especially with regards to its façade presentation extant. While it currently operates well as a space for professional services, it no longer operates as a retail space as per its original function, and therefore is no longer a working example of its type.

Criteria Assessment	
a) Historic	The item has historical significance as a standard Federation style retail building that was common in the Sydney suburbs prior to the popularisation of shopping malls.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as an example of a typical form of corner store architecture in the Federation Arts and Craft style, common in the suburbs.
d) Social	The item has social significance to Wentworthville in terms of how the community interacted with retailers and the exchange of goods prior to centralised shopping malls.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of local retail activities in suburban Sydney.

Physical Description

The building is a single-storey Federation Arts and Crafts style corner shop located on the corner of Garfield Street and Pritchard Street East, Wentworthville. The building is divided into two sections, the front and street addressing section being the shopfront, and the residence in the rear. The building is a painted brick building with a prominent decorative parapet of raised brick with a rendered capping, spanning both street elevations. Behind the parapet is a corrugated steel gabled roof.

On the chamfered corner is the timber panelled entry door with spotswood glazing on the top panels. The door has an original terrazzo threshold. Above the door is a large "17" in relief. The windows to the side facades of the chamfer have large oversize timber-framed fixed windows. There is timber boarding over the top sections of the door and windows where there would have been three-pane top lights with coloured panes. It is uncertain whether these top lights are still in place. Above the windows and wrapping around the corner facades is evidence of a former awning, which has now been removed. There is a skillion-roofed extension to the shop, which meets the gable-roofed residence in the rear. A former opening to the residence on Pritchard street has been infilled with a window. The windows are timber double hung sash windows. The rear verandah to the residence has also been enclosed with timber boarding.

The whole façade has been painted in a modern colour scheme. Generally, the condition of the building is good though there are small areas of deterioration such as the timber window frames and losses to mortar requiring basic maintenance and repairs.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Removal of wrap-around awning*
- Skillion extension to rear of shop connecting to the gable-roof
- Door opening to Pritchard Street East elevation infilled to a window opening
- Timber boarding above door and windows covering top lights (possibly removed)*
- Timber board enclosing rear verandah of residence*

Although there have been some modifications to the building, these are sympathetic to the heritage values of the building. The overall integrity of the building is high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1922

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. In accordance with normal custom, Wentworth's salary as a medical officer was supplemented with land grants from the Colonial Government. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

In 1910, Wentworthville was again subdivided into the suburb of Girraween. The suburb was created by real estate developer Arthur Rickard of Arthur Rickard & Co. Ltd who began subdividing the area near Toongabbie station during WWI. In this period, Pendle Hill, a locality within Wentworthville became

a suburb changing its name from Wentworthville West to Pendle Hill in 1917. After the 1919 Local Government Act, all subdivisions had to be approved by local councils who examined their allotment sizes, layouts, and streets. Only when the location on a hilltop made a grid pattern subdivision undesirable did surveyors and promoters deviate from the norm, such as Dorothy Mount in Wentworthville (subdivided in 1916) and the Constitution Hill Estate (subdivided in 1924). Pendle Hill was another new subdivision that opened in 1927 and rapidly grew in popularity for its neat cottages and attractive gardens.

The area of Garfield Street underwent sale and subdivision numerous times between 1888 and 1922, when the present boundaries for 17 Garfield Street were set and appear to be maintained today. At this time, the footprint for the corner shop was included in the subdivision plans indicating it was being planned and built around this time. The shop was leased to a grocer, Frederick Inskip between 1924-1935. During WW2, it was reputably being used as a gaming house. A range of retailers and professionals have leased the space continuously until the present day. The site is currently used as a commercial property.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Statement of Significance

The Former Wentworthville Masonic Temple is of local significance for its historic, aesthetic and representative values. The building illustrates the nature of suburban development in the Wentworthville area in 1927, during the Interwar period. The building is historically associated with the Wentworthville Masonic Lodge, as well as the development of local social and cultural institutions that accompanied the residential growth of the period. Architecturally, the building is a representative example of suburban Masonic Temples built in the period in the Inter War Free Classical style. Externally, it appears to retain much of its original character and fabric, although it was modified to accommodate the Armenian Holy Trinity Church. Through this, the building still retains its aesthetic significance as a prominent and well-kept historic building within the street.

Criteria Assessment	
a) Historic	The building illustrates the nature of suburban development in the Wentworthville area in 1927, during the Interwar period. The building is historically associated with the Wentworthville Masonic Lodge, as well as the development of local social and cultural institutions that accompanied the residential growth of the period.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Externally, it appears to retain much of its original character and fabric, although it was modified to accommodate the Armenian Holy Trinity Church. Through this, the building still retains its aesthetic significance as a prominent and well-kept historic building within the street.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Architecturally, the building is a representative example of suburban Masonic Temples built in the period in the Inter War Free Classical style.

Physical Description

The Former Wentworthville Masonic Temple is a double storey Inter-war Free Classical style building. The building features a hipped roof with small gabled vents at the ridge peak and is clad in terracotta tiles. The principal façade is decorated with several classical motifs including rendered brick pilasters, an entablature and Romanesque rendered arches with a rectangular cartouche at the centre. The entablature is supported on rendered classical columns with a simple base. The main entrance features a timber door and fanlight with diagonal lattice glazing. The upper level of the principal facade features three rectangular windows with diagonal lattice glazing. These windows are framed by simplistic rendered detailing, including a rendered cornice sill and lintel with a bare rectangular keystone. Window openings along the north and south elevations retain the diagonal lattice glazing with a rendered lintel along the upper façade and multipaned double hung sash windows along the lower façade.

The building features a rear extension that wraps around to the southern elevation. This extension is visible from Garfield Street. The southern elevation also features a side addition. Both are constructed of rendered concrete and have flat roofs. The additions are associated with the buildings use as the Armenian Holy Trinity Church.

The surrounding landscape of the building includes restrained landscaping elements with two young trees framing the entrance and hedging in garden beds along the principle elevation. The surrounding land is largely of concrete, with new paths and a driveway along the north elevation that leads to concrete carpark at the rear of the building. The property's boundary on Garfield Street is marked by a contemporary brick fence with steel balustrade infill and gate. The building remains a prominent element in the streetscape and is highly visible.

The building appears to be in a good condition and well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extension
- Southern elevation side addition
- Entablature, added in 2012*
- Romanesque rendered arches, added in 2012*
- New boundary fence and gate
- Concrete access ramp, paths and carpark
- New signage, added in 2012
- Contemporary landscaping
- Removal of 'Masonic Temple' from the upper string course on the principle façade*
- New light fittings internally, added in 2012
- New pews internally, added in 2012

The building appears to have substantially modified for use as a Church. Although modified, the building appears to be well maintained and retains much of its original material and fabric. Although the extension and side addition are visible from the front elevation, they do not distort the form, scale and massing of the original structure. The integrity is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1927

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. The subject property formed part of the Wentworthville Estate subdivided in c.1881. Wentworthville was proclaimed a town in 1890.

The masonic temple was built by a member of the masonic lodge known as Brother George Redman at a cost of £3500 which included the internal furniture. The foundation stone was laid by Grand Master Bro. J Goulston in April 1927. The Masonic Lodge opened in August 1927 and was celebrated with a 'Ladies Night' for all the Wentworthville Masons, their mothers, wives, daughters and sisters.

In 2007, the Armenian Church Diocese, clergy of the Church of Holy Resurrection acquired the Wentworthville Masonic Temple. The former Masonic Temple space was acquired to establish a Church to serve the spiritual and religious need of the growing Armenian population in the area. A redevelopment project was undertaken in 2012 to transform the internal space to a holy sanctuary. This saw a number of changes to the interior with the inclusion of new light fittings and pews, as well as external elements such as the landscaping, an entablature over the entrance and Romanesque arches on the principle façade. The holy alter was consecrated by Bishop Haigazoun Najarian on 5 January 2014. The building remains in use as the Armenian Holy Trinity Church.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The dwelling at 32 Garfield Street, Wentworthville is locally significant for its aesthetic and representative values. Built c1923, the dwelling has aesthetic significance as a largely intact and fine example of an Inter-War bungalow with Federation period influences. Located on a large block on a prominent street corner, it is an important element to both streetscapes it addresses. While it has been slightly modified, the building remains an important part of the historic building stock in the area.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a largely intact and fine example of an Inter-War bungalow with Federation detailing. Located on a large block on a prominent street corner, it is an important element to both streetscapes it addresses. While it has been slightly modified, the building remains an important part of the historic building stock in the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The dwelling is a largely intact and fine example of an Inter-War bungalow with Federation period influences.

Physical Description

The subject building is a face brick bungalow with a prominent hipped main roof clad in terracotta tile, as well as a flat roof over the L-shaped front verandah. The roofscape features one brick chimney with a single terracotta cowl pot and a whirly bird. The verandah roof is supported on timber posts with screen detailing located on brick piers. There is a brick balustrade. The brick balustrade that spans between the piers features rendered capping which is painted blue. The verandah features tile and terrazzo finish to the floor. The facades addressing the street feature pairs of French doors which open onto the verandah, a panelled front door with sidelights and, timber framed windows with Edwardian style lead lights and brick and rendered arched heads. The rear of the house includes a skillion-roofed section clad in brick and Fibre Cement sheet with aluminium windows.

The property was subdivided into two parcels of land and a new dwelling constructed on the new parcel of land in 2017, now addressed as 11 Perry Street. A metal garage which was added in 1996 was subsequently been removed.

The property commands a prominent corner lot and is bound by a brick and decorative wrought iron fence. The building features a modest setback and is fronted by a mature garden with some contemporary landscaping. The back of the property is lined with a corrugated steel fence. While there is no specific landscape elements of value, the overall layout is contributory to the aesthetic significance of the place and should be managed accordingly.

Overall the condition of the dwelling is good. It appears to well-maintained having undergone general maintenance and repair works, including the repainting of timber elements, replacement of guttering to verandah and main roof, and the repointing of mortar joints in certain areas.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Council records indicate:
  - Works to the porch were carried out in 1950
  - The skillion-roofed section to the rear and the Fibre Cement additions were made in 1956
- Aluminium windows have been fitted along the side of the dwelling*
- A metal garage was added in 1996, this has subsequently been removed
- A recent rear brick addition fronted with a flat roofed carport has been added to the building
- Timber verandah elements have been repainted
- Mortar joints along the southern elevation have been repointed
- Whirly bird addition to roof, painted to match the roof tiles
- The property was subdivided into two parcels of land and a new dwelling constructed on the new parcel of land in 2017, now addressed as 11 Perry Street

Although slightly modified, the building presents as a highly intact interwar bungalow. The rear additions are sympathetic to the buildings form, scale and materiality and do not adversely impact on the heritage significance of the item.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1923

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When

he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, and Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890 following this subdivision of the Wentworth Estate in 1881.

In 1893, a portion of Wentworth's estate was bought by William Pritchard, an Auctioneer, and the land was subsequently subdivided. In 1892 a portion of land was transferred to John Hamilton who sold it in 1913 to the Intercolonial Investment Land and Building Company Ltd. A covenant was placed on the property at this time to state that any building erected within the following 20 years should cost not less than 250 pounds. Intercolonial subdivided the land further and in 1916 sold part of the subdivision to Frederick Ebenezer Greenwood, who in turn sold part in the next year to Minna Catherine Flales.

In 1918, this property was formed through a subdivided of a piece of land into two parcels. The site was purchased by Agatha Leddin in 1920 who subsequently sold it to Septimus Owen, a builder, in 1923. It is not clear when the house was constructed, however, its style would indicate that it was built at approximately this time. In 1931 the property was sold again and has been transferred a number of times since. The property was subdivided into two parcels of land and a new dwelling constructed on the new parcel of land in 2017, now addressed as 11 Perry Street. The original dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. 3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the eastern portion of the current site includes a modern two-storey dwelling of no heritage value and the two properties are subdivided, the heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The dwelling at 38 Garfield Street, Wentworthville is of local heritage for its historic, aesthetic and representative values. Built in c.1916, the dwelling has historic significance as evidence of the subdivision of the original D'Arcy Wentworth Grant by local auctioneer William Pritchard and is one the earliest large remaining suburban residences constructed on this 1881 estate. The dwelling has aesthetic significance as a fine and largely intact Queen Anne Federation Bungalow and is a representative example of that building type. The building has additional aesthetic value for the positive contribution it makes to the character of Garfield Street in general.

Criteria Assessment	
a) Historic	Built in c.1916 the dwelling has historic significance as evidence of the subdivision of the original D'Arcy Wentworth Grant and is one the earliest large remaining suburban residences constructed on this 1881 estate.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a fine and largely intact Queen Anne Federation Bungalow and is a representative example of that building type. The building has additional aesthetic value for the positive contribution it makes to the character of Garfield Street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of Queen Anne Federation Bungalow.

Physical Description

The item is a single storey cottage built in the Federation Queen Anne Bungalow style with an asymmetrical layout. The building has face brick walls which have been tuck pointed to the front façade. The roof is a gabled hip roof clad with slate tiles and terracotta ridge caps. The roof also features two single and one double rendered brick chimneys with terracotta chimney pots, a vented gable end and exposed timber rafters. The gabled wing to the street has a roughcast rendered end and simple timber panel. A verandah wraps around the northwest corner between the hipped wings and is an extension of the main roof. The verandah roof is supported on pairs of squat timber columns on brick piers with exposed rafters, a decorative timber infill and brackets with a low steel balustrade and concrete base. The front door next to the gabled wing is timber and glass panelled, with leadlight side and fan lights. The second door in the hipped wing terminates the northern verandah and has an air-conditioning unit installed to the fan light. The projecting gabled wing to the street elevation features a set of three timber framed double hung sash windows with contemporary flyscreens. The windows have timber framed awnings with slate roof tiles. A three faceted bay window located in the verandah recess of the front façade is similarly a set of three timber framed double hung sash windows with contemporary flyscreens.

The rear verandah has been infilled with fibro cladding and louvred windows. The rear addition is not readily visible from the street elevation, according to the former listing sheet the rear addition '*has hardiplank wall cladding and aluminium sliding windows. An open carport or shed is attached at the rear SE corner.'* The rear setback contains a swimming pool dated to c.1997.

A concrete driveway on the northern boundary leads to a small garage at the rear. The dwelling is fronted by a mature and established garden landscape, bound by a low timber picket fence on rendered retaining wall with a central recessed entry to the street. While there are no specific plantings of note, the overall landscape setting contributes positively towards the heritage character of the dwelling.

Overall, the condition of the building is good. The rendered retaining wall is showing signs of cracking due to differential settlement, perhaps due to the garden bed that abuts the wall. There is some minor biological growth on the slate tiles.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Enclosure of rear verandah with fibro and louvred windows*
- Rear additions which are not visible from the street
- Picket fence to street with timber retaining wall
- Carport at south eastern corner
- An air-conditioning unit has been installed to fan light*
- Steel balustrade added to the verandah
- A pool was constructed c.1997

The building remains largely intact, with alterations to the rear of the property which have retained the overall character and form of the dwelling.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1916

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject property is part of 2200 acres originally granted to D'Arcy Wentworth in 1819. In 1882, the land formed part of 488 acres between the Great Western Railway and Great Western Road acquired by Fitzwilliam Wentworth and subdivided and sold from 1883. Allotments between Garfield and present Station Street were purchased by the Wentworthville Estate Land and Building Co Ltd in 1888. Land purchased in 1893 by William Pritchard included the subject property. The dwelling formed part of four 1/2 acres between Garfield St and present Station St purchased by John Hamilton in 1895, which was subdivided and sold between 1913-1918, forming the present property boundaries. A covenant was placed on the property in 1913 which required any building to cost not less than 250 pounds.

The subject property was one of the first to be sold in the area. It was purchased by Alfred Lucas, a salesman, in 1914. Lucas also purchased the adjacent allotment at no. 37 which is located to the north. Mortgages taken out by Lucas between 1914-24 and 1924-27 were most likely for the purchase of the land and construction of the cottage. The Sands Directory first noted Lucas at 'Foreston' in 1916. Lucas resided at the property until 1937. The building remains in use as a private residence.

Curtilage Map

Statement of Significance

The dwelling at 41 Garfield Street, Wentworthville is of local significance for its historic, aesthetic and representative values. Built c.1903, the building is historically linked to the residential development of Wentworthville following the subdivision of the Wentworth Estate in 1881 by local auctioneer William Pritchard. The dwelling has aesthetic significance as a modest Inter-War period residence, notably for its use of weatherboard and fibro cladding. It is representative of the simplicity and fabric of the Inter-War period. The building makes a positive contribution to the streetscape character of Garfield Street, informed by other single storey federation bungalows, and is readily identifiable as part of the historic building stock.

Criteria Assessment	
a) Historic	Built c.1903, the building is historically linked to the residential development of Wentworthville following the subdivision of the Wentworth Estate in 1881 by local auctioneer William Pritchard.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a modest Inter-War period residence, notably for its use of weatherboard and fibro cladding. The building makes a positive contribution to the streetscape character of Garfield Street, informed by other single storey federation bungalows, and is readily identifiable as part of the historic building stock.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	It is representative of the simplicity and fabric of the Federation period.

Physical Description

The dwelling is a single storey timber framed cottage with a gabled hip roof and hipped wing extending towards the street. The roof is clad in corrugated iron and features a face brick chimney with a terracotta chimney pot and new Colorbond guttering. The building is built on brick foundations (piers to the side and brick infill to the front) with weatherboard walls to waist height and battened fibro above. A flat roof verandah extends around the hipped wing to form a roof over the bay window. The verandah is supported by pairs of timber posts set into a concrete base with simple capital and neck mouldings, and features Klip Lok roof sheeting. The hipped wing features a faceted bay window with three timber double hung multi-paned (6 per sash) windows. The front door adjacent to the hipped wing is obscured by metal security screen. Adjacent are a pair of similar windows to the faceted bay, with wide architraves. There are contemporary flyscreens fixed to each window opening. The building features a rear addition with a hipped roof clad in Colorbond sheet metal with solar panels.

A concrete driveway along the northern boundary leads to a small garage at the rear of the property. The garage features a contemporary garage with a roller door, walls clad in weatherboard to waist height and battened fibro above. The garage has a hipped gable roof with a central gablet infilled at the ridge peak. It appears to have been altered at the same time as the rear extension due to similar roof cladding materiality.

The street boundary features a low metal fence covered extensively with ivy. The property appears to retain its boundaries formed in 1930.

The building is in a good condition and is well maintained. Timber elements have been repainted and the guttering and downpipes replaced.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extension
- Solar panels added to the roof of the rear extension
- Modified garage door and roof
- New Colourbond guttering and downpipes
- New paint scheme
- Kilp Lok sheeting to verandah roof*

The buildings integrity is considered to be high. On the most part, building alterations do not detract or adversely impact the significance of the building and generally align with necessary building maintenance and repair.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1903

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually

subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The land on which this dwelling is located was part of 2200 acres originally granted to D'Arcy Wentworth in 1819. In 1882, the land formed part of 488 acres between the Great Western Railway and Great Western Road acquired by Fitzwilliam Wentworth. The land was progressively subdivided and sold from 1883, and allotments on the western side of Garfield Street were purchased by the Wentworthville Estate Land and Building Company Limited in 1888. Land purchased in 1893 by William Pritchard, local auctioneer, included the subject property. Sections of Pritchard's Estate, including the subject property, passed to his wife Anna Maria in 1897. Pritchard subsequently subdivided the area. The subject property formed part of 3 acres 1 rood purchased by Emma Ormerod, wife of John Ormerod in 1901. It appears the cottage was constructed shortly after, as the property is first noted in the Sands in 1903, occupied by John Ormerod, fruit grower.

The property was known as 'Ingallara' in 1930. The present boundaries were formed in 1930 upon purchase by the Commissioners Government Savings Bank of NSW in 1930, by William Shannon in 1946, and by Raymond Ormerod in 1948. The building remains in use as a private residence.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The dwelling at 42 Garfield Street, Wentworthville is of local significance for its historic, aesthetic and representative values. Built c.1919-1921, the dwelling relates to the residential development of Wentworthville that followed the establishment of the railway station and subsequent attraction for people to move to the area. The item has aesthetic significance for its external form and detailing which presents as a largely intact Federation cottage which retains much of its original detailing. It has additional aesthetic significance for the contribution it makes to the character of Garfield Street generally. The building is a representative example of Federation cottages built in the area.

Criteria Assessment	
a) Historic	Built c.1919-1921, the dwelling relates to the residential development of Wentworthville that followed the establishment of the railway station and subsequent attraction for people to move to the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact and fine quality Federation period cottage which retains much of its original detailing. It has additional aesthetic significance for the contribution it makes to the character of Garfield Street generally.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The building is a representative example of Federation cottages built in the area.

Physical Description

The dwelling is a single storey Federation cottage. The cottage has an asymmetrical layout with face brick walls which have been tuck pointed to the street facades. The corrugated iron roof is hipped with two gabled wings projecting to the streets on the south and west. A verandah extends along the south and west elevations, and forms part of the main roof. The verandah is supported by pairs of timber posts on a curved brick balustrade. The timber posts feature simple timber brackets. The verandah also features tiled base and steps. The gabled wings have a faceted bay windows with brick spandrels and narrow multi-paned casement windows with multi-paned top lights and coloured glass panes at the bottom. The bay windows have a flat roof awning supported by carved timber brackets. The windows along the recessed verandah are timber framed, multi-paned casement windows. The front door adjacent the west wing is timber panelled, with glazed top and side lights. A second door into south wing terminates the south verandah. At the rear is a face brick skillion which appears to be original, and timber windows have segmental arched heads. An open verandah at the rear has a bullnose roof profile and is a later addition.

At the rear south east corner of the property is a small gabled entry portico off Bennett Street. A gabled carport is located off Garfield Street to the north and is addressed by a concrete driveway. The dwelling is situated on a deep corner block to Garfield and Bennett Streets, with an established garden setting. There two rows of five established palm trees located along entrance footpath. They form a significant component of the landscapes setting. They are surrounded by hedges along the dwelling and small contemporary plantings along the boundary fence.

The block appears to be subdivided at the rear with a contemporary building which addresses Bennett Street. The original subdivision boundary is therefore compromised.

Overall, the condition of the building is considered to be fair and the house presents as well-maintained from the street. The roof appears worn, however not dilapidated and operational. There is, however, some cracking to brickwork along the verandah brick infilled balustrade.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear bullnose verandah
- Gabled entry portico to Bennet Street
- Carport off Garfield Street
- Repointing to mortar joints along street façade*
- Roof sheeting replaced in c.1980-90s
- Subdivision of lot to create two lots

Overall, the integrity of the building is considered to be moderate. Although this is the case, the dwelling remains largely intact with alterations primarily at the rear of the property that do not detract from the dwellings overall form, scale or key detailing.

There are, however, obvious sections of brickwork which have been repointed on the principle façade (west elevation) and along the brick verandah balustrade that do not match the existing tuck-pointed mortar joints. The patch repairs have inadvertently negatively impacted on the aesthetic of the dwelling. The tuck pointing along these principle façades should be maintained using traditional techniques to match the existing.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1919-1922

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject dwelling is located on the land originally granted to D'Arcy Wentworth in 1819. In 1882, the land formed part of 488 acres between the Great Western Railway and Road acquired by Fitzwilliam Wentworth. The land was progressively subdivided and sold from 1883, and allotments between Garfield and Station Streets were purchased by the Wentworthville Estate Land and Building Company Limited in 1888. The subject property formed part of 6 acres 1 rood and 8 perches purchased by John Hamilton in 1894. The land was further subdivided and progressively sold between 1913-1919, forming the boundaries evident along the street today. A covenant placed on the property in 1913 required any building constructed on the property within the following 20 years should not cost less than 250 pounds. The property was purchased in 1917 by Leslie and Harry Thompson, and by Charles Miller in 1918. A mortgage taken out by Miller between 1919-22 to William Hitchcock and George Folkard, timber merchants, most likely was for the construction of the cottage. The Sands Directory first notes Miller at the property in 1921. W E Thomas is listed at the property between 1926-1928, and H T Murray 1930-33.

The dwelling remains in use as a private residence. However, it does not retain the original allotment boundary formed with the 1913-1919 subdivision as the rear of the property was subdivided to now include a contemporary dwelling addressing Bennett Street.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	

4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Repointing of brickwork should make an attempt to match existing mortar joints and be tuck-pointed.
- Due to the rear development and subdivision of the original allotment, the heritage curtilage of the item now only includes Lot 55 in DP1129817. The heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The dwelling at 45 Garfield Street, Wentworthville is of local significance for its historic, aesthetic and representative values. Built c.1913, the building is historically linked with the residential development of the area that followed the establishment of the railway and subsequent attraction for people to move to the area. The item has aesthetic significance for its external form and detailing which presents as a largely intact Federation cottage which contributes positively to the character of Garfield Street through both built and landscape elements. The building is representative of a quality Federation period cottage.

Criteria Assessment	
a) Historic	Built c.1913, the building is historically linked with the residential development of the area that followed the establishment of the railway and subsequent attraction for people to move to the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has high aesthetic significance as a largely intact Federation cottage with fine detailing which contributes positively to the character of Garfield Street through both built and landscape elements.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of Federation period cottages.

Physical Description

The item is a single storey Federation cottage with an asymmetrical layout. The dwelling features face brick walls with polychromatic details, including string courses and segmental arched window heads. The brickwork to the southern and eastern façade is of a different colour and has been tuck pointed. The roof is hipped with two gabled wings that extend to the east and south, clad with Colorbond roof sheeting. The roof also has two rendered brick chimneys. The east gable end has a simple barge board detail and a central triple hung window with wide segmental arched heads and bullnose brick sills. A bullnose verandah wraps around the southeast corner of the dwelling between the gable wings. The bullnose verandah is supported on simple timber posts with decorative timber brackets and valance. The verandah has a tiled floor base. The two doorways off the verandah are obscured by aluminium security screens. Windows are generally timber framed double hung or casement windows that have segmental arched heads and brick sills. The rear of the dwelling has a skillion roofed timber weatherboard addition with an aluminium framed window.

The dwelling retains its original subdivision boundaries. Built with a deep setback, the dwelling is fronted by an established landscape setting with several mature trees lining the driveway and boundaries. The concrete driveway on the south side leads to a timber framed carport at the rear.

The building is in a good condition and appears to be a well-maintained residence. The brickwork appears to be recently repointed.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Weatherboard skillion rear addition
- Roof sheeting replaced
- Recent tuck pointing of south and east elevations
- Aluminium framed window to the rear*

The building is largely intact with minor alterations and additions. All alterations have respected the buildings heritage values and follow the principle of replacing heritage fabric on a like-for-like basis. The buildings integrity is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1913

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject site is part of 2200 acres originally granted to D'Arcy Wentworth in 1819. In 1882, the land formed part of 488 acres between the Great Western Railway and Road acquired by Fitzwilliam Wentworth. The land was progressively subdivided and sold from 1883, and allotments on the western side of Garfield Street were purchased by the Wentworthville Estate Land and Building Company

Limited in 1888. Land purchase in 1893 by William Pritchard, auctioneer, included the subject property. Sections of Pritchards Estate, including the subject property, passed to his wife Anna Maria in 1987. Pritchard subsequently subdivided and the subject property formed part of 3 acres 1 rood purchased by John Armour, a messenger, in 1912. The land was progressively subdivided and sold between 1913-53. The property was purchased by Edward Andrew in 1913, and the house appears to have been constructed shortly after, first listed in the Sands Directory in 1915. Andrew resided at the property until 1925, and the property was purchased by Frederick Lambert in 1927. Lambert resided at the property between 1929-48, when it was purchased by Noel Croghan. The dwelling remains in use as a private residence.

Curtilage Map

Statement of Significance

The dwelling at 26 Jordan Street, Wentworthville is locally significant for its historic, aesthetic and representative values. Built in c.1914 the house is historically linked to the residential development of the area that followed the establishment of the railway and subdivision of land surrounding the railway station, principally the Government Domain estate. The item has aesthetic significance for its external form and detailing which presents as a largely intact Federation cottage which makes a positive contribution to the character of Jordan Street. The building has representative values as a quality weatherboard Federation cottage.

Criteria Assessment	
a) Historic	Built in c.1914 the house is historically linked to the residential development of the area that followed the establishment of the railway and subdivision of land surrounding the railway station, principally the Government Domain estate.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance for its external form and detailing which presents as a largely intact Federation cottage which makes a positive contribution to the character of Jordan Street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item has representative values as a quality weatherboard Federation cottage.

Physical Description

The subject building is a single storey weatherboard clad Federation cottage. The dwelling has a hipped roof with a projecting gable extending towards the street, which is clad in corrugated iron. The roofscape also features a single brick chimney on the eastern side. The front elevation has a single door with an infilled top light, aluminium security screen and a pair of casement windows. The gable end features a timber screen with a simple bargeboard and finial above a faceted bay with a pair timber casement windows at the centre. The centre casement windows have single casement windows either side and fixed timber awnings. All windows to the street feature a band of coloured glass panes along the bottom, multi-paned coloured top lights, and simple timber architraves and sills. The verandah has a corrugated iron skillion roof with a timber ladder valance, which is supported on timber posts. The verandah has replaced a fibro infilled balustrade with a timber ladder and retained the original timber tongue and groove floorboards. The verandah has been extended around the western elevation and enclosed with fibro cladding, supported on brick piers with aluminium sliding windows and timber framed doorway. A possibly early weatherboard lean-to is located at the rear south eastern corner of the dwelling.

There is a low painted timber picket fence to the street and side boundaries. A driveway along the western boundary leads to a long garage towards the rear of the property. It appears to be clad in fibro sheeting with a skillion roof. The site has an established garden setting with a range of plantings, including a frangipani tree.

The building is well maintained and appears to be a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Verandah has been extended around the western elevation
- Veranah below the balustrade has been enclosed with fibro cladding
- New roof sheeting

The dwelling is largely intact and retains much of its original fabric. Although modified the buildings significance is not adversely impacted as the overall form and scale of the building is respected. The integrity is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1914

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject property originally formed part of the 1065 acre Government Domain. The later subdivision of the Government Domain in 1859 saw much of the land acquired by William Fullagar, who acquired extensive tracts in the present day Westmead and Wentworthville area. In 1913 approximately 89 acres

were purchased by Charles Veron, grazier, who subsequently subdivided in 1914, forming Jordan Avenue. The subject area was situated on Lot 91 which comprised of 1/2 acre that was purchased by Florence Collins, wife of Charles Collins in 1914.

Although the exact date of construction of the cottage is unknown, its architectural style would indicate it was constructed for Collins as part of this early 20th century subdivision. This view is substantiated in the Sands Directory, as Charles Collins is listed at the property between 1923-33. Florence Joy and Hector Donald purchased the property as tenants in common in 1948. The property was further subdivided, and the present boundaries formed in 1960, when the cottage and grounds were purchased by Philip Wurst. The Wurst's resided at the property until 1989, when it was purchased by the present owner, Janice Sillett. An application for building works in 1961 was for a fibro garage. The dwelling remains in use as private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Curtilage Map

Statement of Significance

The item at 42 Lane Street, Wentworthville is locally significant for its historic, rarity and representative values. It is an early surviving cottage, likely erected in the late nineteenth century on the 1881 Wentworthville Estate subdivision of D'Arcy Wentworth's original land grant. This type of dwelling is now the only one of its kind remaining in Lane Street. The cottage is a good representative example of the many small weatherboard "workingmen's cottages" built in the late 19th & early 20th century throughout Wentworthville in a simple late Victorian style.

Criteria Assessment	
a) Historic	It is an early surviving cottage, likely erected in the late nineteenth century on the 1881 Wentworthville Estate subdivision of D'Arcy Wentworth's original land grant. This type of dwelling is now the only one of its kind remaining in Lane Street.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	This type of dwelling is now the only one of its kind remaining in Lane Street.
g) Representativeness	The cottage is a good representative example of the many small weatherboard "workingmen's cottages" built in the late 19th & early 20th century throughout Wentworthville in a simple late Victorian style.

Physical Description

The item is a simple timber weatherboard cottage, painted yellow, with bullnose verandah to the front elevation. The gable main roof and verandah have new galvanised iron cladding and guttering. The gable ends have two timber finials which appear to be replacements. The roof also features a painted brick chimney with stepped brick course and a chimney pot. The verandah is supported on replaced timber verandah posts with decorative timber corner brackets. The timber posts and bracket are coated in red paint. The windows to the front elevation are paired timber-framed casement windows with small coloured panes to top & bottom. They have simple timber sills with a decorative timber skirt. The front façade features rusticated board while the side elevations are ship lapped board. A rear addition is clad in fibro sheeting with a skillion roof.

The rear landscape is predominately concrete slabbed. A contemporary toilet block is built adjacent the cottage with ship lapped weatherboards and a skillion roof clad in pressed metal sheeting. Further back, the site contains a gabled roof pergola. The rear of the site is enclosed by a modern steel balustrade fence.

The front landscape features paved retaining gardens with bullnose brick capping. A curved brick footpath with a red steel handrail is located to the north and adjoins the verandah. The southern boundary has many established and mature trees. Access of the site has been altered to account for the new function for the Occasional Child Care Association NSW.

The building appears to have been recently renovated and is in a good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New roof sheeting
- Replaced finials
- Replaced timber brackets and post
- New paint scheme*
- Rear skillion roof, fibro clad addition
- Rear toilet block
- Rear gabled roof pergola
- Rear concrete slab
- Access - Paved entry to item, including a ramp with a balustrade*
- Boundary fence (steel balustrade fence)

The building appears to be highly modified, though the replacement of degraded fabric has been undertaken on a like for like basis including timber elements of the verandah and roof. The building retains its form and scale, though the overall access and landscaping of the site has been altered significantly to account for the new function for the Occasional Child Care Association NSW. The integrity is considered moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Unknown, likely late nineteenth century

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville

area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today.

Another major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Part of the suburb of Wentworthville originally formed a part of the western part of the Domain of Government House at Parramatta (known as Parramatta Park by the 1850s). An extensive portion of the Domain was subdivided in 1859-1861 and it was at this time that Fullagar acquired the land.

The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject property is an early surviving cottage on land originally granted to D'Arcy Wentworth and subdivided 1881 as the "Wentworthville Estate". Lane Street (originally First Street) was subdivided into small allotments in the first subdivision. The property was last sold in 1993. At present the site is occupied by Occasional Child Care Association NSW.

Curtilage Map

Statement of Significance

St Andrew's Presbyterian Church is of local significance for its historic, associative, aesthetic and social values. Built in 1840 in the heart of Parramatta and completed by 1849, the Church is historically significant as the first Presbyterian Church built in Parramatta. Importantly, it was relocated stone by stone to its present site on McKern Street, Wentworthville in 1925. The Church is historically associated with early colonial architects James Hume and James Houison, and Superintendent of Bridges, David Lennox who designed the masonry. St Andrew's Presbyterian Church is one of the few buildings designed by the David Lennox and is an important early example of a Victorian Gothic church. Although it was relocated from its original site in Parramatta, which is the source of some the church's original historical site associations and architectural integrity, the relocation of the item reflects the social significance that the Church held to the local Presbyterian community of Parramatta and Wentworthville. This community was also involved in the physical reconstruction of the Church at its present location in Wentworthville. The church has aesthetic significance for its use of sandstone and its pinnacle tower which forms a prominent local landmark in Wentworthville, significant for its continued appreciation and use by the local Presbyterian community.

Criteria Assessment	
a) Historic	Built in 1840 in the heart of Parramatta and completed by 1849, the Church is historically significant as the first Presbyterian Church built in Parramatta. Importantly, it was relocated stone by stone to its present site on McKern Street, Wentworthville in 1925.
b) Associative	The Church is historically associated with early colonial architects James Hume and James Houison, and Superintendent of Bridges, David Lennox who designed the masonry. St Andrew's Presbyterian

	Church is one of the few buildings designed by David Lennox and is an important early example of a Victorian Gothic church.
c) Aesthetic/Technical	The item retains aesthetic significance as an intact Victorian Gothic Church, although rebuilt in 1925 in Wentworthville which may have compromised some of its architectural integrity.
d) Social	Although it was relocated from its original site in Parramatta, which is the source of some the church's original historical site associations and architectural integrity, the relocation of the item reflects the social significance that the Church held to the local Presbyterian community of Parramatta and Wentworthville. This community was also involved in the physical reconstruction of the Church at its present location in Wentworthville.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

St Andrew's Presbyterian Church is a sandstone Victorian Gothic church built to a traditional plan with a central aisled nave and square belltower - with castellated parapet & square corner pinnacles at the corners over the principle entrance. The church features lancet headed windows and doors, and small buttresses along nave (side) walls and at the corners of the tower. The stonework features shallow decorations on the face of the tower including circular & quatrefoil motifs.

The church grounds has a range of buildings of varying ages. A c.1960 red brick church hall with narrow timber framed windows painted white and terracotta tile roof is adjacent to the church. A contemporary building is built to the rear. The church remains prominent within the streetscape with minimal landscaping to obscure the church frontage. There is one established conifer located to the southeast corner, near McKern Street.

The building appears to be in a fair condition, although the sandstone shows some signs of discolouration and biological growth.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Church rebuilt stone by stone in Wentworthville between 1925-1928
- Church hall built adjacent to the church, c.1950-60s
- A contemporary building is located at the rear of the church

Although the church was rebuilt in this location, it appears to retain much of its original architectural detailing. The item retains a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Originally constructed in 1840, relocated to Wentworthville in 1925-1928

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville

area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

St Andrews Presbyterian Church in Wentworthville was originally located in Church Street, Parramatta. The government had provided a site in Parramatta for the Presbyterian Church in 1837. The architect of the Church was James Hume, with some contribution from architect James Houison, often referred to as Parramatta's 'forgotten architect'. The church was built by Thomas Orr with the masonry designed by David Lennox in 1840 and completed in 1849. By the 1920s the Presbyterian Church required a larger building to accommodate the community of Parramatta. As a new church was built in Parramatta to replace St Andrews Presbyterian church, it decided the Church would not be demolished, but relocated "stone by stone" to its present site on McKern Street, Wentworthville in 1925. The reassembled Church was completed by 1928. The Church remains in use for religious activities.

Statement of Significance

The dwelling at 30 Monash Street, Wentworthville is of local significance for its historic, aesthetic and representative values. Built in c.1915, the property relates to the residential development that followed the second subdivision of the Wentworth Estate in 1912. The item retains its aesthetic significance as a small Federation period workers cottage with fine timber detailing. Although modified, the building has retained essential characteristics of the original building in scale, form and detailing. The building makes a positive contribution to the streetscape character and is readily identifiable among the historic building stock of the area.

Criteria Assessment	
a) Historic	Built in c.1915, the property relates to the residential development that followed the second subdivision of the Wentworth Estate in 1912.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item retains its aesthetic significance as a small Federation period workers cottage with fine timber detailing. Although modified, the building has retained essential characteristics of the original building in scale, form and detailing. The building makes a positive contribution to the streetscape character and is readily identifiable among the historic building stock of the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of Federation period workers cottages built in the area.

Physical Description

The item is a single storey weatherboard cottage on brick foundations with a bullnose verandah that extends along the front facade. The original house has a gabled roof with timber finials at either end. There is a single painted brick chimney on the eastern side of the roof. The verandah has simple timber posts, decorative timber frieze and brackets, painted corrugated iron roof sheeting and timber floorboards. A symmetrical facade to the street has a single timber and glass panelled door with single timber framed double hung windows on either side. All window openings have simple timber architraves and sills. An aluminium sliding window has been installed into an early window opening on the west. A large skillion lean-to extends to the rear and has weatherboard and fibro walls and appears to have been constructed in at least two stages. At the south western corner is a gabled extension with similar weatherboard walls, corrugated iron roof, and aluminium sliding and timber sash windows with adjustable canvas awnings.

The dwelling is located on a long narrow block and appears to retain its original subdivision boundary. The house is located close to the street alignment, with a short narrow grassed driveway on the western side. To the street is a painted timber paling fence and small cottage garden. A garden with wild bushes frames a central brick paved footpath.

The dwelling presents a well-maintained house in a good condition, with roof sheeting and the weatherboards replaced and re-clad.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Replaced weatherboards
- Replaced corrugated roof sheeting
- Rear extension with weatherboard cladding and corrugated iron roof (extended in phases)
- Addition of adjustable canvas awnings in 1994
- An aluminium sliding windows installed into an early window opening on the west*

Although modified, the building is considered to retain a moderate level of integrity. Significant fabric has been replaced on a like for like basis conserving the built heritage values of the item.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1915

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject property is located on land that formerly formed part of 2200 acres originally granted to D'Arcy Wentworth in 1819. In 1882, the property formed part of 488 acres of land between the Great Western Railway and Great Western Road acquired by Fitzwilliam Wentworth. Wentworth began to subdivide the land from 1881, however only those blocks near the recently opened railway line were sold.

It was not until 1890 that the subject property (Lot 64 Sec.4 comprising approx. 1/4 acre), was purchased by a local bricklayer of Wentworthville, Frederick Weekes. At this time, the property is noted on Fullagar Street, later to become the present Monash Street. The property was acquired by John George Weekes in 1900, and re-subdivided in 1912 which reduced the size of the allotments. Although the exact date of construction is unknown, the cottage was most likely constructed for J. G. Weekes in the first decade of the 20th century, possibly to match the adjoining house at No. 28. Although this has since been lost as No.28 was demolished. The property was purchased by local storekeeper, Francis Dobson in 1937. Francis Dobson had a large shopfront by the railway station built in 1928. In recent years, building applications have included a brick veneer addition in 1993 and an awning in 1994.

The building remains in use as a private dwelling.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Curtilage Map

Statement of Significance

The item is of local significance for its historical, associative and aesthetic values, and as a representative example of suburban commercial architecture. The façade is significant for the evidence it provides of the early commercial development of Wentworthville in association with the development of important transport routes. This building has some associative significance as a shop leased to George Maunder who was a long-serving mayor for Holroyd. While the building has some aesthetic significance as a streetscape element, the quality of the building has been reduced by unsympathetic alterations to the shopfronts at the street level.

Criteria Assessment	
a) Historic	The item related to the early twentieth century commercial development of Wentworthville.
b) Associative	The item is associated with a notable local identity, George Maunder, a long-standing mayor of Holroyd, who had a lease at this property.
c) Aesthetic/Technical	The item has some aesthetic significance, as a streetscape element, although the aesthetic value of the building has been reduced by unsympathetic alterations to the shopfronts at the street level.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The building is a two-storey structure with face brick and Arts and Craft detailing above the awning and contemporary aluminium shop front below the awning. The suspended steel framed awning features a decorative battened underlining and corrugated steel cladding overlining. Steel rods are fixed to two rendered piers which frame face brick façade above.

Above the awning the façade is symmetrical and features two sets of timber framed casement windows with bracketed flat hood. These are surmounted by decorative frieze featuring ceramic tile and rendered details bearing the date '1929' in relief. A broken parapet with curved feature is a prominent element of the façade and conceals a sloped roof behind.

At ground floor level both shop fronts have been heavily modified with a glazed and aluminium entrance to both No. 2 and No. 4, as well as a steel roller door closing off the opening of No. 4. The rear of the building features an enclosed, skillion-roof section at ground level of brick construction with timber and aluminium windows. An uncovered terraced area is at the rear of the building with a small carport/garage area at the property boundary.

Adjacent is another pair of shops of a similar height at 6-8 Station Street (Item 107B) of rendered brick construction with Spanish Mission detailing including a central pediment, parapet mouldings and half-round hood mouldings to the windows. The two buildings as a pair positively contribute to the streetscape. A drive runs along the northern boundary of the property to access the rear.

The building is generally in a good condition although there is paint peeling to bracketed hoods on casement windows and some cracking to the parapet on the northern end of the front façade.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Aluminium shopfront windows
- New roller doors to No. 4
- New security system
- Contemporary signage*

The first floor of the shopfront has remained relatively intact and has high integrity, however, as the ground level has been significantly modified the shopfront is considered to be of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1929

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was

not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

Another major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Part of the suburb of Wentworthville originally formed a part of the western part of the Domain of Government House at Parramatta (known as Parramatta Park by the 1850s). An extensive portion of the Domain was subdivided in 1859-1861 and it was at this time that Fullagar acquired the land.

The urban growth and population of the area is attributed to the establishment of the Bonds Industries Limited. George Bond's company, George A. Bond & Co opened the first cotton spinning mill in Australia in 1923. The company prospered and in June 1920, Bond converted his enterprise into a public company which led to an increase of jobs within the area. In the 1920s, there were 500 people employed at the mill, with the majority being women. By the mid-1930s there were almost a thousand staff in the Cumberland area employed.

Prior to the current brick buildings, the commercial structures in this location were single storey shopfronts with residences to the rear. The brick two-storey structures were developed in 1928 shortly before the adjacent Dobson House at 6-8 Station Street. Historic photos show sandstone urns decorating the end columns. Ethel Golding purchased portions of lots 4 and 5 of Station Street near the train station. After the site was developed, one of the shops was leased to George Maunder as a newsagent. Maunder was a twice-serving mayor of Holroyd, between 1941-1946, and 1951-55. The property has been sold a number of times, including subdivision of the building into two separate properties in 1955. An application for an outbuilding was made in 1994.

Recommendations

Curtilage Map

Statement of Significance

The façade of the shops at 6-8 Station Street, Wentworthville is of local significance as part of a group with the adjoining shops at 2-4 Station Street. The façade has historic significance as evidence of a major period of urban growth for the community of Wentworthville relating to the development of important transport routes. The shopfront has aesthetic significance through its contribution to the main streetscape, as well as its paired relationship with the adjacent property. It has Mediterranean architectural features to its façade, which is uncommon in its local context. The Station Street shop facades are one of the few remaining intact examples of early shop facades in Wentworthville.

Criteria Assessment	
a) Historic	The item represents a major period of urban growth for the community of Wentworthville relating to the development of important transport routes.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance, particularly its contribution to the main streetscape, as well as its paired relationship with the adjacent property. It has Mediterranean architectural features to its façade, which is uncommon in its local context
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The subject building, known as 6-8 Station Street, is a three-storey commercial building constructed in 1928. The original building is divided into two sections, the front and the rear. The front section is a three-storey section with painted brick parapet and sloped roof. The rear section is a deep gable-roof wing.

The front façade forms a prominent element in the streetscape. There are two ground level shops with aluminium windows and entrance however, the glazed tiling at the base has been retained. Separating the ground level and upper façade levels is a suspended metal awning. Above the awning is a central bay that is expressed forward beyond the main façade with one window in the centre. On either side of this central bay is a set of three casement windows with arched fanlight, classical columns at the join of each arch. The fanlight glazing to the central façade section, as well as to No. 6 is still intact, however, the fanlights to No. 8 have been infilled either with timber board, or painted white. The moulded rendered parapet expresses a deco style, with the central bay embossed with 1928 with a flagpole in between.

In 1998, the building was described as having corrugated iron roofing, and the brick rear and side facades and timber windows with rendered sills intact. The gable-roof rear addition has a central brick chimney, and there is a narrow verandah to the second floor of No. 6. There are a number of sheds and outbuildings across both properties.

The shops front Station Street and are separated from the road by a footpath.

The building has been well-maintained apart from some paint peeling from the upper level of the façade. The shopfront is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New outbuilding elements to rear
- Aluminium shopfront windows and entrance*
- Contemporary signage*
- Modified cladding and signage to awning
- Fanlights to upper storey windows infilled with timber board or painted white at No. 8*

The façade of the upper storey of the shopfront has remained relatively intact and has high integrity, however, as the ground level has been significantly modified with aluminium windows and contemporary signage, the shopfront is considered to be of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents

to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.
Another major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Part of the suburb of Wentworthville originally formed a part of the western part of the Domain of Government House at Parramatta (known as Parramatta Park by the 1850s). An extensive portion of the Domain was subdivided in 1859-1861 and it was at this time that Fullagar acquired the land.

The urban growth and population of the area is attributed to the establishment of the Bonds Industries Limited. George Bond's company, George A. Bond & Co opened the first cotton spinning mill in Australia in 1923. The company prospered and in June 1920, Bond converted his enterprise into a public company which led to an increase of jobs within the area. In the 1920s, there were 500 people employed at the mill, with the majority being women. By the mid-1930s there were almost a thousand staff in the Cumberland area employed.

Prior to the construction of Dobson House, there were single storey commercial shopfronts with residences to the rear in this location. The current three-storey structure was built in 1928 just before the adjacent two-storey structure at 2-4 Station Street. Historic photographs show the arched windows were intended to be an open verandah, which at some stage was infilled with the current casement windows. Today, the site is still used as a commercial property.

Curtilage Map

Statement of Significance

The memorial fountain is of local significance for its associative, aesthetic, and social values, and as a rare memorial to the local area. The memorial fountain is unique and socially significant to the community of Wentworthville as it commemorates the death of notable local individuals. It is a representation of local sentiment and emotional expression towards its community members. The design and construction are uncommon and designed by architect Mr F.J. A Weller. The item's significance is enhanced by its prominent location between the commercial premises of Wentworthville town centre and the railway entrance, which serve to maximise its exposure and recognition.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item is associated with the local persons specifically commemorated on the memorial, as well as to the community of Wentworthville who erected the memorial.
c) Aesthetic/Technical	The item is a unique design with a dual function as a memorial and as a public utility.
d) Social	The item is socially significant to the community as it commemorates individuals from the community, and it was erected by the community.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is rare as a community memorial commemorating the death of specific individuals.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item is a freestanding brick memorial wall with sandstone capping surrounding a bronze plaque. The central front of the wall is tiled with a ceramic basin for the stainless-steel drinking fountain. The fountain sits on a two-step sandstone platform.

The Bronze plaque inscription reads:

Main inscription – "In memory of / Jack Walter Stanton and / James Alexander Tomlinson / who perished in the service of / God and their fellow men. / Drowned at Scarborough on / October 1, 1932. / Marked bravery was also displayed / on this occasion by Rita Tomlinson, / John Geoffrey Harper and Leo Stubbs"

Top surround – "Ho, Every one that thirsteth, come ye to the waters, buy without money and without price. Isaiah LV.1."

Bottom Surround – "This fountain was erected by district residents / unveiled MCMXXM E.J.A. Weller ARAIA."

The memorial is currently situated at the southern entrance to Wentworthville Railway station. The memorial has been reinstalled and remounted, likely to accommodate the railway TAP modifications. It has been relocated and reinstalled from its exact original position. A new brick wall has been constructed and is now shorter in length with two nib walls (presumably using the salvaged brick and sandstone from the truncated length) have been added to the memorial wall dividing it into three sections. The memorial has been retiled and framed and a new fountain tap has been added. The bronze plaque has been conserved.

The Memorial Fountain has been well maintained and is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

In c. 2014, the Memorial Fountain was relocated from original location adjacent Wentworthville Railway station to current location. The memorial has some modifications as a result of relocation:

- Memorial wall shorter in length
- Two nib walls added
- New tiling and framing to centre.
- New brick wall
- New fountain
- Polished concrete framing around bronze plaque

Although there have been significant modifications to the memorial including a new brick wall, new tiling and fountain tap, the modifications are sympathetic to the original heritage values of the memorial. The Memorial fountain has moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1932

Wentworthville

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. In accordance with normal custom, Wentworth's salary as a medical officer was supplemented with land grants from the Colonial Government. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta

from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

In 1910, Wentworthville was again subdivided into Girraween. The suburb was created by real estate developer Arthur Rickard of Arthur Rickard & Co. Ltd who began subdividing the area near Toongabbie station during WWI. In this period, Pendle Hill, a locality within Wentworthville became a suburb changing its name from Wentworthville West to Pendle Hill in 1917. After the 1919 Local Government Act, all subdivisions had to be approved by local councils who examined their allotment sizes, layouts, and streets. Only when the location on a hilltop made a grid pattern subdivision undesirable did surveyors and promoters deviate from the norm, such as Dorothy Mount in Wentworthville (subdivided in 1916) and the Constitution Hill Estate (subdivided in 1924). Pendle Hill was another new subdivision that opened in 1927 and rapidly grew in popularity for its neat cottages and attractive gardens.

Memorial Fountain
The item commemorates the drowning death of two boys at Scarborough Beach, north of Wollongong, on 1 October 1932. On this day, a small Sunday School party of five teachers and sixteen students from St. Pauls Wentworthville went on a surfing excursion to Scarborough when two of the party got into difficulties in the surf. Jack Stanton (aged 22, of Dunmore Street) and James Tomlinson (aged 16, of Smith Street) entered the surf to assist and were drowned. Their bodies were washed ashore two weeks later. A service for the two men was given at St Pauls Wentworthville on 16 October 1932.

The construction of the memorial was largely a voluntary effort, with much of the funds locally donated, and materials and labour for the construction also reducing the final cost to around £70 if not for the donation of locals. The memorial may have originally had surrounding landscaping, which has long since been removed. The unveiling of the memorial was a largely celebrated local event.

Architect – E.J. A. Weller
Edward James Archibald Weller born in Warragul, Victoria in 1903 was an established modernist Australian Architect based initially in NSW before he moved to Queensland. Between 1918 and 1924 he was employed in an architect's office in Sydney, 'G.C Thomas and F.G Briggs' and also worked in an office of Walter Burley Griffin. He became fully registered Architect in Queensland in1929. Prior to that he was employed by the Sydney Municipal Council for the construction of Bunnerong Power Station.

In 1966 E J Weller opened the Design Arts Centre in Brisbane which exhibited 'furniture, sculpture, pottery, paintings, glassware, jewellery, handweaving and woodwork. Its primary aim was to provide a showplace for local artists and craftsmen whose skills might otherwise be unknown. Weller's commitment to the promotion of art and local craftsmanship through the centre resulted in an invitation to become President of the Royal Queensland Art Society in 1954 and led to his election as Vice-President of the Queensland Division of the Craft Association of Australia in 1971.

A precursor to the Design Centre was the Brisbane Building Centre (Pty Ltd) located in the basement of the AMP building in Brisbane. First opened in 1935, the centre was also established by Weller. Modelled on the Building Centre in London, it was a commercial venture, with the aim to promote "better building through the attractive display of modern products". To this end, the centre offered customers access to a "service bureaux" where they could find information on modern materials and building processes.

E. J. A. Weller passed away in 1979, in Brisbane. He is remembered for many achievements, notably becoming the President of the Royal Australian Institute of Architects in 1954, the past President of the Queensland Chapter and for his associated with the Department of Public Works in Brisbane.

Revised curtilage recommended – refer below

Statement of Significance

Wentworthville Railway Station is of local significance for its historic, aesthetic, social, scientific and representative values. The site of Wentworthville Railway Station is of historical significance through its relationship to the development of the suburb of Wentworthville following the Wentworth Estate Subdivision and the original station's funding by land speculators. The present railway station redevelopment took place during the quadruplication of the Main Western Line between Parramatta and Blacktown in 1946. This group of buildings also shows the effects of war time financial constraints. The station buildings are of aesthetic significance as good examples of mid-twentieth century railway construction in an urban context, displaying distinctive elements of Inter-War Stripped Functionalist style including the use of bonded brickwork, Art Deco influenced parapet detailing, strong horizontal planes and steel awnings. The style is competently executed, displaying many typical stylistic elements of similar station buildings throughout the Western suburbs generally. The place has the potential to contribute to the local community's sense of place and can provide a connection to the local community's past. The station is of the same construction as those of the neighbouring stations Pendle Hill and Toongabbie. The station buildings provide opportunities together with Toongabbie, Pendle Hill and Seven Hills stations to study and understand mid-20th century building techniques.

Criteria Assessment	
a) Historic	The site of Wentworthville Railway Station is of historical significance through its relationship to the development of the suburb of Wentworthville following the Wentworth Estate Subdivision and the original station's funding by land speculators. The present railway station redevelopment took place during the quadruplication of the Main Western Line between Parramatta and Blacktown in 1946. This

	group of buildings also shows the effects of war time financial constraints.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The station buildings are of aesthetic significance as good examples of mid-twentieth century railway construction in an urban context, displaying distinctive elements of Inter-War Stripped Functionalist style including the use of bonded brickwork, Art Deco influenced parapet detailing, strong horizontal planes and steel awnings. The style is competently executed, displaying many typical stylistic elements of similar station buildings throughout the Western suburbs generally
d) Social	The place has the potential to contribute to the local community's sense of place and can provide a connection to the local community's past.
e) Scientific	Wentworthville Railway Station is of technical significance for its ability to demonstrate design and construction techniques of the mid-20th century railway structures. The station buildings provide opportunities together with Toongabbie, Pendle Hill and Seven Hills stations to study and understand mid-20th century building techniques.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Wentworthville Railway Station is a representative example of a small, mid-20th century railway station that is designed in the Inter War Stripped Functionalist style in an urban context, similar to Toongabbie and Pendle Hill Railway Stations. The footbridge was identified as an item of moderate heritage significance in the comparative analysis from the 2016 'Railway Footbridges Heritage Conservation Strategy'.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Inventory listing sheet for 'Wentworthville Railway Station', last updated in 6 April 2009. As the description features a comprehensive physical description of both external and internal station elements, only minor amendments were made with regards to recent stations upgrade.

Wentworthville Railway Station was upgraded as part of Transport for NSW's Transport Access Program (TAP) between 2016-2017. The station precinct features a contemporary overhead concourse providing improved station accessibility and safety. The concourse is accessed via lift and stairs, and features platform canopies that extend from the concourse and along the platform entries. Other contemporary additions to the station precinct include lighting, signage, seating, opal machines, and bins.

STATION BUILDING PLATFORM 1/2 (1943)
External: The station buildings are identical to those at Toongabbie and Pendle Hill Railway Stations. The building on Platform 1/2 is larger than Platform 3/4 building and is a post war Functionalist style railway building. It is of face brick construction with low pitched gabled roof and brick parapets at each end with courses of recessed heeler bricks capped by a course of bullnosed bricks. The eastern end of the building is defined by a curved masonry bay with a single door. Centrally located on each parapet is an Art Deco style projecting vertical masonry fin constructed of heeler bricks in a contrasting colour. The parapets step down on each side from the fin. The roof is clad with Colorbond, which extends as an awning on all four sides of the building. The awning on the western end, which provides shelter to passengers purchasing tickets from the ticket window and the machine, is supported by two rectangular brick columns with curved corners. On Platform 1/ 2, one ticket window remains in use while the other is bricked up. Steel framed windows with three horizontal hopper panels (central panel fixed) are vertically proportioned and placed regularly on both platform elevations. A contemporary canopy connects the building from the underside of the original awning to the stairs and footbridge.
Note. The existing stairs from the footbridge were removed as part of the 2017-2017 TAP Upgrades.

Internal: Internally the building has a linear floor layout with series of rooms in various sizes including combined former booking/parcels office (now booking office and staff area) with storeroom, general waiting room, ladies room and toilets, men's toilets with a store room in the curved bay. The doors are secured by metal grill gates while the windows covered with security mesh. The entire original interior fit-out has been removed.

STATION BUILDING PLATFORM 3/4 (1943)

External: The station building on Platform 3/4 is approximately half the size of the Platform 1/2 building featuring the same detailing and architectural style with the exception of the curved bay on one end. It is of face brick construction with low pitched gabled roof and brick parapets at each end with courses of recessed heeler bricks capped by a course of bullnosed bricks. Centrally located on each parapet is an Art Deco style projecting vertical masonry fin constructed of heeler bricks in a contrasting colour. The parapets step down on each side from the fin. The roof is clad with Colorbond which extends as an awning on all four sides of the building. The awning on the western end, which provides shelter to passengers purchasing tickets from the ticket machine, is supported by two rectangular brick columns with curved corners. The building had two ticket windows, which are now blocked. Early timber doors are extant. The standard steel framed windows with three horizontal hopper panels (central panel fixed) are vertically proportioned and placed regularly on both platform elevations between the solid timber doors. A contemporary canopy connects the building from the underside of the original awning to the stairs and footbridge.

Internal: Internally the building has a linear floor layout consisting of a booking office, waiting room and out of room. The doors are secured by metal grill gates while the windows are covered by security mesh. The building is currently used for storage purposes. The internal finishes are the same as the other platform building with plasterboard panelled ceilings, hardboard flooring (booking office) and tile flooring (waiting room). The out-of-room has a metal sliding loading door and concrete floor.

PLATFORMS (1943)

Both island platforms have brick faces with concrete deck and asphalt surfaces. Platforms 1/2 also have sections of steel rail post and brick panel. Modern aluminium palisade fencing, timber bench seating, lighting and signage are located on both of the platforms.

FOOTBRIDGE (1941)

The footbridge is a steel beam structure with concrete deck and RSJ steel supports over the platforms and main lines with stairs to each of the platforms, and a ramp to street level on each side. It is of a simple structure with no ornamentation representing economic policies of the time. The footbridge and associated stairs and ramps are covered with corrugated metal awnings.

The TAP Upgrades substantially altered the existing footbridge with the incorporation of anti-throw screens within canopies to the full length of the footbridge, the widening of the concourse area with lift landing areas, and on the live rail side of the stairs to both The Kingsway and Wentworth Ave and the removal of stairs and associated structures to platform and incorporation of new roof canopies along the platform.

MOVABLE ITEMS

Plaque – brass, Centenary of the opening of the railway to Wentworthville 1 August 1885
Cast iron Ajax safe fixed to a concrete base in the booking office and a hidden floor safe which may, or may not be an early variety.
Booking office machine (BOM) including dispenser, computer, monitor, keyboard and associated equipment such as plastic coin trays etc
Small timber coin tray / box
Platform 3-4: SRA decal / sticker on platform ticket window, two pairs of metal door protectors / guards attached to doorways to parcels office, the booking office on Platform 3-4 has an original built in timber counter.

POTENTIAL ARCHAEOLOGICAL FEATURES

Wentworthville Railway Station has low archaeological potential with no evidence of the 1920s station buildings remaining.

Wentworthville Railway Station is a highly active station and presents a well maintained and operational site. The condition of the built elements is considered good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The internal fitout of the station building
- Replaced roof sheeting to station building
- The Kiosk (built in c1954) was demolished in 2016
- Major station TAP upgrade completed between c.2016-2017*

While the TAP upgrade has substantially remodelled the site, key elements within the precinct remain relatively intact and representative of the core heritage values of the site. The integrity is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1943-1946

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth was a substantial land holder in the early colony. He appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today.

The railway line was opened in 1860 and duplicated in 1886, with Wentworthville opening in 1883 as T R Smiths' Platform. The name Wentworthville was adopted in 1885 after Darcy Wentworth, whose grant was located on both sides of the railway. The station serviced a subdivision of this estate and was paid for by the speculators. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The first station buildings on the site were built in 1924, though they were removed for the construction of the present brick station buildings, dating from the time of the quadruplication of the line in 1946. The existing buildings follow the Inter-War Stripped Functionalist style and were part of the line quadruplication project between Lidcombe and St. Marys.

The pedestrian bridge dates from 1944 and is formed by steel beams. The use of ramps instead of footways was a common feature of footbridges between 1930 and 1960.

The station precinct was substantially altered in 2016-2017 with the Transport for NSW's TAP Upgrade program which saw the footbridge widened and enclosed with a new concourse area atop the station. Other new features included the reroofing of canopies extending from the concourse area to the station buildings and the introduction of lifts from the street elevation to concourse and from the concourse to the platform.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. 3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The heritage curtilage should be revised to include the entire station precinct and align with the curtilage supported by RailCorp and Sydney Trains on their Section 170 Heritage and Conservation Register. The heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP. The revised curtilage recommended forms part of the current Lot/DP.

Curtilage Map

Statement of Significance

The dwelling at 16 Veron Street, Wentworthville is locally significant for its aesthetic and representativeness values. Built c.1924, the dwelling is a largely intact Inter-War Californian Bungalow. The building retains much of its original architectural detailing and is now a rare architectural style within a highly modernised residential streetscape of Veron Street. The building has an unusual streetscape character with the wide sweeping gable, deep setback and mature trees.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling is a largely intact Inter-War Californian Bungalow. The building retains much of its original architectural detailing and is now a rare architectural style within a highly modernised residential streetscape of Veron Street. The building has an unusual streetscape character with the wide sweeping gable, deep setback and mature trees.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The dwelling is representative of a Federation period Californian Bungalow

Physical Description

The house is a single storey structure of hardiplank weatherboards with a wide low-pitched gable roof and an open front verandah. The roof consists of profiled steel sheeting and has a single rendered masonry chimney on the eastern side. The verandah has a separate gable roof with timber shingles at the gable end. The verandah is supported by pairs of timber posts on tapered rendered masonry piers at each end, with two central tapered timber posts on smaller piers. The verandah has a solid timber frieze, an infilled timber paling balustrade and floorboards. The front facade facing the verandah has stained horizontal pine boarding and a central door opening. The set of paired timber casement windows on the front facade either side of the verandah have leadlight infill. The windows and verandah post detailing are original. A hardiplank skillion roofed section extends the width of the rear façade has two single door openings and a small window opening. A wide timber pergola and deck is also located at the rear of the house.

The former listing sheet notes:
'Internally the building has timber boarded floors with a mixture of carpet and vinyl floor coverings, and decorative plaster ceilings with Art Deco motifs. The living room has an exposed face brick fireplace and cast iron fireplace surround.'

A concrete driveway runs along the eastern boundary and leads to a small garage with fibre cement sheet cladding and concrete tile clad roof. The item contains several established and mature trees. The deep setback and vegetation are a stark contrast to the surrounding residential high- rise development along Veron Street. The property appears to have retained its original subdivision boundary.

The item is a well-maintained property and is in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The house has been reclad in hardiplank and pine boarding to front facade
- Replaced timber balustrade infill and floorboards to verandah
- Replaced roof sheeting
- New paint scheme
- Rear skillion addition

The building retains its scale, form and some key detailing. Overall, the integrity of the item is considered moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1924

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents

to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The dwelling was originally part of the 1065 acre Government Domain. The subject property formed part of land granted to William Fullagar in 1859, who acquired extensive tracts in the present day Westmead and Wentworthville, particularly during the subdivision of the Government Domain. In 1913 approximately 89 acres were purchased by Charles Veron, grazier, who subsequently subdivided in 1914 and formed Veron Avenue.

Lots 33 and 34 of the subdivision, totalling almost 1/2 acre, were purchased by Annie Roberts in 1917, and James and Isabella Vine in 1920. The subject property (Lot 34) was individually purchased in 1922 by Frederick Daw, poultry farmer, who was to reside at the property until 1970. Daw first appears in the Sands in 1924 and Vine in 1923, indicating that the house was constructed for Daw after subdivision by Vine. Vine resided at the adjacent property (lot 33) until at least 1933. The property was purchased by John and Mary Stone in 1970. Works were carried out to the building in 1982/3. Property was purchase by John and Jenny Haub in 1985. Applications for building works have included a garage in 1950, pergola in 1988 amd pool in 1995. The building remains in use as a private residence.

Statement of Significance

The dwelling at 44 Veron Street, Wentworthville is of local significance for its historic and aesthetic values. Built in c.1923, the building relates to the residential development of Wentworthville that followed the subdivision of Government Domain and William Fullagar's land grants. The item is aesthetically significant as a fine and largely intact example of a Federation bungalow that retains typical period detailing. The dwelling makes a strong contribution to the streetscape and is readily identifiable as part of the historic building stock.

Criteria Assessment	
a) Historic	Built in c.1923, the building relates to the residential development of Wentworthville that followed the subdivision of Government Domain and William Fullagar's land grants.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as a fine and largely intact example of a Federation cottage, that retains typical federation period detailing. The dwelling makes a strong contribution to the streetscape and is readily identifiable as part of the historic building stock.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item is a single storey face brick cottage in the Federation style. The building features a hipped roof clad in terracotta tiles and gabled wings extending to the north (street frontage) and east. The roof has a face brick chimney with a terracotta chimney pot on the eastern side. The gable ends are half timbered and rough caste rendered, with a set of triple casement windows with coloured dimple glass high lights, painted sills and a fixed timber bracketed awning. The walls are face brick with the front façade showing evidence of tuck pointing. A recessed verandah wraps around the northeast corner and is supported on a pair of timber posts with simple timber brackets and a decorative infill between the posts. There is a simple timber posted balustrade. The front door adjacent the north gable wing is timber and glass panelled. A similar triple casement window with coloured glass high lights is adjacent. The second door at end of the east verandah is partially glazed. There is a small, low-scale addition to the rear.

The property is located on a standard suburban block. There is no landscaping at the front as the entire front section is covered by a concrete slab and used as car parking. An extension of the concrete driveway on the west leads to a single garage at the rear of the property. The garage has a new aluminium roller door. There are, however, a number of mature trees located along the street verge and rear boundaries. A low timber picket fence to the street alignment is later addition in a sympathetic style. The property appears to retain its original subdivision boundary.

Overall the condition of the building appears to be good, with evidence of repointing of mortar joints along the front façade and below the windowsills on the western elevation.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The roof may have been retiled
- Rear addition
- Tuck pointing to street facade repointed in c.1990s
- Timber balustrade may have been replaced
- Timber picket fence added

Overall the integrity of the building is considered to be high with minor alterations made to the built fabric and landscape.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1923

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

Another major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Part of the suburb of Wentworthville originally formed a part of the western part of the Domain of Government House at Parramatta (known as Parramatta Park by the 1850s). An extensive portion of the Domain was subdivided in 1859-1861 and it was at this time that Fullagar acquired the land.

The subject property formed part of the 1065-acre Government Domain, that was later acquired by Fullgar. In 1913, approximately 89 acres were purchased by Charles Veron, a grazier, who subsequently subdivided the area in 1914, forming Veron Avenue. Lot 26 of the subdivision was purchased by Alfred Giggs, a fire brigade employee, in 1914. The land was subsequently purchased by George Winterton in 1917, and Charles and Lilly Lawson in 1919. E Lawson is first listed in the Sands Directory in 1923, Lot 26B, forming the subject site, was individually purchased by Leslie James Lawson in 1928. Applications for building work included garages in 1950 and 1991, an addition in 1991, and an awning in 1992. The dwelling remains in use as a private residence.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the concrete landscaping around the base of the building should be removed and replaced with a more permeable material to ensure the building is protected from rising damp.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Statement of Significance

The dwelling at 57 Veron Street, Wentworthville is of local significance for its historic and aesthetic values. Built c.1920-23, the building is historically linked with the residential development of the area that followed the major subdivision of the Government Domain and William Fullagar's land grant. The building has aesthetic significance as a Federation cottage with a variety of materials and fine decorative detailing with Queen Anne influences. Of particular note, is the use of weatherboard cladding to resemble masonry blockwork, the varied roofline and strong decorative theme. The deep setback adds to the visual prominence of the house within the street. Although the house has been closed in by later medium density subdivisions and developments, it still retains a strong presence in the street.

Criteria Assessment	
a) Historic	Built in c.1920-23, the building is historically linked with the residential development of the area that followed the major subdivision of the Government Domain and William Fullagar's land grant.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building has aesthetic significance as a Federation cottage with a variety of materials and fine decorative detailing with Queen Anne influences. Of particular note, is the use of weatherboard cladding to resemble masonry blockwork, the varied roofline and strong decorative theme. The deep setback adds to the visual prominence of the house within the street. Although the house has been closed in by later medium density subdivisions and developments, it still retains a strong presence in the street.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item is a single storey cottage in the Federation style with a gabled hip roof of cement tiles and a broken back verandah to three sides (the south, east and west). The roof has a rendered masonry chimney on the eastern side. The dwelling features an unusual wall cladding that is profiled to resemble blockwork, and further manipulated to resemble rough cut profile quoins on the corners. The verandah has two gabled returns to the south and a southeast chamfered corner and is supported on timber posts set on rendered masonry piers on a concrete floor with tiles. A decorative geometric valance runs the length of the verandah, except where removed along the western edge and a metal carport is attached. The eastern end of verandah has been partially infilled with rendered masonry and extends past verandah line with a new skillion roof of similar tiles. Gable ends to the verandah have diamond motif and decorative barge boards. The floor of the verandah is concrete. The front facade is symmetrical, with a central timber and glass panelled door with side and top lights. Timber framed casement windows grouped in fours with feature coloured glass top and bottom panes. Top lights and rendered sills are located on either side of the door. An original timber and glass panelled French door and top light is located on the chamfered corner. The door openings on the western elevation have aluminium security grilles. The rear has been extended with skillion and flat roofed additions, with rendered masonry walls and steel roof sheeting.

The cottage retains a deep setback from the street. There is minimal landscaping to the front. There are two tall palm trees is located to the east and west side or the recently rendered garden bed fronting the verandah. The property is bounded by a high steel loop and palisade fence. The railway line to the rear is elevated and screened by tall plantings. The dwelling is situated next to a large residential development to the east and a single storey residence to the west.

Overall, the condition of the building appears to be good and well maintained. All timber elements appear to feature a fresh coat of paint and in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Enclosed portion of the eastern verandah
- Rear skillion and flat roofed extensions
- Carport attached to the western elevation
- Diamond motif to gable end does not appear to be original
- Garage added in 1984
- Carport added in 1985
- Pergola added in 1991

Overall the building appears to have high integrity, although slightly modified. The building retains scale and form and has not been adversely impacted by the rear additions.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1920-23

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

Another major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Part of the suburb of Wentworthville originally formed a part of the western part of the Domain of Government House at Parramatta (known as Parramatta Park by the 1850s). An extensive portion of the Domain was subdivided in 1859-1861 and it was at this time that Fullagar acquired the land.

The subject property formed part of the 1065 acre Government Domain and land acquired by William Fullagar. In 1913 approximately 89 acres were purchased by Charles Veron, grazier, who subsequently subdivided in 1914 and formed Veron Avenue. Lots 21-22 & 41 were purchased by Michael Wasilowski, a local carpenter, in 1917. Part lot 21 was later purchased by Joseph James Smith, a labourer, in 1920. It would appear the house was constructed shortly after, as Smith is first listed in the Sands in 1923. Smith is listed in the Sands Directory until 1933.

The present property boundaries were formed in 1943, when the property was purchased by Garey Elliott. A section of land at the rear was resumed by the railway at this time. Mark Bullivant purchased the property in 1984. Applications for building work were for a pool in 1975, garage and awning in 1984, carport in 1985, and pergola in 1991. The building remains in use as a private residence.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

'Allengreen' at 1 Amos Street Westmead is of local significance for its historical, associative, aesthetic and representative significance. Built in c.1870, the building relates to the early subdivision of Parramatta Park in the 1860s. The residence provides evidence of the development of this area for the more prestigious end of the residential market in the years around the turn of the century. The item is associated with the Oakes family, prominent pastoralists and early land grantees in Westmead. The residence size, architectural character and attractive 'front row' location onto Parramatta Park contributes to the aesthetic significance of the item, however this is reduced due to loss of original fabric and the rear residential development. The building retains its aesthetic significance through its connection to Parramatta Park and its architectural form and scale. The item remains a good representative example of the substantial suburban residences built in Cumberland in the late 19th century period.

Criteria Assessment	
a) Historic	Built in c.1870 the building relates to the early subdivision of Parramatta Park in the 1860s. The residence provides evidence of the development of this area for the more prestigious end of the residential market in the years around the turn of the century.
b) Associative	The item is associated with the Oakes family, prominent pastoralists and early land grantees in Westmead.
c) Aesthetic/Technical	The residence size, architectural character and attractive 'front row' location onto Parramatta Park contributes to the aesthetic significance of the item, however this is reduced due to loss of original fabric and the rear residential development. The building retains its aesthetic

	significance through its connection to Parramatta Park and its architectural form and scale.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item remains a good representative example of the substantial suburban residences built in Cumberland in the late 19th century period.

Physical Description

'Allengreen' is a large single storey cottage clad with rusticated weatherboards atop a rendered brick foundation. The roof is half-gabled and clad in Marseille tiles with projecting gable to the east fronting the southern domain of Parramatta Park. The roof features two rendered brick chimneys with terracotta pots and replaced guttering. The gable end has replaced timber shingles with scalloped weatherboards (now painted). A return verandah extends along the north and east elevations. The verandah roof is an extension of the main roof, this is supported on square timber posts (untreated) with a painted timber ladder valance and balustrade. The ladder valance replaces a curved timber valence. The verandah retains the original timber floorboards, however the other timber elements (e.g. posts, valance and balustrade) are not original.

The window on the front gable is a squared faceted bay window consisting of five (5) timber framed casement windows with top lights and a skillion awning clad in Colorbond sheeting. The windowpanes, frames and awnings are not original elements. A contemporary French door is also located along the east elevation. The front door is a modern timber door. The property fronts the southern domain to the east and is bounded by a timber pile and wire mesh fence.

Within the curtilage of the residence, the item features several rear extensions and a medium to high rise residential apartment that fronts Thomas May Place. There are four identifiable changes to the rear of the cottage extending from the north to the south along the rear elevation. They include: a rear second storey extension constructed of rusticated weatherboards on the ground floor and timber battening infilled with fibro sheeting on the upper storey, with a gabled roof clad in Colorbond sheeting. There windows on this portion of the building are timber double hung sash windows with aluminium framed and cotemporary security screens. This is adjoined by a skillion roof, that is connected to another single storey structure with a gabled roof clad in red Colorbond sheeting. These appear to be the modification of a former stables and out house. Neighbouring this structure to the south is a single storey skillion roof side addition with weatherboard cladding visible from Amos Street.

The rear extensions feature a hedge that runs along a brick wall and concrete path separating the Federation residence from the large multi-storey residential apartment, constructed in 2010. The residential apartment block is approximately four storeys high and is a mix of brick and concrete render.

The surrounding landscape is dominated by modern medium to high rise residential apartments along Thomas May Place, Amos Street and Good Street. The item retains an interesting location, located off Amos Street with a primary frontage to the Southern Domain, which would have originally joined the Parramatta Domain. The item has a modest set back from the southern domain with a low-lying front garden fronted by a timber post and panel fence with wire mesh inserts. The southern domain is a large open grassed area with many established gum trees.

The building appears to be in a good condition having undergone an external and possible internal renovation in the recent past.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Replaced timber elements of the verandah (posts, valance and balustrade)
- Replaced timber shingle in gable end with scalloped weatherboards
- New Colorbond guttering and roof cladding
- New windowpanes, frames and awning
- Rear addition built in 2010

The item represents a highly modified Federation cottage with a substantial amount of heritage fabric replaced and a large development to the rear. The multi-storey apartment has been carefully designed to ensure the item is not overwhelmed by the new development. The integrity of the item is considered low, however an attempt to retain form and replace materials on a like for like basis has been employed.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1870

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead south of Westmead Station lies in the territory of Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and it became a residential office for ten governors.

By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The site originally formed part of the Government Domain until 1859, when land was offered for sale in approximately 1-acre allotments. A later subdivision of 'Parramatta Park' saw the surrounding land later divided the land into small allotments in 1886. George Oakes, a member of the Legislative Assembly and owner of land nearby, predicted that 'very few farmers would be interested in acquiring land with soil to grow profitable crops' however nevertheless purchased large tracts of land himself.

Although the land was owned by George Oakes and remained in the Oakes Family possession from the mid-nineteenth century into the turn of the century, it remains unclear if George Oakes lived in this property. There were a number of occupants who lived in Allengreen. The Oakes family were leading pastoralists in New South Wales in the 1880s and it was recorded that Charles Shirley Oakes was the prominent resident of Allengreen throughout the 1870s and 1880s. Several weddings between the Oakes Family and Weston family are recorded as having their reception at 'Allengreen'. The property was advertised for let in June 1895 as a first-class family residence standing on 1 ½ acres of ground with planted flower, fruit and vegetable gardens. The land remained in their ownership until 1927. Amos Street was originally known as Payten Street after another landowner in the area.

In 1927, the property was advertised for auction as the Park Crest Estate (Allengreen) Parramatta. The study area was advertised as having charming and uninterrupted views to Parramatta Park, with links to a golf course, bowling greens and tennis courts. The advertisement also noted the building was supplied by city water, gas, electric light and sewer.

In 2010, the property underwent substantial alterations with the construction of a large, four-storey residential apartment block at the rear of the property's allotment. The item remains in use as a private residential dwelling.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Due to the inclusion of a four-storey residential apartment block at the rear of the property is recommended the curtilage is revised and updated in the Cumberland LEP, as shown below. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

- The item is in the vicinity of Old Government House and Domain, Parramatta Park, which was inscribed on the UNESCO World Heritage list as one of the eleven (11) sites across Australia forming the serial listing for the Australian Convict Sites. Parramatta Park and Old Government House is also listed on the NSW State Heritage Register (00596).

  Old Government House and its parkland setting of the Government Domain is of outstanding national significance for its association with the foundation of British colonial administration, and as an important centre of the convict system in Australia. Much of the administrative, social and political life of the colony, including the commencement of the government's convict administration, was decided by the governors at this place from the very beginning of the colony until the last convicts served their sentences.

  The landscape of Parramatta Park remains remarkedly true to the estate created by Governor and Mrs Macquarie during their time in NSW from 1810 and 1821. This landscape is valued today because it is a public park that still has the structure and character of the nineteenth century Australian Government Domain.

  Any future Development Applications would have to consider the known outstanding heritage values and State heritage values of the Parramatta Park landscape which adjoins the item, Allengreen – Federation Cottage (I273).

Statement of Significance

The Inter-War Bungalow at 15 Austral Avenue, Westmead is of local significance for its historical, aesthetic and representative values. Built in c.1928, the item historically relates to the significant residential subdivisions of Westmead. The property was formerly part of the Government Domain subdivided in 1859 and acquired by James Howison and William Fullagar. In 1914 the land was acquired by John Toohey and formed part of the Tooheys Palm Estate. The present property boundaries historically relate to the 1925 subdivision of Tooheys Palm Estate. The item has aesthetic significance as part of a fine and well-preserved group of Inter-War Bungalows that are largely intact and in good condition. The item makes a strong contribution to the character of Austral Avenue. Due to the similarities in design, use and material the significance of 15 Austral Avenue is enhanced by the group of houses at 15-19 Austral Avenue, Westmead. The item demonstrates representative qualities of an intact Inter-war bungalow built in Westmead,c.1928.

Criteria Assessment	
a) Historic	The item was built in c.1928. The item is historically linked to significant residential subdivisions of Westmead. In 1914 the land was acquired by John Toohey and formed part of the Tooheys Palm Estate. The present property boundaries historically relate to the 1925 subdivision of Tooheys Palm Estate.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as part of a fine and well-preserved group of Inter-War Bungalows that are largely intact and in good condition. The item makes a strong contribution to the character of Austral Avenue. Due to the similarities in design, use and material the

	significance of 15 Austral Avenue is enhanced by the group of houses at 15-19 Austral Avenue, Westmead.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact Inter-war bungalow built in Westmead, c.1928.

Physical Description

The subject building is one of three similar 1920s Inter-war bungalows in the streetscape, similar in design and style to the Moree Avenue group. The bungalow is a single storey brick residence with a terracotta tiled hipped roof with a projecting gable to the street. The roof has exposed timber rafters, no chimney and replaced Colorbond guttering. The gable end is weatherboard and half-timbered in the Federation style. The front verandah has a broken back roof and continues along the width of the building projecting just beyond the gable. It is supported by columns that are 2/3 brick piers and 1/3 small cast concrete columns. The verandah floor is painted concrete, and the sub-base is of brick, rendered at the front. The front facade and gable end feature groups of three timber casement leadlight windows with sloped brick sills. The front door adjacent to the gable end is the original timber and glass panelled door, with a mottled glass fanlight above. The front facade has been tuck pointed and darker bricks have been used. At the rear is a brick skillion with aluminium sliding windows which extends beyond the eastern building alignment.

A concrete slab driveway along the western boundary leads to a weatherboard garage at the rear. A contemporary timber panel gate is located midway down the driveway. There is a low brick fence to the street. The item contains an informal garden area with established plantings. The street is predominantly characterised by single storey 1950s brick residences and established gardens. It appears that the bungalow retains its early subdivision boundaries.

Overall the building is in a good condition and is well maintained. The timberwork appears to have been repainted along the verandah and in the gable end. The brick boundary fence however is in poor condition and has been impacted by vegetation planted along the fence. Some sections are precariously stacked with no mortar joints.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Repainted timber bargeboard
- New guttering
- Rear modification
- Gate over driveway

Overall the integrity of the building is moderate. The rear addition is a discrete addition that does not have an adverse impact on the significance of the item. The façade appears to be relatively intact, although it is likely the timber elements have been replaced. This is an acceptable change that supports the heritage significance of the item.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1928

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, several main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The site is located on Portions 311 and 312 granted to James Howison and William Fullagar respectively in January 1861. It was formerly part of the Government Domain which began to be subdivided in 1859 when the name "Westmead" was first used. It was not until 1914 that land from several land grants was consolidated by John Toohey.

Tooheys Palm Estate was subsequently subdivided in 1925 and lot 192 was one of a number of lots purchased by Herbert Leslie Glover in December 1927. It seems that a restrictive covenant was placed on a number of lots at this time and entailed that any main building constructed on the lots should not be of material other than brick and/or stone, have a value no less than 450 pounds, a slate and/or tile roof, and stand at least 20 feet from the street. In March 1928 lot 192 was sold to Raymond and Ruby Tillett. It is assumed the cottage was constructed during 1928, as the Sands Directory lists Raymond Tillett at "Ruberay" from 1929. The Tilletts retained ownership until 1940 when the property was sold to Colin Woods. The site has since been transferred several times. In 1978, an application was made for additions and in 1988 an application was lodged for the construction of a garage.

The dwelling remains in use as a private residence.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g.	**X**

				paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the brick fence should be repaired and where possible, reuse existing heritage fabric available.

Physical Description

The subject building is one of three similar 1920s Inter-war bungalows in the street, similar in design and style to the Moree Avenue group. The bungalow is a single storey brick dwelling with a terracotta tiled hipped roof and a projecting gable to the street. The roof appears to have a replaced Colorbond guttering system. The front verandah has a broken back roof, and continues along the width of the building projecting just beyond the gable. The verandah is supported by tapered colonettes on brick piers. The gable end is rendered with halftimbered detail to the centre. The verandah is enclosed by brick balustrading and has a painted concrete floor. The sub-base is of brick, rendered at the front. The front façade also features timber casement windows with rendered concrete lintels and sloped brick sills. The central casement to the gable end features a leadlight detail. The front door adjacent to the gable end is the original timber and glass panelled door, with a mottled glass fanlight above and aluminium fly screen. The front façade has been tuck pointed and features darker bricks.

The rear features a brick and fibro skillion roofed section. A driveway extends from the street boundary, along the eastern boundary to the rear of the property. The property appears to retain its original subdivision boundaries. The street is predominately characterised by single storey 1950s brick residences and established gardens. While 17 Austral Avenue retains the consistent setback and alignment of the streetscape, the item does not feature any significant landscape elements. The front yard is a grassed area with minimal plantings enclosed with a painted timber picket fence along Austral Avenue.

Overall the building is in a good condition and is well maintained. The front façade appears to have been recently repointed and the timberwork and rendered elements appear to have been recently repainted. The rendered lintel of the window beneath the gable shows some signs of delamination.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Modified rear including a brick and fibro skillion extension
- Replaced guttering
- Contemporary fence
- Recent repointing
- Repainted timber elements

Overall the integrity of the building is moderate. The rear addition is a discrete addition that does not have an adverse impact on the significance of the item. The façade appears to be relatively intact, although it is likely the timber elements have been replaced. This is an acceptable change that supports the heritage significance of the item.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead south of Westmead Station is located within the territory of Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

Statement of Significance

The Inter-War bungalow at 19 Austral Avenue, Westmead is of local significance for its historic, aesthetic and representative values. Built in c.1928, the item relates to significant residential subdivisions of Westmead. The property was formerly part of the Government Domain which was subdivided in 1859 and acquired by James Howison and William Fullagar. In 1914 the land was acquired by John Toohey and formed part of the Tooheys Palm Estate. The present property boundaries historically relate to the 1925 subdivision of Tooheys Palm Estate. The item has aesthetic significance as part of a fine and well-preserved group of Inter-War Bungalows that are largely intact and in good condition. The item makes a strong contribution to the character of Austral Avenue. Due to the similarities in design, use and material the significance of 19 Austral Avenue is enhanced by the group of houses at 15-19 Austral Avenue, Westmead. The item demonstrates representative qualities of an Inter-War Bungalow built in Westmead.

Criteria Assessment	
a) Historic	The item was built in c.1928 and is linked to significant residential subdivisions of Westmead. In 1914 the land was acquired by John Toohey and formed part of the Tooheys Palm Estate. The present property boundaries historically relate to the 1925 subdivision of Tooheys Palm Estate.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as part of a fine and well-preserved group of Inter-War Bungalows that are largely intact and in good condition. The item makes a strong contribution to the character of Austral Avenue. Due to the similarities in design, use and material the

	significance of 19 Austral Avenue is enhanced by the group of houses at 15-19 Austral Avenue, Westmead.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an Inter-War Bungalow built in Westmead.

Physical Description

The subject building is one of three similar 1920s Inter-war bungalows in the streetscape, similar in design and style to the Moree Avenue group. The bungalow is a single storey brick residence with a terracotta tiled hipped roof and a projecting gable to the street. The roof has a face brick chimney on the eastern side, exposed timber eaves and a new Colorbond guttering system. The gable ends are infilled with weatherboards at the peak and timber panel and fibro sheeting below. The front brickwork has been tuckpointed and is of a darker colour than the side elevations, sitting atop a rendered brick sub-base. The verandah features a flat roof that runs the width of the building projecting just beyond the gable and retains the original metal sheeting. It is supported by small concrete tapered colonnettes on brick piers. The colonnettes are paired along the main verandah and are singular at the projecting gable. The verandah has a brick balustrade and concrete floor.

The original timber and glass panelled door is adjacent to the gable end and has a mottled glass highlight and aluminium flyscreens. The brass name plate adjacent to the door reads ‘Chalfont”. The windows are timber framed double-hung leadlight windows with concrete lintels and sloped brick sills. The windows are grouped in sets of three and are fronted by aluminium flyscreens. A small aluminium window on the western façade has replaced an original window.

The rear of the dwelling has a weatherboard skillion extension. A driveway extends along the western boundary and leads to a small metal garage at the rear. The property appears to have retained its original subdivision boundaries. The front yard features some informal plantings along the verandah and an established palm tree. Hydrangeas are planted along the stepped brick boundary fence.

The building appears to be in a good condition and well-maintained. The timberwork of the front façade appears to have been recently repainted.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Replaced guttering
- Replaced window on the western elevation with an aluminium window
- Repainted façade
- Flyscreens
- Rear addition

The buildings integrity appears to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. Westmead owes much of its present street layout to the developments from this period.

The site is located on Portions 311 and 312 granted to James Howison and William Fullagar respectively in January 1861. It was formerly part of the Government Domain which began to be subdivided in 1859 when the name "Westmead" was first used. It was not until 1914 that land from a number of the grants was consolidated by John Toohey. Tooheys Palm Estate was subsequently subdivided in 1925 and lot 191 was one of a number of lots purchased by Herbert Leslie Glover in December 1927. It seems that a restrictive convenant was placed on a number of lots at this time and entailed that any main building constructed on the lots should not be of material other than brick and/or stone, have a value no less than 450 pounds, a slate and/or tile roof, and stand at least 20 feet from the street. In November 1927 the site was purchased by Ernest Payne and his wife Sarah Ann. It is assumed that the cottage was constructed during 1928, as the Sands Directory lists Ernest Payne at "Chalfont" from 1929. In 1942 the property was purchased by Frederick Charles Smith passing to his widow in 1949 who in turn sold to Marjorie Smith in 1953. The property was not sold again until 1983 and in 1985 alterations were carried out. In 1993 the property was sold again. An application for a swimming pool was made in 1997.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. Curtilage Map

Statement of Significance

The Late Victorian Cottage at 2 Drew Street, Westmead is of local significance for its historical and aesthetic values. Built in c.1885, the item is linked to the Excelsior Land Investment & Building Co and Bank Ltd subdivision of Amos Estate and Drew's Orchard Estate. The building also reflects the development of the area in the early years of the twentieth century. The building has aesthetic significance as a largely intact Victorian cottage in both form and fabric, however this is reduced and adversely impacted by the poor condition of the dwelling.

Criteria Assessment	
a) Historic	Built in c.1885, the item is linked to the Excelsior Land Investment & Building Co and Bank Ltd subdivision of Amos Estate and Drew's Orchard Estate. The building also reflects the development of the area in the early years of the twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as a largely intact Victorian cottage in both form and fabric, however this is reduced and adversely impacted by the poor condition of the dwelling.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion in its current condition.

Physical Description

The subject building is a small painted brick Late Victorian cottage with a corrugated iron roof. The hipped roof has a single early brick chimney to the western side which has stepped brick detailing and highly corroded gutters. A hipped bullnose verandah clad in corrugated iron fronts the dwelling. The verandah roof is supported on simple timber posts and has an early timber floor.

The house is bounded by a high timber lattice fence with heavily overgrown ivy. The front façade was not visible, however the former listing sheet states:

The front facade has a central door with a double hung window on either side. Openings have segmental arched heads and rendered window sills which have been painted. At the rear is a skillion section, which is larger than the main house and has weatherboard cladding.

The front and side elevation are severely overgrown with ivy. The dwelling appears to have several rear skillion extensions and a rear shed with a hipped roof clad with asbestos sheeted roofing. The rear skillion has fibro and mini-orb wall renovated with the use of recycled weatherboards.

While the property is located on a corner block with a lane extending along the eastern boundary, the house is hidden from view by a tall corrugated iron fence that extends along the eastern boundary. It appears that the house was originally located on a larger block although it still retains a large yard at the rear. There are a number of mature trees and palms in the rear yard and a number of large eucalypts within the boundary.

Overall the condition of the building is poor. The item is heavily impacted by vegetation growth and from lack of water management, the guttering is completely corroded in sections. There is some rusting on the corrugated roof and timber rotted elements of the verandah. The bullnose verandah is starting to detach from the front façade, and paint is flaking off the brickwork.

Condition	Good	Fair	**Poor**

Alterations and Additions

- Rear skillion addition*
- Contemporary fencing along north and east boundary*

The cottage retains its scale and form although has been modified to the rear with the inclusion of several rear skillion additions. The main portion of the house appears largely intact. The integrity is considered high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1885-1889

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery

Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The property is located on the border of two allotments granted to Charles Roberts Senior and Richard Bergan in July 1859. The Richard Bergan grant was transferred to James Bergan almost immediately. Similarly, in April 1861 John Brenan conveyed the Roberts grant to William Hibburd by Deed Poll. Shortly after it was re-conveyed to Reverend Richard Amos.

In 1875 William Drew purchased the Amos Estate, and in 1877 consolidated the two grants when he purchased the Bergan land. In 1885, the Excelsior Land Investment & Building Co and Bank Ltd purchased the estate and subsequently subdivided and sold allotments of Drew's Orchard Estate.

In November 1885 Gordon McKinnon, an architect, purchased Lot 32, a narrow lot featuring a 20 feet lane along its eastern boundary giving rear access to several lots on Good and Amos Streets. It is assumed that the cottage was constructed from this time and the Sands Directory indicates it was occupied from 1889.

It is assumed that H. Heydon purchased the property in 1897, retaining ownership until 1909 when Robert Burnett is listed in the Sands Directory. Burnett retained ownership until his death in 1933 when the property was passed to his wife Mary. The property subsequently changed ownership in 1976 and in 1984 when the current owners purchased the property. Unspecified works were undertaken to the building in 1985. Currently, the building appears to be vacant.

Curtilage Map

Statement of Significance

The dwelling at 24 Good Street, Westmead is of local significance for its historical and aesthetic significance. Built in 1899, the item is linked to the early subdivision of 'Drews Orchard Estate' by the Excelsior Land Investment and Building Company and Bank Ltd. The building is a fine example, if poorly maintained, of a medium sized gentlemen's cottage of the late Victorian period dating from the 1890's. Although the building is slightly modified the item still retains its aesthetic significance as a late Victorian cottage in its form and scale. Furthermore, although the surrounding district has been rezoned and the context of the building has changed, it still retains a large curtilage area and is a strong contributory element to the streetscape with a strong garden landscape.

Criteria Assessment	
a) Historic	The item was built in 1899 and is linked to the early subdivision of 'Drews Orchard Estate' by the Excelsior Land Investment and Building Company and Bank Ltd.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item, although slightly modified, retains its aesthetic significance as a late Victorian cottage in its form and scale. Although the surrounding district has been rezoned and the context of the building has changed, it still retains a large curtilage area and is a strong contributory element to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The subject building is a single storey, 'T' shaped timber framed cottage clad in weatherboard and fibro cement sheet with front verandah on brick infill footings. The cottage features a main gabled and hipped roof section and skillion roofed addition clad in corrugated steel, with a centrally located rendered chimney. The side and front gables each feature decorative fretwork and barge boards, as well as a faceted bay with hipped roof supported on decorative brackets. The bays feature timber framed double hung windows on each face. The front of the house features a 'L' shaped verandah with concrete floor and is covered by a skillion awning with a corrugated steel roof supported on flat iron columns. The front facade of the building features a panelled timber door with sidelights. The building generally features timber framed double hung windows.

The building is situated on a large corner block and is set close to both street boundaries. A simple timber rail fence and paling fence bounds the property. A mature garden surrounds the cottage and also features a garage in the south western corner of the property. The streetscape features a mix of residential properties including some home units.

The building is well-maintained and is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Skillion roofed addition to the east side of the building
- Early rear addition with a gable roof
- Replaced timber posts on the verandah with wrought iron posts
- Replaced windows on western façade
- Garage added in 1963

The building is relatively intact although many of the original timber weatherboards have been replaced by fibro, timber and metal sheeting, leaving only the front with the original cladding. The integrity is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1899

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

In 1859 Charles Roberts (Senior) purchased 6 acres of what was formerly part of the Government Domain subdivided in 1859. It was subsequently sold to the Excelsior Land Investment and Building Company and Bank Ltd who continued to subdivide the land. In 1889, W. Harvey Holt purchased part of the subdivided land known as "Drew's Orchard Estate". It is assumed that the house was constructed at this time. The Sands Directory lists this property as "The Firs" from 1890 till 1911. In 1911, it was sold to John R. Coils and his wife who changed the name of the house to "Coolalie". In 1918, Stanley Jerome bought the property and let it to Pearce R. Creagh who later purchased the property in 1937. Creagh retained the property until 1956 when it was sold. Since that time, several additions have been made to house. The property remains in use as a private residence.

Curtilage Map

Statement of Significance

The Westmead Progress Association Hall is of local significance for its historic, aesthetic and social values. Built in 1925, the Westmead Progress Association Hall is historically linked with significant residential subdivisions in Westmead. Furthermore, it is historically significant for its link to the Progress Association, for which it stands as an example of the types of projects they undertook. It has social significance for its association and use by the local Progress Association and for the part it played in the social and recreational life of the immediate neighbourhood. The item also has some aesthetic significance as a purpose-built Federation hall dating to the late 1920s. The aesthetic significance of the building is further enhanced by its prominent position within the streetscape that makes a positive contribution to the landscape.

Criteria Assessment	
a) Historic	Built in 1925, the Westmead Progress Association Hall is historically linked with significant subdivision in Westmead. Furthermore, it is historically significant for its link to the Progress Association, for which it stands as an example of the types of projects they undertook.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item also has some aesthetic significance as a purpose-built Federation hall dating to the late 1920s. The aesthetic significance of the building is enhanced by its prominent position within the streetscape that makes a positive contribution to the landscape.
d) Social	It has social significance for its association and use by the local Progress Association and for the part it played in the social and recreational life of the immediate neighbourhood.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The Progress Association Hall is a single storey face brick building located on an elevated corner with a frontage to Priddle and Hassall Streets. The building features a gabled roof clad in terracotta tiles behind a brick squared parapet addressing Hassall Street. Both the rear and the front of the building feature a flat roofed addition.

The front façade is broken into three bays by brick pilasters which extend the height of the façade through the parapet. The parapet features a rendered cornice and painted rendered frieze, bearing "Westmead Hall Est. 1925" topped by a soldier course of brickwork. The front façade has two windows either side with timber framed multipaned double hung sash windows. A single small high window is also located over the front entry of the building. The front entry is a modified protruding brick entrance with a staircase that leads up to an enclosed formal entry of the building, covered by a flat roof with a boxed eave.

The north and south elevation of the building feature several bays with window and door openings and framed by face brick pilasters. The windows along these elevations are generally timber framed multipaned double hung sash windows with opaque patterned glass, flat brick segmented arches and brick sills. The north elevation features several door openings including one disabled access with concrete ramp.

The flat roofed addition is located at the western end of the building and is surrounded by a landscaped area enclosed by high steel mesh fencing. The front of the building features some landscaping and a brick planter box/retaining wall along the street boundary. The building is surrounded by relatively recent and contemporary face brick walk up residential blocks.

Although the southern elevation of this building was not accessible during the site inspection, it is worth noting that the former listing sheet noted the southern elevation appeared to have ‘minor soiling on the southern facade brickwork’. The building appears to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- It appears that the front, formal entry of the building has been altered and extended to incorporate WC facilities
- The south eastern window is obscured by the extension, only the original brick arch is evident and glass blocks have been fitted to the two front windows
- It is assumed, that the door openings and access on the northern facade have been altered.
- The western facade also features flat roofed addition*

Although the building features modified entrances and doorways, the building retains a moderate level of integrity in terms of the buildings overall form, scale and architectural detailing.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1925

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The site is located on land acquired by George Oakes in 1861 following the subdivision of the Government Domain in 1859. In 1883 George Caird purchased thirty acres of this grant, subdivided the land and began to sell various allotments. In 1889 lots 29 to 32 of Section C on Railway Street were purchased by John Smythe Richardson. In 1914, William Shelley purchased all four lots on what was now Hassall Street. In 1915 and 1917, the land was again transferred and in 1922 was divided when lots 31 and 32 were transferred to William and Frances Withers. In 1923, lots 31 and 32 were transferred to Frank Ralph, Frederick Young, Arthur Davies, Standish Mills and Robert Creswick and in 1925 to Frank Ralph, Frederick Young, Arthur Davies, Standish Mills and William Scrivner as joint tenants. The foundation stone was laid by F. Ralph in 1925 and the hall was constructed from this time. The Sands Directory first lists a "Public Hall" in 1927. The building was designed by architects Messrs, Rowe and Frye.

During the 1880s and 1890s, Local Progress Associations begun to appear in developing suburbs. These associations were made up of local businessmen and landowners, who petitioned governments for public works and services and organised local public events. They were dedicated to local "progress" and leisure activities. The School of Arts movement was aimed at providing education and access to cultural activities for the working class. Their halls were venues for education lectures, courses in trades, plays, art music, exhibitions and debating and were actively used by the community. It is assumed that the Westmead branch constructed and used the Hall for their various business and social activities. The Westmead Progress Association was a highly active group in the area prior to the construction of the hall on Hassell Street. Previously they would meet at St Barnabas Hall.

The Hall was initially constructed for the Willing Workers. The Willing Workers was a group comprising women in the district who banded together to arrange functions for charitable purposes. The group had asked the Progress Association to join their efforts in procuring a hall, as their work was hindered by the lack of a suitable hall to hold such functions. The Progress Association accepted the responsibility of and bought the land on which the hall is located today. The hall cost £1200, this was financed by a loan from the Bank of New South Wales and repaid by the representative of the Association.

In 1971, the property was purchased by the Council of the Municipality of Holroyd. The building is owned and managed by Cumberland Council, and used for various functions and activities for the local community.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The 'Deskford' property at 41 Hawkesbury Road, Westmead is of local significance for its historic, associative and aesthetic values. Built in 1874, the building is historically linked to the early subdivision of the Government Domain that facilitated the subdivision and development of Westmead. The dwelling is associated with prominent local figure Andrew Payten, magistrate for the Parramatta Park Trust. The building has some aesthetic significance as a Victorian Gothic residence. Although notably altered, the building retains important original components and fabric, making it an important member of the relatively small group of substantial 19th century gentlemen estates and residences left in the Cumberland LGA. The building is a representative example of a substantial gentlemen's estate constructed in Westmead in c.1870s.

Criteria Assessment	
a) Historic	Built in 1874, the building is historically linked to the early subdivision of the Government Domain that facilitated the subdivision and development of Westmead.
b) Associative	The dwelling is associated with prominent local residents Nathaniel Payten and Andrew Payten. Nathaniel Payten designed and built Parramatta Gaol among other notable buildings in Parramatta. Andrew Payten was known as for his role as magistrate for the Parramatta Park Trust.
c) Aesthetic/Technical	The building has some aesthetic significance as a Victorian Gothic residence. Although notably altered, the building retains important original components and fabric which makes it an important member

	of the relatively small group of substantial 19th century gentlemen estates and residences left in Cumberland LGA.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The building is a representative example of a substantial gentlemen's estate constructed in Westmead in c.1870s.

Physical Description

'Deskford' is a two-storey painted brick Victorian Gothic residence with filigree elements. The item has a steeply pitched gabled roof clad with slate tiles. The roofscape is 'T' shaped with a projecting gable to the north, south and east. The dwelling features two tall brick chimneys with terracotta pots and two short rendered brick chimneys with corniced detailing at the gable peak. The gable ends have a timber bargeboard and finial detailing characteristic of Victorian "Gothic" style.

A wrap-around verandah on the second storey of the north and east elevation has a bullnose verandah roof. This roof is clad with corrugated iron and is supported on decorative cast iron flat columns with a decorative cast iron balustrade and stop-chamfered timber posts to ground floor. The gabled end to the north wing features a small cantilevered balcony at first floor level with a hipped concave corrugated iron roof supported on decorative cast iron columns, with a decorative cast iron balustrade and valence. Each gable end also features a small window opening with a rendered sill and lintel. The windows are generally timber framed double hung sash windows with four panes, with a sloped brick sill and rendered lintel.

The gravel driveway culminates at a concrete slab located to the northeast of the property, located off Hawkesbury Road. This runs along the former northern boundary of the building. This boundary is reminiscent of the 1922 auction of the Deskford Estate. There are some established palms located along the former boundary of the item, however there is minimal landscaping surrounding the building and it comprises predominately grassed areas.

The residence retains a prominent position within the landscape to the north, while the south is heavily modified with the construction of the Cabrini Nursing Home. The nursing home is located to the south of the main residence with a prominent street address to Amos Street. The nursing home structure is a large two-storey rendered brick complex. The nursing home structure features a similar form to Deskford with a gabled roof clad with dark concrete tiles. A similar paint scheme has been employed for both sites.

The residence is generally in a fair condition. The verandah roof and cast-iron elements show signs of corrosion and the slate roof has some biological growth on the tiles.

Condition	Good	**Fair**	Poor

Alterations and Additions

- The verandah features replaced elements. The former listing sheet makes note of the removal of elements on the first-floor balustrade and ground floor valence and other detailing on the first-floor verandah.
- Various alterations and additions externally and internally to fit out site as a nursing home.
- Air conditioning units*
- New paint scheme

Overall the integrity of the building is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1874

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

Deskford is sited on land which originally formed part of the Government Domain. The house was built on a large allotment (up to 50 acres – 20ha) by Nathaniel Payten following the subdivision of the Government Domain Estate in 1859. The property was passed on to Mr Andrew Payten, who occupied the site until 1895 when he passed away. He was survived by his widow, Miss Reid. She passed away in 1904.

The Deskford Estate was subdivided in 1922, which formed the site's current curtilage.

In 1949, Ada Sparks occupied the site and used it to care for nineteen destitute elderly people. Ada Sparks was a remarkable local, who continued to care for the elderly residing at Deskford even after losing her sight.

In 1950 Margaret Butler, registered with the Australasian Trained Nurses' Association, purchased Deskford and ran it as a private maternity hospital. When Margaret retired in 1963, Maron Butler's daughter and son-in-law Aileen 'Joy' and Bob Harris took over Deskford and established the Cabrini Convalescent Hospital. Deskford remains part of the Cabrini Nursing home.

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The current curtilage for Deskford relates a residential subdivision that occurred c.1920s and is visible in a 1943 aerial. Historical research shows that there is the opportunity to revise the curtilage to a reflect a more historically accurate representation of the original c.1860s allotments, purchased by Nathanial Payten after the 1859 subdivision of the Government Domain. It is unclear if the existing curtilage is an accurate reflection of the heritage curtilage. A revised curtilage is recommended for the Cumberland LEP to better capture the historic curtilage. This will form part of the Stage 2 assessment of Cumberland LGA Heritage Study.

Statement of Significance

Westmead Public School is of local significance for its historic, social and representative values. The present-day location of the Westmead public school was established in 1919 as the first purpose-built school building in Westmead that opened in 1920. The item provides evidence of the growth of community facilities, which accompanied the increase in population throughout Westmead in the twentieth century. The building is of aesthetic significance as a relatively intact Federation period school building. This is enhanced by the degree to which its buildings have retained early fabric and detailing. The mature tree plantings also enhance the aesthetic of the site making it an attractive and notable local landmark. The building is representative example of the early twentieth century government school buildings.

Criteria Assessment	
a) Historic	The present-day location of the Westmead public school was established in 1919 as the first purpose-built school building in Westmead that opened in 1920. The item provides evidence of the growth of community facilities which accompanied the increase in population throughout Westmead in the twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building is of aesthetic significance as a relatively intact Federation period school building. This is enhanced by the degree to which its buildings have retained early fabric and detailing. The mature tree plantings also enhance the aesthetic of the site making it an attractive and notable local landmark.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The building is representative example of the early twentieth century government school buildings.

Physical Description

Westmead Public School is a standard government designed school of the Federation period. The collection of buildings consists of two storey brick structure with a hipped roof with a projecting gable to the north, clad with terracotta tiles. The window openings are generally timber framed multipaned double hung sash windows with a simple brick sill and a segmented arch of painted brickwork.

The school complex contains several modern additions to the northwest of the school property. The schools aesthetic is retained through the vegetated boundary which features several established trees along the school's boundary fence. The school is enclosed by a steel modern palisade fence.

The school is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Various extensions throughout the 1960s to the present.
- Boundary fence
- Carpark
- Painted timber window frames

The school has undergone substantial modification with continued expansion of the school buildings to service the suburb of Westmead. The inclusion of new buildings are respectful and discrete additions which do not negatively impact the significance of the significant built elements. The integrity is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1919-1923

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed a part of the western portion of the Domain of Government House at Parramatta which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and it became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities

had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

Three acres were resumed for Westmead Public School which was established in 1917, when an Infants' School opened in a rented Church of England hall in April of that year. By 1919 the present site was acquired, and the first purpose-built school building was opened in May 1920. In 1923 the building was extended to provide accommodation for Primary students. This work was put to tender with a contract awarded to Mr R Frazer of Canley Vale to complete the works. Within two years the growing local population created demand for additional accommodation for Primary students.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the Development Application should be accompanied by a detailed fabric analysis to understand which buildings are significant and how to manage change.

Curtilage Map

Statement of Significance

The Victorian Cottage at 43 Houison Street, Westmead is of local significance for its historic, aesthetic and representative values. The building is an early residence in the area and historically relates to the early subdivision of the Government Domain, which facilitated the development of Westmead. The item is of aesthetic significance as a largely intact Victorian cottage that has retained a large amount of land to the side and rear. The heritage curtilage makes a significant contribution to the aesthetic and historic quality of the house. The aesthetic significance is further enhanced by the established gum tree and informal landscaping of the front yard. The item demonstrates representative qualities of an intact and early Victorian cottage.

Criteria Assessment	
a) Historic	The building is an early residence in the area and historically relates to the early subdivision of the Government Domain, which facilitated the development of Westmead.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as a largely intact Victorian cottage that has retained a large amount of land to the side and rear. The heritage curtilage makes a significant contribution to the aesthetic and historic quality of the house. The aesthetic significance is further enhanced by the established gum tree and informal landscaping of the front yard.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item demonstrates representative qualities of an intact and early Victorian cottage.

Physical Description

The item at 43 Houison Street, Westmead is a small masonry Victorian cottage. The item has a hipped roof clad with newly replaced corrugated iron. The roofscape is a 'U' shape with a modern central vent, a single brick chimney and rear skillion addition. The verandah features a concave verandah roof below the main roof line and is clad in newly replaced corrugated iron sheets. The verandah was reconstructed and replaced in c.1992-93. The verandah roof comprises painted timber posts with cast iron filigree brackets and valance. The verandah features replaced timber floorboards.

The symmetry of the front façade is accentuated by a central front door of panelled timber. A pair of French doors with elongated glass inserts in the top panels frame the central door on either side. All doors have security grills. The windows on the southern facade have modern roll down security shutters. On the northern facade there are two timber double hung windows with rendered sills and segmental arched heads.

At the rear of the building is a skillion brick section, dated to 1973, was constructed in two stages and featuring a diamond shaped window. This single timber window is similar to the original, and aluminium double hung on the northern wall of the addition. At the rear is a skillion verandah with turned timber posts.

The building is located on a large corner block of Houison and Drew Streets. The cottage does not appear to retain its original curtilage, however, remains prominent for its deep setback from the front boundary and large semi-formal landscaped front yard which features a mature gum tree. Both street boundaries have an early timber fence with two distinct types of pickets. The rear contains a concrete slab driveway accessed from Drew Street.

The condition of the building is good. The item appears to be well-maintained and to have undergone conservation repairs to the roof and verandah.

Condition	**Good**	Fair	Poor

Alterations and Additions

- 1973 rear addition
- 1992/93 verandah reconstructed and roof replaced

Although modified, the building retains its scale and form and is relatively intact. The works to the verandah elements and roof have followed appropriate conservation practice by replacing significant fabric on a like for like basis, maintaining the heritage significance of the site. The rear addition is a discrete addition that does not negatively detract from the heritage value of the place. The integrity of the item is considered moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1860-80

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The dwelling is located on land which originally formed part of the Government Domain that was first subdivided into large parcels of up to 50 acres. The subject property formed part of 3 acres 1 rood and 34 1/2 perches on Houison Street between Drew and Amos Streets, acquired by Richard Bergan and Charles Roberts in 1859.

The Sands Directory lists a W. Grogan at No.43 Houison Street in 1931. The property was purchased by George Barter and John Smith in 1942. From the Sands Directory, it appears Barter resided at the property prior to this date. He is noted in residence at Dennebrog between 1923-27. The subject property was purchased by Stanley Smith, Colin Williams and Gejtu Borg in 1964, who subsequently subdivided it, forming the present boundaries. The property was again purchased by Graham Gett in 1981. It remains uncertain as to when the subject house was constructed and for whom.

The building is largely intact; however, a rear addition was added in 1973 and the verandah was modified in 1992. The building remains in use as a private residence.

Curtilage Map

Statement of Significance

The item at 20 Lichen Place is of local significance for its historical and aesthetic values. Built c.1900s, the item is historically linked to the Parramatta Park subdivision of 1886. The residence's size, architectural character and attractive 'front row' location onto Parramatta Park provides evidence of the wealthy and prestigious residential development of Westmead at the turn of the century. The building is of aesthetic significance as a Federation style residence with Gothic revival elements. This aesthetic significance is enhanced by the surrounding landscape and degree of original fabric and detail retained. The item is a representative example of a substantial Federation residence built in Westmead in the late nineteenth century.

Criteria Assessment	
a) Historic	Built in the c.1900s, the item is historically linked to the Parramatta Park subdivision of 1886. The residence's size, architectural character and attractive 'front row' location onto Parramatta Park provides evidence of the wealthy and prestigious residential development of Westmead at the turn of the century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building is of aesthetic significance as a Federation style residence with Gothic revival elements. This aesthetic significance is enhanced by the surrounding landscape and degree of original fabric and detail retained.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item demonstrates representative qualities of a substantial Federation residence built in Westmead in the late nineteenth century.

Physical Description

The building at 20 Lichen Place, Westmead is a large single storey Federation residence with Gothic revival elements. The building addresses the Southern Domain and has rear access off Lichen Street. The building has a steeply-pitched gabled roof with a central projecting gable to the Southern Domain. The gable end is infilled with weatherboard cladding and features wide decorative timber bargeboards and a central window. The roof retains four chimneys of painted brick with terracotta pots. The verandah features a skillion roof reclad in galvanised iron, c.2016. The verandah roof is supported on paired timber columns with diagonal lattice between.

The front yard is highly vegetated with informal landscaping consisting of established trees. The property is bounded by a timber post and panel fence with a gate framed by two brick piers.

The building is in a good condition, having undergone recent repairs with the inclusion of a new roof and rendered façade. The building is well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New roof and verandah cladding c.2016. This replaced terracotta tiles on the main roof.
- New paint scheme.

The building is considered to have moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1900

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The site originally formed part of the Government Domain until its subdivision in 1859. The land offered for sale was in approximately 1-acre allotments. The later Parramatta Park subdivision in 1886 saw the property located on land acquired by John Booth and J. R Rodd. The residence was constructed soon after, in 1900.

The item remains in used as private residence.

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The item is in the vicinity of Old Government House and Domain, Parramatta Park, which was inscribed on the UNESCO World Heritage list as one of the eleven (11) sites across Australia forming the serial listing for the Australian Convict Sites. Parramatta Park and Old Government House is also listed on the NSW State Heritage Register (00596).

  Old Government House and its parkland setting of the Government Domain is of outstanding national significance for its association with the foundation of British colonial administration, and as an important centre of the convict system in Australia. Much of the administrative, social and political life of the colony, including the commencement of the government's convict administration,

was decided by the governors at this place from the very beginning of the colony until the last convicts served their sentences.

The landscape of Parramatta Park remains remarkedly true to the estate created by Governor and Mrs Macquarie during their time in NSW from 1810 and 1821. This landscape is valued today because it is a public park that still has the structure and character of the nineteenth century Australian Government Domain.

Any future Development Applications would have to consider the known outstanding heritage values and State heritage values of the Parramatta Park landscape which adjoins the item, Federation Residence (I283).

Curtilage Map

Statement of Significance

The house at 5 Moree Avenue, Westmead is of local significance for its historic, aesthetic and representative values. The item is historically linked to the early subdivision of the Government Domain, which facilitated the residential development of Westmead following William Fullagar's acquisition of large tracts of land in the area. Built in 1928, the dwelling directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA. The building is of aesthetic significance as a largely intact Inter-War Bungalow that makes a positive contribution to the character of the streetscape. The item is a good representative example of the architectural style of dwellings constructed as part of the 'Toohey's Palm Estate' and remains an important element in the group of houses along Moree Avenue conservation area.

Criteria Assessment	
a) Historic	The item is historically significant for its relation to significant early subdivisions of Westmead. Built in 1928, the item directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representative example of its style, which although has been slightly modified remains an important element in the group of houses along Moree Avenue built on the 'Toohey's Palm Estate.'

Physical Description

The item is a single storey 'L' shaped 1920s brick Inter-War bungalow with a gabled roof clad with terracotta tiles and a small projecting gable on the western side of the front. Both gable ends have weatherboards at the apex, with timber batten and fibro infill below. The gable ends also feature wide bargeboards and have exposed rafters at the eaves. The roof has solar panels located on the western side.

A verandah roof extends the width of the building, projecting just beyond the projecting gable. The verandah roof is flat and clad in pressed metal. It is supported by columns that are brick piers topped with small cast concrete square tapered columns. The columns are paired to support the verandah and singular at the projecting gable. The verandah is enclosed by a low brick balustrade and has a concrete floor. The sub-base is of brick, rendered at the front and corbelled to the sides.

The window in the gable end is a group of three timber framed casements with leadlight detailing and a contemporary flyscreen. The window has a concrete lintel and rendered sill. The window under the verandah is a pair of timber framed casements of a similar style to those on the gable end. The front door is in the centre of the facade and has a mottled glass top light and security screen. On the eastern facade are two openings, one with a skillion metal awning. On the western facade is a single opening with a skillion awning with stained timber brackets over the window.

A fibro skillion section at the rear appears to be early and has a brick base. A large yard at the rear of the property has an early detached fibro garage with a gable roof. The property is bounded by a Colorbond fence and has minimal garden landscaping, retaining the early subdivision boundaries. Opposite the property on the southern edge of Moree Avenue is a row of mature palm trees that relate to the early subdivision of the Toohey's Palm Estate established by John Toohey in 1925, that contribute to the landscape of the item.

The condition of the building is good and appears to be well-maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Colorbond sheet fence*
- Contemporary flyscreens added
- Air-conditioning unit added
- Replaced window awning on western elevation
- Solar panels to roof
- Refreshed paint scheme.

The building is quite intact, with a discrete rear addition. The integrity of the item is high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1928

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed a part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and it became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, several main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The item is located on land which originally formed Portion 50 of the Government Domain subdivision, which occurred between 1859-1861 and was acquired by William Fullagar in 1861. In 1902, part of Lot 50 and Lot 51 of Fullagar's Estate comprising approximately 22 acres was purchased by George Terry. This land was later purchased by John Toohey in 1911. John Toohey subsequently subdivided the land in 1925, forming the 'Tooheys Palm Estate'. This established the present boundaries of the dwelling. Each Avenue was lined with Palm trees (*Phoenix canariensis*) at a distance 50 feet apart. The municipal council carried out the kerbing and guttering of the estate on the condition Mr Toohey concreted the footpaths. No expense was spared in making the Toohey's Palm Estate subdivision an attractive subdivision for prospective buyers.

In 1927, the property was purchased by Herbert Leslie Glover, an estate agent. A covenant placed on the subdivision at this time required any building to cost not less than 450 pounds, be of stone and brick construction with a slate or tiled roof, and to be set back 20 feet from the street. It was also during this time that council applied building regulations to the land use of properties in residential areas.

The subject house appears to have been constructed in 1928, and first appears in the Sands Directory in 1929 occupied by William Reynolds. The property was purchased by John Blair, rubber worker in 1941 and Francis Taylor, a school teacher in 1954. The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. Statement of Significance

The house at 7 Moree Avenue, Westmead is of local significance for its historic and aesthetic values. The item is historically linked to the early subdivision of the Government Domain, which facilitated the residential development of Westmead following William Fullagar's acquisition of large tracts of land in the area. Built in 1930, the dwelling directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA. The building is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape. The item is a good representative example of the architectural style of dwellings constructed as part of the 'Toohey's Palm Estate' and remains an important element in the group of houses along Moree Avenue conservation area.

Criteria Assessment	
a) Historic	The item is historically significant for its relation to significant early subdivisions of Westmead. Built in 1930, the item directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representative example of its style, which although has been slightly modified remains an important element in the group of houses along Moree Avenue built on the 'Toohey's Palm Estate'.

Physical Description

The item is a single storey 'L' shaped brick Inter-War bungalow with a hipped roof clad in terracotta tiles and a small projecting gable to the western side. The gable end features rough cast detailing with a rising sun timber panel motif and a wide timber bargeboard.

A verandah is located to the east of the gable with a broken-backed verandah roof which extends across the gable end, forming a hood over the windows on the gable elevation. The verandah roof is supported on short columns on brick piers and brick balustrade, with rendered and painted capping. The windows beneath the gable are timber framed casements, in a set of three, which feature leadlight detailing. The window has a simple rendered sill and lintel.

The western side of the building features an addition where a new room has been created and has partly been clad in fibro with aluminium windows. At the rear of the building is a skillion roofed section. The building rests on brick footings and is situated on a 1/4-acre block, set a little distance back from the front boundary.

A concrete paved driveway extends across the base of the verandah and runs along the eastern side of the house, leading to a garage at the rear of the property. The garage is fronted by a flat roof carport. The front boundary of the property is marked by a steel ladder balustrade fence which encloses a front garden. The front landscape consists of an informal garden space with some established plantings.

The building retains its original subdivision allotment. Within the vicinity of this landscape is a row of mature palm trees situated along the southern edge of Moree Avenue, that relate to the early subdivision of Toohey's Palm Estate established by John Toohey in 1925, that contribute to the landscape of the item.

The condition of the building is considered to be good. There is some paint peeling from the bargeboards that will eventually require remediation.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Side addition to the west
- Skillion addition to the rear
- New fence*
- New concrete paved driveway

Although modified, the bungalow remains largely intact with some discrete modifications that do not alter the character of the building. The item retains its original style and is considered to have moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1930

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The item is located on land which originally formed Portion 50 of the Government Domain subdivision, which occurred between 1859-1861, and was acquired by William Fullagar in 1861. In 1902, part of Lot 50 and Lot 51 of Fullagar's Estate comprising approximately 22 acres was purchased by George Terry. This land was then purchased by John Toohey in 1911. John Toohey subsequently subdivided the land in 1925, forming the 'Tooheys Palm Estate'. This established the present boundaries of the dwelling. Each Avenue was lined with Palm trees (*Phoenix canariensis*) at a distance of 50 feet apart. The municipal council carried out the kerbing and guttering of the estate on the condition Mr Toohey concreted the footpaths. No expense was spared in making the Toohey's Palm Estate subdivision an attractive subdivision for prospective buyers.

In 1927, Herbert Leslie Glover purchased Lots 133-5. At this time, there was a covenant placed on the properties stating that any building would be not less than 450 pounds and that it would stand back 20 feet from the street. It was also during this time that council applied building regulations to the land use of properties in residential areas.

Later that year, lots 133 and 134 were purchased by Anthony Bradfield. Lot 134 was sold to George Carrett, builder, in 1930. It is assumed that the house was constructed at this time, the dwelling is first listed in the Sands Directory in 1932. The property had been sold four (4) times before it was purchased in 1972. The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, a more sympathetic fence in keeping with the Heritage Conservation Area and item should be investigated (e.g. a low brick boundary fence or timber picket fence).

Curtilage Map

Statement of Significance

The house at 9 Moree Avenue, Westmead is of local significance for its historic and aesthetic values. The item is historically linked to the early subdivision of the Government Domain, which facilitated the residential development of Westmead following William Fullagar's acquisition of large tracts of land in the area. Built in 1928, the dwelling directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA. The building is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape. The item is a good representative example of the architectural style of dwellings constructed as part of the 'Toohey's Palm Estate' and remains an important element in the group of houses along Moree Avenue conservation area.

Criteria Assessment	
a) Historic	The item is historically significant for its relation to significant early subdivisions of Westmead. Built in 1928, the item directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representative example of its style, which although has been slightly modified remains an important element in the group of houses along Moree Avenue built on the 'Toohey's Palm Estate.'

Physical Description

The item is a single storey 'L' shaped brick Inter-War bungalow with a gabled roof clad in terracotta tiles and a small projecting gable to the street. The roof features a single brick chimney with a rendered corbel and new Colorbond guttering. The gable ends feature timber battens with fibro sheet infill and wide bargeboards. A timber vent is located in the main gable.

A verandah roof extends the width of the building, projecting just beyond the projecting gable. The verandah roof is flat and clad in pressed metal and is supported by columns that are brick piers topped with small cast concrete square tapered columns. The columns are paired to support the verandah and are singular at the projecting gable. The verandah is enclosed by a low brick balustrade and has a concrete floor. The sub-base is of brick, rendered at the front and corbelled to the sides. The entrance to the verandah has a metal gate.

The brickwork on the front façade appears to be built with a darker brick and was original coated with a red oxide and tuckpointed. A group of three timber framed casement windows with leadlight detailing are located beneath the gable end and have a concrete lintel and rendered sill. These windows are fronted by a steel security grill. Under the verandah there is a pair of timber framed casements with a similar design. The front door in the centre of the facade has a mottled glass top light and security screen. On the eastern facade are two openings, one with a skillion metal awning, and on the western facade is one opening with a timber awning window.

There is a fibro skillion section at the rear of the dwelling that appears to be an early addition. The rear of the property has an early detached fibro garage with a gable roof which is addressed by a concrete slab driveway. The garage was added c.1962. The front yard features an established informal garden space located along the boundary fence. The fence is a squared timber picket fence, painted white. The item retains its original subdivision boundaries and row of mature palm trees along the southern side of Moree Avenue.

The building in a good condition and appears to be well-maintained. The timber elements of the gable end and verandah have been recently repainted.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Fibro cement garage, added in 1962
- Rear skillion addition
- Security grill and security front door
- New Colorbond guttering

The item is relatively intact. The integrity is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). Statement of Significance

The house at 11 Moree Avenue, Westmead is of local significance for its historic, aesthetic and representative values. The item is historically linked to the early subdivision of the Government Domain, which facilitated the residential development of Westmead following William Fullagar's acquisition of large tracts of land in the area. Built in 1928, the dwelling directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA. The building is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape. The item is a good representative example of the architectural style of dwellings constructed as part of the 'Toohey's Palm Estate' and remains an important element in the group of houses along Moree Avenue conservation area.

Criteria Assessment	
a) Historic	The item is historically significant for its relation to significant early subdivisions of Westmead. Built in 1928, the item directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representative example of its style, which, although slightly modified, remains an important element in the group of houses along Moree Avenue built on the 'Toohey's Palm Estate.'

Physical Description

The subject building is a single storey 'L' shaped brick Inter-War bungalow with a hipped roof clad in terracotta tiles, with a small projecting gable to the western side. The roof has a single brick chimney. The gable end features a diamond brick detail at its centre.

The verandah roof is broken backed and continues along the width of the building, projecting just beyond the gable. The verandah roof is supported on brick piers topped with small cast concrete circular tapered columns. These columns are paired to support the verandah and are singular at the projecting gable. The verandah has a brick balustrade with rendered capping and a concrete floor. The sub-base is brick, rendered at the front and corbelled to the sides.

A group of three timber framed casement windows beneath the gable end have a concrete lintel and sloped brick sill. The central window in the group has leadlight detailing, with replaced windowpanes either side. Under the verandah is a pair of timber framed casements with a concrete lintel and sloped brick sill. The front door in the centre of the facade has a mottled glass top light and a security screen.

There are two openings on the eastern facade and one on the western facade. A fibro skillion at the rear of the building appears early and has a brick base. A detached fibro garage with a gable roof is located at the rear of the property. This is addressed by a concrete slab driveway on the western edge. The dwelling does not have any fencing located along the front boundary. The front yard is predominately an open grassed yard with many potted plants. The property appears to retain its early subdivision boundaries.

The building appears to be in a good condition and well maintained, having had certain elements repainted recently. The brickwork appears to have had the mortar joints repointed.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Repainted gable end and verandah elements
- Repointed mortar joints of the front façade
- Some windowpanes replaced
- Fibro garage added in 1959

This item is relatively intact and is considered to have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). Statement of Significance

The house at 13 Moree Avenue, Westmead is of local significance for its historic and aesthetic values. The item is historically linked to the early subdivision of the Government Domain, which facilitated the residential development of Westmead following William Fullagar's acquisition of large tracts of land in the area. Built in 1928, the dwelling directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA. The building is of aesthetic significance as a largely intact Inter-War bungalow that makes a positive contribution to the character of the streetscape. The item is a good representative example of the architectural style of dwellings constructed as part of the 'Toohey's Palm Estate' and remains an important element in the group of houses along Moree Avenue conservation area.

Criteria Assessment	
a) Historic	The item is historically significant for its relation to significant early subdivisions of Westmead. Built in 1928, the item directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representative example of its style, which although slightly modified remains an important element in the group of houses along Moree Avenue built on the 'Toohey's Palm Estate.'

Physical Description

The item is a single storey 'L' shaped brick Inter-War bungalow with a gabled roof clad with terracotta tiles and a small projecting gable on the western side of the front. Both gable ends have weatherboards at the apex with timber batten and fibro infill below. The gable ends also feature wide bargeboards and have exposed rafters at the eaves. The roof includes a skylight on the western side of the roof and a vent extractor on the east.

A verandah roof extends the width of the building projecting just beyond the projecting gable. The verandah roof is flat and clad in pressed metal. It is supported by columns that are brick piers topped with small cast concrete square tapered columns. The columns are paired to support the verandah and are singular at the projecting gable. The verandah is enclosed by a low brick balustrade and has a concrete floor. The sub-base is of brick, rendered at the front and corbelled to the sides.

The window in the gable end is a group of three timber framed casements with leadlight detailing and a contemporary flyscreen. The window has a concrete lintel and sloped brick sill. The window under the verandah is a pair of timber framed casements of a similar style to those on the gable end. The front door is in the centre of the facade and has a mottled glass top light and security screen. On the eastern facade are two openings, one with a skillion metal awning. On the western facade is a single opening with a skillion awning with stained timber brackets over the window.

The large skillion extension at the rear appears to be an early extension to the dwelling. The rear of the property contains a large recent detached fibro garage with a gable roof. This is addressed by a concrete strip driveway. The front yard is bounded by a curved hedge and garden. The property appears to retain its early subdivision boundaries, and the bungalow is hidden from the street by two trees on the verge.

The building is in a good condition and presents a well-maintained property. The brickwork of the front façade and verandah balustrade appears to have had the mortar joints repointed in the recent past. The façade also features a refreshed paint scheme.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Additions undertaken in 1994 include a new garage at the rear
- The roof includes a skylight on the western side and a vent extractor on the east
- New paint scheme

The dwelling is relatively intact and considered to have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The item is located on land which originally formed Portion 50 of the Government Domain subdivision, which occurred between 1859-1861 and was acquired by William Fullagar in 1861. In 1902, part of Lot 50 and Lot 51 of Fullagar's Estate comprising approximately 22 acres was purchased by George Terry. This land was later purchased by John Toohey in 1911. John Toohey subsequently subdivided the land in 1925, forming the 'Tooheys Palm Estate'. This established the present boundaries of the dwelling. Each Avenue was lined with Palm trees (*Phoenix canariensis*) at a distance of 50 feet apart. The municipal council carried out the kerbing and guttering of the estate on the condition that Mr Toohey concreted the footpaths. No expense was spared in making the Toohey's Palm Estate subdivision an attractive subdivision for prospective buyers.

In 1927, the property was purchased by Herbert Leslie Glover, an estate agent. A covenant was placed on the subdivision at this time requiring any building to cost not less than 450 pounds, be of stone and brick construction with slate or tiled roof, and to be set back 20 feet from the street. It was also during this time that Council started applying building regulations to land use of properties in residential areas.

The house was constructed in 1928. The dwelling first appears in the Sands Directory in 1929 occupied by Oliver Fowl and known as 'Le Nid' in 1929 and 1930. The dwelling remains in use as a private residence.

Statement of Significance

The house at 15 Moree Avenue, Westmead is of local significance for its historic and aesthetic values. The item is historically linked to the early subdivision of the Government Domain, which facilitated the residential development of Westmead following William Fullagar's acquisition of large tracts of land in the area. Built in 1928, the dwelling directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA. The items aesthetic significance is reduced by the external modifications to the front façade. Although the building retains the original subdivision boundary, the item is not a good representative example of the architectural style of Inter-War dwellings constructed as part of the 'Toohey's Palm Estate.' However, it remains an important element in the group of houses along Moree Avenue conservation area.

Criteria Assessment	
a) Historic	The item is historically significant for its relation to significant early subdivisions of Westmead. Built in 1928, the item directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item's aesthetic significance is reduced by the external modifications to the front façade.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Although the building retains the original subdivision boundary, the item is not a good representative example of the architectural style of dwellings constructed as part of the 'Toohey's Palm Estate.' However, it remains an important element in the group of houses along Moree Avenue.

Physical Description

The subject building is a single storey 'L' shaped brick Inter-War bungalow with a hipped roof clad in terracotta tiles and a small projecting gable to the western side. The roof has a single brick chimney. The gable end features a rendered circular detail at its centre.

The verandah roof is broken backed and continues along the width of the building projecting just beyond the gable. The verandah roof is supported on brick piers topped with small cast concrete circular tapered columns. These columns are paired to support the verandah and are singular at the projecting gable. The verandah has a brick balustrade with rendered capping and concrete floor. The sub-base is of brick, rendered at the front and corbelled to the sides.

The brickwork on the front façade appears to be built with a darker brick that was originally coated with a red oxide and tuckpointed. There are sections on the balustrade infill that have been repointed and feature patches of painting. A group of three timber framed casement windows with leadlight detailing are located beneath the gable end and have a concrete lintel and rendered sill. The central portion of the façade appears to be recently infilled and painted, having removed previous window openings. The dwelling was in the process of a renovation at the time of the inspection.

The rear of the property features staged rear additions, evidenced by the change in brickwork colour. The large extension is a single storey with a gabled roof that is set below the main roof form.

The property is bounded by a hedge along Moree Street and features an established palm tree in the front yard. The property retains its original subdivision boundaries.

The item appears to be in a fair condition, with some cracks evident in the brick balustrade and piers.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear addition, c.1960s
- Infilled verandah window*

While the item features substantial rear additions, they are sympathetic in nature and retain the scale and form of the dwelling when addressed from Moree Avenue. However, the infilled front façade is a major alteration that adversely impacts the significance of the item. The integrity is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. Curtilage Map

Statement of Significance

The house at 19 Moree Avenue, Westmead is of local significance for its historic and aesthetic values. The item is historically linked to the early subdivision of the Government Domain, which facilitated the residential development of Westmead following William Fullagar's acquisition of large tracts of land in the area. Built in 1928, the dwelling directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided in 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA. The building is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape. The item is a good representative example of the architectural style of dwellings constructed as part of the 'Toohey's Palm Estate' and remains an important element in the group of houses along Moree Avenue conservation area.

Criteria Assessment	
a) Historic	The item is historically significant for its relation to significant early subdivisions of Westmead. Built in 1928, the item directly relates to the 'Toohey's Palm Estate' subdivision, purchased by John Toohey in 1911 and subdivided 1925. The item was built as part of the planned subdivision of 'Toohey's Palm Estate' and provides evidence of the pattern of residential development in the suburb of Westmead and within the broader Cumberland LGA.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is of aesthetic significance as a largely intact Inter-war bungalow that makes a positive contribution to the character of the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representative example of its style, which, although slightly modified remains an important element in the group a group of houses along Moree Avenue built on the 'Toohey's Palm Estate.'

Physical Description

The subject building is a single storey 'L' shaped brick Inter-War bungalow with a hipped roof clad in terracotta tiles and a small projecting gable to the western side. The roof has exposed timber rafters and no chimney. The gable end features a rendered diamond brick detail at its centre surrounded by roughcast render.

The verandah roof is broken backed and continues along the width of the building projecting just beyond the gable. Due to the limited visibility to the verandah elements, the following description is quoted from former listing sheet: *'original brick and concrete verandah supports have been replaced with metal posts, frieze and balustrade, and original timber casement windows replaced with aluminium sliding windows.'* The verandah roof would have originally been supported on brick piers topped with small cast concrete circular tapered columns. These singular columns at the projecting gable are retained.

The front façade features darker bricks and is tuck pointed. A group of three timber framed casement windows beneath the gable end have a concrete lintel and sloped brick sill. The original window openings of rendered concrete lintels and slant brick sills have been retained, but the original timber casement windows have been replaced with aluminium sliding and flyscreens. A single pair of timber casements on the eastern facade have been retained. The front door is a modern timber panelled front door with an original glazed top light.

The dwelling features an early fibro skillion addition at the rear which has single timber framed double hung window with a fixed timber awning. A small brick and cement tile outhouse is also located at the rear of the property. A concrete driveway on the western boundary leads to a small fibro garage at the rear. The property appears to retain its early subdivision boundaries.

The front yard is bounded by a substantial hedge with a timber panel gate. The hedge obscures views to the property. A timber carport also features substantial vegetated growth forming the roof of the structure.

Generally in good condition. Weathering to timberwork is typical given the age of the building.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Original brick and concrete verandah supports have been replaced with metal posts, frieze and balustrade
- Original timber casement windows replaced with aluminium sliding windows.
- Fibro rear skillion addition added c.1960s
- Garage constructed in 1968.

The item retains the scale and form of the original dwelling however the building has been modified. The integrity of the item is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The item is located on land which originally formed Portion 50 of the Government Domain subdivision, which occurred between 1859-1861 and was acquired by William Fullagar in 1861. In 1902, part of Lot 50 and Lot 51 of Fullagar's Estate comprising approximately 22 acres were purchased by George Terry. This land was later purchased by John Toohey in 1911. John Toohey subsequently subdivided the land in 1925, forming the 'Tooheys Palm Estate'. This established the present boundaries of the dwelling. Each Avenue was lined with Palm trees (*Phoenix canariensis*) at a distance of 50 feet apart. The municipal council carried out the kerbing and guttering of the estate on the condition that Mr Toohey concreted the footpaths. No expense was spared in making the Toohey's Palm Estate subdivision an attractive subdivision for prospective buyers.

In 1927, the property was purchased by Herbert Leslie Glover, an estate agent. A covenant placed on the subdivision at this time required any building to cost not less than 450 pounds, be of stone and brick construction with slate or tiled roof, and to be set back 20 feet from the street. It was also during this time that council applied building regulations to the land use of properties in residential areas.

Later in 1927, the property was purchased by Gustav O'Reilly and the house was constructed in 1928. The dwelling first appears in the Sands Directory in 1929 occupied by Norman O'Reilly. O'Reilly owned the property until 1941, when it was purchased by Alfred Poole. The item remains in use as a private residence.

Curtilage Map

Statement of Significance

The item at 1 Oakes Street, Westmead is of local significance for its aesthetic, social and representative values. The dwelling, although modified, retains its aesthetic significance as an intact Federation cottage with fabric that has been replaced on a like for like basis. The item also has some social value to the local community for its continued use as a community centre since the early 1990s. The dwelling is a representative example of Federation cottages built between 1910 and 1920.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item, although modified, retains its aesthetic significance as an intact Federation cottage with fabric that has been replaced on a like for like basis. The dwelling makes a positive contribution to the landscape.
d) Social	The item has some social value to the local community for its continued use as a community centre since the early 1990s.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of Federation cottages built between 1910 and 1920.

Physical Description

The item is a single storey Federation cottage. The dwelling has walls clad in rusticated weatherboards and a hipped roof clad in corrugated iron with a projecting gable to the east. The gable end is infilled with timber shingles fronted by a splayed bargeboard and timber finial. A verandah extends along the north and east elevation of the building. The verandah has a skillion roof clad in corrugated iron supported on simple square timber posts with a decorative timber bracket. The verandah floor consists of brick laid atop a concrete sub-base. There are several window openings along the main elevations. These generally have timber architraves and sills and are timber framed double hung sash windows with multipaned inserts. The two door openings also contain timber architraves and contemporary security screen doors. The community rooms were also extended in 2000.

The dwelling is surrounded by a paved brick area, there is also a public children's play area which adjoins the grounds. The entire site is encapsulated in a steel ladder balustrade fence and gate.

The item is well-maintained and presents a highly modified heritage item. The condition of the building is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The item underwent substantial conservation works in 1994 for its conversion into a community facility
- In 1996, Council closed the road in the front of the property and created a large park area
- In 2000, the community rooms were extended
- Dwelling features upgraded kitchen amenities which include stove, microwave, fridge and hot water urn. There is disabled access and toilet facilities
- New roof
- New paint scheme
- Contemporary door

Although the building still retains its form as a Federation period workers cottage, due to the substantive renovations undertaken in the 1990s and early 2000s, the item is considered to have moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1910-20

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The item is located on land which originally formed part of the Government Domain subdivision. which occurred between 1859-1861 and was acquired by George Oakes in 1861. Oakes was a prominent landowner in the district who had many pastoral interests in Parramatta.

In December 1883, Oakes' orchard was subdivided into 125 lots and the township of Westmead was built on this part of the subdivision. It appears from Council records that the original house of 1 Oakes Street, Westmead, was built by Mr C.T. Mackey.

The house was acquired by Council in December 1993. Council purchased the property in 1993 and in July 1994 voted to use $60,000 for the renovation of the building for use as a community facility. The Domain Community Rooms were officially opened on 4 March 1995 and included a branch of the Holroyd Toy Library and a 25-person meeting room. In 1996, Council closed the road in the front of the property and created a large park area. This work was funded from the Council's Section 94 Contribution Plan.

In August 2000, Council resolved to allocate $78,140 from the previous Section 94 Plan to the upgrade and extension of the Government Domain Community Rooms (including a new play area).

As of 1 January 2002, the facility has been available for hire by community groups for meetings and recreational use. There are two rooms each with a capacity of 20 people. Both rooms are air conditioned and have tables and chairs with shared kitchen amenities which include a stove, microwave, fridge and hot water urn. There is disabled access and toilet facilities.

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The item is in the vicinity of Old Government House and Domain, Parramatta Park, which was inscribed on the UNESCO World Heritage list as one of the eleven (11) sites across Australia forming the serial listing for the Australian Convict Sites. Parramatta Park and Old Government House is also listed on the NSW State Heritage Register (00596).

  Old Government House and its parkland setting of the Government Domain is of outstanding national significance for its association with the foundation of British colonial administration, and as an important centre of the convict system in Australia. Much of the administrative, social and political life of the colony, including the commencement of the government's convict administration, was decided by the governors at this place from the very beginning of the colony until the last convicts served their sentences.

  The landscape of Parramatta Park remains remarkedly true to the estate created by Governor and Mrs Macquarie during their time in NSW from 1810 and 1821. This landscape is valued today because it is a public park that still has the structure and character of the nineteenth century Australian Government Domain.

  Any future Development Applications would have to consider the known outstanding heritage values and State heritage values of the Parramatta Park landscape which adjoins the item.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The Victorian Semi-detached Terrace at 29-30 The Park, Westmead is of local significance for its historic and aesthetic values. The item is a relatively rare example within Westmead and more broadly within the Cumberland LGA of a pair of late Victorian semi-detached terraces. Built in c.1886, the item is associated with the 'Parramatta Park' subdivision. The residence's size, architectural character and attractive 'front row' location onto Parramatta Park provides evidence of the development of this area for the more prestigious and wealthy residents of Westmead at the turn of the century. The building's aesthetic significance is enhanced by the degree to which, despite numerous alterations, it has retained important original fabric and detail.

Criteria Assessment	
a) Historic	Built in c.1886, the item is associated with the 'Parramatta Park' subdivision. The residence's size, architectural character and attractive 'front row' location onto Parramatta Park provides evidence of the development of this area for the more prestigious and wealthy residents of Westmead at the turn of the century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The aesthetic significance of the item is enhanced by the degree to which, despite numerous alterations, it has retained important original fabric and detail.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is a relatively rare example within Westmead and more broadly within the Cumberland LGA of a pair of late Victorian semi-detached terraces.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item at 29-30 Parkside Lane, Westmead is a two storey Victorian terrace. The front façade has rendered brick walls while the side elevations are painted brick. The gabled roof is clad with slate tiles and retains two rendered chimneys with rendered cornice detailing and glazed terracotta pots.

The upper storey has a verandah that extends along the primary elevation. The verandah features a bullnose roof clad with Colorbond sheeting supported on replaced timber posts. No.29 represents a more intact verandah with decorative cast iron valance and balustrade infill. No.30 appears to be in the process of restoration or repair with no balustrade or valance. The verandah is separated by a brick privacy wall. The verandah is accessed by two French doors.

Generally, window openings are double hung sash windows with timber frames. The windows on the lower façade, however, are semi-circular timber framed double hung sash windows fronted by painted steel bars with a decorative rendered arch. The dwellings retain their original front doors with side and fanlights.

The item fronts the Southern Domain. The rear of the property is highly modified with the construction of a modern apartment complex. The complex is three storeys' high (with a carpark and two residential levels) and is constructed of concrete with a Colorbond gabled roof. Each unit has a balcony area enclosed by a steel balustrade. The units front Parkside Lane.

The item features an established informal garden fronting the Southern Domain, formerly Parramatta Park. The landscape features two Jacaranda trees and an established hedge along the boundary fence. The boundary fence consists of a rendered brick pier with sandstone capping, with a low brick wall with steel palisade inserts. The fence along the southeast boundary features contemporary brick between the rendered piers.

The item appears to be in a good condition with elements in a fair condition. The dwelling at No.30 appears to be under renovation, with a particular focus on the reinstatement of verandah elements. Overall, the Victorian terrace is in a good condition and appears to be well-maintained.

The contemporary apartment block attached to the dwelling fronting Parkside Lane is considered to be in a fair condition with cracking in the concrete.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Replaced bullnose verandah roof sheeting
- Replaced timber verandah posts
- The original two-storey verandah to front elevation of No.30 was largely removed and/or closed in during the 1980s-90s.* This verandah is in the process of being reinstated.
- Rendered masonry fence
- Rear addition – contemporary apartment block

The integrity of the item is considered to be moderate. It appears that original fabric has been replaced on a like for like basis to appropriately conserve the item. The building maintains its overall form and relationship to the Southern Domain. Although a new development dominates the Parkside Lane frontage, the development has respected the form, scale and heritage significance of the item and is not a prominent intrusion to the site from prominent frontages, such as the Southern Domain.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1886

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station is within the territory of the Cumberland Council.

Westmead originally formed a part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The area on which the residence is located was previously part of the Government Domain upon which Old Government House was situated. Prior to the land being subdivided, it was used for maize farming

in the 1790s. When the land was subdivided, the land allotment of the site was acquired by W. Walton. The dwelling was constructed in 1886. The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The verandah of No.30 should be reinstated to its former form with appropriate verandah elements reinstated, such as the valance and balustrade.
- Consideration should be given to the integration of 29 and 30 The Park as an a combined, individually listed heritage item. The revised curtilage below should be considered for the Cumberland LEP.

- The item is in the vicinity of Old Government House and Domain, Parramatta Park, which was inscribed on the UNESCO World Heritage list as one of the eleven (11) sites across Australia forming the serial listing for the Australian Convict Sites. Parramatta Park and Old Government House is also listed on the NSW State Heritage Register (00596).

  Old Government House and its parkland setting of the Government Domain is of outstanding national significance for its association with the foundation of British colonial administration, and as an important centre of the convict system in Australia. Much of the administrative, social and political life of the colony, including the commencement of the government's convict administration, was decided by the governors at this place from the very beginning of the colony until the last convicts served their sentences.

  The landscape of Parramatta Park remains remarkedly true to the estate created by Governor and Mrs Macquarie during their time in NSW from 1810 and 1821. This landscape is valued today because it is a public park that still has the structure and character of the nineteenth century Australian Government Domain.

  Any future Development Applications would have to consider the known outstanding heritage values and State heritage values of the Parramatta Park landscape which adjoins the item.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The Inter-War Apartment Block is of local significance for its historic, aesthetic and rarity values. Built c.1925-39, the building is historically associated with the residential development of Westmead that followed the "Parramatta Park" subdivision in 1886. Although built later, the land and building has associations with a number of early residents. The item is of aesthetic significance as a largely intact Inter-war apartment block. The building is a fine example of its style which, although slightly modified, retains its significance as an important element overlooking the Park lands to the north. The item demonstrates representative qualities as an intact, Inter-War style apartment block.

Criteria Assessment	
a) Historic	Built c.1925-39, the building is historically associated with the residential development of Westmead that followed the "Parramatta Park" subdivision in 1886. Although built later, the land and building has associations with a number of early residents.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as a largely intact Inter-war apartment block. The building is a fine example of its style which, although slightly modified, retains its significance as an important element overlooking the Park lands to the north.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities as an intact, Inter-war style apartment block.

Physical Description

The item is a large two storey Inter-war apartment block. The item is a rendered brick apartment block with heavily banded facades with a hipped roof clad in terracotta tiles. The roof also features a centrally placed dormer window which lights an internal stairway. The front facade features a projecting entry with a pair of fully glazed doors with ribbed glass. This door is fronted by a security screen with a sympathetic geometric design. The front facade features a two storey bay window, an oriel window at the northern end and an open verandah either side of the door. The windows are generally timber framed double hung windows with horizontal glazing.

The rendered banding continues around the side elevations, the rear of the building features sections of curved walls. The building has a frontage to the Southern Domain, formerly Parramatta Park, and retains a vista to Parramatta city northeast. The building is set close to this frontage which features a rendered and painted banded fence with wrought iron gate along its boundary. There are a number of mature trees surrounding the building.

The surrounding landscape of Westmead is a highly developed residential area, with several blocks of apartments to the rear of the property and along the street frontages of Amos Street, Thomas May Place and Lichen Lane.

The building is considered to be in a good condition and well maintained, however the rendered boundary fence is in a fair condition with a significant crack at its centre which is in need of repair.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Council records indicate that alterations were made in 1969 and 1992
- A garage was added in 1982

The building appears to have high integrity with minimal external modifications made to the dwelling. Although the surrounding landscape is highly developed, the item retains its original form and relationship to the Southern Domain.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1925-39

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed a part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and it became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

In 1859 George Oakes, a member of the Legislative Assembly and owner of nearby land, was given a Crown Grant for a portion of the Government Domain by Sir William Thomas Denison. In 1860, he sold a portion of this land to John Allen Manton. This property was passed through the family and in 1881 John Kerr Manton sold it to Emma Jane Oakes as part of the "Parramatta Park" subdivision. She and her family remained as owners until 1913. The land was then sold to Thomas Wheatley, and in 1914 John Meier became the owner. The property was subdivided by Alicia Meier in 1939 and lot 7 was sold to Emily Irene Brown. There was a covenant placed on the property that stated that any building erected must not be less than 750 pounds and that it may only be residential in nature. This covenant reflects Council's desire to add a certain quality and character to an already irregular pattern of settlement.

During the 1940's, there was a rapid succession of owners. In 1959, the property was purchased by Harold Henry Godwin passing to Isabel Godwin in 1982. The landscape was developed in the early c1990s with the addition of a large multi-storeyed residential block to the rear.

The building remains in use as a private residence with several apartments.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Due to the large residential development surrounding the building, it is recommended the curtilage is revised, as shown below, and updated as the current curtilage in the Cumberland LEP. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

- The item is in the vicinity of Old Government House and Domain, Parramatta Park, which was inscribed on the UNESCO World Heritage list as one of the eleven (11) sites across Australia forming the serial listing for the Australian Convict Sites. Parramatta Park and Old Government House is also listed on the NSW State Heritage Register (00596).

  Old Government House and its parkland setting of the Government Domain is of outstanding national significance for its association with the foundation of British colonial administration, and as an important centre of the convict system in Australia. Much of the administrative, social and political life of the colony, including the commencement of the government's convict administration, was decided by the governors at this place from the very beginning of the colony until the last convicts served their sentences.

  The landscape of Parramatta Park remains remarkedly true to the estate created by Governor and Mrs Macquarie during their time in NSW from 1810 and 1821. This landscape is valued today

because it is a public park that still has the structure and character of the nineteenth century Australian Government Domain.

Any future Development Applications would have to consider the known outstanding heritage values and State heritage values of the Parramatta Park landscape which adjoins the item.

World Heritage listing curtilage shown in dark green.

Statement of Significance

Essington is of state significance for its historic, associative and aesthetic values. The item is historically significant for its association to significant early subdivisions, namely the Government Domain. It is also significant for its association with the prominent local family of William Fullagar, one of Wentworthville and Westmeads pioneer settlers. Essington was built for William Fullagar as his second residence, a gentleman's villa. The item was built by a family member. The item is of aesthetic significance as a substantial Late Victorian gentlemens residence with gothic elements. Although modified, the building retains a moderate level of integrity and is a highly prominent local landmark which makes a striking contribution to the landscape. The item is a representive example of a gentlemen's residence built in Westmead c.1860, although the style has been somewhat compromised by later Federation period additions and contemporary alterations.

Criteria Assessment	
a) Historic	Built in c.1860, the item is historically significant for its association to significant early subdivisions, namely the Government Domain and William Fullagar.
b) Associative	The item is primarily significant for its association with the prominent local family of William Fullagar, one of Wentworthville and Westmeads pioneer settlers. Essington was built for William Fullagar as his second residence, a gentleman's villa. The item was built by family member.

c) Aesthetic/Technical	The item is of aesthetic significance as a substantial Late Victorian gentlemen's residence with gothic elements. Intact Gothic elements include the arched windows, the roof form and chimney. Although modified, the building retains a moderate level of integrity and is a highly prominent local landmark which makes a striking contribution to the landscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representive example of a gentlemen residence built in Westmead c.1860, although the style has been somewhat compromised by later Federation period additions and contemporary alterations.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Essington', last updated 2016. As the description features a comprehensive physical description, no amendment has been made to the physical description.

Essington House:
Essington is a large two storey historic house now run as a school, by the Church of the Foursquare Gospel. It is located on the north-western corner of Bridge Road and the Great Western Highway, with its principal facades facing these roads. Its site is elevated and in combination with the house's high ceilings and steep roof, this gives it prominence in the local area.

The house's original block - a late Victorian/Federation building with 'Italianate' and 'Gothic' elements - was L shoaped with gabled roofs finished with timber bargeboards and turned finials. Walls are polychrome brick and the building has a slate roof. A projecting bay window on the front (east) elevation features 2x2 pane double hung sash windows with sandstone sills and heads; first floor windows on the bay feature 'four-centred' arch heads.

The original verandah was replaced by later (probably inter-war period) two storey verandah to the front and side (south) elevations with brickwork columns, first floor balustrade and paired 'stump' columns. Various additions including single storey block of rendered masonry and a recent 2 storey wing of face brickwork with metal framed sliding windows.

A 1990 classroom extension was made on the house's western side. This is accessed by a carpark entered off Bridge Road. An auditorium is located at the far-northern end of the site, set low and away from the house.

Garden:
The house is surrounded to the east and south by lawns and mature plantings of trees. A limited number of trees including a large remnant Bunya pine (Araucaria bidwillii), hoop pine (A.cunninghamii) and vestiges of its original garden remain on the property, principally on its southern side facing the Great Western Highway, and on the eastern side facing Bridge Street. To the north is principally car parking areas over former grounds, and rear extensions for class rooms/ administration.

To the north the site is predominantly bitumen car parking area, accessed off Bridge Road. To the west additions to the house have been made to provide for school classrooms.

Condition
Essington appears to be well-maintained and is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Interwar period - The original verandah was replaced by a later inter-war period verandah to the front and side (south) elevations with brickwork columns, first floor balustrade and paired 'stump' columns. Various additions also include a single storey block of rendered masonry and a recent two storey wing of face brickwork with metal framed sliding windows.
- 1982 - Major restoration works including the installation of balustrades and railings on the staircase, replacing all original timber window sash cords, glass replacement in front door entry replaced with leadlight, sandstone sills replaced in new brick walls on old building, marble fire places restored, painting, landscaping.
- 1982 - New picket fence on Bridge Road and Great Western Highway, replacing 1920s two rail Arris fence.
- 1990 - Four new classrooms built to the west of house.
- 2003 – A large Eucalyptus was removed from northern side of house.
- 2005 - Slate roof conservation work.

The buildings integrity is considered to be moderate. Although the building has undergone various alterations, significant fabric has been appropriately conserved on a like-for like basis with the 1982 restoration. Although later alterations from the inter-war period to present have compromised some aesthetic values of the building, the item retains a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1860

Westmead
The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed part of the western portion of the Domain of Government House at Parramatta, which was laid out by Governor Philip in 1790. It originally comprised over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided, and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison, John Savery Rodd and George Oakes. These allotments comprised 50 acres, however, many of these individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes Street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

Essington
Essington was built for one of Holroyd's important pioneers, William Fullagar, as his second residence. Essington was built opposite his first residence (The Wattles or Wattle Cottage) as a gentlemans villa, on the northern side of the Great Western Highway in a prominent position. It was reportedly designed and decorated with no expense spared.

Fullagar was the son of convicts John Fulligar and Esther Leadham, and he demonstrates the upward mobility of descendents of many individuals transported to NSW. Fullagar was a butcher and publican turned stock agent who was in the process of buying large tracts of neighbouring properties and making his way up in the world. From his base at The Wattles or Wattle Cottage, he bought sufficient land to make him one of Holroyd's important pioneers whose estates covered much of Wentworthville.

William Fullagar purchased the 30 acre James grant (a convict grant) (to the south of Essington) in 1849, and *'soon after he purchased it, he fenced it and built his residence upon it and went there to live, and lived there continuously from that time until within a few years of his death'*. When he bought James's 30 acres, Fullagar was the lessee of the neighbouring Burder Park estate (later Finlayson's Estate) a 95 acre property immediately west of James's grant belonging to descendents of Rowland Hassall, William Davis and John Bolger. These are all marked on a 1908 map of the Parish of St. John. He then purchased land from the Burder Park estate in two (2) lots of 67 1/4 acres in 1851 and 1854, the last section of 33 acres on the south-west corner was not acquired until 1866. He used the property as part of his business for cattle grazing and in later years for agistment as well as growing hay and other feed crops, timber cutting, making bricks and cultivating part of it as an orchard.

All statements agreed that once he moved to Willow Cottage, Fullagar never lived anywhere else until he built his new residence opposite the 201 acre property some few years before he died in 1894.

By the 1870s Fullagar was one of the major landholders in the Parramatta district. The lots he acquired in 1859-61 were during the sale of an extensive portion of the Government Domain (by the 1850s 'Parramatta Park'). In fact, Fullagar owned much of present day Wentworthville.

Although continuing his stock auction activities, Fullagar aspired to the status of a gentleman. He had time to pursue the hounds in fox hunts organised apparently under his patronage. He was also, for a time, one of the trustees of Parramatta Park. Fullagar's Paddock was occasionally used by others, e.g.: cadets from Sydney Grammar and The King's School combined for an encampment there on the Queen's Birthday, 22 May 1875.

The date he moved over the road to his new house in Essington is vague from existing records. This move appears to have occurred in the late 1880s as his wife, Sarah Fullagar, died at Essington on 24 March 1889. At the time of the 1891 census there were 2 males and 5 females listed at Essington. William Fullagar died there on 8 August 1894, a week after signing his last will and testament. The will offers a convenient summary of his property: it required the sale of 3 parcels of land - the 201 acre site of his former residence, Willow Cottage; 40 acres adjoining Bailey's Orchard near Parramatta north of the railway line; and the site of Essington together with neighbouring allotments, the extensive holdings purchased from Parramatta Park. After costs the money was to be distributed, first in defined bequests - to William Fullagar the younger, to married daughters Hannah Barnes and Sarah Houison, to his grandson Thomas Barnes and to Adah Rebecca Harrex, (Sarah's cousin and possibly the family retainer). Any balance of the sale was to be divided equally between the 8 surviving children from his second marriage - 5 daughters and 3 sons.

The first attempt to sell any land from the estate occurred shortly after probate was granted when Fullagar's Paddocks were subdivided and auctioned on 9/2/1895. It appears this auction was unsuccessful. Another was held on 25/9/1897, again without provoking much interest, for the only buyer was a family member, Amy Adah Hughes, so the trustees decided to apply for Torrens Title, possibly to encourage sales.

Holroyd Heritage Study 1993 notes that Essington was built by a family member, William John Fullagar c.1860s and sold by him in 1912. Surrounding land 'the Fullagar Estate' was further subdivided from c.1920. In c. the 1920s the verandah on the house was replaced.

The Parramatta Four Square Gospel Church bought the property c.1980 and erected a picket fence in 1982. From 1983 the Church has run a primary school on site. The church has acquired neighbouring houses with a view to expansion. The item remains in use as primary school known as ‘Westmead Christian Grammar School’.

	Level 2	Transport - Rail	

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The Yennora Railway Station is locally significant for its historic, associative and representative heritage values. The site is historically significant for its association with the McCredie family who financed the construction of the station, which opened in 1927. The station is later historically associated with the industrial development of Yennora that slowly developed in the late 1960s and 1970s, notably the Yennora Wool Centre that was built on the site of the old railway storage workshops at Yennora. While the two extant timber platform buildings situated on Platform 1 have been modified, and are not of high aesthetic value, they do retain qualities that are representative of the simple timber platform structures built by NSW Railways during the Inter-War period.

Criteria Assessment	
a) Historic	The site is historically significant for its association with the McCredie family who financed the construction of the station, which opened in 1927. The station is later historically associated with the industrial development of Yennora that slowly developed in the late 1960s and 1970s, notably the Yennora Wool Centre that was built on the site of the old railway storage workshops.
b) Associative	Yennora Railway Station has an association with the local McCredie family who financed the construction of the station.
c) Aesthetic/Technical	The two small timber structures dating from the 1930s on Platform 1 are not regarded as having a sufficient degree of aesthetic or technical quality to be considered as having local significance in this criterion.
d) Social	The item does not meet this criterion.

e) Scientific	There is the potential for some archaeological remains, though it is unlikely to have significant research potential.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The timber waiting shed and booking office on Platform 1, although both later sheeted with steel cladding, are representative of this simple type of structure built by NSW Railways between 1930 and the 1950s. The haunched steel footbridge is also representative of the type of footbridge structures built during this period. The footbridge was identified as an item of little heritage significance in the 2016 'Railway Footbridges Heritage Conservation Strategy'. However, the strategy recommended detailed physical analysis prior to any change to confirm the significance of the structure.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, RailCorp Section 170 Heritage and Conservation Register listing sheet for 'Yennora Railway Station Group', last updated 2013. As the description features a comprehensive physical description which matches the condition visible during the site inspection, no amendment has been made to the physical description.

BUILDINGS
Platform building, Platform 2 (c.2007)
Platform building, Platform 1- (Type 15) (1970s)
Platform building, Platform 1- (Type 7) (1934)
Booking Office, Platform 1 (c.1934)

STRUCTURES
Platforms 1 and 2 (2009, nd)
Footbridge, (c.1995)
Canopies, (c.2007)

CONTEXT
Yennora Station is accessed via a ramp from Railway Street on the south and via steps from Nelson Road to the north. The station consists of two wayside platforms connected via a steel framed footbridge. The station is characterised by having no commercial or retail strip in the immediate vicinity, but is predominately industrial to the north and a mix of industrial and residential to the south.

PLATFORM BUILDING- Platform 2 (c.2007)
The waiting shelter is a simple three bayed steel SHS framed structure which supports a gabled corrugated steel clad roof. The side to the platform is open while the rear and sides are enclosed by clear glass. There are three aluminium slatted seats within the shelter.

PLATFORM BUILDING- Platform 1 (1970s)
External: A simple rectangular face brick building with male and female toilets at either end, separated by a central store room. The roof is a flat steel ribbed roof surrounded by a steel fascia/gutter. The eaves are open with exposed rafters. The floor consists of a suspended concrete slab supported on a steel frame on circular concrete piers.

Internal: The toilet partitions are rendered brick and there is a concrete floor. Windows are aluminium framed, the ceilings are hardboard.

PLATFORM BUILDING- Platform 1 (1934)
External: The waiting shed is a small rectangular building with a skillion roof clad in corrugated steel sloping toward the platform. It consists of an open waiting room on the right with an enclosed space on the left accessed by a single door facing the platform. The wall finish consists of a metal cladding with

ribs at about 200mm centres, (probably a Kliplok profile) which has replaced the original timber weatherboard siding. The skillion roof cantilevers over the platform with rafters and battens which are exposed. The building is windowless. The building is supported on a traditional bearer and joist framing system supported on brick piers.

Internal: While there is no ceiling lining in the waiting area, the enclosed room has a ceiling lining of T&G boarding. Walls in both spaces have been over clad with a low profile steel cladding (similar to Panelrib). The floor in the waiting area is the original timber boarding, while in the adjacent room it has been replaced with plywood. The original bench seat remains in the waiting area.

PLATFORM BUILDING- Platform 1 (c.1934)
External: This booking office building has been clad externally in the same manner as the waiting shed. The building is small, square in plan, and topped with a hipped roof with a projecting awning supported on brackets on the platform side where the ticket window is located. The roofing material is corrugated steel with the underside of the awning lined in timber boarding and with exposed rafter ends at the other eaves. There is a single timber double hung window on the external elevation and a single entry door faces the access stairs on the east.

Internal: This structure retains much of its original internal linings including the timber wall boarding, the hardboard ceiling, wall ventilators and timber floor (covered in carpet). The fixtures and fittings including a stainless steel basin are not original.

FOOTBRIDGE (1928)
The footbridge employs haunched beam construction, a common method of tapered cantilevers supported off platform trestles, with a shallow beam over the railway tracks. Both the concrete access stairs and the balustrades are later. On the northern side the steel platform trestles and access stairs are supported on concrete piers where the land slopes steeply down to Nelson Road.

PLATFORMS
Platform 1 (nd) has an asphalt surface, with a concrete edge supported on a flush concrete face retaining wall. Platform 2 (2009) has an asphalt surface with a concrete edge supported on a retaining wall consisting of precast horizontal planks spanning between concrete posts.

CANOPIES (c.2007)
A modern gabled corrugated roofed open canopy supported on four steel posts is located to provide shelter at the booking office on Platform 1.

ARCHAEOLOGICAL POTENTIAL
Based on the surviving documentation and the evidence on site it is unlikely there would be any potential archaeological remains at Yennora Railway Station.

All the built elements appear to be in good condition and well-maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- 1934: Waiting room and ladies toilet added to Platform 1
- 1955: Booking office on Platform 2 (now demolished)
- Early 1970s: Male and female toilet block on Platform 1*
- c.1995: Upgrading to footbridge*
- c.2007: Waiting shelter on Platform 2 and extensions to platforms
- 2009: Platform 2 reconstructed
- 2013: Station building repairs

Both the 1930s buildings on Platform 1 retain their external forms although they have been reclad in metal siding. The waiting shed has new internal wall finishes, but the timber floor remains, and the

closed room adjacent retains the original timber boarded ceiling. The booking office, other than being reclad externally, retains most of its internal finishes. The footbridge has a new concrete floor and balustrades and the original stairs have been replaced with new steel and concrete with new balustrades.

The station appears to have a moderate degree of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1927

The following history has been adapted from the NSW Office of Environment and Heritage, RailCorp Section 170 Heritage and Conservation Register listing sheet for 'Yennora Railway Station Group'.

After completion of the initial rail line from Sydney to Parramatta, work soon proceeded on the Main South line from Granville Junction to Goulburn. The first section from Granville to Liverpool was constructed quickly over easy terrain and was opened on 26 September 1856. Campbelltown was reached in 1858, and was officially opened on 17 May 1858. The line was duplicated in 1891. This line was constructed as a rural railway and had no suburban purpose until well into the twentieth century. Its stations served what were then rural settlements and only later were adapted as commuter stations.

It was reported in the Sydney Morning Herald in October 1927, that the new Yennora station, located between Guildford and Fairfield, had opened. Its original cost was 6,102 pounds. The construction of Yennora Station was the result of an agreement between local property owners, namely the McCredie family, and the Railway Commissioners. It was common practise for wealthy landowners to influence the location of railway stations either on their land or nearby as it facilitated land subdivisions and development. Subdividers and the industrialists benefited the most by the station at Yennora.

The railway line was financed by Mrs S. McCredie with the hope the station would 'open up' the area. Yennora remained semi-rural into the 1960s, however, this slowly changed as the evolved to comprise of a more industrial landscape. The establishment of industries in these areas constituted a major step in the decentralisation of Sydney. In 1969 at Yennora Station, the Yennora Wool Centre was built on the site of the old railway storage workshops.

A number of changes have been made to the station since its construction, however a number of timber station buildings some remain.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The heritage curtilage should be revised for the Cumberland LEP to match the RailCorp Section 170 Heritage and Conservation Register curtilage for the station; see item #4800282. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

Toongabbie Railway Station and Underbridge is of local heritage significance for its historic, aesthetic, social, scientific/research, rarity and representative values. The station provides evidence of the railway station redevelopment that took place during the quadruplication of the Main Western Line between Lidcombe and St Marys in 1946. The Greystanes Creek Underbridge has historic significance for its ability to demonstrate the expansion of the railways and the historical stages of railway development in Toongabbie. The station buildings are of aesthetic significance as good examples of mid-20th Century railway construction in an urban context, displaying distinctive elements of the Inter War Stripped Functionalist style. They are competently executed and display many typical stylistic elements of similar station buildings throughout New South Wales and in the western suburbs generally. They are of the same construction as those of the neighbouring stations Pendle Hill, Wentworthville and Westmead (demolished). This group of buildings shows effects of war time financial constraints.

The Toongabbie Underbridge Archaeological Site, located under the Greystanes Creek Underbridge, is of local significance for its historical and research values. The site has the ability to demonstrate the expansion of the railways and the historical stages of railway development in Toongabbie. The archaeological site is of research significance as it provides evidence of previous types of railway bridges used for creek crossings between 1860 and 1946.

Criteria Assessment	
a) Historic	Toongabbie Railway Station is of historical significance as one of several stations constructed as part of the quadruplication of the line from St Marys to Lidcombe in the 1940s. The underbridge and archaeological remains under the Greystanes Creek Underbridge have historical significance for their ability to demonstrate the expansion of the railways and the historical stages of railway development in Toongabbie.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Toongabbie Railway Station is of aesthetic significance as an example of mid-sized Inter-War Stripped Functionalist station buildings in an urban setting. The buildings are noted for their use of bonded brickwork, Art Deco influenced parapet detailing, strong horizontal planes and steel awnings. The archaeological remnants of previous bridges, together with the existing underbridge provide a visually interesting landscape.
d) Social	The place has the potential to contribute to the local community's sense of place and can provide a connection to the local community's past.
e) Scientific	Toongabbie Railway Station is of research significance for its ability to demonstrate design and construction techniques of the mid-20th century railway structures and for its ability to provide evidence of the use of Inter War Stripped Functionalist elements in a railway setting. The station buildings provide opportunities, together with Wentworthville, Pendle Hill and Seven Hills stations, to study and understand mid-20th century building techniques. The archaeological site has research significance in providing evidence of previous types of railway bridges used for creek crossings and opportunity for comparison between bridge construction techniques between 1860 and 1946.
f) Rarity	The archaeological remains of the former bridge structures are one of two early railway viaducts surveyed in the Holroyd Municipality, though the bridge's integrity is reduced due to refurbishment.
g) Representativeness	Toongabbie Railway Station is a representative example of a small, mid-20th century railway station that is designed in the Inter War

	Stripped Functionalist style in an urban context, similar to Pendle Hill and Wentworthville stations. The footbridge was identified as an item of moderate heritage significance in the comparative analysis from the 2016 'Railway Footbridges Heritage Conservation Strategy' as it demonstrates representative qualities as a steel beam structure supported on RSJ steel trestles. However, contemporary modifications have reduced the items representative qualities.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, RailCorp Section 170 Heritage and Conservation Register listing sheet for 'Toongabbie Railway Station Group, Underbridge & Archaeological Remains', dated 2008. As the description features a comprehensive physical description which matches the condition visible during the site inspection, no amendment has been made to the physical description.

BUILDINGS
Station Buildings, Platform 1/2, brick, type 13 (1943)
Station Buildings, Platform 3/4, brick, type 13 (1943)

STRUCTURES
2x Island Platforms, brick faced (1943)
Footbridge, steel beam with RSJ steel supports, stairs and ramps (1946)
Underbridge and Archaeological Remains (c1860, c1880, 1946, 2013)

STATION BUILDING PLATFORM 1/2 (1943)
External: The building on Platform 1/2 is larger than Platform 3/4 building and is a post war Functionalist style railway building. It is of face brick construction with low pitched gabled roof and brick parapets at each end with courses of recessed heeler bricks capped by a course of bullnosed bricks. The northern end of the building is defined by a curved masonry bay with a single door. Centrally located on each parapet is an Art Deco style projecting vertical masonry fin constructed of heeler bricks in a contrasting colour. The parapets step down on each side from the fin. The roof is clad with Colorbond, which extends as an awning on all four sides of the building. The awning on the southern end, which provides shelter to passengers purchasing tickets from the ticket window and the machine, is supported by two rectangular brick columns with curved corners. On Platform 1/ 2, one ticket window remains in use while the other is bricked up. Steel framed windows with three horizontal hopper panels (central panel fixed) are vertically proportioned and placed regularly on both platform elevations. A contemporary canopy connects the building from the underside of the original awning to the stairs and footbridge.

Internal: Internally the building has a linear floor layout with a series of rooms in various sizes including combined former booking/parcels office (now booking office and staff area) with storeroom, general waiting room, ladies room and toilets, men's toilets with a store room in the curved bay. The doors are secured by metal grill gates while the windows are covered with security mesh. All of the original interior fit-out has been removed.

STATION BUILDING PLATFORM 3/4 (1943)
External: The station building on Platform 3/4 is approximately half the size of the Platform 1/2 building featuring the same detailing and architectural style with the exception of the curved bay on one end. It is of face brick construction with low pitched gabled roof and brick parapets at each end with courses of recessed heeler bricks capped by a course of bullnosed bricks. Centrally located on each parapet is an Art Deco style projecting vertical masonry fin constructed of heeler bricks in a contrasting colour. The parapets step down on each side from the fin. The roof is clad with Colorbond which extends as an awning on all four sides of the building. The awning on the southern end, which provides shelter to passengers purchasing tickets from the ticket machine, is supported by two rectangular brick columns with curved corners. The building has one ticket window, unlike Pendle Hill (and formerly Westmead)

which had two. Early timber doors are extant. The standard steel framed windows with three horizontal hopper panels (central panel fixed) are vertically proportioned and placed regularly on both platform elevations between the solid timber doors. A contemporary canopy connects the building from the underside of the original awning to the stairs and footbridge.

Internal: Internally the building has a linear floor layout consisting of a former booking office and a waiting room. The doors are secured by metal grill gates while the windows are covered by security mesh. The former booking office is currently used for storage purposes. The internal finishes are the same as the other platform building.

PLATFORMS (1943)
Both island platforms have brick faces with concrete deck and asphalt surfaces. Some sections are steel rail post and concrete panel cast in situ. Modern aluminium palisade fencing, timber bench seating, lighting and signage are located on both of the platforms.

FOOTBRIDGE (1946)
The footbridge is a steel beam structure supported on RSJ steel trestles with concrete deck over the platforms and main lines with stairs to each of the platforms, and a ramp to street level on each side. It is of a simple structure with no ornamentation representing economic policies of the time. The footbridge and associated stairs and ramps are covered with corrugated metal awnings.
The width of the footbridge was extended for the construction of the new concourse, c.2016. The construction of the new concourse saw the replacement of a later concrete ramp and reinstatement of similar handrails to the originals removed.

ARCHAEOLOGY (1946)
The visible areas of the underbridge consists of a 1946 four rail line crossing over Greystanes Creek with wooden sleepers over riveted steel girder with steel box and Pratt truss transoms supported on 1946 dry-pressed brick foundations. Underneath and at the edges of this underbridge are the piers of two previous bridges including top sections of c1860 sandstone aggregate piers and at the edges remnants of c1880 concrete pylons with blue metal aggregate. The present bridge replaced the c1880 underbridge with concrete pylons. The water level and weed growth obscures much of the view of the remains. In 2013 the transom top underbridge was converted to ballast top. The timber footings from remain. Due to the overgrown nature of the creek area, condition of the archaeological remains under the railway viaduct could not be identified.

The station is in a fair condition and appears to be well maintained.

Condition	Good	**Fair**	Poor

Alterations and Additions

The following modifications have been quoted from the NSW Office of Environment and Heritage, RailCorp Section 170 Heritage and Conservation Register listing sheet for 'Toongabbie Railway Station Group, Underbridge & Archaeological Remains'.

- 1947 - Unspecified improvements to station building. Subsequent modifications not known.
- 1997 - Modifications to booking office.
- 1946 - Bridges supporting the two tracks crossed Greystanes Creek near Portico Parade demolished and replaced.
- N.d - Internal modifications to station building.
- 2013 - Underbridge converted from transom top to ballast top.
- 2016 - Kiosk (c1954) demolished.
- N.d – TAP Upgrade, new lifts, stairs and canopies

The station buildings and their setting have retained a moderate degree of integrity externally due to modern additions to the site. The TAP Upgrade to the improve station accessibility has modified the ramps and stairs associated with the footbridge, although the footbridge has a reduced integrity grading, the station precinct collectively retains a moderate level of integrity.

The railway refurbished underbridge over Greystanes Creek has a low level of integrity though the timber footing remains.

The archaeological potential for the remains below the underbridge is likely to be high as there is no evidence that suggests they have been removed, rather than simply overgrown.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1860 (railway line),1946 (station buildings) and 1946 (underbridge)

The following history has been quoted from the NSW Office of Environment and Heritage, RailCorp Section 170 Heritage and Conservation Register listing sheet for 'Toongabbie Railway Station Group, Underbridge & Archaeological Remains', dated 2008.

Toongabbie was originally the name of an extension to the Rose Hill farm, which opened in 1791, being named New Grounds and later Toongab-be and it was the second white settled area to be given an Aboriginal name. The word may have meant the junction of two creeks, or meeting of the waters or near the water. The railway line opened through Toongabbie in 1860 and was duplicated in 1886 with the station opening in 1880.

On 4 October 1901 a junction was laid in for siding to Emu Gravel & Prospect Company's quarry. The line to the quarry left the main line just before the station. The line then proceeded slightly west of Girraween Road and across Teague Street east of Toongabbie Road. The line crossed the latter road just past the northern end of Okalahoma Avenue, west of Toongabbie Road, then across the Great Western Highway and along Quarry Road to the quarry site, situated east of the Prospect Reservoir wall.

In 1913, the platforms were reconstructed and in 1920 a new station building was constructed in concrete. Quadruplication of the line occurred between Lidcombe and St Marys in 1946. The original station buildings were demolished, and present buildings including a footbridge formed by steel beams were erected. The use of ramps instead of footways was a common feature of footbridges between 1930 and 1960. They were opened on 30 October 1946.

Bridges supporting the two tracks crossed Greystanes Creek near Portico Parade were also demolished and replaced in 1946 in conjunction with quadruplication. The support piers of the earlier bridges are extant beneath the deck of the 1946 bridges. The present bridge replaced one with concrete pylons with blue metal aggregate. The initial bridge had wooden piers set in sandstone aggregate concrete. Their form is the same as hundreds of other bridges.

A pedestrian bridge was also built over the railway line at McCoy Street north of the station and Greystones Creek in c1946. It was replaced with a new structure c1996.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	X	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Any proposed ground disturbance work should be assessed by a qualified historical archaeologist for archaeological potential and heritage impact mitigation.
- Items I102, I104 and A9 should be amalgamated to form one item, consistent with the RailCorp Section 170 State Agency Heritage and Conservation Register.
- The heritage curtilage for the Cumberland LEP should be revised to match the RailCorp Section 170 Heritage and Conservation Register curtilage for the station; see item #4800268 and plan below. This curtilage would retain the subway. Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Section 170 Heritage and Conservation Register curtilage (Source: RailCorp Section 170 Heritage and Conservation Register curtilage for 'Toongabbie Railway Station Group, Underbridge & Archaeological Remains').

Revised curtilage recommended – refer below

Statement of Significance

The following statement of significance has been adapted from GML Heritage (2016) *Rookwood - Conservation Management Plan*:

Rookwood Cemetery and Necropolis is a significant cultural landscape at the local and State level for its historic, associative, aesthetic, social and scientific heritage values. The cemetery is the largest cemetery in Australia and one of the largest in the world, covering an area of 280 hectares with approximately 1,000,000 epitaphs recorded on 600,000 graves and 200,000 crematoria niches. The site contains significant buildings and structures that date from all of Rookwood's history. They have historical significance for being representative of the growth and development of the Necropolis; aesthetic significance as landmarks or important examples of architecture in their own right, and are associated with cultural landscape areas that reflects the spiritual significance of the place to the different faith communities represented there.

The original 200-acre layout followed a gardenesque design, which was continued in the layout of individual sections is historically and socially significant as emblematic features of a nineteenth-century commemorative garden landscape. The remainder of the cemetery includes a great variety of commemorative landscapes and structures illustrating an evolution of visual languages of death and mourning. It is a major natural, archaeological and genealogical resource, containing unique records of early colonial Sydney such as monuments transplanted from pre-existing burial grounds. It contains innovative engineering, including a system of canals and ponds, and landforms and historical archaeology that clearly reveal the original railway link to the city and changing patterns of use, growth and occupation.

The area outside the SHR curtilage also contains cultural landscapes and memorials, which have been created and sustained by a host of different ethnic and religious communities, and is representative of the exceptional cultural diversity of Sydney. Rookwood is a tangible manifestation of the social history of Sydney, documenting the cultural and religious diversity of Australian communities since 1867 to present-day. It is one of Sydney's largest public open spaces and a major resource in terms of biodiversity.

Criteria Assessment	
a) Historic	Rookwood is one of the largest burial grounds in the world and contains the largest 19th century cemetery in Australia. The scale of design, gardenesque layout, high quality and diversity of structures, monuments and details of the oldest sections of Rookwood represent a rare surviving example of mid to late 19th century ideals for a major public cemetery.
b) Associative	Rookwood is the known burial place of almost a million citizens, including scores of noteworthy individuals of importance to the growth and development of the city and suburbs of Sydney and NSW. Rookwood has strong associations with the diverse religious, social and ethnic communities of Greater Sydney and the presence, growth and impact of these communities on the society and culture of NSW.
c) Aesthetic/Technical	Many of the monuments are of outstanding aesthetic quality. Rookwood is so large that vistas can be found within it that are completely contained within the cemetery landscape, providing an aesthetic retreat for the senses of the viewer.
d) Social	Rookwood is a diverse cultural landscape that has provided a setting for burial and memorial traditions of many different faiths and denominations. Rookwood is a tangible manifestation of the social history of Sydney, documenting the cultural and religious diversity of Australian communities since 1867. Prominent individuals and families are recorded in memorials containing significant biographical information. The progressive layering, development and diversity of styles of memorialisation document the conceptual move away from the nineteenth century perception of death and dying to the more rationalist view prevailing at the present time. As a social document and genealogical resource Rookwood Necropolis is unique in its scale and comprehensiveness.
e) Scientific	The monumental masonry and other types of craftsmanship, including cast and wrought ironwork are fine examples of craft processes and reflect social attitudes to death and fashions in funerary ornamentation since 1867. The Necropolis provides a habitat for two rare and endangered plant species. As an extensively used internment site, Rookwood Necropolis has exceptional research potential. The site's historical archaeological resource has the potential to answer a wide range of research questions that would provide insight into the treatment of life and death by a cross-section of cultural groups in the greater Sydney region from the mid-nineteenth century through to the present.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Rookwood Cemetery and Necropolis' dated 2015. As the description features a comprehensive physical description, no amendment has been made to the physical description.

Rookwood Necropolis is the largest cemetery in Australia, the Southern Hemisphere (Jacquet, 2015, 8) and one of the largest in the world, having an area of 288 hectares and approximately 1,000,000 epitaphs recorded on 600,000 graves and 200,000 crematoria niches. It is a multi-denominational cemetery dating from 1867 onwards, with landscaped layout with a focus of a circular hub or roadway.

It is a suburb in its own right, perched on ridges 15km west of the Sydney CBD (ibid, 2015, 8).

Early Design
The original 200 acre layout is located in the north-western corner of the site. The road pattern radiates from a central hub and two different approaches to design are exemplified. The Wesleyan, Presbyterian, Independent, General and Catholic Cemeteries uses a curvilinear layout whereas the Anglican Cemetery uses a grid layout. The original designers followed a garden design, which was continued in the layout of individual sections.

Located in the Church of England No.1 Cemetery is an extensive system of serpentine drains and ponds The open drain is brick-lined and approximately 1800mm deep. Extensive shelters, urns, bridges, fountains, and gardens ornament the serpentine drains. The paths, gardens and carriageways throughout the older sections are formed between finely detailed brick gutters which remain largely intact.

The Crematorium
The grounds are dominated by the Spanish Mission style building which is laid out in cruciform pattern to accommodate three separate chapels. The earlier parts of the garden are enclosed by a rendered brick wall with tiles capping that gives it an attractive unified appearance as viewed from the rest of the cemetery. Within the wall, formal gardens are laid out in an axial pattern using brick and stone to negotiate changes of levels. Ponds mark the intersection of the main pathways. The major axes terminate in wrought iron gates which afford attractive views over the rest of the cemetery.

Plants and Design
What remains on the site is an accretion of introduced and remnant native plants. Some of the introduced planting dates from the original layout of the cemetery. These include Araucaria pines (A.cunninghamii - hoop pine; A.bidwillii - Bunya pine; A.columnaris - Cook's pine; A.heterophylla - Norfolk Island pine), Magnolia grandiflora - evergreen magnolia / bull bay and Pinus spp. trees and Phoenix (P.canariensis - Canary Island date palms); P.dactylifera - date palm); P.senegalensis - clumping date) palms and Washingtonia robusta (Californian desert fan) palms. These have been planted in an ordered goemetric grid which is transected by gardenesque curvilinear roads in turn bordered by avenue planting. Within this layout are pavilions, fountains and shelters that are important elements in the landscape.

The more recent cemetery areas in the south and eastern portions of the site revert to informal arrangements of native trees and shrubs. The cemetery provides a habitat for two rare and endangered plant (shrub) species, Acacia pubescens and Dillwynia parvifolia. It also contains an unusual ecotone where a pocket of Sydney sandstone associated vegetation occurs in the midst of predominantly Wianamatta shale associated vegetation. It also supports populations of 19 species of frogs and reptiles and a large number of bird species. (CALM) (National Trust 1988)

Archaeological potential
The main features of archaeological significance include:
- monumental masonry;
- former railway siding and site of Mortuary Station, sites of 3 other Stations;
- cast iron section markers on Necropolis Circuit;

- drainage channels, roads, bridges, paths;
- other buildings, works and sites. (Schwager Brooks et al, 1996).

In addition to above, the follow areas are located outside of the SHR listed area. This text has been quoted from the GML Heritage (2016) *Rookwood - Conservation Management Plan*:

Moving east from Necropolis Drive towards the Strathfield Gates, Rookwood is made up of the following areas:

Northeastern Area

- *Anglican Unit 4, which continues the characteristics and patterns of Old Anglican No. 1. Its grid arrangement is punctuated by circular nodal features sometimes occupied by rest houses, these becoming smaller and less decorative moving further east. This area also contains long axial views towards Necropolis Drive, and towards the Anglican buildings and chapel along Hawthorne Avenue.*
- *Anglican Unit 5, which is predominantly open in character. It has 'slab and desk' burials dating from 1940–1970 and is also the site of:*
    - *Mortuary Station 4;*
    - *the 1940's US War Cemetery and former office;*
    - *the merchant navy walled burial area; and*
    - *the RGCRT monuments and maintenance staff shed, which is found at the base of this*
    - *area.*
- *Anglican, Russian/Serbian Orthodox Unit 6, which is visible from Necropolis Drive adjacent to the entry gates and is characterised by mid-twentieth-century slab and desk burials in gridded formation.*
- *Jewish (Unit 14 A, B and C), which has a finer grain enclosed character necessitated by the surrounding circulation network and features a .variety of highly significant early and twentieth century Jewish burials and an intimate war memorial*

Southwestern Area

Moving south from Necropolis Circuit out of the SHR area and into the southwestern portion of the site there is a distinct transition of cemetery character as burials and layouts become notably twentieth century in style and form.

The main precincts of the southwestern portion of the site are:

- *Unit 10 Independent, which retains distinct characteristics in its various areas, including a gentle modified grid and original circular gardenesque layouts, but also marks a transitional area of Rookwood as it opens up in the southern area of the unit, leading into the dominant twentieth century character of the area beyond.*
- *Unit 11 Independent and Catholic, which is a low-rise area dominated by burials dating from the 1940s–1960s in slab/desk form. It also contains a biodiversity pocket of protected vegetation at its centre up to where it borders with Independent Unit 10 (Cooks River Castlereagh Ironbark Forest).*
- *Unit 13 and 13C Independent, which occupies the centre of Rookwood and contains a vast variety of monument typologies from many ethnicities including Russian Orthodox, Muslim, Ukrainian and Greek Orthodox originating from throughout the twentieth-century.*
- *Unit 9 Catholic No 2, which is characterised by dense twentieth-century burial patterns laid out in a north to south and east to west grid pattern within the main road alignment. A significant Canary Island palm avenue is located along Freeman Street and the Southern Canal.*
- *Unit 16 Lutheran, which adopts a rectilinear mid-twentieth century burial pattern within which intricate planting schemes create 'outdoor rooms', with a focus around a central tree-lined avenue leading to the World War I memorial.*
- *Unit 17 Catholic and Lutheran, which is punctuated by the Catholic Crown of Thorns shrine built in late-twentieth century Ecclesiastical style. It includes a semicircular lawn burial area, the Sacred Heart Chapel, the Catholic Crematorium and the former site of Mortuary Station 3.*
- *Unit 18 Catholic (A, B and C), which forms three subsections that dominate the southern end of Rookwood and contains predominantly post-1940 burials and memorials. These are laid out*

in a skewed grid form of northeast and southeast alignment, with rhomboid shapes between intersections that are legible when viewed from on high elsewhere in the site.

Southeastern Area

Moving back up north from the Catholic administrative hub and large southern Catholic sections, the southeastern portion of Rookwood splits again into a wide variety of denominational sections and burial styles, branching out from the central spine of Memorial Avenue and the notable activity hub made up by Rookwood Crematorium and Gardens. This portion of the site is made up of:

- *Unit 15 Crematorium and Gardens, which is characterised by the intricate landscape pattern of the 1930s-era walled and sunken gardens filled with ornamental shrubs, clipped bushes and flowering plant forms that surround the Interwar Mediterranean style crematorium building (the oldest of its kind in Australia).*
- *Unit 19 Catholic, which is directly south of Memorial Avenue and is one of the newest areas of burial at Rookwood being generally open and low-rise with uniform lawn burials and looping circulation routes delineated by recent planting schemes.*
- *Unit 20 Anglican (A, B and C), which is predominately modern in character and form, contains subsets of Chinese, Serbian and Muslim burials displaying a cross-section of recent monumental trends.*
- *Unit 21 Sydney War Cemetery and NSW Garden of Remembrance, which is defined by an entrance off Memorial Avenue via a sandstone-clad loggia with pointed arch entryways and uniform white marble headstones, set in a manicured lawn landscape.*
- *Unit 22 Anglican, one of the most recent burial areas defined by a cross-section of recent monumental trends in a gridded layout.*
- *Unit 23 Muslim, which is defined by medium densities of burials oriented to Mecca (northwest) and also contains the Muslim office.*
- *Unit 24, known as Lot 10, which is a narrow corridor of land at the southern extremity of Rookwood half of which is Vegetation Conservation Area whilst the other half has been allocated for new burials which have commenced at the time of writing.*

Appended to the listing sheet for this item are two maps prepared by GML Heritage (2016) for *Rookwood- Conservation Management Plan* showing significant cultural landscapes and heritage items, and an assessment of archaeological potential for the entirety of Rookwood Cemetery.

Condition	Good	**Fair**	Poor

Alterations and Additions

The following alterations and additions have been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Rookwood Cemetery and Necropolis' (2015).

- 1862 - Government purchases 200 acres near Haslem's Creek station (later Lidcombe) (in north west of current Necropolis lands). Originally six denominations: Roman Catholic, Anglican, Wesleyan, Presbyterian, Jews and Independent (Schwager Brooks et al, 1996)
- 1866 - Entire cemetery enclosed, access roads built and denominational subsections cleared.
- 1864 - branch railway line to cemetery handed over - first record of funeral train 4/1864
- 1867 - Necropolis first dedicated (Schwager Brooks & Partners, 19..), Necropolis Act and burials commenced, railway line and siding provided, and opens. 7th April 1868 - All land dedicated as cemetery.
- 1869 Mortuary Station number one opens.
- 1874-1882 - Serpentine drain constructed in Church of England Section.
- 1878-9 Necropolis enlarged with purchase of additional 577 acres to accomodate demand for burial plots (Schwager Brooks et al, 1996)
- 1869 - two sandstone receiving houses (for funeral trains) built, one at Regent St., Redfern, one in the Necropolis
- 1879 - Government purchases 577 acres of adjoining land.
- 1890 - St Michael the Archangel Chapel built.
- 1897 - Railway branch line extended.

- 1901 - Railway branch line extended with (now) four cemetery stations.
- 1908 - Railway branch line extended
- 1923 - Crematorium opens.
- 1948 - Railway branch line closes - Lidcombe station services Mortuary trains
- 1952 - Railway line pulled up and stations sold.
- 1957 - No 1 Mortuary Railway Station removed (to become the North Ainslie Anglican Church, Canberra, ACT)
- 1980s - construction of Railway Street on the Necropolis and Cemetery's northern side alongside the main western railway.
  1990s - new East Street main entrance constructed
- 2006 9 mature maritime pines (Pinus pinaster) removed, Independent Cemetery near Haslem's Drive, West. Also 28 matured (1989) she oak (Casuarina sp.) trees removed between southern wall of NSW Garden of Remembrance and AWG Boundary with Section 20 of the Anglican Cemetery (JCNTrustees, meeting 10-01, Executive Manager's Report, 5/7/06).

This area of the cemetery has high heritage integrity, as shown by the landscape and intactness of historic elements.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1862

The following history is comprehensive and has therefore been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Rookwood Cemetery and Necropolis', dated 2015. This includes a brief summary of the history of the entire site.

Prior to European settlement, the traditional owners of the area now occupied by Rookwood were the Wangal people, a Darug language-speaking 'clan' group. The Wangal group original extended from Sydney Cove westerly to Parramatta (POM, 23). Aboriginal occupation of this region dates back well into the Pleistocene period (over 10,000 years ago) (Jacquet, 2015, 27).

The Haslem Creek Cemetery, as Rookwood was originally known, was the result of urban encroachment. By the 1840s, only half a century after the arrival of the First Fleet, Sydney's third cemetery at Devonshire Street (now the site of Central Station and railway yards) was facing the same fate as its predecessors: it was running out of space and suffering from urbanisation. Land values were increasing, and for a young city there were better uses for the space it occupied (POM, 23).

By the mid-1850s the need for a new cemetery was becoming urgent. In response the NSW Government embarked on a great Victorian enterprise - mirrored only 10 years earlier at Brookwood outside London - the search for a large-enough parcel of land to bury Sydney's dead in perpetuity (POM, 23). In 1860 the Government advertised that it wanted to purchase land along the railway for a cemetery. After a number of site inspections the Government had narrowed its choice to two possible sites, the Wentworth's Homebush Estate and the Hyde Park Estate.

On the 18th September 1862 the Government of New South Wales purchased 200 acres of the Hyde Park Estate owned by Mr Edward Cohen. During the same month Surveyor Heady sketched the site for the cemetery. By November 1862 Charles Moore, Director of the Botanical Gardens had begun supervising the fencing of the land. In 1863 the Lands Department invited the major denominations to nominate trustees for portions of the cemetery. The area was divided among the denominations according to their proportion in the population in the 1861 census. Roman Catholic, Church of England, Independent (Congregational), Wesleyan, Presbyterian and Jews were invited to name their trustees. Within the area allocated, preparation of the cemetery grounds was to be at the expense of each denomination. At this time the area was known as Haslem's Creek Necropolis.

In June 1864 Colonial Architect, James Barnet, submitted plans for the construction of a lodge for a manager and this was constructed by mid 1865. In December 1865 the Government surveyor, John Armstrong, surveyed the route for the railway into the cemetery and it was opened in April 1867. Rookwood was unusual internationally in having two specially designed 'necropolis' railway stations to cater for funerals and visitors - one at Sydney (Regent Street), which still survives and one in the cemetery, since dismantled and re-erected as a church in Ainslie, Canberra.

Management of the Haslem's Creek Necropolis was resolved by the passing of the Necropolis Act of 1867, which specified that the internal arrangements and ornamentation of each section of the cemetery were to be managed by the nominated trusts. Burials commenced in January 1867 under the authority of this Act.

David Jones, (b.1793) founder of the well-known department store, died in 1873 and was buried at Rookwood.

Between 1874 and 1882 the serpentine drain was constructed in the Church of England No.1 cemetery.

More ground was soon needed so in July 1879 the government purchased 577 acres of adjoining land to the south and east. The new trust areas were gazetted in February 1889. As a result of the cemetery expansion, the railway was extended in 1897 and again in 1908.

In 1881 bushfire caused extensive damage to property at Rookwood. (Daily Telegraph archive)

By 1890 one of the most impressive buildings was the St Michael the Archangel Chapel built by Sims and Devitt.

A major change to the Necropolis was the introduction of facilities for cremation. After ten years of lobbying against public opposition - not just to a crematorium in Rookwood but to the very idea of creation itself (GML, 2017, 23).

The scale of loss in World War 1 had been attributed as contributing to a decline in the elaborate memorialisation and rituals that had been a feature of Victorian-era cemeteries like Rookwood, while the regimented rows of graves adopted by the Commonwealth War Graves Commission for the vast war cemeteries in Europe also promoted a simpler style of graves in civil ceremonies in Australia. In this atmosphere, the NSW Cremation Co., Ltd., formed in 1915, was able to convince the government that as part of amendments to the Necropolis Act in 1923, four acres were set aside at Rookwood for a crematorium. Designed by architect F. l'Anson Bloomfield, the crematorium was to include a Spanish mission or Mediterranean style building, with red-tiled roof and white-rendered walls. The chimney was disguised as a belltower, with chapel, and columbarium inside and an entrance loggia opening into a garden at the rear. It opened in 1925 and was the first crematorium in Australia. Bloomfield had detailed designs for the building and landscaped gardens, which were implemented as money became available. In 1926 the chapel, known as the East Chapel, was completed, devoid of overt religious symbolism so it would be appropriate for all denominations. In the first year of operation there were 122 cremations. By 1929 there were 500. A sale of shares in the company in 1928 and 1929 raised funds to enable completion of much of the design, with the columbarium, furnace room extended (including two new furnaces), and completion of the Garden of Remembrance. Such was its popularity a second chapel was added in 1934, with a special AIF Memorial columbarium unveiled in 1936. This was reserved for returned servicemen of WW2 who had died of wounds or illness since their return (ibid, 2017, 23).

In 1943 a section on the cemetery's western boundary was set aside to serve as a war cemetery, maintained by the Army Graves registration unit. At first graves were marked by simple wooden crosses, but after the war these were replaced with standard marble headstones, representing equality in death of all soldiers that the Imperial War Graves Commission, later the Commonwealth War Graves Commission, had set forth on their establishment in 1918. Rookwood's war cemetery was primarily the resting place for servicemen and women who died at nearby Concord Military hospital from wounds received in combat or from illness. In total 732 burials from WW2 were carried out here. Rookwood

was used as temporary cemetery for American service personnel, with 466 buried there during WW2 years. Their remains were removed to America from Rookwood in 1947 (ibid, 2017, 24).

The years after WW2 saw a change in burial practice in Australia away from the elaborate memorialisation of the Victorian and Edwardian eras, with large imposing monuments in the older sections of Rookwood. A new style of low, unpretentious monument became prevalent throughout newer sections. From the 1920s on, these graves, known as 'slab and desk' (with details of the deceased inscribed on a low headstone) allowed long lines of sight over an ordered, uncluttered landscape. From the 1950s, as well as this style of monuments, new lawn cemetery areas were being used at Rookwood, further distancing the new styles from those of the 19th century (ibid, 2017, 25).

With the advent of motor cars and buses the cemetery railway closed in 1948 and the line and station buildings were sold in 1952 (CALM 1993) (National Trust of Australia (NSW), 1988).

New migrant communities began to be buried together, much as denominational groups had from the beginning. Russian and Greek Orthodox, Croatians, Vietnamese and Muslim sections all appeared, reflecting ever-increasing diversity of Sydney's population in the second half of the 20th century. A growing Chinese community expanded the Chinese section away from the small area set aside in the 1870s with small, austere headstones, to larger monuments often in red or black granite and marble. Many of the recent graves from the 1980s have also appropriated the Italian custom of inserting a photograph of the deceased into the headstone, showing a divergence of cultural practices in the cemetery landscape. The three-barred crosses of the Orthodox faith and extensive garden plantings on Muslim graves also add distinctive character to these sections (ibid, 2017, 26).

In 1987 the entire cemetery was enclosed behind secure fencing for the first time, which led to a drop off in illegal dumping in the grounds. The same year a second Necropolis Amendment Act (1987) saw the formation of a Joint Committee, with representatives of the state government, the National Trust of Australia (NSW), the Heritage Council of NSW, the crematorium and members of the seven trusts to manage the upkeep, maintenance and heritage values of the cemetery. One of their first tasks was commissioning a plan of management for the Necropolis to assess its heritage significance and begin coordinated planning for protection and growth of the site. The growing awareness of the cemetery as a site of heritage value saw it classified by the National Trust of Australia (NSW) in 1981. Formal government recognition followed in 1989 with a Permanent Conservation Order gazetted under the NSW Heritage Act by the Heritage Council of NSW, upgraded in 1999 to State Heritage Register listing (ibid, 2017 27-28).

In 1993 the Friends of Rookwood was formed by concerned and interested community members keen to help restore and preserve the Necropolis. They set about raising funds to conserve important monuments, restoring landscape and garden areas and promoting the cemetery to a wider public. By instigating a series of walking tours through the cemetery, the Friends highlighted the site's importance via the social history of its inhabitants and raised the profile of Rookwood as a place to visit and contemplate, as had been the idea behind its earliest incarnation as a gardenesque public landscape (ibid, 2017, 28).

In 1993 the East Street new entry/gates were built and primary road implementation - Necropolis Drive and Cohen Avenue were upgraded with avenue tree plantings. That year the indigenous vegetation of the cemetery was surveyed, and identified as significant (POM, 15).

In 1996 a boundary planting program commenced and the road hierarchy was confirmed - Hawthorne Avenue (part) was upgraded including avenue tree plantings (POM, 15).

In 1998 the Catholic Trust Mausoleum opened. In 1999 the Independent Trust Mausoleum opened and the Flora & Fauna Survey of the cemetery was updated. From 1999-2001 the Serpentine Drain was restored in the No. 1 Anglican cemetery. An interpretive structure was installed at Mortuary Station No. 1, with grant funding. Also in 2001 Memorial Avenue (part) Primary Road was upgraded including avenue tree plantings. In 2002 cemetery identified Vegetation Conservation Areas were ground-truthed - and a Property Management Plan (for vegetation) was adopted. Bush regeneration works continued (POM, 15).

In 2006 the Quong Sin Tong monument was restored. In 2007 part of Necropolis Drive was upgraded including avenue tree plantings. Also that year the Catholic Trust Crematorium started operating. In 2008 the Catholic Trust John Paul 11 Cryp0t on Sheehy Avenue was completed. In 2009 Sheehy Avenue was upgraded. That year the Jewish Trust commenced restoration of No.1 Jewish cemetery areas, Reflections Cafe and flower shop opened near the Strathfield entry gate. In 2010 Lot 10 construction commenced and in 2011 crypts were completed in the Independent Trust area and the Jewish Trust office opened (POM, 15).

The Necropolis' management has also evolved. In 2012 the Rookwood General Cemeteries Reserve Trust (RGCRT) was formed, amalgamating the former Anglican, General, Independent, Jewish and Muslim Trusts into one management unit, with the Catholic Metropolitan Cemeteries Trust (CMCT) managing the Catholic sections and new Catholic crematoria. Between them these two Trusts manage over 90 different religious and cultural groups that use the cemetery grounds (ibid, 2017, 28).

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- A comparison between the Auburn LEP heritage curtilage (A00718) and the curtilage identified in the GML Heritage "Rookwood Conservation Management Plan" shows that the Auburn LEP curtilage excludes a small section of the cemetery to the south. Refer below for the study area shown in the CMP. The heritage curtilage may need to be extended for the Cumberland LEP. As this includes new land not previously covered by an LEP, this will form part of the Stage 2 assessment of Cumberland Heritage Study.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Note: this current location is incorrect. Refer to recommendations for further information.

Statement of Significance

The site may have local significance for its historic and scientific heritage values. The site may contain features that relate to the property of Joseph Morley, who had one of the first land grants in the area. If present, these features may give evidence relating to early colonial life and agriculture.

Criteria Assessment	
a) Historic	Remains would may relate to the ownership of Joseph Morley and early agriculture and colonial life in the area.
b) Associative	Remains may relate to Joseph Morley, one of the first farmers and had one of the first land grants on Prospect Hill
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item may have the potential to yield information about Joseph Morley and early colonial life and agriculture.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item is previously described to have a copse of trees that may relate to a historic garden/landscape setting. There may be other evidence from a shed and residence that gives evidence towards early agricultural life. However, at present, based on aerial photography, none of these historic archaeological features are visible and have likely to have been impacted by more recent infrastructure (presently, a canal and dam).

Condition	Good	Fair	**Poor**

Alterations and Additions

- N/A. No integrity rating has been provided considering the little physical evidence available as part of this listing sheet update.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

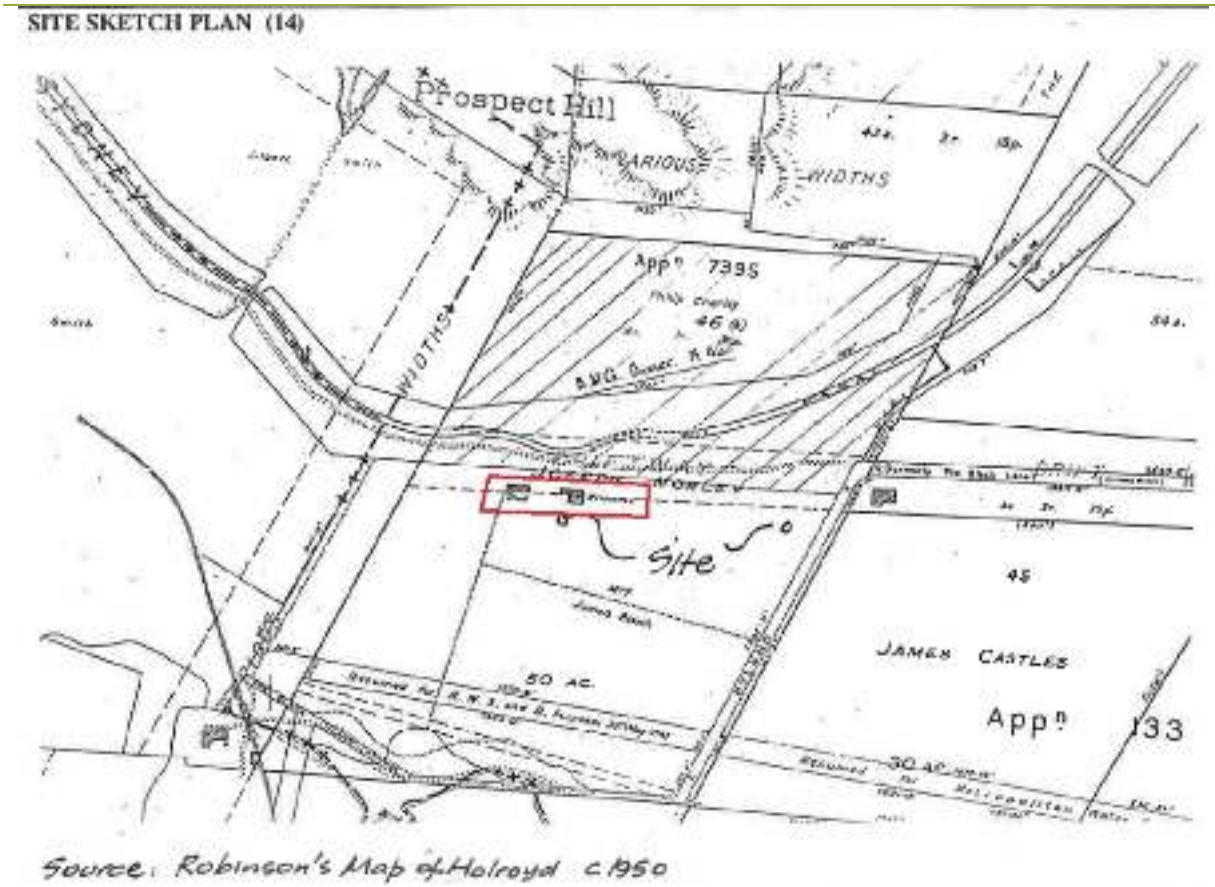
Construction years	1880 - 1900

Greystanes began as a rural suburb in the 1850s and remained so until the 1880s. The suburb was occupied mainly by large estates designed as rural retreats for gentlemen farmers, including Charles Whalan and Nelson Lawson. Greystanes is named after the home of Nelson Lawson, son of William Lawson who built 'Greystanes Estate' on the western side of Prospect Hill.

Grazing was a major area of land use in Greystanes, but some owners diversified into orchards and vineyards. It remained sparsely populated until the twentieth century and only few clusters of settlement developed around industrial sites, new railway stations and on the Western Road.

Greystanes was recognised as a suburb in 1922. Prior to World War II, there was a predominately British and Irish community in the area, however, after 1912 there were European migrants who came to the area, particularly Maltese and Italians. Gozo street in Greystanes was named after the second largest Island in Malta and recognises the Maltese influence in the area. As early as the 1930s, Greystanes was dubbed 'Little Malta' and many of the migrants to the area. Greystanes has remained predominately residential suburb with its first shopping centre opening in September 1970 on a 6-acre site at the junction Merrylands and Braeside Roads.

With respect to the subject site, Joseph Morley's property appears in the 1897 NSW Waterboard map, and a "residence and shed" is shown in the 1950s Robinsons Map of Holroyd markup.



Recommendations

Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	

2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The LEP heritage curtilage for the item should be revised as it is currently indicating the wrong property. It is currently identified as being in the same location as another local heritage item - former Holroyd LEP I27 at 2R Hyland Road, Greystanes. Refer to the plan below for an indication of the correct area for this item i.e. across the road from item I27. As outlined in the two dot points below, further archaeological and landscape assessment is required to ascertain the exact curtilage.
- The residence and shed, which are the significant features that this listing relates to, appear on a 1950s Robinsons Map of Holroyd. Further archaeological investigation should be undertaken to confirm whether this material is intact.
- The remnant landscaping is also a significant feature according to this listing. Additional physical investigation should be undertaken to confirm if this feature is still present, as it appears not to be in current aerial photography.
- The revision of this curtilage and update of this listing sheet will form part of the Stage 2 assessment of the Cumberland LGA Heritage Study, as it will include land not previously covered by an LEP.

Reproduced in the listing sheet for item former Holroyd LEP item A1 (Robinsons Map of Holroyd, c. 1950).

Curtilage Map

Revised Curtilage recommended - refer below.

Statement of Significance

The former Clyde Railway Marshalling Yards is historically significant as part of the progress and expansion of the NSW Railway System, reflecting the growing needs of the Sydney community and industry around the turn of the century, and the need to provide and increase supporting railway facilities, workshops and marshalling yards with the expansion of the railway system at this time. It was one of a few large suburban workshops in NSW and specialised in wagon repairs.

While only remnants of the yards remain, they are able to provide some indication of the historic operations of the site. Collectively the remaining disused sidings, signal box, platform remains, former wheel turning shop and war memorial provide insight into the former yard layout and historical development of the place, though their context and ability to be read cohesively by physical remains alone is diminished by significant redevelopment over the site. In particular the remaining disused sidings and the former wheel turning shop are early remains dating from the c.1920s development of the site.

The Yard also demonstrate the close relationship between the NSW Railways and local industries, evidenced by the existing remnant sidings and branch lines that support nearby industrial sites, many of which were associated with railway track and rollingstock production.

The site is potentially socially significant to former railway workers at the yards, in particular the remnants of Clyburn Station within the yard, as a former station built just for workers to access the site. The former station demonstrates the extent of the railway industry and employment in the area.

The Clyde railway signal box, located within the yard is significant as part of a series of four elevated power signal boxes needed for track amplification works from Auburn to Blacktown during the 1950s, designed as a cohesive group in a post-World War II period functionalist style. The signal box is an example of this last group of signal boxes to be built to a standard railway design in NSW, and is a good example of this style. It retains some original equipment and remains in service.

The war memorial on site, featuring railway honour boards, is historically significant for its association with the war and war time services at the site, as well as likely socially significant for workers, families and their communities affected by war.

The Clyde Railway Marshalling Yards has some limited archaeological potential to yield information on the operations of the former yard and the relationship between the railways and surrounding industry. However, the site has lost almost all original marshalling yard elements and structures with little physical evidence remaining from the once major railway engineering and carriage building facilities.

Criteria Assessment	
a) Historic	The Clyde Marshalling Yard is significant in demonstrating the large volume of railway goods traffic generated by the Sydney metropolitan area, both in historical and current terms. It also demonstrates the close relationship between local industry and rail transport.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The site is potentially socially significant to former railway workers at the yards, in particular the remnants of Clyburn Station, a station built just for workers to access the site. It demonstrates the extent of the railway industry and employment in the area.
e) Scientific	The Clyde Railway Yards has some limited archaeological potential to yield information on the operations of the former yard and the relationship between the railways and surrounding industry.
f) Rarity	The Signal Box is one of four remaining of its type.
g) Representativeness	The signal box is an example of a post-World War II period functionalist style Signal Box.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Clyde Railway Yard Remains and Signal Box', dated 2016. As the description is comprehensive and matches the condition visible during the site inspection, no addition assessment has been undertaken.

CONTEXT
The Clyde Railway Yards comprises a large area in between Clyde and Auburn railway stations. In this assessment it has been divided into 3 sections - referred to as the 'Upside' on the north of the main lines, the 'Downside' for the area to the south of the lines, and the 'Corridor' for the area of tracks that run through the site in the rail corridor and including the Clyde Signal Box. Across the 3 areas, the following historic elements remain on site:

SIGNAL BOX (1959)
CLYBURN PLATFORM REMAINS (1948?)
WAREHOUSE (former Wheel Turning shop, pre-1918) and adjacent remnant traverser track
DISUSED SIDING (pre-1921)
WAR MEMORIAL (HONOUR BOARDS) (1945)
REMNANT LAVATORY FLOOR (Pre-1943)

CLYDE RAILWAY YARDS – UPSIDE (NORTH) – GENERAL DESCRIPTION
The Clyde Up Yards are located on the north side of the Main Western Suburban Line, and on the eastern side of Duck Creek. The original eastern boundary of the yards would have been to Rawson Street and north up to Parramatta Road, although the Yards historically would have serviced isolated industry beyond this. At present, the current yards consist of 1970s onwards to modern operational structures, many of which are still operational in function. Portions of the yard have been rededicated for private industrial use, such as the various concrete production industries and the Sunshine Sugar Mill, however some of these areas are still under the ownership of Railcorp and occupied under long-term lease agreements.

Areas that are still under use for railway functions are small and segmented throughout the Yard, and the built environment in these areas are quite updated, displaying modern 1990s brick office buildings, lightweight and demountable office blocks, and some large steel-clad warehouse and railway maintenance structures. A number of sidings are still extant within this yard, particularly in the southern portion adjacent the Main Western Suburban Line, most of which are still operational. The Clyde Up Yards still maintains one original function of providing railway access to industry in proximity of the yard, as evidenced by the continued use of railway track infrastructure to service the concrete and sugar production industries located within the Yard's curtilage.

DISUSED SIDING (pre-1921)
A small section of original siding remains extant in the Up Yards. These sections of siding, oriented north-south, are currently unused, however remains in place as evidence of an extensive network of sidings that would intercept Parramatta Road at a level crossing, and serviced industrial production north of Parramatta Road in the present North Auburn area. This network of sidings is further evidenced by the remnants still in place on the north side of Parramatta Road, east of the Duck River. One section of siding still in place crosses Parramatta Road, at 305 Parramatta Road Auburn, and continues on to cross the western end of Short Street, Auburn. Additionally, there is a small section of remnant siding in the pedestrian footpath in front of 317 Parramatta Road.

CLYDE RAILWAY YARDS – DOWNSIDE (SOUTH) – GENERAL DESCRIPTION
The Former Clyde Goods Marshalling Yard is located south of the Main Western Suburban Line, and bounded to the west by the Duck River. At present, the Yards comprise of a number of modern railway offices, warehouse and maintenance buildings, most of which date from the late 21st Century. The yards generally consist of modern sheet-clad buildings, either in steel or other external modern cladding material, some with concrete or masonry around the base.

Several areas around this precinct are leased by private operators that either use the facilities as part of their goods transport and freight operations, or undertake maintenance work for Railcorp under

contract. The majority of the original marshalling yard structures and elements including the steel girder frame pedestrian bridge, water tower and the site of the former marshalling yard offices, which were removed after cessation of operations at the Clyde Wagon Works and many local workings from the Yard, are no longer extant. Historic items located on the Downside are detailed below.

WAREHOUSE (former Wheel Turning Shop) AND ADJACENT RAIL TRACKS (former traverser tracks), (pre-1918)
With regards to historic fabric, the Clyde Down Yards retains a small portion of remnant tracks and one warehouse building consisting of structural members stamped by steel manufacturer Dorman Long. The remnant siding is the last remaining section of the original traverser tracks, that serviced the primary maintenance functions of the yard, being the Blacksmiths Shop, the Wheel-turning Shop, and the Wagon Repair Shop. The warehouse building, although truncated at its southern corner, is the intact remnants of the Wheel Turning shop, one of the earliest buildings on the site and the only building from its period presently surviving.

The warehouse has been progressively refurbished over time, leaving the structure largely modified, including the removal the south eastern corner of the building some time in the 1980s to early 1990s, resulting in a change from its original rectangular footprint (as shown in 1943 aerial photographs) to its present L-shape. These features are located in northernmost area of the current Heavy Maintenance Service Centre site, directly south of the privately leased Downer site.

WAR MEMORIAL (HONOUR ROLLS) (1945)
In recent years, a war memorial commemorating WWI and WWII was erected in the south eastern corner of the Clyde Down Yards. The memorial is comprised of a three metre (approx.) high curved masonry wall, with three aluminium window frame inserts which encase a timber hand-painted honour roll within each window. The honour rolls include Clyde Railway Yard employees that served in both WWI (1914-1918) and WWII (1939-1945). Several cast bronze plaques on concrete plinths adorn the memorial and its surrounds. While the masonry structure is modern in nature, the honour roll most likely originates from a previous internal location, such as an office or workshop, prior to being reinstalled into this new memorial.

CLYDE RAILWAY YARDS - RAIL CORRIDOR - GENERAL DESCRIPTION
The Main Western Line runs through the site with Auburn Station to the east and Clyde station to the west. For the purposes of this assessment the signal box adjacent to the corridor in the north west corner of the site has been included in this area. Within this portion of the site are the following historic remains:

CLYBURN STATION PLATFORM REMAINS (c. 1948)
The original Clyburn Station, a brick and concrete platform structure with single steel awning and associated pedestrian footbridge was demolished in 2009. The station, installed in approximately 1948, was a purpose-built private platform for use by Clyde Railway Yard employees only. It was originally located between the Main Western Suburban Line (to its south) and the main marshalling area for the Clyde Up Yard (to its north). It lay towards the eastern end of the Clyde Railway Yards.

Only remnant structures of the platform remain, including a small sections of masonry piers that supported the original platform structure, and a tiled concrete slab which was likely an associated amenities block on the Up (north) Side of the Yard where the former footbridge linked from the station.

SIGNAL BOX (1959)
The signal box is located alongside the north side of the railway line, east of the bridge over Duck River. Clyde signal box is an 'S' type post war version of the elevated two-storey power boxes. Others of this type are Auburn, Granville and Blacktown. It is a Functionalist style building, face brick with a winged design and curved corners. Extant moveable heritage includes original signal display equipment and a central U-shaped table. It has a relay interlocking system and 102 rotary switches. It remains in service.

REMNANT LAVATORY FLOOR (Pre-1943)
A concrete slab and tiled floor, representative of a former lavatory, is extant on the Clyde Up yards. It is likely that the lavatory was associated with a U-shaped former marshalling yards office (now demolished) located directly adjacent (east) of the site. The lavatory was demolished in the late 20th century, leaving the floor and associated plumbing somewhat intact. As the fabric has been assessed as being of little significance, it has not been included in the heritage curtilage.

MOVABLE
No items of movable heritage are known to be located on site, except for the previously mentioned Honour Rolls that are now encased within a modern memorial installation.

ARCHAEOLOGY
Due to the continued heavy use and operation of the site since its inception in the 1870s, much of the Yards have been modified and precincts re-established in order to maintain and update the railway functions of the site as necessary. Most original buildings have been removed, replaced or heavily refurbished with newer, more appropriate facilities as the railways and technologies progressed over the years. Due to the development and continuous redevelopment of the land in the precinct, the potential for significant Aboriginal and historic archaeological remains is low.

The only identified archaeological remnants are the disused siding (Up side, see above) and the Clyburn Platform remains (Corridor, see above).

While not included within the heritage curtilage, the Duck River Bridge, adjacent to the Up Yards precinct, is extant. This timber truss railway bridge was built to service Commonwealth Engineering on the north western side of the Duck River, and would have been accessed directly from the Clyde Railway Up Yards. This facility designed and built railway locomotives, rolling stock and trams, and was therefore used heavily to supplement the needs of the NSW Railways, with the remains of this bridge evidencing the close relationship between primary industries and the Railways in this early period.

Condition	Good	**Fair**	Poor

Alterations and Additions

The site is heavily modified with very few remnant elements still extant which represent the former functions of the site. Whilst the site is still an active and critical railway operations site, built or archaeological features that represent its former focus as the carriage workshops is dislocated from any context. Most buildings and layouts of the site have been subject to complete removal and re-planning to accommodate upgraded and changing needs and functions of the railways.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1891

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The following history for Clyde Marshalling Yards has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Clyde Railway Yard Remains and Signal Box, dated 2016:

The Clyde Marshalling Yards were authorised to replace the Granville Yards for the interchange of south and west wagon traffic on 2 March, 1891. The contract for construction of the railway yards was granted to John Ahern. During construction, workers and their families lived in a nearby camp. The yards were located on the Down (north) side and opened on 1 November, 1891. The yards were used to marshal the Lidcombe-Granville Rail Corridor Upgrade locomotives and rolling stock, and in 1892, a wagon repair works was established on the down side of the line as the major repair centre for goods rolling stock. At this time, there were fourteen Up Sidings and eight Down Sidings. The yards were controlled by signal boxes at Auburn and Clyde North (JCIS, 2010). The yard was developed and changed over time. Various sidings to nearby industrial sites, many of which were associated with the railways, were added between the 1880s and the 1930s, as well as a large loop traversing the western end of the site (Weir Phillips, 2009).

By 1918, the wagon repair works was well established as the major goods wagon repair centre, working in conjunction with the Down Clyde Yard (JCIS, 2010). By 1926, Clyde's share of the increasing repair task was declining as new facilities were established in places such as Enfield, Flemington, White Bay and Abattoirs.

During World War II, the Clyde Wagon Works were not used for non-railway production. Rather, their contribution was in the repair and renovation of goods wagons (JCIS, 2010). After the war, a platform named Clyburn (combining the names of Clyde and Auburn) was opened for works staff in 1948. This platform was never available for use by the general public. The yards were a major centre for employment, for both local works and workers who commuted by train. Work at the yards was very dangerous in the era before the introduction of effective work safety practices. Many of the works were 'shunters', who were responsible for marshalling goods wagons into required configuration. This was the most dangerous occupation on the railways, with many works losing their lives on site (Artefact Heritage, 2013).

Clyde signal box opened in 1959 (the fourth built in the Clyde Yards area), which replaced the 1908 Clyde North Box. Specifically, it controlled access to the Carlingford Branch line and access to the

western end of Clyde down and Sydney yards, and private industrial sidings. It was one part of a much larger scheme to increase the tracks to four main lines between Lidcombe and St. Marys during World War II in order to provide maximum track capacity to the American ammunition and general store built at Ropes Creek. The signal box was one of four Functionalist style boxes between Auburn and Blacktown, these being Auburn, Clyde, Granville and Blacktown. The style was only used from Auburn to Granville as the railway system was largely in place by this time. These boxes represented the last time when conventional, elevated signal boxes were built utilising the traditional model of a ground floor relay room and an upper level where the interlocking frame was operated. A subsequent design of elevated boxes was used in the 1960s but these did not accord to the classic, two-level design with a rectangular footprint. The signal box remains in service.

During the 1960s, a freight terminal was built in the Clyde Yards. In 1973, the newly formed NSW Public Transport Commission created a Workshops Branch and a program of major upgrading workshops commenced. By the late 1970s, Clyde received new machinery, an amenity block, an administration building, two traversers, general components shop and a general repair shops. This new facility, located on the Sydney (east) end of the old workshops, was fully operational by 1981 (JCIS, 2010).

In 1980, the railways came under the newly formed NSW State Rail Authority and a Railway Workshops Board (1980-1989) was formed to take control of the workshops. The Clyde works were now a substantially new facility, with the main responsibilities of overhaul of freight bogies, refurbishment of wheelsets, preventative maintenance of Category 1 wagons and heavy unscheduled repair of wagons (JCIS, 2010). From the 1970s, as a result of the modernisation and rationalisation of freight rolling stock, use of the yard continually declined. The end came for the old Clyde as a wagon works in 1992, when much of the southern end of the site was occupied by the suburban rolling stock maintenance facility- MainTrain (Weir Phillips, 2009). After this, the remainder of the old wagon works site was largely abandoned and demolished leaving very few structure extant on site.

Remnants of the former marshalling yard and wagon works are scattered. Following the closure of the former Clyde Engineering Works (on the southern side of the main running line) and Commonwealth Engineering (on the northern side of the line), significant industrial development has occurred in the immediate vicinity (Weir Phillips, 2009).

Significant facilities upgrades have been carried out continuously over the 21st century, in response to the changes in the needs of the commuter community, and technology. By 2015, very few original structures remain or are heavily modified to accommodate for these additional needs. Changes in the organisation have also seen areas of the organisations land and functions leased out to external service providers for support.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The listing of Clyde Marshalling Yards should include be included on Schedule 5 of the Cumberland LEP as a built heritage item and as an archaeological item.
  The former LEP has classified a series of items of an industrial nature, including railway, road and water infrastructure, as 'archaeological' sites. This classification is historical and relates to the former use of the term 'Industrial Archaeology', which refers to the study of industrial and engineering history. The use of the term 'Industrial Archaeology' is no longer used and the term 'Industrial Heritage' is now preferred. Archaeological sites are legally defined as sites *which* contain one or more 'relics' and, in NSW, relics are specifically protected by the Sections 138 -146 of the Heritage Act 1977. The classification of a site as 'archaeological' consequently affects the statutory controls and procedures, including the need for excavation permits and pre-excavation procedures, triggered by Development Applications.
  As the item includes both built heritage items and archaeological features it is necessary to list on the Cumberland LEP as both.
- The heritage curtilage shown on the RailCorp Section 170 Heritage and Conservation register listing below should be considered as the revised curtilage for the Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The Granville Conservation Area – Civic Precinct is a locally significant heritage conservation area for its historic, aesthetic, social and representative values. The conservation area is at the civic, religious and residential heart of Granville and, together with the Residential Precinct Conservation Area, the conservation areas collectively represent Granville's great periods of growth and prosperity between the 1880s - 1930s. The area is predominantly residential in character, with a range of intact, representative and aesthetically significant housing types, age and sizes, with some larger scaled civic, religious, commercial and educational buildings. Combined with the street planting and edging, the area reflects the substantial role played by Granville in the development of western Sydney, the way in which it developed and the nature of its social structure.

Criteria Assessment	
a) Historic	Together with the Residential Precinct Conservation Area, the conservation areas collectively represent Granville's great periods of growth and prosperity between the 1880s - 1930s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The area is predominantly residential in character, with a range of intact, representative and aesthetically significant housing types, age and sizes, with some larger scaled civic, religious, commercial and educational buildings.
d) Social	The area has social significance as a location for civic and religious functions.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The area presents a good representative example of significant housing types with some larger scaled civic, religious, commercial and educational buildings.

Physical Description

Distinctive characteristics include:

- Varied subdivision patterns and allotment sizes with varied building forms.
- Predominantly residential in character, with some larger scaled civic, religious, commercial and educational buildings which are visually dominant elements of particular areas of the streetscape.
- Civic and religious buildings located on prominent street corners.
- Low scale character of original dwellings and low-scale development.
- Predominance of buildings from 1880s - 1930s which collectively show how the area has grown, and provide the historic significance and character of the area
- A variety of residential buildings including single and two storey freestanding suburban houses, pairs of attached dwellings and terraces in the Victorian, Federation and Inter-War styles.
- Early buildings, such as Victorian cottages and Federation worker cottages, are built to street alignment and do not contain a deep setback.
- The scale and grain of the Heritage Conservation Area features generous space between each building.
- Buildings stand parallel to the street, with the space between the building line and front fence generally free of structures such as garages or carports. Instead, dwellings are separated from the street by garden front setbacks.
- Predominance of brick as the primary building material coupled with tile, slate or iron roofing.
- Interest and variety in styles and materials provided by occasional use of other materials including stone, rendered and ashlared brick and timber.
- Front garden spaces are visible from the street mostly over low front fences. Front fences consist of varied materials, sympathetic fences generally include brick, timber picket or timber posts with wire mesh inserts.
- In the Granville Conservation Area – Civic Precinct, the total garden area is generally about 40% of the site
- Remnants of street tree plantings include brush box and silky oak which frame and unify the street space and cool pavements in summer
- Remnants of sandstone kerbs and gutters in important civic and residential streets.

For detail on individual heritage items within the conservation area, refer to the relevant listing sheets for the items.

Generally, the condition of the buildings and streetscape is fair.

Condition	Good	**Fair**	Poor

Alterations and Additions

- N/A

Overall, the Granville Conservation Area – Civic Precinct is considered to have high integrity as an intact conservation area that demonstrates Granville's great periods of growth and prosperity between the 1880s - 1930s. The area is predominantly residential in character, with a range of intact, representative and aesthetically significant residential dwellings in the Victorian and Federation architectural styles, with some larger scaled civic, religious, commercial and educational buildings.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1860s subdivision

Granville Conservation Area – Civic Precinct was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development in 1880s driven by the relocation of several large manufacturing industries close to the railway such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. The buildings in this area are partly residential but the area is also characterised by civic, commercial, educational and religious buildings such as the Town Hall, which was erected in 1888.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. 5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- In conjunction with the Granville Conservation Area – Residential Precinct, draft a new or revised site-specific Development Control Plan for this Heritage Conservation Area to protect the heritage values of the area during development.
- In addition to the recommendations identified above, recommendations for management include:
  - Retain subdivision layout and avoid amalgamation of sites
  - Retain the low-scale character of the conservation area
  - In addition to the civic and religious sites, retain all types of historic houses to exemplify the growth and prosperity of the area between the 1880s - 1930s
  - Encourage appropriate historic paint schemes
  - When providing new street plantings, ensure they are sympathetic to the landscape heritage of the place

Curtilage Map

Statement of Significance

The Granville Conservation Area – Residential Precinct is a locally significant heritage conservation area for its historic, aesthetic and representative values. The conservation area is at the civic, religious and residential heart of Granville and, together with the Civic Precinct Conservation Area, the area collectively represents Granville's great periods of growth and prosperity between the 1880s - 1930s. The area is predominantly residential in character, with a range of intact, representative and aesthetically significant housing types, ages and sizes including Victorian, Federation and Inter-War dwellings. Combined with the street layout, plantings, some sandstone edging remnants, the area reflects the substantial role played by Granville in the development of western Sydney, the way in which it developed and the nature of its social structure.

Criteria Assessment	
a) Historic	Together with the Civic Precinct Conservation Area, the conservation areas collectively represent Granville's great periods of growth and prosperity between the 1880s - 1930s. Combined with the street layout, plantings, some sandstone edging remnants, the area reflects the substantial role played by Granville in the development of western Sydney, the way in which it developed and the nature of its social structure.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The area is predominantly residential in character, with a range of intact, representative and aesthetically significant housing types, age and sizes including Victorian, Federation and Inter-War dwellings as well as streetscape elements such as plantings and sandstone edging.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The area presents a good representative example of significant housing types including Victorian, Federation and Inter-War dwellings as well as streetscape elements such as plantings and sandstone edging.

Physical Description

Distinctive characteristics of the conservation area include:

- Varied subdivision patterns and allotment sizes with varied building forms.
- Predominantly residential in character, though there are some buildings adaptively reused for small-scale business and a large precinct occupied by Granville Public School.
- Low scale character of original dwellings and low-scale development.
- Predominance of buildings from 1880s - 1930s which collectively show how the area has grown, and provide the historic significance and character of the area
- A variety of residential buildings including single and two storey freestanding suburban houses, pairs of attached dwellings and terraces in the Victorian, Federation and Inter-War styles.
- Early buildings such as Victorian cottages and Federation worker cottages, are built to street alignment and do not contain a deep setback.
- The scale and grain of the HCA features generous space between each building.
- Buildings stand parallel to the street, with the space between the building line and front fence generally free of structures such as garages or carports. Instead, dwellings are separated from the street by garden front setbacks.
- Predominance of brick as the primary building material coupled with tile, slate or iron roofing.
- Interest and variety in styles and materials provided by occasional use of other materials including stone, rendered and ashlared brick and timber.
- Front garden spaces are visible from the street mostly over low front fences. Front fences consist of varied materials, sympathetic fences generally include brick, timber picket or timber posts with wire mesh inserts.
- Remnants of street tree plantings include brush box and silky oak which frame and unify the street space and cool pavements in summer
- Remnants of sandstone kerbs and gutters in important civic and residential streets. In the Residential Precinct Conservation Area these have sometimes been removed to form garden edges around recent central street tree plantings.

For detail on individual heritage items within the conservation area, refer to the relevant listing sheets for the items.

Generally, the condition of the buildings and streetscape is fair.

Condition	Good	**Fair**	Poor

Alterations and Additions

- N/A

Generally, the Granville Conservation Area – Residential Precinct is considered to have high integrity as a relatively intact conservation area that demonstrates Granville's great periods of growth and prosperity between the 1880s - 1930s. The area is predominantly residential in character, with a range of intact, representative and aesthetically significant housing types, ages and sizes including Victorian, Federation and Inter-War dwellings. The landscape character of this residential precinct is enhanced by a consistent built subdivision pattern and set back with gardened front yards.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1860s subdivision

The Granville Conservation Area – Residential Precinct was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s the area became 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development in 1880s driven by the relocation of several large manufacturing industries close to the railway such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

Curtilage Map

Statement of Significance

The Blaxcell Estate Conservation Area is locally significant for its historic, social, aesthetic and representative values. The Conservation Area comprises of the first group of public housing built in NSW by the then newly formed Housing Commission in 1944. The brick houses within this estate demonstrate the ideals of the Housing Commission which was established to build comfortable and well-appointed dwellings within the resources and capacity of the state. The inclusion of fibro houses is reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program. The Conservation Area retains its aesthetic values through a consistent scale, siting, materiality and fencing treatment which provides a cohesive 1940s suburban character. The area is remarkable for its totally intact core area of Montgomery Street which has kept all its fencing and all original houses without second storey additions. The fibro housing is a particularly good example of an extensive public housing development by the Housing Commission extant throughout Western Sydney.

Criteria Assessment	
a) Historic	The Conservation Area comprises of the first group of public housing built in NSW by the then newly formed Housing Commission, in 1944. The brick houses within this estate demonstrate the ideals of the Housing Commission which was established to build comfortable and well-appointed dwellings within the resources and capacity of the state. The inclusion of fibro houses is reflective of the cost-effective measures undertaken by the Housing Commission to produce the quantity of houses when post war shortages of labour and materials threatened the building program.

b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The Conservation Area retains its aesthetic values through a consistent scale, siting, materiality and fencing treatment which provides a cohesive 1940s suburban character.
d) Social	The Conservation Area has social value to the community as public housing.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The area is remarkable for its totally intact core area of Montgomery Street which has kept all its fencing and all original houses without second storey additions. The fibro housing is a particularly good example of an extensive public housing development by the Housing Commission extant throughout Western Sydney.

Physical Description

Distinctive characteristics of the conservation area include:

- Flat to gently undulating clay land which drains slowly to the east and Duck Creek
- Regular sized allotments, mostly 20m x 34m
- Single storey freestanding houses separated from the street and neighbours by large garden space, with lawn and shrubs
- Spaciousness of the area created by:
  - width of each allotment
  - wide side boundaries
  - background view to large remaining eucalypts located in various spaces throughout the conservation area, particularly in backyards
  - backyard placement of garages and carports
  - houses standing parallel to the street
- Intact street character and a remarkable number of the houses, most of which have very few alterations or additions
- Consistent age of the houses - almost all date from 1944 – 1950, with a few from the 1960s
- Uniform building form, scale and setbacks
- One chimney per house
- Uniform building materials - bricks and tiles to Montgomery Street and fibro and tiles to the other street, with the occasional timber clad house and brick corner houses in Oakleigh Avenue. Uniform brick fences to Montgomery Street and throughout the rest of the area.

For detail on individual heritage items within the conservation area, refer to the relevant listing sheets for the items.

Generally, the condition of the buildings and streetscape is fair.

Condition	Good	**Fair**	Poor

Alterations and Additions

- N/A – refer to the individual listing sheets for I601, I602, I603, I604, I608, I610 for information on the alteration and additions of listed heritage items within the Conservation Area.

Overall, the integrity of the Blaxcell Estate Heritage Conservation Area is considered to be high. Though some modifications have occurred, the dwellings generally retain their scale, form and materiality. The Conservation Area maintains a uniform street character comprised of low-scaled residential dwellings with their original subdivision pattern and building material.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1944 - 1950

The suburb of South Granville lies along the western bank of the Duck River and is bounded by Granville to the north, Auburn to the east., Guildford to the west and Chester Hill to the south. Westwards from present day Clyde Street, this portion of land in South Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided.

To the east of Clyde Street, lies part of 250 acres of land by the Duck River that was granted to Darcy Wentworth, an Irish medical practitioner and public servant who settled in Australia in June 1790. Other early land grants to the south of the area were given to James Chisolm and Charles Frazer.

In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared which included the suburb of South Granville. Many of the first buyers in the area were orchardists and farmers, although there were also some men who built middle-class villas.

Compared to Granville, South Granville experienced a greater industrial expansion and is consequently a mixture of industrial and residential buildings. The formation of South Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, the Municipality of Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s. In the post-war period there was a large-scale Housing Commission Scheme through South Granville which also impacted the development and layout of the suburb.

The land on which this Conservation Area is situated had been privately acquired and subdivided as early as 1922, but very few of the lots had sold. The Commission bought the estate, kept the proposed street pattern, re-subdivided the lots, leaving a few private lots (all at the end of streets). This was the first of the Commission's group developments in New South Wales and the buildings in Montgomery Street were completed in December 1944. They were constructed in full double brick with Marseilles tiled roofs, decorative use of bricks around front porches and identical front fences.

Recommendations

Curtilage Map

Revised curtilage – refer below.

Statement of Significance

The Toohey's Palm Estate Group Conservation Area, located along Moree Avenue in Westmead, is locally significant for its historic, aesthetic and representative heritage values. The conservation area provides evidence of the pattern of suburban development in Westmead during the Inter-War period. The Toohey's Palm Estate was a planned subdivision which used a distinctive pattern of planting palm trees along the street, giving it a unified identity and character to the allotments. The early residences contribute positively towards the streetscape and retain much of their original character, setting and fabric as Californian bungalow style dwellings. They demonstrate good representative qualities of intact Californian bungalows. As a group, they provide evidence of the social, economic and architectural forces which accompanied the burgeoning residential development of this period.

Criteria Assessment	
a) Historic	The conservation area provides evidence of the pattern of suburban development in Westmead during the interwar period. The Toohey's Palm Estate was a planned subdivision which used a distinctive pattern of planting palm trees along the street, giving it a unified identity and character to the allotments. As a group, they provide evidence of the social, economic and architectural forces which accompanied the burgeoning of new residential development in this period.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The early residences contribute positively towards the streetscape and retain much of their original character, setting and fabric as Californian bungalow style dwellings.

	Palm tree plantings along the street also contribute highly towards the aesthetic significance of the conservation area. The palm trees formed a key component of the original Toohey's Palm Estate subdivision and give a unified identity/character to the subdivision and associated dwellings.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The dwellings within this conservation area demonstrate good representative qualities of intact Californian bungalows.

Physical Description

Distinctive characteristics of the conservation area include:

- Regular sized allotments, 40m deep x 15m wide
- Single storey freestanding houses in the Californian Bungalow style
- Consistent age of the houses, dating from the 1920s
- Uniform building shape (form), scale and setbacks
- Uniform building materials including face brick, decorative timber, timber windows (with stained glass windows to some) and roof tiles.
- Houses separated from the street and neighbours by large garden space
- A mixture of front boundary fence styles including brick, hedge and timber picket, though the sympathetic style is the low face brick boundary fence with palisade fence inserts
- Driveways to the side of each building, entered from the street. Placement of garages and carports towards the rear of the site.
- Palm tree street plantings along the length of the road, separated 18m (50 feet) apart.

For detail on individual heritage items within the conservation area, refer to the relevant listing sheets for the items.

Generally, the condition of the buildings and streetscape is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- N/A – refer to individual listing sheets for heritage items within this curtilage.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1920

The suburb of Westmead is bounded by the suburbs of Wentworthville to the west, Parramatta to the east, Northmead to the north and Mays Hill and Merrylands to the south. The southern half of Westmead, south of Westmead Station lies in the territory of the Cumberland Council.

Westmead originally formed a part of the western part of the Domain of Government House at Parramatta which was laid out by Governor Philip in 1790. It originally comprised of over 2000 acres of land established by Governor Macquarie as an administrative area for the penal colony and it became a residential office for ten governors. By the 1850s the Domain became known as Parramatta Park. In 1859-1861, an extensive portion of the Domain was subdivided and it was at this time that the suburb became known as Westmead ('West meadow'). The major landholder in the area was William Fullagar, a butcher and publican turned stock agent. Land was also allotted to James Houison John Savery Rodd and George Oakes. These allotments comprised of 50 acres, however, many of these

individuals acquired multiple allotments. By the time of this subdivision, a number of main roads had been established including Hawkesbury Road, Pye Street, Oakes street, Bridge Road, Good Street and Houison Street.

Westmead was relatively slow to develop, and it was only after the Westmead Railway Station was opened in 1883 that landowners began to subdivide in the area. By the 1920s, the station's facilities had improved and several estates such as Toohey's Palm Estate and Fullagar's Estate were further subdivided. By the late 1940s, the Westmead Housing Commission Estate was developed which comprised of 300 brick houses as well as a retail strip with 12 shops and a block of flats. Westmead owes much of its present street layout to the developments from this period.

The item is located on land which originally formed Portion 50 of the Government Domain subdivision, which occurred between 1859-1861 and was acquired by William Fullagar in 1861. In 1902, part of Lot 50 and Lot 51 of Fullagar's Estate comprising approximately 22 acres were purchased by George Terry. This land was later purchased by John Toohey in 1911. John Toohey subsequently subdivided the land in 1925, forming the 'Tooheys Palm Estate'. This established the present boundaries of the dwelling. Each Avenue was lined with Palm trees (*Phoenix canariensis*) at a distance of 50 feet apart. The municipal council carried out the kerbing and guttering of the estate on the condition that Mr Toohey concreted the footpaths. No expense was spared in making the Toohey's Palm Estate subdivision an attractive subdivision for prospective buyers.

Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Draft a new or revised site-specific Development Control Plan for this Heritage Conservation Area to protect the heritage values of the area during development.
- In addition to the recommendations identified above, recommendations for management include:
    - Retain subdivision layout and avoid amalgamation of sites
    - Retain the low-scale character of the conservation area
    - Encourage appropriate use of materials and historic paint schemes
    - When providing new street plantings, ensure they are sympathetic to the landscape heritage of the place
- The significance of the Conservation Area is not only tied to the Californian Bungalows but also the palm trees, which formed a key component of the original Toohey's Palm Estate subdivision. The trees gave a unified identity and character to the subdivision and associated dwellings. As the length of Moree Avenue, from Bridge Road to Grand Avenue, contain a large number of substantial and well-kept palm trees within the road verge on the north and south edge of Moree Avenue, it is recommended these are included in the curtilage of the Conservation Area to ensure that that their significance is protected and managed appropriately. The heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP. This revised curtilage covers the individual properties and road verge up to the guttering of the street.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the correct Lot/DP and will need to be altered.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Revised curtilage – refer below.

Statement of Significance

The Fullagar Road War Service Homes Group Conservation Area is a locally significant conservation area for its historic, aesthetic, social and representative values, and likely qualifies for listing on the State Heritage Register. The area includes fourteen houses historically associated with the post-World War I Commonwealth government initiative, under the War Service Homes Act, to provide affordable housing for returned servicemen and their families. The War Service Homes Act was one Commonwealth policy of rehabilitating ex-servicemen and their dependants. Built in 1920, the Fullagar Road War Service Homes Group forms one of the earliest War Service Homes estates built in Western Sydney by the War Services Homes Commission. Collectively, the Conservation Area forms a visually cohesive and aesthetically significant collection of Interwar style dwellings that illustrate the use of standardised designs prepared by the Commission. The Group provides evidence of the architectural attitudes to housing service personnel in the years immediately following World War I. The Group is a large and intact representative example of Inter-War service homes in Western Sydney. The group is also socially significant to the local community and commemorates the local veterans that occupied the houses, providing a vital contextual link to the local community of Wentworthville and World War I.

Criteria Assessment	
a) Historic	Built in c.1920, the group forms one of the earliest War Service Homes estates built in Western Sydney by the War Services Homes Commission. The houses are historically associated with a post-World War I Commonwealth government initiative, under the War Service Homes Act, to provide affordable housing for returned servicemen and their families. The War Service Homes Act was one Commonwealth policy of rehabilitating ex-servicemen and their dependants.

b) Associative	The group is associated with the War Services Homes Commission.
c) Aesthetic/Technical	Built in 1920, the Fullagar Road War Service Homes Group forms one of the earliest War Service Homes estates built in Western Sydney by the War Services Homes Commission. Collectively, the group forms a visually cohesive and aesthetically significant collection of Interwar style dwellings that illustrate the use of standardised designs prepared by the Commission. The Group provides evidence of the architectural attitudes to housing service personnel in the years immediately following World War I.
d) Social	The group is also socially significant to the local community and commemorates the local veterans that occupied the houses, providing a vital contextual link to the local community of Wentworthville and World War I.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The Group is a large and intact representative example of Inter-War service homes in Western Sydney.

Physical Description

The War Service Homes Group consists of a group of fourteen 1920 Inter-War Bungalows of two distinct styles; rendered or face brick with classical style details, or face brick with Federation style details. The built character of the War Service Homes Group Conservation Area is distinguished by the continuity in built form, height, setback and pattern of development. The group contain deep setbacks along the Fullagar Road frontage and retain their original subdivision boundaries. The curtilage of the Conservation Area is enhanced through the retention of the original subdivision pattern and the consistent visual, physical, historical and function link between each dwelling located along this portion of Fullagar Road. The retained context of the Conservation Area assists the interpretability of the area's significance.

The character of the conservation area is further enhanced by the vegetated landscapes within the front yard. These consist of garden beds, hedging and a mix of exotic and native plantings along the front fence and front façade. Plantings identified include frangipani trees, palms conifers, gum trees among others.

Between the road and the footpath, the streetscape includes a nature strip of grass. Within the grassed verge along the footpath are some small street trees that provide additional landscaping to the already established front garden. Fullagar Road is a modern road base with a concrete gutter, grassed verge and concrete footpath. The landscape elements of the Conservation Area typify the Garden City Movement in town planning.

There is an inconsistent fencing style along the Fullagar Road. There is a mix of timber picket fences, timber post and wire mesh fences, rendered brick fences, decorative concrete fences and metal loop-top palisade fences present within the Conservation Area. Some properties do not have a fence and use plantings to mark the boundary to Fullagar Road. Appropriate fencing would include timber picket fences, timber post and wire mesh fences, rendered brick fences, decorative concrete fences as opposed to metal loop top palisade fences.

Within the streetscape, elements of importance include the bronze plaques inlaid in the footpath out the front of most listed items providing an important social context of the Anzac residents who originally lived in each dwelling.

For detail on individual heritage items within the conservation area, refer to the relevant listing sheets for the items.

Overall the group is well-maintained, and their condition is generally known to be good. There is some deteriorated timberwork and fencing elements that require repair work.

Condition	**Good**	Fair	Poor

Alterations and Additions

The conservation area presents a highly intact streetscape indicative of the pattern of development in Wentworthville, c.1920s. Generally, the built environment has retained the original subdivision pattern, form and scale of the standardised 1920 Inter-War Bungalows built by the War Services Homes Commission.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1919-1923

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth (1762-1827) was an Irish medical practitioner and public servant who settled in Australia in June 1790. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject property formed part of the 1065-acre Government Domain that was subdivided into a mix of 20 acre and 50 acre allotments. In 1859, William Fullagar purchased over 37 acres between Fullagar Road, the Great Western Highway, Toongabbie Creek and Bridge Road. Fullagar purchased extensive tracts in the present-day Westmead and Wentworthville at this time.

In 1920, the land along Fullagar Road was subdivided and purchased by the War Service Homes Commission. The War Services Homes Commission was a Commonwealth government initiative established under the War Services Act 1919 to assist the rehousing of returned soldiers and their families. The commission aided veterans through low interest rate loans to construct a new house, purchase or complete an existing house, or discharge an existing mortgage. The focus of the Commission during the first two years was focused on the construction of new houses, a measure "designed to help solve, and not accentuate the national housing problem". The houses built by the Commission were to a standard design under the direction of their principal architect.

By 1923, the collection of bungalows along Fullagar Road had been completed. The houses constructed by the commission had a distinct style based on Colonial Revival and Californian Bungalow designs. The sudden increase in settlement along Fullagar Road during the 1920s is illustrated in the Sands Directory.

A number of the properties were individually purchased throughout the 1940s and 1950s. A summary of purchases is listed below:

- The property at No.6 was individually purchased by William Keary in 1947.
- A commemorative plaque notes the ANZAC Residents of 8 Fullagar Road included Thomas Henry Walmsley (1921), Robert Colin Tinker (1927) and Alfred Weller (1928).
- The property at No.6 was individually purchased by Lionel Anthes in 1951.

- The property at No.12 was individually purchased by Victor Fear in 1942. However, the commemorative plaque notes the ANZAC Resident of 12 Fullagar Road was John Patrick Golding (1924-1926).
- The property at No.14 was individually purchased by William Kelly in 1949.
- The Sands Directory notes that Clyde Johnstone Young occupied the property at No.16. This is also noted on the commemorative plaque fronting the dwelling. In 1976, the property was transferred to Young's widow.
- The property at No.18 was individually purchased by James Sutton in 1951. Sutton was in living in the residence from 1926.
- The property at No.20 was individually purchased by James Arkins in 1949.
- The property at No.22 was individually purchased by Caradog Davies in 1942. The dwelling is currently occupied by a community health centre, known as Rosewood Cottage. Rosewood Cottage provides aged respite to people from English and Arabic speaking backgrounds.
- The property at No.24 was individually purchased by Frank Palister in 1958, who also purchased other properties on Fullagar Road at this time. The commemorative plaque notes Roland Bernard Elliot was the ANZAC resident living at the property from 1925.
- The property at No.26 was individually purchased by Bessie More in 1949.
- The property at No.30 was individually purchased by Frank Pallister in 1958.
- The property at No.32 was individually purchased by Reinne Herbert in 1959. The commemorative plaque notes the Anzac Resident of No.32 was Luke Sanders Deviland from 1922 to 1923.

The property at No. 38 was individually purchased by Frederick Bridges in 1951.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The historic buildings on this site should be investigated further for their potential to be listed on the State Heritage Register (SHR). It appears to be of State significance for its historic, aesthetic, social and representative values.
- A Conservation Management Plan (CMP) should be prepared for this site to understand in greater detail the history and significance of the place, as well as how to manage change.
- Draft a new or revised site-specific Development Control Plan for this Heritage Conservation Area to ensure the heritage values of the Group are protected during development of the Group or neighbouring properties.
- To ensure the roadside kerb, street trees, footpath and immediate streetscape setting is protected, the heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the correct Lot/DP and will need to be altered.
- There is an inconsistent fencing style with the Heritage Conservation Area. Should the opportunity arise, it is recommended that appropriate fencing be reinstated. Appropriate fencing includes timber picket fences, timber post and wire mesh fences, rendered brick fences and decorative concrete fences. Metal loop top palisade fences are considered inappropriate.

Statement of Significance

The following Statement of Significance has been quoted from the NSW Office of Environment and Heritage, State Heritage Register listing sheet for 'Lidcombe Hospital Precinct' (2004):

Lidcombe Hospital is of outstanding significance in the history of NSW health care, operating for over a century from 1893-1995 as a major State Asylum for the aged and infirm, then an important State teaching hospital specialising in geriatric care and rehabilitation. Lidcombe Hospital became a leader in geriatric care and rehabilitation practices in the 20th Century. The expansion, then the closure, of the hospital reflects the changes in State and Commonwealth government health care policies over the twentieth century. The site has significance for its association with innovative medical practitioners, specialists in geriatric heath care, nurses and the local community for over a century. As the site of the Media Village, the place also has associations with the 2000 Sydney Olympic Games, which provided short-term accommodation for approximately *5,000 visiting journalists.*

The precinct contains an exceptional and rare collection of fine, intact architecture and landscapes of the Victorian, Edwardian, Interwar and late-20th Century styles, together with outstanding examples of asylum and institutional planning from leading Colonial, Government and private architects from the 19th and 20th Centuries. The asylum and hospital planning is an exceptional example of the 19th century advancements in health care along the principles of Florence Nightingale, where it was considered healthy to surround hospital and asylum buildings with gardens as part of patient treatment and the buildings were designed with particular attention to natural light, ventilation and climate control for the care of patients. The collection of reformatory, asylum and hospital buildings include dormitories designed by James Barnet (1885-1887), the former Dining Hall (1885), the Superintendent's Residence (1887) and nine wards designed by Walter Liberty Vernon (1893-1906). All reformatory and asylum buildings are designed in harmony around the central Village Green and unite qualities of shelter and surveillance, community and destitution, within a landscape both picturesque and functionally self-sufficient. The Recreation Hall and Chapel (1963) designed by Ken Woolley, the No. 1 Nurses Quarters (1910), Herdsman's Cottage (c1885), Boiler House and Chimney (1901) and the later Nos 2 and 3 Nurses Quarters (1931 and 1939) all contribute to the aesthetic and historic qualities of the place.

The nine Vernon-designed wards, individually and collectively, are outstanding examples of hospital pavilion buildings in a bungalow form, which are a deliberate continuation of the hospital pavilion typology found in some French and British Colonies of the time, with innovative design variations demonstrating the early use of the colonial vernacular in NSW public buildings and advancements in design for patient care. Australian designs for naturally ventilated hospital wards were well known internationally. Vernon's work demonstrated greater attention to light and ventilation than English examples and landscaping of a much higher standard. The ward buildings demonstrate Vernon's deliberate (and early) use of the Australian Colonial vernacular in his design of public buildings, particularly the wrap-around verandah as a means of climate control, rather than the Italianate arcade or colonnade. The building designs of Vernon at Lidcombe Hospital thereby represent one of a series of public buildings built in NSW, such as the Lands Board Office, the Bourke Courthouse and Grafton Experiment Farm buildings, that mark the search for a distinctly Australian architecture, an architecture that drew on the colonial vernacular. (Boyd)

The earliest roads demonstrate the pattern of development of the Lidcombe Hospital site and the location of the former farming activities and isolation facilities of the earlier Asylum and hospital periods, including Farm Road, Mance Avenue, Brooks Circuit, Main Avenue, Church Street, Sussex Street, Copeland Road and Peden Lane. Landscape plantings including the hoop pines and phoenix palms, tallowwoods, brush boxes, iron barks, pepper trees and spotted gums contribute to the aesthetic qualities of the precinct, including a surviving grove of eucalypts situated on a separate portion of the former hospital site. The Village Green, at the centre of the precinct, is of outstanding significance at a State level for its historic and aesthetic qualities.

The archaeological resource of the site has the potential to contribute to our understanding of the early modifications of the landscape through farming activities and the development of early institutional care for the aged, infirm and the destitute. The Hospital was the site of first Septic Tank system constructed

on a large scale to service an institution in Australia. Remains of the Tank are now located on an adjacent site but infrastructure associated with this system may survive.

The Lidcombe Hospital site has played a significant role in the development of the surrounding suburban areas and the growth of the local area as an employer. It has also acted as a physical barrier to development within the area. The Lidcombe Hospital has continued to be held in high esteem by the local community, including in the present day a number of local community groups, for its cultural, social and landscape values.

Criteria Assessment	
a) Historic	▪ The Lidcombe Hospital site was in continual use for over 100 years, initially providing care and shelter for destitute men, then evolving into an important State teaching hospital providing a comprehensive range of community health care facilities. The Lidcombe Hospital site, as a whole, contains physical evidence of major public works associated with changes in State and Commonwealth health care policy. ▪ From its inception as a proposed Boys Reformatory and Model Farm, to an Asylum for destitute men through to a State teaching hospital, eventually specialising in geriatric care and rehabilitation, the Lidcombe Hospital Precinct demonstrates the changing attitudes of managing and caring for the aged, infirm and destitute. ▪ The Lidcombe Hospital Precinct shows the design and development of a government welfare institution initially reliant upon a self-sustaining farm. ▪ Lidcombe Hospital site shows the design of an institution that had to isolate its proposed function as a Boys Reformatory from the surrounding community, and how it developed to accommodate medical isolation facilities, such as the Scabies and Epilepsy Wards, then evolved to more general health care functions. ▪ In 1919 Rookwood State Hospital and Asylum for Men was the largest institution of its type in the Commonwealth. ▪ The Lidcombe Hospital site played a significant role during the 2000 Sydney Olympics providing accommodation and facilities for over 5,000 journalists. It was temporarily renamed Olympic Media Village. ▪ It is important in demonstrating the colonial government's response to institutionalised housing and care of wayward boys and destitute and infirm men. ▪ The Lidcombe Hospital Precinct is important in demonstrating the concept of a self-sustaining public welfare institution that required intensive farming operations to support its functions. ▪ The Lidcombe Hospital Precinct is important for its role as an Asylum with working farm providing produce to other state institutions. Despite there being little physical evidence of this aspect of operations remaining it is an important historic value associated with the site. ▪ The Lidcombe Hospital site is important for providing and developing geriatric health care and rehabilitation facilities and health care programs during the twentieth century. ▪ The Lidcombe Hospital Precinct reflects changes in State health policy during the twentieth century. The decline and subsequent closure of Lidcombe Hospital reflects the changing emphasis of healthcare for the aged to keep people out of institutions and in their own homes, by integrating geriatric care services provided by general practitioners, hospital outreach services and voluntary agencies.

	▪ Lidcombe Hospital in the 1960s and 1970s was a leader in New South Wales in the medical speciality of 'geriatrics' and the treatment and rehabilitation needs of the elderly. ▪ The Lidcombe Hospital site was transformed during the 2000 Sydney Olympics by providing housing for approximately 5,000 journalists. It demonstrates the important government and community commitment to a major public event. ▪ The Lidcombe Hospital site has played a significant part in the development of many of the surrounding suburban areas and the growth of local communities, both as an employer and as a physical barrier to suburban expansion. ▪ The Lidcombe Hospital site has maintained continuous health care for those in need from the 1890s until its closure in 1995-97. ▪ The Lidcombe Hospital Precinct demonstrates the continually changing needs and responses to the treatment and care of the elderly.
b) Associative	▪ The Lidcombe Hospital Precinct demonstrates the changes in the practice of accommodating and caring for the homeless, destitute and the elderly during the twentieth century. ▪ In 1967, Medical Superintendent George Procopis developed Lidcombe Hospital, as a whole, into an important geriatric hospital with emphasis on activity and rehabilitation therapy; and included treatment and rehabilitation for patients suffering alcoholism, demonstrating the hospitals commitment to innovative and progressive health care. ▪ Dr Tinsley established a full rehabilitation department in 1961 at Lidcombe Hospital and developed programs to actively improve physical and mental facilities and quality of life for aged and disabled persons, demonstrating evolving attitudes to geriatric health. ▪ The Lidcombe Hospital site, as a whole, is significant for its association with Dr Piere Fiaschi and the advanced techniques he made in anaesthesia in 1919 when the Mettzer method of insufflation anaesthesia was introduced to the Sydney medical fraternity. ▪ Many medical specialists, including Dr Lionel Cosins, an English geriatrician of note visited Lidcombe Hospital because of its advanced Rehabilitation Centre, indicating its professional reputation in geriatric medicine. ▪ The Lidcombe Hospital Precinct has associations with the office of eight New South Wales Government Architects notably, James Barnet, Walter Liberty Vernon, George McRae, Cobden Parkes; and the architect Ken Woolley, in demonstrating evolving government design approaches to major public health infrastructure through the twentieth century.
c) Aesthetic/Technical	▪ The precinct contains an exceptional and rare collection of fine, intact architecture and landscapes of the Victorian, Edwardian, Interwar and late-20th Century styles, together with outstanding examples of asylum and institutional planning from leading Colonial, Government and private architects from the 19th and 20th Centuries. ▪ The asylum and hospital planning is an exceptional example of the 19th century advancements in NSW for health care along the principles of Florence Nightingale, where it was considered healthy to surround hospital and asylum buildings with gardens as part of patient treatment and the buildings were designed with

	particular attention to natural light, ventilation and climate control for the care of patients. Australian designs for naturally ventilated hospital wards were well known internationally, where for example, the examples by Hall and Dods in Brisbane were mentioned in advice on hospital design given by the English War Office in 1915. (Boyd) ▪ The nine Vernon-designed wards, individually and collectively, are outstanding examples of hospital pavilion buildings also evidenced in some French and British colonies of the time, which demonstrate the deliberate continuation of the hospital pavilion and barracks designs of the Royal Engineers for the West Indies, with its own distinctive variations derived from the Australian colonial vernacular. This Colonial pavilion style was also employed in Sydney for the Rum Hospital and the Military Hospital on Observatory Hill, and in Newcastle for the James Fletcher Hospital. Examples of similar hospital pavilions are also evidenced in the French colonies. Overseas institutional layouts were visited by both Barnet and Vernon. Vernon's work demonstrated greater attention to light and ventilation than English examples and landscaping of a much higher standard. (Boyd) ▪ Vernon's ward buildings also demonstrate the deliberate and early use of the Australian Colonial vernacular in the design of NSW public buildings, particularly the wrap-around verandah as a means of climate control, rather than the Italianate arcade or colonnade favoured during this stylistic period. The building designs of Vernon at Lidcombe Hospital thereby represent one of a series of public buildings built in NSW, such as the Lands Board Office, the Bourke Courthouse and Grafton Experiment Farm buildings, that mark the search for a distinctly Australian architecture, an architecture that drew on the colonial vernacular. (Boyd) It is possibly this incorporation of the colonial vernacular, along with the deliberately modest building scale, form and non-institutional design, that has led to the wards sometimes being described as being of a bungalow style, even though they were not designed as residences. ▪ The nine Vernon-designed wards (1893-1906) demonstrate finely crafted and detailed timber and fretwork, roof vents, fleches, brick chimneys and encircling verandahs which are aesthetically distinctive. Both individually and collectively they contribute to the aesthetic values of the Lidcombe Hospital Precinct and the Lidcombe Hospital site as a whole. ▪ The architectural character of the Barnet and Vernon-designed buildings and their arrangement around the Village Green reflects late Victorian planning ideals for institutional facilities. ▪ The Vernon-designed bungalow wards demonstrate an adaptation of the domestic bungalow design idiom to the larger institutional scale, also responding to Australian climatic conditions. ▪ The Lidcombe Hospital Precinct contains a rich ensemble of buildings that reflect changing technologies associated with the provision of medical care and public health administration for a period of over 100 years. ▪ The Lidcombe Hospital Precinct is a visually distinctive cultural landscape with buildings sited along contour related roadways creating a 'village' style institution within a landscaped setting. ▪ The buildings around the Lidcombe Hospital Precinct including the Barnet-designed wards (1885-1887), Superintendent's Residence (1887), former Dining Hall (1885), the nine Vernon-designed wards (1893-1906) and the Village Green itself, have an strong

	aesthetic cohesiveness and create a harmonious arrangement of buildings around a landscaped open space. ▪ A number of prominent built elements and landscape features, such as the phoenix palms and hoop pines along the Main Avenue, the Boiler House Chimney, the Clock Tower, the Village Green surrounded by the Barnet and Vernon-designed buildings, the Woolley-designed Recreation Hall and Chapel, the large fig trees and the separate grove of surviving mixed Eucalypts, are all landmark features within the Precinct. ▪ The design of early buildings, their configuration and relationship to each other and the layout of the Lidcombe Hospital Precinct, including the roads, creates an aesthetically distinctive complex of hospital buildings that provides built evidence of significant phases of the development of an important health care facility in New South Wales. ▪ The design and layout of the roads into and within the Lidcombe Hospital Precinct demonstrate the pattern of development and changes that have occurred. The earliest extant roads are important for the understanding of both the Lidcombe Hospital site, as a whole, and include Farm Road, Mance Avenue, Main Avenue, Brooks Circuit, Church Street, Sussex Street, Copeland Road and Peden Lane. ▪ The sequence of buildings on the Lidcombe Hospital site as a whole reflects the changing attitudes to, and technologies of, health care and forms of accommodation thought suitable for patients and staff and architectural philosophies of the late nineteenth and twentieth centuries.
d) Social	▪ The Lidcombe Hospital site is valued by former medical administrators, healthcare practitioners and nurses for: its prominence in development and training in the area of geriatric care and rehabilitation in New South Wales, and for its role as a teaching hospital. ▪ The Lidcombe Hospital site was important to the local community in providing employment and access to a wide range of health care facilities. Local people have strong associations with the place as former staff, patients and visitors. ▪ It is a place that is held in high esteem by a number of identifiable groups for its cultural and social values. ▪ If the Lidcombe Hospital Precinct was damaged or destroyed, it would cause the community and cultural groups a sense of loss. ▪ It is a place of particular importance and association for the Lidcombe Heritage Group Inc. and the Auburn District Historical Society.
e) Scientific	▪ The archaeological resource associated with the Lidcombe Hospital Precinct (in varying degrees depending on integrity) has the potential to contribute to and enhance the extant documentary and physical evidence concerning the development and use of the site over time. ▪ The archaeological resource associated within the Lidcombe Hospital Precinct can contribute to an understanding about developments and changes in the treatment of the destitute, infirm and ailing during the nineteenth and twentieth centuries in Sydney. ▪ The archaeological resource of much of the Lidcombe Hospital Precinct has the potential to yield information about the everyday functioning of the early institutions of asylums and homes for the

	destitute in a unique way through sufficiently intact physical remains which could provide meaningful information. ▪ The archaeological resource associated with the first Septic Tank constructed in Australia and the possible relationship between the irrigation system stormwater channel and the sewerage system has the potential to yield information about the development of the early sewerage system and its technical innovation. The remains of the Septic Tank itself are no longer within the hospital boundary, but pipes and channels and associated infrastructure are likely to be located in the Lidcombe Hospital Precinct. (The remains of the Septic Tank are in the University of Sydney Cumberland College campus). ▪ Archaeological investigations of the early road system could reveal details relating to modifications of the landscape and land use patterns over time that are not available in the documentary resource. ▪ The major part of the former hospital site, beyond the Lidcombe Hospital Precinct, has low or no archaeological significance because it is unlikely to yield further information that will contribute to an understanding of the site's history. This is because no occupation occurred at those areas (occupation was ephemeral, or minor activities associated with the major phases of the site's history took place at those locations). In addition, they are the areas where site disturbance has so compromised archaeological resources that no meaningful information could be pursued through archaeological means. ▪ The evolution of the Lidcombe Hospital Precinct from a facility for the care of the destitute, homeless, aged and infirm, with a self-sustaining farm, into an important teaching hospital specialising in geriatric health care and rehabilitation is a benchmark or reference type for such health care facilities in New South Wales. ▪ The buildings constructed in the Lidcombe Hospital Precinct during the first phases of its development, designed by architects Barnet and Vernon, provide evidence of the government's architectural solution for late nineteenth and early twentieth-century institutions for wayward boys and homeless and destitute men. ▪ The wards designed by Vernon provide evidence of late nineteenth and early twentieth-century methods of natural ventilation and climate control for dormitory-style buildings in New South Wales.
f) Rarity	▪ Lidcombe Hospital Precinct provides evidence of the type of self-sufficient institution developed in the late nineteenth century for the care of wayward boys and later for homeless and destitute men. ▪ The Lidcombe Hospital Precinct, including the Barnet wards, the former Dining Hall, Superintendent's Residence and the Vernon bungalow wards, arranged around the Village Green, are a rare and intact group of institutional buildings reflecting the design philosophies for reformatories/asylums in the late nineteenth and early twentieth centuries. ▪ The largely intact Vernon wards demonstrate a rare expression of the Australian Bungalow architectural style in an institutional setting, responding to the climate in New South Wales and adapted for institutional use.

	▪ The timber detailing, fretwork, roof vents, fleches, brick detailing and verandahs demonstrated in the Vernon ward buildings create a unique architectural aesthetic that is of exceptional interest. ▪ The Lidcombe Hospital Precinct demonstrates the evolution, during the twentieth century, of an institution for the destitute into an important State teaching hospital for the wider community. ▪ It would require further research and analysis to detail the extent to which the Lidcombe Hospital site demonstrates other aspects of the rarity this criterion.
g) Representativeness	The Lidcombe Hospital Precinct, with its historic, aesthetic, social significance, technical/research potential and rarity, provides ample evidence to represent the key State historic themes of science, government and administration, health, education, death and persons. It therefore satisfies all of the following inclusion guidelines: ▪ is a fine example of its type; ▪ has the potential characteristics of an important class or group of items; ▪ has attributes typical of a particular way of life, philosophy, custom, significant process, design, technique or activity; ▪ is a significant variation to a class of items; ▪ is part of a group, which collectively illustrates a representative type; ▪ is outstanding because of its setting, condition or size; and ▪ is outstanding because of its integrity; and ▪ is important for the esteem in which it is held.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, State Heritage Register listing sheet (2004) for 'Lidcombe Hospital Precinct':

Hospital site, setting and layout
The Lidcombe Hospital site contains a variety of buildings and landscape features in a landscaped setting. It also contains historical archaeological features which provide physical evidence of the development of the site from the late nineteenth century to the present day.

The site boundaries have changed substantially since the proposed Boys Reformatory and Model Farm was proposed in 1885, having expanded and contracted during its evolution (Godden Mackay Logan, 2004).

The institution dates to 1876. Its earliest building was the 1885 superintendent's quarters of the Boys' Reformatory (1886-7, comprising five buildings for inmates) (Read, 2018).

Lidcombe Hospital represents hospital planning concepts spanning the 20th century, with its earliest (1880s-90s) phase under Colonial (government) Architect James Barnet, and later phase (1893-1906) under his successor, Government Architect, Walter Liberty Vernon. They demonstrate bungalow style buildings around a 'village green', a continuation of hospital pavilion and barracks designs found in French and British colonies of the era, with greater care over light, ventilation and landscaping of far higher standard. Both Barnet and Vernon visited overseas institutions to inform their work. Vernon's nine wards show deliberate (and early) use of Australian colonial vernacular in public buildings - e.g. wrap-around verandahs to control climate (cf Italianate arcades). With other Vernon work, they show a search for a distinctly 'Australian' style as well as cutting-edge health provision (Boyd, Noni, quoted in Read, 2018).

The buildings were supported by adjacent supporting farm and vegetable gardens and orchards (now gone c/o the 2000 Olympics Media Village and 2006-11 redevelopment for housing). The whole demonstrates self-sufficiency and independence of such institutions and how they worked (Read, 2018).

Its core grounds laid out formally in circuitous drives and landscaped spaces show distinctive High-Victorian and Federation era landscaping, with an array of exotic and native species, spacious lawns, feature shrubs and flower bedding. Surviving mature specimen trees speak of that age as much as its buildings do, notably native rainforest trees such as Norfolk Island and hoop pines (Araucaria heterophylla, A. cunninghamii), figs such as Moreton Bay (Ficus macrophylla) and Port Jackson (F.rubiginosa), brush boxes (Lophostemon confertus)(as lined many a suburban street of the era) and specimen or lines of palms (e.g. Californian Washingtonia robusta, Canary Island dates (Phoenix canariensis) and native cabbage tree palms (Livistona australis)(State Heritage Register listing). Later plantings (1950s-70s) included more native species - Eucalyptus such as tallowwoods (E.microcorys), red ironbarks (E.fibrosa), spotted (Corymbia maculata) and lemon-scented gums (Corymbia citriodora), bottlebrushes and paperbarks. Detail plantings (shrubs, flowers) have been lost with cuts in staff and budgets but structure plantings of major trees generally survive. (Read, 2018).

Road and landscape elements

- *Village Green, Areas 1 and 2 and vistas within the Village Green;*
- *Farm Road;*
- *Main Avenue;*
- *Mance Avenue;*
- *Brooks Circuit;*
- *Copeland Road;*
- *Church Street;*
- *Sussex Street;*
- *Peden Lane;*
- *Chapel Road;*
- *Palm Circuit;*
- *Hoop pine and open space (site of former Administration Building) at junction of Main Avenue and Brooks Circuit at the entry to the historic core (32);*
- *Avenue of hoop pines (Araucaria cunninghamii) and phoenix palms (Phoenix sp.) ((33);*
- *Avenue of tallowwoods (Eucalyptus microcorys) (14);*
- *Remnant plantings (hoop pine, pepper tree (Schinus areira), flame tree (Brachychiton acerifolium) (15);*
- *Moreton Bay fig (ficus macrophllya) and row of tallowwoods (Eucalyptus microcorys) (16);*
- *Avenue of plantings at rear of historic core, Moreton Bay figs (Ficus macrophylla) and brush boxes (Lophostemon confertus) (17);*
- *Petticoat and cotton palms in eastern area of historic core (Washingtonia robusta and Washingtonia filifera) (20);*
- *Mixed plantings east of Superintendent's Residence (21);*
- *Mixed plantings in Area 1 of Village Green opposite Superintendent's Residence (25);*
- *Chinese juniper (Juniperus chinensis) (37);*
- *Hoop pine (Araucaria cunninghamii) and phoenix palm (Phoenix sp.) (38);*
- *Avenue of Canary Island palms (Phoenix canariensis) (41);*
- *Plantings at Palm Avenue (south end of triangle) (42);*
- *Northern end of Sussex Street (roadway and palms) (43)*
- *Red ironbark (Eucalyptus fibrosa) (46);*
- *Plantings associated with Nurses Quarters No. 1 and No. 3 (18);*
- *Plantings associated with Nurses Quarters No. 2 (19);*
- *Boundary planting south of Superintendent's Residence (22);*
- *Plantings for Olympic Media Village in Village Green Area 1 (24);*
- *Double row of brush box (Lophostemon confertus) (28);*
- *Row of cypresses (Cupressus species) (29);*
- *Mixed plantings northwest corner of historic core (30);*
- *Mixed plantings to southern sector of original triangle (39);*
- *Eucalypts and palms (40);*

- *Triangular bed at fulcrum of Mance Ave and Sussex Street (48);*
- *Plantings for Olympic Media Village along Mance Avenue (62);*
- *Landscape feature north of Vernon-designed wards (63);*
- *Pond, bridge and plantings north (rear) of Vernon-designed wards (64); and*
- *Plantings for Olympic Media Village near Chapel Road (65).*
- *Grove of mixed gums (Eucalyptus spp.) (57) on a separate portion of the former hospital site to the remainder of the listing (Godden Mackay Logan, 2004).*

Hospital Buildings

- *Herdsman's Cottage (Building 94);*
- *Gatehouse (Building 90);*
- *Barnet-designed dormitory wards (Buildings 7, 9, 66A and 89);*
- *Barnet-designed Dining Hall and Kitchen (Building 66);*
- *Barnet-designed Superintendent's Residence (Building 53);*
- *Barnet-designed Toilet Block (Building 89A) and ablutions facilities (Building 9A);*
- *Vernon-designed nine pavilion wards (Buildings 1, 2, 3, 4, 5, 10, 11, 12 and 13);*
- *Vernon-designed No.1 Nurse's Home (and 1919 annex) (Buildings 72 and 69);*
- *Vernon-designed Gatehouse (Building 90);*
- *Vernon-designed dormitory ward additions (Buildings 6 and 8, to Building 7);*
- *Vernon-designed ablutions facilities (Building 8A);*
- *Boiler House attributed to Walter Liberty Vernon (Building 59);*
- *Parkes-designed Nurse's Homes Nos 2 and 3 (Buildings 73 and 74);*
- *Three fibro buildings; the Male Nurse Amenities (Building 96, the two Red Cross Buildings (Buildings 95A and 95B);*
- *WWII Air Raid Shelter (Building 91);*
- *1953 Memorial Clock in the village green (Building 92);*
- *Three Parkes-designed 1930s/1940s ward buildings (Buildings 34, 35 and 36); and*
- *Woolley-designed Recreation Hall (Building 64) (Godden Mackay Logan, 2004)*

Condition	**Good**	Fair	Poor

Alterations and Additions

The majority of buildings outside the Lidcombe Hospital Precinct have now been demolished and substantial changes have been made to the landscape to prepare the site for a residential development. The Lidcombe Hospital Precinct contains all early extant buildings to the 1940s and other built elements from the 1950s and 1960s, and the most significant parts of the road network. While hospital infrastructure has been adapted to accommodate new technologies and uses, the essential character of the Precinct remains intact. The core of the Precinct, centred on the Village Green, very strongly reflects the key values of the site.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1885-1892, 1893-1913, 1914-1926, 1927-1966, 1966-1995, 1998- 2000, 2006.

The following history has been quoted from the NSW Office of Environment and Heritage, State Heritage Register listing sheet for 'Lidcombe Hospital Precinct':

Six key phases of development demonstrate the evolution of the site, from proposed Reformatory and Model Farm for wayward boys to an important teaching hospital that specialised in geriatric care and rehabilitation until its transformation into the Media Village for the Sydney 2000 Olympics. An innovative aspect of the development of the site was Sydney's first Septic Tank with associated facilities,

constructed in 1897-1898 to alleviate the inadequacies of the existing system. A summary of key development dates is provided below:

1885-1892: Boys Reformatory and Model Farm (proposed).
1893-1913: Rookwood Asylum for the Aged and Infirm.
1914-1926: Lidcombe State Hospital and Asylum for Men.
1927-1966: Lidcombe State Hospital and Home.
1966-1995: Lidcombe Hospital (Note: the Jack Lang Wing remained in use for hospital purposes until 1997).
1998-2000: Olympic Media Village.
2006+ conversion into a planned residential precinct, 'Botanica' with heritage conservation and new development over stages (Government Architect, NSW).

*The Lidcombe Hospital Recreation Hall and Chapel was designed by architect Ken Woolley.**

* ***Ken Woolley (1933-2015):***
Ken Woolley died in late 2015. His designs for the University of Sydney's Chemistry School and St. Margaret's Hospital chapel, done when he was 22, are heritage-listed. Before he was 30 he had completed a number of famous Sydney buildings, including the University of Sydney's Fisher Library, the State Office Block on the corner of Macquarie and Bent Streets (demolished in 1997 for Aurora Place), the Woolley House in Mosman, the Lidcombe Hospital Recreation Hall and Chapel and the first Pettit & Sevitt project home houses. Woolley went to University of Sydney through a traineeship from the NSW Public Works Department that paid the fees and an allowance, with holiday employment and a five year contract after graduation. He graduated in 1955 with first class honours in architecture and the University Medal. He was awarded the Byera Hadley Travelling Scholarship for 1955, working in London for Chamberlin Powell and Bon, in the midst of discussion about modernism and the International style. The Smithsons, New Brutalism and New Liberty styles were part of this discourse. He travelled to Finland in the north, Italy and Spain in the south, visiting prominent architects and buildings of the day.

In 1964 Woolley went into partnership with Ancher Mortlock Murray, and on to a career including over 6000 dwelling units and production houses and his own three Wilkinson Award-winning homes. The early years of the practice saw the individual partners doing their own thing, but with time and retirements Woolley became sole principal and design director of Ancher Mortlock Woolley in 1982 and from then on much of the firm's work carried his stamp. He saw himself as a late modernist, influenced in various ways by Alvar Aalto, Mies van der Rohe and Le Corbusier and attuned to the development of regionalism, New Brutalism, the theoretical aspects of post-modernism and reattachment to traditions.

His works in the Australian Embassy in Bangkok, Parramatta Federal Courts, the ADFA Cadets' Mess, several student union buildings on universities, wharf-side Navy buildings of Garden Island, the Park Hyatt Hotel, Sydney Town Hall House and Sydney Square (between the Town Hall and St. Andrew's Cathedral), the ABC Radio and Goossens Hall - first section of the ABC's Ultimo headquarters, Australia's pavilion at Expo '88, the State Library of Victoria (extension), the Olympics 2000 sports halls, the Agricultural Society Dome and the Hockey Stadium at Homebush and Sydney Airport Control Tower. He designed the new Large Theatre at Sydney Opera House.

In the 21st century came the latest refurbishment of the Queen Victoria Building, an effort at revival of the Pettit & Sevitt houses and other collaborative projects with his former practice, Ancher Mortlock Woolley. He was a visiting professor at University of NSW and University of Sydney and chaired or was a member on various award, review and competition juries. Woolley was interested in architectural theory and was working on a book, 'People in Glass Houses' about the key point in Modernist architecture, around 1930, when he died.

Woolley was made a member of the Order of Australia (AM) in 1988, awarded the Gold Medal of the Royal Australian Institute of Architects in 1993 and elected a fellow of the Academy of Technological Sciences and Engineering in 2001. He received the Centenary Medal in 2003 for services to structural engineering. In 2010 he was awarded a Doctorate of Science in Architecture honoris causa by the

University of Sydney, where he was an adjunct professor of the Faculty of Architecture, Design and Planning (Woolley & Veitch, 2015, 49).

1990s+ disposal and private ownership:
By the 1990s the site was superfluous to the Health Department's needs and was sold into private ownership for redevelopment as housing. At an early stage in the redevelopment process, the owner and developer Frasers Property Australia nominated the heritage precinct for inclusion on the NSW State Heritage Register thereby ensuring greater community awareness and expert scrutiny. The site underwent a stage of master planning, with the aim of balancing the parts of the site identified as needing to be retained with spaces available for redevelopment (Government Architect, NSW).

Conservation of the entire site followed an innovative two-tiered conservation management planning process with the master plan informed by an overarching conservation management plan (CMP) and archaeological zoning plan. The CMP defined the appropriate heritage curtilage for the heritage precinct, determined the locations for new development around its periphery, and set out principles for protecting the settings of individual elements such as the Superintendent's Residence. Specific elements conservation policies were then developed to provide detailed guidance for the conservation and adaptive re-use of individual buildings, groupings, landscape, and roads (GA, NSW).

The key driver in this work was that the functions of the hospital should remain visible and able to be appreciated even when the site transitioned to a new use. As a result, the historic core and the hospital's key roads and paths were prioritised for retention while areas of lesser importance were designated for new development (GA, NSW).

2006+ Residential housing adaptive reuse and additions, infill:
Lidcombe Hospital site has been converted into an award-winning, master-planned residential precinct, "Botanica", with heritage conservation and new development proceeding over a number of stages since 2006. The heritage buildings and landscape have been repurposed, but through careful design and interpretation, the site's significance as a hospital that provided innovative health care for more than 100 years can still be appreciated (Government Architect, NSW).

Botanica is now a 750-dwelling residential subdivision, covering 44 ha of the former hospital site. Within that, a core heritage precinct of 7 ha containing a range of significant buildings and spaces has been adaptively re-used for residential, commercial, and community uses, forming the heart of the new suburb (GA, NSW).

As well as its many historic buildings, the site's roads, paths, and circulation spaces were identified in the conservation management plan as important parts of the place's history. As a result, they have been retained in the new development and form some 7 ha of parklands, cycleways, and walks, which are now valued assets (GA, NSW).

The heritage-listed pavilion wards have been redeveloped as 'The Gallery' residences, and the Superintendent's House has been redeveloped as 'The Manor'. These dwellings now form part of the unique features within the wider development. Converting the hospital buildings into residential dwellings posed numerous design challenges, such as providing open-plan living spaces while maintaining the unique character of each building. Outdoor areas were similarly challenging, requiring historic landscapes to be integrated into the public realm without detracting from their historic character. Other significant buildings within the heritage precinct have been adaptively re-used as a childcare centre, church (former hall) and as retail and commercial properties, replicating the once active community hub within the hospital which originally housed a bakery, stores, and other hospital functions (GA, NSW).

Restoration of each building began with a detailed site assessment to identify the work required. Layers of later fabric were removed, including asbestos, and then the original fabric was made good and re-used where possible. Heritage trade specialists were engaged to undertake an extensive program of restoration and repair works. Timber floors and windows were retained but they needed extensive work to repair past damage, including salvaging and reinstating float glass from other buildings on the site (GA, NSW).

The site master plan identified that many of the original roads, pathways, and historical connections between the various elements should be retained as a way of understanding the historical functioning of the hospital. The result is that 1.4 ha of parkland has been dedicated to council, now incorporating cycleways and a heritage trail with interpretation hubs and element-specific signage. Other important parts of the original hospital landscaping, like the entry drive lined with hoop pines and phoenix palms, have formed prominent components of the redevelopment. The new landscape design involved adapting the former hospital grounds to new public uses that are viable and of a high quality while retaining trees and addressing watershed issues. This included limiting the choice of new materials used in public spaces, such as parks and playgrounds, to those that respond to the site's historic character (GA, NSW).

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Reconcile, update and correlate the LEP information and mapping with the SHR listing for this precinct.
- Explore options with the Heritage Division of the Office of Environment and Heritage to draft a new or revised site-specific Development Control Plan to ensure consistency between State and local objectives.
- The 2004 Conservation Management Plan for this site should be updated to understand in greater detail the history and significance of the place, as well as how to manage change and monitor conditions of the site.
- Liaise with the Heritage Division of the Office of Environment and Heritage to remove redundant Health Services Section 170 Heritage and Conservation Register SHI data entries which do not have any available mapping or information, creating confusion between the listing sheets. These include 26 items along Joseph Street:
  - Ablution Facilities, former
  - Aged Care Assessment and Medical Museum
  - Air Raid Shelter
  - Boiler House with Chimney Stack
  - Chaplain Residence
  - Clock Tower
  - Cmla Workshop
  - Dermatology Units
  - Diabetes Centre
  - Dormitory Block / Convalescent Wards
  - Gatehouse
  - Herdmen's Cottage
  - Medical Ward Ophthalmology
  - Nurses Home
  - Occupational Therapy
  - Old Training School
  - Orchid Society Building
  - Orchid Society Rooms
  - Physiotherapy Out Patients
  - Recreational Hall
  - Rehabilitation Workshop
  - Salaries and Finance Section
  - Sawing Room
  - Speech Pathology Unit
  - Verminous Patient's Bathroom, Toilet Block, former
  - Work Assembly Unit / Occupational Therapy

Curtilage Map

Statement of Significance

The terrace pair at 36 and 38 Jamieson Street is not considered to be of local or State heritage significance. While the dwelling pair relates to the concurrent purchase and development of land within Jamieson Street, the dwelling have been heavily modified to a point where significant fabric has been lost and the overall street presentation detracts from the significance of the Granville Conservation Area – Civic Precinct.

Criteria Assessment	
a) Historic	The item has historic significance as related to concurrent purchase and development of land within Jamieson Street.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The subject site contains a pair of two-storey Federation terraces of red brick in Flemish bond and Marseilles tiled roof and central gables with decorative timber detailing.

The dwelling at 36 Jamieson Street is heavily infilled on both the ground and first floors, containing klip lock sheet metal and timber and aluminium windows of varying styles. Evidence of the former elevation appear to have been completely removed. The dwelling is bounded by a concrete wall to the front as well as a low timber picket fence which is unpainted.

The dwelling at 38 Jamieson Street is infilled on the first floor with fibro sheet and simple timber windows. The ground floor elevation has been modified with the replacement of the original window. Some decorative elements remain such as the timber brackets to the verandah. The dwelling is bounded by a concrete wall to the front with a cast iron gate, as well as cyclone fencing to the side.

Both dwellings have been extended to the rear in brick.

A severely deteriorated timber fence, with most timber removed, separates the two front gardens.

Condition	Good	**Fair**	Poor

Alerations and Additions

- Most façade elements on 36 Jamieson Street have been removed
- Window to ground level on 38 Jamieson Street has been removed
- Original boundary fencing removed
- Extensions at the rear of both properties in brick.
- Both elevations have been infilled with fibro, klip lock sheet metal and windows of varying styles.
- Concrete and cyclone boundary fencing added

Due to the extensive building modifications, this item retains a low level of integrity.

Integrity	High	Moderate	**Low**

Historical Notes

Construction years	1905

Granville Conservation Area – Civic Centre was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville Civic Centre was largely determined by development in the 1880s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. There is a varied subdivision pattern in the Civic Centre and today there is still a predominance of buildings dating to the 1880s – 1930s.

In conjunction with other properties on Jamieson Street, these two lots were purchased as vacant land in 1903-1904 by Albert and Sydney Carson (sons of Thomas Carson), Stephen Chandler and his wife

Florence and by Rebecca Hill, wife of Roland Hill of Chatswood. In the ensuing years, a series of dwellings were built for the owners, both for owner-occupation and for rental. By 1914, the entire street was complete. Many of the owners lived in the street or nearby. Even the Hills moved to Granville from Chatswood.

The erection of these dwellings was a direct response to the improved conditions in Sydney in the early 1900's.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- None

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Statement of Significance

The cottage at 10 William Street, Granville is not considered to be of local or State heritage significance. The dwelling has been altered considerably in terms of its interior, as well as its exterior. While the cottage is listed as a weatherboard cottage, vinyl sidings have replaced the weatherboard, and changes to original fabric including to the hipped roof, front fence, verandah posts, and removal of the original chimney, have contributed to a reduction in the significance of the cottage itself. The setting of the cottage as a group of three cottages including 6, 8 and 10 William Street has been compromised with the demolition and replacement of the original cottages at 6 and 8 William Street. The overall contribution of 10 William Street as part of a group has been compromised.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Originally this building formed part of a group of three single fronted single storey cottages, now only No. 10 survives.

No. 10 is a weatherboard cottage with hipped roof clad with corrugated iron and bullnose front verandah. The roof features a wind ventilator. The verandah is supported on one turned timber post and one square metal post, has a concrete floor and corrugated iron roof. The verandah features a timber lattice privacy screen on the western side. The weatherboards have been partly replaced with vinyl cladding and the front door is modern. The dwelling has a timber picket fence and gate to the front, along with a metal palisade gate at the entrance to the side setback, all of which have been added to the site at a later date.

Overall, the dwelling is in fair condition, although the bullnose awning appears to have some structural issues.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Demolition of neighbouring dwellings within cottage group at 6 and 8 William Street*
- Aluminium screens over windows
- Aluminium screen on front door
- Air-conditioning unit in the window along the eastern elevation*
- Vinyl cladding*
- Timber verandah post replaced*
- Front fence added
- Removal of original chimney

As the two neighbouring dwellings have been demolished and the existing dwelling has been heavily modified, the integrity of the item is considered to be low.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1900

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this cottage is located was auctioned for the Hudson Brothers as "Clyde" in December 1884. The Hudson Brothers, manufacturers of railway rolling stock, opened their site nearby

in 1883 on the Duck River at Clyde. The site covered 14 acres. For 25 years from 1905, when Clyde Engineering was awarded large contracts to build locomotives, Granville saw another great period of development, with the appearance of new small industries, new housing, new shops and businesses.

An earlier building had been erected on Lot 29 by 1914. Between 1914 and 1929, this building was removed, and three cottages built. Lots 27 & 28 were held by John Fergus until his death in 1919. Lot 29 was devised to Roseanna Young in 1915, wife of D'arcy Young who was a tram driver of Leichhardt. She took out two mortgages over the land in April 1916 which probably financed the erection of the cottage at No. 6 William Street. The other two cottages, including No. 10 William Street, appear to have been built for Fergus at the same time.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- This item should be considered for de-listing as an individual heritage item on the Schedule 5 – Environmental Heritage of the LEP. The dwelling has been altered considerably in terms of its interior, as well as its exterior. The setting of the cottage as a group of three cottages including 6, 8 and 10 William Street has been compromised with the demolition of the original cottages at 6 and 8 William Street and the replacement with new dwellings on both sites.

Curtilage Map

Statement of Significance

The pair of semi-detached houses at 9-11 Woodville Road, Granville are not considered to be of local or State heritage significance. While the dwellings historically relate to the development of housing in the 1880s, they have been heavily modified to a point where all significant fabric has been lost. In their current form, the dwellings are considered to be a detracting element in the streetscape.

Criteria Assessment	
a) Historic	The dwellings relate to the development of Granville in the 1880s, in response to the movement of industry away from Sydney and the establishment of large manufacturing industries in the area. They were built in conjunction with the early subdivision of the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The site consists of two conjoined Victorian terraces, standing at two-storeys in height. They are both constructed of brick laid in the Flemish bond pattern, with iron gabled roofs with hipped ends. The roofs also contain two symmetrical and prominent chimneys, located on the front and rear roof planes. Key features include a jerkin head roof, carved timber fretted barge boards at each side, and elegantly curved bell-shaped balcony awning. Both dwellings have been extended to the rear.

No. 9 has an enclosed balcony, clad with weatherboard which contains a single aluminium window. This is supported on two timber posts set on a concrete floor. The ground floor elevation contains a front door which is screened by a security screen and a timber window with security bars and a painted sandstone sill. The front fence is aluminium cyclone wire with wire mesh panel attached to pipe frame gate.

No. 11 has an enclosed balcony, clad with fibro sheet which contains a two aluminium windows. This is supported on two timber posts. The ground floor elevation contains a front door which is screened by a security screen and a timber window with security bars and a painted sandstone sill. The front fence is aluminium cyclone wire with wire mesh panel attached to pipe frame gate.

The sites do not contain any significant landscaping.

The dwellings appear to be in fair condition overall, showing signs of deterioration as a result of water ingress and use of poor quality materials for alterations and additions.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Decorative frieze and brackets removed from ground floors*
- Decorative frieze and brackets removed or screened from view on the first floors*
- Lacework balustrades removed or screened from view on the first floors*
- No. 9 balcony enclosed with weatherboard*
- No. 11 balcony enclosed with fibro sheet*
- Mesh fence*
- Both dwellings extended to the rear

As both dwellings have been infilled and significant decorative features removed, the integrity of both dwellings is low.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1882

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the

establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is a predominance of buildings dating to the 1880s – 1930s.

The dwelling at 9 and 11 Woodville Road were located on part of 3 acres of land bought by Joseph Pegler in 1877 for 350 pounds. He sold most of the land in 1880 and 1881, though he retained a part facing Woodville Road. A building is marked on Parrott's map of 1881 in approximately this position. A subdivision plan of 1882 also suggests that this terrace pair may have been erected by then. By 1885, Fuller's 1885 directory shows that the buildings were occupied by tenants. These houses remained in the hands of the Pegler family until 1914.

Today, the dwellings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- This item should be considered for de-listing as an individual heritage item on the Schedule 5 – Environmental Heritage of the LEP. As both dwellings have been infilled on the facade and significant decorative features removed, the historic integrity of both dwellings is extremely low. In their current form, the dwellings are considered to be a detracting element in the streetscape.

Curtilage Map

Statement of Significance

The Federation Period Cottage at 4 Myall Street, Merrylands is not considered to be of local or State heritage significance. While the dwelling historically relates to the development of Merrylands in the 1900s, the cottage has been extensively modified to a point where the heritage value of the property has been lost, particularly though the inclusion of a dominant second storey extension which has adversely altered the overall form of the dwelling. The only original and visible element appears to be the front window. The item is no longer a representative example of its building type, nor does it retain its aesthetic value as an intact, small-scale workers cottage.

Criteria Assessment	
a) Historic	The item has some historic significance as a late Federation cottage, constructed in c. 1928 that relates to the development of the suburb of Merrylands during this period.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is no longer a representative example of a small-scale workers cottage as it has been compromised.

Physical Description

The subject cottage is a small-scale single storey Federation style rectangular worker's cottage with a dominant two-storey rear extension. The original cottage is constructed of timber framed and rusticated weatherboard construction with a front facing corrugated metal gable roof.

To front the cottage has a small recessed verandah on the western side with a single turned timber post and faux 1890s decorative timber fringe, metal balustrade and tiled verandah floor. The front door is timber framed with an aluminium screen door and transom light. The gable end of the façade has battened fibro construction and features a triple timber casement window with small panes of coloured glass, decorative timber sill and fixed timber and corrugated steel awning. There is a similar awning over casement windows on the western side, and three double hung sash windows on the eastern side.

To the rear is a dominant two-storey extension constructed of fibre cement weatherboard cladding consisting of a front-facing gable roof and central projecting gable with timber barge boards and battened fibro. There is a single aluminium-framed sliding window to the projecting gable and three windows of the same style to each side elevation.

The cottage has been highly modified. There has been a number of significant changes to the fabric of the façade including the replacement of the barge board, re-design of the gable end panelling and inclusion of faux 1890s decorative timber to the front entry. The large rear extension saw the loss of the double face brick chimney on the eastern side. The only original visible elements appear to be the front window and three sash windows to the eastern elevation.

To the front of the cottage there has been some significant landscaping including hedging to the eastern side and a brick paved driveway and footpath. From aerial photographs there is a small outbuilding to the rear.

The cottage is mostly in a good condition, although there is painting peeling on to the timber weatherboards on the eastern elevation.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Dominant second storey extension*
- New colour scheme
- replacement of the barge board*
- re-design of the gable end panelling*
- inclusion of faux 1890s decorative timber to the front entry*
- brick paved driveway*
- Timber picket fence and gateway*
- Aluminium framed screen door*
- Removal of double face-brick chimney to east of cottage*

The cottage has been significantly modified and the inclusion of a dominant second storey extension has adversely altered the overall form of the dwelling. As the form, style and detailing have been significantly modified the cottage is considered to be of low integrity.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c. 1928

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The subject property formed part of 2 allotments totalling 50 acres originally granted to Frederick Stratford in 1872, which passed to his widow Jane upon his death in 1880. The property was purchased by Martin Harrison in 1881, and then later that same year by William Crane and William Fowler, tenants in common. Crane and Fowler subsequently subdivided the land into smaller allotments, and William St (present Myall St), High, Alfred and Fowler Streets were formed at this time. In 1887, the subject property formed part of 1/2 acre purchased by John Rayner, auctioneer, who also purchased other allotments in the subdivision. The subject property (lot 7) was in part purchased by Mary Robinson later that year, and in part by Richard Dawson in 1888. The 2 parts were amalgamated in 1928 when the property was purchased by Betsy Dawson. The architectural style of the cottage would indicate the cottage was constructed for Dawson at approximately this time, although Dawson in not listed in the Sands. The Sands notes E Wild in residence at 'Bronte' at 4 Myall St between 1930-33, and it is possible Dawson initially rented the property. Further subdivision resulted in the present boundaries in 1955.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	

4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- This item should be considered for de-listing as an individual heritage item on the Schedule 5 – Environmental Heritage of the Cumberland LEP. As the cottage has been significantly modified and a dominant second storey has been added to the building the historic and aesthetic integrity of the cottage is extremely low. In its current form, the dwellings are considered to be a detracting element in the streetscape.

Curtilage Map

Statement of Significance

Guildford Railway Station, first opened in 1876, played a critical role in the early development boom of Guildford, transforming the area from a 'Tiny Village' to an area of residential expansion. Original structures included an 1876 platform and station building, a 1891 platform, the purchase of a Station Masters Residence in 1924 and a 1937 timber station building. However, all structures and remnants relating to this early station development have now been removed. The remaining structures on site date from c.1970, c.2002 and 2016-2017, and have no heritage value. The overall loss of historical fabric including all the original and early platform buildings greatly reduces the significance of the railway station.

Criteria Assessment	
a) Historic	Guildford Railway Station has limited historic fabric to demonstrate its associations as one of the early railway stations built on the Main South Line from Granville Junction to Goulburn.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The modern platform buildings, canopies, footbridge and lifts at the railway station are a common example of this type of building in the Sydney metropolitan area. Therefore Guildford Railway Station does not fulfil this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Inventory listing sheet for 'Guildford Railway Station', dated 2008. As the description features a comprehensive physical description of both external and internal station elements, only minor amendments were made with regards to recent station upgrades.

PLATFORM BUILDING- Platform 1 (c1970s)
External: A long rectangular skillion roofed building consisting of a Booking Office, Station Manager's Room and Staff facilities in the southern half and Male, Female and equitable access toilets at the northern end. The external walls are a combination of painted concrete block and aluminium panels set in expressed aluminium mullions. The windows are fixed and sliding aluminium set high in the walls. On the Military Road elevation the southern end is characterised by a projecting section of wall which is sandstone clad in random rubble fashion. A smaller concrete block concessionaire is separated from the main building by a short flight of access steps from the Military Road footpath. The skillion roof which rises gently to the platform side cantilevers to provide weather protection, and is finished with a 400mm high metal fascia.

Internal: The interior walls and ceilings are finished in plasterboard with a small coved cornice. Except for the toilets, which are finished in ceramic tiles, the floors are carpet finished.

FOOTBRIDGE (c2002)
The footbridge spans the railway lines about midway along the platforms, slightly south of the concessionaire on Platform 1. The main span consists of precast concrete planks supported on circular concrete piers with squared haunches. An easy access lift is located at each end of the footbridge, where the structure terminates with a second circular pier. Full height glass encloses the footbridge beneath a skillion metal deck roof, with this enclosure continuing down each platform access stair. Each glazed lift shaft is topped with a louvred motor room which rises above the surrounding bridge structure.

PLATFORMS (unknown)
Platform 1 has an asphalt surface, with a concrete edge supported on a flush faced concrete retaining wall. Platform 2 has an asphalt surface and retains the original brick edge and facing for the length of the platform. Both platforms have been reconstructed since the first timber ones of 1891.

CANOPIES (2000-2003)
On Platform 2 a modern open steel framed flat roofed canopy extends from the bottom of the footbridge access stairs for some 25 metres north along the platform. On Platform 1 a similar canopy extends from the side of the footbridge stair and abuts with the platform building roof. Light framed steel canopies continue into the streets on each side of the station complex.

SUBWAY (c1975)
A concrete walled pedestrian subway connects Military Road to Railway Terrace near the northern end of the platforms. The walls of the subway have been painted with natural bush scenes, while the floor finish is asphalt.

As all station elements and buildings are contemporary, their condition is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- 1891: New timber Up and Down platforms constructed with the duplication of the line
- 1892: Standard Lamp Room built on Platform 1
- 1900: Awnings provided over platform buildings.
- 1911: Platforms extended.
- 1920: Improved office accommodation and cover over signal frame.
- 1924: House for SM purchased
- 1929: Railway electrified.
- 1937: New timber platform building on Platform 2
- c1975: Subway between Military Road and Railway Terrace constructed
- c2000: Platform canopies added to toilets and adjacent to kiosk on Platform 1
- c2002: Easy Access lifts including new footbridge, stair access and toilets converted on Platform

Note: there is no date for the removal of the 1930s timber building.

As all historic elements and buildings have been removed, the integrity of the station is **NIL**.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1876 - 1937

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

After completion of the initial rail line from Sydney to Parramatta, work soon proceeded on the Main South line from Granville Junction to Goulburn. The first section from Granville to Liverpool was constructed quickly over easy terrain and was opened on 26 September 1856. Campbelltown was reached in 1858, that section opening on 17 May 1858. The line was duplicated in 1891. This line was constructed as a rural railway and had no suburban purpose until well into the twentieth century. Its stations served what were then rural settlements and only later were adapted as commuter stations.

Guildford Station was opened in April 1876. In 1891 new side platform buildings were constructed with new platform buildings for duplication of the line. In 1924 a house was purchased for use as a Station

Master's residence. A number of changes have been made to the station since construction including the addition of a new timber station building in 1937 (now demolished).

All structures and remnants relating to this early station development were gradually modified or removed from 1970 onwards. The remaining structures on site date from c.1970, and c.2002. The site remains in use as a railway station.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As all historic evidence has been removed from the site, it no longer meets any of the NSW heritage criteria. This site should be de-listed as part of the review for the Cumberland City Council LEP.

Significance Level	LOCAL		
Site Type	Level 1	Archaeological Site	
	Level 2	Farming/Grazing	

Curtilage Map

Statement of Significance

The Millmaster Feeds Site was one of two grain mills in Merrylands and was one of the few remnants of the industrial past in this area. It represented a significant phase of industrial activity as it was located to take advantage of rail access for transportation of finished products to market. However, all structures and remnants relating to its former uses have been removed and the site is currently undergoing redevelopment. Any built or archaeological features relating to its former significance are therefore no longer present.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The site is currently undergoing major redevelopment. In the context of the surrounding modern built environment and ongoing developments, redevelopment at this site is presumably for high-density residential or mixed-use purposes. The development has removed or compromised any remaining historic elements.

As the structures and archaeological features relating to the former Millmaster Feed Site have been removed or disturbed by the current redevelopment, the item is in a poor condition.

Condition	Good	Fair	**Poor**

Alterations and Additions

- All structures and archaeological features relating to the former Millmaster Feed Site have been removed or disturbed by the current redevelopment

As there are no remaining structures or archaeological features relating to the former Millmaster Feed Site due to the current redevelopment of the site, the item has low integrity.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1901

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The Millmaster Feeds site was the location of one of two flour mills located adjacent to the railway line near Merrylands. It was constructed between 1901 and 1925, with mill buildings and silos. The site was cleared of buildings in the early 1990s and is currently undergoing redevelopment.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The site no longer meets the criteria for heritage significance due to the loss of its significant fabric. It therefore no longer requires statutory protection through heritage listing and is recommended for delisting from the LEP.

Curtilage Map

Statement of Significance

We note this building was demolished in 2016, the following statement of significance related to the former building:

Located on a corner block in a prominent position in Garfield Street the building is significant for the contribution it makes to the character of the streetscape. 34 Garfield Street has historic and social significance as one of the earliest remaining suburban residences constructed on the former Wentworth estate of 1881, an early subdivision of the original D'Arcy Wentworth Grant. This is one of the earliest remaining house in Garfield Street and has aesthetic significance as a fine and largely intact external example of the style of building dating from the early decades of the twentieth century. The building has significance for its intact nature including its Federation Period detailing. It has aesthetic significance for the intact nature of its style and detailing.

As the building has been demolished and there is no former historic fabric intact, it no longer meets any of the NSW heritage criteria.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Former Federation Bungalow (now demolished):
The following physical description related to the former building:

The subject building is a single storey residence in the Federation/Inter-War Bungalow style. Walls are face brick with polychromatic detailing, including window heads, sills, quions and string courses, and a rendered base. North and west walls are tuck-pointed and have an ochre finish. Large gabled roof of slate tiles with two smaller gabled bays to the north and west, terra cotta ridge caps and exposed timber rafters. Main gable end is half timbered, and smaller gable ends rough caste rendered. Broken back verandah between the two gable ends has slate tiles, is supported on brick piers and pairs of timber posts, and has decorative timber brackets, balustrade and tiled risers. Windows are generally timber framed double hung and have an unusual curviliniear leadlight and coloured glass feature. Western gable end has triple casement windows with similar feature, and a fixed slate tile awning on decorative timber brackets. North gabled bay is 3 faceted, and has a flying gable end supported on curved timber brackets, a single rendered chimney and gas storage unit. Second chimney at southern end of house. High waisted timber and glass panelled door with leadlight side and top lights, Adjacent is circular window with polychromatic brick surround. Aluminium security screen to the front door and flyscreens to some windows. The subject residence forms one of a series of similar style buildings on the street. Opposite is Item 048/047, a similar face brick bungalow from the same period. Located on a corner block, the residence has high visibility from Garfield Street. The property appears to retain its original boundaries. Substantial camphor laurel on the north and 3 palms to front garden.

The former federation bungalow was demolished in 2016.

Current Building:
The corner of Garfield Street and Perry Street is now subdivided and contains a row of three two-storey brick residential town houses along Perry Street, as well as a large contemporary double fronted two-storey brick dwelling fronting Garfield Street. The buildings are constructed of blue brick with hipped gabled roofs clad in cement tiles. All window openings have aluminium framed windows with brick sills. The building on Perry Street is addressed by a concrete driveway and ramp with a pebbled landscape with some plantings along the low brick boundary fence. A corrugated Colorbond fence wraps along the Perry Street boundary.

No condition grading has been provided as the dwelling is no longer extant.

Condition	Good	Fair	Poor

Alterations and Additions

- Former Federation Bungalow demolished in 2016
- New subdivision and buildings constructed in 2017-2018

No integrity grading has been provided as the dwelling is no longer extant.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1918-21

In 1819, after European settlement, the Wentworthville area came under the tenure of D'Arcy Wentworth. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been

awarded a total of 17,000 acres, 2200 acres of which were located in the Wentworthville area. When he passed away in 1827, his will disposed of approximately 22,000 acres of land which was eventually subdivided into the existing allotments of Wentworthville today. The sites closest to the railway line were sold and developed first because of its proximity to the railway line, although it was not until 1883 that Wentworthville received a station known as T.R Smith's Platform. The name Wentworthville was later adopted in 1880. The establishment of the railway station attracted residents to the area, Wentworth's holdings were subdivided into 600 lots. Wentworthville was proclaimed a town in 1890.

The subject property is part of 2200 acres originally granted to D'Arcy Wentworth in 1819. In 1882, the property formed part of 488 acres between the Great Western Railway and Road acquired by Fitzwilliam Wentworth, which was subdivided and sold from 1883. Allotments between Garfield and present Station St were purchased by the Wentworthville Estate Land and Building Company Limited in 1888. The land was purchased by William Pritchard, an auctioneer, in 1893 and was subsequently subdivided. The subject property formed part of 4 1/2 acres between Garfield St and Station St purchased by John Hamilton in 1895, and subdivided and sold between 1913-1918, forming the subject's boundaries from 1918 to 2016. A covenant placed on the property in 1913 required any building to cost not less than 250 pounds.

The subject property was purchased in 1917 by William Watson, a sign writer. A mortgage to Percy McGee, a builder, taken between 1918-21 was most likely for construction of the cottage. The Sands Directory first lists Watson at the property, known as 'Marlow', in 1920. Watson resided at the property until 1953, when it was purchased by Fred and Hilda Salkeld. In 2016, the former Federation dwelling was demolished and the original allotment subdivided into four to make way for several contemporary buildings.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the building has been demolished and there is no former historic fabric intact, it no longer meets any of the NSW heritage criteria. This site should be de-listed as part of the review for the Cumberland LEP.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Statement of Significance

The Former Shop and Dwelling has been demolished and replaced with a modern building. Based on the style of the current building, this most likely occurred in the 1990s.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The following physical description related to the former building:

Single storey weatherboard shop and dwelling. Shop retains original display windows, timber parapet. The practice of adding an additional room to form a shop in front of an existing house was common in suburban areas. This addition, added in a somewhat makeshift way, is typical of development prior to the introduction of town planning controls later in the century.

No condition rating has been provided as the dwelling is no longer extant.

Condition	Good	Fair	Poor

Alterations and Additions

- Former building most likely demolished and replaced in the 1990s.

No integrity grading has been provided as the former shop and dwelling is no longer extant.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1883

Merrylands is located within the Parish of St John, County of Cumberland. In an undated map of the parish (likely circa 1835), the area that would later become Merrylands was divided into land grants given to Richard Atkins, John Bowman, John Watts, and E. Lombley from as early as 1793. The main roads marked would later become known as Parramatta Road to the east and Woodville Road to the south. Liberty Plains was marked to the south-east of the area, which includes some areas of the later Merrylands locality.

Merrylands was named after the English home of politician and explorer Arthur Todd Holroyd who acquired land in the area in 1855. The area of Merrylands grew into an intensive agricultural settlement by 1850s and remained sparsely populated until the 1880s.

With the opening of the railway station in 1878, land surrounding the area was subdivided for housing and small farms. Brick and pottery production became a prominent industry in the area, and brickyards operated to supply local demand. Moderate estates were advertised in the 1880s, using the proximity to the station as a selling point. By this time, the pottery and brick making industry was flourishing and larger facilities were constructed, such as Goodlet and Smith Brickworks.

The former shop and dwelling were located on land subdivided in c.1883 for the Australian Mutual Investment and Building Co. As shown on the 1943 aerial image (see LPI SIX Maps), the shop was situated on the corner of Abbott Street and Farnell Street.

Recommendations

Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting	

				(form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As this item has been demolished and a late twentieth century building constructed in its place, this site should be de-listed as an individual heritage item.

Curtilage Map

Statement of Significance

The dwelling at 70 Jersey Road, South Wentworthville has been demolished. The statement of significance for the former structure, quoted from the former listing sheet for the item, is as follows:

> *Significant as one of the earliest remaining cottages in the area, located on the "Cumberland Model Farms estate" c1890. The building although modified, has aesthetic significance as a small scale weatherboard cottage which largely retains its form and character even with the addition of an unsympathetic verandah across the facade. The curtilage has been reduced and impacts on the aesthetic quality of the building.*

The remaining shed on site does not the meet the criterion for heritage significance.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The following physical description related to the former building:

> *The subject building is a single storey timber framed weatherboard cottage with a single gabled roof of corrugated iron in a late Victorian style. Gable ends feature decorative timber barge boards and finials. Two brick chimneys are symmetrical to the house, and have profiled tops. Symmetrical front facade around central timber panelled door, with glazed fan light above and aluminium security screen, and single window openings either side. Windows are generally timber framed double hung. Windows to the street only are multi-paned and feature arched top panes. Aluminium flyscreens to window openings. Flat roofed verandah along front facade has three decorative steel posts and single timber post, kliplok roof sheeting and concrete base. A skillion lean-to at the rear has battened fibro and weatherboard walls. Lean-to has aluminium sliding windows and air conditioning unit to northern wall. The property appears to have a reduced curtilage, and the northern wall of the house forms the boundary to the adjacent property. Adjacent to northern wall is driveway of neighbouring property. Timber paling fences to northern and southern boundaries, low wire mesh fence to street boundary. Gravel driveway extends along the southern boundary to back yard. Development in adjacent vicinity is 1950s brick or fibro residential. Jersey Road is a 6 lane highway, also known as Cumberland Highway, located 8 metres from the house.*

No condition rating has been provided as the dwelling is no longer extant.

Condition	Good	Fair	Poor

Alterations and Additions

- Former building demolished and landscaping removed.

No integrity grading has been provided as the dwelling is no longer extant.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1893

The subject property formed part of 30 acres originally granted to Stephen Shore in 1810. Shore's estate formed part of 338 acres, comprising six separate Crown Grants dating from 1810-1818, were purchased by George Mobbs, auctioneer, in 1892. Mobbs subsequently subdivided the land into approximately 2-4 acre allotments, which were sold as the "Cumberland Model Farms". Lot 12 of Section A of the subdivision comprising 2 1/2 acres was purchased by William Horton in 1893. The exact date of construction of the dwelling is unknown, although its architectural style would suggest it was constructed sometime after 1893, possibly for Horton. The property passed briefly to Mary Horton in 1910 and to John Gibbons later the same year. The property was purchased by George Leslie and Ernest Tanner in 1914, who also purchased the adjacent lot 11 at the same time. Ernest Tanner was sole proprietor between 1917-37, and is listed in the Sands Directory in occupation on Jersey Road between 1923-33.

The dwelling was demolished in the 2000s.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the historic dwelling has been demolished, this site should be de-listed as an individual heritage item.
