Executive summary

Extent Heritage Pty Ltd was commissioned by Cumberland City Council to prepare a Cumberland Local Government Area (LGA) Comprehensive Heritage Study (the 'Heritage Study'). Cumberland City Council is the amalgamation of the majority of the former Holroyd City Council area, parts of the former Auburn City Council area and parts of Parramatta City Council area. The purpose of the study is to prepare a comprehensive review and assessment of existing items of environmental heritage within the LGA, and to identify potential items of environmental heritage that may warrant inclusion as environmental heritage on the Cumberland Local Environmental Plan environmental heritage schedule.

The Heritage Study includes a review of the existing items of environmental heritage, which is predominantly associated with early European settlement and the establishment of the towns and suburbs of the area. This review includes built and industrial heritage, historical archaeological sites, cultural and natural landscapes, as well as Aboriginal objects and/or places. In addition, the Heritage Study also includes an assessment of potential new heritage items, heritage conservation areas and historical archaeological sites. Aboriginal objects and/or places are not included in the assessment of potential new listings.

The Heritage Study has been divided into two stages:

STAGE 1

- Prepare thematic history
- Review existing items of environmental heritage, including fieldwork audit of all places across the LGA
- Identify potential items for delisting
- Identify potential items for State Heritage Register nomination
- Identify places that require additional heritage documentation
- Prepare updated mapping
- Prepare Main Report, summarising outcomes of Stage 1

STAGE 2

- Identify potential new items of environmental heritage for inclusion on the consolidated Cumberland LEP
- Fieldwork audit of all potential places across the LGA
- Identify potential items for State Heritage Register nomination
- Identify places that require additional heritage documentation
- Prepare updated mapping
- Prepare Secondary Report, summarising outcomes of Stage 2

The purpose of the Main Report is to outline the findings of Stage 1, which included a review of Schedule 5 in the *Holroyd Local Environmental Plan 2013*, the *Auburn Local Environmental Plan 2010* and *the Parramatta Local Environmental Plan 2011* to determine the future actions for existing heritage listings.

The Main Report is split into three volumes:

2. List of archaeological sites

The following section includes a tabulated summary of each archaeological site recommended for retention on Schedule 5 of the Cumberland LEP. As described in Volume 2, Section 2.1.5, a series of items on the former LEPs were converted from archaeological sites to heritage items. These items were not archaeological in nature and must be reclassified as a heritage item to be accurately identified.

6. Consolidated inventory sheets – heritage items

Heritage Inventory Sheet

Item Name	Auburn War Memorial		
Recommended Name	Auburn War Memorial		
Site Image			
Address	Railway Park/Auburn Memorial Park on Rawson Street, Auburn NSW 2144		
Lot/Section/DP	1-2	-	1174373
Current LEP ID	I1 (Cumberland LEP)		
Former LEP ID	A49 (Auburn LEP)		
Heritage Conservation Area	Not Included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Monuments and Memorials	

Curtilage Map

Note: The above map shows the new curtilage for the Item due its relocation.

Statement of Significance

The Auburn War Memorial is significant at a local level for its historical, social and rarity values. The monument is socially significant to the local community as a place of remembrance relating to local involvement in WW1 (1914-1918), WW2 (1939-1945), Korea (1950-1954), Malaysia (1950-1957), Vietnam (1962-1973), and UN Peace Keeping Forces. The War Memorial is a rare example of its type in Auburn, though it is typical of suburbs and country towns.

Criteria Assessment	
a) Historic	The item is an elaborate war memorial monument erected by the Railway Department in 1921 to commemorate those who fell in WW1 (1914-1918). It now also commemorates WW2 (1939-1945), Korea (1950-1954), Malaysia (1950-1957), Vietnam (1962-1973), and UN Peace Keeping Forces.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item is socially significant to the local community as a place of remembrance relating to local military involvement.
e) Scientific	The item does not meet this criterion.
f) Rarity	The War Memorial is a rare example of its type in Auburn, though it is typical of suburbs and country towns.
g) Representativeness	The item does not meet this criterion.

Physical Description

The War Memorial, located between Railway Park and Auburn Memorial Park, consists of a sandstone pedestal and plinth with one soldier, flanked by two kneeling female figures in white marble. The plinth houses a range of bronze plaques. Behind the monument is a rounded, low marble wall with three anodised aluminium signs. The monument is surrounded by a formal garden which contains two stone floor plinths with bronze plaques. The area surrounding the plinth is also paved with brick and stone paving.

The War Memorial commemorates those who fell in WW1 (1914-1918), as well as WW2 (1939-1945), Korea (1950-1954), Malaysia (1950-1957), Vietnam (1962-1973), and UN Peace Keeping Forces.

Overall, the War Memorial is in good condition though there are some signs of deterioration to the stone.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Relocated twice – in 1987 to the carpark of the Auburn RSL and 2014 to its present location.

Overall, the War Memorial has a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1921

The land which forms part of the modern suburb of Auburn was first developed the 1790s, when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Pots, who was given 410 acres.

In 1855, the first railway line from Sydney to the Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The War Memorial was erected by the Railway Department in 1921, to commemorate those who fell in WW1 (1914-1918). The item was relocated to the carpark of the Auburn RSL Club in 1987, then relocated to its present location in 2014. Over time, several new plaques have been installed to commemorate other military involvement.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- This listing should be converted from an archaeological item to a heritage item with landscape elements.
- Due to the relocation of the war memorial from the carpark of the Auburn RSL Club to its present location in the Railway Park/Auburn Memorial Park on Rawson Street, Auburn, the curtilage shown above provides the new heritage curtilage for the Auburn War Memorial to be used in the Cumberland LEP. The noted Lot/DP is correct for this listing sheet.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Revised Curtilage recommended - refer below.

Statement of Significance

The former Clyde Railway Marshalling Yards is historically significant as part of the progress and expansion of the NSW Railway System, reflecting the growing needs of the Sydney community and industry around the turn of the century, and the need to provide and increase supporting railway facilities, workshops and marshalling yards with the expansion of the railway system at this time. It was one of a few large suburban workshops in NSW and specialised in wagon repairs.

While only remnants of the yards remain, they are able to provide some indication of the historic operations of the site. Collectively the remaining disused sidings, signal box, platform remains, former wheel turning shop and war memorial provide insight into the former yard layout and historical development of the place, though their context and ability to be read cohesively by physical remains alone is diminished by significant redevelopment over the site. In particular the remaining disused sidings and the former wheel turning shop are early remains dating from the c.1920s development of the site.

The Yard also demonstrate the close relationship between the NSW Railways and local industries, evidenced by the existing remnant sidings and branch lines that support nearby industrial sites, many of which were associated with railway track and rollingstock production.

The site is potentially socially significant to former railway workers at the yards, in particular the remnants of Clyburn Station within the yard, as a former station built just for workers to access the site. The former station demonstrates the extent of the railway industry and employment in the area.

The Clyde railway signal box, located within the yard is significant as part of a series of four elevated power signal boxes needed for track amplification works from Auburn to Blacktown during the 1950s, designed as a cohesive group in a post-World War II period functionalist style. The signal box is an example of this last group of signal boxes to be built to a standard railway design in NSW, and is a good example of this style. It retains some original equipment and remains in service.

The war memorial on site, featuring railway honour boards, is historically significant for its association with the war and war time services at the site, as well as likely socially significant for workers, families and their communities affected by war.

The Clyde Railway Marshalling Yards has some limited archaeological potential to yield information on the operations of the former yard and the relationship between the railways and surrounding industry. However, the site has lost almost all original marshalling yard elements and structures with little physical evidence remaining from the once major railway engineering and carriage building facilities.

Criteria Assessment	
a) Historic	The Clyde Marshalling Yard is significant in demonstrating the large volume of railway goods traffic generated by the Sydney metropolitan area, both in historical and current terms. It also demonstrates the close relationship between local industry and rail transport.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The site is potentially socially significant to former railway workers at the yards, in particular the remnants of Clyburn Station, a station built just for workers to access the site. It demonstrates the extent of the railway industry and employment in the area.
e) Scientific	The Clyde Railway Yards has some limited archaeological potential to yield information on the operations of the former yard and the relationship between the railways and surrounding industry.
f) Rarity	The Signal Box is one of four remaining of its type.
g) Representativeness	The signal box is an example of a post-World War II period functionalist style Signal Box.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Clyde Railway Yard Remains and Signal Box', dated 2016. As the description is comprehensive and matches the condition visible during the site inspection, no addition assessment has been undertaken.

CONTEXT
The Clyde Railway Yards comprises a large area in between Clyde and Auburn railway stations. In this assessment it has been divided into 3 sections - referred to as the 'Upside' on the north of the main lines, the 'Downside' for the area to the south of the lines, and the 'Corridor' for the area of tracks that run through the site in the rail corridor and including the Clyde Signal Box. Across the 3 areas, the following historic elements remain on site:

SIGNAL BOX (1959)
CLYBURN PLATFORM REMAINS (1948?)
WAREHOUSE (former Wheel Turning shop, pre-1918) and adjacent remnant traverser track
DISUSED SIDING (pre-1921)
WAR MEMORIAL (HONOUR BOARDS) (1945)
REMNANT LAVATORY FLOOR (Pre-1943)

CLYDE RAILWAY YARDS – UPSIDE (NORTH) – GENERAL DESCRIPTION
The Clyde Up Yards are located on the north side of the Main Western Suburban Line, and on the eastern side of Duck Creek. The original eastern boundary of the yards would have been to Rawson Street and north up to Parramatta Road, although the Yards historically would have serviced isolated industry beyond this. At present, the current yards consist of 1970s onwards to modern operational structures, many of which are still operational in function. Portions of the yard have been rededicated for private industrial use, such as the various concrete production industries and the Sunshine Sugar Mill, however some of these areas are still under the ownership of Railcorp and occupied under long-term lease agreements.

Areas that are still under use for railway functions are small and segmented throughout the Yard, and the built environment in these areas are quite updated, displaying modern 1990s brick office buildings, lightweight and demountable office blocks, and some large steel-clad warehouse and railway maintenance structures. A number of sidings are still extant within this yard, particularly in the southern portion adjacent the Main Western Suburban Line, most of which are still operational. The Clyde Up Yards still maintains one original function of providing railway access to industry in proximity of the yard, as evidenced by the continued use of railway track infrastructure to service the concrete and sugar production industries located within the Yard's curtilage.

DISUSED SIDING (pre-1921)
A small section of original siding remains extant in the Up Yards. These sections of siding, oriented north-south, are currently unused, however remains in place as evidence of an extensive network of sidings that would intercept Parramatta Road at a level crossing, and serviced industrial production north of Parramatta Road in the present North Auburn area. This network of sidings is further evidenced by the remnants still in place on the north side of Parramatta Road, east of the Duck River. One section of siding still in place crosses Parramatta Road, at 305 Parramatta Road Auburn, and continues on to cross the western end of Short Street, Auburn. Additionally, there is a small section of remnant siding in the pedestrian footpath in front of 317 Parramatta Road.

CLYDE RAILWAY YARDS – DOWNSIDE (SOUTH) – GENERAL DESCRIPTION
The Former Clyde Goods Marshalling Yard is located south of the Main Western Suburban Line, and bounded to the west by the Duck River. At present, the Yards comprise of a number of modern railway offices, warehouse and maintenance buildings, most of which date from the late 21st Century. The yards generally consist of modern sheet-clad buildings, either in steel or other external modern cladding material, some with concrete or masonry around the base.

Several areas around this precinct are leased by private operators that either use the facilities as part of their goods transport and freight operations, or undertake maintenance work for Railcorp under

contract. The majority of the original marshalling yard structures and elements including the steel girder frame pedestrian bridge, water tower and the site of the former marshalling yard offices, which were removed after cessation of operations at the Clyde Wagon Works and many local workings from the Yard, are no longer extant. Historic items located on the Downside are detailed below.

WAREHOUSE (former Wheel Turning Shop) AND ADJACENT RAIL TRACKS (former traverser tracks), (pre-1918)
With regards to historic fabric, the Clyde Down Yards retains a small portion of remnant tracks and one warehouse building consisting of structural members stamped by steel manufacturer Dorman Long. The remnant siding is the last remaining section of the original traverser tracks, that serviced the primary maintenance functions of the yard, being the Blacksmiths Shop, the Wheel-turning Shop, and the Wagon Repair Shop. The warehouse building, although truncated at its southern corner, is the intact remnants of the Wheel Turning shop, one of the earliest buildings on the site and the only building from its period presently surviving.

The warehouse has been progressively refurbished over time, leaving the structure largely modified, including the removal the south eastern corner of the building some time in the 1980s to early 1990s, resulting in a change from its original rectangular footprint (as shown in 1943 aerial photographs) to its present L-shape. These features are located in northernmost area of the current Heavy Maintenance Service Centre site, directly south of the privately leased Downer site.

WAR MEMORIAL (HONOUR ROLLS) (1945)
In recent years, a war memorial commemorating WWI and WWII was erected in the south eastern corner of the Clyde Down Yards. The memorial is comprised of a three metre (approx.) high curved masonry wall, with three aluminium window frame inserts which encase a timber hand-painted honour roll within each window. The honour rolls include Clyde Railway Yard employees that served in both WWI (1914-1918) and WWII (1939-1945). Several cast bronze plaques on concrete plinths adorn the memorial and its surrounds. While the masonry structure is modern in nature, the honour roll most likely originates from a previous internal location, such as an office or workshop, prior to being reinstalled into this new memorial.

CLYDE RAILWAY YARDS - RAIL CORRIDOR - GENERAL DESCRIPTION
The Main Western Line runs through the site with Auburn Station to the east and Clyde station to the west. For the purposes of this assessment the signal box adjacent to the corridor in the north west corner of the site has been included in this area. Within this portion of the site are the following historic remains:

CLYBURN STATION PLATFORM REMAINS (c. 1948)
The original Clyburn Station, a brick and concrete platform structure with single steel awning and associated pedestrian footbridge was demolished in 2009. The station, installed in approximately 1948, was a purpose-built private platform for use by Clyde Railway Yard employees only. It was originally located between the Main Western Suburban Line (to its south) and the main marshalling area for the Clyde Up Yard (to its north). It lay towards the eastern end of the Clyde Railway Yards.

Only remnant structures of the platform remain, including a small sections of masonry piers that supported the original platform structure, and a tiled concrete slab which was likely an associated amenities block on the Up (north) Side of the Yard where the former footbridge linked from the station.

SIGNAL BOX (1959)
The signal box is located alongside the north side of the railway line, east of the bridge over Duck River. Clyde signal box is an 'S' type post war version of the elevated two-storey power boxes. Others of this type are Auburn, Granville and Blacktown. It is a Functionalist style building, face brick with a winged design and curved corners. Extant moveable heritage includes original signal display equipment and a central U-shaped table. It has a relay interlocking system and 102 rotary switches. It remains in service.

REMNANT LAVATORY FLOOR (Pre-1943)
A concrete slab and tiled floor, representative of a former lavatory, is extant on the Clyde Up yards. It is likely that the lavatory was associated with a U-shaped former marshalling yards office (now demolished) located directly adjacent (east) of the site. The lavatory was demolished in the late 20th century, leaving the floor and associated plumbing somewhat intact. As the fabric has been assessed as being of little significance, it has not been included in the heritage curtilage.

MOVABLE
No items of movable heritage are known to be located on site, except for the previously mentioned Honour Rolls that are now encased within a modern memorial installation.

ARCHAEOLOGY
Due to the continued heavy use and operation of the site since its inception in the 1870s, much of the Yards have been modified and precincts re-established in order to maintain and update the railway functions of the site as necessary. Most original buildings have been removed, replaced or heavily refurbished with newer, more appropriate facilities as the railways and technologies progressed over the years. Due to the development and continuous redevelopment of the land in the precinct, the potential for significant Aboriginal and historic archaeological remains is low.

The only identified archaeological remnants are the disused siding (Up side, see above) and the Clyburn Platform remains (Corridor, see above).

While not included within the heritage curtilage, the Duck River Bridge, adjacent to the Up Yards precinct, is extant. This timber truss railway bridge was built to service Commonwealth Engineering on the north western side of the Duck River, and would have been accessed directly from the Clyde Railway Up Yards. This facility designed and built railway locomotives, rolling stock and trams, and was therefore used heavily to supplement the needs of the NSW Railways, with the remains of this bridge evidencing the close relationship between primary industries and the Railways in this early period.

Condition	Good	**Fair**	Poor

Alterations and Additions

The site is heavily modified with very few remnant elements still extant which represent the former functions of the site. Whilst the site is still an active and critical railway operations site, built or archaeological features that represent its former focus as the carriage workshops is dislocated from any context. Most buildings and layouts of the site have been subject to complete removal and re-planning to accommodate upgraded and changing needs and functions of the railways.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1891

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The following history for Clyde Marshalling Yards has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Clyde Railway Yard Remains and Signal Box, dated 2016:

The Clyde Marshalling Yards were authorised to replace the Granville Yards for the interchange of south and west wagon traffic on 2 March, 1891. The contract for construction of the railway yards was granted to John Ahern. During construction, workers and their families lived in a nearby camp. The yards were located on the Down (north) side and opened on 1 November, 1891. The yards were used to marshal the Lidcombe-Granville Rail Corridor Upgrade locomotives and rolling stock, and in 1892, a wagon repair works was established on the down side of the line as the major repair centre for goods rolling stock. At this time, there were fourteen Up Sidings and eight Down Sidings. The yards were controlled by signal boxes at Auburn and Clyde North (JCIS, 2010). The yard was developed and changed over time. Various sidings to nearby industrial sites, many of which were associated with the railways, were added between the 1880s and the 1930s, as well as a large loop traversing the western end of the site (Weir Phillips, 2009).

By 1918, the wagon repair works was well established as the major goods wagon repair centre, working in conjunction with the Down Clyde Yard (JCIS, 2010). By 1926, Clyde's share of the increasing repair task was declining as new facilities were established in places such as Enfield, Flemington, White Bay and Abattoirs.

During World War II, the Clyde Wagon Works were not used for non-railway production. Rather, their contribution was in the repair and renovation of goods wagons (JCIS, 2010). After the war, a platform named Clyburn (combining the names of Clyde and Auburn) was opened for works staff in 1948. This platform was never available for use by the general public. The yards were a major centre for employment, for both local works and workers who commuted by train. Work at the yards was very dangerous in the era before the introduction of effective work safety practices. Many of the works were 'shunters', who were responsible for marshalling goods wagons into required configuration. This was the most dangerous occupation on the railways, with many works losing their lives on site (Artefact Heritage, 2013).

Clyde signal box opened in 1959 (the fourth built in the Clyde Yards area), which replaced the 1908 Clyde North Box. Specifically, it controlled access to the Carlingford Branch line and access to the

western end of Clyde down and Sydney yards, and private industrial sidings. It was one part of a much larger scheme to increase the tracks to four main lines between Lidcombe and St. Marys during World War II in order to provide maximum track capacity to the American ammunition and general store built at Ropes Creek. The signal box was one of four Functionalist style boxes between Auburn and Blacktown, these being Auburn, Clyde, Granville and Blacktown. The style was only used from Auburn to Granville as the railway system was largely in place by this time. These boxes represented the last time when conventional, elevated signal boxes were built utilising the traditional model of a ground floor relay room and an upper level where the interlocking frame was operated. A subsequent design of elevated boxes was used in the 1960s but these did not accord to the classic, two-level design with a rectangular footprint. The signal box remains in service.

During the 1960s, a freight terminal was built in the Clyde Yards. In 1973, the newly formed NSW Public Transport Commission created a Workshops Branch and a program of major upgrading workshops commenced. By the late 1970s, Clyde received new machinery, an amenity block, an administration building, two traversers, general components shop and a general repair shops. This new facility, located on the Sydney (east) end of the old workshops, was fully operational by 1981 (JCIS, 2010).

In 1980, the railways came under the newly formed NSW State Rail Authority and a Railway Workshops Board (1980-1989) was formed to take control of the workshops. The Clyde works were now a substantially new facility, with the main responsibilities of overhaul of freight bogies, refurbishment of wheelsets, preventative maintenance of Category 1 wagons and heavy unscheduled repair of wagons (JCIS, 2010). From the 1970s, as a result of the modernisation and rationalisation of freight rolling stock, use of the yard continually declined. The end came for the old Clyde as a wagon works in 1992, when much of the southern end of the site was occupied by the suburban rolling stock maintenance facility- MainTrain (Weir Phillips, 2009). After this, the remainder of the old wagon works site was largely abandoned and demolished leaving very few structure extant on site.

Remnants of the former marshalling yard and wagon works are scattered. Following the closure of the former Clyde Engineering Works (on the southern side of the main running line) and Commonwealth Engineering (on the northern side of the line), significant industrial development has occurred in the immediate vicinity (Weir Phillips, 2009).

Significant facilities upgrades have been carried out continuously over the 21st century, in response to the changes in the needs of the commuter community, and technology. By 2015, very few original structures remain or are heavily modified to accommodate for these additional needs. Changes in the organisation have also seen areas of the organisations land and functions leased out to external service providers for support.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The listing of Clyde Marshalling Yards should include be included on Schedule 5 of the Cumberland LEP as a built heritage item and as an archaeological item.
  The former LEP has classified a series of items of an industrial nature, including railway, road and water infrastructure, as 'archaeological' sites. This classification is historical and relates to the former use of the term 'Industrial Archaeology', which refers to the study of industrial and engineering history. The use of the term 'Industrial Archaeology' is no longer used and the term 'Industrial Heritage' is now preferred. Archaeological sites are legally defined as sites *which* contain one or more 'relics' and, in NSW, relics are specifically protected by the Sections 138 -146 of the Heritage Act 1977. The classification of a site as 'archaeological' consequently affects the statutory controls and procedures, including the need for excavation permits and pre-excavation procedures, triggered by Development Applications.
  As the item includes both built heritage items and archaeological features it is necessary to list on the Cumberland LEP as both.
- The heritage curtilage shown on the RailCorp Section 170 Heritage and Conservation register listing below should be considered as the revised curtilage for the Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Statement of Significance

The former Auburn Ambulance Station is of local significance for its historic, aesthetic and social values. The building is historically significant as the premises of the local St. Johns Ambulance brigade between 1930 and 1953 and as an important local utility that provides evidence of the growth of Auburn as a suburban centre. It is aesthetically significant as an intact example of a local Inter War Free Classical building. The location of the building and the integrity of its aesthetic qualities make it a notable landmark in its local area. Additionally, the site has social significance as related to the many Ambulance crews and their colleagues who were based at the building over the years.

Criteria Assessment	
a) Historic	The building is historically significant as it was the premises of the local St. Johns Ambulance brigade between 1930 and 1953 and is evidence of the growth of Auburn as a suburban centre.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	It is aesthetically significant as an intact example of a local Inter War Free Classical building to house an important local utility. The location of the building and the integrity of its aesthetic qualities make it a notable landmark in its local area.
d) Social	There is some social significance related to the many Ambulance crews and their colleagues who have been based at the building over the years.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The former Auburn Ambulance Station is an Inter War Free Classical building which is located on a prominent corner location.

The two-storey building has a symmetrical Queen Street (front) façade divided into three bays, expressed through the pronunciation of the engaged piers in the facade. The main pedestrian entrance is centred in the middle bay of this facade, with two square columns either side supporting an elaborate moulded entablature. The entablature is at ceiling height of the ground floor, this height being expressed through the rendering of a string course around the circumference of the external wall. The same render has been applied to the parapet above roof height, between the piers. The parapet has a curved capping and features the moulded name of the building.

The Harrow Road elevation contains the bays for the ambulances. The architectural style is similar to that of the front facade; however, the parapet is only situated above two of the bays. In the remaining wall, the gabled roof is extended to form an eave. Each bay of the front and side elevations contain airs or sets of timber framed, double hung sash windows. The lintels have been rendered. The four first floor windows situated in the end bays of the facades contain arched windows, with mouldings above. A small plaque has been set into the ground floor of the Harrow Road façade.

Overall, the condition is considered to be fair with some cracking evident in the render, efflorescence (salt) on the brickwork and deterioration of some timber elements. The deterioration of the building condition is exacerbated by the disuse of the building.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Contemporary security screens to windows on the first floor.
- Concrete tiled ground surface.
- Replaced guttering

Although the urban context of the site is substantially changed as the Ambulance station now located in a public space, the building retains a high level of integrity with much of its original fabric and detailing extant.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1930

The land which forms part of the modern suburb of Auburn was first developed the 1790s, when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Pots, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880, it was reported that there were about 40 residences and a population of 200 people living in

Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The Auburn Division of the St. John Ambulance Brigade was formed in 1913. First Aid classes were conducted in 1914 in the Council Chambers. The division continued to meet at the Council Chambers until 1916. The first ambulance station in Auburn opened in October 1916 on land acquired by J.T. Lang at the corner of Station Road and Rawson Street (likely located on the southeast corner). That station cost £2,450 to construct. In 1930, the new Ambulance Station was constructed on the site at 54 Queen Street and is estimated to have cost £2,600 to construct. The older Station (1916) was sold to the Carnarvon Golf Club. In 1953, a hall on Park Road became the premises of the Division and the Queen Street building was vacated.

Today, the building is no longer used as an ambulance station and remains vacant.

Curtilage Map

Statement of Significance

The Baptist Church building has local significance for its historic, aesthetic, social and representative values having served as a community church since 1928. The building is also significant for the evidence it provides of the nature of suburban development in the late Federation and early Inter War period. In particular, it provides evidence of the development of local social and cultural institutions that accompanied the initial residential growth of Auburn as well as later in the 1970s. The addition of the 1970s parish hall is an architecturally interesting modernist addition that contributes to the cultural significance of the church and in its ability to demonstrate the development of cultural institutions that accompanied the residential growth of the area. The Church retains its aesthetic significance as an intact suburban Inter-War Romanesque Church that externally appears to retain much of its original character and fabric. The Auburn Baptist Church demonstrates representative qualities of an intact Inter-War Romanesque church, built in c.1928.

Criteria Assessment	
a) Historic	The Baptist Church building has local historic and social significance as having served as a community resource since 1928. The building is also significant for the evidence it provides of the nature of suburban development in the early Inter War period.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The Church building has aesthetic significance as a representative example of a suburban Inter War Romanesque Church that externally appears to retain much of its original character and fabric. The parish hall is an architecturally interesting modernist addition that makes an aesthetic contribution to the site.

d) Social	The Church provides evidence of the development of local social and cultural institutions to accompany the notable residential growth of the period.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The Auburn Baptist Church demonstrates representative qualities of an intact Inter-War Romanesque church, built c.1928.

Physical Description

Built in the inter-war period, the Church displays characteristics often associated with Inter-War Romanesque style architecture. These include an asymmetrical building configuration, low to moderately low-pitched roofs, round headed arches to the openings, and buttresses to the front and sides of the building. The Church building comprises a single storeyed, hipped roof baptistry, a double height, gable roof, nave entrance and a four storeyed, flat roofed tower to the street facing front, with a single storeyed, transverse gable roof, nave and transept toward the rear section of the property. A gable roofed parish hall occupies the south-eastern section of the site. Dark brickwork to the street facing facades, polychromatic brickwork to the nave and transept sections, and horizontal brick banding of contrasting colours emphasises the texture of the walls, with terracotta coloured cement concrete tiles to roofs and eaves. The main entrance to the Church is marked by a large corbelled brick arch, with an arched window above it with reinforced concrete mullions and stained glass. The tower has a continuous rendered moulding to the centre of its street facing facades, with stained glass window openings on each storey, and rounded arches to windows that terminate the moulding below the eaves. The moulding springs from two round headed arches with windows to the street facing façade and a corbelled brick entrance to the side of the tower.

The Church is set back from the street boundary with a concrete driveway and path, and cement steps leading to the front and entrances. A stepped low brick wall with a metal gate demarcates the boundary of the property. There are some small gardens fronting the Church, however the item is no longer as vegetated as it was historically due to the concrete driveway.

A 1970s brickwork and stepped gabled roof extension connects the Church to the Parish Hall. The Parish Hall is a typical example of Post-War Ecclesiastical architectural style. The stepped gable roof is supported atop simple stepped brick buttressed walls with three tall windows above a square concrete cantilevered awning. The windows align with two entrances addressed by concrete steps.

The Church does not appear to have been modified since its construction, with the exception of the possible replacement of the double front doors and the extension at the rear connecting the Parish Hall. The low wall on the street boundary is a later addition to the site, as well as the signage in the foreground.

Overall, the item is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Brick extension from Church to Parish Hall
- Concrete path and driveway
- Low wall on the street boundary
- Contemporary signage

Overall, the Auburn Baptist Church retains a high level of integrity. The 1970s brick extension to the parish hall is an architecturally interesting modernist addition that contributes to the cultural significance

of the church in its ability to demonstrate the development of cultural institutions that accompanied the development of Auburn in the 1970s.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1926-1928

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Pots, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

Around 1888, the Baptist families of Auburn were meeting in private homes as places of worship. It was soon decided by the denomination to build a Church. The first ceremony took place in the Congregational Hall on Park Road. The manager of the Sydney Meat Preserving Company soon placed the School Hall at the disposal of the Church.

A small structure was erected around 1896 to operate as a Baptist Church. This is a brick building, of which remnants are presently visible. The building also had a weatherboard wall which was constructed with the intention for further growth of the church. Soon after, the Church was extended, and a Manse was built.

Early in 1928, plans were prepared for a new Church with seating for 500 worshippers. The new Church was opened on 14 April 1928 by the first candidate for Baptism. In 1970 the Parish Hall was added to the site, a brick extension was constructed to connect the two buildings.

Today, the site remains in use as a church.

Statement of Significance

Auburn Botanic Gardens is of local significance for its historic, associative, aesthetic and social heritage values. The garden has historic significance through its origins in the Cumberland Planning Scheme (1946–1951) which set aside the area along the banks of the Duck River for recreation It also has significance through its association with the Whitlam Government's (1972–1975) pioneering federal government funding scheme, which recognised local governments through direct funding. As a part of this scheme, Auburn Council received funding in 1974 and 1975–76 to develop the gardens. Its original concept and design is credited to Council's former Engineer and Town Planner Mr Eric Black rather than a commercial landscape architectural firm. The site is significant for its aesthetic qualities as an expression of cultural planting in the local area and demonstrates a high degree of creative accomplishment of creative parkland design. The Gardens have a range of environments including such a riverside ecosystem, Australian rainforest and native garden, rose garden, fauna reserve and the Ryoan-ji style Japanese Garden. In addition, the Gardens have social significance to the people of Auburn, those involved in the former Auburn Council unemployment relief works, and visitors from around Australia and overseas who visit the Gardens and attend family events such as weddings or enjoy the festivals that are regularly held in the Gardens.

Criteria Assessment	
a) Historic	The Gardens have historic significance through its origins in the Cumberland Planning Scheme (1946–1951) which set aside the area along the banks of the Duck River for recreation. It also has significance through its association with the Whitlam Government's (1972–1975) pioneering federal government funding scheme, which recognised local governments through direct funding. As a part of this scheme, Auburn Council received funding in 1974 and 1975–76 to develop the gardens.
b) Associative	The Gardens is significant in that its original concept and design is credited to Council's former Engineer and Town Planner Mr Eric Black rather than a commercial landscape architectural firm.
c) Aesthetic/Technical	Auburn Botanic Gardens is significant for its aesthetic qualities as an expression of cultural planting in the local area and demonstrates a high degree of creative accomplishment of creative parkland design. The Gardens have a range of environments including such a riverside ecosystem, Australian rainforest and native garden, rose garden, fauna reserve and the Ryoan-ji style Japanese Garden.
d) Social	The Auburn Botanic Gardens has social significance to the people of Auburn, those involved in the former Auburn Council unemployment relief works, and visitors from around Australia and overseas who visit the Gardens and attend family events such as weddings or enjoy the festivals that are regularly held in the Gardens such as the annual Japanese Cherry Blossom Festival.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

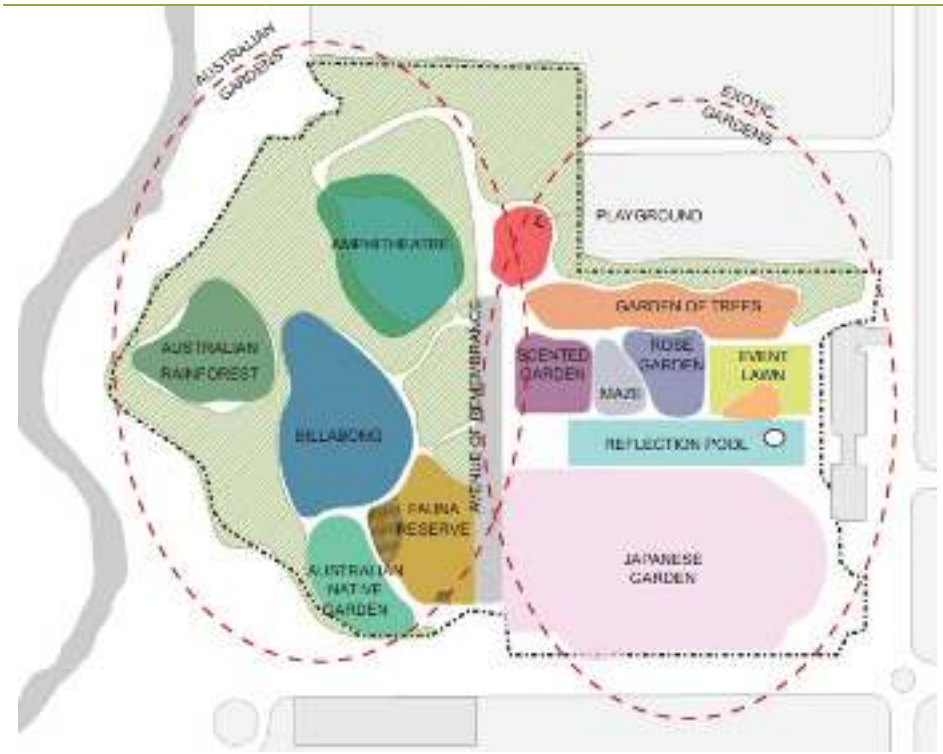
Auburn Botanic Gardens cover an area of 9.5ha. The site is surrounded by the Duck River Regional Corridor to the west, Chisholm Road to the east, Chiswick Road to the south and Webbs Avenue Playing Fields to the north.

The Botanical Gardens has a number of components, the largest being the Japanese Garden which is centred around a water feature with a Remembrance Walk, known as the Avenue of Remembrance, and a formal pond located to the north and west of the Japanese Garden. The Avenue of Remembrance is used to delineate the exotic garden spaces from the Australian themed garden spaces. The Avenue features a brick arch with imprinted bricks and a decorative wrought iron fence,

leading to a paved brick path lined with pine trees. There are two plaques located at the northern end of the Avenue which commemorate the part played by the Australian Government in the development of the Gardens and in particular the role played by the Hon Tom Uren and Victory in the Pacific in 1945 and the servicemen, women and civilians who gave service to Australia.

Auburn Botanical Gardens is used as a recreation space, with many organised groups visiting the area. The park contains a Community Picnic Area and barbecue area adjacent to Duck River. There are a number of vegetated landforms that surround the central lake feature which provide a strong sense of enclosure. The gardens are in strong contrast in form and landscape quality to much of the suburb of Auburn.

The Botanic Gardens consists of nine (9) biodiversity themes:



1. Japanese Lake & Hill
2. Central formal area containing the reflection pool and pergola, sunken
3. Rose garden and scented garden.
4. Woodlands Theatre
5. Australian Native Garden
6. Australian Rainforest
7. Aviary
8. Fauna Reserve
9. Bonsai Garden

The current vegetation of the Auburn Botanic Gardens precinct consists of a mix of indigenous native flora, ornamental flora, weed infestations, introduced lawn grasses and maintained garden areas of both native and exotic plants.

There are a number of buildings within the Auburn Botanic Gardens precinct. The more prominent buildings include:

1. Fauna Reserve
2. Aviary
3. Kiosk
4. Bonsai Garden
5. Community Picnic Area
6. Amenities
7. Woodland Theatre
8. Peacock Gallery
9. Bowling Green

The architectural features of the built environment, although varied in style are generally of a high quality and consistent with the surrounding themes of the area.

Existing site plan and uses, north of Chiswick Road.

The Auburn Botanic Gardens are in a good condition

Historical Notes

Construction years	1968 - 1977

The gardens owe their origin to the Cumberland Planning Scheme (1946–1951) which set aside a 9.5ha area along the banks of the Duck River for recreation. Both before and after the scheme, the council dumped rubbish and sewage along the banks and in brick and tile clay-pits for many years.

In July 1968, Black presented a detailed report to the council on proposing a mixture of sporting grounds and intensive cultivation of the Duck River parklands. Black envisaged a series of gardens representing national styles from around the world. This vision was later reduced, though some elements survived, including the Japanese gardens and lake, the formal gardens and reflection pool, and the different Australian habitats.

The next crucial step was the Whitlam Government (1972–1975) pioneering federal government recognition of local government through direct funding. Through the regional development program, Auburn Council received funding in 1974 and 1975–76 to develop the gardens.

The original concept and design of the Auburn Botanic Gardens is credited to Council's former Engineer and Town Planner Mr Eric Black. The Gardens were officially opened on the 11 September 1977 by His Excellency Sir Roden Cutler VC.

Originally, the Gardens were composed of a variety of spaces:

- Australian Garden
- Australian Rainforest
- Billabong Area
- Open Air Woodland Theatre
- Avenue of Remembrance
- Central Formal Area
- Garden of Trees
- Sunken Rose Garden
- Ornamental Reflection Pool
- Scented Garden
- Japanese Hill and Lake Garden
- Carpark
- Earth Mounds Planted with Native Shrubs and Trees
- Picnic Area
- Riverside Walk
- Floral Clock
- Kiosk
- Bonsai Garden
- Community Picnic Area
- Toilets
- Fern House

The Avenue of Remembrance was opened on the 12th September 1987 by the Hon Michael Cleary. Two plaques located at the northern end of the Avenue commemorate the part played by the Australian Government in the development of the Gardens and in particular the role played by the Hon Tom Uren and Victory in the Pacific in 1945 and the servicemen, women and civilians who gave service to our homeland in Australia's hour of need

The Aviary was added and officially opened on 5th December 1988 by the Hon Gary West. The Aviary was supported as a Bicentennial Project by the Commonwealth Government.

A Fauna Reserve was opened in 1994 and the equal access playground, a project supported by the Commonwealth Government, was opened by the Member for Reid, Laurie Ferguson MP on 28 May 2001.

The gardens have matured since their opening, to the extent that some areas have had to be replanted after maturing trees and plants came to the end of their life cycles. The New South Wales National Parks and Wildlife Branch of the Department of Environment and Climate Change has identified the gardens as part of the recovery plan for certain environments and species, including Cooks River clay plain scrub forest, *Acacia pubescens* (downy wattle) and *Wahlenbergia multicaulis* (Tadgell's bluebell).

Community groups have added a bonsai garden and an aviary to the basic plan. The native fauna reserve, set up in consultation with Taronga Zoo, is a later addition by the council's parks and gardens department.

The Gardens host two important festivals each year, the Autumn Colours Festival in late May and the Cherry Blossom Festival in mid to late August.

In recent years other additions to Auburn Botanical Gardens include Peacock gallery and a Bowling Green. Peacock Gallery is functions as a public art space for the local community and council to showcase art. Their date of construction is unknown.

Statement of Significance

The Auburn North Public School buildings have local historic and aesthetic significance, having served as a community educational resource since the late nineteenth century. Built 1891, the buildings are also significant for the evidence they provide of the nature of suburban development in the Federation period. In particular they provide evidence of the development of local social and cultural institutions to accompany the notable residential growth of the period. Architecturally, the school buildings are representative examples of well detailed Federation, suburban school buildings of the period and externally they appear to retain much of their original character and fabric. The siting of the group and the integrity of its aesthetic qualities also make it a notable and attractive landmark in its local area.

Criteria Assessment	
a) Historic	The school is historically significant for its role as an educational institution for the community since 1891. The buildings provide evidence of the nature of suburban development of local social and cultural institutions which accompanied the residential growth of the suburb during the early twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Architecturally, the school buildings are representative examples of well detailed Federation, suburban school buildings of the period and externally they appear to retain much of their original character and fabric. The siting of the group and the integrity of its aesthetic qualities also make it a notable and attractive landmark in its local area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The main building of the Auburn North Public School comprises a large two storey building, constructed in brick with gabled roofs and situated adjacent to large outdoor play areas and yards. The building is face brick, with a corrugated iron roof, exposed rafters, regular roughcast rendered masonry chimneys and regular fenestration. The window heads are cement rendered. The windows are timber framed, double hung sash configurations.

The Adderley Street facade of the main building features the gable end of the main roof, with a prominent verge and simple, taper cut barge boards. The first storey contains three small square paned windows with arched heads. The name of the school and date of construction has been fixed onto the wall below these windows. The ground storey forms an annex with a smaller gabled roof. It is partially clad in weatherboard.

There are a number of other school buildings around the site that relate to later periods of use and expansion, though these are not well documented and were not readily visible during the site inspection.

The former listing sheet notes that the site contains Morton Bay Figs, though these were not visible during the public domain site visit.

Overall, the school appears to be well kept and in good condition.

Condition	Good	Fair	Poor

Alterations and Additions

- The early 'U-shaped' building appears to have been infilled with later brick addition. A number of modifications have been made to the grounds of the school, including the construction of a mesh boundary fence and bituminising of the recreational areas. Other buildings have been built on the grounds as the needs of the school expanded and upgrades were required over time.
- Typical accretions such as air-conditioning condenser units and signage are prevalent.

The main school building maintains much of its historic character. Though, as is the nature of school buildings, they are subject to change overtime and it is likely that the interiors and some elevations are of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1891

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

Auburn North Public School stands on the south western corner of Samuel Haslam's grant of 1806, facing Parramatta Road. An application for the establishment of a public school at Auburn North was forwarded to the Department of Education in 1889, however the request was refused. Approval for the building of a school was eventually given, later in 1889. The site of three acres was acquired in 1890 and the first building erected in 1891. The school was opened shortly afterwards. Additions to the building were made in 1895. In 1920 an Infants School was completed.

The school was enlarged in 1924 when over an acre was purchased and more land was acquired later in 1925.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. 5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the Development Application should be accompanied by a detailed building assessment to understand which buildings are significant and how to manage change.
- Should any new buildings be proposed for the site, the architecture of the new buildings should not detract or adversely impact upon the heritage items and respect the heritage character.

Curtilage Map

Statement of Significance

The Auburn Public School is of local significance for historic and social values. Built in 1886, the buildings have served as a community resource. The buildings are also historically linked to the suburban development of Auburn during the 1880s to the 1930s. In particular, they provide evidence of the development of local social and cultural institutions that accompanied the residential growth of Auburn during that period.

The school buildings are aesthetically significant as large single and two storey, intact and well detailed Victorian and Federation suburban school buildings that appear to retain much of their original character and fabric. The siting and integrity of the group and the integrity of its aesthetic qualities also make it a notable and attractive landmark in the local area. The portable classroom blocks are not considered to be significant. The buildings demonstrate representative qualities of both Victorian and Federation school buildings built between 1886 and 1915.

The *Eucalyptus Molucanna* is representative of indigenous vegetation that once was the dominant vegetation of the locality. It is significant for its aesthetic, historic, social and scientific values being a landmark tree in the locality, retained in the grounds of a local educational institution and has scientific potential as a seed source.

Criteria Assessment	
a) Historic	The Auburn Public School has local historic significance, serving as a community resource since 1886. The buildings are also significant for the evidence they provide of the nature of suburban development in between 1880 and 1930s. In particular, they provide evidence for the development of local social and cultural institutions that accompanied the residential growth of Auburn during that period.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The school buildings are aesthetically significant as representative examples of large single and two storey, well detailed Federation, suburban school buildings of the period and externally they appear to retain much of their original character and fabric. The main building has fine brickwork and stone detailing in the front facade. The stone detailing around the front windows is a good example of the art of stone masons at the time of the original construction. Similarly, the buildings exhibit good quality brickwork and are a good example of the type of school buildings that were being constructed. In particular, the cottage to the north of the site is a typically proportioned Federation cottage of the period. The siting of the group and the integrity of its aesthetic qualities also make it a notable and attractive landmark in its local area and it retains the original buildings on the site and in an area where nearly all the other original building stock has disappeared. The portable class room blocks are not considered to be significant.
d) Social	The school has social significance with the current and past community of Auburn including current and past pupils, parents and teachers.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The buildings demonstrate representative qualities of Victorian and Federation school buildings built between 1886 and 1915. The *Eucalyptus Moluccana* is representative of indigenous vegetation that once was the dominant vegetation of the locality. It is significant as a landmark tree in the locality, retained in the grounds of a local educational institution and has the potential as a seed source.

Physical Description

The Auburn Public School complex comprises a number of single and two storey buildings, mostly constructed in brick with gabled rooves and situated around large outdoor play areas and yards. The earliest of the buildings dates to 1885 and is one storey, with tall, narrow windows and a decorative timber barge board, with rendered side walls. The windows in the gable wall of this building have quoined reveals in sandstone.

It appears that the front verandahs are still present but at some time these have been filled in with timber cladding. Most of the other buildings in the complex are face brick, with shingled or corrugated iron rooves, exposed rafters, regular masonry chimneys and regular fenestration. The window heads are either cement rendered or arched brickwork. The windows are timber framed, double hung, sash configurations. A portable classroom block has been installed at the School, containing at least two extra large classrooms.

The site contains a large established *Eucalyptus mollucana* tree that is approximately 20 meters in height. The tree is located in the playground of the school complex in the vicinity of the Victorian school buildings along Beatrice Street. The tree is a remnant planting of the original vegetation of the Cumberland plain and is a substantial example of its type.

Overall, the item is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Demountable buildings have been added to the site*
- New coated steel palisade fence
- Contemporary school signage

As per the former listing sheet for the item, “the School buildings do not appear to have been extensively modified since construction”. The item is considered to have high integrity as viewed from the street. However, as the site has continued to function as a school it is likely the interiors have undergone some change and are of a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1886

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O’Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Pots, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith’s poem ‘The Deserted Village’. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

A formal application for a public school at Auburn was made in 1884. The application was approved in that year and in 1885 the site was purchased. Auburn Public School was completed in 1886. The school was built to accommodate 200 pupils and by the end of the first week it 180 had enrolled. In the same year, a wooden infants building was added. As a result of the annual inspection of 1903, the school was raised to the rank of 'Superior'. Four classrooms for girls were added in 1910 and a new boys' building in 1916. Another building was completed in 1921 and six rooms in 1925; four of which were for girls and two for boys.

Remnant vegetation of the Cumberland plain, the *Eucalyptus Moluccana* tree, was probably retained when the school was established in the late 19th century.

Today, the site remains in use as a school.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the Development Application should be accompanied by a detailed fabric analysis.
- Should any new buildings be proposed for the site, the architecture of the new buildings should not detract or adversely impact upon the heritage items and respect the heritage character.

Curtilage Map

Statement of Significance

The dwelling at 245 Auburn Road, Auburn is of local heritage significance for its social and representative values. This site is architecturally representative of typical post-war suburban housing that was prolific throughout major cities in Australia as it responded to a period of economic restraint as well as population growth. The item retains its aesthetic significance through the retention of much of its original detail, form and landscaping. This dwelling is a representative example of vernacular architecture common in Post-War suburbia. It has social significance as community housing.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	This site is architecturally representative of typical Post-War suburban housing that was prolific throughout major cities in Australia as it responded to a period of economic restraint as well as population growth. The item retains its aesthetic significance through the retention of much of its original detail, form and landscaping.
d) Social	The item has social significance as community housing.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item has representative significance as vernacular architecture common in Post-War suburbia.

Physical Description

The building is a triple-fronted timber weatherboard residence with terracotta roof on a raised masonry base with concrete slab verandah. It has timber-framed doors and windows, with the main entrance in the central front, and casement windows to the fronts on either side. The central front also has a wide opening which is filled with glazed timber-framed French opening doors framed with sidelights on either side.

To the side rear is a detached shed constructed of corrugated steel sheet, and to the rear and attached to the residence building is a steel carport structure at the end of a concrete driveway which is accessed from Vaughan Street.

The building is set within a deep corner setback with minimal landscaping, enclosed with a low white timber picket fence.

Condition	Good	**Fair**	Poor

Alterations and Additions

- The front façade maintains its original triple-fronted character, however to the rear there are a number of attached and detached modern structures such as carports and sheds
- Steel grilles to all windows
- A penetration in the roof to allow for a steel heater stack

Overall the integrity of the building is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1950s-1960s

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The period after WW2 was austere and stringent due to general shortages and rationing of many things including building supplies. Accompanying this was an increased demand for cheap and quick-to-

construct housing with the returning soldiers, the baby-boomer generation, and immigration. Housing in these post-war expansion areas and subdivisions does not carry the decoration and prestige of earlier affluent periods, but while it may have been limited in terms of budget, labour and materials, challenged more traditional designs with its un-symmetrical frontages, open-plan floor plans, and use of new building techniques and materials. This housing is still very common in many suburbs around major centres that expanded and subdivided in this period, including most of Sydney's western suburbs.

This particular dwelling was constructed between the 1950s and 60s and is an example of housing constructed as a part of this port-war housing development in Auburn. It remains in use as a private dwelling.

Curtilage Map

Statement of Significance

The site has local significance for its historic, aesthetic, rarity and representative values. Built in 1876, the dwelling is a rare example of a late-nineteenth century Victorian Italianate dwelling dating from the first subdivision of the area. Through its character and location, the site also provides evidence of the influence of the railway and industrial development on the residential suburb of Auburn. The original fabric of the building is largely intact, and it has attractive and interesting decorative detail and a mature garden setting that contribute to the aesthetic values of the item. The

Criteria Assessment	
a) Historic	The site has local historic significance as a rare example of a suburban residence erected in the late nineteenth century on a new subdivision, which was reflective of the growing influence of railway and industrial development in the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	It provides a good example of a substantial Victorian Italianate residence. The original fabric of the building is largely intact and has attractive and interesting decorative detail and mature garden setting.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The site is a rare example of a substantial Victorian Italianate dwelling from the late nineteenth century in this area.
g) Representativeness	The item demonstrates representative qualities of an intact Victorian Italianate cottage, built in 1876.

Physical Description

Built in the Victorian Italianate style, the building is situated on a large block with mature landscaping to the front, including the public verge. It features a corrugated steel hipped main roof and extended gable with decorative timber bargeboards and finial over the faceted front bay window. The window has three arched, timber framed, double-hung sash windows highlighted with moulded reveals. A bullnose verandah extends along the front of the building, supported by decorative cast iron posts and brackets. There are two corbelled brick chimneys. The building is painted brick, while the bay window is fully rendered. The wall at the rear of the verandah features two full height, double-hung sash windows with timber frames. The front door is located adjacent to the front wing and is a panelled door with coloured leadlight glazing and detailed mouldings around the panels. What appears to be the original picket fence extends along the street frontage.

There is a carport at the end of a concrete driveway on the southern side of the property.

The site contains mature plantings that are overgrown and ad hoc in nature. While they are not considered to be formal, planned plantings associated with the residence, they contribute towards the overall character of the dwelling.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Security grilles and screens on all windows and doors*
- Weatherboard shallow-pitched gablet on top of the main roof
- Modern corrugated steel cladding
- Modern carport and concrete driveway

The form and detailing of the building is highly intact, despite some modern upgrades and accretions. This property is one of the few extant early Victorian properties situated on a large block that remains intact with very few modifications.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1876

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area

was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The improved transportation infrastructure to the region, including rail and road networks, and the relocation of many industries and other utilities to Auburn resulted in a growth in residential development around the emerging town centres and within walking distance from the places of employment.

The nature of these early residences varied according to their location. Most were constructed simply from timber with weatherboard cladding and shingled or galvanised iron rooves. Many were simple, single storey workers' cottages, of which a number remain. Others, built around the turn of the century, were constructed from brick or timber or a combination of the two, with tiled rooves and timber detailing.

This brick residence in Cumberland Road is situated on one of the early subdivisions of the Auburn region in the late nineteenth century. It was owned by Martin Long. This residence is an example of one of the earliest residential types to be constructed in Auburn in this area. It may also provide evidence of one of the earliest uses of brick in the region. This property is one of the few extant early Victorian properties situated on a large block that remains intact with very few modifications.

Today, the building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Mature landscaping which currently obscures the building should be maintained.
- A paint colour scheme to represent the Victorian era would be more sympathetic.

Curtilage Map

Statement of Significance

The dwelling at 31 Gelibolu Parade is of local significance for its historic, aesthetic and representative values. Built in c1910-1915, the dwelling relates to the early twentieth century development of Auburn, which continued to be driven by industrial activity in the wider area. The item has aesthetic value, contributing positively to the streetscape character of the area. The item demonstrates representative qualities of a Federation period residence built in Auburn, c.1915.

Criteria Assessment	
a) Historic	The dwelling relates to the early twentieth century development of Auburn, which continued to be driven by industrial activity in the wider area. From the 1870s, industrial development had a significant impact on Auburn's residential development.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic values through its positive contribution to the streetscape character of the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact Federation bungalow built in Auburn c.1915.

Physical Description

The building is a Federation double fronted bungalow with a Marseilles tiled low-pitched gable roof and a projecting gable, tuck-pointed brickwork and roughcast render walls and gable ends. The street facing façade comprises of timber and roughcast rendered gable ends to the main roof and to the projecting gable, with timber shingles to the main gable end. A verandah with a brick parapet wall and pier with decorative metal panel, and a Marseilles tiled skillion roof faces the street and provides entry to the house. This is addressed by a temporary ramp over the front steps. The windows are timber framed, double hung sash windows set in a segmental arch. The window located on the projecting gable end are covered by a corrugated metal awning on timber brackets. The windows are fronted by a lightweight aluminium framed flyscreen. The entrance door is a single leaf door with a transom also set within a segmental arch opening. A horizontal band of rendered and painted bricks runs continuously across the street facing facades of the building so as to demarcate the lower brickwork sections of the building from the upper roughcast render sections. The front fence is a low brick wall, with brick coping and piers set with decorative metal grills. The front façade appears to feature a refreshed paint scheme.

The eastern side of the verandah has been boarded up with fibre cement panels. The bargeboards to the projecting gable have been replaced, guttering and downpipes introduced to the southern side of the building, and a junction box has been added to the northern façade. The item features a rear brick extension with a skillion roof. A large shed is located at the rear of the property. The structure is a fibre cement sheets with a corrugated iron roof.

The property retains a modest setback consistent with the streetscape. The front yard features some informal plantings and young trees that not of heritage significance.

Overall, the item is in fair condition and well-maintained. There is some paint peeling from the bargeboard that it typical for a building of this age.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Fibro sheet privacy screen at the eastern end of the verandah*
- Replaced bargeboards to projecting gable
- Junction box to northern façade
- Guttering and downpipes to southern façade
- Repainted façade elements
- Flyscreen to front windows
- Ramp covering front step to verandah

Overall, the integrity of the item is moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1910-1915

The land which forms part of the modern suburb of Auburn was first developed the 1790s, when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Pots, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

Gelibolu (Turkish for Gallipoli) Street was previously known as North Parade up until approximately 1986, when the Auburn Gallipoli Mosque was constructed on the street to commemorate the relationship between the Australian and Turkish troops in World War I. The land at 31 Gelibolu Parade appears to have been subdivided between 1910-1915. The style of the building and the available mapping suggests the building may have been constructed around this time.

Today, the building remains in use as a private residence.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning

Curtilage Map

Statement of Significance

The dwelling at 3 Kihilla Street, Auburn is of local heritage significance for its historic, aesthetic and representative values. Built c.1926, the dwelling has historic significance as a working-class residence erected in areas of suburban expansion in the early twentieth century. It has aesthetic significance as a good representative example of a worker's residence typical of the style from the Inter-War period. The original fabric of the building is largely intact and it has attractive and interesting decorative detail.

Criteria Assessment	
a) Historic	Built c. 1926, the dwelling has historic significance as a working class residence erected in areas of suburban expansion in the early twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as good example of a typical worker's residence. The original fabric of the building is intact and they have attractive and interesting decorative detail.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item forms part of the intact collection of worker's residences in Kihilla Street which were typical of many such bungalows constructed in Auburn around the 1920's, during a population boom in the area.

Physical Description

This item is a single storey, Inter-War dwelling with Federation style influences. It sits on an average sized block in Kihilla Street. It has a hipped roof with a gabled wing extending from the main structure. The terracotta main roof is extended over a deep verandah with timber verandah posts and decorative timber brackets supported by brick piers, linked by a brick balustrade. The gable has prominent eaves with tapered barge boards. The gable end has been stuccoed. A small face brick chimney protrudes through the hipped roof at the rear of the gable and another in the opposite hip of the roof. The walls are constructed from dark face brick. A window is situated in the street facade of the projecting wing, with security grilles and an awning with decorative timberwork over it. Another window is located in the wall adjacent to the main entrance, also with grilles.

The property was originally enclosed with a wrought iron fence between brick piers at the corners of the property, however the iron fence elements have been removed. The brick piers remain intact and show evidence of repair and some remnants of the fence fixings. Two original decorative wrought iron gates remain in place. Through one of the gates is a tiled entrance pathway that runs through the front yard, positioned in the centre of the property. A series of three paved steps lead to the tiled verandah, and the centred main entrance.

The dwelling has a consistent setback within the street. There are no notable plantings within the front garden.

The dwelling is in good condition overall, showing no signs of fabric deterioration.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Removal of original wrought iron fence elements
- Security grilles on windows*

Apart from these small accretions, the item is highly intact in form and decoration.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1926

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area

was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The Inter-War Years comprised of periods of both economic prosperity and stringency, especially during the Great Depression, and both such conditions were reflected in the architectural fabric of Auburn. During the 1920's a number of residences were erected in 'Californian Bungalow' style, based on the 'Federation Bungalow', with many features borrowed from Californian originals. These residences in Kihilla Street are typical of many such residences constructed in Auburn around the 1920's, during a population boom in the area.

The establishment of Investment Companies and Building Societies enabled local workers on low incomes to own simple cottages such as this one, on reasonably sized blocks. After the Great Depression, in the early 1930's building activity was considerably slowed, and only the simplest of structures were erected.

Today, the dwelling remains in use as a private residence.

Curtilage Map

Statement of Significance

The dwelling at 8-10 Mary Street is of local significance for its historic, associative, aesthetic and rarity values. Built in 1931, the building is historically linked with the suburban and urban development of Auburn within the Inter-War years. The item is historically associated with prominent local Dr Mr Lawson who used the ground floor as his doctor surgery and resided upstairs. The building is a rare example of an Inter-War suburban residence erected on land relatively close to the town centre. The item retains its aesthetic significance as an intact Inter-War residence with Georgian revival influences. This is enhanced by the level of original fabric and architectural detailing retained. It remains a good, rare example of a large residence, erected in the municipality of Auburn during the Inter-War period.

Criteria Assessment	
a) Historic	Built in 1931, the building is historically linked with the suburban and urban development of Auburn within the Inter-War years.
b) Associative	The item is historically associated with prominent local, Dr Mr Lawson. The item remained in the Lawson family until 2011.
c) Aesthetic/Technical	The item retains its aesthetic significance as an intact Inter-War residence with Georgian Revival influences. This is enhanced by the level of original fabric and architectural detailing retained.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	It is a rare example of a large residence erected in the municipality of Auburn during the Inter-War period. This is enhanced by its architecture and proximity to the town centre.
g) Representativeness	The item does not meet this criterion.

Physical Description

Located at the corner of Mary Street and Harrow Road, the site consists of a double storey Inter War Georgian Revival residence. It has a simple, rectangular massing with a symmetrical street facade featuring an entrance portico in the classical order. The entrance portico features a moulded entablature with decorative pediment. The corners of the building are quoined. Paned, double hung sash windows with timber frames are situated at regular intervals in the facade and a small pair of French doors open onto the balcony over the entrance portico. The windows have moulded sills and small, moulded projecting entablatures with brackets. The balcony features a decorative metal balustrade with Art Deco design influences, similar in style to the metal detailing of the low boundary wall around the site. This low wall features a central gateway, leading directly to the entrance portico behind. Two tall palm trees are situated either side of the entrance portico in the front yard. A garage forms part of the ground floor and is accessed from Harrow Road. It is set forward from the main residence, forming a bay in the side wall. The garage features a highly dilapidated timber door.

A small gateway, off the street, leads to the rear yard of the building. A tall, narrow, rendered brick chimney is situated in the side wall of the building. The roof is hipped and clad in terracotta tiles. A small dormer window is situated in the eastern hip of the roof.

Overall, the building is in good condition. The building has been repainted in the recent past, however there is some staining to the render at the rear of the building. The garage door is highly dilapidated.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Aluminium panelled fence along Harrow Road*
- Roller shutters to windows along Harrow Road
- Garage door along east elevation*
- Refreshed façade with new paint.

Overall, the item is considered to have a high level of integrity. Externally, very few modifications to this residence have occurred. The entrance lighting on the columns of the portico may be a later addition, as well as the roof tiling which may have been replaced, along with the side downpipe. However, as the building has continued to function as a residence and doctors' surgery from the 1930s to 2011, it is likely the interiors have undergone some change.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1931

The land which forms part of the modern suburb of Auburn was first developed the 1790s, when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Pots, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and, by 1880, it was reported that there were about 40 residences and a population of 200 people living in

Auburn. By 1912–13, Auburn had established itself as suburb with the eleventh largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The Inter War Years comprised periods of both economic prosperity and stringency, especially during the Great Depression, and both such conditions were reflected in the architectural fabric of Auburn. During the 1920's, a number of residences were erected in the 'Californian Bungalow' style, based on the 'Federation Bungalow', with many features borrowed from Californian originals. After the Great Depression, in the early 1930's building activity was considerably slowed, and only the simplest of structures were erected. This residence on Mary Street appears to be an exception to these trends.

The item was the residence of a prominent local doctor, Dr. Lawson and was constructed in 1931. Initially built as a single storey residence with a large fence, approximately 6 foot high. The Council received many complaints from local residents over the height of the fence. The house was designed by architect, Mr Jarvie.

It is unknown when the second addition was made to the dwelling, but it appears to be done pre-1943. The ground floor was used for waiting rooms and a surgery while the residence was located upstairs. With exception of the fence along Harrow Road, the boundary fence appears to be original, suggesting that the residence was not situated on a larger block. The dwelling remained in the Lawson family until at least 2011. Today, the dwelling remains in use as a private residence, however unoccupied.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the aluminium side boundary fence should be removed and replaced with a sympathetic design solution.

Curtilage Map

Statement of Significance

The dwelling at 16 Queen Street, Auburn is locally significant for its historic, aesthetic and representative values. Built c. 1875, the dwelling is a representative example of an early residence erected in the late nineteenth century on one of the earlier subdivisions. It is aesthetically significant as a good example of a Victorian residence where the original fabric of the building is largely intact and it has attractive and interesting detail. Through its character and location, the site also provides evidence of the influence of the transport routes and industrial development in the residential suburb of Auburn.

Criteria Assessment	
a) Historic	The item is locally significant as an early Victorian cottage erected in the late nineteenth century as part of early subdivisions in the area. Through its character and location, the site also provides evidence of the influence of the transport routes and industrial development in the residential suburb of Auburn.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	It is aesthetically significant as a good example of a Victorian residence where the original fabric of the building is largely intact and it has attractive and interesting detail.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representation of an early suburban cottage in the Victorian Regency style for this area.

Physical Description

The item is a grand, one storey residence with a simple square building footprint on an irregular triangular allotment. It has a hipped terracotta roof with accented ridge tiles. The roof eaves are supported by decorative masonry corbelled brackets. It has a symmetrical street facade, featuring a full length, hipped verandah roof. The corrugated iron roof sheeting is painted in an alternating stripe scheme of green and steel grey. The verandah is supported by simple timber posts and simple timber balustrading. The verandah flooring is timber. The front façade fenestration is symmetrical, with the front door in the centre and a single large window to either side. The door reveals are accented with a rusticated rendered quoining to match the quoining around the large double hung, timber framed, sash windows and at the corners of the building. The sills appear to be timber with an elaborately decorative profile. The building is surrounded by a yard on all sides, the front yard area being quite shallow.

A sandstone boundary wall is located along the street frontage, with taller pillars and capping positioned at regular intervals along the wall. The central pillars frame a wire gate forming the street entrance to the yard and property. One of the capping stones at this entrance is carved with “GLENARA 16”.

There is a concrete driveway at the southern corner of the property on the corner of Queen and Louisa Streets, with a detached weatherboard garage with roller door.

The dwelling is in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Screen door to entry

The item is highly intact with very few external modifications and accretions.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1875

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O’Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith’s poem ‘The Deserted Village’. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn’s development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area

was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The improved transportation infrastructure to the region, including rail and road networks, and the relocation of many industries and other utilities to Auburn resulted in a growth in residential development around the emerging town centres and within walking distance from the places of employment. The nature of these early residences varied according to their location. This is a surviving cottage on one of the early subdivisions of Auburn, built c.1875.

Today, the dwelling remains in use as a private residence.

Address	Corner of St Johns and Park Roads, Auburn NSW 2144		
Lot/Section/DP	1	-	828311
Current LEP ID	I14 (Cumberland LEP)		
Former LEP ID	I12 (Auburn LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Landscape	
	Level 2	Parks/Garden/Tree	

Curtilage Map

Statement of Significance

Grey Box Reserve is of local heritage significance for its historic, aesthetic, scientific, social and representative heritage values. The reserve is representative of remnant native vegetation that used to cover the local region. The trees have historic, aesthetic, scientific and social significance through their local landmark quality at the corner of St Johns Road and Park Road, evidence of continuing seed source of the original indigenous vegetation and recognition by the local community in the establishment of "Grey Box Reserve".

Criteria Assessment	
a) Historic	The item contains natural elements that are historically representative of the indigenous landscape that used to dominate the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic and scientific significance through their local landmark quality at the corner of the St Johns Road and Park Road, evidence of continuing seed source of the original indigenous vegetation.
d) Social	The has social significance to the local community who have established the "Grey Box Reserve" as a natural asset of a now rare landscape.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Representative of remnant indigenous vegetation that used to cover the local region.

Physical Description

A group of Grey Box (Eucalyptus mollucana) that has been selected by the local community to be representative of the local indigenous vegetation that was originally the dominant tree in the local region. Much of the reserve is grass with a selection of Australian native shrubs located in the planter bed around the trees. There is a small stone with a plaque set in a small rock, located in the reserve at the corner of St Johns and Park Roads.

The plaque reads:

AUBURN COUNCIL

GREY BOX GUM RESERVE

THE EUCALYPTUS MOLUCCANA (GREY BOX) TREES IN THIS RESERVE ARE ONE OF THE LAST REMAINING STANDS OF INDIGENOUS TREES WITHIN THE AUBURN COUNCIL AREA

COUNCIL PURCHASED THE RESERVE IN 1993 IN AN ENDEAVOUR TO PRESERVE THE TREES FOR FUTURE GENERATIONS

COUNCILLOR S.L. HEDGES
MAYOR
COUNCILLOS AND OFFICERS OF Council

P.N CURTIN – DEPUTY MAYOR

P.J BOYCE	C.M. CASSIDY

S.K. HASLEM O.A.M	W.J. KAIN
T.H KEEGAN	L. LAM
H. LANE	J.D. MOORE

GEORGE TOEMOE – GENERAL MANAGER

The item is considered to be in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- N/A

As the trees are mature remnants native vegetation the item is considered to have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1788-1855

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and

by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The trees were likely naturally seeded from the nineteenth century and are remnant vegetation of the local region recognised by the local community as an important local resource in 1988. The site was probably a spare block of land until recognised by the local community in the formation of the park. Auburn Council purchased the land in 1993 in an endeavour to preserve the remnant landscape, formally creating the Grey Box Reserve.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

Heritage Inventory Sheet

Item Name	Horse Trough		
Recommended Name	Horse Trough		
Site Image			
Address	Corner of Water Street and Auburn Road, Auburn NSW 2144		
Lot/Section/DP	-	-	-
Current LEP ID	I15 (Cumberland LEP)		
Former LEP ID	I13 (Auburn LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Movable/Collection	
	Level 2	Farming/Grazing	

Curtilage Map

Revised Curtilage recommended - refer to below.

Statement of Significance

The horse trough has historic significance as a remnant public infrastructure relating to past agricultural processes and technologies. This item demonstrates how agricultural and industry has developed over time. The item is associated with Annis and George Bills, who erected a number of horse troughs throughout NSW and VIC in the Inter-War period. The item represents a period when working horses for agriculture and industry was prevalent.

Criteria Assessment	
a) Historic	The item has historical significance as a remnant public infrastructure relating to past agricultural processes and technologies. This item demonstrates how agricultural and industry has developed over time.
b) Associative	The item is associated with Annis and George Bills, who erected a number of horse troughs throughout NSW and VIC in the inter-war period.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item represents a period when working horses for agriculture and industry was prevalent.

Physical Description

The item is a precast concrete horse trough with internal steel reinforcing. The trough is divided into two compartments, one substantially larger than the other. The concrete uses a large dark bluestone aggregate throughout the trough with the exception of the name plate which has a fine white stone aggregate inserted, giving it some visual prominence. Engraved into this name plate is “DONATED BY / ANNIS & GEORGE BILLS / AUSTRALIA”**.** The engraved letters are painted black.

The trough itself is formed of one piece of precast concrete, with the decorative rounded backing pediment attached as a separate piece, as are the three blocks which form the feet of the trough. There is a steel ring that protrudes from the front edge of the trough, which would have been used to tether horses.

The trough is positioned on the northern verge of Water Street, on the corner of Auburn Street. A concrete pad, footpaths and street kerbing are all positioned closely, or abutting, the trough.

The condition of the trough is good, although it does exhibit signs of weathering and expected wear and tear. The embossing profile around the edges of the back pediment and around the trough is no longer pronounced, and some exposed metal reinforcing is corroding. It does not show any signs of impact damage despite its proximity to the roadway.

Condition	**Good**	Fair	Poor

Alterations and Additions

- No alterations or additions to the item itself, it is highly intact with all original pieces in position. However, other concrete elements such as kerbing edges and footpaths have been installed in close proximity or abutting against the trough.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1920-1950

Horse troughs were used in the era before motor vehicles, where industry and transport were dependant on working animals. Bills horse troughs were installed from the late 1920s to early 1940s to provide relieve to work animals throughout New South Wales and Victoria. Bills horse troughs were funded by a trust left by George Bill, a businessman prominent in Sydney, Melbourne and country Victoria, on his death in 1927. The trust set out in George Bills’ will was to:

> *"..construct and erect and pay for horse troughs wherever they may be of the opinion that such horse troughs are desirable for the relief of horses and other dumb animals either in Australasia, in the British Islands or in any other part of the world subject to the consent of the proper authorities being obtained."*

Each trough cost £13 plus transport and installation. Earlier troughs were individually designed until the early 1930s when they began production to a standard design, of which the horse trough on Water Street is an example. Production of troughs ceased by 1945 with the rise of motor vehicles.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The item is at a high risk of damage by motor vehicles, as this intersection is highly trafficked. Relocation to a more appropriate location (for example, in a 'No Stopping Zone') along Water Street may be a good outcome.
- As the listing concerns the horse trough only, the heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Former LEP ID	I14 (Auburn LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The item is locally significant for its historic, associative, aesthetic and rarity values. Built in 1916, the dwelling has historic and aesthetic significance as a good example of a typical inter-war fibre cement clad workers cottage on the same allotment plan since the original subdivision of the area. The building is of associative significance as it was constructed by the Voluntary Workers Association (VWA) for an incapacitated returned soldier. The item is also rare in that this example is the only such residence built by the Voluntary Workers Association in Auburn.

Criteria Assessment	
a) Historic	The item is a good example of a modest residence by the Voluntary Workers Association for the support of returned servicemen. It was built at the time this area was first subdivided. The allotment was offered to the VWA from the local council. The VWA was formed in 1916, making this one of their earlier projects, and the only one of its type built in Auburn.
b) Associative	The item is associated with the Voluntary Workers Association, an important community-based organisation from 1916 who built houses and provided support to returned soldiers and their families during and after WWI.
c) Aesthetic/Technical	While the item is a good example of a typical, modest workers cottage, it has minimal decorative detailing and does not utilise any materials of distinction.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item has rarity values as the only such residence built by the Voluntary Workers Association in Auburn.
g) Representativeness	The item does not meet this criterion.

Physical Description

This cottage may have come directly from the 'Hudson's Redicuts Catalogue'. It is a simple, narrow, gable rooved 'box' in fibro. The residence has a set back entrance on one side, with two cement steps leading to the front door, covered by the roof gable and a bullnose verandah which wraps around the full length of the street facade. The gable has small eaves and taper cut barge boards. The roof is clad in painted corrugated iron as is the bullnose verandah. The timber verandah posts are turned, with carved timber brackets being the only decorative feature on the façade. The narrow street facade of the residence also features a pair of timber framed sash windows. The front landscaping has been fully concreted.

There is one mature tree to the north of the dwelling, though this is not a significant or notable planting.

The condition of the item is good. It retains much of its original fabric and overall aesthetic.

Condition	**Good**	Fair	Poor

Alterations and Additions

- A steel open carport added to the gable-ended front of the building*
- A refreshed paint scheme has been added

The building is highly intact with minor alterations and additions and therefore has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1916

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In the 1860s-80s some of the larger estates were subdivided for residential use, at which point the Auburn community originated from. John Yelverton Mills subdivided his estate near the railway station and named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in 1855 when the first Government railway line from Sydney to Parramatta Junction allowed for suburban development around the area. In the 1860s the New South Wales government began buying small lots of railway rolling stock locally, like from manufacturers Henry Vale & Co. who built locomotives around Auburn. Some other notable industries that came to Auburn include car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

In 1916 Council offered the block of land at 21 Yillowra Street to the Volunteer Workers Association who proceeded to build a cottage on the allotment for the use of returned WWI servicemen and their families. Most of the building materials were donated and the labour was voluntary.

Today, the dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, a paint analysis should be undertaken to an find an appropriate heritage paint scheme to apply to the dwelling.

Curtilage Map

Revised curtilage recommended – refer below.

Statement of Significance

Installed in 1967, the Jack Lang Plaque is of local significance for its associative significance, as a tribute to Mr John T Lang (1900 – 1958) who was the Mayor of Auburn, Colonial Treasurer of NSW, Premier of NSW and a pioneer of social welfare legislation over his lifetime.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item is dedicated to Mr John T Lang who was the Mayor of Auburn, Colonial Treasurer of NSW, Premier of NSW and a pioneer of social welfare legislation over his lifetime.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item consists of a bronze plaque which reads:

"A tribute to a distinguished man of the people who occupied this site from 1900 – 1958 Mr. John T. Lang: Mayor of Auburn 1909 – 1910; Colonial Treasurer of New South Wales 1920 – 1922; Premier of New South Wales 1925 – 1927. A pioneer of social welfare legislation. Erected by The Citizens Council of Auburn. This plaque unveiled by his worship the Mayor of Auburn ALD. S. L. HEDGES on 7th November 1967."

The plaque shows signs of oxidisation and there are some paint droplets on the plaque from painting works to the wall surrounding.

Condition	**Good**	Fair	Poor

Alterations and Additions

- None

Overall, the integrity of the item is high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1967

The land which forms part of the modern suburb of Auburn was first developed the 1790s, when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Pots, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

John Thomas (Jack) Lang (1876-1975), estate agent and politician, was born on 21 December 1876 in George Street, Sydney. In 1906 he became secretary of the Starr-Bowkett Ballot and Sale Society, a workers' co-operative home-buying group. In 1903 Lang was secretary of the Granville Labor League, in 1906 of the Nepean Federal Council of the party, and in 1913 president of the Granville Electoral Council. He was also secretary of the Newington Progress Association. He was associated with St Joseph's Hospital and took part in Catholic social life. In 1907-14 he represented Newington Ward on the Auburn Council and was Mayor in 1909-11 and the local seat of Granville in 1913. Lang was commonly referred to as 'The Big Fella' in reference to his physicality.

Jack Lang was a significant figure in New South Wales and Federal government and politics from the time of his election as a Political Labor Party (later Australian Labor Party) member to the NSW Legislative Assembly in 1913. During Lang's political career he is celebrated as the pioneer of social welfare legislation. He is remembered as a great reformer during his first premiership introducing the 44 hour working week, child endowment, widow's pension, and workers compensation. Lang also abolished fees for secondary school during this time.

As twice premier of NSW, he was one of Australia's most controversial politicians both loved and hated. Lang's second premiership occurred during the Great Depression. This was a tumultuous period that resulted in his dismissal from office by the NSW Governor for refusing to repay interest on Commonwealth loans. As a result, he was expelled from the Labor party in 1941. In 1971, Lang was re-admitted into the Party with the support of his young protégé, Paul Keating. Lang passed away in September 1975.

The plaque in Auburns town centre is recognition of Lang's contribution to the local government. The plaque was erected by the citizens and council of Auburn in 1967. It is unclear why the location at 4 Auburn Road was selected for the memorial. The land which formed part of Thomas Turners land grant in 1890 was acquired by the Commonwealth and transferred to Auburn Council in 1950.

Mr Lang's professional history has been outlined in the table below.

Position	Start Date	End Date	Duration
Member of the NSW Legislative Assembly	06 Dec 1913	15 Aug 1946	32 years 8 months 10 days
Member for Granville	06 Dec 1913	21 Feb 1917	3 years 2 months 16 days

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Owing to the size and location of the plaque the heritage curtilage should be reduced. The revised curtilage shown below should be updated as the new heritage curtilage for the item in the new Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Commercial	

Curtilage Map

Statement of Significance

The Keighery Hotel has local significance for its historic, social, aesthetic and representative values. It is as an example of a hotel established in the early twentieth century, prominently situated in the centre of the town of Auburn. The hotel is historically significant for providing temporary accommodation for some of the early industry workers who came to the area in the early twentieth century. It was amongst the earliest leisure facilities to be established in the area and provided stimulus to the growth of the town centre in the immediate vicinity. It is socially significant as a popular place of gathering and meeting in the Auburn community. The building has aesthetic significance as an intact Inter-War Georgian Revival building which is enhanced by the prominent corner location. The hotel demonstrates key representative qualities of an Inter-War Georgian Revival commercial building.

Criteria Assessment	
a) Historic	The hotel is historically significant as it would have provided temporary accommodation for some of the early workers to come to the area in the early twentieth century, as well as provided stimulus to the growth of the town centre in the immediate vicinity. The hotel was amongst the earliest leisure facilities to be established in the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	This hotel is an Inter-War Georgian Revival Building, characterised by the pediment, bracketed eaves, quoining to brickwork, multi-paned windows of horizontal proportions, string courses, Palladian motif, face brickwork and references to the Classical Order.
d) Social	It is socially significant as a popular place of gathering and meeting in the Auburn community.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The hotel demonstrates key representative qualities of an Inter-War Georgian Revival commercial building.

Physical Description

The two-storey hotel is an Inter-War Georgian Revival building characterised by pediments, quoining to brickwork, multi-paned windows, string courses, and references to the Classical Order in terms of columns and pilasters. There are three pediments with decorative fanlight motifs to the Rawson Street façade which indicate the primacy of this side of the building. French doors open out onto a balcony with a decorative metal balustrade placed in line with the pediments. There is a larger balcony along Station Road demarcated by two tapering Classical order influenced columns and decorative metal balustrades. The polychromatic brickwork to the first floor and to the ground and first floors of the end bay of the building along Station Road is contrasted by pilasters and quoining to the corners and bays of the building. There are cast brackets to the roof parapets and eaves. Multi-paned double hung sash windows with timber plantation shutters are placed in a regular sequence to the first-floor facades along Rawson Street and Station Road. The roof is hipped with a medium pitch with Marseilles tiles. An awning with hotel signage wraps around the corner of the building.

The ground floor façade has been modified over time with double leafed, panelled doors with fixed glass panes and ceramic tiling till lintel height. There are full glass shopfronts to the end bays of the ground floor façade along Rawson Street. There is an asphalted carpark to the north section of the site, which serves the hotel. The building features a flat roofed rear addition.

Overall, the condition of the item is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Ground floor ceramic tiling, doors and windows changed
- Contemporary shopfront fit-out at the western end ground level along the Rawson Street façade
- Contemporary signage to the Rawson Street façade
- Asphalt carpark at the rear
- Rear skillion addition

The overall integrity of the item, as viewed from the public domain, is considered to be high as the item retains a high level of original fabric, architectural detail and form. It is likely however that due to the continued use of the building as a public house and hotel that the interiors have undergone some change and are of a moderate level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1932

The land which forms part of the modern suburb of Auburn was first developed the 1790s, when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Pots, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

Hotels were amongst the earliest leisure facilities to be established in the area. Initially they catered to travellers but in the late nineteenth century they were established to cater for local residents. Hotels provided accommodation for single men who had recently arrived in the district and were to be employed in local industries. Such accommodation was in great demand. The earlier hotels were usually located in a prominent position in the town centres, or on the major transport routes such as Parramatta Road.

The Keighery Hotel was opened in 1932, with Greg Keighery as publican. Today, the building remains in use as a hotel / pub.

Curtilage Map

Statement of Significance

The Former Lea's Temperance Hall at 24 Mary Street, Auburn has some local historic, associative, aesthetic and rarity significance. The site was the former Lea's Temperance Hall (otherwise known as Clifton Boarding House). Lea's Temperance Hall was built in the 1890s and was the venue for the first meeting of Auburn Council in 1892 in lieu of the first Auburn Council Chambers which was not erected until 1896. Lea's Temperance Hall was built by Henry Lea in support of the Temperance movement which was popular around the world in the from the mid-1880s to WWI. The Hall was also used as a boarding house and hotel until its demolition in 1922. In 1922 the former Hall was replaced with the current structure, a two-storey Californian Bungalow style home which was owned by Dr Eric Hyam Freidman, an prominent local Doctor in the local community. While modified, the building still retains some key aesthetic features. This building is rare are multi-storey example of its type in the Auburn area.

Criteria Assessment	
a) Historic	The site was the former Lea's Temperance Hall (otherwise known as Clifton Boarding House). Lea's Temperance Hall was built in the 1890s and was the venue for the first meeting of Auburn Council in 1892 in lieu of the first Auburn Council Chambers which was not erected until 1896. Lea's Temperance Hall was built by Henry Lea in support of the Temperance movement which was popular around the world in the from the mid-1880s to WWI. The Hall was also used as a boarding house and hotel until its demolition in 1922. In 1922, the former Hall was replaced with the current structure, a two-storey Californian

	Bungalow style home which was owned by Dr Eric Hyam Freidman who was an eminent local Doctor in the local community.
b) Associative	The former Hall on this property was associated with the Auburn Council, being the site of the first meeting of Council in 1892. The current building is associated with Dr Eric Hyam Freidman who was an eminent local Doctor in the local community.
c) Aesthetic/Technical	While modified, the two-storey Californian Bungalow building still retains some key aesthetic features.
d) Social	The item does not meet this criterion.
e) Scientific	The site may have archaeological potential.
f) Rarity	This building is a rare multi-storey example of this building type in the Auburn area.
g) Representativeness	The item does not meet this criterion.

Physical Description

The current building on site is a two-storey residence on the corner of Park Road and Mary Street. It is modelled on the Californian Bungalow style, although it is a rare multi-storey example of its type. The building has a simple, rectangular massing with a visually prominent, low pitched, street facing, hipped roof. It has wide, exposed timber eaves with what appears to be a cement tile roof. The building is rendered brick. The corner façade has been heavily modified to remove the original timber shingle façade treatment, replacing it with a fully rendered treatment. The whole façade is painted in a pink colour scheme. Only one row of timber sliding and casement windows that wraps around the corner remains. A number of the stained-glass timber framed windows with corbelled sills remain intact however, the individual awnings per window have been removed. A small, diamond shaped window is also situated in this facade, on the ground floor. The side and rear walls feature a number of single and grouped casement windows, similar to those mentioned above. An air-condition unit, as well as modern signage have been attached to the façade.

The site is bounded by a low rendered wall with modern powder-coated steel fence and gate elements that terminates at driveways on both Mary and Park Streets. Most of the rear of the property is covered with a large carport. There is a detached two-storey rendered building to the rear that appears to be a second occupancy.

The front ground floor of the building appears to be used as a professional office/occupancy.

The condition of the building is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Facade rendered*
- Timber shingle cladding has either been removed, post 2004 based on description on former listing sheet*
- Verandah enclosed*
- Air-conditioning unit added to façade*
- Modern signage fixed to facade*
- The roof cladding appears to have been replaced
- There is a substantial detached building and large carport structure to the rear*

The integrity of the building is low, as most of its original Californian Bungalow features are no longer evident as viewed from the street.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1922

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The site on which the current building stands was the site of the former Lea's Temperance Hall (otherwise known as Clifton Boarding House). Lea's Temperance Hall was built in the 1890s and was the venue for the first meeting of Auburn Council in 1892 in lieu of the first Auburn Council Chambers which was not erected until 1896. The hall was built by Henry Lea in support of the Temperance movement which was popular around the world in the from the mid-1880s to WWI. The hall was also used as a boarding house and hotel, containing 11 rooms, until its demolition in 1922.

In 1922 the hall was replaced with the current structure, a two-storey Californian Bungalow style home which was owned by Dr Eric Hyam Freidman, an eminent local Doctor in the local community. The dwelling is now in used as a cultural centre.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Given the highly modified nature of the site, as viewed from the street, it is recommended that a detailed fabric analysis of the built elements is prepared to better understand the heritage integrity of the site. This should include interiors. This will assist owners in the appropriate future planning and management of the property. The results of this assessment should be integrated into the heritage listing sheet for the item, when made available.

- Heritage interpretation should be implemented in the vicinity (e.g. the footpath) of the property, to identify its former history as the venue for the first meetings of the Auburn Council.

Curtilage Map

Statement of Significance

St Joseph's Hospital, formerly known as Duncraggan Hall, is of high local significance and potentially State significance for its historic, social, associative, aesthetic and representative values. Historically it is associated with the Buchanan family, local timber merchants in the 1880s who constructed the Italianate residence known as Duncraggan Hall, on the former Chisholm lands. In 1892, the Sisters of Charity occupied the building and subsequently established the St Joseph's Hospital, still in operation today as an associated public hospital to St Vincent's Hospital in Sydney. It has social significance for its long-standing use as a health care facility in the area and has associative significance as having been operated by the Sisters of Charity, the first female religious order in Australia, active since the 1830s and who founded St Vincent's Hospital in Sydney. The item is also associated with the Buchanan family, pioneering industrialists in the local area. The building is aesthetically significant as a fine and intact example of a large Victorian Italianate mansion, well set off by its substantial and attractive garden which contains many fine mature trees.

Criteria Assessment	
a) Historic	The item is historically significant as a highly extravagant mansion in the local area, demonstrating the wealth of early merchants, the Buchanan family, local timber merchants. It has been occupied by the Sisters of Charity since the 1880s, operating as St Joseph's Hospital since the 1880s up to the present day.
b) Associative	The item is associated with the Buchanan Family, wealth timber merchants of the area. The item has long associations with the Sisters

	of Charity order who established a hospital on the site and have operated it for over a century.
c) Aesthetic/Technical	The item is aesthetically significant as a fine and intact example of a large Victorian Italianate mansion. Its substantial and attractive garden which contains many fine mature trees. The Hall is situated on a high point in the Auburn landscape, with a large landscaped garden and driveway in the foreground.
d) Social	The item has served the local community as a hospital for over a century.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is a rare example of a two-storey Victorian Italianate mansion in the local area.
g) Representativeness	The item is a good representation of a Victorian Italianate mansion.

Physical Description

Setting
Duncraggen Hall is an established Victorian Italianate residence situated within the grounds of the St Josephs Hospital, Auburn. The site is located on a large parcel of land in the centre of the suburb of Auburn. Within the hospital complex there are a number of contemporary buildings associated with the operation of the hospital. Duncraggen Hall is located off Alice Street fronted by St Josephs Village at the corner of Alice Street and Normanby Road. St Joseph's Hospital is located off Normanby Road, northwest of Duncraggen Hall and west of St Joseph's Village. Both Duncraggen Hall and St Joseph's Hospital have been extensively altered with the several phases of rear additions that extend south to Mona Street.

Duncraggen Hall
This grand, two storey residence was constructed from cement rendered brickwork in the Victorian Italianate style. It features a large central tower with classical mouldings around the windows and eaves. There is a small wrap-around balcony at mid-level on the tower with a fine elaborate cast iron balustrade. The first-floor level of the tower features a niche, in which the initials of the original owner are inscribed 'JB'. The portico at the tower entrance is flanked by two large urns. The hipped roof is clad in terracotta tiles, replacing the earlier slate tiles. The original residence features deep verandahs with intricate cast iron lacework balustrades and decorative cast iron posts and brackets. The walls of the main building feature floor to ceiling windows and doors, opening directly onto the verandahs. The extensions to the rear are more simply constructed in rendered brickwork, with hipped rooves but without the verandahs.

St Joseph's Hospital
The St Joseph's Hospital entrance fronting Normanby Road is a post-war addition that fronts the original St Joseph's Hospital established in the 1880s. The later entrance is comprised of a three storeyed addition. The entrance is addressed by a flat awning supported on brick piers with a fascia that reads 'ST JOSEPH'S HOSPITAL' in blue lettering. The windows are narrow vertical fixed sashes separated by brick piers.

St Joseph's Village
St Joseph's village, located on the corner of Alice Street and Normanby Road, is a two-storey complex of residential units. The building is a contemporary structure built of red and yellow bricks with a hipped roof with projecting gables clad in terracotta tiles. The windows are sliding sash windows with aluminium frames and fronted by security screens. Verandahs on the ground and first floors have concrete cantilevered floors clad in tiles, and a metal balustrade enclosing the space.

Landscape
The landscape sited directly opposite Duncraggen Hall features a hedged shrub and concreted driveway. The Alice Street elevation is fronted by a grassed area with some smaller hedges and some established gum trees. The area retains established paths and gardens reminiscent of Victorian gardened landscapes. Duncraggen Hall is situated on a high point in the Auburn landscape, with a

large landscaped garden and driveway in the foreground. This area has been replanned to accommodate parking and circulation between the various buildings that make up the Hospital site.

Condition
The buildings have been well maintained and are in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Large extension to the rear of the Duncraggen Hall.
- A number of smaller buildings associated with the hospital functions

The integrity of the historic buildings, namely Duncraggen Hall, is considered to be high. However, it is likely that due to the continued use of the site, the interiors are likely to have a lower integrity grading as the building have been upgraded for operational requirements.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1876-1892

Auburn
The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

Duncraggan Hall

Designer/Maker: Harry Kent (?) / Leighton Irwin and Co.
Builder/Maker: Graham Evans and Co.

Duncraggan Hall was constructed soon after the land was purchased by John Buchanan, a timber merchant, from Fred Chisolm in the 1880's. The name may have been borrowed from the homestead in Sir Walter Scott's 'The Lady of the Lake'.

Due to the depression of the 1890's, John Buchanan sold the residence and its thirteen acres of land to the Sisters of Charity in 1892. Thereafter the Hall became 'St. Josephs Sanitorium for

Consumptives'. In 1903 'St Joseph's Hospital Two' was constructed on the land and the nuns have since occupied the Duncraggan Hall as their convent.

The tower of Duncraggan Hall once featured a mansard roof with dormer windows and a cast iron cresting. It was, however lowered during World War One. A new wing was opened in 1916 with 20 new beds. In 1920 electric light was installed throughout the Hospital. In 1927 a new kitchen was built and hot water was installed throughout the hospital. Another new ward was built and furnished in 1928 as well as 12 additional rooms for nursing staff. A new wing of 56 beds was constructed in 1974.

St Joseph's continues to operate as a hospital serving the local community of Auburn. There have been several additions to the site in the 2000s with the construction of the village, and the progressive addition of other hospital buildings in 2009 and 2012.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**

4. Consider additional research to nominate this item for the State Heritage Register.	**X**	**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The historic buildings on this site should be investigated further for their potential to be listed on the State Heritage Register (SHR). It appears to be of State significance for its aesthetic, historic and rarity values.

- A Conservation Management Plan (CMP) should be prepared for this site to understand in greater detail the history and significance of the place, as well as how to manage change.

Statement of Significance

The St. Phillips Anglican Church and Kindergarten buildings have local historic and social significance as having served as a community resource since 1921. The buildings are also significant for the evidence they provide of the nature of suburban development in the Federation period. In particular, they provide evidence of the development of local social and cultural institutions to accompany the notable residential growth of the period, the Church serving the local Anglican community. The Church building has aesthetic significance as an intact example of a suburban Federation Gothic Church and externally it appears to retain much of its original character and fabric.

Criteria Assessment	
a) Historic	The St. Phillips Anglican Church and Kindergarten buildings are historically significant for their use as a community resource since 1921. The buildings are also significant for the evidence they provide of the nature of suburban development in the Federation period. St Phillip's Church of England was the first place of worship to be erected in Auburn.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The Church building has aesthetic significance as an intact example of a suburban Federation Gothic Church and externally it appears to retain much of its original character and fabric.
d) Social	The St. Phillips Anglican Church and Kindergarten buildings have social significance as having served as a community resource since 1921. The Church served the local Anglican community.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Located at the corner of Hall Street and Macquarie Street, the building is a large brick Church building with influences of Federation Gothic style. It has a complex roof form comprising parapeted gable roofs to the nave and chancel, transverse gable roofs to the transept, and half hipped roofs to the sacristy and vestry on either side of the chancel. The roofs are covered in shingles with sandstone parapets and terracotta cappings. There are six gablets with ventilators to different sections of the roofs. The tuck-pointed brick Church has wall buttresses marking the structural bays and pointed arched windows and doors with sandstone reveals to three large windows and brick corbelling to the entrance door and smaller windows. Leadlight is used for all the windows, with timber panels to the doors. Moulded cement crosses have been mounted to the apex of the gable ends. The church is bounded by cyclone fencing alongside the street footpath.

The site contains two later buildings - one facing Hall Street which is a brick building with hipped roofs, and another facing Macquarie Street which is a brick gabled roof with a projecting gable. These are the kindergarten and Ministers Office associated with the Church.

The landscape associated with the Church consists of several mature tree and plantings which are considered to form a part of the heritage landscape.

Overall, the building is considered to be in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New Kindergarten and Minister Office buildings
- Low brickwork fence to the sacristy and vestry exteriors
- Protective wire mesh to the windows
- Signage to the property
- Cyclone fencing*

Overall, the dwelling maintains its general form and structure and is considered to be of high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1921

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Pots, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in

Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The first regular church services in Auburn were held in private homes. No church buildings were constructed until the 1880s. St Phillip's Church of England was the first place of worship to be erected in Auburn in 1886. The records of the services of St. Phillips date back to 1883, when services were held in a school hall, situated on the corner of Parramatta Road and St. Hilliers Road. These were monthly services. The present St. Phillips Church was constructed in 1921 and the church was dedicated by the Archbishop of Sydney in that same year.

At present, the building still remains in use as an Anglican Church.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. Curtilage Map

Revised curtilage – refer below.

Statement of Significance

The Uniting Church is of local significance for its historic, aesthetic and representative values. The Church is historically significant as evidence for the development of local social and cultural institutions which accompanied the inter-war residential growth of Auburn. It has social significance as a continuous focal point of religious activity for a group of people in the community from 1888 onwards. The building is an aesthetically significant and intact suburban Inter-War Mission style Church with a prominent street-addressing façade. The church appears to retain much of its original character and fabric and is a good representative example of its type.

Criteria Assessment	
a) Historic	The Church is historically significant as evidence for the development of local social and cultural institutions which accompanied the inter-war residential growth of Auburn.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as good example of suburban Inter War architecture. It has a prominent façade character, and externally appears to retain much of its original character and fabric.
d) Social	The item is socially significance as a continuous focal point of religious activity for a group of people in the community from 1888 onwards.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of suburban Inter War architecture.

Physical Description

The building is constructed from brick with a number of engaged piers dividing the structural bays. The roof is a simple gable with a steep pitch, tiled with slate roof tiles. In the centre of the main façade is a small brick antechamber which is essentially a fully enclosed brick porch. The antechamber has a tiled hipped roof which is partially covered by tall engaged piers with a squared parapet at the top, which borders the front double doors. The piers project above the parapet line, with moulded ends. A small, moulded finial is situated at the apex of the gable, possibly a former cross.

The main façade of the church is a large, gable-ended, oversize façade element with a prominent parapet, with engaged piers. In the gable above the centralised door is a window opening with a moulded pointed arch and two smaller, narrow stained-glass windows with pointed arches. The side and rear facades are unpainted brick, with narrow windows with pointed arches located between the engaged piers of the main side walls of the Church. The cement sills span between the buttresses.

The Victory Hall, built in the 1920s of weatherboard, was destroyed by fire in 2005. It has since been replaced by a new, modern church hall building to the immediate east of the church, fronting Helena Street.

Overall, the Church is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The integrity of the church building is highly intact with few modifications evident to the external façade.
- A disabled access ramp has been installed in front of the building leading up to the front entrance.
- The adjacent Victory Hall was destroyed by fire and replaced with a modern building for the Uniting Church.

The church itself is highly intact and thus is of a high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1901-1925

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

Prior to the Uniting Church's use of the site, Methodist services were held in the Auburn Hall in 1887 until a church was built at the corner of Helena Street and Harrow Road in 1888. This was superseded by a new Church completed in 1910 which had a Victory Hall added in 1922.

In December 2005, the weatherboard Victory Hall adjacent to the Church was completely destroyed by fire. A new hall was built in its place, larger in footprint and a completely modern deviation from the original, more traditional style of church building. Historically, it was a Methodist Church, however today it continues as a place of worship for the Uniting Church.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Due to construction the contemporary Victory Hall it is recommended the curtilage be revised to embody the Church and the garden landscape alone. The heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

'Lohengrin' is an early Federation dwelling which is of local significance for its historic, aesthetic and representative values. This site has local historic significance as a representative example of an early Federation style residence. Built in c.1898 the building historically relates to one of the earlier subdivisions of Auburn that occurred in association with the commercial and industrial development of Auburn. The item has aesthetic significance as a quality example of a Federation residence where the original fabric of the building is largely intact.

Criteria Assessment	
a) Historic	Built c.1898, the item historically relates to one of the earlier subdivisions of Auburn that occurred in association with the commercial and industrial development of Auburn.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as a good example of a Federation residence where the original fabric of the building is largely intact and it has attractive and interesting detail.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of the type of early Federation period cottages built in the Auburn area.

Physical Description

This one storey brick Federation style cottage has a simple 'box-like' massing with a dutch gable roof. The roof cladding appears to be replacement concrete tiles. The building is set on brick foundations. It has a side driveway leading to a rear yard.

The front of the building features a verandah with a striped, half bullnose roof, and a central projecting gabled entry porch over the stairs and front door which appears to be a later addition. The porch is supported on turned timber posts and decorative timber brackets. The valance and gable end are clad with timber shingles. The front door is timber framed and panelled with side and top light windows. Two timber framed, double hung, sash windows are located in the wall either side of the front door. They also have side and top light windows. The sills are stone.

The front of the property is fully concreted, with a detached carport with decorative detailing to match the main house, over the driveway. There are some mature plantings located in the southern corner of the front house. The property is enclosed with a modern timber picket fence along Harrow Road, with a brick and Colorbond fence along the southern boundary of the allotment.

Overall, the dwelling is well-maintained and in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Modern detached carport over concreted front driveway
- Modern concrete tiled roof
- Modern timber picket fence along Harrow Road and a modern brick and Colorbond fence along the southern boundary of the allotment

The building is highly intact but there are a number of modifications and additions such as the carport and the gabled entry porch which, although sympathetic to the original heritage fabric, detract from the overall integrity of the dwelling. It is of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1898

The land which forms part of the modern suburb of Auburn was first developed the 1790s when a track from Sydney to Parramatta was first developed and early land grants were given to free settlers and ex-convicts in the area. Most early land grants were small, measuring between 30-100 acres and were awarded to people such as Edward Gould, Henry Marr, Thomas Bates and John O'Donnell. Larger grants were given to established merchants and officials, such as James Chisholm, a merchant, who received a 600-acre grant, and Joseph Hyde Potts, who was given 410 acres.

In 1855, the first railway line from Sydney to Parramatta Junction allowed for suburban development around the area. The suburb of Auburn developed in the 1860s-80s from the subdivisions by John Yelverton Mills near the railway station. Mills named the suburb after the village in Oliver Goldsmith's poem 'The Deserted Village'. During this period, several main roads were built through the area and by 1880 it was reported that there were about 40 residences and a population of 200 people living in Auburn. By 1912–13, Auburn had established itself as suburb with the 11th largest number of new buildings in the metropolitan area for that year, with 268 approvals.

From the 1870s, industrial development had a significant impact on the Auburn's development. This process began in the 1860s when the New South Wales government began buying small lots of railway

rolling stock locally. Some notable industries that came to Auburn include Henry Vale & Co. who built locomotives around Auburn, car and tractor maker Caldwell Vale, and Purcell Engineering. As the area was known for its clay-based soil, pottery and brickmakers flourished in the area, such as the Auburn Brick, Tile & Pottery Company who took over Duck River Brickworks.

The improved transportation infrastructure to the region, including rail and road networks, and the relocation of many industries and other utilities to Auburn resulted in a growth in residential development around the emerging town centres and within walking distance from the places of employment.

The nature of these early residences varied according to their location. This surviving cottage sits on 600 acres of land originally granted to James Chisholm and was one of the earliest subdivisions in Auburn. The dwelling 'Lohengrin' first appears within the Sands Directory in 1898 and was owned by the Edward Evans. Evans and his family were involved in teaching music and dancing within the community and they even had a ballroom added onto the house. The residence remained within the Evans family until at least 1933.

The building remains in use as a private residence.

Revised curtilage recommended- refer below.

Statement of Significance

The Auburn Railway Signal Box is of State significance for its historic, associative, aesthetic, social and representative values. It is significant as the first of a series of four elevated power signal boxes needed for track amplification works from Auburn to Blacktown during the 1950s, designed as a cohesive group in a post-World War Two period functionalist style. This Signal Box is a good example of the last group of signal boxes to be built to a standard railway design in NSW that remained in operation until 2009. It has a high degree of intactness and retains its original operational equipment including the CTC panel, desk and illuminated wall diagram.

Criteria Assessment	
a) Historic	The Auburn Railway Signal Box is of historic significance as the oldest building remaining in the Auburn railway precinct. It is further significant as the first of four signal boxes constructed in 1954 to assist traffic management between Auburn and Granville when the number of main lines was increased from three to five as part of the rebuilding of the Main Western line after 1948.
b) Associative	The signal relays are reported to be made by well-known international signalling firm McKenzie & Holland who began supplying interlocking machines and signalling equipment to the NSW Railways in 1881 and continued until 1927.
c) Aesthetic/Technical	The Signal Box is aesthetically a good example of post-World War Two period functionalist style railway architecture demonstrating key elements of the style including brick banding, ribbon windows and curved cantilevered awnings. The Signal Box has technical significance as it retains much of its original equipment including its

	original toggle switch control panel, desk and illuminated wall diagram and some original equipment in the downstairs relay room.
d) Social	The place has the potential to contribute to the local community's sense of place and can provide a connection to the local community's history.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The Signal Box is representative of the four signal boxes built between Auburn and Blacktown after World War Two in the functionalist style, the others being Granville, Clyde and Blacktown.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Auburn Railway Signal Box', dated 2010. As the description features a comprehensive physical description, no amendment has been made to the physical description.

SIGNAL BOX (1954)
External: Auburn Railway Signal Box is an 'S' type post war version of the elevated power boxes. Others of this type are Clyde, Granville and Blacktown. The signal box operates by relaying interlocking machines and features 90 Kellogg Keys levers.

Constructed of polychromatic face brick, it is a two-storey electric power signal box with a single storey relay wing and designed in the Functionalist style. The massing reflects a dominant entrance/ amenities tower contrasting with curved walls of the signal box. Windows are shaded by a cantilevered concrete awning. Upper level ribbon windows are timber framed, as are doors, however the ground floor signal room windows have been replaced with aluminium fixed or double hung types. The flat roof is concealed behind the brick parapet.

Internal: Internally, a two-flight staircase leads to the operating (or upper level) signal room that contains the original toggle switch control panel, desk and illuminated wall diagram (paper based, dated 3/6/52). Staff toilet facilities are on the first floor. The ground floor relay room still operates with some original equipment such as the main control panel. A brick single storey relay room annex with flat metal tray roof has been added to the east end. Original doors, and wall and ceiling linings are also evident.

MOVEABLE ITEMS
The only moveable items observed were the original desks and equipment.

The Signal Box is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- 1981: Air conditioning installed in Signal Box upper level
- c1985: Some of the Signal Box window frames removed and replaced with modern materials and brick relay room annex added to Signal Box

The building has a high degree of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1954

The following history has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Auburn Railway Signal Box'.

A single railway track was opened through Auburn in 1855, and the line was duplicated in 1856. The original station was opened at this location in 1876. Nothing is known of the original buildings but they were replaced with a standard, second class set featuring a substantial main brick station building, approved by George Cowdery, Engineer for Existing Lines, in 1886.

In 1909 the NSWGR approved the demolition of the two original side platforms (slightly staggered) and they were replaced between 1909 and 1913 with an island platform and a standard Federation style building. There were 2 subways provided under the platform, with a ticket booking office on the platform between them, and an on-platform parcels office is shown in a 1938 plan. Plans also show a goods lift was installed on the platform c1950.

With the 1954 quadruplication of the line, the station was almost completely rebuilt, at which time the former c1913 platform building was demolished and a new simple canopy structure built. A second island platform was also built which featured simple steel canopies with small control rooms. Access to the platforms was provided by subway.

Improvements to the station were undertaken during the late 1980s and the 1954 station has been almost completely rebuilt.

The present Signal Box was opened on 20 June 1954 to assist in the management of traffic between Auburn and Granville when the number of main line tracks was being increased from three to five. Specifically, the Signal Box controlled access to Clyde down and up yards. It was one part of a much larger scheme to increase the tracks to four main lines between Lidcombe and St. Marys during World War II in order to provide maximum track capacity to the American ammunition and general store built at Ropes Creek. It took over 32 years until all aspects of the quadruplication were completed between Westmead and Blacktown. Quadruplication reached St. Marys in 1978, while the Granville to Westmead section was finally completed in 1986.

When opened in 1954, the Auburn Railway Signal Box was the first of four Functionalist style boxes between Auburn and Blacktown, these being Auburn, Clyde, Granville and Blacktown. The style was only used from Auburn to Granville as the railway system was largely in place by this time. These boxes represented the last time when conventional, elevated signal boxes were built utilising the traditional model of a ground floor relay room and an upper level where the interlocking frame was operated. A subsequent design of elevated boxes was used in the 1960s but these did not accord to the classic, two-level design with a rectangular footprint.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**

2. 		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

This listing should be converted from an archaeological item to a built item on the Cumberland LEP.

The former LEP has classified a series of items of an industrial nature, including railway, road and water infrastructure, as 'archaeological' sites. This classification is historical and relates to the former use of the term 'Industrial Archaeology', which refers to the study of industrial and engineering history. The use of the term 'Industrial Archaeology' is no longer used and the term 'Industrial Heritage' is now preferred. Archaeological sites are legally defined as sites *which* contain one or more 'relics' and, in NSW, relics are specifically protected by the Sections 138 -146 of the Heritage Act 1977. The classification of a site as 'archaeological' consequently affects the statutory controls and procedures, including the need for excavation permits and pre-excavation procedures, triggered by Development Applications.

- The item should be renamed to 'Auburn Railway Signal Box' to match the State Heritage Register listing for the item.
- The heritage curtilage should be revised to match the State Heritage Register curtilage for the item, shown below.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The Electricity Substation No. 167, also known as Auburn Zone Substation No. 167, is significant at a State level for its historic, associative, aesthetic, rarity and representative values. The Electricity substation is significant as the main high voltage electricity distribution point for this part of Sydney when constructed in 1924 by the Municipal Council of Sydney. It is representative of the Municipal Council's extension of its role as a regional electricity supplier to what were then outlying areas of Sydney. Auburn marks the western extent of the Council's network, with power further west being supplied from a private company based in Parramatta. Electricity Substation No. 167 was the most substantial piece of early electrical infrastructure constructed in western Sydney in the 1920s and is the only one which remains in service for its original purpose. It was integral to the development of the Auburn area as a major industrial area in the mid- to late-20th century. Electricity Substation No. 167 is significant at State level as a large and attractive industrial structure which features Art Nouveau and Art Deco detailing to the street facade. Stylistically, the substation is a grand example of this type of substation architecture, which is generally characterised by smaller buildings. It is the largest of this style of substation and externally retains its character as an early 20th century industrial building. The building was substantially and sympathetically extended in the late 1920s by the Municipal Council of Sydney in response to the rapid growth of the Auburn area and increased demand for electricity.

Criteria Assessment	
a) Historic	Electricity Substation No. 167 is significant at a State level both for its association with a significant historical phase, in the expansion of electricity provision to outlying areas of Sydney in the 1920s, and as demonstration of the continuity of historical activity in the provision of electricity to this area. Electricity Zone Substations are the critical

	backbone of the electricity network and serve as the points where the high voltage power supplied from the generation system is received and transformed for distribution to the network of small distribution substations and thence to customers. Electricity Substation No. 167 was the major high voltage distribution point for this area of Sydney during the 1920s and was a key piece of infrastructure in the expansion and development of industry in the Auburn area in the mid to late 20th century. This zone substation is the largest piece of electrical infrastructure that was built by the Municipal Council of Sydney in western Sydney. Electricity Substation No. 167 has been continually upgraded over the intervening years and continues to serve its original function as an item of critical infrastructure within Sydney's electricity network.
b) Associative	Electricity Substation No. 167 is significant at State level for its association with the work of Walter Frederick White (ARIA) from c. 1924 to 1947 at the City Architect's Office, Municipal Council of Sydney and its successor organisation, Sydney County Council. While White did not design the original building, he was responsible for its 1929 extensions. Other electricity substations that White is also known to have designed are No. 269, Bondi (1928) and No. 349, Randwick (1930), both of which were prestige structures in the Mediterranean/Spanish Mission styles designed to complement the building stock of these suburbs. Further research should reveal additional surviving substations built by the Municipal Council of Sydney and Sydney County Council that can be attributed to WF White.
c) Aesthetic/Technical	Electricity Substation No. 167 is significant at State level for its size and style. Electricity zone substations were considerably larger structures than ordinary substations. No. 167 is a large and attractive structure which features Art Nouveau and Art Deco detailing to the street facade. It is the largest of this style of substation constructed by the Municipal Council of Sydney, a style that was typically characterised by much smaller buildings. The high standard of electricity substation design of the 1920s and 1930s demonstrates the undertaking of the Municipal Council of Sydney (and later the Sydney County Council) to apply architectural design to utilitarian structures.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion. While it continues its original function, its internal equipment has been completely altered over the life of the building.
f) Rarity	Electricity Substation No. 167 is significant at State level as the largest and most intact of the zone substations constructed by the Municipal Council of Sydney in the Interwar Art Nouveau style. It shares stylistic similarities with two other similar period and style zone substations but is the best example of the type. Zone Substation No. 80, Chatswood (1923) is a smaller example of the style which has had a greater degree of modification than the subject Zone Station. Zone Substation No. 129, Hunters Hill (1928, located in Gladesville), is another smaller example of the style which was originally of a similar design to Electricity Substation No. 167. No. 129 has, however, been considerably altered, including the demolition of a two-storey portion of the building on the front facade which has been replaced with a brick wall. Both Zone Substations No. 80 and No. 129 have been assessed by EnergyAustralia for its s. 170 Heritage and Conservation Register as having local significance.
g) Representativeness	Electricity Substation No. 167 is significant at State level as typical, in scale and function, of the high voltage substations built throughout

	Sydney in the 1920s and 1930s for the expansion of the electricity network. It is the largest and most intact example of its style.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Electricity Substation No 167', dated 2009. As the description features a comprehensive physical description, no amendment has been made to the physical description.

The Auburn Zone substation is a large and impressive two storey structure. It is prominently located at a major corner intersection and acts as a local landmark.

Built in 1924, it was designed by the City Architect of the Municipal Council of Sydney (Mr Broderick) in the Interwar Art Nouveau style. It was substantially and sympathetically extended in 1929 (by MCS City Architect WF White) to become the largest of its style of substation built by the Municipal Council of Sydney.

The Auburn Zone substation is a brick and cement render structure. The lower storey is finished in tuck-pointed face brick, and the upper storey is finished with a smooth cement render.
The MCS logo and "ELECTRICITY SUBSTATION" are embossed in large lettering on the facade. The facade is asymmetrical with an elaborate entrance and hipped roof to one side, and a parapet and simpler plant entrance to the other.

The street facade features Art Nouveau and Art Deco detailing.

The style of Federation Arts and Crafts is evidenced by elements of Art Nouveau including the lettering style, treatment of the facade, a curvilinear cornice above the main doorway surmounted by stylised rendered pilasters, dentils and a small gable.

The two entrance doors are later modifications and are a steel-roller shutter type.

The condition of the site is generally good. Some timber windows require repainting and there are instances of graffiti.

Condition	**Good**	Fair	Poor

Alterations and Additions

- 1933: Connected substation # 72 (Five Dock) to #167 Auburn
- 1934: new Merz Price Balanced Voltage System Protection to be installed once Clyde Engineering Works substation is online.
- Roof, gutters and downpipes replaced. Gutters and downpipes are sympathetic in style. Two entrance doors replaced with steel roller doors. Later chain wire boundary fences.
- Transformer yard and equipment has been upgraded and replaced multiple times.
- 2007: Internal crane recorded and removed to allow for equipment upgrades and installation of a new crane.
- 2008-9: Media report of upgrade - 2 new transformer bays of precast concrete panels and columns lined with a brick fade, new equipment inside - completion is due in early 2009 (The Auburn Review, 1/7/08).

As the substation is an operational asset, the interiors have been substantially altered with the replacement of most internal equipment in line with operational standards. The substation is considered to have a moderate degree of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1924

The following history has been quoted from the NSW Office of Environment and Heritage State Heritage Register listing sheet for 'Electricity Substation No 167', dated 2009.

The Auburn Zone Substation No. 167 is a purpose designed and built structure dating from 1924, constructed by the Municipal Council of Sydney. The zone substation is located at the border between the area supplied by the Municipal Council of Sydney and that supplied by the private Parramatta and Granville Electric Company. Auburn Zone substation No. 167 was constructed as the main high voltage electricity distribution point for this part of Sydney and was the largest electrical facility built in western Sydney at that time.

The substation was substantially and sympathetically extended c. 1929 in response to increased demand for electricity driven by the rapid growth of the Auburn area. Its development marks the extension of the Municipal Council of Sydney's role as a regional electricity supplier to, what were in the 1920s, outlying areas of Sydney. Substation No 167 was integral to the development of the Auburn area as a major industrial area in the mid to late 20th century.
The site was substantially upgraded in 2007 to extend its operational life for the foreseeable future.

Electricity Provision in Sydney, 1904 to present
In 1904, the year in which the first power station in Sydney commenced operations, the Municipal Council of Sydney (MCS) was formed to produce and distribute electric light and power to central Sydney. From 1904 until 1935 the MCS, as both an electricity generation and distribution authority, constructed hundreds of small distribution substations throughout Sydney, many of which are still in service. The MCS supplied electricity to retail customers around the inner city, inner west and lower north shore and provided bulk power to outer western and northern suburbs such as Penrith, Hornsby and Manly.
The MCS initially competed against a number of private electricity supply companies. These were mostly small-scale operations which the MCS had acquired by 1914. The exception was the Electric Light and Power Supply Corporation (ELPSC), established in 1909, which was the one major private player in the Sydney electricity market until 1955 when it was nationalised by the Electricity Commission of NSW.

In 1935 the functions of the MCS Electricity Department were taken over by the Sydney County Council (SCC) with broad responsibility for electricity supply across the Sydney region. There was rapid expansion in the electricity distribution network with 40-50 substations constructed annually. The scale of SCC's operations consistently made it the largest local authority in Australia throughout the second half of the 20th century.
In 1991 the SCC was reconstituted as Sydney Electricity (a statutory authority). In 1996 Sydney Electricity merged with the Hunter regional electricity authority Orion (formerly Shortland Electricity) and was corporatised as EnergyAustralia, which it remains today (2007).

Substation design, 1904 to present
Electricity distribution substations were generally built as modest 1 or 2 storey buildings, with Zone Substations considerably larger in scale.

The style and nature of substation construction became progressively more standardised as the electricity network expanded. While the earliest substations tended to be large, well-ornamented public buildings, as they became more commonplace, substations became smaller and simpler. This reflected the need for cost-effective construction methods, the reduction in size of electrical equipment and the speed with which substations needed to be constructed to keep pace with demand.
While early substations were often purpose-designed and built for a specific location, by the late 1920s the trend was for standardised designs built to a similar size and generally designed to fit on a standard suburban subdivision block, typically 100-200 m2.

Designs did keep pace with architectural trends and it is possible to identify a number of different and distinct architectural styles of substations. One-off designed substations did continue to be built well into the mid-20th century thought these tended to be restricted to what the SCC referred to as "high class" suburbs in Sydney's east.

The number of substations constructed in the Sydney region exploded from the late 1920s, with dozens of substations being constructed in any one year to cope with expanding demand. While in the early years of network construction many substations had unique characteristics and were sited in response to a particular need, from the late 1920s standardised designs were generally used and expansion was based on a need to establish and expand the electricity grid rather than in response to localised or site-specific issues.

By the 1950s the trend towards architecturally designed and detailed substations was exhausted. From that point on, the freestanding metal kiosk-style substation was progressively introduced, while buildings, where they were constructed, tended towards strictly functional unadorned brick enclosures.

Substation design was also influenced by the general changes in Australian building construction in the mid-20th century. The trend towards larger steel and concrete buildings saw "chamber"" style substations incorporated directly within new buildings. In such circumstances the electricity provider had little or no input into the architectural style of the substation chamber, merely supplying technical requirements which influenced the location and size of the substation within the new building.
This trend also saw smaller older-style substations demolished in some areas and replaced with new chamber substations incorporated into a new development. This style of construction is commonplace today, particularly in high density urban areas. EnergyAustralia's older substations range from very finely detailed to very plain and functional.

The early government-run electrical authorities were aware of the need to make substations in residential areas attractive and in keeping with the surroundings, and an architect joined the substation design area of Sydney County Council in 1936. By contrast, the modern trend is to make substations essentially invisible, through incorporating them into larger buildings, placing them wholly underground or within anonymous small steel boxes which tend to be ignored in urban environments. The exception to this continues to be the zone substations and high voltage switchyards, which continue to require large buildings or areas of land to house equipment.

Historically, better quality buildings tended to be reserved for what the MCS referred to as "high class" suburbs (particularly Woollahra and Mosman) while middle- and working-class suburbs generally received much simpler, functional buildings. Designs tended to be reused, sometimes with only minimal variation.

There are also marked stylistic differences between substations constructed by government as opposed to those constructed by the Electric Light and Power Supply Corporation (ELPSC) throughout the first half of the 20th century. The ELPSC substations tend to be functionalist brick boxes with only the slightest degree of architectural detailing or ornamentation, whereas the substations constructed by municipalities, while often reusing the same underlying design with minor variation, tend to be more finely detailed and in many instances are designed to match the architecture of the surrounding area. This may reflect the different nature of the competing priorities of a private as opposed to a government enterprise. A number of former ELPSC structures exist within the EnergyAustralia network.

Curtilage Map

Revised curtilage recommended- see below.

Statement of Significance

Berala Railway Station, a functioning railway station with an original 1920s station building, booking office and subway, has local historic, aesthetic, social, rarity and representative significance. It is historically representative of the reconstruction of the original Lidcombe-Regents Park line and its extension to Cabramatta, replacing the earlier Berala Station to the south. The station building is a representative example of an extended rafter type of station building, of which there are relatively few remaining in Sydney. The station complex, with its elevated platform and street level subway, is a distinctive built feature that contributes to the historic character of the suburb. The station has the potential to contribute to the local community's sense of place and can provide a connection to the local community's past.

Criteria Assessment	
a) Historic	Berala Railway Station is historically significant at a local level as the existing station with its 1920s station building, booking office and subway represents the significant reconstruction of the original Lidcombe-Regents Park line and its extension to Cabramatta, replacing the earlier Berala Station to the south.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Berala Railway Station has local aesthetic significance as an example of a 1920s extended rafter railway station building with its steep gable roof and extended rafter awnings. The station complex, with its elevated platform, is visible from the platform buildings and the street level subway is a recognisable feature in the area.

d) Social	The place has the potential to contribute to the local community's sense of place and can provide a connection to this community's past.
e) Scientific	The item does not meet this criterion.
f) Rarity	The extended rafter platform building at Berala Railway Station is one of few buildings of this type in the Metropolitan network. Other examples are at Bullaburra, Cardiff, East Richmond and Hornsby.
g) Representativeness	The station building is representative of the style of railway station building, which is characterised by extended rafters.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Berala Railway Station Group', dated 2009. The description is comprehensive and matches the condition visible during the site inspection.

BUILDINGS
Platform Building, Platform 1-2 (Type 18) (1924)
Booking Office, Platform 1-2 (c.1930s)

STRUCTURES
Platform 1-2, (1924)
Pedestrian Subway, (1924)
Canopy, (modern)
Brick culvert / stormwater canal - needs further heritage assessment

CONTEXT
Berala Railway Station is accessible from Woodburn Road and Campbell Street via the subway which runs underneath the tracks and has a set of stairs which lead up to the platform. The station is surrounded by a mix of residential and commercial development.

PLATFORM BUILDING (1924)
External: The building is of weatherboard construction. It has a steep gable roof which incorporates awnings within its pitch. The roof has extended timber rafters that support the spread of the awnings. The roof is made of corrugated steel and has timber bargeboards and fascia. The building has a mix of timber windows. There are large double hung windows with double paned upper and lower sashes, some of which have painted upper sashes and lower sashes fitted with safety glass and some of which have been boarded up. There are smaller fixed glass windows and double hung windows which are fitted with wire enforced glass. The doors used in the building include steel grill gates and flat panelled doors with aluminium kick plates. Based upon site inspection it appears that the building has original weatherboard walls and most of its window and door openings are original although some windows have been partially boarded up and some doors have been replaced with steel grill gates.

Internal: The original layout of the building included a storage area, a waiting area and toilets. The existing configuration has remained the same. The toilets have been refitted with new bathroom fittings but it is possible cubicle partitions and doors are original. The toilets have recently installed plasterboard ceilings and ceramic tiled floors. The waiting room and store have original weatherboard ceilings and timber floorboards. Original cast iron ventilators have been retained in the store. An original internal window in the waiting room has been boarded up.

BOOKING OFFICE (c1930s)
External: The booking office is located to the east of the main platform building. It is a narrow, single room, weatherboard structure that has been encased with painted, corrugated steel sheets. The north-eastern corner of the building has an aluminium framed glass enclosure. The roof of the booking office is formed by the canopy over the platform. The structure has double hung timber windows with double paned upper and lower sashes fitted with safety grills, a flat panelled timber door and a new aluminium and glass ticket window.

Internal: The original weatherboard walls and ceilings have been painted and the floor is carpeted. The office has original cast iron ventilators. The room has a door that has been blocked up.
PLATFORM (1924)
Platform 1 (Up) and Platform 2 (Down) have in-situ concrete faces and asphalt surfaces and together they form an island platform arrangement. The platforms are raised as compared to the surrounding area and road level.

CANOPY (modern)
There is a modern canopy structure extending to the east of the platform building incorporating the roof of the booking office and the stairs leading up to the platform from the subway.

PEDESTRIAN SUBWAY (1924)
The subway which runs under the elevated tracks and platform connects the station to Woodburn Road in the north and Campbell Street in the south. The subway has brick walls, a brick barrel vault and ceramic tiled stairs leading up to the platform.

MOVABLE
Heritage-style platform lamp posts.

Ticket office: red and white "Emergency Response" box including contents and contents list, blue cast iron safe with two drawers, blue timber-framed noticeboard on interior wall, metal wall vents, series of framed staff safety awards and certificates of appreciation, click-clack credit card slider with "Berala CityRail" inscribed, collection of ticketing-related objects (ink stamps, coin wrappers, receipt books etc), timber booking office coin (BOC) tray, CityRail wide-brimmed hat, timber paper tray, key box built into door of current staff office.

Main platform building: wrought iron and timber platform bench and fitted timber bench in waiting room, fanlight operator to fanlight over door to original staff room/booking office, timber-framed blackboard including printed notice for workers compensation, metal wall vents, boarded up original ticket window, fitted timber ticket desk in original ticket office, evidence of original and early paint colours schemes in ticket office, solid timber cubicles and doors in toilets.

Platform and subway: cast iron railing around subway stairs, large timber noticeboard on exterior wall of current ticket office building, "Fabulous Creatures" – 2010 public art mural joint initiative of RailCorp, Auburn City Council and Berala Public School, cast iron handrail ends on subway stairs.

LANDSCAPING
Plaque – brass mounted on a rustic sandstone plinth installed to commemorate 50th anniversary of the Berala Train Accident, 7 May 1952.

Mature trees in corridor including several jacarandas, Berala Memorial Garden near station entrance, including the Berala Trains Accident plaque.

ARCHAEOLOGICAL POTENTIAL
Based on the surviving documentation and the evidence on site it is unlikely there would be any potential archaeological remains at Berala Railway Station.

PLATFORM BUILDING
The building is in good condition externally. However, internally, it is in a moderate condition as the store room walls have problems of peeling paint, damp patches and some graffiti.

BOOKING OFFICE
The building is in good condition.

PLATFORM
The platforms are in good condition.

CANOPIES
The canopies are in good condition.

PEDESTRIAN SUBWAY
The subway is in moderate condition. There is organic growth and dampness to some of the walls surfaces.

Condition	**Good**	Fair	Poor

Alterations and Additions

The following modifications have been quoted from the NSW Office of Environment and Heritage, Section 170 Heritage and Conservation Register listing sheet for 'Berala Railway Station Group'.

1924: New station on line deviation.
1929: Railway electrified.

The building also has new paint scheme based on the ESB 010 Heritage Paint Schemes.

As the site retains its original 1920s station building, booking office and subway, the integrity of the place is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1924

The suburb of Berala is 17.7 kilometres west of Sydney city and is bounded by Auburn, Lidcombe and Regents Park. Berala originally formed the southern part of the suburb of Lidcombe (then known as Rookwood) and was known Hyde Park during this time. It is entirely in the catchment of the main arm of Haslams Creek. The name Berala is derived from an Aboriginal word meaning swamp duck, which refers to the birds that live in the swampy Haslams Creek.

Berala lies on the land that was originally part of the Hyde Park Estate, a grant of 1,110 acres given to HG Douglas in 1833. A large part of this estate was purchased by Joseph Hyde Potts in 1834 and 1835 who subdivided the area into farm lots and subsequently into residential lots. This area lies to the east of the railway. There were earlier, smaller land grants, including one of 60 acres (24 hectares) to Thomas O'Donald in 1823, which encompassed what is now the western side of the railway.

On 11 November 1912, a single line on the railway was opened at Regents Park which served residents at Berala until 1924, when Berala Station was opened. By this time, Berala had begun to develop as a suburb with an increase in residences and industry. These residences were predominately detached single-storey houses. It was not until the late 1960s that the first three- and four-storey apartment blocks, and later townhouses were built. The 1980s brought similar but higher density development, mainly on the western side of the railway.

Industry and commercial businesses also developed alongside the introduction of the railway. By 1920, there was a letter receiver, an authorised stamp seller and a public telephone. Mail was delivered from Lidcombe post office. In 1925, an unofficial post office was opened on the western side of the railway station in W. K. Andrews' general store. By 1935, there were 26 business and the population had increased to 2,000. The Commonwealth Bank of Australia opened a branch in 1947, followed by the Bank of New South Wales and a building society. The shopping centre developed along one side of Woodburn Road, facing vacant railway land and the station.

The Lidcombe to Regents Park line was originally built by the Public Works Department as a tramway to service construction of the second Potts Hill reservoir. The line was opened as such in 1912 and was part-funded by the Metropolitan Water Sewerage and Drainage Board. Industrial and suburban

development along the line caused it to transform into a general freight and passenger line. By the 1920s, a decision had been made to extend the railway from Regents Park to Cabramatta, as a relief to the Main West and Main South via Granville and this was completed in 1924. The work involved major reconstruction of the original Lidcombe-Regents Park section of the line.

A station was opened at Berala on 11 November 1912. The line reconstruction in 1924 involved a deviation and embankment through Berala and, accordingly, a new station was opened on the deviated line on 6 December 1924. The old station was demolished. In 1962, there was a major crash at the station involving two suburban trains.

Today, the site remains in use as an active railway station.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- This listing should be converted from an archaeological item to a built item.
  The former LEP has classified a series of items of an industrial nature, including railway, road and water infrastructure, as 'archaeological' sites. This classification is historical and relates to the former use of the term 'Industrial Archaeology', which refers to the study of industrial and

engineering history. The use of the term 'Industrial Archaeology' is no longer used and the term 'Industrial Heritage' is now preferred. Archaeological sites are legally defined as sites *which* contain one or more 'relics' and, in NSW, relics are specifically protected by the Sections 138 -146 of the Heritage Act 1977. The classification of a site as 'archaeological' consequently affects the statutory controls and procedures, including the need for excavation permits and pre-excavation procedures, triggered by Development Applications.

- The heritage curtilage of Berala Railway Station should be revised to match the RailCorp Section 170 Heritage and Conservation Register curtilage for the station (below); see item #4800211. This curtilage would retain the subway.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The Berala Public School buildings are locally significant for their historic, aesthetic and representative values. The School has served as an educational institution for the community since 1924. Through this, the buildings also provide evidence of the nature of suburban development of local social and cultural institutions which accompanied the residential growth of the suburb during the early twentieth century. The School buildings are aesthetically significant as representative examples of well detailed, late Federation, suburban school buildings. The siting and integrity of the Schools aesthetic qualities also make it a notable and attractive landmark in the local area. Externally, the buildings retain much of their original character and fabric.

Criteria Assessment	
a) Historic	The School is historically significant for its role as an educational institution for the community since 1924. The buildings provide evidence of the nature of suburban development of local social and cultural institutions which accompanied the residential growth of the suburb during the early twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The School buildings are aesthetically significant as representative examples of well detailed, Late Federation, suburban school buildings. The siting and the integrity of the Schools aesthetic qualities also make it a notable and attractive landmark in its local area. Externally, the buildings retain much of their original character and fabric.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The buildings are representative of late Federation, suburban school buildings.

Physical Description

The Berala Public School complex comprises of several one and two storey buildings, mostly constructed in brick with hip and gable roofs. They are situated around large outdoor play areas and yards.

The earliest of the buildings is a two-storey structure, with partially rendered face brick side walls. The building features decorative dark brick string courses. A hipped verandah projects over the main entrance of the building at ground level. It is partially enclosed and supported by timber posts with steel balustrade. The gable end of the main roof features small, painted timber brackets under the eaves and a high set of timber roof vents. Single and paired double hung timber framed sash windows have been replaced with multi-paned aluminium framed windows.

Most of the other buildings in the complex are face brick or weatherboard, with tiled or corrugated iron hip and gable roofs. Due to site access constraints, it is unclear which of these buildings have heritage value. The outdoor areas of the school have been laid down with asphalt. The entire complex is surrounded by a metal palisade style fence. Within the Schools curtilage and along the perimeter is a number of mature trees.

As viewed from the street, the buildings appear to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New six-pane and single pane windows with aluminium frames added to main building*
- Asphalt and turfing surrounding primary building
- Modern school buildings on site

As viewed from the street, the historic buildings appear to have high integrity. Though, as is the nature of school buildings, they are subject to change overtime and it is likely that the interiors and some elevations are of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1924

The suburb of Berala is 17.7 kilometres west of Sydney city and is bounded by Auburn, Lidcombe and Regents Park. Berala originally formed the southern part of the suburb of Lidcombe (then known as Rookwood) and was known Hyde Park during this time. It is entirely in the catchment of the main arm of Haslams Creek. The name Berala is derived from an Aboriginal word meaning swamp duck, which refers to the birds that live in the swampy Haslams Creek.

Berala lies on the land that was originally part of the Hyde Park Estate, a grant of 1,110 acres given to HG Douglas in 1833. A large part of this estate was purchased by Joseph Hyde Potts, in 1834 and 1835, who subdivided the area into farm lots and subsequently into residential lots. This area lies to the east of the railway. There were earlier, smaller land grants, including one of 60 acres (24 hectares) to Thomas O'Donald in 1823, which encompassed what is now the western side of the railway.

On 11 November 1912, a single line on the railway was opened at Regents Park which served residents at Berala until 1924 when Berala Station was opened. By this time, Berala had begun to develop as a

suburb with an increase in residences and industry. These residences were predominately detached single-storey houses. It was not until the late 1960s that the first three- and four-storey apartment blocks, and later townhouses were built. The 1980s brought similar but higher density development, mainly on the western side of the railway.

Industry and commercial businesses also developed alongside the introduction of the railway. By 1920, there was a letter receiver, an authorised stamp seller and a public telephone. Mail was delivered from Lidcombe post office. In 1925, an unofficial post office was opened on the western side of the railway station in W. K. Andrews' general store. By 1935, there were 26 business and the population had increased to 2,000. The Commonwealth Bank of Australia opened a branch in 1947, followed by the Bank of New South Wales and a building society. The shopping centre developed along one side of Woodburn Road, facing vacant railway land and the station.

In February 1922, the first Public School in Berala was opened in the Presbyterian Church located on Tilba Street. In March of the same year, Council resumed the Clarke Street site for educational purposes. The original school building was completed in 1924. Over the years, several buildings have been constructed on the site to accommodate the growing population.

Today, the site remains in use as a public school.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the Development Application should be accompanied by a detailed heritage assessment and fabric analysis to understand which buildings are significant and how to manage change.
- Should any new buildings be proposed for the site, the architecture of the new buildings should not detract or adversely impact upon the heritage items and respect the heritage character.

Curtilage Map

Statement of Significance

The Brush Box Street Trees are significant for their historic, aesthetic and representative values. The brush box tree (*Lophostemum conferta*) was widely planted in the area throughout the early 20th century, with the initial plantings occurring in the early 1920s. The trees along Lidbury Street are historically significant as a demonstration of the c.1920s practice of street plantings that was widespread locally and throughout other Sydney suburbs during this time. They remain a defining element of the streetscape.

Criteria Assessment	
a) Historic	The trees are historically significant as part of the brush box tree planting (*Lophostemum conferta*) that was widespread locally and throughout other Sydney suburbs in the early 20th century, with the initial plantings occurring in the early 1920s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The trees are aesthetically significant as a defining element to the streetscape of Lidbury Street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion. They are a typical planting in the area.
g) Representativeness	The brush box trees are representative of early street tree plantings that were widespread locally and throughout other Sydney suburbs during this time.

Physical Description

The Brush Box Tree is an evergreen tree which is native to Australia. Dome-like in shape, it has a denser foliage with dark green, leathery leaves and hence provides more shade than the native eucalyptus tree. The typical height of the trees is approximately eight metres. It is also considered to be safer than a eucalyptus as it rarely sheds limbs.

The trees on this site are situated under electrical lines and are therefore modified due to constant trimming to allow for access to and safely of the power lines.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Trimming*

As this is a natural heritage item, an integrity rating has not been applied.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Planting years	1913-1939

The general planting of street trees became fairly widespread in Australia after the end of World War I. Among the typical species used were the Brush Box, which were widely planted throughout the local region including the adjoining suburbs of Concord and Strathfield.

Curtilage Map

Revised curtilage recommended- see below.

Statement of Significance

The St. Peter Chanel Church and School buildings are locally significant for their historic and aesthetic values. The site has been used as a religious and educational resource by the local community since 1959 and provides evidence of the nature of suburban development in the Post-War Period. In particular, the extant buildings provide evidence of the development of local social and cultural institutions during the residential growth of the period. The Church building is aesthetically significant as a representative example of a suburban Post-War Ecclesiastical Church and, externally, it appears to retain much of its original character and fabric.

Criteria Assessment	
a) Historic	The St. Peter Chanel Church and School buildings have local historic significance, having been used as a religious and educational resource by the local community since 1959. The buildings provide evidence of the development of local social and cultural institutions during the residential growth of the period. The buildings are also significant for the evidence they provide of the nature of suburban development in the Post-War Period.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The Church building is aesthetically significant as a suburban Post-War Ecclesiastical Church which retains much of its original character and fabric.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Church
This Post-War Ecclesiastical style Church has a simple rectangular massing with a large entrance portico. Both the portico and the main Church have low pitched gable roofs. The building appears to be constructed around a reinforced concrete or steel frame, with large areas of infill brickwork and glazing between the structural bays. The street facade of the entrance portico is defined by a prominent gable and side wall verge. The facade is clad with sandstone panels and features a sculpture of Christ's Crucifixion. The portico also features a simple colonnade, behind which two large timber doors form the entrance to the building. Two large glazed areas are situated either side of the main entrance. The colour of the brickwork indicates that a covered roof has been added to the entrance which is supported by several simple brick columns and a single-storey building to the left side used as the 'Church Shop'.

Hall
The 'Berala Jubilee Hall' is situated to the south of the main Church. It is a small, one storey steel framed building with a flat roof. The street facade is clad in sandstone panels and features two pairs of off-centre double doors. A face brick structure has been added to the left side of the façade. This partially covers what would have been sandstone cladding. It has a covered walkway leading from the southern elevation of the Church to the main entrance on the eastern (street facing) elevation.

Presbytery
The Presbytery is situated directly north of the main Church. It is a single storey red brick and tile building, constructed in a simple mid-20th century style. The roof is hipped with rounded ridge capping. The windows are timber double hung and the front entry door is covered by an enclosed brick portal. Above the doorway is a cross. The building has a long straight footpath laid in red and cream tile with a concrete edge. The building also contains a side entry stair in brick leading to an aluminium door. A detached brick and tile roof garage, in matching to style to the dwelling, is located at the rear of the dwelling. This garage is entered via a concrete driveway.

Landscaping
The site contains a large open carpark laid in concrete. The carpark contains a single tree surrounded by a small square of grass. It is unlikely that any mature vegetation was present here earlier as the carpark site once comprised of a dwelling.

The buildings on site appear to be in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

Church
- Face brick church shop to the front façade, connected to the portico awning
- Brick columns to portico awning
- Concrete carpark
- Modern signage

Hall
- Face brick building to the front elevation*

The church retains much of its original character and fabric and is therefore considered to have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1959-1963

The suburb of Berala is 17.7 kilometres west of Sydney city and is bounded by Auburn, Lidcombe and Regents Park. Berala originally formed the southern part of the suburb of Lidcombe (then known as Rookwood) and was known Hyde Park during this time. It is entirely in the catchment of the main arm of Haslams Creek. The name Berala is derived from an Aboriginal word meaning swamp duck, which refers to the birds that live in the swampy Haslams Creek.

Berala lies on the land that was originally part of the Hyde Park Estate, a grant of 1,110 acres given to HG Douglas in 1833. A large part of this estate was purchased by Joseph Hyde Potts, in 1834 and 1835, who subdivided the area into farm lots and subsequently into residential lots. This area lies to the east of the railway. There were earlier, smaller land grants, including one of 60 acres (24 hectares) to Thomas O'Donald in 1823, which encompassed what is now the western side of the railway.

On 11 November 1912, a single line on the railway was opened at Regents Park which served residents at Berala until 1924, when Berala Station was opened. By this time Berala had begun to develop as a suburb with an increase in residences and industry. These residences were predominately detached single-storey houses. It was not until the late 1960s that the first three- and four-storey apartment blocks, and later townhouses were built. The 1980s brought similar but higher density development, mainly on the western side of the railway.

Industry and commercial businesses also developed alongside the introduction of the railway. By 1920, there was a letter receiver, an authorised stamp seller and a public telephone. Mail was delivered from Lidcombe post office. In 1925, an unofficial post office was opened on the western side of the railway station in W. K. Andrews' general store. By 1935, there were 26 business and the population had increased to 2,000. The Commonwealth Bank of Australia opened a branch in 1947, followed by the Bank of New South Wales and a building society. The shopping centre developed along one side of Woodburn Road, facing vacant railway land and the station.

Until 1919, Berala parishioners travelled to Lidcombe to worship at St. Joachims. A hall in Third Avenue was purchased in 1920 for the Church. The hall was blessed and dedicated in 1923 and was the subject of a number of alterations until its removal in 1928 to land in Kingsland Road when further alterations were conducted.

Two Catholic Parochial Schools were established in 1933 by the Sisters of St. Joseph. One operated in Mary Street, Lidcombe and the other in Kingsland Road, Berala. These schools were distribution points for local benevolent societies in the 1930's. The Kingsland School became St. Peter Chanel.

The hall located on Third Avenue ceased to be used in 1940, with the construction of the Church / School in Regents Street in 1959. Since this time a number of alterations have taken place. This included the demolition of the Church on Regents Street in 1964, and the erection of the new parish hall in 1962-63 on Kingsland Road, called the Berala Jubilee Hall.

Today, the site remains in use for religious activities.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, remove the face brick addition to the front of the hall.
- As the listing concerns the church, hall and presbytery only, the heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland Council LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

Everley Park, which comprises of Melita Stadium and Native Vegetation, has local heritage significance for its historic, social, scientific, representative and rarity values. The Park is largely dominated by Melita Stadium, constructed between the late 1980s and early 1990s. The stadium is of historical significance as the home ground for Parramatta Football Club (FC), formerly known as the Parramatta Eagles and earlier, as the Parramatta Melita Eagles. The team 'Parramatta Melita Eagles' was established by Maltese migrants in 1956 after the amalgamation of the Malta Eagles and the Melita Soccer Club. The continued use of the club, it its various reiterations demonstrates a strong social connection to the local sporting community which have continued to support the club.

The Park is significant for its natural heritage values, with the park retaining valuable strands of native vegetation. The Cumberland Plain bushland has been extensively cleared since European settlement. The regeneration of vegetation along the Duck River reserve is historically associated with the Federal Government's revived interest in Australian native planting in the 1970s. The revegetation of the landscape has assisted the conservation of threatened species and ecological communities crucial to maintaining the unique biodiversity of the Cumberland Plain. The park contains an assemblage of 264 native plant species, representative of the type of vegetation once located across the Eastern Cumberland Plain. It also contains a stand of Wattle Acacia Pubescens which is in danger of extinction, a highly unusual occurrence of a stand of Grey Gum E. Punctata (in relation to the outcrop of Minchinbury sandstone), and an unusually large number of 51 native grass species. It is also relatively free from weeds and remarkably intact. The conservation of the Duck River reserve, which Everley Park forms a part of, is also associated with local Auburn resident Tony Price, who founded the 'Friends of Duck River Reserve' and was an active advocate for the biodiversity conservation of the area.

Criteria Assessment	
a) Historic	The stadium is of historical significance as the home ground for Parramatta FC, formerly known as the Parramatta Eagles and earlier, as the Parramatta Melita Eagles. The team 'Parramatta Melita Eagles' was established by Maltese migrants in 1956 after the amalgamation of the Malta Eagles and the Melita Soccer Club. The regeneration of vegetation along the Duck River reserve, including land known as Everley Park, is historically associated with the Federal Government's revived interest in Australian native planting in the 1970s.
b) Associative	The conservation of the Duck River reserve is associated with local Auburn resident Tony Price, who founded the 'Friends of Duck River Reserve' and was an active advocate for the conservation of the area.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The continued use of the club, it its various reiterations demonstrates a strong social connection to the local sporting community which have continued to support the club.
e) Scientific	The Park is significant for its natural heritage values, with the Park retaining valuable strands of native vegetation. The Cumberland Plain bushland has been extensively cleared since European settlement. The regeneration of vegetation along the Duck River reserve is historically associated with the Federal Government's revived interest in Australian native planting in the 1970s. The revegetation of the landscape has assisted the conservation of threatened species and ecological communities crucial to maintaining the unique biodiversity of the Cumberland Plain.
f) Rarity	The Park contains a stand of Wattle Acacia Pubescens which is in danger of extinction, a highly unusual occurrence of a stand of Grey Gum E. Punctata (in relation to the outcrop of Minchinbury sandstone), and an unusually large number of 51 native grass species. It is also relatively free from weeds and remarkably intact.
g) Representativeness	The Park contains an assemblage of 264 native plant species, representative of the type of vegetation once located across the Eastern Cumberland Plain. It is also relatively free from weeds and remarkably intact.

Physical Description

The Park comprises an area of open park space and remnant bushland located along the west bank of Duck River, between Everley Road, Chester Hill and Melita Stadium. The site contains a large assemblage of native vegetation types, characterised by diverse plant communities of Open Forest, Grass Woodland, Open Heath and Scrubland.

A portion of the land has been cleared for the inclusion of a sporting field, called Melita Stadium. The stadium features a main grandstand and low-scale seating around the building. The grandstand appears to have been built between the late 1980s and early 1990s, and has been refreshed more recently, possibly c.2010. The Melita Stadium has an asphalted carpark, concrete wall with a steel gate and a small club house behind the stadium.

Overall, the condition of the stadium and parkland is considered good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Revegetation of Duck River in the 1970s
- Construction of the Melita Stadium grandstand between late 1980s and early 1990s
- Stadium refresh c.2010

The plantings and grandstand are well maintained. The site has high integrity as a result.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1970s

Duck River Reserve
The trees along Duck River were most likely planted in the 1970s, when a revived interest in Australian native planting was expressed in the greening much of Sydney's inner west areas by the Federal Labor Government. Today, the native vegetation on this site makes a notable contribution to the landscape and contributes towards a well vegetated corridor along the banks of Duck Creek where several walking tracks have been established.

In the recent past, the conservation of the Duck River catchment also included the interest of local residents who have a keen interest in the ecology of the Cumberland Plain bushland. In 2013, a journal article in *Cunninghamia* Vol.1, No.1, by Alison Hewitt titled 'Revisiting Tony Price's (1979) account of the native vegetation of Duck River and Rookwood Cemetery, western Sydney', was written which discusses the work of Tony Price, a local Auburn resident who studied the remnant species along the Duck River:

In the late 1970s, local Auburn resident G A (Tony) Price, recognised the value of these remnants both for the species they held and the clues they could give to past vegetation patterns, spent three years surveying and collecting plants in the area. He compiled an extensive list of the existing plant species, recorded ecological observations, and interpolated them into a picture of the landscape and vegetation of the district at the time of European settlement, in his unpublished account The Vegetation of Duck River and Rookwood Cemetery, Auburn.

He was the founding member of the 'Friends of Duck River Reserve' whose activities included: petitioning for interpretative signage; instigating fencing of the area to protect it from minibike riders and overflow parking at the Melita Soccer Stadium; gaining funding for the removal of old car bodies from the reserve; ensuring the retention of trees along the riverbanks; propagating local species and undertaking bush regeneration work.

Tony Price conducted his fieldwork in 1976, 1977 and 1978 and completed his written account in 1979. He states that he studied the Duck River site most intensively. He collected voucher specimens, utilised the limited number of published field guides that were available at that time and took specimens to the identification counter at the Royal Botanic Gardens in Sydney for assistance. He recorded abundance estimates on all species, coding them as common (X), occasional (O) or rare (R) but did not record a decision rule as to how species were assigned into these abundance classes. He carefully recorded the habitat/s in which each species was found, dividing these into his eight 'microenvironments': 1. low woodland, Duck River; 2. ti-tree and eucalypt scrub; 3. grasslands; 4. exposed soils and subsoils; 5. drainage lines, edges of permanent sheets of water, creeks etc.; 6. permanent and transient sheets of water; 7. graves, Rookwood cemetery; and 8. dumped soil, edges of roads and tracks. Price was also interested in the ecological processes that were occurring in the vegetation and made notes on the apparent regeneration and establishment requirements of species: their light and shade tolerances and responses to waterlogging, drought, fire and soil disturbance.

Based largely on his surveys of the remnant native vegetation at Duck River and Rookwood Cemetery, Price reconstructed a picture of pre-European vegetation for the Auburn district. He also drew from his observations of the 'scattered, veteran eucalypts' of the State hospital grounds at Lidcombe, the Carnarvon Golf Course at Berala, and various parks and yards immediately east and west of these

sites. He incorporated his knowledge of local land use and fire history and compared his conclusions on the pre-European vegetation with those postulated earlier by Pidgeon (1941) and Kartzoff (1969).

Melita Stadium

The football team known as the Parramatta Eagles, better known as Parramatta Melita, was established by Maltese migrants in 1956 after the amalgamation of the Malta Eagles and the Melita Soccer Club. Their first season was played in 1957. Melita Eagles joined the NSW Soccer Federation along with higher profile clubs such as Hakoah, APIA Leichhardt & St George who were part of the original breakaway movement from the old NSW Soccer Football Association.

In 1962, they underwent a name change to Melita Eagles-Newtown and played their home games at Fraser Park, Marrickville. By 1967 they had reached the top tier of football in New South Wales (NSW). Whilst playing in the National Soccer League (NSL) the team name was changed to Parramatta Eagles in accordance with demands by the ASF to remove ethnic origins from club names. The Parramatta Eagles competed in the A-league, known as the NSL for a number of years. They first competed in the 1984 season after finishing as Premiers in NSW in 1983, and again in 1989. The Parramatta Eagles remained in the NLS until 1995.

Melita Stadium was constructed sometime between the late 1980s and early 1990s. In 2000, a five-year partnership was established with the Manchester United Football Club to run an Academy from Melita Stadium. Melita Stadium is the home of the former NSL club Parramatta Eagles, now known as Parramatta FC Eagles and Parramatta Lady Hawks.

A new partnership was formed between (PMESC) Melita Eagles Sports Club & (GDSFA) Granville & Districts Soccer Football Association, creating Parramatta FC. Parramatta FC gained promotion back into the NSW Premier League in 2011.

Recommendations

Curtilage Map

Revised Curtilage recommended – refer below

Statement of Significance

The late Federation cottage at 156 Targo Road, Girraween, (otherwise known as Targo Mahal) is locally significant for its historic and aesthetic values. The building has historic significance as a c.1923 dwelling built after the land was transferred to William Charles Wentworth in 1917 and subsequently subdivided. The dwelling has aesthetic significance as a fine and largely intact example of a late Federation cottage which retains original and early decorative detailing. The building is an important streetscape item, though it is located on a site which has been reduced by modern subdivision. Due to various extensions and the addition of overly ornate dormers to the roof, the dwelling is not considered to be a representative example of its type.

Criteria Assessment	
a) Historic	The building has historic significance as a c.1923 dwelling built after the land was transferred to William Charles Wentworth in 1917 and subsequently subdivided.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a fine and largely intact example of a Late Federation Cottage which retains original and early decorative detailing. The building is an important streetscape item, though it is located on a site which has been reduced by subdivision.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The dwelling is a single storey timber framed weatherboard late Federation cottage. It is an asymmetrical cottage with a main gabled hip roof and gabled wings extending to north and east (street) of corrugated iron. The roof contains a large group of solar panels which are visible from the street. A bullnose verandah wraps around the northeast corner between the wings and features gabled return and sweeping concrete steps at the corner. The verandah has turned timber posts, decorative brackets and valance in the Federation style and simple picketed balustrade. Gabled ends have decorative timber screens, barge boards and finials typical of the Federation style. Windows are generally timber multi-paned casement with coloured top and bottom panes, decorative timber surrounds and sills and are grouped in pairs or threes. There is a bay window to the east gable wing. There is an original timber and glass door adjacent to east wing, with a glazed top light and name plate inscribed "Targo Mahal". There is a glass connection at the rear of the cottage.

A driveway on the north leads to a new face brick townhouse development at the rear. It provides vehicular access to small weatherboard and corrugated steel garage at the northeast corner of the property which appears to have been extended at the rear. An adjacent carport is a later addition and has similar style timber details to the main house.

A low timber picket fence faces the street as well as part of the northern boundary. The front garden is heavily landscaped and features several established trees.

The property appears to have reduced curtilage from its original subdivision and has been recently subdivided and developed at the rear. Despite the subdivision, the remaining curtilage provides good sense of space around house.

Despite the heavy vegetation adjacent to the dwelling, the building shows no signs of deterioration and is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Extension of garage
- Carport in a sympathetic style
- Covered walkway between garage and cottage
- Timber picket fence
- Paved driveway and path
- North facing dormers to roof added in a Federation style*
- Rear of property subdivided and developed in 1994*

As building has undergone some visually dominant, overly ornate modifications, which are clearly visible from the street, its overall level integrity is still considered to be moderate.

Integrity	High	**Moderate**	Low

* *element detracts from the overall* cultural *significance of the place*

Historical Notes	
Construction years	c.1923

Girraween is located to directly west of Pendle Hill and lies on the land that was part of Darcy Wentworth's land grant. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the present-day suburbs of Wentworthville, Pendle Hill and Girraween.

The suburb was created in 1910 when Wentworthville was subdivided into Girraween by real estate developer Arthur Rickard of Arthur Rickard & Co. Ltd. It was first subdivided as the Toongabbie Estate and then the Girraween Estate. The suburb was officially named 'Girraween' when the local post office opened in 1918. The name 'Girraween' derives from an Aboriginal word meaning 'place where the flowers grow'.

The property is on land originally granted D'Arcy Wentworth in 1819. A lease for part of this land holding was made in 1901 to the Emu Gravel and Road Metal Company for the period of 30 years. The Quarry reserve was located on the Great Western Road boundary. In 1916, 700 acres were transferred to Fitzwilliam Wentworth. However, it was not until 1917, when the land was transferred to William Charles Wentworth, that it was subdivided into various allotments. In the same year, a number of allotments were purchased by the Green Acre Park Limited and a number of individuals.

In 1923, Francis Leslie Flood purchased Lot 310. It is assumed that the house was constructed from this time and Francis Flood is listed in the Sands Directory from 1926. In 1941, Francis Flood and his wife became joint tenants of the property which was transferred to Leo Richard Flood in 1960. Flood sold the property shortly after to John Harwood Carr who in turn sold the property to James and Jessie Bristoe in 1967. The property has since been sold in 1977 and in 1987 when the current owner purchased it. In 1994, the lot was subdivided and a duplex was constructed on the rear lot. The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring	**X**		

		development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, a historic paint analysis should be investigated and implemented.
- As the rear of the site has been subdivided and developed, the heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The building at 26 Tungarra Road, Merrylands, (otherwise known as 'Urana') is of local heritage significance for its historic and aesthetic values. The building is historically significant as a dwelling likely constructed prior to the subdivision of the land by William Charles Wentworth in 1917. The cottage may have been on an early farm associated with the Wentworth Estate and appears to be the earliest building on the street. The residence has aesthetic significance as a modest late Victorian / early Federation cottage. Though it has undergone some modifications, it has several intact features and makes a positive contribution towards the streetscape. It is readily identifiable as part of the local historic building stock.

Criteria Assessment	
a) Historic	The building is historically significant as a dwelling likely constructed prior to the subdivision of the land by William Charles Wentworth in 1917. The cottage may have been on an early farm associated with the Wentworth Estate. The dwelling appears to be the earliest building on the street.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as a modest late Victorian / early Federation dwelling. Though it has undergone some modifications, it has several intact features and makes a positive contribution towards the streetscape. It is readily identifiable as part of the historic building stock.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The dwelling is a single storey timber framed weatherboard cottage in a late Victorian / early Federation style. The dwelling appears to be the earliest building on the street.

It is a T-shaped cottage with a hipped roof, continuing at a lower pitch to a former encircling verandah on three sides and gabled wing at the northern end. The roof has painted corrugated iron roof sheeting and a single face brick chimney at the northwest corner. The building is supported on brick pier foundations. The verandah has been infilled to the southern and western elevations with weatherboard cladding to match the original. The verandah infill to the south appears to the early twentieth century, evidenced by the weatherboard cladding and decorative windows elements that differ slightly to the original. The remaining open verandah on the east elevation fronting Tungarra Road is supported by simple timber posts with decorative timber brackets, valance and a simple picket balustrade. A timber lattice privacy screen is located at the southern end of the verandah.

The front façade has a high-waisted four panelled Victorian timber door adjacent to a gabled end with an aluminium screen door fronting. The original portion of the front façade and the gable end features a triple timber casement window with replaced windowpanes. All windows on the front façade have decorative timber sills which appear to be original. The triple casement windows on the gable end have a timber fixed awning with decorative brackets. The casement windows located on the southern portion of the verandah infilled are grouped in pairs and fours. They have similar decorative sills, and are timber framed on the east elevation and aluminium framed on the south elevation. A single window on north elevation is a timber framed double hung sash window with a fixed timber awning and shingled roof.

The dwelling has a rear single storey extension with timber weatherboard cladding and a corrugated iron roof. This is located at northwest end of the residence. There is a low timber picket fence to the street. The timber picket fence has a gate located beneath a gabled portico with replaced timber posts and finial. A paved driveway to the south of the building leads to a small gabled single garage with fibro walls and a corrugated asbestos roof. There is minimal landscaping to the rear and several established trees in the front yard.

The dwelling is located on a moderately sized suburban block. The present boundaries do not appear to be original with modern dwellings constructed on the south, west and north sides of the building.

The condition of the building is considered to be fair, with deterioration to timber elements throughout and peeling paint. The brick piers on southern side also appear to be leaning and require attention.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Verandah infilled on the southern elevation,
- Fibro garage, constructed in 1954
- Paved driveway
- Subdivision of site*
- Lean-to addition in weatherboard
- Lattice verandah infill to the southern side*
- Timber picket fence and timber arch to the entry footpath
- Replaced timber verandah posts.

While the building has undergone some modification that has altered the original detailing, the building overall retains its original form. The integrity is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Pre 1916

Girraween is located to directly west of Pendle Hill and lies on the land that was part of Darcy Wentworth's land grant. Wentworth was a substantial land holder in the early colony, he appears to have obtained his first grant of about 147 acres at Parramatta from Governor Hunter in 1799; by 1821, he had been awarded a total of 17,000 acres, 2200 acres of which were located in the present-day suburbs of Wentworthville, Pendle Hill and Girraween.

The suburb was created in 1910, when Wentworthville was subdivided into Girraween by real estate developer Arthur Rickard of Arthur Rickard & Co. Ltd. It was first subdivided as the Toongabbie Estate and then the Girraween Estate. The suburb was officially named 'Girraween' when the local post office opened in 1918. The name 'Girraween' derives from an Aboriginal word meaning 'place where the flowers grow'.

The property is on land originally granted to D'Arcy Wentworth in 1819. A lease for part of this land holding was made in 1901 to the Emu Gravel and Road Metal Company for the period of 30 years. The Quarry reserve was located on the Great Western Road boundary. In 1916, 700 acres were transferred to Fitzwilliam Wentworth. However, it was not until 1917, when the land was transferred to William Charles Wentworth, that it was subdivided into various allotments. In the same year, a number of allotments were purchased by the Green Acre Park Limited and a number of individuals.

The subject property formed part of 50 acres originally granted to John Merritt in 1794, and 2200 acres to D'Arcy Wentworth in 1819. The site formed part of 735 acres between the Great Western Road and the railway, acquired by Fitzwilliam Wentworth in 1916 and then William Charles Wentworth in 1917. Wentworth subsequently subdivided and 50 acres that was retained by WC Wentworth, was further subdivided, forming Tungarra Road and the present property boundaries.

The property was purchased by Lionel Leslie North, bread carter, in 1920. This is consistent with the Sands Directory, as North is listed in occupation of the property between 1924-33. There is no evidence as to when the house was constructed, although its architectural style suggests it dates prior to 1916; possibly the cottage of an early farm on the Wentworthville Estate. The dwelling remains in use as a private residence.

Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Monument/Memorial	

Curtilage Map

Revised Curtilage recommended- refer below.

Statement of Significance

The Railway Centenary Monument is locally significance for its historic and associative values. The railway monument is historically significant for its construction as part of the commemoration of the centenary of the NSW Railways in 1955. Though it has been relocated a short distance from the railway and its original location, its location is historically significant, as it marks the terminus of the first NSW railway journey between Sydney and Parramatta in 1855. Its materials are also historically significant, with the sandstone used being sourced from the first railway viaduct built in Australia. The memorial is associated with railways commissioner, Reginald Windsor, who held the position from 1952 to 1956. Windsor oversaw the centenary celebrations and was present at the monument unveiling.

Criteria Assessment	
a) Historic	The monument is historically significant for its construction as part of the commemoration of the centenary of the NSW Railways in 1955, and for its location, which marks the terminus of the first NSW railway journey between Sydney and Parramatta in 1855. Its materials are also historically significant, with the sandstone used having been sourced from the first railway viaduct built in Australia.
b) Associative	The monument is associated with railways commissioner, Reginald Windsor, who held the position from 1952 to 1956, following a career in the railways that began in 1906, when he joined the NSW Government Railways and Tramways as a probationer at Singleton. Windsor oversaw the centenary celebrations during his time as commissioner. He was also responsible for cost cutting measures, such as staff reductions and the suspension of the Eastern Suburbs

	railway, while he endeavoured to generate new business by using diesel locomotives, air-conditioned trains, freight containers and streamlined procedures.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The monument is an asymmetrical shape covering a footprint of approximately five metres. Its centre is a platform, surrounded on three and a half sides by walls made of sandstone blocks, the highest being approximately two metres high and the others being approximately 0.5 metre high. The platform can be accessed by two steps that wrap around at one corner. The lower walls contain small garden beds and plantings. There is a plaque in the centre of the high wall on the internal face and another on the outside face of one of the low walls. There appears to be space for a third plaque, that is no longer attached. The monument shows physical evidence of its relocation, whereby the stone blocks have been disassembled, moved and reconstructed using concrete mortar. The monument is set in a small, flat, grassed reserve that features rows of mature tree plantings along its perimeter.

The engraved bronze plaque reads:

'Erected to commemorate the opening of the
Sydney to Parramatta Railway
26th September 1855.
This was the first section of the New
South Wales Railways and the first state owned
Steam railway in the British Empire.
The Parramatta terminus was adjacent
To the monument.

Unveiled by his Excellency, Lieut-Gen.
Sir John Northcott. K.C.M.G., K.C.V.O.C.B.,
Governor of New South Wales,
26th September, 1955.'

Another plaque reads: "This land was made available by the Commissioner for Railways: R Winsor Esq. to mark the historical occasion of the New South Wales railway centenary 26th September 1955.

The item is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Monument was relocated to the current site in 1968.

The monument itself appears to be intact in terms of its primary form, however, it has been relocated a short distance from its original location, which also required its disassembly and reconstruction.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1955

In 1955, the monument was constructed as part of the celebration of the centenary of the NSW railways. It was constructed to commemorate the place where the first rail journey ended at Parramatta Junction, and was originally located in a small park at Dog Trap level crossing on the east side of Woodville Road.

Parramatta City Council stone masons are reported to have built the monument. The stones used in its construction were recovered from the first railway viaduct in Australia, which was built at Long Cove Creek, Lewisham, in 1855. The tablet and plaque were originally used as builder's nameplates on locomotives and were presented by the Australian Railway Historical Society and the Royal Australian Historical Society.

The engraved plaque reads: 'Erected to commemorate the opening of the Sydney to Parramatta Railway, September. 26, 1855. This was the first section of the New South Wales Railways and the first State-owned Steam Railway in the British Empire. The Parramatta Terminus was adjacent to this monument. Unveiled by His Excellency, Lieutenant General Sir John Northcott, K.C.M.G., K.C.V.O., C.B., Governor of New South Wales, September 26, 1955.'

Another plaque reads: "This land was made available by the Commissioner for Railways: R Winsor Esq. to mark the historical occasion of the New South Wales railway centenary 26th September 1955.

Newspapers from the time describe the monument unveiling. Speakers at the ceremony included the Commissioner for Railways, Mr. R. Winsor, the Minister for Transport, Mr. E. Wetherell, President of the Royal Australian Historical Society, Dr. C. H. Curry, and the State Governor, Sir John Northcott. In his address, Sir John congratulated the Railway Department on the development which had taken place during the past 100 years. He remarked that when the first train arrived at Granville the rain came down in 'torrents'. Mr. Winsor later presented a silver tray to the Governor, as a memento of the occasion.

Plans, dated 1968, indicate that the memorial monument was relocated a short distance at this time, from its original location on the east side of Woodville Road to the west side. The memorial monument remains in this location, in the centre of a small reserve between Woodville Road, Crescent Street and the railway line.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland Council LEP as it more accurately captures the site and its landscape setting.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The cottages at 15 and 17 Bennalong Street are of local significance for their historic, associative and aesthetic values. Built c.1890, the dwellings were constructed in association with industrial and commercial development of Granville from 1880 to 1930s. The item has additional significance for its association with local builder and stonemason, Horace James Melville, who constructed the cottages with stones which had previously formed the wall around Parramatta Park. The item has some aesthetic significance as a pair of Victorian period cottages; however, this is reduced by the accumulative impact of unsympathetic alterations and additions which are not in keeping with the character of the buildings.

Criteria Assessment	
a) Historic	The item is historically linked with the residential development of Granville in association with the industrial and commercial improvement of Granville from 1880 onwards.
b) Associative	The item is historically associated with local builder and stonemason, Horace James Melville, who constructed the cottages with stones which had previously formed the wall around Parramatta Park.
c) Aesthetic/Technical	The item has some aesthetic significance as a pair of Victorian period cottages. The aesthetic significance is however, reduced by the accumulative impact of unsympathetic alterations and additions that not in keeping with the character of the building.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item does not meet this criterion

Physical Description

The item consists of two, single storey stone cottages with hipped roofs clad with green Colorbond roofing and a brick chimney.

The cottage at No.17 features sandstone masonry blocks that appear to have been recently re-mortared along the first five courses from the base. The verandah is a skillion extension from the main roof supported on timber posts with timber panel end walls and contains a concrete floor. The timber elements of the verandah have been replaced in sections and painted grey. The steel loop-top fence along No. 17 has replaced a Gothic pattern timber picket fence on concrete plinth. The loop-top fence is an intrusive addition. The front door features a transom light above a Victorian timber four panel door. The windows contain timber framed sash windows fronted by a steel frame grill and a sandstone sill. The dwelling also features a rear single storey addition with a skillion roof and weatherboard cladding.

The cottage at No.15 consists of a rendered stone front façade with sparrow picked ashlar block to the sides. At present, the dwelling is visually obscured by an intrusive bamboo and bush fence that stands 1.8 metres high, with a timber panelled gate atop a sandstone base.

The cottages feature a deep setback, in line with other dwellings on the street. The front setbacks do not contain any significant landscape elements.

The cottages appear to be in a fair condition overall, although timber elements showing signs of deterioration. The recladding of the roofs and the re-mortaring of stonework has addressed any previous issues with water management.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear additions to both dwellings
- Bamboo fencing along No.15*
- Steel loop-top fencing along No.17*
- Roofs replaced
- Painted concrete verandah slab at No.17*
- Replaced timber verandah posts at No.17

The integrity of the item is impacted and reduced by the accumulative impacts of minor alterations to the front façade, such as the fences. Overall, the integrity of the building is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1890

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The site is built on Copeland Bennett's Subdivision. These houses were built in the early 1890s by builder Horace James Melville, using stones which had previously formed the wall around Parramatta Park. The sandstone used for the construction of these cottages originates from the demolition of the dwarf wall around Parramatta Park (erected during Governor Macquarie's residence 1811 to 1821).

Houses are shown on street alignment survey of c.1891. They are also shown on the 1914 Water Board plan. Apart from a cottage in Nobbs Street, these were reputed to be the only stone houses in Granville.

Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**

2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		10. Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the steel loop fence along No. 17 and the bamboo/timber fence along No. 15 should be removed and replaced with a more historically sympathetic fencing style such as timber picket.

	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

'Nallabrae' is of local significance for its historic and aesthetic values. Built in 1913, the building relates to the early twentieth century residential development of Granville which continued to be driven by the industrial activity in the wider area. The building is aesthetically significant as a large two-storey Federation Arts and Crafts house, which is unusual in the area. At present, the aesthetic value is reduced by the unsympathetic alterations to the building's front façade which has modified the upper and lower verandah spaces. Although this is the case, the building demonstrates characteristic qualities of large Federation period residences built in Granville in c.1913. The item's form and architectural character makes a positive contribution towards the heritage character of the Granville Heritage Conservation Area – Civic Precinct, however this could be enhanced by reinstating original features.

Criteria Assessment	
a) Historic	Built in 1913, the item relates to the twentieth development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has some aesthetic significance as a large two-storey Federation period residence, which is unusual in the area; however, this is reduced by a series of later unsympathetic alterations to the façade that represent an adverse impact to the aesthetic values of the site. There is the opportunity to see the reinstatement of aesthetic features based on documentary evidence and physical evidence as the adverse impacts are largely reversible.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Due to various alterations, the item does not meet this criterion.

Physical Description

'Nallabrae' is a large, two-storey brick Federation-period Arts and Crafts house which has been converted into several individual flats. The building features faded tuck-pointed brick walls with roughcast render over facade and brick columns at the front. The structure features a hipped roof with a central gable clad with Marseilles tiles. The gable features timber fretwork. The roof has two brick chimneys with rough cast render and squat terracotta pots. The verandah has paired timber posts set on brick piers with shingled balustrade and a concrete floor. The front door is under a gabled pediment above entrance, with a transom light and sidelights flanking an eight panelled timber door. The window lintels and sills have been painted, however would have originally featured contrasting dark brick string courses. The fence was of solid bricks, with a bullnose coping and brick posts connected by wrought iron scrolled pattern panels. However, at present the item consists of timber panels with much of the original structure removed. Cyclone wire security fencing encloses the property to the south and west. The façade appears to have fibro sheeting infilled below windows of the upper façade and above those of the lower façade. It appears the stairs located on north and south elevation are a later modification. The stairs have a cantilevered concrete base with tiled stairs and a steel balustrade.

The residence has a modest setback from the street alignment and does not contain any significant garden features.

The dwelling features highly deteriorated timberwork along the façade. However the overall condition of the building is considered to be fair.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Internal works to convert the house into apartment block
- Replaced fence except for some brick elements*
- Enclosed verandah with fibro sheet infill with aluminium framed windows*
- Modified projecting gable with window
- Possible rear extension
- External stairway on the north and south elevations

The building generally retains a moderate level of integrity. However, the infilled verandah on the upper and lower floor, as well as the division of the house into apartments, are an intrusive modification that detracts from the integrity of the item. The verandah fabric may be removed to reconstruct the original verandah arrangement based on physical and documentary evidence.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1913

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-

class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land was bought in 10 July 1912 by Tom Hewson, an orchardist in Granville. The land was mortgaged twice, once in September 1912 and again in 1913 to build this large dwelling. Hewson called it "Nallabrae" and had moved in by 1915. It was one of the houses used to illustrate the development of Granville as a progressive urban centre, in the book 'Progressive Granville in 1915' published by the Granville Brotherhood. The Brotherhood was a social group for men working and living in Granville.

The building was originally one home, but now presents as several unoccupied flats.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The verandah infill walls are intrusive and, should the opportunity arise, be removed to reconstruct the original verandah arrangement. This should be based on physical and documentary evidence.
- Should the opportunity arise, repairs to timberwork should be undertaken.
- Any new paint works should adopt an appropriate historic colour scheme.
- A suitably qualified heritage trades specialist should undertake the repair works to Nallabrae.

Curtilage Map

Statement of Significance

The Charles Street Group are of local significance for their historic and aesthetic values and as representative examples of Federation period timber residences in Granville. Built between 1906-1910, the group is historically linked to the residential growth of Granville that occurred in conjunction with the industrial and commercial development of the area. Specifically, they relate to the New Glasgow Estate and the Hudson Brothers own subdivision, Clyde Township. The cottages are of aesthetic significance as intact and well-kept Federation period cottages. The group has additional significance for its contribution to the streetscape character, which is enhanced by the similarities in age, design, use and materials between the dwellings.

Criteria Assessment	
a) Historic	The item is historically significant as an early-1900s group of cottages, linked with the residential growth of Granville that occurred in association with the industrial and commercial development of the area. Specifically, they relate to the New Glasgow Estate and the Hudson Brothers own subdivision, Clyde Township.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwellings are of aesthetic significance as a group of intact and well-kept Federation style cottages. The group has additional significance for its contribution to the streetscape character, which is enhanced by the similarities in age, design, use and materials between the dwellings.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of an intact, modest Federation style cottage.

Physical Description

The item consists of three single storey Federation weatherboard clad cottages.

The cottage at No.3 features weatherboard cladding with a pattern that imitates sandstone masonry, a hipped galvanised iron roof and two brick chimneys with a stepped string line. The verandah features a bullnose verandah roof, clad in galvanised iron supported on timber chamfered posts set on timber plinth and timber floor. A timber valance decorated by narrow latticework with incised trefoil pattern at regular intervals runs between the verandah posts. The front façade is further distinguished by a bay window and single arched window with rectangular niches below sills. The front door features a keystone in the arch above a glazed fanlight with dentils in the transom above a Victorian four panel door with bolection moulds. The fence is an acorn topped timber picket fence with matching gate.

The cottage at No.5 is of a modest design and built across two allotments. The dwelling features a galvanised iron hipped roof with a brick chimney, stepped string course and bullnose verandah. The bullnose verandah is clad in galvanised iron and supported on timber stop chamfered posts enclosed by a timber ladder balustrade. The front door features a transom light above a French door with glazed panels above and timber bolection moulded panels below. The front fence is a timber picket fence that joins the verandah's balustrade. The rear of the property, in the northwest corner, contains a double storey weatherboard garage/shed with a pitched roof clad in red Colorbond sheeting. The garage/ shed is built behind a large, mature tree.

The cottage at No.9 appears to have been recently renovated with a new roof and verandah detailing. The dwelling features a hipped roof, recently reclad in galvanised iron, and a tall brick chimney with step and two Chinese lantern pots. Similarly, the bullnose verandah has also been re-clad in galvanised iron. This is supported on timber posts with a simple curved timber valance with a ladder infill and timber floor. The front door has a transom light above four panelled door with two glazed panels above lock rail and timber collection mould panels below. The windows are double hung sash windows with four small multi-coloured glass panes along the trim. The property fence is a painted timber picket fence.

The Charles Street Group cottages feature a consistent front setback within the streetscape. The landscape is moderately vegetated with several established plantings within the allotments and along the streetscape within the public domain. Notable plantings along Charles Street in the public domain include several Willow's (*Agonis flexuosa*), and a Mugga Ironbark gum (*Eucalyptus sideroylon*).

The cottage at No.9 is recently renovated and presents as a well-maintained building. The cottage at No.3 is also well maintained and cared for with no defects identified. While there is minor timber deterioration on the weatherboards of No.5 front façade; the dwelling is otherwise well-maintained. Overall, the condition of the Charles Street Group cottages is considered to be good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- No.3 – Window arches have been redone.
- No.5 – Extensions to the rear and a garage/ flat conversion to the northwest rear of the property.
- No.9 – Recently renovated to include a rear extension, new verandah, roof and fencing. The former verandah is described as featuring a skillion roof with timber posts with privacy walls with coloured glazed panes on fibro lined balustrade. The former fence is described as being of weldmesh panels attached to pipe posts, with wrought iron gate. These elements have been replaced with sympathetic alterations that respect the heritage aesthetic and character of the individual item and group.

Overall, the integrity of the Charles Street Group is high, with any alterations and additions sympathetic to the heritage value of the buildings.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1906-1910

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The industrial development in the wider area brought employment opportunities which would create a demand for housing and land in the Granville area. Notable amongst these new housing estates were the New Glasgow Estate and the Hudson Brothers own subdivision, Clyde Township, auctioned on the 13 December 1884. The land in which the cottages are located formed part of the 'New Glasgow Estate', however, they were later subdivided in 1890s as part of Peter Murphy's Dunlewey estate subdivision. The cottage at No. 5 was built in 1906 for Frederick Bowden, a blacksmith who came to be the foreman of Clyde Engineering Works. Bowden was also an active Alderman of the Granville Municipality in the 1920s and Mayor of Granville in 1926 after which he was re-elected for a successive term.

Heritage Conservation Area	Included, Granville Conservation Area – Residential Precinct		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The dwelling at 7 Daniel Street is of local significance for its historic and aesthetic values, and as a representative example of Federation bungalow in the area. Built in 1910, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes positively to the overall streetscape character of the Conservation Area. This is enhanced by the similarities in age, design, use and materials with other houses along the street.

Criteria Assessment	
a) Historic	The item relates to the twentieth development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item contributes positively to the overall streetscape character of the Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a Federation period bungalow.

Physical Description

The single storey Federation period bungalow is a tuck-pointed exposed brick structure with an asymmetrical gabled roof form. The roof, being the most prominent aspect of the building, is covered with terracotta shingle tiles with terracotta ridge capping and comprises of a hipped main roof with gable ends to the south and western facades. A bay window projects outwards from the western façade gable end, and the southern street facing façade gable end contains a corbelled and timber framed set of double hung sash windows. The south-western corner of the building appears to have been a former verandah with brick walls and brick on edge copings. This is now enclosed by a series of operational and fixed clear and patterned glass windows. Other features include simple, curved timber valances and timber posts to the entry to the house, and two roughcast rendered chimneys with exposed brickwork decorations and terracotta chimney pots. The bungalow has a rear brick extension with a skillion roof, and a brick fence with wrought iron gate to the front of the property. To the west of the dwelling, a detached brick and gable roof garage, with an adjoining carport with cyclone security fencing have been added at a later date.

The dwelling retains a moderate setback that is consistent with the streetscape with no formal landscaping elements.

The building is in a good condition with no defects identified. Timberwork appears to have been repainted in the recent past, although there are some timber elements which feature peeling paintwork.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear skillion addition
- Carport
- Cyclone security fence
- Timber windows enclosing verandah

Although modified the building retains a moderate level of integrity. Although the infilled verandah is an early modification that does not have an adverse impact on the aesthetic values of the item, there is the opportunity for the reinstatement of the original verandah form. The rear extensions are a discrete addition that have a negligible impact on the significance of the item.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1910

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the

subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was constructed was purchased by Edward Brown in December 1907 for £80. It appears to have been built shortly after the purchase of the land as it is shown on the Water Board Detail Survey of 1914.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the future opportunity arise, the windows enclosing the verandah be removed and the original verandah reinstated.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Statement of Significance

The house at 9 Daniel Street is of local significance for its historic, associative, aesthetic and representative values. Built c.1882, the dwelling relates to the 1880s development of Granville in association with increased industrial activity in the area. The dwelling is associated with John Rayner, one of the major speculators and promoters of Granville in the 1880s. The item has additional significance as part of the Granville Conservation Area – Residential Precinct. The building retains some aesthetic value through the retention of the original built form and fabric; including the brick walls and corrugated iron roof, however, the dilapidated condition of the dwelling has adversely impacted the aesthetic value of the dwelling. While the dwelling features modified built elements, the overall form and architectural character of the building demonstrates representative qualities of a late Victorian cottage, built in c.1882.

Criteria Assessment	
a) Historic	Built in 1882, the item dwelling relates to the 1880s development of Granville when industrial activity such as Clyde engineering works sparked the residential development of Granville.
b) Associative	The item is associated with John Rayner, one of the major speculators and promoters of Granville in the 1880s.
c) Aesthetic/Technical	The building retains some aesthetic value through the retention of the original built form and fabric; including the brick walls and corrugated iron roof, however, the dilapidated condition of the dwelling has adversely impacted the aesthetic value of the dwelling.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	While dwelling features modified built elements, the overall form and architectural character of the building demonstrates representative qualities of a late Victorian cottage built in c.1882.

Physical Description

The dwelling at 9 Daniel Street is a single storey Victorian cottage of brick construction with a corrugated metal hipped roofed. The notable features of the roof include a roof ridge parallel to the street, a pair of two flued chimneys with simple corbelled capitals, and a continuous wrap around verandah with corrugated metal skillion roofs to all sides supported on recently replaced steel pipe posts. The verandah is a concrete slab. There are several types of doors visible on the verandah, including French doors, one of which one is unhinged. While the former listing for the house states, *"Front wall was originally tuckpointed, now painted. Double hung sash windows to side. Rear skillions with chimney",* it is not possible to confirm if these details still exist due to accretions such as furniture, construction mesh, plyboards and metal panels blocking clear views to the building. Additions to the property include a small fibre cement clad, gabled roof building with a roller door to the south-eastern side, and a weldmesh fence to front.

The item has a modest setback that is consistent with the streetscape. The item has no significant plantings surrounding the dwelling. There is however an established tree located at the rear of the property that contributes the historic setting of the item.

Overall, the dwelling is in poor condition with deteriorated corrugated metal to the roof and verandah, vegetation growth throughout the guttering system and detached elements such as doors visible on the façade.

Condition	Good	Fair	**Poor**

Alterations and Additions

- Rear skillion extension
- Fibre cement building to the south-east of the dwelling
- Weldmesh fence*
- Steel pipe posts to verandah*

The building retains a moderate level of integrity, although, there are elements in a highly deteriorated state and poor condition. Should these elements continue to deteriorate there is a high risk that the significance of the building will be adversely impacted and the integrity compromised.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1882

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the

Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This land on which this dwelling was constructed was purchased for £184 in September 1881 by John Rayner, a draper of Sydney. He mortgaged the land for £150 in September 1881, followed by a further loan of £400 in January 1882, with which he built this house. Rayner became one of the major speculators and promoters of Granville in the 1880s. He does not appear to have lived in this house, as he was not listed at this address by either the Sands or Fuller's Directories in the 1880s. This house is shown on the Water Board Details Survey of 1914.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.	X		

Other recommendations and/or comments:

- We note the condition of this item is considered to be poor. Should the building continue to be left to deteriorate there is a high risk that the significance of the building will be adversely impacted.
- Should the opportunity arise, remove accretions blocking views of the dwelling's detail from the street
- Should the opportunity arise, the roof should be repaired, and vegetation growth removed to ensure the dwelling is protected from further water damage.
- There is the opportunity to reinstate original features (French doors, windows and verandah posts). Should these works occur, a suitably qualified heritage consultant should be engaged.

Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The house 'Abebdour' at 11 Daniel Street, Granville, is of local significance for its historic and aesthetic values, and as a representative example of a Federation dwelling in the area. Built in 1914, the dwelling relates to the early twentieth century development of Granville which continued to be driven by the industrial activity in the wider area. The item retains its aesthetic significance through the retention of much of its original fabric and form. It has additional significance as part of the Granville Conservation Area – Residential Precinct, to which it makes a positive contribution to the overall streetscape character of the Conservation Area. This is enhanced by the similarities in age, design, use and materials with other houses along the street.

Criteria Assessment	
a) Historic	Built in 1914, the item relates to the twentieth development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item retains its aesthetic significance through the retention of much of its original fabric and form. The item contributes positively to the overall streetscape character of the Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact Federation period residence, built c.1914.

Physical Description

The dwelling consists of a single-storey Federation period cottage constructed of shiplap weatherboards with a gablet hipped roof clad in corrugated metal. A continuous wrap around verandah occupies three sides of the building with the fourth side infilled by a later extension which was constructed of fibre cement walls and multi-paned casement windows. The wrap around verandah is covered by skillion roofs which have been laid as extensions of the main roof. They are supported by timber tapered posts with replaced curved timber valance. Other notable features of the dwelling include casement windows with coloured glass and transoms, a five panelled front door with transoms and sidelights, and two rough cast rendered brick chimneys with chimney pots. Changes to the building include the infill to the eastern side of the verandah, the simple curved valence boards and timber balustrades to the verandah, the cyclone fence to the front of the property, the brick pavers to the driveway and the new flat roof carport to the end of the paved brick driveway.

The item contains an established front garden with low-lying hedging fronting the verandah and fence with some flowers planted, with an established jacaranda tree at the rear of the property. The garden setting makes a positive contribution to the aesthetic significance of the item.

The building appears to be well maintained and in a good condition. There is some rusting occurring in the roof sheets, however this does not compromise the integrity of the item.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Infilled eastern side of the verandah with fibre cement sheets and casement windows.
- Replaced curved timber valence boards to the verandah
- Replaced timber balustrades to the verandah
- Cyclone fence
- Flat roof carport

The building appears to retain a high level of integrity with the replacement of fabric on a like for like basis.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1914

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the

subdivision pattern of this era is still evidence and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling is located was purchased as vacant land by Elizabeth Mary Brown, wife of James Brown, a science teacher of Merrylands. By April 1914, the land was still vacant but the dwelling was built shortly afterwards. Mr and Mrs Brown were in occupation of the house soon after.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**

Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The house at 32 Elizabeth Street is of local significance for its historic and representative values. Built in 1886, the Victorian period cottage is historically associated with the early subdivision and development of the Granville area. Due to the unusually deep setback, the item is quite prominent within the streetscape and is easily identified as part of the historic building stock. The building has some aesthetic significance as a Victorian cottage however that has been reduced by various unsympathetic alterations to original fabric.

Criteria Assessment	
a) Historic	The item is associated with the early subdivision and residential development of the area that followed the coming of the railway.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building has some aesthetic significance as a Victorian cottage however that has been reduced by various unsympathetic alterations to original fabric.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Due to alterations and changes in fabric, particularly the addition of Corinthian columns, the item is not a good representative example of Victorian period cottages of this style and therefore does not meet this criterion.

Physical Description

The item is a single storey rendered brick Victorian cottage with ashlar markings and a re-clad Colorbond roof. The gabled roof features decorative timber barge boards and a rendered chimney with corbelled detailing. The verandah retains the original Ogee roof, clad in corrugated iron and supported by Corinthian cast iron columns. The verandah also has rendered brick privacy walls with corbels set on a concrete capped floor. The sashed windows have rendered corniced sills and are fronted by contemporary steel security grills. The front door features a transom light above a Victorian timber four panel door with simple moulded panels and a standard fly-screen security door. The property's boundary fence is of rendered brick walls between piers with a timber picket gate. The inserts of the fence have been removed. Modifications include an extension across rear elevation and a rear garage converted to a granny flat with carport attached.

The item features a deep setback and is built in the centre of the allotment, which is unusual for the street. This illustrates an earlier street alignment. The site does not have any significant landscaping. A concrete slab driveway is framed by a brick course that is joined by a concrete footpath to the house which contains a contemporary decorative steel fence. The property has is bonded by a concrete boundary fence. The surrounding landscape consists of residential housing development.

The condition of the building appears to be fair, although the verandah roof is slightly corroded, and the rendered brick chimney and fence appear to be in a dilapidated state with cracking in the render. There is also a significant crack located on the front façade and windowsill that may be a result of settlement movement.

Condition	Good	**Fair**	Poor

Alterations and Additions

- New roof, re-clad in Colorbond sheeting
- Whirlybird to roof
- Security grills to windows and door*
- Corinthian columns to verandah*
- Concrete boundary fence*

Although the alterations to the building have been minor in nature, the accumulative impact has reduced the building's integrity. In particular, the addition of the Corinthian columns to verandah are not sympathetic to the historic fabric of the building and detract from the aesthetic values of the building. The item is considered to be of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1886

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the

establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is a predominance of buildings dating to the 1880s – 1930s.

The land for this property was bought in January 1885 by James Townsend, a railway employee of Granville. The land was later mortgaged in March 1886 to build this cottage. At present the item remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the front fence should be reinstated with palisade inserts. Further, the verandah columns should be replaced with a more sympathetic column style.

Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Commercial	

Curtilage Map

Statement of Significance

The Former Shop is of local significance for its historic, associative, aesthetic and rarity values. Built c.1890, the item is an early commercial building in Granville that relates to the relocation of industry away from Sydney to Granville. The item formed part of the major subdivision known as “Clyde” which was associated with the Hudsons Brothers Clyde Engineering works. The building is the last remaining shop surviving in the area which served the local working community near the engineering works. Although somewhat modified, the building is highly intact from the street and is considered to be a local landmark.

Criteria Assessment	
a) Historic	The item has historic significance for its link to the early subdivision of “Clyde” and its role in serving the local working community Granville employed by the Hudson Brothers Engineering Works.
b) Associative	The item is associated with the Hudson Brothers Engineering Works.
c) Aesthetic/Technical	The item has some aesthetic significance as a prominent, two-storey commercial building located on a street corner.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is rare as the last surviving shop which served the working community near the Hudsons engineering works.
g) Representativeness	The item does not meet this criterion.

Physical Description

The Former Shop is a two-storey building located on a corner site, addressing Factory Street to the front and First Street to the side (south). The building retains a visually prominent position within the streetscape with no landscaping elements surrounding the building, except for an open grassed area to the north of the building. The building is simplistic in style and constructed of rendered brick, which has been detailed to imitate ashlar stonework, and has a single hipped roof glad in galvanised iron. The roof contains one chimney of exposed brick. The windows are timber double-hung sash windows, with security grills on the ground floor. There are some air-conditioning units in the upper sash of windows. The doors are covered with aluminum screens. On the northern elevation, a single-storey carport has been added and on the western elevation a two-storey skillion extension has been added in brick. The extension has been painted and contains a galvanized iron roof. The front façade and southern elevation show evidence of former painted advertising signage and street art style artwork. While it was originally constructed as a shop, the building is now occupied as two dwellings.

The site also contains a skillion style, single-storey painted brick building which addresses First Street. It is used as a pre-school.

Overall, the primary building is in fair condition with evidence of foundation settlement issues as well as spalling brickwork and paint as a result of rising and/or falling damp. The brickwork is in a poor condition with spalling brickwork particularly evident on the exposed brick chimney.

Condition	Good	**Fair**	Poor

Alterations and Additions

- To the rear, a two-storey skillion extension has been added in brick
- Most windows have been modified with the inclusion of aluminium framed windows and mounted air-conditioning units*
- Replaced guttering and roof sheets
- Ground floor windows include modern security bars
- The front and side entry doors contain aluminium screen doors
- Single-storey brick building to the rear*
- Preschool sunshade/fencing cover

Although the building exhibits modified window openings, the building retains a moderate level of integrity with a retention of the built form.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1890

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the

worker's and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

On the 13 December 1884, the land on which this site is located was auctioned as "Clyde" for the Hudson Brothers, who built their engineering works nearby. The Hudson Brothers, manufacturers of railway rolling stock, opened their site in 1883 on the Duck River at Clyde. The site covered 14 acres. For 25 years from 1905, when Clyde Engineering was awarded large contracts to build locomotives, Granville saw another great period of development, with the appearance of new small industries, new housing, new shops and businesses.

The land on which this building was constructed was sold in late 1890 to Charles Augustus Runge, a tobacconist of Granville. He built the shop with a mortgage of £300 which was taken out in October 1890. Prior to this purchase, Runge had been one of the butchering partnerships known as Runge Brothers in the 1880s but had withdrawn from the firm by 1890. The building was occupied by 1912 as dining rooms by Mrs Maria Bower & George Bonnor.

The building was later used as the Granville Multicultural Centre. Today, the building is used as a dual occupancy residential building.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the air-conditioning units should be removed from the windows and the windows “made good”.

Curtilage Map

Statement of Significance

The house at 37 Fifth Street is of local significance for its historic and aesthetic values as a representative example of a Federation period cottage. Built in 1914, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area. Although the dwelling has been modified, the item has aesthetic significance as a neat Federation period cottage that contributes positively to the overall streetscape character.

Criteria Assessment	
a) Historic	The item relates to the twentieth century development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item contributes positively to the overall streetscape character of Granville as a modest weatherboard cottage built in 1914.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a Federation period residence.

Physical Description

The item is a single storey weatherboard clad cottage with a bullnose verandah and gabled roof. The roof features the original steep brick chimney with terracotta cowl, which has been recently re-clad in new galvanised iron. Similarly, the bullnose verandah roof also features contemporary galvanised iron. The verandah is supported by stop chamfered timber posts and timber brackets in a sunray pattern. The timber elements feature a navy blue painted finish. According to the former listing sheet the cottage was originally clad in unpainted timber. The item is now re-clad in a PVC weatherboard to give the impression of timber. All windows are timber framed with timber shutters. The front door has a glazed fanlight above a four panelled door. The property's boundary fence is a contemporary timber post infilled with wire-mesh. The dwelling features a rear skillion addition that extends across the rear elevation. There is a modified garage constructed of rusticated PVC weatherboard with a squared parapet and timber panelled doors.

There are no significant or notable landscape elements on site. The front setback contains a series of ad hoc and recent plantings along the front boundary fence, including an established lavender bush, young frangipani tree, and a small jasmine bush.

Overall the condition of the building is considered good, with no defects identified.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Contemporary garage*:
- New roof cladding;
- New exterior PVC weatherboard cladding; and
- Contemporary window.

The integrity of the building is considered moderate. The building fabric has largely been replaced following a like for like approach that has respected the significance of the building.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1914

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which the subject site is associated with this period of industrial development that brought the higher employment opportunities to Granville and created the demand for housing. Notable

amongst these new estates was the New Glasgow Estate, located on the land near Clyde. This subdivision was offered for sale from 1878.

During the initial period of development Fifth Street was known as John Street. The dwelling at 37 Fifth Street was built on Lot 21 Sec 5 of the New Glasgow Estate. The dwelling is shown on the NSW Metropolitan Water Board plan of c. 1914. According to Sands Directory the dwelling was occupied by James B. Alderson in 1915.

The item remains in use as a private residence.

Curtilage Map

Statement of Significance

The house at 8 Florrie Street is of local significance for its historic and aesthetic values and is a representative example of late Federation style houses in the area. Built c. 1924, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area. The item has additional aesthetic significance as it contributes positively to the overall streetscape character. This is enhanced by the similarities in age, design, use and materials with other houses along the street.

Criteria Assessment	
a) Historic	The item relates to the twentieth century development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item contributes positively to the overall streetscape character of the Granville as a modest weatherboard cottage built in 1924.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of an intact late Federation period cottage.

Physical Description

The house is an unusual 1920s timber framed cottage atop brick foundations. Externally, the lower portion of the dwelling is clad in weatherboard while the upper sections are clad with fibro sheeting and a decramastic metal tile roof. The house is double-fronted, with a hipped roof topped with a gablet and finials over each building front. The deep verandah is enclosed with timber posts and balustrades with brackets showing a simple Art Nouveau profile. The verandah is accessed via a seven stepped pebblecrete staircase situated on brick foundations capped also with pebblecrete. The dwelling appears to feature a rear extension clad in fibro sheeting with a skillion roof. Other features include small awnings over front timber-framed casement windows. The dwelling retains the original timber-framed woven wire front fence. Other fencing evidence on site include contemporary steel fencing at the rear and a degraded timber picket fence along the northern perimeter. The building features a garage clad in fibrocement sheeting with a roller door entry.

The dwelling features a deep setback with a landscape that does not contain any significant plantings. While there are no significant landscape elements identified within the front yard, the retention of the setback and space surrounding the item contributes to the item's setting and significance.

Overall, the condition of the building is considered to be fair. The site contains a highly degraded timber picket fence along the northern boundary and some deteriorated weatherboard elements along the lower portion of the external cladding.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear addition clad in fibro sheeting with a skillion roof;
- Contemporary metal handrail along staircase;
- Pebblecrete along the verandah floor and staircase; and
- Contemporary rear fencing.

The integrity of the building is considered to be moderate, given the minor nature of alterations that have occurred.

Integrity	High	**Moderate**	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	c. 1924

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the

subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This land was bought by Claude Douglas Duff, a carriage builder of Granville in 1913. On 17 November 1923, he applied to Granville Council to erect a weatherboard cottage on this land worth an estimated £500. This dwelling was first listed in the 1926 Sands Directory, occupied by Duff.

The building remains in use as a private residence.

Curtilage Map

Statement of Significance

The house at 10 Florrie Street is of local significance for its historic and aesthetic values and is a representative example of late Federation style houses in the area. Built in c.1925, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area. The item has additional aesthetic significance as it contributes positively to the overall streetscape character. This is enhanced by the similarities in age, design, use and materials with other houses along the street.

Criteria Assessment	
a) Historic	The item relates to the twentieth century development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item contributes positively to the overall streetscape character of the Granville as a modest weatherboard cottage built in c. 1925.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a late Federation period residence.

Physical Description

The house at 10 Florrie Street is a single storey timber cottage with rusticated boards built to an asymmetrical plan and possibly as a ready-cut prefabricated kit. The dwelling features a hipped roof with a projecting front gable clad in decramastic metal tiles. The roof also features a brick chimney with terracotta chimney pots and a louvred gablet at the ridge peak. The verandah is supported on brick foundations with timber floorboards and simple timber posts, brackets, and balustrade. This is accessed by a concrete capped stairway with tiles on the front steps and a steel handrail. The windows are timber framed 1/1 double hung sash windows, with curvilinear under-sill mouldings. The windows on the projecting room feature a small awning framed with simple timber brackets and ladder valance. The property is bounded by a modern weldmesh fence along Florrie Street.

There is a rear addition to the dwelling, clad in fibro sheeting with a skillion roof. A garage is located at the rear of the driveway. The garage is clad in fibro sheeting, features a pitched roof clad in corrugated iron and timber panel doors.

The building features a deep setback and a grassed front yard with no significant plantings. While there are no significant landscape elements identified within the front yard, the retention of the setback and space surrounding the item contributes to the item's setting and significance.

Overall, the condition of the building is considered fair, with evidence of deteriorated timber verandah elements and rusticated boards.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear addition clad in fibro sheeting with a skillion roof;
- Contemporary metal hand rail and tiled front steps; and
- Contemporary weldmesh fence.

Overall the integrity of the building is considered high, as there have been few modifications to the item.

Integrity	**High**	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	c. 1925

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land that comprises 10 Florrie Street was purchased by Thomas Hotchkiss, a local pattern maker of Granville, in 1916. On 17 October 1925, builder H. Crouch applied for Hotchkiss to erect a weatherboard house worth £650 on this land. To finance the construction of the dwelling, Hotchkiss mortgaged the land in January 1926. This house first appeared in the 1927 Sands Directory and was occupied by Hotchkiss.

The dwelling remains in use as a private residence.

Statement of Significance

The complex of modest buildings at 1A Glen Street, likely built c. 1928 are of local significance for historic and social reasons, and as a representative example of their time and function as a Scout Hall. The hall reflects the use of this site for scouting purposes since 1917 and the possible commencement of scouting in Granville in 1911.

Criteria Assessment	
a) Historic	The item hall has historic significance as a site used for purposes since 1917.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item has social significance as a boy's scout hall, in use from 1928.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item buildings are representative of their time and function.

Physical Description

The Scout Hall complex consists of three buildings, one located at the northern boundary, another located on the eastern boundary and a third building near the southern boundary. The buildings are arranged to form an open-air space within the centre of the complex. All three buildings are constructed on brick foundations and are clad with corrugated galvanised iron to the walls and roof. The roof to all three buildings is gabled and there are louvred openings to each gable ends. The southernmost structure has a single brick chimney and a verandah enclosed in corrugated iron.

The windows to all buildings are timber-framed with that have plain 1920s style architraves. The eastern building has one timber-framed window to the southern end which has been boarded up with corrugated iron.

A long, narrow driveway is accessed from Glen Street, Granville and runs parallel to William Street. The driveway is fronted by wire mesh security fence. The Scout Hall complex contains several mature Eucalyptus trees within the curtilage. They are primarily located along the boundary of the site. The complex is surrounded with chain-mesh security fencing and is situated to the north of Duck Creek.

Generally, the condition of the three Scout Hall buildings is fair although some elements are in a poorer condition such as the corrugated galvanised walls which have paint peeling and graffiti to the walls of all buildings.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Structure on the eastern boundary constructed post-1943
- Northern structure re-clad in corrugated galvanised iron
- Southern structure enclosed with corrugated galvanized iron
- Window to south elevation of east structure has been boarded up with corrugated iron.

There have been minor changes to the original form and structure of the Scout Hall. The integrity of the item is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1917-1928

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

It is unknown whether the buildings extant were built in 1917 or 1928, however it is clear and well documented that the site was used by the Boy Scouts from as early as 1917. This is noted in the Sands Directory which listed Glen Street as the address of the Granville Boys Scouts from 1917 onwards. This is further supported by local historian Thomas Fowlie, who stated stated that the Boy Scouts commenced in Granville in 1911 and operated from a shed on the south side of William Street on the banks of the Duck River. It is possible that this was the site.

Later newspaper articles inform us that on 15 May 1926, builder T Parry applied to Granville Council to erect a Boy Scouts Club Room or hall worth £500 on this site. A galvanised iron shed was shown on this land on the 1928 update of the Water Board Detail Survey.

In April 1932, Granville Council approved the erection of another club room on this site by G. A Parry for the Boy Scouts Association, and in March 1945 it was transferred to the NSW Branch of the Boys Scouts Association.

Today, the site appears to be unused.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.	X		

Other recommendations and/or comments:

- Some elements of this item are considered to be considered in a poor condition. Should the building continue to be left to deteriorate there is a high risk that the significance of the building will be adversely impacted.
- Explore potential for adaptive reuse of the complex in order to maintain its continued use within the community.

Curtilage Map

Statement of Significance

The Grimwood Street Group is of local significance for its historic, associative, aesthetic and representative values. The group is a representative example of Victorian workers cottages built between 1880 and 1890. The dwellings relate to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area. The group is also significant for its association with local carpenter, Joseph Flynn, who appears to have built the cottages. The group has aesthetic significance as it contributes positively to the overall streetscape character. This is enhanced by the similarities in age, design, use and materials with other houses along the street.

Criteria Assessment	
a) Historic	The item relates to the twentieth century development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item is significant for its association with local carpenter, Joseph Flynn, who appears to have built the cottages.
c) Aesthetic/Technical	The item contributes positively to the overall streetscape character of Granville as a group of modest weatherboard cottages built between 1880 and 1890.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of Victorian workers cottages.

Physical Description

The item consists of a group of late nineteenth century workers' cottages constructed along Grimwood Street. The buildings are of similar design with standardised features such as, walls clad in weatherboard and hipped rooves with gablets clad in galvanised iron as well as a modest setback that create a consistent street alignment. The level of integrity of fabric and condition of building varies.

Cottage at No. 23
The cottage at No.23 is a single storey weatherboard clad cottage atop brick foundations. The dwelling is a rectangular building with a half-hipped roof with a projecting gable-ended front wing, all clad in corrugated iron. The building's front façade has been substantially modified with the inclusion of a weatherboard clad infill of the verandah space. The infilled cladding has introduced a dated sliding door and catslide roof. The building does not contain any original window fittings. The replaced timber frames have been left untreated. This area is accessed via three concrete steps with tiles and a simple steel handrail bar. The building features a skillion roofed carport to the northeast, that fronts a garage. The building appears to have a rear addition with skillion roof.

The condition of No.23 is considered fair, with sections of the roof sheeting in a poor condition as they are highly corroded in sections, while other panels have been recently replaced. The weatherboard cladding and brick foundations appear to be sound.

Cottage at No. 27
The cottage at No.27 is a single storey weatherboard clad cottage with a steep hipped roof clad in corrugated iron. Sections of weatherboard to the sides have been repaired and replaced with a like for like material. The cottage sits atop a concrete slab floor and features a verandah with flat roof supported on painted white timber posts with decorative cast iron lacework. The windows feature aluminium framed windows with simplistically decorated steel security grills.

The condition of No.27 is considered fair. Overall the fabric appears sound although the roof sheeting appears to be weathered.

Cottage at No.28
The cottage at No.28 is a single storey gabled roof clad in corrugated iron and painted green. The roof features a brick chimney on the ridge peak with a stepped brick string course and two terracotta chimney cowls. The gable end features a decorative curved timber bargeboard, painted red. The cottage is clad in rusticated weatherboards. The cottage features a bullnose verandah clad in corrugated iron with stop chamfered timber posts with cast iron lacework brackets. The verandah is enclosed with a timber balustrade. The front façade is symmetrical with the central entrance framed either side by timber framed French doors. All entrances have security screen doors fronting them. The building appears to have a rear skillion roof addition that extends across the rear elevation. The cottage features a timber picket fence and gate with acorn tops.

The condition of No.28 is considered to be good, no defects were identified.

Cottage at No.30
The cottage at No.30 is a recently renovated single storey weatherboard cottage. The weatherboard cladding appears to be shiplap and features a new paint scheme. The roof is half-hipped with a projecting gable-ended front wing, all clad in corrugated iron. The roof also features a finial on the gable end, and a gablet at the ridge peak with a simple timber bargeboard and finial. The roof is clad in blue steel sheeting. The verandah features a bullnose roof, also clad in blue steel sheeting. The verandah is supported on timber posts with a tiled floor. The building features new aluminium windows with security steel grills and a modern security door. The front projecting section has been converted into a

garage and is addressed by paved driveway. The building features a deep setback with contemporary plantings and is bounded by a blue picket fence.

The condition of No.30 is good, due to the recent renovations.

Condition	Good	Fair	Poor

Alterations and Additions

No.23

- Infilled verandah space with weatherboard cladding*
- Corrugated iron sheets in section.
- New colour scheme
- Contemporary windows*

The integrity of the cottage at No.23 is highly compromised by the infilled verandah space. The modification has altered the form of the roof and negatively impacts the significance of the dwelling. The integrity is therefore considered to be low.

No 27

- Restructured verandah elements; roof, post and floor.
- Contemporary windows and security door*
- Repaired weatherboard elements to the sides of the cottage.

The integrity of the cottage at No.27 is considered moderate, due to the nature of the modification of the verandah elements, windows and doors. Although modern, they do not negatively detract from the overall significance of the building.

No.28

- Contemporary screen doors*
- Two French doors possibly original window openings,
- Rear skillion roof addition.
- Contemporary fence.
- Contemporary verandah balustrade and infill.

The integrity of the item is considered moderate. Although the fence and verandah balustrade appear to be modern fabric, they are sympathetic additions to the building and do not negatively detract for the buildings form.

No.30

- Contemporary security screen door and security grill*
- Garage conversion of front projecting section,
- Roof reclad in steel sheet.
- Contemporary windows and security door*

The integrity of the built fabric of No.30 is considered to be low given the nature of the renovations and the substantial loss of original fabric. The renovations have however respected the form and scale the item and do not negatively detract from the significance of the building group.

Integrity	High	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	1880-

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-

class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evidence and there is still a predominance of buildings dating to the 1880s – 1930s.

Originally Grimwood Street was known as Parramatta Street. This area was subdivided by R. J. Want in 1856, after the coming of the railway. The two lots on the western side were purchased by Norah Flynn, wife of Joseph Flynn, a local carpenter, in June 1882 for £122/4. The cottage at No. 28 was built by the Flynns shortly after, since they sold the parcel of land which that cottage occupied for £260 in January 1884. They appear to have also built the cottage at No. 30 at a similar time.

All these houses are shown on a street alignment survey of 1891. In October 1903, No. 30 was conveyed by them to Langdon & Langdon, local timber merchants to pay off a debt from September 1893. All of these cottages are shown on the 1914 Water Board plan.

The group remains in use as private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The infilled verandah of the cottage at No.23 is an unsympathetic alteration that detract from the cultural significance of item. Should the opportunity arise, it is strongly advised that the original form is reinstated.

Revised Curtilage recommended- refer below.

Statement of Significance

The Holy Trinity Roman Catholic Church Group is locally significant for its aesthetic, social and representative values. The group of buildings is aesthetically significant for diverse religious architectural styles that it represents, dating from 1908 to 1965. Of note is the MacKillop Hall built in 1908 that presents an intact brick federation church hall and the Holy Trinity War Memorial Church built in 1965 which celebrates the Post-War ecclesiastical style. Each of the buildings individually and collectively make a positive contribution to the streetscape and are a local landmark. The Holy Trinity War Memorial Church is also of social significance to the local community as the church was dedicated to the memory of local members of the armed services who gave their lives during World Wars I and II.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as it represents various diverse religious architectural styles. The Mackillop Hall is an intact Federation Church Hall that retains much of its original fabric. The Holy Trinity War Memorial Church is an aesthetically significant modernist Church that is celebrates the Post-War ecclesiastical style.
d) Social	The item is socially significant to the local community as the church was dedicated to the memory of local community members of the armed services who gave their lives during World Wars I and II.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The Mackillop Hall is a good representation of Federation brick church halls and Holy Trinity War Memorial Church is representative of the Post-War ecclesiastical style.

Physical Description

MacKillop Hall
MacKillop Hall is a brick Gothic church hall located on the corner of Randle and Grimwood Streets. The church hall has a slate roof with terracotta ridge capping on Flemish bond brick walls with rendered foundations and caps. The church hall also features a parapeted gable with Gothic traceried window above a gabled porch.

Narrow square brick columns flank the windows on the west elevation and extend above the parapet ending with pinnacle decoration. A window is located between each brick buttress along the side elevations. The windows have painted rendered sloping sills and rendered Gothic label mould arches and decorative stops (above door). The church hall entrances feature timber tongue and groove double doors in a Gothic arch.

Holy Trinity Memorial Church
The current Holy Trinity Memorial Church is representative of the Post-War ecclesiastical style. The building makes use of traditional church architecture with the bronze cross at the central ridge peak. However, the building most notably makes use of the vertical motif with slender concrete slabs and vertically proportioned windows. The building is cruciform in plan resulting in four projecting entrances.

The Church is a large, yellow brick structure with a pressed metal roof. The main entrance is addressed by brick steps under a butterfly awning and distinguished by the floor to ceiling glazed windows with vertically proportioned panels. The windows are partitioned by long, slender vertical mullions in concrete and brick which project forward to a point. The entrance is accessed via timber panel double doors.

The flanking walls feature plain brick surfaces with some sections with perforated brick. The Church features a brick retaining wall along Bennelong and Randle Streets. The landscape surrounding the Church consists of well-manicured garden beds with few trees. The building is the most prominent element.

Church Presbytery
The Church Presbytery was located between the Memorial Church and the Church Hall. It was a rare two-storey Federation Bungalow style residence with terracotta tiled roof, tuck pointed brick walls and rendered foundations. This building was demolished in 2014.

Holy Trinity Primary School
Holy Trinity Primary School is a two-storey brick building located to the east of the 1965 Church and south of the MacKillop Hall. The building has a hipped roof with projecting gable which is clad in terracotta tiles with terracotta tile ridge capping. The building makes use of multicoloured bricks. The timber framed arched windows along the north elevation feature expressed brick window arches while the east elevation along Grimwood Street makes use of simple brick veneer style with multiple double hung sash windows with sloped brick sills.

The land to the south and west of the church structures are dominated by the education buildings associated with Delany College.

Overall, the condition of the buildings is considered good with no defects identified.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Demolition of the Presbytery (2014)
- Construction of Delany College on larger, southern portion of the property.
- MacKillop Hall underwent heritage restoration and was reopened in 2008.
- Church underwent internal modifications in 2009.
- Construction of the awning over the main entrance of Church entrance in 2014.

Overall the integrity of the Holy Trinity Church Group is considered high. Although the buildings have undergone modification the works do not negatively detract from the building's heritage significance.

Integrity	**High**	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	1908-1965

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

A portion of land on the subject site was gifted to the Roman Catholic Church in 1854, when R. J. Want subdivided his estate. However, the first reference to a church in the subject area which was dedicated to the Holy Trinity does not appear until 1881 in the Freeman's Journal (2 July 1881). This made reference to a visit by the Archbishop of Sydney to Parramatta and Granville for the purpose of opening a new church in Granville. Construction of this church began in October 1880. The church was described as "… comparatively small in size and has little architectural beauty, but is well furnished, affording as it does room for eighty persons." The journal also noted that further work on the church would be required to enable a much larger congregation.

Holy Trinity officially became a parish in 1886 incorporating Granville, Harris Park, Merrylands, Guildford and East Granville. Mary MacKillop established the Sisters of St Joseph in Granville from 1885. Part of the church was blown down in 1895 and had to be rebuilt and extended. Cardinal Moran blessed and dedicated the extensions later in the same year.

In 1906, Cardinal Moran asked the parish priest at the time, Father Flahavan, to build a new church as the then current church was becoming too small for the expanding population. The second Holy Trinity Church on the corner of Randle and Grimwood Streets was opened in April 1907. However, in May 1908, the replacement church was destroyed by fire. The Church was rebuilt by Mr Taylor and designed by architect, James Nangle. The foundation stone of was laid on 14 October 1908 and the church reopened in October 1908. This building remained a church until the present church was opened in 1965. The building is now known as MacKillop Hall and was reopened in 2008 after considerable heritage conservation works.

The current Holy Trinity Church located on Randel Street was built in 1965. The foundation stone of the new church was blessed and laid by Cardinal Gilroy, Archbishop of Sydney, on 23 May, 1965. On 28 November 1965, the Auxiliary Bishop to his Eminence Cardinal Gilroy, the Most Rev J P Carroll, blessed and opened the church.

The church was dedicated to the memory of members of the armed services who gave their lives for their country during World Wars I and II. Because of this, the church is also known as the Holy Trinity War Memorial Church.

Throughout its history, the church has had design changes. One of the earliest changes was the inclusion of the secondary altar in front of the main altar to allow the celebrant to say Mass facing the people. A railing separating the Sanctuary from the rest of the church was also removed. Both of these changes were the result of changes brought about by Vatican II (1962 – 1965).

Extensive refurbishment occurred in 2009 under Father Paul Roberts, the Parish Priest between 2008 – 2011. The church was fully refurbished with a foyer built below the choir loft at the back entrance of the church and the original timber flooring restored and polished. Repairs to the outside roof of the church were also undertaken to repair leaks that had allowed water to enter the church. Prominent features of the church include the trinity symbol hanging from the roof above the main altar and the roof made from Tasmanian oak.

In 2014, an external change to the church occurred with the inclusion of an awning over the main entrance doors during Father Clifford D'souza's time as Administrator of the Parish. This was done to provide cover from rain or sun for marriages and funerals and to serve as an area where parishioners can gather and have morning tea after Mass.

The Holy Trinity Presbytery was opened in 1917. Parish goers promoted an eight-day bazaar for the purpose of raising funds to reduce the debt of the new building. The estimated cost of the building was at £2500, and it was expected the bazaar would raise approximately £800.

The Church remains an active Parish within the Granville community. Within the Parish ground is the Holy Trinity Primary School.

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Due to the nature of the extensive development of the southern portion of the allotment and into Delany College, the heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The pair of semi-detached residence at 43-45 Grimwood Street, Granville is of local heritage significance for its historic, aesthetic, rarity and representative values. Built in c. 1882-1891, the pair of semi-detached Victorian houses relate to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. In this area, the cottages are now rare examples of early workers cottages. The pair make an important contribution to the historic streetscape.

Criteria Assessment	
a) Historic	The item relates to the early development of Granville in response to the movement of industry away from Sydney in the 1880s and the establishment of large manufacturing industries in the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as Victorian period dwellings which make an important contribution to the historic streetscape in terms of style and setting.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The cottages, especially as semi-detached houses, are now rare examples of early workers cottages.
g) Representativeness	The item is a good representative example of Victorian period housing.

Physical Description

The site consists of a pair of single storey semi-detached brick houses with a shared hipped roof clad with galvanised iron and built with narrow eaves. There are central brick chimneys to both houses, at both the front and rear elevations. Both facades are in Garden bond brick which have now been painted. Each elevation consists of a single, central entry door – No. 43 has a timber flush door, No. 45 has a brick arched lintel above the timber recessed door with beaded incised panels. Two windows flank each door and have soldier brick arches and rendered sills. They appear to have been replaced with aluminium. The verandah across the front is flat, clad with corrugated iron and hipped corners. Verandah supports are now pipe posts with a timber slat privacy wall between. No. 43 verandah is enclosed with a timber slat balustrade while No. 45 is only partially enclosed with a similar balustrade. The verandah floor to No. 43 remains in timber, while No. 45 consists of concrete.

The fence to No. 43 is decorative timber palisade painted in yellow and deep red. The fence to No. 45 is of weldmesh panels attached to pipe post fence with wire mesh panel attached to pipe frame gate.

Both dwellings are consistent with the dominant streetscape setback. The front gardens contain recent plantings which do not contribute greatly towards the setting of the historic dwellings. The footpath to No. 45 has been altered to include multi-coloured tiles.

Both dwellings appear to be in good condition, though the roof of No. 43 shows signs of some deterioration.

Condition	**Good**	Fair	Poor

Alterations and Additions

- No. 43
  - Wall mounted air-conditioning unit to side (northern) elevation*
  - Aluminium windows*
  - Timber posts to verandah
- No. 45
  - Roof replaced
  - Weldmesh fence*
  - Pipe posts to verandah*
  - Security screens to door and windows*
  - Aluminium windows*
  - Concrete verandah floor*

Due to a series of alterations and additions to the dwellings, in particular to No. 45, the integrity of the dwellings is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	c. 1882-1891

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which the dwellings are located was subdivided as part of Want's Estate in 1856. They were likely built between c. 1882-1891 for Ellen Amelia Rawlings, wife of Samborne Rawlings, who was a carriage builder from Randwick. She was the daughter of John McDowell, a gentleman of Granville who later acquired title to these houses and then bequeathed them to his daughter in his will. The dwellings are both shown on a street alignment survey of c.1891. They are also shown on 1914 Water Board plan.

Today, the dwellings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the front fence at No. 45 should be replaced with a timber picket fence and the pipe posts to verandah should be replaced with timber posts. The missing balustrade of the verandah should also be reinstated.
- Should the opportunity arise, all aluminium windows should be replaced with timber windows.

Curtilage Map

Statement of Significance

The house at 4 Hewlett Street is of local significance for its historic, aesthetic and representative values. Built in 1883, the dwelling relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. It was built in conjunction with No. 42 The Avenue, during the early subdivision of the Drainwell Estate. The building retains its aesthetic significance through the retention of much of its original fabric and detailing. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it makes a positive contribution to the overall streetscape character of the Conservation Area. This is enhanced by the similarities in age, design, use and materials with other houses along the street. The building demonstrates representative qualities of an intact Victorian Italianate cottage.

Criteria Assessment	
a) Historic	Built in 1883, the item relates to the early development of Granville in response to the movement of industry away from Sydney in the 1880s and the establishment of large manufacturing industries in the area. It was built in conjunction with No. 42 The Avenue, during the early subdivision of the Drainwell Estate.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building retains its aesthetic significance as through the retention of much of its original fabric and detailing. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it makes a positive contribution to the overall streetscape character of the Conservation Area.of the Granville Conservation Area – Residential Precinct.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The building demonstrates representative qualities of an intact Victorian Italianate cottage.

Physical Description

The dwelling is a single storey brick Victorian Italianate residence with a slate roof. The dwelling features rendered brick walls with decorative plaster mouldings to front and brick to side elevations. The gabled roof features a projecting gable front and two tall rendered brick chimneys with cornice decoration (one has two terracotta pots) and another shorter brick chimney at the rear. The projecting gable end features timber fretted open scroll barge boards and finial with a faceted bay below. The bay window features a corniced parapet and flat roof. All other windows have rendered corniced brick sills with bracket decoration below, and rounded brick arches (above side windows). The verandah features a concave corrugated iron roof with hip corner, across front to projecting gable. Verandah floor is of tessellated tiles and rolled sandstone edges, its posts are Corinthian cast iron columns, and it has cast iron brackets and frieze. The front door is a Victorian four panel door with bolection moulds. The fence is timber is a new picket fence that replaces a post and rail with cyclone wire infill and chain wire set in tube frame gate with wrought iron scroll pattern across top. A very old frangipani tree exists in rear yard. The building also contains a possible rear extension. The building features a deep setback with a very modest, European landscaping setting. While the setting contributes to the aesthetic significance of the item, it is a contemporary landscape and is not of heritage significance.

Overall the condition of the building is good. The building appears to be well maintained having undergone a recent renovation. The exterior appears to be recently painted with a contemporary colour scheme.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extension
- Modified windows
- New exterior paint*
- New fence

Although modified the building retains a high level of integrity through its retention of original fabric and detailing.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1883

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was built was purchased on 30 March 1883 by Henry Sargent Winter, builder of Newtown. Winter was probably one of the builders of the Royal Hotel, South Street.

Winter also constructed No.42 The Avenue. In order to do so, he had to mortgage the land along The Avenue on 20 April 1883 to finance the building of both dwellings. By October the houses were complete, although Winter made several unsuccessful attempts to sell them. On 16 May 1884 the mortgagee sold the houses by auction to Coates & Harper, timber merchants of Parramatta.

Today, the building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The house at 6 Hewlett Street is of local significance for its historic and aesthetic values, and as a representative example of a modest Victorian weatherboard cottage. Built during the 1880s, the dwelling relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes positively to the overall streetscape character of the Conservation Area. This is enhanced by the similarities in age, design, use and materials with other houses along the street.

Criteria Assessment	
a) Historic	The dwelling relates to the early development of Granville in response to the movement of industry away from Sydney in the 1880s and the establishment of large manufacturing industries in the area and was built in conjunction with the early subdivision of the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as a modest Victorian weatherboard cottage that contributes to the character and significance of the Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a modest Victorian weatherboard cottage.

Physical Description

The architectural style of 6 Hewlett Street is transitional between late Victorian and Federation periods. The dwelling is a single storey residence of weatherboard construction with iron hipped roof and a rendered brick chimney with cornice decoration. The weatherboard construction along the front elevation is designed to imitate ashlar masonry. The side elevations of the building appear to have been replaced with vinyl cladding.

The verandah contains an Ogee verandah roof enclosed by a brick balustrade with coloured glass at each end, restrained iron lace work and timber flooring. Timber chamfered post are set on the brick piers with a rendered coping. This is accessed by three concrete steps with a steel handrail. The verandah construction appears to be a later addition to the original building and dated to the Federation period.

The windows are sashed and fronted by modern security grills. The front door has a transom light and round headed glazed sidelights above timber door. Bolection mould encloses glazed shaped panel in the upper door, below is a timber curved collection mould panel. The fence is an aluminium cyclone wire fence with wire mesh panel attached to pipe frame gate. There appears to be a rear addition to the building. The surrounding landscape is predominately concrete and contains a shared driveway with No.8 Hewlett Street. A garage of weatherboard construction with a pitched roof and roller door is located to the rear of the property.

Within the curtilage of the listed property, is a dwelling at 8 Hewlett Street. The dwelling is a brick, single storey Federation cottage, with a gabled roof. Clad in corrugated iron, the roof features a central gablet with a single timber bargeboard and timber louvers, and a single brick chimney with stepped string courses. The verandah features a distorted bullnose roof, supported on timber chamfered posts, with a decorative timber valance. The timber posts are supported on brick piers and enclosed by a brick balustrade with coloured glass at each. The brick balustrade features darker bricks along the capping and cornices, as well as pebble concrete capping. This is accessed by a curved staircase that is also clad in pebble concrete. The windows are sliding sash, with rendered sills. The front door has a transom light and round headed glazed sidelights above timber door.

Overall the condition of both buildings is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Partly enclosed brick verandah*
- Possible rear addition
- Contemporary security screens to windows
- Vinyl recladding of side elevations

The building retains a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1895

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was built was purchased for £100 on January 1895 by William Adams, a local painter of Granville. Shortly after its purchase a weatherboard cottage was erected on site. The dwelling was tenanted for several years. Adams was employed by Lyons & Collier. This allotment was one of many blocks in the family's possession. At the time of the purchase they were living on the corner of Hewlett Street and The Avenue in a rendered brick Victorian cottage at No. 36 The Avenue.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The dwelling at No. 8 should be assessed for its potential listing as an individual heritage item as a part of Stage 2 of this heritage review.
- The listing sheet relates to the heritage significance of 6 Hewlett Street, Granville. The heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP.

Curtilage Map

Statement of Significance

The cottage, 'Loch Marie', at 18 Hewlett Street, Granville is of local significance for its historic, aesthetic and representative values. Built in 1900-01, the dwelling relates to turn of the century development of Granville which continued to be driven by the industrial activity in the wider area. The building retains its aesthetic significance through the retention of much of its original fabric and architectural detailing as a quality Federation Queen Anne cottage. It has additional significance as part of the Granville Conservation Area – Residential Precinct which it makes a positive contribution to the overall streetscape character of the Conservation Area and is located on a prominent corner site. The items significance is further enhanced by the similarities in age, design, use and materials with other houses along the street. The item demonstrates representative qualities of a fine, intact Federation Queen Anne cottage built in Granville, c.1900.

Criteria Assessment	
a) Historic	Built in c.1900-01, the item relates to the twentieth development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building retains its aesthetic significance through the retention of much of its original fabric and architectural detailing as a quality Federation Queen Anne cottage. It has additional significance as part of the Granville Conservation Area – Residential Precinct which it makes a positive contribution to the overall streetscape character of the Conservation Area and is located on a prominent corner site. The

	items significance is further enhanced by the similarities in age, design, use and materials with other houses along the street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of a fine, intact Federation Queen Anne cottage built in Granville, c.1900.

Physical Description

The dwelling is a substantially sized Federation Queen Anne cottage, with a gablet hipped roof. It has an exposed brick construction comprising tuck-pointed bricks and Marseilles tiled roofs with exposed rafters. A combination of brickwork is employed in the building with darker, even toned face bricks used to the street facing facades, and commons bricks to its eastern façade. Rough cast rendered gable ends to the corner, north and western edges of the building provide definition to the building edges. A notable feature of the building is the wrap around verandah which extends between the north and western gable ends and, while its western end has been infilled as an extension of the house, the remaining sections of the verandah display paired timber tapered posts set on brick balustrades with rendered coping and rectangular niches with roughcast render. Other features include scrolled decorative timber valance and brackets to the verandah, bay windows to the north and western gable ends, sloping brick sills to the bay windows, segmental arched double hung sash windows to the eastern facade, a tuck-pointed brick corbelled chimney with a terracotta chimney pot, and a solid brick fence with bullnose brick coping, brick piers and wrought iron gate along the street facing property edges. A stripped canvas screen has been suspended from some parts of the verandah to be used as privacy screen. A timber arched gateway has been added recently to the brick fence along Hewlett Street. The fence has some instability as a result of vegetation growth in the vicinity.

A part gable, part skillion Colorbond roofed brick extension has been added to the southern end of the building, along with a two-car garage which has a skillion roof and is constructed partly of exposed brickwork and metal and plywood mesh walls.

Federation Queen Anne cottages typically contain a picturesque garden setting, although the landscape setting has been altered with the removal of a pine tree and jacaranda, the corner of Hewlett and Walter Streets retains a row of rose bushes that contribute to the aesthetic significance of the item A concrete driveway has been added along the southern portion of the site, while a gravel driveway to an open, unpaved carpark has been added to the eastern side of the site.

The cottage is in a very good condition and appears to be well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Extension to southern end of building*
- Enclosure of western end of verandah
- Timber arched gateway
- Two-car garage
- Canvas privacy screens to verandah

The building retains a high level of integrity with much of the original fabric and architectural detailing extant. Apart from the small extension at the southern end of the building, the item retains a consistent built form.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1900-01

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was built was purchased as vacant land in June 1900 by Thomas Carson, a railway employee of Granville. The dwelling was built for him between 1900-01 and he had moved in by 1901. It was named 'Loch Marie' and remained Thomas Carson's house until he died in 1918. Thomas Carson was a member of a prominent local family which also had ties with the Bellingers.

The building remains use in as a private residence.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. 2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the Colorbond roofed brick extension to the southern end of the building should be removed as it is unsympathetic to the heritage character of the building and its setback enhances its prominence on the street.

Statement of Significance

The cottage at 20 Hewlett Street is of local significance for its historic, aesthetic and representative values. Built in 1914, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area. The building retains its aesthetic significance as an intact Federation Arts and Crafts cottage through the retention of much of its original fabric and architectural detailing. The dwelling makes a positive contribution to the neighbouring heritage conservation area, Granville Conservation Area – Residential Precinct, which forms the eastern boundary of the property. This is enhanced by the similarities in age, design, use and materials with other houses along the street. The cottage demonstrates representative qualities of a high-quality and intact Federation Arts and Crafts cottage built in Granville, c.1914.

Criteria Assessment	
a) Historic	Built in 1914, the item relates to the twentieth development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building retains its aesthetic significance as an intact Federation Arts and Crafts cottage through the retention of much of its original fabric and architectural detailing. The dwelling makes a positive contribution to the neighbouring heritage conservation area, Granville Conservation Area – Residential Precinct, which forms the eastern boundary of the property. This is enhanced by the similarities in age, design, use and materials with other houses along the street.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The cottage demonstrates representative qualities of a high-quality and intact Federation Arts and Crafts cottage built in Granville, c.1914.

Physical Description

The dwelling at 20 Hewlett Street is a brick Federation Arts and Crafts period cottage with a gablet roof with a projecting gable to the street. The roof is clad in slate tiles with terracotta ridge cappings, two tall brick chimneys with roughcast render and expressed brick string courses with terracotta pots, and an antenna.

The front facade comprises of a rough cast rendered projecting gable end and a broken back verandah roof. The verandah roof is supported on timber posts with decorative fretwork, and exposed rafter ends under roof eaves. The verandah flooring is of later concrete/tile surface. The windows are timber framed casement window in sets of three with replaced glass panes, with rendered sills. The casement windows on the project gable feature an awning with decorative timber brackets. The windows along the side elevations are timber framed double hung sashes with rendered lintels and sills. An air conditioning unit is affixed to brickwork of the projecting gable.

The rear section of the site comprises of post 1940s addition in brick with a skillion roof. The extension is in keeping with the character of the building. A more recent single-storey granny flat with lean-to has also been added to the southern edge of the site.

A c.1950s low brick fence with a wrought iron gate fronts Hewlett Street, while a painted timber panel fence extends along the eastern and western boundaries of the property. There are no significant plantings within the curtilage.

Overall the condition of the building is fair. The slate roof requires some minor repairs to ensure there are no issues with water ingress and falling damp.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear extension to cottage in brick
- Granny flat and lean-to at the rear
- Air-conditioning unit to front gable end of cottage
- Tiled flooring to verandah
- Replaced window panes
- Antenna to hipped roof

The building is considered to retain a high level of integrity with discreet rear extensions. The item retains a significant amount of original fabric and architectural detailing.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1914

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The original allotment for 20 Hewlett Street was transferred to James Herbert Dawes, a plumber of Granville, in November 1909. The cottage was shown in this position on the Water Board Detail Survey on May 1914. Rather than occupying the site himself, Dawes let the cottage to tenants.

Today, the building remains in use as a private residence.

Statement of Significance

The house at 21 Hewlett Street is of local significance for its historic, aesthetic and representative values. Built in 1894, the dwelling relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. The cottage retains its aesthetic significance as an intact late Victorian cottage. The dwelling makes a positive contribution to the overall streetscape character of Hewlett Street. This is enhanced by the similarities in age, design, use and materials with other houses along the street. The cottage demonstrates representative qualities of a high-quality and intact late Victorian cottage built in Granville, c.1894.

Criteria Assessment	
a) Historic	The item relates to the early development of Granville in response to the movement of industry away from Sydney in the 1880s and the establishment of large manufacturing industries in the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling makes a positive contribution to the neighbouring heritage conservation area, Granville Conservation Area – Residential Precinct, which forms the eastern boundary of the property. This is enhanced by the similarities in age, design, use and materials with other houses along the street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The cottage demonstrates representative qualities of a high-quality and intact late Victorian cottage built in Granville, c.1894.

Physical Description

The building on site is a single storey weatherboard cottage with a Colorbond hipped roof. The front of the building is occupied by a timber deck verandah covered by an ogee curved roof which is supported on open trellis cast iron posts. Shiplap weatherboard has been used on the front elevation, with feather edge weatherboard to the eastern façade. A rendered brick chimney with two flues and pots is located to the eastern side of the building. The dwelling has a recent skillion style extension to the rear.

A cast iron palisade fence on polychromatic brick base with a cast iron gate supported by steel posts forms the front of the property. The footpath leading to the front door is poured concrete, with a brick footpath leading to the side entry gate which is of timber. Th dwelling features a deep setback with no established garden in the front yard.

The cottage is in a good condition overall, although the cast iron palisade fence is in need of repair and maintenance works.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Skillion roofed weatherboard extension to the rear.
- Security screen to front door

The item retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1894

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This allotment was transferred late in 1898 to Alfred Trimmer, a mechanical engineer of Granville. However, the dwelling was built as early as 1894. The area was subdivided in May 1894 and Trimmer himself has lived in this house on this land since late 1896. He appears to have purchased this land after the subdivision. This cottage is shown on the 1914 Water Board Survey.

The building remains in use as a private residence.

Curtilage Map

Statement of Significance

The house at 23 Hewlett Street is of local significance for its historic and aesthetic values, and as a representative example of an early Federation cottage in the area. Built in 1895, the dwelling relates to the late nineteenth century development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes positively to the overall streetscape character of the Conservation Area. This is enhanced by the similarities in age, design, use and materials with other houses along the street.

Criteria Assessment	
a) Historic	The item relates to the early residential development of Granville in response to the movement of industry away from Sydney from 1880 to 1930.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item contributes positively to the overall streetscape character of the Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of an early Federation cottage.

Physical Description

The building on site is a single-storey Federation weatherboard cottage with a Colorbond hipped roof and a Colorbond bullnose verandah, atop brick foundations. The weatherboards to the street facing elevation have a rusticated appearance to resemble stone blocks, with feather edged weatherboards to side. The verandah roof is supported on simple timber posts with cast-iron lacework, atop timber floorboards. The windows on the front façade are timber framed double hung sash with a contemporary flyscreen. The windows feature wide timber architraves with a decorative timber sill.

The footprint of the building has been extended to the rear, with additions made to the south-western end of the building. This includes the construction of a shed with a gabled roof and a skillion roof rear addition. The dwelling has a name plaque - 'Rockleigh'.

The front of the property is lined by a white timber palisade fence with wide posts and with art deco style metal gates. A native Ficus type tree, possibly a fig, is located in the front yard. The landscape is largely informal, however contributes the aesthetic values of the item and the setting.

Overall, the cottage is in a good condition and appears to be well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Extension to the building along its south-western side.
- Rear additions of gable roof shed and lean-to.
- Solar panels to the roof along its south-western and southern ends.

The building retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1895

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This allotment was transferred to Granville builder Edward Phillips in 1894. At the first listing of Hewlett Street in the Sands Directory in 1896, William Phillips is listed here. Phillips transferred the cottage to Thomas Sands, a wood and coal merchant of Granville in July 1895, who is listed in the Directory at this address from 1897 onwards.

The building remains in use as a private residence.

Statement of Significance

The former Granville Police Station is of local significance for its historic, aesthetic and rarity values. Built in 1885, the item is historically significant as an early Victorian style police station built to serve the growing population of Granville. The building allows for the interpretation of the early settlement pattern of Granville and the administration of peace and justice during this time. The item has additional historic significance for its continued use as a police station until 2010. The item is of aesthetic significance as an intact example of Victorian Police Station that strongly contributes towards the aesthetic character of the Granville Conservation Area – Civic Precinct, in addition with other nearby historic buildings. This is enhanced by the level of original fabric and architectural detail retained. The item is a rare example of this building type within the local context of Granville and more broadly within the Cumberland LGA.

Criteria Assessment	
a) Historic	Built in 1885, the item is historically significant as an early Victorian style police station built to serve the growing population of Granville. The building allows for the interpretation of the early settlement pattern of Granville and the administration of peace and justice. The item has additional historic significance for its continued use as a police station until 2010.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact example of Victorian Police Station that strongly contributes towards the aesthetic character of the Granville Conservation Area – Civic Precinct, in addition with

	other nearby historic buildings. This is enhanced by the level of original fabric and architectural detail retained.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is a rare example of this building type within the local context of Granville and more broadly within the Cumberland LGA.
g) Representativeness	The item does not meet this criterion.

Physical Description

The former Granville Police Station is a single-storey brick building in a U-shape which has undergone numerous additions over the years. The station features a single storey brick Victorian cottage, constructed of sandstock bricks laid in English Bond pattern. The building features a hipped roof and skillion verandah roof. The verandah is clad with in corrugated iron and supported on timber posts with cast iron brackets. Windows feature timber multi-paned sash windows, with rendered sills below. This building features two chimneys with rendered brick and cornice decoration. The recessed, infilled verandah connecting to the brick cottage to the other brick building is completed with aluminium weatherboard-like panels and aluminium framed windows. Former elements of the verandah remain in the form of timber posts with cast iron brackets.

The fence is a painted acorn-top, timber picket fence. The front door has a transom light above Victorian timber four panel door with upper panels glazed. Incremental additions to the building relate to the former use and current occupation of the building. Security cameras and steel security grills are affixed to windows exterior of windows. A carport and modern skillion addition are located to the rear of the item.

There are some plantings along the front façade that contribute to the aesthetic setting of the item, however, are contemporary and not of heritage significance.

Overall, the building condition is considered good, in which the roof appears to be a recently re-clad.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Skillion addition to the rear
- Infilled verandah with aluminium framed windows*
- Contemporary security grills
- Modern lights and security cameras

The building retains a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1885, 1907-1911

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

With the growth of the area a need for police protection became evident, especially amongst members of the commercial and professional men living in Granville. A group led by John Nobbs prevailed upon the Colonial Government to erect a police station building in Hutchinson Street. According to an article in the Cumberland Mercury, the new police station was to be built on land which the station is located was a former orange grove on land behind the St Marks Church and next to the residence of Dr Curtayne. The complex included a lockup-keepers residence. This was a two-bedroom cottage with a hall through it. Beside the cottage was the office / charge room of the station. The lock up contained two roomy cells. These were completed in 1885.

The police station required the lock-up buildings to be extended in 1907-11. The building remained in use by the NSW Police Force until 2010, when a new three storey building was constructed at 2-8 Carlton Street, Granville. The new building provided the force with upgraded facilities to serve the growing population.

The building is currently occupied by Multicultural Disability Advocacy Association of NSW.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the verandah infill should be removed, and the open verandah reinstated.

Curtilage Map

Statement of Significance

Knox Presbyterian Church is of local significance for its historic, aesthetic and representative values. Built in 1885, the church is of historic significance as an early Victorian Church built to serve the growing Presbyterian community of Granville, a function that continues today. The building presents an intact Victorian church which contributes positively to the heritage significance of Granville Conservation Area – Civic Precinct in unison with other historic buildings in the area. The item demonstrates representative qualities of an intact Victorian Free Gothic brick church built in Granville, in 1885.

Criteria Assessment	
a) Historic	The item is of historic significance as an early Victorian Church built in 1885 to serve the growing Presbyterian community of Granville.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact Victorian Free Gothic Church that makes a strong contribution to the Granville Conservation Area – Civic Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact Victorian Free Gothic brick church built in Granville in 1885.

Physical Description

The single-storey Victorian church is built in the Free Gothic style with a steep hipped gable roof clad with diamond shaped asbestos-tiles with terra-cotta ridge capping. The Facades feature machine made bricks laid in the English bond pattern with bands of contrasting colour, with brick buttresses capped in sandstone. The windows have Gothic arches of brick in a lighter colour, some with stained glass panes, others sash. The front door has a Gothic arch in entrance porch above timber double doors with large decorative cast iron hinges. A timber bellcote is located next to the entrance on the eastern elevation.

Within the curtilage of the church is a weatherboard clad church hall and residence. The surrounding landscape contains some established plantings along the Hutchinson Street footpath and younger plantings between the gravel carpark and grassed area surrounding the church. The carpark is accessed off a concrete lined and gravel filled driveway. Although the church retains a deep setback within the allotment, it is visually prominent within this area due to the low-scale buildings surrounding.

Overall. the building's condition is considered good, though there are some biological growth issues to the roof.

Condition	**Good**	Fair	Poor

Alterations and Additions

- None.

The building retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1885

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The church was designed by James Tosh, of the firm Robinson and Tosh Architects, and built by John Dempsey and John Payne. The church opened for services in 1885. Early in the 20th Century new work was carried out on the building, by 1916, three windows had been opened in the west wall which considerably brightened the interior. The shingles on the roof were also replaced in 1919. In 1919, Thomas Fowlie, when writing the History of Granville, found it a 'plain dismal looking structure', an opinion which would find little favour today, and it is an excellent instance of changes in architectural fashions.

Today, the building is still in use as a Presbyterian church.

Curtilage Map

Statement of Significance

The terrace housing group at 6-14 Jamieson Street is of local significance for its historic, associative aesthetic values, and as a representative example of Victorian period terraces in the area. The group is historically significant as it relates to suburb development in the 1880s, which was driven by the relocation of several large manufacturing industries away from Sydney and close to the railway. It presents as a key part of the larger historic building stock in the area and makes a positive contribution to the streetscape character of the Granville Conservation Area – Civic Precinct. The significance of the terrace group is enhanced by its association with James Bellinger and its relationship with the Victorian Italianate house opposite at 29 Jamieson Street.

Criteria Assessment	
a) Historic	This item historically significant as it relates to suburb development in the 1880s, which was driven by the relocation of several large manufacturing industries away from Sydney and close to the railway.
b) Associative	The building group is associated with James Bellinger, a key property owner and developer between 1880 and 1912 in Granville.
c) Aesthetic/Technical	This item is aesthetically significant as a well-kept Victoria style terrace group.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	This item is representative of Victorian period terrace houses.

Physical Description

The group consists of a row of five (5), two-storey Victorian style terraces. While some of the structures have undergone alterations and additions, they are collectively a highly intact group that retain their form and scale.

The terraces are generally of painted brick with gabled corrugated iron roofs. The overall structure is based on gabled roofs with fir walls protruding from roof and front walls as privacy walls. In general, original features survive in varying capacities across the dwellings, including cast iron remains on balconies, French doors, parapets and sash windows. There are three chimneys in total, with two central rendered chimneys containing corbels shared by two pairs of residences and one residence containing a single chimney of the same style. Verandahs are skillion, with corrugated iron roofs over the upper level across front covering both ground and first floor. Verandah features include a timber deck to the first floor, ground floor tiles of varying types, painted brick privacy walls, cast iron balustrades on first floor and cast-iron brackets and frieze. Windows feature rendered sills and curved rendered arches. Exterior doors have transom light over French doors with bolection moulded panels below and glazed panels above. Front doors have transom light above Victorian timber six panel doors. Fences are timber picket with matching gate.

At the rear, all dwellings retain the original rear second-storey form. Some have been extended at the rear on the ground floor only. The dwellings feature a consist setback with a small front yard. The front landscape generally contains small, contemporary gardens that are not of any heritage value.

Overall, the groups condition appears to be good. The terraces present as a well-maintained group.

Condition	**Good**	Fair	Poor

Alterations and Additions

6 Jamieson Street
- Decorative lacework has been removed
- Contemporary security screens and grills to window and door openings

8 Jamieson Street
- Entry path and porch tiling replaced with modern tiles*
- Contemporary security screens and grills to window and door openings

10 Jamieson Street
- Entry path and porch tiling replaced with modern tiles*
- Contemporary security screens and grills to window and door openings

12 Jamieson Street
- Entry path and porch tiling replaced with modern tiles in a heritage style
- Contemporary security screens and grills to window and door openings

14 Jamieson Street
- Roof has been replaced
- Entry path paving replaced with brick*
- Front fences replaced
- Contemporary security screens and grills to window and door openings

The Jamieson Street row of terraces retain a high level of integrity. While some of the structures have undergone minor alterations and additions, they are collectively a highly intact group that retain their form and scale.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c. 1880-1883

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

In September 1880, James Bellinger, a well-off farmer of Fairfield who developed a profitable orchard and vineyard, Overton Park, growing oranges, apples and stone fruit, began construction on the terrace group at 6-14 Jamieson Street. When big land sales opened up at the then Parramatta Junction (Granville), the sale began with the auction of Wetherill's subdivision. On 16 October 1875, Bellinger purchased one of the best blocks in the subdivision. His two-acre (0.81 hectare) plot was bounded by Mary Street, Railway Street (now The Avenue), and Jamieson Street. It was on this site that he constructed a block of five terraces between c1880-1883. These were the first of a large number of rental properties he built between 1880 and his death in 1912. By 1898, Bellinger owned 22 houses in Granville according to a letter he wrote to Council.

In March 1883, he conveyed one of the dwellings within the terrace to his son-in-law Thomas Carson for 350 pounds. In 1885, Fuller's directory showed a number of tenants occupying this terrace, in addition to Carson. Bellinger later built No. 29 Jamieson Street (across the road from this terrace group) in the Victorian filigree style. Smithfield held on to these rental terraces until his death, upon which time they passed to his daughters.

Today, the buildings remain in use as private residences.

Statement of Significance

The cottage at 17 Jamieson Street, Granville is of local significance for its historic, aesthetic and representative values. Built in 1905, the building historically relates to the residential development of Granville in response to the movement of industry away from Sydney. The item is a fine example of a Federation residence built by local builders and craftsmen. The item retains its aesthetic significance through the retention of much of its original fabric and architectural detailing. It has additional significance as part of the Granville Conservation Area –Civic Precinct which it makes a positive contribution to the overall streetscape character of the Conservation Area. This is enhanced by the similarities in age, design, use and materials with other houses along the street. The cottage demonstrates representative qualities of an intact Federation Arts and Crafts cottage built in Granville, c.1905.

Criteria Assessment	
a) Historic	The item relates to the development of Granville in response to the movement of industry away from Sydney.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as a highly intact Federation style dwelling and contributes positively to the streetscape values of Granville Conservation Area – Civic Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of the Federation style of dwelling.

Physical Description

The site contains a single-storey, face brick Federation dwelling with contrasting brick string courses, gablet hipped iron roof, two profiled brick chimneys and a projecting flying gable front with timber finials and elaborate timber detailing on the gable end. The house has a bullnose verandah to the front with fretwork and a tessellated tiled front porch, with white marble edges on a brick base. The verandah posts are turned timber spindle valance and scalloped decorated valance. Windows are double-hung timber sash with coloured panels, sandstone sills and soldier dark brick curved arches. The front entry door has a transom light and sidelights. The front door is five paneled with three glazed panels above a lock rail and timber bolection moulded panels below.

The site is bounded by a modern timber picket fence to the front and modern, solid unpainted timber fence along the southern boundary. The garden area forward of the front setback contains several mature plantings which largely screen the dwelling from the streetscape.

The building is fair condition overall, though some timber elements to the front roof gable end show signs of deterioration. There are also signs of some structural movement with cracking around window lintels and to the base of the structure.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Timber picket fence along the front
- Solid, unpainted timber fence added along the side elevation

The item retains a high level of integrity with much of original fabric and detailing extant.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1905

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The subject site was purchased as vacant land in 1905 by George Watts, an engine driver local to Granville. He immediately mortgaged the land to build the cottage which survives today, having the dwelling built by local builders and craftsmen. The mature plantings on site do not relate to the early setting of the dwelling, as shown by the 1943 aerial imagery of the area. Today, the building remains in use as a private residence, however, appears to be unoccupied.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X

Curtilage Map

Statement of Significance

The semi-detached Federation cottage at 22 and 24 Jamieson Street, Granville is of local significance for its historic and aesthetic values. Built c.1910, the semi-detached cottage relates to the residential growth of Granville that occurred in response to the relocation of industry away from Sydney to Granville between 1880 and 1930. The item retains its aesthetic significance as an intact Federation cottage with Victorian architectural influences, that retains its original form and much of its original architectural detailing. The item form part of a larger group of historic houses in the area which were built during that period. This is enhanced by the similarities in age, design, use and materials. Although the semi-detached cottage has been modified over time with the addition of new decorative elements, the item contributes positively towards the aesthetic character of the Granville Conservation Area – Civic Precinct.

Criteria Assessment	
a) Historic	The item has historic significance as related to the concurrent purchase and development of land within Jamieson Street, in response to the early development of Granville and movement of industry away from Sydney.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as an intact Federation cottage with Victorian architectural influences, that retains its original form and much of its original architectural detailing. This item forms part of a larger group of historic houses in the area which were built during that period. This is enhanced by the similarities in age, design, use and materials. Although the semi-detached cottage has been modified

	over time with the addition of new decorative elements, the item contributed positively towards the aesthetic character of Granville Conservation Area – Civic Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	With varied timber detailing, the item does not meet this criterion for any one particular architectural style.

Physical Description

The item is a symmetrical single-storey, semi-detached Federation cottage constructed of weatherboard on a brick foundation with some Victorian architectural influences. The front elevation features weatherboard panels imitating sandstone block masonry. The roof is a gabled hip clad in replaced corrugated galvanized iron with two tall brick corbelled chimneys. The semi-detached cottage has a continuous Ogee verandah roof with hipped corners. The verandah is supported in the centre by a brick privacy wall with two decorative timber posts either side with decorative brackets of different styles atop timber floorboards. The central painted brick privacy wall has recessed blind arches and adjoins a timber picket fence dividing the two residences. The houses feature timber framed sash windows with sidelights and decorated timber sills. The windows along the façade of 22 Jamieson Street feature steel bars. Each dwelling features a transom light and sidelight flanking a five paneled door with three glazed panels above lock rail and timber bolection moulded panels below, fronted by a contemporary security screen door. Both dwellings have been extended to the rear with single-storey lean-to additions.

The semi-detached cottage features a modest setback that aligns with the neighbouring properties, creating a consistent setback along Jamieson Street. The dwellings each contain informal, contemporary front gardens of little heritage significance. However, the property at 24 Jamieson Street has a mature tree in the front yard that is of moderate significance. The property shares at the front a timber, acorn topped picket fence with matching gate.

Overall, the semi-detached cottage is in a good condition and appears to be well maintained. The property at 22 Jamieson Street features a refreshed paint scheme. The timber fascia below the guttering on the property at 24 Jamieson Street shows signs of minor deterioration.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Single-storey rear extension to both properties
- Replaced roof sheeting
- Security screen doors
- Security bars on windows
- Timber flooring to verandah

Overall the item retains a high level of integrity as evident through the retention of much of its original architectural detailing and overall form. The item has had sympathetic repairs made to building with the replacing of the roof fabric on a like for like basis.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c. 1910

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

In conjunction with other properties on Jamieson Street, these two lots were purchased as vacant land in 1903-1904 by Albert and Sydney Carson who was the sons of Thomas Carson, Stephen Chandler and his wife Florence, and by Rebecca Hill wife of Roland Hill of Chatswood. In the ensuing years, a series of dwellings were built for the owners, both for owner-occupation and for rental. By 1914, the entire street was complete. Many of the owners lived in the street or nearby. Even the Hills moved to Granville from Chatswood.

The erection of these dwellings was a direct response to the improved conditions in Sydney in the early 1900's.

Today, the buildings remain in use as private residences.

Curtilage Map

Statement of Significance

The dwelling at 29 Jamieson Street, Granville, otherwise known as "Overton/Longford", is of local significance for its historic, associative, aesthetic and representative values. The building is historically linked to the residential growth of Granville that occurred in conjunction with the relocation of industry to the area between 1880 and 1930. The significance of the dwelling is enhanced by its association with James Bellinger, its construction by local builders and craftsman, and its historic connection to the terrace group across the road at 6-14 Jamieson Street which were also constructed by Bellinger and heritage listed. The building retains its aesthetic significance as a fine, intact example of a freestanding Victorian filigree terrace with landscape aesthetic qualities that are rare to the area. The house is highly intact when viewed from the street and strongly contributes to the streetscape values of the Granville Conservation Area - Civic Precinct. The item demonstrates representative qualities of an intact Victorian terrace built in Granville, c.1887.

Criteria Assessment	
a) Historic	This item is historically significant as related to suburb development in the 1880s, driven by the relocation of several large manufacturing industries away from Sydney. It is historically associated with the terrace group across the road at 6-14 Jamieson Street, Granville.
b) Associative	The building group is associated with James Bellinger, a key property owner and developer between 1880 and 1912 in Granville.
c) Aesthetic/Technical	This item is aesthetically significant as a fine Victorian filigree dwelling which has a prominent streetscape presence and landscape setting. The house is highly intact when viewed from the street and strongly

	contributes to the streetscape values of the Granville Conservation Area - Civic Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact Victorian terrace built in Granville, c.1887.

Physical Description

The dwelling at 29 Jamieson Street is a two-storey freestanding Victorian filigree terrace. The building is of brick with a rendered finish. The roof is gabled with decorative barge boards, finials at each end and slate roofing. The roof also contains a single rendered brick chimney with cornice decoration. The bullnose verandah contains Corinthian fluted cast iron posts, balustrades and brackets with lacework detailing. On the southern end of the verandah is an arched opening. The dwelling also contains a verandah to the rear. The porch across the ground floor and across the rear of the dwelling has a tessellated tile floor with sandstone edges, while the first floor is timber. The house also has two Juliet balconies on the north side elevation. Windows have rendered brick corniced sills with bracket decoration below and decorated label moulded arches. Exterior doors on first floor have transom lights over French doors with glazed panels above timber bolection moulded panels. The front door has segmented arches above sidelights and stenciled glazed transom light with "Longford" in stencil, and a timber four panelled door with risers.

The dwelling has been extended to the rear with a painted, two-storey brick structure with a skillion roof. A small lean-to, single storey addition has been added to that. A single-storey, face brick shed with a highly corroded iron gable roof is situated at the very back of the property. All extensions are visible from the neighbouring carpark.

The dwelling has a deep setback from the street which is unusual when compared with other dwellings in the area. The setback features a period style fountain in the front garden which has a Grecian urn top and head of lion below. The setback also contains a concrete footpath and concrete driveway. The front of the property is fenced by a palisade cast iron fence set into large cast iron barley-twist posts on dwarf wall. The front landscape contributes to the aesthetic significance of the item.

Overall, the condition of the building is good, though the slate roof has a significant amount of biological growth.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Two-storey brick extension with a skillion roof*
- Single-storey lean to addition
- Single-storey, face brick shed to the rear of the property

The building retains a high level of integrity with minor rear additions that are a discreet addition to the dwelling that do not impact upon an intact roof form. The item retains a high level of original and significant fabric.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c1887

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

"Longford/Overton" was built c.1887 by James Bellinger, a well-off farmer of Fairfield who developed a profitable orchard and vineyard, Overton Park, growing oranges, apples and stone fruit. When big land sales opened up at the then Parramatta Junction (Granville), the sale began with the auction of Wetherill's subdivision. On 16 October 1875, James purchased one of the best blocks in the subdivision. His two-acre (0.81 hectare) plot was bounded by Mary Street, Railway Street (now The Avenue), and Jamieson Street. He constructed his dwelling on this lot for the purpose of renting. In 1880, he took the first step towards building his own home in the area. He bought a block (2,024 sq. metres) on the eastern side of Jamieson Street, from Thomas Carson, who had become his son-in-law the previous year. He paid 90 pounds for the property. He contracted a builder, believed to have been John Fewster, to build a two-storey house, and occupied it c.1887. Though the door light of the building says "Longford", sources state he named the house "Overton" after the English village where he was born. The building is noted as 'Overton' in the 1890 Sands Directory. Bellinger moved into the dwelling and took up the role of a local gentleman. This was one of a large number of rental properties he built between 1880 and his death in 1912. By 1898, Bellinger owned 22 houses in Granville according to a letter he wrote to Council.

Today, the building remains in use as a private residence.

Curtilage Map

Statement of Significance

The house at 30 Jamieson Street, Granville is of local significance for its historic, aesthetic and representative values. Built c.1910, the item is a modest Federation period house which relates to the early twentieth century residential development of Granville that occurred in conjunction with the industrial and commercial development of Granville between 1880 and 1930. The item makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Civic Precinct. This is enhanced by the similarities in age, design, use and materials with other houses along the street. The item demonstrates representative qualities of an intact Federation cottage, built c.1910.

Criteria Assessment	
a) Historic	The item has historic significance as related to concurrent purchase and development of land within Jamieson Street in response to industrial activity.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as a Federation style dwelling which contributes positively to the streetscape values of Granville Conservation Area – Civic Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact Federation cottage, built c.1910.

Physical Description

The dwelling is a single storey, Federation Queen Anne style residence constructed with tuck pointed brick with a hipped roof clad with Marseille tiles and a projecting gable to the street. The projecting gable features a decorative timber bargeboard and finial, with painted timber soffits and a semi-circular timber framed sash window, with coloured multipaned upper sashes, a rendered corniced sills and semi-circular label moulds above arches over windows that are set on a brick string course. The upper gable end also features a corniced string course with roughcast render above an expressed brick string course.

The verandah has Marseille tiled skillion roof that extends from main roof across front to projecting gable. The verandah roof is supported on cast iron decorated openwork posts, atop tessellated tile flooring and white marble steps and edge. The rendered edge of the steps features decorative glazed ceramic insets, addressed by a painted concrete path. A pair of French doors open to the verandah and are fronted by white painted timber shutters. The front door has transom light and sidelight flank a five panelled door with three glazed panels above lock rail and timber bolection mould panels below. All are with coloured glazing.

Front fence is solid brick fence with brick coping and brick piers connected by galvanised pipe and Cyclone wire set in tube frame gate with wrought iron scroll pattern across top. The front yard features some informal and contemporary plantings that are not significant however contribute to the setting.

The item appears to be in a good condition, however there is some damp brickwork in the gable end that has biological growth.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear skillion extension
- Refreshed paint scheme to the bargeboard and exposed timber rafters and soffits.

Overall, the item retains a high level of integrity. The rear skillion addition is an extension of an existing built form that is a discreet addition to the dwelling.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1910

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the

subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

In conjunction with other properties on Jamieson Street, these two lots were purchased as vacant land in 1903-1904 by Albert and Sydney Carson, who were the sons of Thomas Carson, Stephen Chandler and his wife Florence and by Rebecca Hill, wife of Roland Hill of Chatswood. In the ensuing years, a series of dwellings were built for the owners, both for owner-occupation and for rental. By 1914, the entire street was complete. Many of the owners lived in the street or nearby. Even the Hills moved to Granville from Chatswood. The erection of these dwellings was a direct response to the improved conditions of Granville in the early 1900's.

The dwelling remains in use as a private residence.

Statement of Significance

The semi-detached Federation dwellings, 'Lockerbie' and 'Keswick' are of local significance for their historic, aesthetic, and representative values. Built c.1910, the item is historically linked to the residential growth of Granville that occurred between 1880 and 1930 in conjunction with the relocation of large manufacturing industries to the area. The item retains its aesthetic significance as a highly intact Federation Queen Anne dwelling with much of its original fabric and architectural detailing. The item makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Civic Precinct. The item forms part of a larger group of historic houses which were built during the same time along Jamieson Street, resulting in the similarities in age, design, use and materials. The item demonstrates representative qualities of intact semi-detached Federation Queen Anne dwelling built in Granville, c.1910.

Criteria Assessment	
a) Historic	Built c.1910, the item is historically linked to the residential growth of Granville that occurred between 1880 and 1930 in conjunction with the relocation of large manufacturing industries to the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item retains its aesthetic significance as a highly intact Federation Queen Anne dwelling with much of its original fabric and architectural detailing. The item makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Civic Precinct. The item forms part of a larger group of historic houses which were built during the same time along Jamieson Street, resulting in the similarities in age, design, use and materials.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact semi-detached Federation dwelling built in Granville, c. 1910.

Physical Description

The item is a symmetrical single storey semi-detached Federation dwelling. The item is constructed of red brick, laid in Flemish bond pattern with remnant tuck pointing evident along the front façade. The roof is hipped with a central gablet vent and two flanking projecting gables with exposed rafters. The roof of 34 Jamieson Street is clad with corrugated iron sheets, while the roof of 32 Jamieson Street has replaced corrugated galvanised iron sheets. The item has two tall brick chimneys with stepped rich courses and roughcast render.

Each gable end features timber shingle cladding in gables with spindle ladder screen and finial above and with a semi-circular timber sash windows below with a rendered corniced sill and Victorian label mould arches with stops above. The upper sashes are multipaned coloured glass, with the lower central sash fronted by a lightweight aluminium framed flyscreen. Windows along the side elevations are timber framed double hung sashes with brick segmental arches fronted by lightweight flyscreens.

The dwelling features a paired brick arch porch entrance with a skillion corrugated iron roof between the flanking projecting gables. The brick arches feature a Victorian label mould arch with stops above. Each cottage features a name plate above the moulded arch of the porch, No.32 is 'Lockerbie' and No.34 is 'Keswick'. The front doors have transom lights and sidelights, around a five panelled door with three glazed panels above lock rail and timber bolection mould panels below, all with coloured glazing. This is fronted by a contemporary security screen.

The item shares a painted acorn top timber picket fence and gate. Both dwellings have been extended to the rear with a single-storey, flat roof structure. The dwelling features planting along the front façade, which may be contributing the issues with water ingress and ground settlement issues. This is particularly evident on the façade of 34 Jamieson Street that features a severe cracking in the brickwork.

Overall the condition of the dwellings is fair. There is evidence of structural movement around the front window of 34 Jamieson Street with severe cracking in the brickwork. There are also some dilapidated timber elements of the timber finial of the property at 32 Jamieson Street.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Single-storey rear extensions to both dwellings
- Replaced roof sheets of 32 Jamieson Street
- Contemporary security screen doors.
- Lightweight flyscreens

The item retains a high level of integrity with the retention of much of the building original architectural detailing intact.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Curtilage Map

Statement of Significance

The St Mark's Anglican Church and Rectory in Granville is of local significance for its historic, associative, aesthetic and representative values. The church and rectory are historically significant for their ability to demonstrate the early residential development of Granville between 1880 and 1930, as they were built to serve the growing Catholic community of Granville in the late eighteenth and early nineteenth century.

Built in 1882, St Mark's Church has historical significance which is enhanced by its association with the well-known architect, Edmund Blackett. The church retains a high level of original detail and is aesthetically significant as an intact Victorian Free Gothic Style stone church. The church has representative qualities of an intact and example of a Victorian period church.

The Rectory of St Mark's built in 1904 and is historically associated with architect, Routledge Louat. The rectory retains a high level of intact detailing and is of aesthetic significance as a substantially intact Federation Queen Anne style residence. The Rectory demonstrates representative qualities of a fine example of a Federation Queen Anne style residence.

The item retains a prominent position with the streetscape and is assisted by the established garden landscape surrounding the item. Together the church and rectory make a significant and positive contribution to the heritage character of the Granville Conservation Area – Civic Precinct.

Criteria Assessment

a) Historic	The church and rectory are historically significant as items built to serve the growing Catholic community of Granville in the late eighteenth and early nineteenth century.
b) Associative	The church is associated with the well-known architect, Edmund Blackett. The rectory is associated with architect Routledge Louat.
c) Aesthetic/Technical	The items are of aesthetic significance as an intact example of Victorian Free Gothic Style Church paired with a later Federation period Queen Anne rectory. The item retains a prominent position with the streetscape and is assisted by the established garden landscape surrounding the item. Together the church and rectory make a significant and positive contribution to the heritage character of the Granville Conservation Area – Civic Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The complex demonstrates representative qualities of a Victorian Church and a later Federation period Queen Anne residence.

Physical Description

Church:
The church is a Victorian Free Gothic style stone church with a slate gable roof and gablet vents topped by metal finials. The masonry consists of rustic sandstone walls with sandstone quoins and buttresses. A sandstone addition with a skillion roof is located to the west of the north elevation. The window arches feature sandstone label moulds above windows and doors. The windows contain lead lights. The main entrance door features a steep pitched gable Gothic arch over entrance porch. The fence is constructed of rusticated sandstone with sandstone coping and piers with pyramid tops, wrought iron gates and features a columbarium.

Hall:
The hall was not visible and is potentially demolished. The former listing sheet describes the building as a single storey nineteenth century weatherboard building with a steeply pitched iron roof and multi-paned high windows. The associated iron bell tower is extant and located to the north of the Church. It shares the sandstone fence wall with the adjoining St Marks Church. Other features include fibro skillion attached to south side.

Rectory:
The Rectory is a two-storey Queen Anne style residence constructed of red brick in stretcher bond bands of contrasting colour. The roof construction is hipped with projecting gable front and with smaller gable over entrance, clad with Marseilles tiles. The roof has three brick chimneys with dark brick strapwork forming a cross. The verandah roof is also clad with Marseille tiles and is an extension from main roof over upper verandah, which is across front to projecting central gable on both floors. The verandah floor is of concrete and is supported on Gothic brick arch under projecting gable. It has timber ladder valance between paired timber posts and timber brackets, and decorative timber balustrade. The windows are multi-paned with sloping rendered brick sills and Gothic arches. Exterior doors have sidelights flanking French doors. There are transom lights and sidelights flanking the front door. The columbarium sandstone fence wall separates the church and the rectory. The building features a deep setback and substantial front garden. A contemporary carport is located to the southeast of the residence, accessed via a concrete strip driveway with gravel fill.

The church, hall and rectory are linked by plantings. This landscaped garden surrounding Church and rectory features mature palms and cypresses that are of heritage value.

Overall the condition of the buildings is considered fair. There are some signs of salt damage to sandstone masonry with some spalling occurring in the upper courses of the boundary wall and microbiological growth on the roof of both the church and rectory.

Condition	Good	Fair	Poor

Alterations and Additions

- Early sandstone addition with skillion roof to Church
- Carport with a pitched roof and roller door to the south of the Rectory
- Church hall demolished (?)

The church retains a high level of integrity.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1883 (Church), 1904 (Rectory)

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

This building was designed by the firm of Blacket & Son and it is believed that Edmund Blacket was responsible for the design. The Foundation Stone was laid on 3 May 1882. The building was erected by William Thackeray. On 13 January 1883 the building was officially opened but it only contained a nave and a temporary church. Stained glass windows were provided by Orlando Jones, a local resident. It was not until 1920 that additions designed by R G Routledge were commenced. Even when dedicated on 4 Nov 1922 it was not complete and had a wooden vestry.

The Hall was erected 1902 for the Catholic Apostolic Church in Margaret Street, where it was largely patronised by the Dawes family. When the church closed down it was given to St. Mark's and moved bodily into the grounds of St. Mark's. Part of the furnishings of St. Mark's came from the Catholic Apostolic Church. This includes a fine altar made from Tasmanian blackwood.

Early in the twentieth century, it became clear that the Rector of St. Mark's would need a substantial Rectory adjacent to the church. The foundation stone was laid on 29 November 1902 by the Governor of NSW. This building was designed by Routledge Louat.

The fence was designed by Saumarez -Smith in 1910. The columbarium was incorporated into the fence in 1945.

The site is still used for the church.

Statement of Significance

The dwelling at 40 Jamieson Street, Granville is of local significance for its historic, aesthetic, rarity and representative values. The item is of historical significance for its link to the residential development of Granville that occurred in conjunction with the relocation of large manufacturing to the area between 1880 and 1930. Built in 1905, the building is associated with the subdivision of the Drainwell Estate and the suburban formation of Jamieson Street during this period. The item retains its aesthetic significance as an intact Federation period Queen Anne style residence built by local builders and craftsmen, that retains much of its original fabric and architectural detailing. It has additional aesthetic significance as part of the Granville Conservation Area – Civic Precinct. The item retains a prominent position within the streetscape and makes a positive contribution towards the overall character of the Conservation Area. While the item demonstrates representative qualities of an intact and fine Federation Queen Anne residence, the item has rarity values as a rare architectural style within the Granville Conservation Area – Civic Precinct.

Criteria Assessment	
a) Historic	The item is historically significant for its connection to the early subdivision and development of Granville.
b) Associative	The item does not meet this criterion.

c) Aesthetic/Technical	The item is of aesthetic significance as an intact Federation Queen Anne residence that retains much of its original fabric and architectural detailing. The item has additional aesthetic significance as part of the Granville Conservation Area – Civic Precinct
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item has some significance as a rare building type within the Granville Conservation Area – Civic Precinct.
g) Representativeness	The item demonstrates representative qualities of a fine Federation period Queen Anne style residence.

Physical Description

The site contains a two-storey Federation Queen Anne face brick villa with Marseilles tiled roof. The roof is hipped, with projecting hip and gable to front and side elevations, and features terracotta ridge ornament. There are two tall brick chimneys with stepped corbels on rendered base with squat terracotta pots. The facades are tuck pointed, with blue-black string lines above and below window openings. The verandah is roofed with Marseilles tiled skillion extending from main roof over upper verandah which is across front and returning to projecting gable and hip on both floors. The verandah floor is of tessellated tiles and white marble steps on the ground floor with timber on first floor. The verandah is supported on timber posts, stop chamfered, with timber ladder balustrade on first floor and timber brackets. Exterior doors have transom lights above timber Victorian style four panel doors, with upper panels glazed. On the first floor, transom lights are above timber Victorian style four panel doors, with coloured glazed panels above the lock rail. Main (front) door has a transom light above Victorian timber four panel door with bolection moulded panels. The dwelling has a small, single-storey brick extension to the Mary Street elevation with a hopped tiled roof and aluminum windows.

The property retains a prominent corner position within the streetscape, with an established garden landscape along the Jamieson and Mary Streets frontage. The property boundary is marked by a modern steel looptop mesh fence.

The dwelling was under renovation works during the 2019 site inspection. Overall, the dwelling is in a good condition, although there is some evidence of timber deterioration to the verandah.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Brick extension to the Mary Street elevation with a hipped tiled roof
- Alarm fixed to the exterior
- Modified concrete ramp entrance
- Security grills to windows on the lower façade.

Overall, the building retains a high level of integrity with much of its original fabric intact. The building features minor modifications to the exterior with the inclusion of security screens to windows on the lower façade. The brick extension at the rear of the property does not represent significant fabric and is an intrusive addition to the overall form of the building.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1905

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

In conjunction with other properties on Jamieson Street, these two lots were purchased as vacant land in 1903-1904 by Albert and Sydney Carson who were the sons of Thomas Carson, Stephen Chandler and his wife Florence, and by Rebecca Hill wife of Roland Hill of Chatswood. In the ensuing years, a series of dwellings were built for the owners, both for owner-occupation and for rental. By 1914, the entire street was complete. Many of the owners lived in the street or nearby. Even the Hills moved to Granville from Chatswood.

The building is now used as the NSW Government Health, Western Sydney Local Health District Community Rehabilitation Service

	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The cottage at 53 John Street, Granville is locally significant for its historic and aesthetic values. Built c. 1884, the modest Victorian cottage relates to late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. The dwelling has an unusually deep setback from the street, located over the opposite side of Duck Creek from John Street. This deep, landscaped setback makes for an unusual and notable heritage setting for the item and, in addition with other dwellings on the street, reflects the early street alignment.

Criteria Assessment	
a) Historic	Built c. 1884, the modest Victorian cottage relates to late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has an unusually deep setback from the street, located over the opposite side of Duck Creek from John Street. This deep, landscaped setback makes for an unusual and notable heritage setting for the item and, in addition with other dwellings on the street, reflects the early street alignment.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The site consists of a single storey vernacular brick Victorian cottage. The original portion of the dwelling has a gabled corrugated iron roof which would once have had scalloped pattern barge boards. The verandah is concaved and corrugated iron, extending from main roof, across front of original building only, supported on pipe posts and with a crossed timber balustrade. The front elevation consists of rendered brick and contains a single-entry door, the material of which was not visible on site. Two sets of timber casement windows flank the door on either side. The dwelling has a later addition to the east, constructed of fibro and set on a brick base. The extension has made considerable effort to match the tradition style of the original dwelling, adopting timber casement windows and a gabled corrugated iron roof with a barge board and finial.

The dwelling is built above the Duck Creek line, on the northern side. This makes for extremely deep and unusual building setback within the street. The dwelling is accessed by a paved walkway leading to a timber footbridge over the creek. The dwelling is then accessed by a set of concrete stairs. The property fence is of weldmesh panels attached to pipe posts across front, with three rail timber fence either side of bridge across creek. The front of the property is bound by a recent metal palisade fence, while the eastern boundary is lined by a Colorbond fence.

Landscaping on the site largely consists of open grassed areas, with one large gum tree along the western boundary of the property towards the street. Another younger gum tree is also present halfway along the property on the western side.

From the street, the dwelling appears to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Fibro extension
- Weldmesh fence to creek line*
- Recent metal palisade fence to front property boundary
- Colorbond fence to eastern property boundary*

As the dwelling has undergone a sizable extension to the east, altering the overall form and street facing elevation of the dwelling, the dwelling is considered to have moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	c1884

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the

workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The dwelling was originally part of Blaxcell's Drainwell Estate and subdivided on 26 January 1882 as 'The Meadows Estate' which comprised of over 150 allotments. By 1886, the SANDS directory indicates that John Davies was living in the property. Duck Creek runs crosses the property, which was channelised after the dwelling was constructed as part of the Public Works Act, 1912- Granville Stormwater Drainage: Duck Creek Main Channel Extension.

g) Representativeness	The item does not meet this criterion.

Physical Description

As the dwellings were not visible during the site inspection, the following physical description has been quoted from the former listing sheet for the item:

> *Single storey brick Victorian building comprising two dwellings with rendered fronts, painted brick sides and gabled iron roof with timber fretwork barge boards. Built up above the creek level and on the opposite side from John Street. Each cottage has a sashed window at front. No.55 has bullnose corrugated iron roof over verandah across front. No. 57 has concave corrugated iron extending from main roof over verandah across front. Both properties have timber picket fence and gates.*

The site is heavily landscaped with a range of native and introduced species. It is difficult to asses whether this is a planned landscaped related to the original dwellings.

As the site was inaccessible during the site inspection, a condition rating has not been provided.

Condition	Good	Fair	Poor

Alterations and Additions

- The building was undergoing major construction work during the site inspection.

As the site was inaccessible during the site inspection, an integrity rating has not been provided.

Integrity	High	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	c. 1884

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which the existing dwellings are located was purchased by Thomas Fewster, a bricklayer of Granville. It is likely that he was related to John Fewster, the builder of No. 32 Walter Street, Granville. The land was mortgaged in March 1884 to erect the existing cottages. Fewster was living in one of the cottages by 1885. He sold the cottages in 1892.

	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The item at 5 Margaret Street is of local significance for its historic and aesthetic values. Built in 1909, the cottage is historically significant as it relates to the early twentieth century residential development of Granville which occurred in conjunction with the relocation of large manufacturing industries to the area. Though the building has some aesthetic significance as a modest workers cottage, the building is substantially modified and is not an intact example of its type. The dwelling relates to other cottages of a similar date and scale in along Margaret Street, though it only makes a minor contribution to the overall streetscape character.

Criteria Assessment	
a) Historic	The item relates to the early twentieth century residential development of Granville that occurred in conjunction with the industrial and commercial development of the area between 1880 and 1930.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has some aesthetic significance as a modest federation cottage that relates to similar buildings of a similar design and age within Margaret Street, though it has been modified.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The dwelling is a single storey brick cottage, with a hipped roof with boxed eaves clad with replaced corrugated galvanised iron. The roof features two simple brick chimneys with corbelled caps. The façade is asymmetrical and single fronted with a new bullnose verandah and a pair of double hung sashed windows which appear to have internal shutters. The doorway is located to the right and features a top light. The brickwork was formerly tuck pointed, however is now painted. The bullnose verandah is a recent addition to the dwelling that replaces a modified flat roof verandah supported on steel hollow posts.

The building has been substantially altered with the inclusion of a large rear extension and a bullnose carport attached to the southern elevation of the dwelling. The carport features a beaded fascia to boxed eaves.

Other additions include a modern timber picket fence and contemporary paving. There are no other significant landscape features. The building is built to street alignment.

At the time of inspection the building was under renovation. It appeared to be in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear single-storey extension
- Replaced verandah
- Roof is re-clad
- Carport located to the side of the property*
- Contemporary paving of driveway
- Modern timber fence

The building retains a moderate level of integrity. Although modified with the inclusion of a rear extension the building has made an attempt to retain the significant fabric of the original core structure, form and scale.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1909

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This dwelling first appeared in the 1909 Sands Directory and was occupied by Julia Hodgson, widow of Granville. It is shown on the 1914 Water Board Detail Survey and appears to be one of the earlier cottages built on this side of Margaret Street.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the carport should be removed and replaced with more simplistic structure which does not obscure or confuse the overall design intent of the dwelling.
- The dwelling should be given an appropriate historic paint scheme informed by a suitably qualified heritage trades specialist.

Curtilage Map

Statement of Significance

The house at 8 Margaret Street, Granville is of local significance for its historic and aesthetic values and is representative as a modest Federation period cottage in the area. Built in 1905, the cottage is historically linked with the residential growth of Granville that occurred in association with the industrial and commercial development of the area. The cottage is of aesthetic significance as an intact early vernacular Federation period workers cottage. This significance is enhanced by the similarities in age, design, use and materials with other cottages in the area.

Criteria Assessment	
a) Historic	The item is historically linked with the residential growth of Granville that occurred in association with the industrial and commercial development of the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact early vernacular cottage.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a modest Federation period cottage.

Physical Description

The dwelling is a typical early vernacular Federation period cottage more commonly referred to as a Workers Cottage. The dwelling is a single storey timber cottage with a traverse gable roof with an integrated skillion clad in corrugated iron, situated atop brick pier foundations. The roof also features a brick chimney. The house has a hipped Ogee verandah clad in original corrugated galvanised iron with replaced guttering supported on timber posts. The timber chamfered posts appear to be replaced and half treated. The verandah features replaced timber floorboards and is addressed by a concrete step. The dwelling has a symmetrical façade with two timber framed double hung sash windows flanking a central front door. Contemporary flyscreens and a security screen door front the windows and door. There is a garage located at the rear of the property that features rendered brick and a roller door. The dwelling features a flat roofed pergola at the rear.

The building does not contain any significant landscaping elements within the curtilage of the item. The properties boundary is marked by a modern weldmesh fence and gates.

Overall, the condition of the building is considered to be fair, although the building show signs of timber deterioration and biological growth on the roof. The pattern of deterioration, evident in the blistering of the paint is likely from the use of an acrylic based paint which retains moisture and causes the timber beneath to rot.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Replaced verandah post and floorboards*
- Rear addition
- Garage located to the rear of the property
- Modern flyscreens and security screen door
- Concrete entry path
- Cyclone fencing*

The building retains a high level of integrity, with the retention of the buildings form and much of its significant fabric. The rear extension is a discreet addition that respects the built form and space retained in the curtilage.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1905

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the

subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This dwelling first appeared in the 1905 Sands Directory and was occupied by Mrs M Hilder. It is shown on the 1914 Water Board Detail Survey and appears to be the earliest cottage built on this side of Margaret Street. In 1905, the site was owned by Susan Ritchie, wife of Robert Ritchie, a major manufacturer at Granville. She appears to have arranged for the construction of this cottage. In September 1909, she sold it for £160 to Sarah Roberts, wife of John Roberts, labourer of Granville. They are listed as living in this house in the Sands Directory from 1911 onwards.

The dwelling remains in use as a private residence.

Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential building (private)	

Curtilage Map

Statement of Significance

The Federation cottage, 'Tuena' at 14 Margaret Street, Granville is of local significance for its historic, aesthetic and representative values. Built in 1912, the item is historically significant for its link to the early twentieth century residential development of Granville that occurred in conjunction with the relocation of several large manufacturing industries to the area. The building retains its aesthetic significance as an intact weatherboard Federation cottage that retains much of original fabric. The dwelling makes a notable contribution to the character of the streetscape. The item demonstrates representative qualities of an intact weatherboard Federation cottage.

Criteria Assessment	
a) Historic	Built in 1912, the item relates to the residential development of Granville that occurred in conjunction with the movement of industry away from Sydney from 1880 to 1930.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building retains its aesthetic significance as an intact weatherboard Federation cottage that retains much of original fabric. The dwelling makes a notable contribution to the character of the streetscape
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact weatherboard Federation cottage.

Physical Description

The dwelling is a single storey weatherboard Federation residence with a hipped roof and a projecting gable. The roof is clad in iron and features a brick chimney with corbels and squat terracotta pots. The weatherboards are marked to resemble ashlar blocks, while the side elevations feature rusticated timber weatherboards. Some weatherboards have been replaced along the southern elevation. The verandah has a hipped skillion roof clad with corrugated iron which extends from main roof across the front to the projecting gable. The verandah is supported on timber stop chamfered posts with long timber brackets and a timber lattice infilled balustrade atop a concrete slab. The windows on the projecting gable is a set of three timber framed casement windows, with multipaned and a set of three top lights with a scrolled timber under sill. The window on the projecting gable and along the north elevation has a skillion pressed metal awning supported by decorative timber brackets. French windows located under the verandah are fronted by contemporary flyscreens. The front door has a transom light above timber door with three coloured glazed panels above with large glazed pane. Below lock rail are three horizontal bolection moulded timber panels. Original letter opener and door handle in lock rail.

The dwelling appears to have been extended at the rear in stages. The first extension appears to have been an early addition, completed with rusticated weatherboards and a corrugated iron roof. The last addition features a flat rom and rusticated weatherboards with a painted white finish. The rear extensions have contemporary aluminium framed windows with flyscreens.

The dwelling features an established informal garden setting that includes a bush along the fence and a young Kentia Palm tree. The front garden formerly contained two very old palms in front yard, however they have been removed. The property boundary is marked by an acorn-top, timber picket fence with matching gate along the street. The north and south elevations are marked by a Colorbond pressed metal fencing.

Overall the condition of the building is considered fair. The roof cladding is quite corroded and deteriorated which led to the replacement of some corrugated iron panels. The timber elements are generally well cared for, however there are some timber elements along the side elevations that show signs of timber rot. The pattern of deterioration, evident in the blistering of the paint, is likely from the use of an acrylic based paint which retains moisture and causes the timber beneath to rot.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Replaced weatherboard cladding to the side elevations
- Possible rear extension
- Replacement of roof cladding in sections
- Modified landscape with the removal of two large established palms.

The building retains a moderate level of integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1912-1914

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The dwelling 'Tuena' was built between 1912 and 1914. The land in which Tuena is located as well as the allotment behind was purchased for £58 in August 1901, by Frederick Joseph Rose, a local carpenter of Granville. The land was mortgaged in 1903 for £175 and again in 1912 for £350. The first mortgage possibly enabled Rose to build the cottage he occupied facing Milton Street and the second probably was related to the erection of this property. Tuena was sold for £475 in July 1917 to James William Boughey, a wagon builder.

The building remains in use as a private residence.

Recommendations

Heritage Management		Existing Built and Landscape Elements		Future Development and Planning	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the dwelling should be coated in an oil-based paint. The use of acrylic paint will exacerbate the rate of deterioration and adversely impact the condition of the building and significant fabric.

Curtilage Map

Statement of Significance

The house at 24 Margaret Street, Granville is of local significance for its historic and aesthetic values, and as a representative example of a modest Federation period cottage. Built in 1914, the building is historically linked with the early twentieth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. The item retains its aesthetic significance as an intact Federation cottage with much of its original fabric and detailing intact. The dwelling makes a positive contribution to the heritage character of Margaret Street which is enhanced by the similarities in age, design, use and materials with other houses along the street. The item demonstrates representative qualities of an intact Federation cottage.

Criteria Assessment	
a) Historic	Built in 1914, the building is historically linked with the early twentieth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. It is also related to the subdivision of Drainwell Estate.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item retains its aesthetic significance as an intact Federation cottage with much of its original fabric and detailing intact. The dwelling makes a positive contribution to the heritage character of Margaret Street which is enhanced by the similarities in age, design, use and materials with other houses along the street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item demonstrates representative qualities of an intact Federation cottage.

Physical Description

The dwelling is a single storey red brick Federation residence with a slate roof with terra-cotta ridging. The facade was built with tuck pointed stretcher bond, with bands of contrasting colour bricks and dark brick quoins. The roof is hipped with a projecting gable front and features a brick chimney with corbels. This has been replaced in sections with a new roofing material at the rear. The projecting gable features a decorative finial and fretted timber barge boards. The windows have marble wide flat sills (on front windows only). The exterior doors are replacement (aluminium security door) with French doors under verandah.

The verandah is skillion, and extends from the main roof, across the front elevation. The verandah roof extends across the gabled front and acts as an awning for a set of three casement windows. The verandah floor is of tessellated tiles with marble edges and steps, supported on turned timber columns, decorated with alternate timber ladder panels and incised geometric panels in frieze.

The property features a modest setback, with a primary frontage to Margaret Street. The property boundary is marked by a corroded wrought iron panels set in timber posts with wrought iron gate. A Colorbond fence runs the length of the property to the north, south and east of the property. An established frangipani tree is located along the southern elevation. There are no other established plantings within this curtilage.

Overall the condition of the building is considered fair. There is significant cracking in the brickwork, suggesting there is some structural movement. The slate roof appears to be failing with signs of some tiles are coming loose and biological growth. The wrought iron fence is highly corroded. There also appears to be deteriorated timber elements, such as the eaves on the underside of the guttering along the north elevation.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Possible rear addition
- New roof cladding to the rear of the building
- Art deco style fencing to the front of the property
- Large garage at the rear.

The building retains a high level of integrity with much of its original architectural detailing and form intact.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1914

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land in which this item is located was purchased in January 1914 by Hilda May Frost. She was the wife of Stephen Frost, a warehouseman of Granville. Prior to the lands subdivision it was an Orchard that grew oranges and fruit trees for Mr McDowell.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, future conservation works, and repairs should involve a suitably qualified heritage specialist or consultant.

Revised curtilage - refer below.

Statement of Significance

The Former Bank and Residence at 8 Mary Street, Granville is of local significance for its historic, associative, aesthetic, rarity and representative values. Built between 1883 and 1897, the item relates to the commercial development of Granville that occurred between 1880 and 1930 with the relocation of large manufacturing industries to the area, facilitating the urban growth of Granville. The item is associated with Augustus Neich, an active and progressive townsman in Granville who was instrumental in the amount of buildings erected around Granville; the Commercial Banking Company of Sydney, who built the bank; and prominent local John Raynor, who later occupied the building for the office of Registrations of Births, Deaths and Marriages. The item retains its aesthetic significance as a modest, and intact Victorian cottage paired with an early Federation commercial building, built in the Free Classical architectural style. The item has a high level of integrity with much of its original fabric and architectural detailing intact. The item has additional aesthetic significance for its association with the Granville Conservation Area – Civic Precinct which the item makes a striking contribution to. The item demonstrates representative qualities of an intact Victorian cottage. However, the former bank is a rare building type in the Granville area and more broadly Cumberland LGA.

Criteria Assessment	
a) Historic	The item has historic significance as it relates to the commercial development of Granville that occurred between 1880 and 1930 due to the relocation of large manufacturing industries to the area. The industrial development of Granville facilitated the urban growth of the area in from 1880, the cottage and former bank directly relate to this development.

b) Associative	The item is associated with Augustus Neich, an active and progressive townsman in Granville who was instrumental in the amount of buildings erected around Granville. It is also associated with the Commercial Banking Company of Sydney, and later John Raynor who used the property as an office for the Registration of Births, Deaths and Marriages.
c) Aesthetic/Technical	The item has aesthetic significance as an intact Victorian cottage and later commercial premise built to the Federation Free Classical style. The item retains is aesthetic significance as intact examples of their respective building types with much or their original detailing and architectural detail intact. The item also makes a striking contribution to the streetscape of Granville Conservation Area – Civic Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item has rarity values as an early Victorian cottage with an adjoining commercial bank. The Bank demonstrates rarity values as a commercial building built in the Federation period Free Classical style.
g) Representativeness	The item demonstrates representative qualities of an intact Victorian cottage built in Granville, in the mid-1880s to mid-1890s.

Physical Description

The Residence
The residence is a single storey Victorian cottage of rendered brick with an iron hipped roof attached to the former bank building on the corner of Lumley and Mary Streets, Granville. The cottage has ashlar markings, and some plaster moulding and imitation stone quoins. The cottage has two tall rendered brick chimneys with cornices, string courses and octagonal glazed terracotta pots. The verandah roof is skillion, with corrugated iron and hipped corners, extending across the front façade (north elevation) and returns to eastern elevation. The verandah is supported on decorated cast iron open work posts. Awning sails are affixed to the verandah fascia. The eastern elevation of the verandah is partially infilled with fibro sheeting and a large door. The floor along the verandah is new with replaced timber floorboards and a concrete ramp leading to the entrance. There is a transom light over the French doors with bolection mould panels below and glazed panels above. There are timber louvre shutters beneath the verandah on two sides.

Former Bank
The former bank is a Federation Free Classical commercial building. The façade of the former Bank features simple plaster ornamentation in the form of banded pilasters flanking a pedimented gable parapet enclosing an arched vent. The building's windows have painted rendered sills with curved rendered arches. The porch of the bank building has a segmented arch above a glazed fanlight and timber panelled bolection moulded door.

Apartment Block
At the rear of the property is a large multi-storey brick apartment building. It is unknown when the building was constructed however appears to date between late-c.1980s to early 2000s. The building has an asymmetrical gabled roof clad with terracotta tiles. All windows on the external elevations are aluminium sliding windows with fibro inserts above and below.

The item retains a prominent position within the streetscape with no significant landscaping elements obscuring views to the item. Other notable features that contribute to the item include the sandstone gutters along Mary Street.

The overall condition of the two buildings is considered to be good. The former Bank appears to have been painted recently and the residence has replaced guttering.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Modern signage*
- Awning sails to verandah of residence
- Concrete ramp to access verandah
- Enclosed verandah space on the east elevation
- Replaced guttering
- The former bank features a refreshed paint scheme
- Multistorey residential development to the rear

The item retains a high a level of integrity with much of its original fabric and architectural detailing and form intact. Although the item features a four-storey residential development to the rear, the development has been carefully designed and set back from the item so as not to overwhelm and negatively detract from the heritage item.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1882 (Residence), c.1897 (Former Bank)

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The cottage was built between 1882 and 1884 for Augustus Neich. Neich took out many mortgages over the land, presumably though not all were for the construction of this cottage. Neich was an active and progressive townsman in Granville and was instrumental in the amount of property erected around Granville.

In 1897 the Commercial Banking Co. of Sydney Ltd took possession of the villa and its surrounding land and built the commercial bank adjoining the cottage. The cottage was used as the residence for the bank manager. In 1914, the company had removed the banking business from this site. The land was sold to Samuel Wallington, who in turn sold it to Mr John Rayner.

During Mr Raynor's occupation of the former bank and residence, the site was used as an office for the Registration of Births, Deaths and Marriages.

At present, the site is occupied by the Vietnam Veterans' Federation of Australia. The organisation provides support to all present and past members of Australia's defence force and families and are compensation advocates. The group was formerly known as the Vietnam Veterans Association of Australia.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.	X	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Due to the rear development at the back of the property it is recommended the curtilage, as shown below, is revised and updated as the new heritage curtilage for the item in the Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

Granville Boys High School is of local significance for its historic, aesthetic, social, rarity and representative values. Built in the 1926, the site is associated with the provision of public education to the growing population of the local area. Specifically, Granville Boys High School is historically linked to the period of urban growth between 1880 and 1930 that was facilitated by the relocation of large manufacturing industries to Granville. The building has some social value having continued to serve the local community from 1926. The main building is indicative of the standard design of educational facilities in NSW during the 1920s. The main building is to a degree rare in its use of the architectural style, Federation Free Style, which utilises elements of late Queen Anne and 1920s Arts and Crafts styles. The item retains a high level of integrity with much of its original fabric and architectural detail and form intact. The aesthetic value of the item is enhanced by the contribution it makes to the character of the Granville Conservation Area- Civic Precinct.

Criteria Assessment	
a) Historic	The site and buildings are historically associated with provision of public education since 1926. The item is also historically linked to the period of urban growth between 1880 and 1930 that was facilitated by the relocation of large manufacturing industries to Granville.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The main building is to a degree rare in its use of the architectural style, Federation Free Style, which utilises elements of late Queen Anne and 1920s Arts and Crafts styles. The item retains a high level of integrity with much of its original fabric and architectural detail and form intact. The aesthetic value of the item is enhanced by the

	contribution it makes to the character of the Granville Conservation Area- Civic Precinct.
d) Social	The item has a wide appreciation in and associations with, the local community. The building has some social value having continued to serve the local community from 1926.
e) Scientific	The item does not meet this criterion.
f) Rarity	The main building is to a degree rare in its use of the architectural style, Federation Free Style, which utilises elements of late Queen Anne and 1920s Arts and Crafts styles.
g) Representativeness	The site demonstrates representative qualities of a Federation period educational structure built to a standard design in NSW, c.1926.

Physical Description

The Granville Boys High School is a substantial school complex bound by Mary Street to the north, Lumley Street to the east, Maud Street to the south and Hutchinson Street to the west. The historic fabric on site presents typical architecture design by and for an institution. This is reflected in the use of the Federation Free Style architecture of the main building which incorporates classical architectural elements paired with typical Federation periods styles. The main building which operates as an administrative office and classroom building has a primary street frontage to Mary Street.

The buildings roofscape is in an 'E' shape with the main roof consisting of a traverse gable with a central projecting gable and two flanking hipped wings. The roof is clad with concrete tiles and infilled between the projecting hips with pressed metal sheets. The façade is predominately face brick with the main projecting gable and upper storey rendered. The main projecting gable features a name plate that reads 'Granville Boys High School' below three double hung timber sash windows with a rendered sill and cornice. The windows along the façade are generally narrow sashes (now arranged as hoppers).

The lower storey along the main projecting gable features an enclosed verandah space with skillion roof clad with pressed metal sheets supported on brick piers with contemporary glass infills and double hung timber sashes.

The landscape addressing the front façade has been heavily modified with the inclusion of a small concrete carpark area, concrete steps and ramp with a rendered balustrade. The school features a number of later buildings that range in period. An early timber auxiliary structure (possibly tuck shop) is retained in school grounds. The boundary of the school is marked by a tall palisade fence and gate with several extensive plantings along these boundaries. Particularly along Mary Street landscape features include palms, jacarandas, brush box and hedges which enhance the aesthetic significance of the item and contributes to the heritage conservation area.

The main building appears to be in a good condition and well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Refreshed paint scheme
- Several later school buildings added to site
- New landscaping along Mary Street and to the rear of the building
- New fencing

The school retains a high level of integrity as viewed from the public domain, although the landscape has been substantially modified. It is likely the interiors have a moderate level of integrity due to the nature of the building continued use as a school administration building and classroom.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1926

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

Education in the Granville area was initiated with an application submitted to the Council of Education on 24 September 1974 by a committee of prominent local gentlemen of the Granville area. They consisted of Messrs Morris Asher, John George Lackey, John Bergan, John Nobbs, W Bernett and John Rayner. They submitted the application with 70 signatures from parents and a list of 212 children aged between one and 17 years old. In 1878 it was reported that there were 600 permanent residences living in the area, and this was increasing.

Following Federation, the value of secondary education was reconsidered. Previously, secondary education was not considered essential. Generally, once students were able to read and write they left the education system and entered the work force. The main objective in reorganising secondary education was to provide a secondary school system that offered appropriate forms of higher education to all students who had satisfactorily completed primary school. Officials believed that NSW required a workforce in four major areas; the professions, commerce, industry and the home. It was also assumed that by the time a child was about 12 years of age, it was possible to know which area of the workforce he or she was most suited to. This meant establishing schools to cater for the differing vocational needs of pupils and ensuring that pupils were guided into the schools which most suited their ability.

The NSW government resumed the Bergan family's home on this block in 1923, and it was demolished to erect the Granville Boys High School. In 1924, tenders were let for the erection of a Junior Technical School on this site. It opened on 10 October 1925.

The site remains in use as a school.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the Development Application should be accompanied by a detailed heritage assessment and fabric analysis to understand which buildings are significant and how to manage change.
- Should any new buildings be proposed for the site, the architecture of the new buildings should not detract or adversely impact upon the heritage items and respect the heritage character.

Curtilage Map

Statement of Significance

The dwelling at 21 Membrey Street, Granville is of local heritage significance for its historic, aesthetic, rarity and representative values. Built c. 1885-1890, the Victorian cottage relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. The dwelling is a good example of a Victorian Italianate cottage which is constructed in timber. This combination of style and materiality is rare in the Granville area. The house is readily identifiable as part of the historic building stock, and strongly contributes to the streetscape character.

Criteria Assessment	
a) Historic	Built c. 1885-1890, the Victorian cottage relates to late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a well-kept Italianate cottage which strongly contributes towards the streetscape character of the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	A Victorian Italianate cottage with timber cladding is rare in the Granville area.
g) Representativeness	The dwelling is a good example of a Victorian Italianate cottage constructed of timber.

Physical Description

The single storey cottage has a gabled corrugated iron main roof with a projecting gabled wing with a faceted bay window to the front elevation. The bay window has a ripple iron awning with decorative barge boards and finial above in gable. Main roof gables have matching decorative barge boards and finials. The external walls of the structure are weatherboard, some of which has been cut and arranged in a coursed stone pattern and applied to the front elevation. The verandah has a sloped corrugated iron roof across the front which extends to the projecting gable. Timber posts with small decorative brackets support the verandah, and a lattice infill on the valance. The verandah is floored with concrete.

Windows are largely double hung sash windows with profiled sills and reeded timber mullions. The bay window, a configuration of three separate windows, has bracket decoration and label mould and stops above. Side windows to the attic level appears to be later additions, indicating that the attic was converted to a living space at a later date. The exterior door is a Victorian four panel timber door with bolection moulds around each panel. The front door also has narrow glazed transom light above. The rear has been extended with a single-storey skillion structure in weatherboard.

A freestanding carport has been added to the eastern side of the dwelling, accessed by a concrete driveway. Much of the front setback has been landscaped with concrete, leaving one small garden in front of the verandah which contains recent plantings. The front fence is a round topped timber picket fence with timber posts. The building has an unusual setback within the street, set much closer to the roadway than most dwellings.

Overall the condition of the building appears to be good, though there are signs of deterioration to the faceted bay roof.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Removal of a tongue and groove timber front gate with spindle ladder decoration.
- Rear skillion extension
- Carport
- Concrete driveway
- Attic living space, including side elevation windows

Alterations and additions to the dwelling have been sympathetic, retaining the integrity of the dwelling.

Integrity	**High**	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	c. 1885-1890

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the

Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling is located was subdivided and sold as part of the New Glasgow Estate from January 1878 onwards. The dwelling was built on part of lots 66 & 67 Sec 4 of this estate, showing on the street alignment plan of September 1891. Membrey Street was named Crown Street at this time. The dwelling is also shown on Water Board survey of c. 1919.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**

Statement of Significance

The remaining 1936 elements of the swimming centre complex are significant at a local level for their historic, associative, aesthetic, social and representativeness values.

The Granville Swimming Pool is historically significant as representative of the development of community swimming facilities in the 1930s. It was one of the earliest Olympic swimming pools built in Sydney by local councils to provide amenities for the residents and was the primary training centre in Sydney for amateur swimmers and divers until larger sporting institutes were established. The pool is significant for its strong association with a number of former Australian Olympians, as well as other prominent Australians, including Olympian John Devitt. The pool complex has been a community swimming facility for over 80 years and has historically been a focal point for community activity.

The complex was designed by architects Rudder and Grout, and the remaining original 1936 brick building is an example of Inter-war functionalist style, with art deco detailing, and is complemented by the related entryway park with its symmetrical layout of paths and tree plantings. However, the site has been substantially modified, with the removal of a large portion of the original 1936 pool complex and its unsympathetic replacement, as well as the internal and external modification of the remaining original building, reducing its overall aesthetic significance.

The pool complex is somewhat representative of pool complexes constructed in Sydney in the 1930s, being one of four similar facilities constructed at this time. However, the site and remaining 1936 built features have been altered to a degree that reduces their ability to demonstrate either rarity or representativeness values, except at a basic level.

While the pool complex itself is not likely to yield historic scientific information, the broader site has the potential to contain archaeological remains of the former mill. See the Granville War Memorial listing sheet for further information.

Criteria Assessment	
a) Historic	The item is historically significant as representative of the development of community swimming facilities in the 1930s. It is one of the earliest Olympic swimming pools built in Sydney by local councils to provide amenities for the residents and was the primary training centre in Sydney for amateur swimmers and divers until larger sporting institutes were established. The pool is significant for its strong association with a number of former Australian Olympians.
b) Associative	The complex was designed by architects Rudder and Grout.
c) Aesthetic/Technical	The remaining original 1936 brick building is an example of Inter-war Functionalist style, with Art Deco detailing, and is complemented by the related entryway park with its symmetrical layout of paths and tree plantings. However, the site has been substantially modified, with the removal of a large portion of the original 1936 complex and its unsympathetic replacement, as well as the internal and external modification of the remaining original building, reducing its overall aesthetic significance.
d) Social	The item has social significance in its role of being a community swimming facility for over 80 years and has historically been a focal point for community activity.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The pool complex is somewhat representative of pool complexes constructed in Sydney in the 1930s, being one of four similar facilities constructed at this time.

Physical Description

The pool complex includes an original portion of the 1936 pool building compound, the 1936 park that forms its forecourt to the east, and new pool facilities developed in c.2005. The majority of the former facilities, including the separated men's and women's pavilions, the original pools and the terraced grandstand (with seating and diving board) have been removed and replaced as a part of a major redevelopment that included a new ten lane 50m pool, new grandstand, awning structures, security fencing and refurbished building entry, changing rooms and kiosk.

Of the original 1936 buildings, only the western portion of the original pool compound remains, and this includes the entry building and former changing room wings (now offices). The main facade of this building is an Art Deco Style finished in blond brick with horizontal red brick banding forming a decorative motif in the central, northern and southern rooms of the building. The majority of the wings are finished in an orange coloured brick, with column protrusions and ceramic vents. The original entrance is now covered by the addition of a new brick entry that encloses the building.

Overall the building is in a good condition and appears to be well maintained, reflecting the significant work undertaken at the site in 2005. The 1936 brick walls that extend east from the pool building exhibit some cracking.

Condition	Good	Fair	Poor

Alterations and Additions

- Removal of a large portion of the original 1936 complex,
- Internal and external modification of the remaining original building*
- Addition of a new ten lane 50m pool, grandstand, awning structures, security fencing and refurbished building entry, changing rooms and kiosk*

The item presents a low level of integrity having undergone several alterations from earlier site redevelopments in 2003 and 2005. The integrity of the site has been significantly reduced by the removal and replacement of the original pools and the eastern portion of the 1936 development, which has left the former entry and change building on the western side of the pool as the main remnant of the original facility. The brick walls that extend from this building also remain as part of the original fabric, though their context has been diminished by the newer developments adjacent.

The 1936 building has also been substantially modified as part of site redevelopment, both internally and externally. This includes significant changes to the form, layout and pattern of building use, as well as removal and replacement of original materials with modern materials that are only somewhat compatible/sympathetic.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Mid-1930s

During the 1930s, four Olympic swimming pools were constructed in Sydney; at Enfield and Bankstown (c1933), North Sydney (c.1935/36), and Granville (1936). This has been linked to swimming's growing popularity as a sport and leisure activity, as well as to Australia's success at the 1932 Summer Olympics in Los Angeles. The popularity of the Enfield Olympic Swimming Pool (and revenue from admissions) meant that the proposed pool at Granville was viewed by at least one Alderman as a sound financial venture; despite the significant investment of rate payers' money that would be required. Estimates at the time placed the cost of construction at approximately £22,000.

In February 1934, Bergan's paddock was selected by Granville Council as the site for new baths, due to its 'excellent natural drainage', and proximity to the railway station, school, and main shopping centre. Construction commenced on 20 March 1936, and Granville Swimming Pool officially opened on 10 October that year. The remaining land along the northern, western and southern boundaries of the paddock, named 'The Olympic Pool Estate', was subdivided into "twenty-seven splendid building sites" and offered for auction on 24 October.

The proposed facility at Granville was designed by architects Messrs. Rudder and Grout, who also designed the North Sydney Pool. The site preparation was described in detail in the June 12, 1935 issue of Building:

> *From a structural point of view, minimum excavation will be involved and the depressed area of the site not actually occupied by the baths construction will permit the disposal of any spoil, which in turn will level the area, thus enabling a more desirable park area to be created.*

The building used simple massing along a lengthy façade, with ornament- enriched cement panels connecting the main walls to the wings. A perspective was published in *Decoration and Glass*, June 1936. The perspective shows two Cedars of Lebanon flanking the entrance and other mature trees. The builders were Kell and Rigby.

The National Trust of Australia (NSW) Classification Report describes the pool as follows:

> *The Granville Olympic Pool was built as a walled compound with a shallow curved apse to either end, a feature reminiscent of the layout of roman baths (and the ornamental pool at Villa Adriana). The western side of the pool compound is formed by the main pavilion, containing*

the central entrance and the side wings. Each side wing contained dressing facilities and lavatories, men to the north and women to the south.

The two original pools were made of reinforced concrete with glazed tiles marking the lanes and for the distances. They were surrounded by a level concrete apron.

The official opening carnival was attended by a number of prominent sportspeople; including Bonnie Mealing, who won a silver medal in the 100-metre backstroke at the 1932 Olympics in Los Angeles, Pat Norton who competed in the 100-metre backstroke at the 1936 Olympics in Berlin, and the NSW Diving Troop, that included Margaret Dovey (future wife of Australian Prime Minister Gough Whitlam). The Whitlam children Nick and Kathy also swam at the Granville Pool, Nick Whitlam winning the 55-yards breaststroke at state level.

The Granville pool and its facilities were redeveloped between August 2003 and March 2005. The main changes included the partial demolition of the 1936 Olympic pool, acquisition of one of the greens from the Bowling Club to allow the expansion of the centre, the refitting of the dressing rooms, the adaption of the bowling club house for use as a youth and community centre and the demolition of the former pool equipment pavilion (plant room), the men's club room and the terraced seating. The original pool building was retained, though was replaced as the main entry way by a new building facing Memorial Avenue (the 'north building').

The site is undergoing further redevelopment however, the 1936 building and landscaping will remain intact.

Curtilage Map

Statement of Significance

Granville War Memorial and associated park is significant at a local level for its historic, social and scientific values. The place is socially significant to the local community as a place of remembrance relating to local involvement in the wars. The horse trough within the park is historically significant as an example of a c1930s 'Bills' horse water trough. The site has the potential to contain archaeological remains of the former mill, located under the 1960s community centre.

Criteria Assessment	
a) Historic	The horse trough within the park is historically significant as an example of a c1930s 'Bills' horse water trough.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item is socially significant to the local community as a place of remembrance relating to local involvement in the wars.
e) Scientific	The item has the potential to contain archaeological remains of the former mill. As per the Extent Heritage "Granville Multi-Purpose Centre Development: Application for s139(4) Excavation Exception – Work Method Statement", prepared for Cumberland Council": "The 1930s aerial imagery indicates the site of Bergen's Mill is partially under the 1960s community centre. The potential subsurface archaeological remains associated with the mill are likely to consist of substantial brick or stone footings and foundations, remnant subsurface services (e.g. former drainage or sewer structures), and

	masonry pads associated with machinery once installed on the site. There is also a more limited potential for the presence of artefacts associated with the use of the site such as pieces of former machinery, tools or other industrial type materials. The area was altered for the development of the site in the 1930s; however, the construction of the community centre would likely have involved the disturbance/removal, at least in part, of the mill remains, and the building up and levelling of the area now containing the basketball courts and community centre with introduced fill. It is therefore likely that partially disturbed structural remains associated with the former mill are present."
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

Granville War Memorial is an urban park comprising three memorials set off Memorial Avenue, also known as 'Soldier's Memorial Park'. Memorials include a stone column topped with sphere with base inscribed with names of servicemen. At the front are sandstone gateposts commemorating the Second World War and later conflicts. There are two large rocks within the park, dating to 2000, with plaques dedicated to PTE George Cartwright who was awarded the Victoria Cross.

The park is largely a grassed open area which is bound by Memorial Drive and Enid Avenue. The park includes several large mature trees dispersed throughout, formal low-lying gardens, concrete footpaths and timber benches.

The site contains a historic horse trough with a plaque that reads "This horse trough, originally located on the northern side of Railway Terrace near the intersection of Jamieson Street and relocated to this site by the Parramatta City Council. October 1982. R G Muddle. Town Clerk".

The setting surrounding the external perimeter of the war memorial gardens is planned to be upgraded as part of the community centre development at the adjacent pool site.

The memorials landscape elements are in a good condition and appear to be well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- None.

The memorial retains a high level of integrity.

Integrity	**High**	Moderate	Low

Historical Notes	
Construction years	1946

In 1866, James Bergan purchased part of Castner's section (Lots 2 and 3). This land was situated on the south west sides of the railway and Duck Creek, and was bounded by William, South and Vulcan Streets. The area was heavily timbered and Bergan soon began clearing the site in order to set up a woollen mill. At the time, he was employed as the manager of Byrnes Bros. Woollen Mills in Parramatta. Because there were no formed roads on the property, and Bergan's western neighbour, Mrs. Lee, opposed him cutting a track from Dog Trap Road to his land, Bergan experienced great difficulty getting materials and machinery to the mill site. He was forced to drag materials down Dog Trap Road to the southern side of William Street, then down a winding bush track and over large expanses of spongy ground. The works were finally completed in 1870. The mill was erected near the railway line, adjacent to Duck Creek. Bergan also constructed a weir on Duck Creek near the railway line in order to obtain the necessary water supply for wool scouring and dyeing.

In 1872, brick making was started in Bergan's Mill paddocks. The early cottages in Vulcan Street and the 150 feet high chimney stack at Goodlet and Smith (formerly the Parramatta Brick and Tile Works) were built from Bergan's brick pit. Bergan's brickyard was closed down in the early 1880s, and the old clay pits were formed into a water reserve where the drainage from the surrounding land was stored and used to supply the mills. A pipe was also laid on to Marsh Bros. Tannery and the water supply for their works obtained from this dam. However, by 1900, this water supply proved insufficient and Bergan connected his mill to the Metropolitan Water Supply.

The trade in Bergan's Woollen Mill was primarily tweed manufacture and the mill was initially very successful. Bergan died in 1885, yet the business continued for several years. By the end of the 1890s, however, business became intermittent owing to the heavy importation of woollen goods in anticipation of the Government Tariff. This overstocking forced the colonial woollens trade to a standstill. Business at Bergan's Woollen Mill essentially closed down at the turn of the century.

Over the next twenty years, Bergan's Woollen Mill was leased and worked several times; in 1909, for a few months by Messrs. Stokes and Weathers, in 1911 by W.F. Holliday who carried out a contract of making yarn for six years, and in 1917 by Wolk and Company, also yarn makers. In 1920, the mill was closed for the last time, and the buildings fell into a state of disrepair.

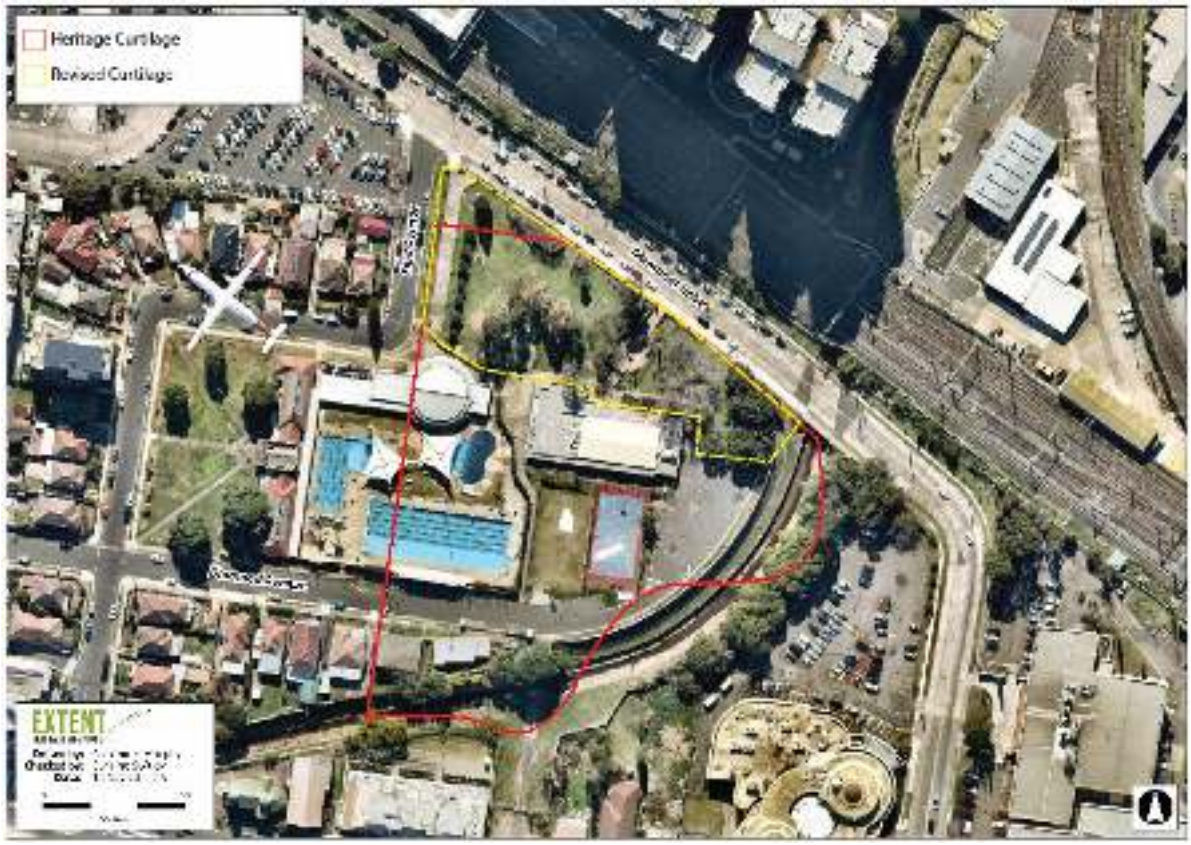
In 1946, Granville Council resolved to dedicate land to the rear (north east) of Granville Swimming Pool (the former Woollen Mill) as a public park, in memory of local servicemen. This open area had been utilised in the past by a travelling circus, but the Council decided not lot let the park for such purposes in the future after the Mayor related (perhaps with some exaggeration) how the lion's cage had tipped over "within twenty yards of his back gate", and elephants had "eaten some of the trees".

The council proposal was for an open 'beauty park' containing ornamental trees and shrubs, with memorial gates at one entrance. However, early feedback from the community also identified the need for local sports facilities. A general design for the park was adopted by Council in March 1947, with amenities including a general recreation area, tennis courts, cricket pitch, and bowling greens. The facilities were used by local schools and clubs for sports activities, and were also open to the general public.

The park contains a number of monuments, including the Granville War Memorial. The Memorial was originally unveiled by Major-General Sir Charles Rosenthal on 25 November 1922, at a different location on the corner of Carlton and Russell Streets in front of the Granville Town Hall. It was later moved to the Granville Memorial Park at the request of the Granville sub-branch of the Returned Sailors and Soldiers Imperial League of Australia (RSSILA), who claimed that in its original location the monument was a "…menace to traffic, that it is not in a central position…".

Sandstone gate posts at the main entrance to the park (off Memorial Drive) commemorate those who served in World War II and later conflicts. They were erected by the Women's Auxiliary of the Granville Sub-Branch, NSW Branch, Returned Sailors, Soldiers & Airmen's Imperial League of Australia in 1962, and the memorial was dedicated on 15 August 1995.

The most recent memorial within the park, a boulder with plaque attached, is located in a garden at the front of the community centre. It commemorates Private George Cartwright VC (1894-1978). Cartwright was born in London in 1894, and migrated to Australia in 1912. He enlisted in the Australian Imperial Forces on 16 December 1915 during World War I. He was awarded the Victoria Cross on 31 August 1918 for most conspicuous valour and devotion to duty, after attacking a machine gun post during the attack on Road Wood, south west of Bouchavesnes near Péronne, France. After the war, Cartwright settled in Merrylands and became an officer in the militia. He trained recruits in the Merrylands Drill Hall, then located in Granville Park. The memorial was erected in 2000 in Granville Park, and the Granville RSL Sub-Branch arranged for it to be moved to Granville Memorial Park in 2015.



A watering trough is located adjacent to the footpath near the main park entrance on Enid Avenue. It was initially installed on the northern side of Railway Terrace near the intersection with Jamieson Street, but was moved to its current location by Council in 1982. The trough was donated by George and Anna Bills, who had no children, but donated considerable sums to animal societies. When George died in 1927, he left an estate of £91,000. After various bequests, the remainder of the estate was to be used to construct and pay for horse troughs wherever they may be necessary for the relief of horses or other animals in Australasia, the British Isles or any other part of the world. The trough is one of approximately 700 erected between 1930 and 1940 in Australia and overseas (including England and Ireland), the majority of which were installed in Victoria. The troughs were usually manufactured of reinforced concrete and were of a standard design.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The original alignment of Duck Creek has been altered significantly with the man-made canal construction and part of the site heavily developed with a number of later buildings and structures. The heritage curtilage should be reassessed, possibly to just include the park area and memorial site. The heritage curtilage shown below should be considered as a revised curtilage for the Cumberland LEP.

Curtilage Map

Statement of Significance

The Granville RSL Club is significant at a local level for its historic, associative, aesthetic, social and rarity values. Built in 1963, the Granville RSL is representative of the history of the Granville RSL Sub-Branch which rapidly grew in popularity throughout the 1950s. The building remains a social club and has a strong association with members of the local community and RSL Sub-Branch. The building is historically associated with the architect Frank Fox. The Granville RSL was dubbed 'the Opera House of Western Suburbs" and was one of the most contemporary style of buildings in the area of its time. The building retains some aesthetic significance for its use of innovative building technology to create a unique circular concrete structure, however this has been reduced due to a series of modifications over the years that have diminished this value. Although modified the building remains a rare example of 1960s modernist architecture in the Granville area and more broadly in the Cumberland LGA.

Criteria Assessment	
a) Historic	The Granville RSL is a historically related to the growth of RSL Sub-Branch that required the construction of a larger club to cater to the increased patronage in 1964. The building was dubbed the 'Opera House of the Western Suburbs' and was one of the most contemporary style of buildings in the area of its time.
b) Associative	The item is associated with architect, Frank Fox. Frank Fox is renown for the construction of the North Sydney RSL club and the faux heritage theme park in Somersby, Old Sydney Town.
c) Aesthetic/Technical	The item has some aesthetic significance as an innovative 1960s building that made use of concrete folded plates to create a unique

	circular structure. However, this has been reduced by a number of modifications over the years that have diminished this value.
d) Social	The item is of some social significance for its strong association with the local community and members of the RSL Sub-Branch.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is a rare example of a 1960s modernist building in the Granville area and more broadly in the Cumberland LGA.
g) Representativeness	The item does not meet this criterion.

Physical Description

The RSL building was constructed on a curvilinear/circular plan form with domed concrete roofs. This was influenced by free organic planned concrete buildings which came about in the 1950s. The sloping walls are over sailed by bevelled concrete roofs with plain wall areas and clerestory lights. The buildings design centres around three intersecting circles. The building has a later rectangular, single-storey addition to the front which takes up a large portion of the northern end of the facade. Large satellite dishes are located on the roof and a large digital sign on the front façade which reads “Lest We Forget”. The property features modern fencing and a large asphalt carpark accessed off Memorial Drive, Granville.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Addition of a single-storey rectangular structure to the front*
- Internal central courtyard enclosed*
- Relocated main entrance*
- Building was internally refurbished in 2014, 2017 and 2018
- Porte-cochere enclosed in 2009
- New dining area to the northwest of the building
- Digital sign
- Satellite dishes on roof*
- Plant equipment
- Advertisement signage

The Granville RSL retains a low level of integrity with much of its interior fabric highly modified, altered and replaced by a series of past renovations in 2014, 2017 and 2018. The exterior also presents a modified space however retains evidence of its original construction and form with the original cement columns.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1961-1964

On 21 December 1954, a meeting was held by the members of the RSL to discuss the possibility of opening a club in Granville that held a liquor license. A Club Management Committee was subsequently established with the task of seeking the rental of the former RSL premises on Blaxcell Street.

The Granville RSL Sub-Branch Club was granted registration on 18 April 1955. Their first annual meeting was held on the 23 February 1956 and Mr Charles Gardiner was elected president. The patrons of the club enjoyed professional entertainment on Sunday mornings, Sunday afternoon concerts, film programmes and Saturday night dances.

By 1957, the RSL Sub-Branches membership had increased to such an extent that the RSL on Blaxcell Street required a larger club to the increased patronage. In 1958, a large block known as 'Brunton's Paddock' was acquired for the construction of the new RSL club.

Construction for the Granville RSL Club began in 1961 and was the club opened on 22 September 1964, though the official opening date was 14 November 1964. The building was designed by architect Frank Fox and was dubbed the "Opera House of the western suburbs" by Fox himself and as the most contemporary RSL building constructed in Australia. The Granville RSL was one of Fox's most important buildings due to the innovative building technology comprised in the concrete structure which used folded plate shells.

The unique, circular three-storey structure was estimated to cost £100,000. The new RSL located on Memorial Drive and William Street was to replace the club's existing premise in Blaxcell Street. The central courtyard formed an important aspect of the buildings original design and was always intended to commemorate Australian soldiers.

The building underwent extensive modifications in the 1980s and 2000s. This included the relocation of the main entrance which was moved from its original located at the intersection of William Street and Clyde Street to the northern façade and accessed off the carpark. The circular driveway was disengaged when the 1980s porte-cochere was enclosed. The largest modification to the building during this period included the addition of the dining area to the northwest of the original building. The addition nearly doubled the capacity of the club with a new dining room, toilet, kitchen, back of house area and service entrance. A similar architectural detailing as the original building was employed.

The original terrace to the northwest of the building was brought into the interior as the original external floor to ceiling glazed doors were demolished and new window assemblies were constructed under a cantilevered roof.

In 2014, the RSL was internally refurbished, and again in 2017 and 2018 in which the internal courtyard was enclosed with a roof.

	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The house at 28 Mimosa Street, Granville is of local significance for its historic and associative heritage values. Built c. 1920, the dwelling was the first war service cottage built by the War Service Homes Commission in Granville. The building is also significant for its association with war veteran and Alderman and Mayor of Granville, Michael Adams. Michael Adams received this house for the military service provided at Gallipoli. While the building once had significance as a representative example of this type of house constructed for the purpose of housing recently returned war veterans, the physical integrity of the dwelling has been vastly diminished by the unsympathetic alterations and additions.

Criteria Assessment	
a) Historic	The item is historically associated with the War Service Homes Commission, who were actively involved in the housing of returned war veterans. The cottage is of additional historical significance as a War Service cottage built in Granville in 1920.
b) Associative	The item is of local historically significance for its association with Michael Adams, a veteran of Gallipoli and a former Alderman and mayor of Granville, and more broadly the War Service Homes Commission.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The physical integrity of the dwelling has been vastly diminished by the unsympathetic alterations and additions, as a result the item does not meet this criterion.

Physical Description

The cottage is a single storey cottage with a decramastic metal tile roof and rusticated weatherboard cladding of the outer walls. The roof is a hipped gable with a projecting gable to the front elevation. The projecting gable features a plain bargeboard with no decorative detailing or finial. The verandah roof is an extension from the main roof with decramastic metal tile roof sheeting. The verandah roof is infilled with a timber boarded valance, this is supported on squared timber posts with a steel balustrade atop brick foundations and a tiled floor. All windows along major elevations feature painted timber sills and architraves and have been replaced with contemporary aluminium framed windows and flyscreens.

Further additions to the property include a rear skillion addition clad in weatherboard attached to the rear of the property. This is adjoined with a carport. A concrete slab driveway is located along the eastern edge of the property.

The item features a modest setback and grassed front yard. The yard features some contemporary garden beds that are of no heritage significance. Significant plantings are located in the street verge.

Overall, the building is in a good condition, although some paint is peeling along the base of the brick verandah foundations.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Original corrugated iron roof has been replaced with decramastic metal tile roof*
- Replaced decorative bargeboard and finial with unadorned timber bargeboard.
- Aluminium verandah balustrade*
- Verandah tiles*
- Aluminium windows frames and flyscreens*
- Replaced timber window sills and architraves*
- Contemporary security screen door
- New paint and colour scheme

The incremental alterations have overtime resulted in the removal of much of the original fabric associated with this item. The integrity of the building is considered to be low.

Integrity	High	Moderate	**Low**

** element detracts from the overall significance of the place*

Historical Notes

Construction years	c. 1920

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The cottage was completed early in 1920. It was the first War Service cottage in the Granville Parramatta area. The construction initially was undertaken by voluntary workers, however the War Service Homes Commission took over the construction of this cottage. In the loan records of the War Service Homes Commission, this was the third loan for building to be arranged by the Commission in NSW. It was built for Michael Adams, an early volunteer from Granville, who served at Gallipoli. He later became an Alderman for Granville Council during the 1930s and was elected Mayor in 1943.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the dwelling has undergone a series of unsympathetic alterations, resulting in a building which does not aesthetically or representatively warrant heritage listing. Work to reverse this would be considered a positive heritage outcome.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Statement of Significance

The New York Street cottages in Granville are of local significance for their historic, aesthetic, rarity and representative values. The group is historically related to the subdivision of the New Glasgow Estate which occurred in 1878 onwards. The item was built in 1910, as workers cottages for employees of Hudson Brothers, located on the Duck River at Clyde. The workers cottages are directly related to the residential growth of Granville that occurred between 1890 and 1930 with the relocation of large manufacturing industries to the area. In this particular area of Granville, the cottages are now a rare example of a group of workers cottages built in the late nineteenth and early twentieth centuries for the industrial centre of Granville. This is enhanced by their retention of architectural detailing and form. They are able to demonstrate representative qualities of an intact group of early Federation workers cottages.

Criteria Assessment

a) Historic	The group is historically related to the subdivision of the New Glasgow Estate which occurred in 1878 onwards. The item was built in 1910, as workers cottages for employees of Hudson Brothers, located on the Duck River at Clyde. The workers cottages are directly related to the residential growth of Granville that occurred between 1890 and 1930 with the relocation of large manufacturing industries to the area.
b) Associative	The group does not meet this criterion.
c) Aesthetic/Technical	The group has some aesthetic significance as an intact group of Federation workers cottages that retain their built form and some architectural detailing.
d) Social	The group does not meet this criterion.
e) Scientific	The group does not meet this criterion.
f) Rarity	The cottages are now rare examples of workers cottages built in the late nineteenth and early twentieth centuries for the industrial centre of Granville.
g) Representativeness	The group demonstrate representative qualities of an intact group of early Federation workers cottages.

Physical Description

The cottages are a group of single-storey weatherboard cottages of varying styles.

12 New York Street, Granville
No. 12 has a single gable roof which has been replaced with Colorbond. The gable ends have a decorative barge board. The awning has also been replaced in a matching material, though the timber posts remain in place. The central door is varnished timber, as are the timber double hung windows in sets of two on either side of the entrance. The property has a wide paved driveway, Colorbond fencing to either side of the dwelling and a grassed area in the front setback. The property does not have a front boundary fence.

13 New York Street, Granville
No. 13 is a hipped roof cottage with Colorbond sheeting which extends over the awning. The awning is supported on decorative timber posts set into a timber porch. The centrally placed door is covered by a modern security screen. The door is flanked by timber double hung windows in sets of two. The dwelling has a building name panel spelling out “Stirling”. The property is bound by a green, low style pool fence and the front setback is largely grassed with some young plantings along the fence line. A concrete driveway has been provided along the eastern edge of the property.

14 New York Street, Granville
No. 14 has a gabled hipped roof with a central gable with decorative timber detailing. The central door is covered by a modern security screen as are two timber double-hung sash windows flanked on either side of the door. The property is bound by a white, low pool-style fence and the front setback is largely grassed with some young plantings along the fence line. The building has a single-storey skillion extension to the rear.

18 New York Street, Granville
No. 18 has a single gable roof which has been replaced with Colorbond. The awning has also been replaced in a matching material, along with the timber posts which are now steel. The central door is covered by a modern security screen as are two timber double-hung sash windows flanked on either side of the door. Along the eastern elevation, the building is clad with fibro sheeting. The property is bound by a modern palisade fence and the front setback is largely paved, with some young plantings along the fence line. The building has a single-storey skillion extension to the rear.

20 New York Street, Granville
No. 20 has a single gable presenting forward towards the street with a decorative timber bargeboard, corrugated iron roofing and a rendered brick chimney with a cornice and single terracotta cowl. The bullnose awning is corrugated iron with timber posts onto a concrete porch slab. The Federation style

five-panelled door, offset from the centre of the building, has two small glazed panels above a large square glazed pane with two timber bolection mould panels below lock rail. To the right of the door are three timber windows with sets of six colour panes and a transom window at the top. The dwelling has been extended to the rear with a single-storey skillion structure in weatherboard.

22 New York Street, Granville
No. 22 is a single gable cottage with a corrugated iron roof and awning, set over a concrete porch with chamfered timber posts. The gable end has a decorative bargeboard in timber. Decorative lace brackets have been added to the awning. The porch is closed in on both ends with fibro sheeting. The central door is covered by a modern security screen as are two aluminum windows flanked on either side of the door. The dwelling is bounded by a cyclone fencing to the front, unpainted timber slat fencing along the eastern side and Colorbond fencing along the western side. The building has a single-storey skillion extension in weatherboard to the rear.

24 New York Street, Granville
No. 24 is a late twentieth century face brick building, constructed with Federation style detailing. It is a single-storey dwelling with a tiled hipped roof with four gables. Windows are aluminum with security bars across each. The dwelling is bound by a face brick fence with decorative palisade inserts.

Condition
Overall the condition of the group is good. Many of the dwellings present as recently renovated cottages with new roofs and paint schemes. The cottage at 20 New York Street shows signs of rusting along the bullnose of the verandah roof and some slightly deteriorated timber weatherboards in the gable end.

Condition	**Good**	Fair	Poor

Alterations and Additions

12 New York Street
- Rear single-storey hipped extension
- New Colorbond roof and awning
- New verandah floor cladding*
- Replaced timber window architraves and door frames
- Windows fixed to the front façade
- Paved driveway

13 New York Street
- Aluminium looptop and arrowhead boundary fence*
- Skillion roof rear extension,
- Colorbond roof and verandah sheeting,
- Security screen door
- Paved brick footpath.

14 New York Street
- Rear single-storey skillion extension
- Aluminium security screens to windows and doors,
- Aluminium looptop fencing to property boundary*,
- Replaced roof sheeting
- Solar panels to roof of rear extension
- Colorbond pressed metal side gate/fence.

18 New York Street
- Rear single-storey skillion extension,
- Replacement of bullnose awning with a skillion style awning clad in Colorbond*,
- Replaced roof sheeting,
- Contemporary aluminium ladder fence*,

- Security screens to windows and doors,
- Concrete driveway,
- Rendered side elevation – weatherboard cladding removed.
- Skillion carport

20 New York Street
- Rear single-storey skillion extension in weatherboard,
- Modern carport at the rear,
- Security screen door,
- Roller awning along east elevation,
- Replaced roof sheeting,
- Concrete verandah floor*
- Weldmesh fence along the property boundary*
- New paint scheme.

22 New York Street
- Rear single-storey gabled extension in weatherboard with Colorbond roofing,
- Security screens to windows and door openings,
- Contemporary aluminium window frames,
- Fibro privacy screen infills,
- Weldmesh fencing*

24 New York Street
- Demolition of original dwelling*

The group retains a moderate level of integrity. Collectively, the group of cottages retain their built form although modified with the inclusion of rear extensions, modified roof sheeting and refreshed paint schemes.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1910

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which the cottages are located was subdivided and sold as part of the New Glasgow Estate from January 1878 onwards. They were built as workers cottages for the nearby railway site at Clyde established by the Hudson Brothers. The Hudson Brothers, manufacturers of railway rolling stock, opened this site in 1883 on the Duck River at Clyde. The site covered 14 acres. For 25 years from 1905, when Clyde Engineering was awarded large contracts to build locomotives, Granville saw

another great period of development, with the appearance of new small industries, new housing, new shops and businesses.

New York Street was put through by John Rayner, a local estate agent and speculator, in association with H. Mumford. Two houses, now numbered 22 and 24, are shown on the 1891 street alignment plan. All these houses are shown on Water Board plan of c1914, except No. 13.

The original cottage at 24 New York Street, shown in the 1943 aerial image for the site, was demolished and replaced with the current dwelling. This likely occurred in the 1990s or 2000s, based on the style of the current dwelling.

Today, the buildings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the current front fences should be replaced with a sympathetic fencing treatment.

- Due to the demolition of and the subsequent modern development 24 New York Street, Granville, the heritage curtilage of this item should be revised to exclude the dwelling at 24 New York Street. It is recommended the revised curtilage shown below is updated as the accurate heritage curtilage of the item for the Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The semi-detached Victorian cottages at 9-11 Queen Street, Granville are significant at the local level for their historic, associative, aesthetic and representative values. Built in 1886, the item is historically related to the early subdivision of the Drainwell Estate, known as the Evesham Estate subdivision and relates to the early residential growth of Granville that occurred from 1880 with the relocation of large manufacturing industries to the area. The item is also historically associated with prominent Granville local, John Nobbs who owned the land and property. Due to the similarity in architectural style and construction date of No. 13-15 Queen Street, it is likely the building is associated with local builder, Ebenezer Seeley. Although modified, the item retains its aesthetic significance as an intact Victorian cottage that demonstrates good representative qualities of a modest Victorian period semi-detached cottage, built in Granville c.1886. The item represents an aesthetic characteristic of the area and contributes to the heritage character of Granville.

Criteria Assessment	
a) Historic	Built in 1886, the item is historically related to the early subdivision of the Drainwell Estate, known as the Evesham Estate subdivision and relates to the early residential growth of Granville that occurred in 1880 with the relocation of large manufacturing industries to the area.
b) Associative	The item is associated with John Nobbs, an early landholder and prominent local of Granville, as well as, Ebenezer Seeley, a local builder of Victorian cottages in Granville.
c) Aesthetic/Technical	The dwellings represent an aesthetic characteristic of the area, for their intact example of Victoria period cottage, which contributes to the heritage character of Granville.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of a modest Victorian period cottages, built in Granville c.1886.

Physical Description

The item comprises of a single storey semi-detached Victoria cottage. The building is constructed of brick with a transverse gable roof clad in part with Colorbond and part galvanised corrugated iron with three skylights. The item features a symmetrical facade with two simple chimneys with stepped brick courses and brickwork laid in a Flemish bond pattern now painted. A bullnose verandah clad in corrugated Colorbond sheets extends the length of the front façade and is partitioned by painted brick privacy walls with open arched niches (recessed in the infilled wall). The verandah floor of No. 9 is timber, while No. 11 has quarry tiles. Verandah decoration includes cast iron frieze and spandrels. The windows are double hung timber sashes with rendered and painted sills. The windows to 9 Queen Street are fronted by flyscreens, while the windows of 11 Queen Street are fronted by painted steel bars. The front doors have transom light over modern replacement timber four panelled doors.

The item features a modest setback consistent with the street's alignment infilled with a small informal contemporary garden space. The properties boundary along Queen Street is marked by an aluminium looptop and spearhead palisade fence along 9 Queen Street and a tall brick pier and plinth with Fleur-de-lis palisade panels between along 11 Queen Street. The boundary fence of No.11 is in a deteriorated state, with missing some brickwork along the base of the fence.

Overall, the building's condition is considered fair. There is some damp brickwork along the base of 11 Queen Street. It is likely the result of water ingress which can be attributed to the use of an acrylic based paint and the tiled verandah floor abutting the building, both trapping water and moisture beneath the surface.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Single-storey rear additions,
- Skylights to front roof plane*
- Tile flooring for No.11 verandah*
- Replaced fencing.

The building is evidently modified with a contemporary paint scheme, replaced roof fabric, and contemporary landscaping. However, the item retains a moderate level of integrity with the retention of the building's form and architectural detailing. While the contemporary paint scheme and replaced roofing do not adversely impact the heritage significance, it is recommended that paint schemes do not apply an acrylic based paint or replace corrugated galvanised iron with Colorbond sheeting.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1886

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The conjoined dwelling was built c.1886-87. This portion of land formed part of the Evesham Estate. The was land bought back by John Nobbs (the original subdivider) in August 1884 for 65 pounds. The land remained clear of any dwellings until 1886.

In March 1886, Nobbs mortgaged the land for 400 pounds to erect these semi-detached cottages. The similarity of style and date suggests that the builder of 13-15 Queen Street, Ebenezer Seeley, may also have built 9-11 Queen Street. The item remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the roof sheeting should not be replaced with Colorbond but corrugated galvanised iron.
- Should the opportunity arise, the fencing along 9 Queen Street should be replaced with a more sympathetic fencing treatment.
- Future repainting works should ensure an appropriate heritage paint scheme is used and an oil-based paint is applied.

Curtilage Map

Statement of Significance

The semi-detached Victorian cottages at 13-15 Queen Street, Granville are significant at the local level for their historic, associative, aesthetic and representative values. The buildings are historically associated with the residential subdivision of the Drainwell Estate known as the Evesham estate subdivision. Built c.1885, the item is historically linked to the residential development of Granville that occurred from 1880 onwards with the relocation of large manufacturing industries to the area. The cottages are also historically associated with John Nobbs and Ebenezer Seeley, one of the major builders in early Granville. Although modified, the item retains some aesthetic value in the retention of the built form which makes a positive contribution to the heritage character of the area. The item demonstrates representative qualities of a modest Victorian period cottage, built in Granville during c.1885.

Criteria Assessment	
a) Historic	The buildings are historically associated with the residential subdivision of the Drainwell Estate known as the Evesham estate subdivision. Built c.1885, the item is historically linked to the residential development of Granville that occurred in 1880 with the relocation of large manufacturing industries to the area.
b) Associative	The buildings are historically associated with John Nobbs and Ebenezer Seeley, one of the major builders in early Granville.
c) Aesthetic/Technical	Although modified, the item retains some aesthetic value in the retention of the built form which makes a positive contribution to the heritage character of the area.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of a modest Victorian period cottage built in Granville c.1886.

Physical Description

The item comprises of a single storey semi-detached Victorian cottage. The residence is constructed of brick with a transverse gable roof clad in part with corrugated galvanised iron and Colorbond. The roof of 15 Queen Street features a skylight in the roof and a rendered chimney with cornice detailing. The front façade features rendered brick ruled to resemble ashlar stone. The item features a verandah along the front façade supported on brick privacy walls with arched recessed infill walls and decorative lacework spandrels. The verandah roof of 13 Queen Street is skillion and clad in Colorbond sheeting, while the verandah roof of 15 Queen Street is concave.

13 Queen Street features an original door bricked in and poorly rendered. The façade also contains a new pair of floor length 4/4 modern spring-weighted sashes, modern timber balustrade with metal wire inserts and a shared driveway area of paved brick with 11 Queen Street.

15 Queen Street contains original window opening with central single double hung sash 2/2 (upper sash re-glazed). Four panel bolection moulded door with rounded upper panels. The dwelling is missing the front fence.

The item retains a modest setback consistent with the street's alignment. The dwellings feature relatively informal and contemporary landscapes, however 13 Queen Street features two established palm trees in the front yard.

The condition of this item is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

13 Queen Street
- Modified façade with the inclusion of a large window opening*
- Replaced roof sheeting
- Large rear extension
- Timber lattice fencing
- Shared paved driveway between with 11 Queen Street
- Contemporary garden landscaping

15 Queen Street
- Small rear extension
- Replaced roof sheeting
- Removed fencing*
- Contemporary garden landscaping
- Skylight

The item presents a moderate to low level of integrity. Although the building is evidently modified, 15 Queen Street present a more intact example of its type, while 13 Queen Street features a highly modified front façade. The overall architectural form is retained.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1885

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This portion of land formed part of the Evesham Estate. Evesham Estate was originally a larger estate owned by John Nobbs. This land was purchased for £46 by local builder, Ebenezer Seeley in October 1882. He mortgaged this site three times in 1883 to a building society to finance the erection of these dwellings. Seeley was living in one of them in 1885. He sold them to Florence Olive in 1888. The item remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the fencing along both dwellings should be made consistent and sympathetic to the architectural style of the dwelling.

Statement of Significance

The Arts and Craft cottage known as 'Loch Erin' at 62 Railway Parade, Granville is of local significance for its historic, aesthetic and representative values. The building is historically related to J. Wetherill's residential subdivision of the Drainwell Estate in 1893. Built c.1912, the item relates to the residential growth of Granville that was driven by the relocation of several large manufacturing industries to the area between 1880 and 1930. The item retains its aesthetic significance as intact Federation period Arts and Crafts cottage with much of its original fabric and architectural detail. The house is readily identifiable as part of the historic building stock and makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Civic Precinct. The item demonstrates representative qualities of a high-quality Federation period Arts and Crafts style dwelling built in Granville, c.1912.

Criteria Assessment	
a) Historic	The item relates to the residential development of Granville, driven by the relocation of several large manufacturing industries close to the railway.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as an example of a high-quality Arts and Craft style dwelling and makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Civic Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a Federation period Arts and Crafts style cottage built in Granville c.1912.

Physical Description

The site contains a single storey Federation period Arts and Crafts style cottage. The dwelling has a slate roof with terracotta ridge capping and two face brick chimneys with stepped corbels. The roof construction is gablet hip with projecting gables to front and side. It features red tuck-pointed face brick walls in stretcher bond with dark brick string lines and quoins, restrained timber detailing around verandah posts and valence boards, and casement windows with coloured panes. Dark bricks were used to end segmented arches, also on quoins around windows and doors. The return verandah with a terracotta tiled roof extends from the main roof. Verandah decoration consists of decorative timber posts set on brick piers, balustrade with rendered coping, and incised decorative timber valance. Exterior doors have transom lights over Federation five panelled doors with two small glazed panes above a large square glazed pane, with two timber bolection mould panels below lock rail (all glazing was removed and replaced by timber infill). The front door is set in segmented arch, a six panelled door with centre panel glazed (other original glass details have been removed and fibro was installed).

The dwelling has been extended to the rear in face brick, with a single storey structure containing a hipped Colorbond roof. The western half of the site has been converted into a gravel carpark with a boom-gate and powder-coated panel fence.

The item retains a modest setback consistent with the street alignment. The building is visually prominent within this landscape with limited landscaping elements. There are remnants of the brick front boundary fence that survive; however, these remnants are impacted by two established trees which have exposed root systems. A simple timber post and rail fence has also been removed since the 1990s.

The building is in a good condition with intact brickwork and mortar; however, the slate roof is showing some signs of wear and deterioration.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Single-storey rear extension in brick
- Brick boundary fence largely removed
- Timber post and rail fence removed
- Gravel carpark with boom-gate
- Contemporary signage

The building retains a high level of integrity as viewed from the street. The item retains a high level of original fabric and architectural detail.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1912

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The property formed part of Section B, Lot 1 of J. Wetherill's subdivision of the Drainwell Estate in 1893. The land on which this residence is located was purchased in September 1911 by George Winter, a builder local to Granville. He mortgaged this land in January 1912 to build the dwelling and named it 'Loch Erin'. By 1915, Winter moved into the building.

By 1943, the dwelling had a small extension on the eastern side of the rear. This has since been removed.

Today, the building remains in use as a medispa.

Curtilage Map

Statement of Significance

'Wendover', formerly named 'Canberra', at 64 Railway Parade, Granville is of local significance for its historic, aesthetic and representative values. The item is historically associated with the 1893 residential subdivision of the Drainwell Estate known as J. Wetherill's subdivision. The land remained vacant until the item was built c.1914. The item is historically associated with the residential growth of Granville that occurred between 1880 and 1930 with the relocation of large manufacturing industries to the area. The building retains its aesthetic significance through the retention of much of its original detailing and architectural detailing. The building is a fine example of a quality Federation Arts and Crafts style house. Today, the house is readily identifiable as part of the historic building stock of Granville and makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Civic Precinct. This is enhanced by the similarities in age, design, use and materials with other houses along Railway Parade. The item demonstrates representative qualities of an intact Federation Arts and Craft cottage built in Granville c.1915.

Criteria Assessment	
a) Historic	The item is historically associated with the 1893 residential subdivision of the Drainwell Estate known as J. Wetherill's subdivision. The land remained vacant until the item was built c.1914. The item is historically associated with the residential growth of Granville that occurred between 1880 and 1930 with the relocation of large manufacturing industries to the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item retains its aesthetic values through the retention of much of its original fabric and detailing. Furthermore, the item makes a positive

	contribution towards the aesthetic character of the Granville Conservation Area – Civic Precinct and is significant as a fine quality Federation period Arts and Crafts style. This is enhanced by the similarities in design, age and style of other houses along Railway Parade.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a Federation period Arts and Crafts style dwelling in the area.

Physical Description

The site contains a single storey Federation Arts and Crafts cottage with an elaborate roof formed with hip and several flying gables to front and side elevations. The roof is slate with terracotta ridge capping on red, tuck pointed, stretcher bond brick walls. Three tall, rough cast and brick chimneys survive, with brick strap work and squat terracotta pots survive. A segmented bay or tower protrudes through verandah roof as a gable on splayed corner. The building contains a return verandah with terracotta tiles on the south side. The verandah has a floor of tessellated tiles and white marble steps, shaped timber columns set on curved brick balustrade with bullnose brick coping, and simple timber curved arches with three ladder infills. The verandah has been infilled on the eastern side with timber casement windows over the brick balustrade. Windows have corniced rendered brick sills and decorative scalloped undersills. Exterior doors have transom lights above a large square glazed pane with two timber bolection mould panels below lock rail. The front door has a transom light and sidelights.

The dwelling features an early rear extension visible in the 1943 aerial. This section of the roof has been recently reclad with Colorbond sheeting. The building retains a modest setback consist with the street's alignment. The front fence is of solid face brick with brick coping and brick piers connected by galvanised pipe with cyclone wire infill and a wrought iron gate. The former mature garden to the front of the dwelling has been removed, with young plantings present in front of the bay window. A large palm tree remains at the rear of the dwelling.

Overall, the condition of the dwelling is fair, with deterioration to decorative timber elements throughout, signs of salt attack to the brickwork and advanced biological growth to roof tiles.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear, single-storey extension,
- Timber casement window infill to verandah
- New sheet metal over bay window awning*

The item retains a high level of integrity with much of its original fabric and architectural detailing intact.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1914

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the manager's and factory owners. Today, the subdivision pattern of this era is still evidence and there is still a predominance of buildings dating to the 1880s – 1930s.

The property formed part of Section B, Lot 1 of J. Wetherill's subdivision of the Drainwell Estate in 1893. The land on which this residence is located was purchased as vacant land in October 1912 by Henry John Percival, a local baker of Granville and member of Granville Council from 1920 to 1925. The dwelling, originally named 'Canberra' in the Sands Directory, was built for him between 1913-14 and he occupied the building by 1915. At the time, the dwelling was regarded as being a showpiece of the area and was thus pictured in the 1915 Progressive Granville handbook. The building is referred to as 'Wendover' in a 1922 article in the Cumberland Argus reporting on the wedding of Henry Percival's son, Mr J. Victor Percival to Miss Evelyne Thompson.

Today, the building remains in use as a private residence.

Curtilage Map

Revised curtilage – refer below.

Statement of Significance

The Federation cottage, known as 'Magnolia' at 70 Railway Parade, Granville is of local significance for its historic, aesthetic and representative values. The item relates to the 1893 residential subdivision of the Drainwell Estate known as the 'J. Wetherill's Subdivision'. Built in c.1913-14, the item is historically related to the residential growth of Granville that occurred between 1880 and 1930 with the relocation of large manufacturing industries to the area. The Federation cottage has a unique Australian character and is representative of a return to craftsmanship. The dwelling is readily identifiable as part of the historic building stock of the area and strongly contributes to its character of the Granville Conservation Area – Civic Precinct. This is enhanced by the similarities in age, design, use and materials with other houses along the street. The item demonstrates representative qualities of an intact, fine quality Federation cottage built in Granville c.1913-1914.

Criteria Assessment	
a) Historic	The item relates to the 1893 residential subdivision of the Drainwell Estate known as the 'J. Wetherill's Subdivision'. Built in c.1913-14, the item is historically related to the residential growth of Granville that occurred between 1880 and 1930 with the relocation of large manufacturing industries to the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as an example of a fine quality Federation cottage. The item strongly contributes to the historic character of the Granville Conservation Area – Civic Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact, fine quality Federation cottage built in Granville c.1913-1914.

Physical Description

The item comprises of a single storey Federation cottage with Marseilles tiled roof decorated with terra-cotta ridge capping. The roof construction is hip with gablets and a projecting gable to front with rough cast infill. Chimneys are brick with strap work. The facade is of red, tuck pointed, stretcher bond brick with dark brick string courses and quoins. The verandah is in terracotta tiles extending from main roof, across front, to a projecting gable. The verandah floor is of tessellated tiles and white marble steps, supports are paired timber posts on curved brick balustrade. Casement windows have coloured panes, skillion awnings with timber ladder brackets. The front door has a transom light above seven-horizontal-panelled timber door. The dwelling has been extended on the eastern side to the rear with a rendered brick structure, patterned to appear like stone blocks, with casement windows and a skillion roof. The dwelling is framed by a low brick boundary wall.

The lot has been amalgamated with 72 Railway Parade. The dwelling at 72 Railway Parade is an inter-war period liverbrick dwelling with a tiled roof, casement windows with decorative timber awnings, and sandstone. The former sandstone porch to the front has been infilled with aluminium windows. The two dwellings are connected via concrete footpaths and open landscaping. It is surrounded by a liverbrick low boundary wall. The integration of this lot through landscaping detracts from the significance of the Federation dwelling, changing its spatial arrangement and setting.

The rear portion of the site has been heavily developed with a four-storey medium density residential building of face brick, with single hung aluminium windows and covered balconies. The building addresses Jamieson Street but is connected to the two dwellings at 70 and 72 Railway Parade by concrete footpaths and landscaping. The development visually encroaches upon the single storey dwelling and is considered to be intrusive.

The cottage is in a good condition having recently undergone refurbishment.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The building remains intact, though the surrounding landscape and relationship to neighbouring building and to other structures in the area have been significantly altered*
- Ramp and balustrade to new entrance along the western elevation of the dwelling*

Although the landscape has been significantly altered the building retains a high level of integrity, having undergone a careful refurbishment.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1913-1914

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land formed Section B, Lot 1 of J. Wetherill's residential subdivision of Drainwell Estate in 1893. The land remained unoccupied until the portion was purchased in March 1913 by Catherine and Florence Alice Sullivan. The dwelling was built 1913-14 as 'Magnolia' and was occupied by 1915.

Today, the building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Due to the medium density development at the rear of the site, it is recommended that the heritage curtilage be reduced to encompass the heritage item alone. The new curtilage as shown below should be adopted in the new Cumberland LEP.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Curtilage Map

Statement of Significance

The Victorian Italianate terrace at 2 and 4 Russell Street is of local significance for historic, associative, aesthetic, rarity and representative values. Built c.1890, the item is an ornate and highly intact example of Victorian Italianate terrace housing which forms part of the larger heritage character of Granville's town centre. The item relates to the early development of Granville in response to the movement of industry away from Sydney in the 1880s and the establishment of large manufacturing industries in the area. The building retains its aesthetic significance as an intact and ornate Victorian Italianate terrace with much of its original decorative elements extant. Further, the item makes a positive and strong contribution towards the aesthetic character of the Granville Conservation Area – Civic Precinct. The significance of the terrace is enhanced by its historic association with Henry William Stokes, who built the item and neighbouring property, Royal Hotel. While the building demonstrates representative qualities of an ornate and intact Victorian Italianate terrace built in Granville, c.1890, the building is a rare example of its architectural type in Granville.

Criteria Assessment	
a) Historic	The item relates to the early development of Granville in response to the movement of industry away from Sydney in the 1880s and the establishment of large manufacturing industries in the area.
b) Associative	The item is associated with Henry William Stokes, a local builder of Granville who built the item and neighbouring property, Royal Hotel.
c) Aesthetic/Technical	The item is aesthetically significant as an intact Victorian Italianate terrace house.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item has rarity values at a local level as a rare architectural style built in Granville.
g) Representativeness	This item demonstrates representative qualities of an ornate and intact Victorian Italianate terrace built, c.1890.

Physical Description

The site consists of a two-storey brick, late Victorian Italianate terrace comprised of two dwellings. The building is of brick construction with rendered ornate facades ruled to represent ashlar work. The building's façade features a prominent parapet with Gothic arched balusters and a central pediment. The heavily moulded parapet includes a series of ornate decorative plaster panels enclosing a garland between a single open scrolled bracket, this is repeated across facades and below the cornice. Three decorative brackets feature at the end of each terrace and in centre. Acanthus leaves decorate a string course across front near window arch on ground floor only. The parapet disguises a corrugated iron roof with rendered chimney with terracotta chimney pots. The balcony on the upper floor features a bullnose corrugated iron roof supported by privacy walls. The privacy walls are plastered and moulded to simulate columns with ornate corbels. Set between the privacy walls are decorative cast iron lacework along the spandrels and balustrade. Below the verandah beam, the verandah is supported on cast iron posts with decorative cast iron spandrels and frieze. The verandah floor features tessellated tiles. The building features sash windows. Some contemporary flyscreen front windows on the upper story of No.4. The windows on the upper storey of No.2 are re-glazed in a metallic chrome coating. The windowsills along the lower facade are decorated with corniced rendered brick sills with bracket decoration. A transom light is located above French doors with bolection mould panels below and glazed panels above on first floor.

The brick fence with brick coping and brick posts connected by galvanised pipe with a wrought iron gate. The landscape is contemporary.

Overall, the condition of the terrace pair is considered fair. The cast iron lacework shows signs of oxidisation along the upper balcony of No.2, where No. 4 is missing in a small section of the verandah.

Condition	Good	**Fair**	Poor

Alterations and Additions

- No known structural additions were noted.
- New window glazing on the balcony of No.2*
- Flyscreens added to windows of No. 4.

The building retains a high level of integrity with much of its original decorative detailing extant on the building's facade.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1890

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of the area in which the subject site is located was largely determined by development in the 1880s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. The municipality also gained gas street lighting and a connection to the metropolitan water supply in this period.

The land on which the terrace is located, passed through a number of hands during the 1880s, until it was purchased by Henry William Stokes. Stokes bought the land in September 1889 for £100 off Ellen Goddard. While Goddard was the publican of the Royal Hotel, Stokes was one of the builders/ plasterers working on the construction of the Royal Hotel. The terrace is a late example of Victorian Italianate architecture. Stokes built the terraced pair of houses with ornate plastered facade built.

The Victorian Italianate Terrace and Royal Hotel would have complemented each other well, but the rich ornamentations on the hotel facade have been since removed.

The item remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. Curtilage Map

Revised curtilage – refer below.

Statement of Significance

The Victorian Italianate terrace at 10 -12 Russell Street, Granville is of local significance for its historic, aesthetic and representative values. Built in c.1890, the terrace historically relates to the early residential development of Granville that followed the industrial and commercial boom of Granville in the 1880s. The item retains its aesthetic significance as a Victorian Italianate terrace with intact decorative elements on the front façade. The terrace is readily identifiable as part of the historic building stock, are very prominent in the streetscape and strongly contribute the heritage character of the area. The item demonstrates representative qualities as a late Victorian Italianate terrace built in Granville, c.1890s.

Criteria Assessment	
a) Historic	The item has historic significance as related to the development of Granville in the 1880s and 1890s, specifically the coming of the railway station and the developing commercial centre.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as an example of late Victorian period Italianate style residence which strongly contributes the heritage character of the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a late Victorian period Italianate terrace, built in Granville c.1890s.

Physical Description

The dwelling is a Victorian Italianate terrace. The item has a hipped roof clad with corrugated iron, with a single rendered brick chimney to No. 12. The verandah has a corrugated iron roof across the front of the building with concrete on the ground floor and timber to the first floor. The awning is supported on Corinthian cast iron posts with cast iron frieze and spandrels and is supported on each side by brick privacy walls. The balustrade to No. 10 is a modern palisade style while No. 12 retains the original decorative cast iron balustrade. No. 12 also has balustrade on ground floor. The building is set on a sandstone foundation. Windows have sandstone sills which are painted. Exterior doors are French doors with bolection mould panels below and glass panels above. Front doors have transom light above Victorian four panel timber door, with upper panels having round tops and bolection moulded panels below. Modern security screen doors have been added. No. 10 has had its wrought iron fence removed, leaving a low brick boundary wall in place. No. 12 also has a low brick boundary wall. All garden areas are concreted.

Overall, the condition of the terrace pair is good although the awning is in need of repair.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Extended at the rear with a lean-to addition
- Chimney removed
- Balustrade removed on ground and first floor
- Wrought iron boundary fence removed
- Modern palisade style balustrade to verandah on the upper storey of 10 Russell Street*
- Modern security screen on door to 12 Russell Street*

Although there have been some minor, yet intrusive alterations made to the item that detract from the heritage significance of the item, the item is considered to have a moderate level of integrity. The façade retains a number of key decorative features.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1890s

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The Victorian Italianate terrace on Russell Street was built for Richard Godson, a freeholder of Parramatta. In addition to two other lots, he purchased this land for 400 pounds in February 1885, a price which reflected the inflated value of land near the railway station and developing commercial centre. These houses were most likely built in the early 1890's. They do not appear on the photograph of the opening of the Town Hall in January 1889 and Sands directories do not list houses there until the mid-1890's. They are late examples of their type. Today, the buildings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, a more sympathetic and appropriate balustrade to the upper verandah of 10 Russell Street should be reinstated.
- Should the opportunity arise, a sympathetic fence should be investigated.
- Based on the amalgamation of I170 and I171 (Parramatta LEP), as a single heritage item in the new Cumberland Council LEP, the heritage curtilage should be revised and amended, as shown below, as the new heritage curtilage.

Curtilage Map

Statement of Significance

The cottages at 41-43 Sixth Street are of local significance for their historic, aesthetic and representative values. Built c. 1886, the cottages are of historic significance for their direct association with the subdivision of land for the Hudson Brothers Engineering works. The cottages exemplify the impact of the engineering works on the early residential development of Granville. The item is an aesthetically significant and intact example of early Victorian semi-detached cottages which make a positive contribution to the streetscape. The item is a representative example of Victorian period cottages in the Granville area.

Criteria Assessment	
a) Historic	The item is of historical significance for its association with the major land subdivision, known as 'Clyde' which is directly associated with the establishment of the Hudson Brothers Engineering works. The cottages exemplify the impact of engineering works on the early residential development of Granville from the 1880s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact early Victorian semi-detached cottage which make a positive contribution to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of Victorian period cottages built in 1886 in the Granville area.

Physical Description

The site consists of a pair of semi-detached Victorian single storey cottages. The cottages are distinguished by their asymmetrical frontage along Sixth and Clyde Streets. The cottages are clad with Colorbond roofing on rendered brick walls with ashlar markings on the front facade and painted brick side elevations. The roofs are gabled and feature decorative timber bargeboards. The cottage at No.41 features a finial. Each cottage features a rendered brick chimney with cornice decoration and string line, with brick cowls and a bullnose verandah roof with cast iron frieze and spandrels. The cottages share a rendered brick privacy wall however, the verandah of No. 41 is supported on a slender cast iron Corinthian column, while the verandah of No.43 is supported by rendered brick privacy walls. The verandah of the cottage No. 41 has concrete floor, while the verandah of No. 43 has tessellated tiles on the floor.

Windows on both cottages have corniced rendered brick sills. The window of No. 43 also features rendered cornices below the sill. The window of No.41 contains vertical transom lights either side of the window. Although a contemporary flyscreen fronts the window of No. 41, and security grills front the window of No. 43, each cottage retains timber framed, double hung sash windows. Victorian label mould and decorative stops are above the window arches. The front door of No. 41 retains a glazed fanlight above a two panelled door with glazed upper pane. The front door of No. 43 retains a transom light above Victorian timber four panel door with round tops in upper panels and bolection moulded panels below. Each cottage contains a timber picket front fence and gate. The fence of No.41 is missing some tops of the pickets and the paint is lightly peeling in some sections.

Other additions to No.43 include a rear skillion roof extension and a lean-to extension along the west elevation.

The cottages feature a modest setback and contemporary landscaping. The items remain visually prominent from within the streetscape.

Overall, the condition of each building is considered to be in good condition with only minor damage to the head of one panel in the picket fence of No.41 identified.

Condition	**Good**	Fair	Poor

Alterations and Additions

No. 43:

- Rear skillion extension
- Side lean-to extension*
- Roof re-clad in Colorbond sheeting
- Contemporary steel grill to window on front facade
- New paint and colour scheme

No.41:

- Roof re-clad in Colorbond sheeting
- Aluminium flyscreen to window on the front façade
- New paint and colour scheme

Although the cottage at No.43 appears to be more modified and has altered the visual connect of the dwelling from Clyde Street, the item is considered to have high integrity as it retains much of its original form and features.

Integrity	**High**	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes	
Construction years	c. 1886

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The cottages at 41-43 Sixth Street directly relate to the industrial development of Granville in the early 1880s. The land in which they are located formed part of the land known as 'Clyde' which was auctioned on the 13 December 1884 for the Hudson Brothers, who had their engineering works adjacent. The cottages were built on the allotments numbered 16 and 17 of Section 7. They were the only to be sold under the title system which preceded the Torrens title. The remaindered of the estate was converted to Torrens title after. The cottages were purchased by Otto Schmidt, an engineer. The purchase was completed in March 1885, and the cottages were sold soon after with a £400 mortgage.

Presently, the cottages remain in use as private residences.

Curtilage Map

Statement of Significance

The Young's Building is of local significance for its historic, aesthetic, representative and rarity values. The item was historically occupied by a pharmacy and prominent menswear company named Clayborough Bros. The item is an example of a major landmark shop complex of pronounced styling, revealing a major design effort in presentation of the occupying company. The building retains its aesthetic significance along the upper façade as a relatively intact Federation Arts and Crafts style commercial building and demonstrates representative qualities of this architectural style, built c.1913. This type of commercial building is relatively rare in the local area and makes a notable contribution to the streetscape.

Criteria Assessment	
a) Historic	The item is of historic significance for its association with the major commercial development of Granville. The building was historically occupied by a pharmacy and menswear company, Clayborough Bros.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The commercial building is of aesthetic significance for its landmark qualities expressed in the architectural detailing of the upper facade. The building is a relatively intact Federation period Arts and Crafts style commercial building.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is considered rare to the immediate context of Granville commercial centre.
g) Representativeness	The item demonstrates representative qualities as a Federation period Arts and Crafts style commercial building, built in 1913.

Physical Description

The item is a two storey, brick Federation period Arts and Crafts style commercial building with a corrugated iron roof. Sections of roof appear to have been replaced. The item consists of a row of five shops along the ground floor. As a result, heritage fabric is largely obscured by modern signage appended to the façade below the cantilevered awning. The upper floors are occupied by private residences and remain more intact. The upper façade features an arcaded balcony on upper floors with transom lights above the French doors with bolection mould panels below and glazed panels above lead onto balconies. The facades are of stretcher bond brick with rough cast trim. The centre of the upper floor has semi-circular arch resting on squat entasis granite columns in centre shop with rectangular corniced panel raised above parapet. The centre is further distinguished by the brick parapeted facade, which is decorated with rendered pilasters between each shop with banding and dentilations below. The rear of the building features a variety of later extensions.

Over the condition of the building is considered fair. The rendered elements and brickwork along the upper facade show some signs of dilapidation.

Condition	Good	**Fair**	Poor

Alterations and Additions

- No. 15 – rear extension above second storey, constructed with aluminium weatherboard cladding
- No.17 – Fibro sheeting and sheet metal rear extension enclosed with windows
- No.19 – Small brick single storey rear extension with skillion roof
- The lower façade is heavily modified by current commercial premises. This generally includes modern advertising and signage*
- Canvas awnings along the inner of balconies*
- Air conditioning units*
- Conduits*

Young's Building is considered to have a moderate level of integrity. Although the building contains a number of rear extensions, the overall built form of the commercial premise has been retained. The integrity is reduced however, by the commercial signage and fitout.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1913

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

In 1913, the building was constructed for W. Horton Young, a chemist. Young obtained the money to for construction after a successful mining speculation. Young's chemist shop was located in the northernmost shop and was continuously occupied as a chemist until c.1987. Advertising for this occupation is still extant on the rear of the property. The row also housed Clayborough Bros. a menswear retailer, who had occupied the premises continuously from its construction until 1985.

The building remains in use as a mixed residential and commercial building. Although it does not house the any of the original occupations.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The northernmost shop of Young's building was historically used as a chemist. The rear elevation of this façade retains advertising that relates to building use as a chemist. Although somewhat contemporary, this remnant advertisement contributes to the building's overall significance. Careful consideration should be given to ensure this former use remains legible.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Commercial	

Curtilage Map

Statement of Significance

The Royal Hotel is of local significance for its historic and aesthetic values. Built in 1884, the Royal Hotel is historically related to the commercial growth of Granville that occurred in conjunction with the broader industrial and residential developments of Granville from the 1880s. The hotel is historically significant for providing temporary accommodation to some of the early workers to the area, as well as being the meeting place for many local clubs and groups prior to the construction of community halls or the Granville Town Hall. The item is associated with local plasterer Henry William Stokes, who also built the adjoining terraces (2-4 Russell Street, Granville). Although modified, the Royal Hotel has some aesthetic significance as an early Victorian period hotel in the area which contributes positively to the overall heritage character of the main street, however, it is not a representative example of this type.

Criteria Assessment	
a) Historic	Built in 1884, the Royal Hotel is historically related to the commercial growth of Granville that occurred in conjunction with the broader industrial and residential developments of Granville from the 1880s. The hotel is historically significant for providing temporary accommodation to some of the early workers to the area, as well as being the meeting place for many local clubs and groups prior to the construction of community halls or the Granville Town Hall.
b) Associative	The item is associated with local plasterer Henry William Stokes.
c) Aesthetic/Technical	The item is of aesthetic significance as an early Victorian period hotel which contributes positively to the overall heritage character of the main street.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item is rare for its association to Henry William Stokes.
g) Representativeness	Due to the loss of much of its original decoration, the item does not meet this criterion.

Physical Description

The hotel is a three storey Victorian corner hotel constructed of rendered brick with a simple parapet. The roof construction is hip, with parapeted corner facade with string course decorated with Acanthus leaves running below the third floor window arches. Other features include sash windows with curved rendered arches and corniced rendered brick sills on the upper floors, steel "kliplock" roof to the cantilevered awning. Doors and windows on ground floor have large plate glass.

The building has had much of its original plastered detailing removed from the parapet and windows on the upper floors. The building's current presentation along the upper façade dates to modifications undertaken in c.1957.

The Royal Hotel retains a prominent position on the corner of Russell and South Streets, Granville. The building is built to street alignment and forms an important landmark feature within the urban streetscape of South Street, Granville. There are no natural landscaping elements.

The building appears to be in a good condition and well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- VIP lounge room side addition – constructed to match existing overall building.
- Modern paint scheme
- Contemporary security grills to windows on the upper floor

The building appears to have a low level of integrity, having undergone substantial alterations in the late 1950s. It is also likely that due to the continued use of the item, the interior spaces have been modified and upgraded to accommodate modern standards and operational requirements.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1884

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the manager's and factory owners. Today, the

subdivision pattern of this era is still evidence and there is still a predominance of buildings dating to the 1880s – 1930s.

The land was bought in 1883 by Mrs Ellen Goddard, who had previously held the licence for the 'Duke of Cornwall', Harris Street, Ultimo. In 1883, Ellen Goddard applied for a Conditional Publican's License for a house to be erected at Granville with twenty rooms required for the use of the family. The building was financed by a mortgage to Tooth brewers. It was built in 1883-4 by ornamental plasters 'Stokes and Winter' and opened in 1884. The hotel was the meeting place for many local clubs and groups prior to the construction of community halls or Town Halls.

This hotel was long regarded as the best building in Granville. When opened it was claimed to possess the 'finest balcony' in the colony. The Royal Hotel is described as having a well-ventilated cellar in the basement, with a bar located on the ground floor with a counter composed of cedar and pine. Also, on the ground floor, the hotel contained four parlours, and a roomy dining room described as having magnificent panelled ceilings. A staircase led to the billiards room on the first floor, where there was also a drawing and sitting room, four bedrooms and a bathroom. The third floor contained eleven bedrooms with bathrooms attached. The associated out-buildings included a kitchen, wash-house, laundry, five-stall stable, coach house and groom's room with hayloft over it. The hotel was designed by architect, Mr Thos Butement, from Sydney.

In 1920, the Parramatta Licensing Court granted permission to the alteration of the premises bar, stating "it would mean a great improvement". In 1957, the building's exterior was substantially modified with the removal of much of its original detailing removed from the upper storey and parapet and the lower façade clad in tiles. The Royal Hotel remains an active hotel in Granville.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Curtilage Map

Statement of Significance

The former Chateau Blanc cinema is of local significance for its historic, aesthetic and rarity values. The building is of historic significance as being the first of two Quonset cinemas built by Hoyts' Western Suburbs Cinemas. Although highly modified the item's façade still retains some of aesthetic significance as an Inter-War 'Quonset' style cinema. In addition to this, the item is rare for its use of innovative construction techniques in the early post-war years. This is believed to be a very early example of the use of this building technique to erect cinemas. The building remains prominent in the streetscape and strongly contributes to the heritage character of the main commercial strip along South Street.

Criteria Assessment	
a) Historic	The item is of historic significance as being the first of two Quonset cinema built by Hoyts' Western Suburbs Cinemas.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as an early example of Quonset style cinema.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is a rare form of cinema construction which used innovative construction techniques, particularly in the Inter-War years.
g) Representativeness	The item does not meet this criterion.

Physical Description

The former Cinema building was a single storey, steel framed structure with a rendered masonry facade and parapet. A contemporary second-storey extension is now stepped back from the original building. The modern extension is constructed of concrete with a large corrugated iron roof barrel roof. The façade retains four semi-circular rendered slabs set into a vertical wall with a curved cantilevered awning with wide grooved fascia. The facia features modern sign for relating to the Grand Royale. The entrance area, like all of the interior, have been considerably altered. The entrance features glazed aluminium double doors. The building has also undergone a new paint scheme.

Overall, the building condition is good, although there are some minor cracks in the façade's render.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The building has undergone substantial modifications and renovation associated with the current occupation, with a second storey addition and internal modifications*
- Modern paint scheme*
- Contemporary signage

The item is considered to have low integrity due to several alterations that have been undertaken.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1947

The first Castle Theatre was located in a paddock off South Street. This structure was erected in 1911 and was capable of seating 800 people. The Castle had lofty castellated towers, search light, arc lights, small coloured electric lights and a screen larger than the Sydney Glaciarium. The electric lighting was powered by a dynamo driven by a steam engine in the nearby woollen mills.

In 1923 Granville Cinema Ltd was formed with the principal shareholder Alfred James Beszant of the Avenue, Granville. This company took over the operations of both the Castle and Picture Palace. Granville Hoyts Castle was the first of two Quonset cinemas built by Hoyts' Western Suburbs Cinemas. This opened on 26 December 1947 and was built on the site of the original 1911 Castle Theatre. This is believed to be a very early example of the use of this building technique to erect cinemas, the first being a cinema built in Aurora, Colorado in June 1946. The cinema was designed by Cowper, Murphy & Assoc and built by A.W. Edwards. The Hoyts Castle cinema operated for 12 years before it closed in October 1959.

Following its closure, the building was used as a supermarket before it currents use as reception centre, known as the Grand Royale.

Statement of Significance

The Granville Technical College is of local significance for its historic, aesthetic and representative values. Built in 1909, the item is historically significant as an early education building associated with the development of industry and trade in Granville. The building is of aesthetic significance as an intact education building of Federation period design, typical of the Arts and Crafts movement. The building makes an important contribution to the streetscape and has local landmark qualities.

Criteria Assessment	
a) Historic	The item has historic significance as an early education building associated with the development of industry and trade in Granville.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact education building of Federation period design, typical of the Arts and Crafts movement.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of Federation Arts and Craft building design.

Physical Description

The former technical college is a typical Federation period Arts and Crafts style education building. The three-storey red brick building features a hip roof clad in Marseilles tiles flanked by gabled parapeted wings, with five strip ventilators in main gable. The brickwork is distinguished by red brick with contrasting dark brick string courses. Windows and entrances feature arched curved arches of brick in soldier course with central sandstone keystones. Below the multipaned timber sash windows are sloped brick sills. Lightweight security screens are affixed to windows on the lower façade. The verandah floor is of tessellated tiles and slate steps leading to the brick two-bayed loggia with two wrought iron gates. Within this area features a modern handrail and ramp. The front door has a brick arch above a glazed fanlight, below is a double timber panelled door. Other features include sandstone gutters along South Street.

To the west of the complex along Lumley Street there is another building associated with the Technical College. The structure is a large two-storey asymmetrical U-shaped building with a roof that has a parapeted wing end to the north and hipped end to the south. Windows are double multipaned timber sash windows with a green and yellow colour-scheme. Windows to the Lumley Street elevation have been replaced with fixed multipaned aluminium windows on the ground floor. Interspersed between the windows are rectangular sandstone keystones. The southern half of this building appears to be a later extension of the original structure containing large aluminium fixed multipaned windows to the ground floor and two awning windows to the first floor to Lumley Street. An aluminium garage door has been sealed and fixed with two aluminium fixed multipaned windows on this southern extension. This building has a very shallow set back from the street and is set next to the pedestrian footpath.

There are a number of mature gum trees within the curtilage of the Former Granville Technical College, primarily along Lumley Street. They make a notable contribution to the building's aesthetic significance.

Overall the condition of the building is considered good. Although the brickwork shows some signs of efflorescence and may require some repointing in some sections of brickwork.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Modern screen additions to windows along the lower façade
- Ramp with steel handrail located
- Extension to southern end of building to Lumley Street
- Aluminium fixed multipaned windows replace original sash windows on building to Lumley Street

Overall, the original form and features of the building are highly intact and well-kept. The college is considered to be of high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1909

Granville College stands on land which was part of a 1,124 acre grant to Garham Blaxcell. This property was nicknamed “Dog Trap Farm”. Granville municipality grew quickly in the 1880s and 1890s, as industrialists were attracted by its road, rail and water access: the municipality also gained gas street lighting and a connection to the metropolitan water supply in this period. The railway station in Granville’s town centre had been built in 1880 to service the developing industries. Local entrepreneurs James Rayner, John Nobbs and James Niblett made their fortunes by subdividing nearby tracks of land.

One of the largest local companies at that that time was Hudson Bros, now known as Clyde Engineering. The group of engineers came from Scotland to work at Hudson Bros in 1884. One of these was James Brown who immediately began voluntary night classes with the apprentices. In January 1885 the efforts of James Brown were acknowledged by the NSW Technical Education Board and he was appointed resident master. Brown began actively canvassing for prospective students from local industry. His efforts were so successful that by 1893 he had 123 students. By 1907 there were 279 students enrolled and approval was given to build a new Technical College. Brown selected the current site in South Street, Granville.

By 1908 the State Government had acquired the land running between South and Lumley Streets for the construction of the Technical College. Previously, the Department of Technical College had been conducting classes in the School of the Arts Building since 1884 located on the Good Street. The foundation stone was laid on 30 October 1909 by the Premier C. A. Wade. The first buildings were erected by the apprentices and the College was completed by 1910, at a cost of £5,200. Teaching commenced on 29 June 1910, while the official opening was held on 15 July 1910.

During his 36 years of service, James Brown held regular social outings with his students including tennis on Saturday afternoons and helped form the first student association in New South Wales.

In 1937 V.W. Smith had commenced as Principal of Granville College. He was immediately faced with the task of building a College in William Street capable of accommodating approximately 5,000 students. The first buildings were used to train Royal Australian Air Force (RAAF) staff in Fitting and Machining during 1943-1944. During this time the College was open 24 hours each day providing training in three shifts – two for the RAAF, and one for civilian students. In 1948, H.T. Howard was appointed Principal and the activities of the College were also expanded.

At present, the Technical College Building on South Street is unoccupied.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item’s heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item’s listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Explore potential for adaptive reuse of this building in order to maintain its continued use within the community.

Curtilage Map

Statement of Significance

The shops at 82-88 South Street are of local significance for their historic and aesthetic values and are representative of a Victorian period commercial building. Built in 1883, the item is historically significant for the development of Granville's commercial town centre along South Street. The building is of historic significance as being the first commercial building built on the southern side of the railway station. The item is of aesthetic significance as an intact example of Victorian terraced commercial building that makes a positive contribution to the heritage character of Granville.

Criteria Assessment	
a) Historic	The item is of historic significance as the first commercial building constructed along South Street in 1883.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact example of Victorian terraced commercial building.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of Victorian terraced building.

Physical Description

The item consists of a row of four, two-storey plastered brick Victorian shops along the western edge of South Street. The building's façade features ornate plastered cornices below a moulded bracket under a simple parapet. The façade also featured decorative pilasters and bracket, separating each shop. The windows on the upper facade feature rendered architraves and corniced rendered brick sills. There are a mix of two paned and single paned sash windows, in which some are aluminium framed. The building features a roof clad with corrugated iron and a cantilevered awning.

The building is built to the street alignment and makes a notable contribution to the urban landscape of South Street.

The building appears to be in a good condition and well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The façade below the cantilevered awning features highly modified frontages with the inclusion of modern entrances and large single paned windows
- There is a single-storey weatherboard clad, skillion roofed addition to the rear of 88 South Street
- Contemporary advertising signage affixed to the lower façade*
- The building features a new paint scheme*

The building retains a moderate level of integrity. The item retains a more intact upper façade with much of the original decorative detailing intact. However, the overall integrity is reduced by the modified contemporary shop fronts and paint scheme.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1883

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This row of terraced shops were the first shops erected on the southern side of the railway line. Built in 1883 by John Nobbs, the commercial building was originally known as the "Victoria Buildings". This commenced the transition of commercial interest away from its proximity to Parramatta Road to develop along South Street, Granville.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**

Curtilage Map

Statement of Significance

The former Baptist Church is of local significance for its historic, aesthetic, social and representative values. The church is of historic and social significance for its continued services since 1911. The collection of buildings make an important contribution to the streetscape, in which the church is a local landmark. The church retains its aesthetic significance as a highly intact Federation period church in the Gothic Revival style. The church hall is also of aesthetic significance as an intact Inter-War building constructed in the Abstract architectural style. The associated office is a highly modified brick building that has had a series of alterations which detract from the building's overall aesthetic. The Church and Church Hall, demonstrate representative qualities as an intact Federation Period church and Inter-War church hall, built in Granville in 1911 and 1957.

Criteria Assessment	
a) Historic	The item is of historic significance for its relationship to the growing community of Granville since 1911, in which it was built to serve the growing Baptist congregation.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact Federation church of the Gothic Revival style, paired with an intact Inter-War church hall built in the Abstract architectural style. The office is highly modified and detracts from the aesthetic significance.
d) Social	The item has social significance to local Baptist community.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of multiple architectural styles specific to religious building.

Physical Description

Church
The Church is constructed of brick in a Simplified Gothic Revival style. It features render dressings, plaster decoration over windows, buttressed walls, slate roof with decorated terracotta ridge capping, porches at front and at side. The round arched windows generally retain stained glass. Rendered label moulds, string courses, copings, corbels and parapets add to the dramatic entry, with steps from South Street. A concrete ramp is located along the southern elevation. The property has a low brick boundary fence, concrete paths and lawns.

Office
An office building is adjacent to north and there are additional administrative buildings and church hall at rear. The adjacent office is a brick double storey building with a flat roof. The façade features rendered columns with a square parapet. The windows feature rendered windowsills with square cornices and arched brick lintels. The prominent window on the upper façade features a large and elaborate keystone. The window has been modified with the inclusion of a rendered brick infill supporting modern aluminium framed single paned, sash windows. Windows along the lower façade feature timber framed multipaned sash windows, with sloped brick sills. Rendered aspects of the upper façade read “Jesus Saves’ on the eastern and southern façade. An arched brick entrance is located to the south west of the building, from the southern elevation. The building has been highly modified with brickwork along upper façades used to infilled former doorways, that may have led to a balcony. The associated cornices beneath that structure are also removed. The brickwork along the lower façade is also infill.

Church Hall
The church hall is a typical Inter-War building in the Abstract architectural style which dates to the 1950s. The building is a single storey brick building with a butterfly roof. The southern entrance features a glass curtain wall, fronted by a brick planter box. The building also features a sloped brick overhanging wall. There are timber hopper windows along the eastern elevation. The building is addressed by concrete stairs.

Condition
Overall, the condition of the buildings is considered fair. There is evidence to suggest the Church building is suffering from falling damp with the brickwork showing signs of efflorescence. The slate roof shows signs of biological growth with the presence of lichen on the roof. Drainage appears to be an issue for the church and adjacent office building.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Small office building adjacent to the north
- Administrative buildings at the rear
- Lightweight security mesh is fitted to the windows
- Concrete access ramp along the southern elevation, paired with steel handrails.
- Inclusion of air conditioning units

The church is considered to have a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1911 (Church), 1957 (Hall)

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The Baptist Church commenced services in Granville, in the 1880s. A weatherboard hall in Blaxcell Street was used for services until it became too small. This building was constructed by Mr B S Whitford. In order to accommodate the growing congregation, a larger site was purchased at the corner of South and William Streets.

The foundation stone for this new church was laid on 29 April 1911 on the south side. Two other foundation stones face South Street. The builder was Mr Allan of Summer Hill. This building was opened for worship on 28 October 1911.

The former church on Blaxcell Street was sold in 1914. By 1918 all that remained of the former church was the fence and the two pines as the church hall was carefully dismantled and re-erected upon the new site behind the new church building located on South Street.

The old church hall was demolished in 1957 and replaced by a modern building which now addresses William Street. The new hall was built by voluntary labour and reused some material from the old hall.

The item remains in use as a Baptist Church.

Statement of Significance

The house at 14 Spring Garden Street, Granville is of local significance for its historic and aesthetic values, and as a representative example of a dwelling designed during the transition from Victorian to Federation period. Built c.1897, the dwelling relates to the development of Granville in response to the movement of industry away from Sydney. Today, the dwelling is readily identifiable as part of the historic building stock of the area and makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Residential Precinct. The aesthetic significance is enhanced by the similarities in age, design, use and materials with other houses along the street. The item demonstrates representative qualities of an intact Federation cottage with Victorian period elements.

Criteria Assessment	
a) Historic	The item relates to the development of Granville in response to the movement of industry away from Sydney.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant a as mixed Victorian and Federation style dwelling which makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative example of a dwelling designed during the transition from Victorian to Federation period.

Physical Description

The site contains a single storey late Victorian – early Federation villa residence constructed of machine cut bricks laid in the Flemish bond pattern. The hipped roof is corrugated iron with a projecting gable front and bullnose verandah with hip corner across the front. Chimneys are brick, with stepped corbels. Decorative features include cast iron trim to the verandah, red brick bullnose ventilator in gable, narrow eaves, and fine timber dentils outlining the gable with inverted scalloped timber barge boards. The verandah has white marble edges, Corinthian cast iron columns, cast iron brackets and frieze. Windows have rendered brick corniced sills with bracket decoration below, and skillion narrow corrugated iron awnings supported by ladder brackets and turned posts. The front door has a transom light above a Victorian style four-glazed-panel door with bolection moulds. The building has been painted on each side elevation and the foundations rendered in some areas.

The entry path has modern ceramic tiles and the front garden contains no mature landscaping. The property fence is modern.

The building appears to be in a good condition and well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Single-storey, rear extension with a flat roof
- Cyclone fence*
- Ceramic tiles to entry path*

The item appears to have a high level of integrity with much of its original detailing intact.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1897

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was built was purchased by Thomas Sheridan, a trader who operated from the British Solomon Islands, in March 1897 for 100 pounds. He died later that year and his widow mortgaged the land in July 1898, probably to either complete a house under construction or to

commence a new building. The Sands Directory for the year 1901 shows she lived in this cottage briefly before selling it and moving to Melbourne.

Today, the building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the front boundary fence should be replaced with a style which is more sympathetic towards the character of the HCA.

Curtilage Map

Statement of Significance

The semi-detached terraces at 24-26 Spring Garden Street, Granville are of local heritage significance for their historic and aesthetic values and as a representative example of Victorian Filigree terraces in the area. Built in 1884, the terraces historically relate to the early residential development of Granville that followed the industrial and commercial boom of Granville in the 1880s. The item is of aesthetic significance as an intact Victorian Filigree terrace pair that make a positive contribution to the Granville Conservation Area – Residential Precinct. This is enhanced by the similarities in age, design, use and materials with other houses in the area.

Criteria Assessment	
a) Historic	Built in 1884, the terraces historically relate to the early residential development of Granville that followed the industrial and commercial boom of Granville in the 1880s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact Victorian Filigree terrace pair that make a positive contribution to the Granville Conservation Area – Residential Precinct. This is enhanced by the similarities in age, design, use and materials with other houses in the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a Victorian period terrace.

Physical Description

The site contains a two-storey semi-detached Victorian style terrace pair. The item is constructed of painted brick with an iron hipped roof. The roof of No.24 features a brick chimney with stepped corbels, dentils and Chinese lantern pots, while the chimney of No.26 appears to be missing details and is of a simplified design and reduced in height. The roof sheeting and verandah on both terraces has been replaced. While the former verandah was a bullnose style, the current awning style is skillion. On both dwellings, the verandah retains the cast iron detailing in the brackets, frieze and balustrade upstairs, and the valance and frieze on ground floor. The brick privacy walls between each property feature a blind arch. The end walls have open Georgian style arches. The upper storey includes French doors and sash windows. The window sills are painted. The floor of the ground floor balcony has tessellated tiles. Exterior doors have a transom light over French doors with bolection mould panels below and glazed panels above.

The fence of No.24 is a double iron spearhead palisade fence with rendered brick piers with painted capping. The render along the base is in poor condition. The fence along No. 26 is timber picket topped with an acorn. No. 24 has a contemporary paint scheme, and both dwellings have air-conditioning units mounted to the exterior. Both dwellings have been extended to the rear with single-storey additions.

Both dwellings contain gardens to the front setback. The garden at No.24 is a modern, neat and well-kept landscape while the garden at No. 26 is an unmaintained garden with a range of plantings. There are no notable plantings at either property.

The pair of terraces is in fair condition, with no signs of severe deterioration other than the render along the fence base.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Single-storey rear extensions to each dwelling
- New roof cladding to the rear of the building
- Verandah awnings replaced
- Modern palisade fence
- Contemporary paint scheme*
- Air conditioning units*

The dwellings have been well maintained and, while containing some modern features, retain a high level of heritage integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1883

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the

establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling is located was purchased by Frederick Payne on 28 June 1883. Payne was a bricklayer in Granville. The dwelling was immediately constructed as the Sands Directory of 1884 indicates he was living in the residence.

The item remains in use as two private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, prepare a historic paint analysis to inform a more appropriate colour scheme.

Curtilage Map

Statement of Significance

The cottages at 28-30 Spring Garden Street are of local significance for their historic and aesthetic values, and as representative examples of Victorian semi-detached cottages in the area. Built in 1888, the item is of historic significance as it relates to the early residential growth of Granville which occurred in conjunction with the relocation of large industries to Granville between 1880 and 1930. The item is of aesthetic significance as an intact Victorian semi-detached cottage that makes a positive contribution to the Granville Conservation Area – Residential Precinct. This is enhanced by the similarities in age, design, use and materials to other houses along the street.

Criteria Assessment	
a) Historic	The item relates to the residential growth of Granville which occurred in conjunction with the relocation of large industries to Granville between 1880 and 1930.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as a Victorian semi-detached cottage that contributes to the character of Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a Victorian period semi-detached cottage pair.

Physical Description

The item consists of a single storey semi-detached Victorian cottage pair. The cottage is constructed of rendered brick with a steep hip roof with narrow eaves and decorative brackets. The roof of No.28 features a rendered brick chimney with cornice decoration. The chimney of No.30 is removed. Both dwellings have fin walls with arched recesses and verandahs with bullnose corrugated iron roofs across the front. The verandah is supported on the privacy side and centre walls and is decorated with cast iron brackets and frieze. The roof cladding for the main roof and verandah of No.28 is contemporary, as well as the flooring. No.28 features modern black and white tessellated tiles. No.30 features modern quarry tiles. Windows have rendered brick corniced sills. The front door of No. 28 is timber. No. 30 features a transom light above a Victorian timber four panel door. Dwelling No.28 is quite modified with a modern paint scheme and roof cladding. There appears to be single storey extensions to the rear of both properties.

There is no landscaping or fence fronting to No. 28, however, No. 30 contains a highly vegetated front garden with an aluminium Fleur-de-lis palisade fence. There are no significant or notable plantings.

The dwellings are well maintained and both appear to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extensions to both property
- New tiled flooring to verandahs of No. 28 and No.30.

While No. 28 is more modified than No. 30, the pair retain a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1888

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was constructed on was purchased by William Denison in 1885 for £80. Denison was a local carpenter in Granville. Although the land was purchased in 1885, it was not until c.1888 that the dwelling was constructed. Denison had to mortgage it for £150 in April 1888 to

erect a semi-detached house. Denison held on to these dwellings for many years, letting them to tenants. It was only after his death in 1910 that they were they sold by his widow. The buildings remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Statement of Significance

The house at 28 The Avenue, Granville is of local heritage significance for its historic, aesthetic and representative values. Built in 1909, the dwelling relates to the early twentieth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area and commercial growth of Granville. The building is aesthetically significant as an intact Federation period cottage with fine detailing. The building makes a positive contribution to the streetscape character of the Granville Conservation Area – Residential Precinct. This is enhanced by the similarities in age, design, use and materials with other houses along the street. The item is a representative example of quality Federation period houses built in the early twentieth century.

Criteria Assessment	
a) Historic	Built in 1909, the dwelling relates to the early twentieth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area and the commercial growth of Granville.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building is aesthetically significant as an intact Federation period cottage with fine detailing. The building makes a positive contribution to the streetscape character of the Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item is a representative example of quality Federation period houses built in the early twentieth century.

Physical Description

The dwelling is single storey Federation cottage built of brick with a deep setback fronted by a highly vegetated garden area. The dwelling is of a typical symmetrical form, with iron hipped roof and bell-shaped verandah. The roof construction is a broken back hip, re-clad with corrugated iron. The roof also features two tall rendered, ashlar brick chimneys with cornice decoration. The verandah has an Ogee corrugated iron roof with centrally placed projecting gabled pediment over the entrance. The verandah is supported on Corinthian cast iron columns, cut off to sit on rendered brick piers and balustrade, and has decorative gable infill over the entrance with cast iron frieze under the eaves only. The verandah floor is tiled with contemporary square tiles that extend along the front steps. The brick walls on the front façade suggest the building was originally tuck pointed (as shown above the verandah). Exterior doors have transom light over French doors, now modernised, flanking the front entrance door. The front door also features a transom light above the Victorian-style four panel door with upper panels glazed. The fence is timber, narrow post and rail. A modern speared headed balustrade fence is located to the north of the house. A modern lamp post is located along the entry path. The dwelling has been extended to the rear.

The front setback of the dwelling is heavily landscaped, containing a mature hedge along the front fence and other recent plantings such as a frangipani tree. A mature gum tree appears to be located in the rear yard. A concrete driveway runs along the northern boundary of the site and is enclosed by a palisade style gate.

The building has been well maintained and is considered to be in a good condition with no notable deterioration.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extension
- Roof re-clad with corrugated iron
- Contemporary spear headed fence across driveway
- Modern tiling along verandah floor and front steps*

While the dwelling has undergone some modifications, the overall form and detailing of the dwelling remains intact. The dwelling therefore has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1909

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was built was bought by James Bellenger, a local farmer from Fairfield, in September 1885. The land was purchased for £260. Bellenger did not erect anything on this site until the improvement of economic conditions of the 1900's made it an attractive investment. The building was constructed between 1909 and 1910. While Bellenger lived on Jamieson Street the dwelling was quickly let to Reverend Arthur Waldock, a Baptist Minister. Bellenger's will dated May 1910 and stated the property was to be bequeathed it to his daughter Betsy. The property remains in use as a private residence.

Curtilage Map

Statement of Significance

The house at 36 The Avenue, Granville is of local heritage significance for its historic and aesthetic values, and as a representative example of quality Victorian-period vernacular houses built in Granville. Built in the mid-1870s, the dwelling is historically linked with the early population growth of Granville that followed the Drainwell Estate subdivision and subsequent relocation of large industries to Granville between 1880 and 1930. The dwelling is aesthetically significant as a well-kept Victorian residence with fine detailing to the roof, window and verandah elements. The house makes a strong and positive contribution to the character of the Granville Conservation Area – Residential Precinct. This is enhanced by the similarities in age, design, use and materials with other houses along the street.

Criteria Assessment	
a) Historic	Built in the mid-1870s, the dwelling is historically linked with the early population growth of Granville that followed the Drainwell Estate subdivision and subsequent relocation of large industries to Granville between 1880 and 1930.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling is aesthetically significant as a well-kept Victorian residence with fine detailing to the roof, window and verandah elements. The house makes a strong and positive contribution to the character of the Granville Conservation Area – Residential Precinct. This is enhanced by the similarities in age, design, use and materials noted amongst other houses along the street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a quality Victorian-period vernacular house.

Physical Description

The dwelling is a single storey rendered brick Victorian residence with a hipped corrugated iron roof with narrow eaves. The front facade is symmetrical with sash windows and two rendered chimneys with ashlar markings. The roof features skylights at the rear and a whirly bird. The verandah has a timber floor with rolled sandstone edges, paired timber posts set on rendered ashlar brick piers, and Sunray-pattern-incised timber brackets. There are multiple glazing bars are at each end of the verandah, with no glass infill. Windows have curved arches and sills of painted sandstone. The front door has a stained glazed transom light and sidelights above Victorian timber two panel door with bolection mould. Fence is a timber, acorn top picket fence with matching gate. The building has several rear extensions built to a low scale.

The building retains a prominent position on the corner of The Avenue and Hewlett Street. The landscaping contains some mature planting at the rear of the property. A large tree shelters the front setback of the dwelling but is located within the public domain along the street. A concrete slab has been provided to the side and rear of the dwelling.

The dwelling has been well maintained and therefore the condition of the building is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear single-storey extensions
- Skylights
- Whirly bird
- Modern colour scheme*
- Concrete slab*

While the dwelling has undergone some modifications, the overall form and detailing of the dwelling remains intact. The dwelling therefore has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1877

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the

workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which the dwelling is located was purchased by William Adams, a painter employed by Lyons & Collier, in 1877. Adams purchased the land through an auction on the 3 February 1877. A dwelling was constructed almost immediately. By 1878 Adam was occupying the land, when he signed a petition requesting that a school be established in Granville. The house was also shown on an auction plan of September 1880. The item remains in use as a private residence.

Curtilage Map

Statement of Significance

The dwelling at 42 The Avenue, Granville is of local significance for its historic and aesthetic values, and as a representative example of an early Victorian period residence with Italianate features. Built in 1883 in conjunction with 4 Hewlett Street, the dwelling historically relates to the development of Granville in response to the movement of industry away from Sydney and the subdivision of the Drainwell Estate. The dwelling has some aesthetic significance through its overall form and evident Italianate features. It has additional aesthetic significance in Granville for its contribution to the streetscape character, enhanced by the similarities in age, design, use and materials between this house and the near-by identical house at 4 Hewlett Street. Today, the dwelling is readily identifiable as part of the historic building stock of the area and makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Residential Precinct.

Criteria Assessment	
a) Historic	Built in 1883, in conjunction with 4 Hewlett Street, the dwelling historically relates to the development of Granville in response to the movement of industry away from Sydney and the subdivision of the Drainwell Estate.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has some aesthetic significance through its overall form and evident Italianate features. It has additional aesthetic significance in Granville for its contribution to the streetscape character, enhanced by the similarities in age, design, use and materials between this house and the near-by identical house at 4 Hewlett Street. Today, the dwelling is readily identifiable as part of the historic building stock of

	the area and makes a positive contribution towards the aesthetic character of the Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of an early Victorian period residence in the area with Italianate features.

Physical Description

The site contains a single storey Victorian residence with a gabled slate roof, projecting gable front over a bay window and one (of two) surviving rendered brick chimneys with cornice decoration. The walls are rendered to the front with plaster mouldings and painted brick the side elevations. The corrugated iron verandah roof is hipped in one corner and supported on two decorative cast iron posts. One post has lost the central decorative component. The verandah floor is made of concrete. The bay window has a corniced parapet in an Italianate style and a flat roof. Windows have rendered corniced brick sills with bracket decoration below and rounded brick arches (above side and bay windows). The front door is a Victorian style four panel door with bolection moulds. The dwelling has been extended several times at the rear, though this is not visible from the street.

There are several mature plants on the wider property which extends up to Hewlett Street, though none of them are considered to be historic plantings. A large Frangipani is in front of the house. The fence in front of the dwelling is modern metal pool style fencing, while the remainder of the site is surrounded by unpainted timber slat fencing.

This building almost identical with 4 Hewlett Street as both buildings mirror each other with the corner of Hewlett Street and The Avenue as the axis. The key differences are the loss of the timber fretted open scroll barge boards and finial with faceted bay below, as well as the loss of tessellated verandah tiling on 42 The Avenue.

Overall, the condition of the dwelling is good, though there is some cracking to the render on the façade.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear single-storey extension to the rear, containing one section built in weatherboard
- Solar panels to the rear extension
- Flyscreens to windows
- Metal loop fence*
- Pool fencing*

While the dwelling has undergone some modifications, the overall form and detailing of the dwelling remains intact. The dwelling therefore has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1883

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was built was purchased on 30 March 1883 by Henry Sargent Winter, a builder from Newtown, who may have possibly built the Royal Hotel in Granville. He mortgaged the land on 20 April 1883 to finance the building of this dwelling and its twin which is located at 4 Hewlett Street. By October, the houses were complete, though Winter made several unsuccessful attempts to sell them. On 16 May 1884, the mortgagee sold the houses by auction to Coates & Harper, timber merchants of Parramatta. Today, the building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the front boundary fence should be replaced with a style which is more sympathetic towards the character of the HCA such as timber picket.

Curtilage Map

Statement of Significance

The pair of conjoined residences at 52 and 54 The Avenue, Granville is of local heritage significance for its historic, associative and aesthetic values, and as a representative example of Victorian period terraces in the local area. Built c. 1876, the dwellings relate to the early development of Granville in response to industrial activity such as Clyde engineering works. The dwelling is associated with John Raynor, one of the major speculators and promoters of Granville in the 1880s. It has additional significance as part of the Granville Conservation Area – Residential Precinct, being readily identifiable as part of the historic building stock, very prominent in the streetscape and contributes positively to the overall streetscape character of the Conservation Area. This is enhanced by the similarities in age, design, use and materials with other houses in the area.

Criteria Assessment	
a) Historic	The item relates to the early development of Granville in response to the movement of industry away from Sydney, in particular the establishment of the Clyde engineering railway works.
b) Associative	The item is associated with John Raynor, one of the major speculators and promoters of Granville in the 1880s.
c) Aesthetic/Technical	The item is a prominent terrace pair which contributes positively to the overall streetscape character of the Granville Conservation Area – Residential Precinct. This is enhanced by the similarities in age, design, use and materials with other houses in the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a Victorian period terraces.

Physical Description

The site contains a pair of semi-detached, two-storey Victorian period terrace houses located on lots which have fronts to The Avenue and a driveway accessed via Daniel Street. Both houses have street facing verandahs and balconies, gable roofs as the primary roofs, skillion roofs to the balconies, arched openings to side walls, privacy wall between the verandahs and balconies, and double leafed French doors to the ground and first floors, and single leafed entrance doors with transoms. The property is bound by aluminium cyclone wire fence and metal gates.

54 The Avenue is a painted brick building with corrugated metal sheeting to the gable and skillion roofs, metal filigree balustrade to the balcony, a curved concrete verandah with a contemporary low metal balustrade, and a polychromatic brick chimney located at the centre of the roof ridge line.

52 The Avenue has tuck-pointed brickwork, Marseilles look-alike metal pressed tiles to the gable and skillion roofs, metal filigree balustrades to the balcony and verandah, sandstone blocks to the front verandah, metal awnings to the side windows and timber plantation shutters to the French door opening onto the verandah. There is also single storey extension to the rear.

Along the Daniel Street access to the property, there is a brick garage with corrugated metal skillion roof along Daniel Street. The property features a deep setback that has not been consistently applied to the other buildings along the street. This is fronted by a grassed lawn with no significant plantings.

Overall, the dwellings have been well maintained and are in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- 53 - Curved concrete verandah*
- 52 - Chimney missing*
- 54 - Single storey extension and brick garage to the rear
- Both items - Junction boxes to verandahs
- Steel weldmesh fence to property boundary*

While the dwelling has undergone some modifications, the overall form and detailing of the dwelling remains intact. The dwelling therefore has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1876

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the

appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

One parcel of land associated with the current terrace pair was purchased on 3 December 1875 by Harry Richardson, a railway clerk of Parramatta. The second was purchased by John Raynor, who became one of the major speculators and promoters of Granville in the 1880s. The terrace pair were built across the two parcels of land in 1876. Both Raynor and Richardson mortgaged the land to build their properties. When they were unable to repay the loans the mortgagees sold their properties. Today, the buildings remain in use as private residences.

Curtilage Map

Statement of Significance

The dwelling at 58 The Avenue, Granville is of local significance for its historic, associative, aesthetic and representative values. Built c.1883, the dwelling relates to the early development of Granville with the appearance of new industries, housing, shops and businesses from the 1880s onwards. The item is specifically associated with William Thackeray, one of the major builders in early Granville. The dwelling has substantial aesthetic significance as a Victorian period mansion with fine and unique detailing. It has additional aesthetic significance as part of the Granville Conservation Area – Residential Precinct, being a highly prominent, well-kept and attractive building that contributes positively to the overall streetscape character of the Conservation Area. The item has unique features and materiality for the area but is also representative of the Victorian era style of architecture.

Criteria Assessment	
a) Historic	Built c.1883, the dwelling relates to the early development of Granville with the appearance of new industries, housing, shops and businesses from the 1880s onwards.
b) Associative	The item is specifically associated with William Thackeray, one of the major builders in early Granville.
c) Aesthetic/Technical	The dwelling has substantial aesthetic significance as a Victorian period mansion with fine and unique detailing. It has additional aesthetic significance as part of the Granville Conservation Area – Residential Precinct, being a highly prominent, well-kept and attractive building that contributes positively to the overall streetscape character of the Conservation Area.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item has unique features and materiality for the area but is also representative of the Victorian era style of architecture.

Physical Description

The single storey brick dwelling is of an asymmetrical configuration with a hipped roof, a projecting gable to the street front and two gables along the northern façade. It has a verandah along the east and north facades of the building. The building is constructed of tuck-pointed speckled brick walls with sandstone quoins to the street facing facades and slate roofs with terracotta capping. Notable elements include a projecting gable facing The Avenue which comprises a sandstone clad bay window with a decorative sandstone parapet and curved scalloped timber barge boards to the gable. The verandah has timber flooring, a slate skillion roof which is an extension of the main roof, timber posts to The Avenue façade, and a series of exposed brick columns placed equidistant along the northern façade. Other features include a sandstone boundary wall with cast iron palisade fence and gates, three rendered ashlar chimneys with brick corbelled tops, windows with sandstone sills, front door with transom and half-sidelights.

A modern carport has been constructed to the north of the dwelling, set back behind the front building line to reduce the visual impact. The rear of the dwelling has also been extended and modified significantly as shown on the aerial imagery.

There is a formal and well-maintained garden in the front yard which features a hedge and a mature tree that both contribute towards the heritage character of the place.

Overall, the dwelling is in good condition. Some brickwork is in need of repointing, the sandstone boundary fence shows signs of deterioration and the timber barge board to the gable end exhibits signs of water damage.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Brick columns to northern façade
- Extended and modified to the rear
- Modern carport to driveway

The overall form and detailing of the dwelling remain highly intact.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1883

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was built was purchased as vacant land by William Thackeray, one of the major builders in early Granville, in April 1883. He began building immediately with money obtained by mortgage. He moved from North Annandale to occupy the house where he was in residence by 1884. He made a number of attempts to sell the house, the first being in February 1886. The house was finally sold off by the mortgagees. Thackeray was the builder of St Marks Church in Jamieson Street.

The dwelling was owned by the following people between 1897–1998:

- 10.8.1897: Susan Ritchie bought house
- 22.3.1919: title transferred to Elizabeth Meluish wife of Henry Dutton Meluish
- 25.2.1925: Permanent Trustee Co. NSW
- 15.1.1926: Permanent Trustee Co. NSW from Luke Bullock of Bodangara.
- 28.6.1927: Transfer from Luke Bullock to Baptist Union of Australia
- In private ownership since 1934.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- A Conservation Management Plan should be prepared for this dwelling to understand in greater detail the history and significance of the place, as well as how to manage change and monitor conditions of the site.

Curtilage Map

Statement of Significance

The dwelling at 60 The Avenue, Granville is of local significance for its historic, associative and aesthetic values, and as a representative example of a high-quality Victorian residence in the area. Built in 1892, the dwelling relates to the early residential development of Granville in response to industrial activity in the wider area, in particular the Clyde engineering works. The dwelling is specifically associated with Thomas Irons, an engineer who was long associated with the Clyde Engineering Works. The item has high aesthetic significance as a well-kept and prominent dwelling in the streetscape which has unique form, features, detailing and materiality for the area. It is one of a kind in Granville. This aesthetic significance has a particularly high bearing on the significance of the Granville Conservation Area – Residential Precinct, contributing positively to the character of the area. While the item has unique characteristics, the item is also representative of Victorian design.

Criteria Assessment	
a) Historic	Built by 1892, the dwelling relates to the early residential development of Granville in response to industrial activity in the wider area, in particular the Clyde engineering works.
b) Associative	The item is associated with Thomas Irons, an engineer who was long associated with the Clyde Engineering Works.
c) Aesthetic/Technical	The item has high aesthetic significance as a well-kept and prominent dwelling in the streetscape which has unique form, features, detailing and materiality for the area. It is one of a kind in Granville. This aesthetic significance has a particularly high bearing on the significance of the Granville Conservation Area – Residential Precinct, contributing positively to the character of the area.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	While the item has unique characteristics, the item is also representative of Victorian design.

Physical Description

The single storey Victorian period house has an asymmetrical layout, half-hipped roof, projecting gable to the street front, and verandah along the east and north facades of the building. There is a room in the half-hipped section of the roof, with two double hung sash windows overlooking the front yard of the property. The house is constructed of shiplap weatherboard, with a mix of feather edge and diagonal pattern weatherboards to the projecting gable, diamond-shaped asbestos-cement tiles to the roof with terra-cotta ridge capping and finials. The projecting gable comprises geometric fretwork resting on simple brackets, timber shingle to the gable end, and original stained glass to the transoms above windows. The verandah has a ceramic tiled floor (with the former listing stating that it replaced the original timber floor), fluted tapered timber posts, and simple arched timber valences. The verandah is covered by metal pressed tiled skillion roofs. Other features include brick chimneys with corbelling to the top end and paired pots, and panelled brickwork to the chimney stacks. Windows include a mix of double hung sash, fixed and multi-paned windows with timber sills and timber surrounds, and the front door has small leadlight panels in top of timber door. The property fence is a low wall of rustic sandstone.

There are multiple buildings on this property including a half hipped exposed brickwork cottage, and a hipped roof structure and carport which can be seen from the paved area to the front.

There is very little landscaping to the front setback, with a single hedge lining the sandstone retaining wall adjacent to the footpath.

The building is being used as part of a daycare centre, connecting to the neighbouring building at 62 The Avenue.

Overall, the dwelling is in good condition with no signs of deterioration. Some sandstone blocks to the retaining wall have been subject to some movement and have lost their mortar in the process.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Metal pressed tiles to verandah roof
- Skillion addition to the rear
- 1970s face brick building with Federation style detailing constructed to the south of the site*
- Carport connected between 1970s building and Victorian dwelling*
- New paved carpark provided to connect the 1970s building and Victorian dwelling*
- Timber valances to verandah
- Air-conditioning unit to southern façade*

The dwelling itself is highly intact and well-kept, though the rear yard appears to have undergone several changes to account for the new use of the site.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1892

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was built was purchased in October 1891 by Ralph and Harry Richardson. The land was immediately mortgaged to provide 500 pounds to build this house. Another 120 pounds was then obtained to complete the house. The Richardsons offered it for sale on 19 May 1893 and it was soon sold to Thomas Irons, an engineer who was long associated with the Clyde Engineering Works. Some years later, the Richardsons instigated the construction of a holiday cottage at Thirroul, called "Wyewurk". In later years, D. H. Lawrence, wrote his novel, *'Kangaroo'* in Wyewurk.

The dwelling was owned by the following people between 1892-1932:

- 1892: (SEE Railway Street) Starkey, Mrs ?
- 1909: (SEE Railway Street) Irons, Thomas J.P.
- 1910: (SEE Railway Street) Irons, Thomas " Blenheim"
- 1915: (SEE Railway Street) Irons, David " Blenheim"
- 1918: Irons, Mrs D.
- 1920: Bezsant, Albert J.
- 1924: Bezsant, Alfred
- 1932: "Castle Maison' Private Hospital, Miss B.S. Cassells matron

At present the building is used as part of a daycare centre, connecting to the neighbouring site at 62 The Avenue.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- A Conservation Management Plan should be prepared for this site to understand in greater detail the history and significance of the place, as well as how to manage change and monitor conditions of the site.

Curtilage Map

Statement of Significance

The house at 66 The Avenue, Granville is of local significance for its historic, associative and aesthetic values, and as a representative example of a quality Federation Arts and Crafts bungalow in the area. Built c.1915, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area. It is also significant as the house of Gideon Patten who operated a large grocery store in Granville. The dwelling has aesthetic significance as fine example of a Federation Arts and Crafts bungalow with fine detailing and materiality. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes positively to the overall streetscape character. The significance of this dwelling is enhanced by the similarities in age, design, use and materials with other houses in the area.

Criteria Assessment	
a) Historic	The item relates to the twentieth development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item is associated with Gideon Patten, a known local grocer of Granville.
c) Aesthetic/Technical	The dwelling has aesthetic significance as fine example of a Federation Arts and Crafts bungalow with fine detailing and materiality. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes positively to the overall streetscape character. This significance of this dwelling is enhanced by the similarities in age, design, use and materials with other houses in the area.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a quality Federation Arts and Crafts bungalow.

Physical Description

The building is a single storey Federation bungalow with tuck-pointed red brickwork and Marseilles tiled roof with exposed rafters. It has a hipped roof with two projecting gables – one forming the entrance and the other with a bay window, and a verandah between the two gables. The gable ends are comprised of arched timber pediments with painted timber shingles, and the entrance gable has a timber archway with timber posts and slatted fretwork, with the bay window containing leadlight transoms to arched casement windows. The verandah has curved timber arches between timber posts set on brick piers and a balustrade with bullnose coping, and Marseilles tiled skillion roofs extending off the main roof. There are two roughcast rendered brick chimneys with brick coping and chimney pots. The brick bullnose arch leads to front entrance with leadlight transom light and sidelights. The timber door is high waisted with decorative trapezoidal glazed pane, three small panels across a lock rail and three long panels with bolection moulding below. Cantilevered casement windows with corniced architraves along the side elevation have sloping bullnose brick sills. There is a weatherboard extension to the rear of the property. As per the former listing, “The house has an elaborate plan, unusual for this area”.

Wrought iron panels set in low brick walls and piers form the front fence with decorative wrought iron gates. There some significant landscaping to the front and sides of the property, specifically the three mature gum trees which screen views of the dwelling from some parts of the street.

Overall, the property is in good condition, though the wrought iron fence to the front of the property is heavily corroded.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Weatherboard extension to rear
- Canvas sheet over carport

The dwelling retains its original form and features, and therefore appears to have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1915

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell’s commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as ‘Granville’, in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the

Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was constructed was purchased in October 1902 by Ellen Patten, wife of Gideon Patten who operated a large grocery store in Granville. Building construction started in 1915 when the land was mortgaged to erect this house. The Sands Directory identifies that the Patten couple lived in the house until 1932. In 1958, the Baptist Church manse at 76 The Avenue was sold and 66 The Avenue later purchased. This Church sold 66 The Avenue in 1978.

At present the dwelling remains in use as private residence.

Statement of Significance

The dwelling at 74 The Avenue, Granville is of local significance for its historic and aesthetic values, and as a representative example of a Federation style cottage in the area. Built c.1915, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area. It is also significant as the house of Howard Llewellyn Patten who operated a large grocery store in Granville. The dwelling has aesthetic significance as well-kept example of a Federation cottage with a classic form and fine detailing. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes positively to the overall streetscape character. The significance of this dwelling is enhanced by the similarities in age, design, use and materials with other houses in the area.

Criteria Assessment	
a) Historic	The item relates to the twentieth development of Granville in response to the movement of industry away from Sydney between the 1880s – 1930s.
b) Associative	The item is associated with Howard Llewellyn Patten who operated a large grocery store in Granville.
c) Aesthetic/Technical	The dwelling has aesthetic significance as well-kept example of a Federation cottage with a classic form and fine detailing. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes positively to the overall streetscape character. This significance of this dwelling is enhanced by the similarities in age, design, use and materials with other houses in the area.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a Federation style cottage.

Physical Description

The dwelling, located on a corner site, is a single storey Federation house. It has with tuck-pointed red brickwork set on a roughcast rendered base, and a Marseilles tiled hipped roof with projecting gables to the street facing sides. The gable facing The Avenue has a timber and roughcast gable end with three casement windows containing coloured panes and transoms underneath. A corrugated metal awning supported on timber fretwork brackets covers the windows. A skillion roof extends off the main roof cover the verandah, which stretches between the two gables. The verandah is supported by paired timber posts set on brick piers and a curved balustrade with rendered coping. Other notable elements include decorative curved timber brackets to the verandah, roughcast render to the entrance steps, two roughcast rendered chimneys with brick corbelling and chimney pots. The front door has a transom and half-sidelight with leadlight decoration, a timber five panelled door leaf with three glazed panels above lock rail and thee vertical timber panels below. Additions include a skillion brick extension to the rear and a fibre cement panelled, gable roofed garage off William Street.

There is a timber picket fence surrounding the property, partly set on a low brick wall along The Avenue. A matching gate provides access to the property from the corner of the two roads via a timber gabled entry pergola. There is heavy vegetation along William Street and to the corner of the two roads, though there are no significant or notable plantings.

Overall, the condition of the building is good, although there are signs of structural movement with cracking in the brickwork.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear skillion extension
- Garage provided off William Street
- Picket fence to property and pergola

The dwelling has been well maintained as a heritage item and retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1915

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the

establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was constructed was purchased in 1911 by Howard Llewellyn Patten who operated a large grocery store in Granville. The site was mortgaged in February 1912 to erect this building. Directory records show that he lived in this dwelling until at least 1932. The item remains in use as a private residence.

Curtilage Map

Statement of Significance

The dwelling at 83 The Avenue, Granville is of local significance for its historic, aesthetic and representative values. Built in 1912, the item is historically linked to the early residential development and subdivision of Granville that occurred in conjunction with the relocation of large industries to Granville between 1880 and 1930. The item has aesthetic significance as a Federation style dwelling with a fine form and extensive decorative timber detailing. Although this detailing has been added to over time, the dwelling still contributes positively towards the heritage character of Granville and demonstrates representative qualities as an intact Federation cottage built by local builders and craftsmen in 1912.

Criteria Assessment	
a) Historic	The item has historic significance as relates to the early residential development and subdivision of Granville that occurred in conjunction with the relocation of large industries to Granville between 1880 and 1930.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as a Federation style dwelling with a fine form and extensive decorative timber detailing. Although this detailing has been added to over time, the dwelling contributes positively towards the heritage character of Granville.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of the Federation style.

Physical Description

The single storey weatherboard residence features a hipped corrugated iron roof with two projecting gables. The roof also has a tall face brick chimney with brick corbels and two Chinese lantern pots. The projecting gables feature decorative spindle ladder gable screens, tall finials and fine timber barge boards. The return verandah to the projecting gable has a bullnose corrugated iron roof, hipped corner, and ornate timber lattice balustrade between timber posts with open scroll timber brackets set on decorative stops. The verandah flooring contains modern tiles. The windows retain original timber corniced sills and open scroll design under sills. A skillion awning is covered over the front sash window with security screen. The exterior doors have transom light and side lights flanking a five panelled timber door with three upper panes provided in coloured glazing.

Adjacent to the dwelling, and visible from The Avenue, is a small timber board building likely used as a shed or storage space.

The rear of the property includes a highly modified brick structure. The structure is rendered and painted, with a new roof construction that detracts from the original form of the building.

The fence is a tall timber acorn picket set on brick foundation with matching gate and lynch gate. The surrounding landscape is highly modified and consists of modern paving.

There are no plantings on the property.

The dwelling has been well maintained and is in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Skillion brick extension to the rear
- A skillion weatherboard addition to the side*
- Contemporary security screen fronts all windows*
- Steel security grill on front door*
- Contemporary paving surrounding the building to its north, south and west*
- Modern tiles to verandah*

Due to a range of alterations and additions, the dwelling and its setting have moderate heritage integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1912

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the

Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling is located was purchased by Elizabeth Olfen, wife of Charles Olfen, wagon builder of Granville in the early twentieth century. This dwelling was erected shortly afterwards and is depicted on a plan dated March 1914. The item remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X

Curtilage Map

Statement of Significance

The dwelling at 85 The Avenue, Granville is of local significance for its historic, associative and aesthetic and representative values as a high-quality Federation Queen Anne Bungalow. Built in 1910, the building has historical significance as the former residence of Henry Alfred Membrey, a known local resident who became Mayor of Granville in 1922. The building is of aesthetic significance as a highly intact and well detailed Federation Queen Anne Bungalow with a significant garden landscape that makes a strong contribution to the residence and heritage character of Granville. The building demonstrates representative qualities of an intact and high-quality Federation Queen Anne Bungalow.

Criteria Assessment	
a) Historic	The item has historic significance as the former residence of the 1922 Mayor of Granville, Henry Alfred Membrey which was constructed in 1910.
b) Associative	The item is associated with the 1922 Mayor of Granville, Henry Alfred Membrey.
c) Aesthetic/Technical	The building is of aesthetic significance as a highly intact and well detailed Federation Queen Anne Bungalow with a significant garden landscape that makes a strong contribution to the residence and heritage character of Granville.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The building demonstrates representative qualities of an intact and high-quality Federation Queen Anne Bungalow.

Physical Description

The single storey brick Federation Queen Anne style residence features a gablet hip roof with a projecting gable to the west, and a large hip projecting to the north. The roof is clad in terracotta tiles with terracotta ridge capping and terracotta ram horn finials. The roof also has a tall face brick chimney stack with brick corbels and a terracotta chimney pot. A skillion verandah roof extends from the main roof and around corner to a projecting gable and hip. The verandah is supported on fluted Corinthian columns with an ornamental timber valance beneath exposed rafters set between the columns. The verandah floor contains large ceramic tiles. The brickwork features two courses of arched dark brick string courses above window heads and corniced rendered brick sills with open scroll decoration below sills. Other decorative elements include roughcast render in gable and timber strap work. Exterior doors have Queen Anne arch transom light with leadlight decoration and timber door leading onto verandah.

The property fence is a low-lying structure constructed of red brick with a row of decorative Besser blocks below brick coping and with a wrought iron gate. Encapsulated by the fence is a significant garden landscape that features a variety of mature plantings and a concrete path winding through. This feature contributes highly towards the significance of the dwelling.

The dwelling has been well maintained and the condition of the building is therefore good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Flat and pitched rear additions
- Contemporary ornate steel security grills are affixed to windows along the north elevation*
- The west elevation features an aluminium framed window*

The dwelling retains its form and decorative features and has high integrity as a result.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1910

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This land was bought in 1909 by Henry Alfred Membrey, foreman boilermaker employed at Clyde Engineering Works. Membrey served Granville Council as an Alderman for many years from 1914, and as Mayor in 1922-23. This Federation Queen Anne Bungalow was built in 1910 and financed by three mortgages. The dwelling was extant by March 1914, when it was marked on a survey plan. The item remains in use as a private residence.

Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Transport - Land	

Curtilage Map

Statement of Significance

The Stone Bridge on The Avenue is locally significant for its historic and aesthetic values. The bridge is fine representative example of sandstone bridges constructed during the 1890s. Built in 1897, the bridge directly relates to the development of the Granville municipality and provides evidence of the role of local government in municipal works. The bridge is also significant for its association with a former Mayor, John Palmer. The bridge presents a highly intact and aesthetic structure.

Criteria Assessment	
a) Historic	The item relates to the development of Granville municipality and provides evidence of the role of local government in municipal works.
b) Associative	The item significant for its association with former Mayor John Palmer.
c) Aesthetic/Technical	The item is a highly intact and aesthetic structure.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of sandstone bridges constructed during the 1890s.

Physical Description

The sandstone road bridge carries the road The Avenue over a concrete channel of Duck Creek. The bridge is built from rusticated sandstone masonry blocks to form sandstone abutments and a sandstone parapet with a brick arch. The sandstone parapet is approximately six courses high and capped with a slender rusticated sandstone block. The sandstone coping on the eastern side features an inscription that reads: *John Palmer J.P. Mayor 1897*. The bridge appears to have been repointed on the parapets facing the road. The mortar features very strong, clear lines that are similar to tuckpointing. The mortar appears to be a stronger material than traditional lime-based mortar and therefore may contain concrete in the mortar mix.

The bridges approaches are framed either side with a timber post and panel fence. A concrete footpath is situated along the western edge of the bridge. The bridge is located in the centre of a moderately residential and urban area and set within a landscape that features is highly overgrown vegetation.

Overall the condition of the bridge is good. However, further research is required to ensure a cement mortar has not been used to repoint the sandstone masonry which will ultimately deteriorate the sandstone.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Repointed mortar joints, potentially using concrete, of the inner parapet walls that face the road*

The repointing of the bridge and the potential use of concrete in the place of lime-mortar detracts from the overall significance of the building. Nonetheless, as the bridge retains its original and significant fabric, the integrity of the bridge is high.

Integrity	**High**	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	1897

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

Throughout the 1880s and 1890s, several major roads through area were officially aligned and gazetted, which enabled better access of the district. With the increased population of Granville during this period came the greater demand for better roads and bridges. The improvement committee of

Granville advocated for the repair of kerbing, roads and bridges. The borough was noted for having many timber bridges in a highly dilapidated state.

The sandstone bridge along The Avenue was built in 1897 by labourers employed by the Borough of Granville and replaced an earlier wooden bridge over Duck Creek. Fowlie claims it was built by men with no training and is thus a true vernacular structure. The structure makes use of sandstone masonry of a variety of sizes. The bridge remains in use today by vehicular and pedestrian traffic.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	X
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the sandstone bridge should be repointed using mortar. Prior to re-pointing works, mortars are required to be sampled and tested for its constituents by an appropriately qualified heritage trades specialist to confirm colour and texture before proceeding with re-pointing works. Mortars should match the colour and composition of earliest known mortar relevant to the building or element.

Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Revised Curtilage recommended – refer below.

Statement of Significance

The Trongate Victorian Group is of local significance for its historic association with the subdivision of New Glasgow Estate, specifically for workers of the Hudson Brothers Engineering company. Built c.1891, the cottages and terraces are of historical significance for their direct association with the subdivision of land for the Hudson Brothers Engineering works. The dwellings are highly modified and therefore no longer representative of early workers cottages and terraces created in conjunction with the establishment of large industries in Granville. The item exemplifies the impact of the early engineering works on the early residential development of Granville.

Criteria Assessment	
a) Historic	Built in c.1891, the cottages and terrace are of historical significance for their direct association with the subdivision of New Glasgow Estate for workers of the Hudson Brothers Engineering Company.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The item consists of five Victorian two-storey terraces.

The dwellings at No.98 and No.96 consists of a two-storey Victorian semi-detached terrace. The dwellings are painted brick with gabled roofs and skillion verandah clad in Marseilles tiles. The verandah roof of No.96 is removed. Both feature cast iron frieze and spandrels to both floors between privacy walls, however, have largely modified balcony balustrades. No original windows along the front façade of No.98 and No.96 remain. Both feature contemporary aluminium framed windows on the upper and lower façade with contemporary flyscreens and security grills. Other alterations include a concrete slab which fronts No.96, with a contemporary steel fence and gate. No.96 features a masonry brick boundary fence with decorative concrete bricks.

The dwellings at No.94, No.92 and No.90 consist of a row of three two-storey Victorian semi-detached terraces built to the footpath alignment. The dwelling set is rendered brick with a gabled roofs and skillion verandahs clad in Marseilles tiles. A rendered brick chimney with a string cornice is located at the ridge peak of No.94. The verandahs feature brick privacy walls with decorative brackets. The verandah of No.94 features non original cast iron lacework balcony inserts and brackets. The upper façade features a modified door on the balcony with a contemporary security door framed by shutters. The windows have been replaced with aluminium framed windows. No.94 is fronted by a steel fence set on sandstone plinth and gate with arrowhead inserts.

No.92 is a highly modified terrace. The upper balcony has been infilled and enclosed with fibro sheeting and aluminium windows. The lower façade is rendered brick and retains no notable features. The window and door have been replaced with contemporary fabric. The verandah floor is clad in tiles and retains a modern steel fence.

No.90 is also highly modified. The facade features modified windows and doors, as well as a contemporary balcony balustrade with a fibro fascia. The fence at No.90 is of rendered brickwork with a steel rail and gate. A newer terrace has been built to the north of No. 90 and shares a party wall with the property.

There are no significant plantings associated with terrace houses, nor is there a consistent set back to the buildings within the streetscape.

Overall the condition of the group is considered to be fair. No.94 shows signs of dilapidated metal inserts that are corroding as well as peeling paint from render. Paint is also peeling at No.92 and the fibro sheeting is in a poor condition.

Condition	Good	**Fair**	Poor

Alterations and Additions

No. 90

- Contemporary rendered brick fence with aluminium gate*
- Aluminium framed windows*
- Contemporary balcony balustrade*
- Fibro fascia to balcony*
- New roof cladding
- New terrace built into the north wall of No. 90*

No. 92

- Upper balcony infilled and enclosed with fibro sheeting*
- Aluminium framed windows*
- Modern door and flyscreen*
- Verandah floor clad in tiles*

- New roof cladding

No. 94

- Contemporary steel fence*
- Contemporary cast iron lacework balcony inserts and brackets
- Modified door on balcony with contemporary security and shutters
- Aluminium framed windows*
- New roof cladding

No.96

- Contemporary a masonry brick boundary fence with decorative concrete bricks*
- Verandah roof to balcony removed*
- New balcony balustrade
- Contemporary windows with aluminium flyscreens*
- Concrete slab to front
- New roof cladding

No. 98

- Contemporary steel fence*
- New balcony balustrade
- Modern windows with steel security grills*

The condition and integrity of the two-storey terraces is compromised by the inclusion of unsympathetic alterations to the building façade and the intrusive terrace built to the north of No. 90. The integrity of the item is considered low.

Integrity	High	Moderate	**Low**

** element detracts from the overall significance of the place*

Historical Notes	
Construction years	c. 1891

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which the heritage item is located is associated with this period of industrial development that brought the higher employment opportunities to Granville and created the demand for housing. Notable amongst these new estates was the New Glasgow Estate, located on the land near Clyde for the Hudson Brothers Engineering company. This subdivision was offered for sale from 1878. The

terraces appear on the Street alignment plan of September 1891. All these terraces are shown on the August 1914 Water Board plan.

Presently, the terraces are used as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.	**X**		

Other recommendations and/or comments:

- A detailed historical and physical assessment is required to better understand the heritage curtilage and relationship of the items.
- Should the opportunity arise, the intrusive elements to the façade of the terraces should be removed as this significantly detracts from the heritage value of the item and could potentially warrant a delisting in the future.
- Furthermore, of the opportunity arises, the original fabric should be restored and maintained as it is in a poor condition.
- It should be noted that the terrace to the north of No.90 which sits on the corner of The Trongate and Fifth Street is highly intrusive to the heritage values of the terraces. The curtilage has been revised to exclude this intrusive terrace.

- It is recommended that the heritage curtilage for I193 (Parramatta LEP) is revised as shown below due to the different styles of the dwellings. It is most appropriate to separate the site into two heritage listings including the single storey semi-detached cottage (No.100 and No.102), and the group of Victorian terraces (No.90, No.92, and No.94 No.98 and No.96). This listing sheet has been updated to reflect this recommendation. Please see I107 (Cumberland LEP) for the 'Victorian Semi-Detached cottage'. The noted Lot/DP for this listing sheet is accurate and reflects this revised curtilage.

Current LEP ID	I107 (Cumberland LEP)		
Former LEP ID	I193 (Parramatta LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Revised curtilage recommended - refer below.

Statement of Significance

The semi-detached cottage is of local significance for its historic association with the subdivision of New Glasgow Estate, specifically for workers of the Hudson Brothers Engineering company. Built c.1891, the cottage is of historic significance for their direct association with the subdivision of land for the Hudson Brothers Engineering works. The cottage, although modified, is representative of early workers cottages created in conjunction with the establishment of large industries in Granville. The item exemplifies the impact of the early engineering works on the early residential development of Granville.

Criteria Assessment	
a) Historic	Built in c.1891, the cottage is of historic significance for its direct association with the subdivision of New Glasgow Estate for workers of the Hudson Brothers Engineering Company.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The single storey semi-detached cottage at No.100 and No.102 The Trongate is built of brick with a gabled roof clad in galvanised iron. The roof features two rendered brick chimneys with stepped string courses and terracotta posts. The cottages feature a concave verandah roofs and shared a brick privacy wall. Both cottages have had render removed from the front façade to expose the brickwork. Both retain timber framed, double hung sash windows and timber-panelled door with ring door-knocker and transom light. They feature a timber picket fence with dilapidated paint.

The semi-detached cottages feature a modest setback and small informal garden in the front yard. The cottage at No.100 features a young, but established gum in the front yard.

The semi-detached cottage at No.100 and No.102 is in a good condition, with minor paint repairs required to the fence.

Condition	**Good**	Fair	Poor

Alterations and Additions

No.100

- Galvanized iron roof
- Render to brick removed
- Timber picket fence

No.102

- Galvanized iron roof
- Render to brick removed
- Timber picket fence

The cottage at No. 100 and No. 102 retains much of its original fabric and most alterations to the building are sympathetic with the original heritage fabric. The item is of high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	c. 1891

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which the heritage item is located is associated with this period of industrial development that brought the higher employment opportunities to Granville and created the demand for housing. Notable amongst these new estates was the New Glasgow Estate, located on the land near Clyde for the Hudson Brothers Engineering company. This subdivision was offered for sale from 1878. These houses are shown on the August 1914 Water Board plan.

The cottages remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.	X	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- It is recommended that the heritage curtilage for I193 (Parramatta LEP) is revised as shown below due to the different styles of the dwellings. It is most appropriate to separate the site into two heritage listings including the single storey semi-detached cottage (No.100 and No.102), and the group of Victorian terraces (No.90, No.92, and No.94 No.98 and No.96). This listing sheet has been updated to reflect this recommendation. Please see I106 (Cumberland LEP) for the 'The Trongate Victorian Terrace Group'.

- Note that the Lot/DP as specified within this listing sheet reflects this revised curtilage.

Curtilage Map

Statement of Significance

The cottage at 4 Walter Street, Granville is of local significance for its historic, associative and aesthetic values, and as a representative example of early Victorian housing in the area. Built in 1881, the cottage was home of John Scarborough, once an alderman of Granville Council, and then Lucien Grimwood, who was also an Alderman of Granville. It was constructed during the early subdivision and residential development of Granville which occurred in response to the relocation of large manufacturing industries nearby. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes to the overall streetscape character of the Conservation Area. The cottage has additional value as part of a group of cottages of similar age, design, use and materials, located at Nos. 4, 10 and 11 Walter Street.

Criteria Assessment	
a) Historic	The item was constructed during the early subdivision and residential development of Granville which grew in response to the movement of industry away from Sydney between 1880-1930.
b) Associative	The item is associated with John Scarborough, once an Alderman of Granville Council, and then Lucien Grimwood, who was also an Alderman of Granville.
c) Aesthetic/Technical	The item contributes to the overall streetscape character of the Granville Conservation Area – Residential Precinct. The cottage has additional value as part of a group of cottages of similar age, design, use and materials, located at Nos. 4, 10 and 11 Walter Street
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of early Victorian housing.

Physical Description

The building on site is weatherboard cottage with a corrugated metal gable roof and street facing verandah with a bullnose awning. The street facing façade has shiplap weatherboards with feather edge weatherboards to the southern façade. There is one bay window with double hung sashes to the street facing façade. Three timber posts with minimal moulding support the verandah roof, with recent additions including a plain timber post and simple timber brackets which provide additional support to the posts. Other recent additions to the property include a fibre cement and hipped roof garage which occupies the end of the driveway, as well as a low front fence comprising a combination of cyclone fencing and looped metal fencing and a cyclone fence gate.

There is young vegetation to the front and some mature trees to the rear of the site, however none of these are notable or significant plantings.

The dwelling is well maintained and is considered to be in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Timber post to left hand side of verandah*
- Brackets to verandah posts*
- Bay window to front elevation
- Garage
- Fencing*
- Shiplap weatherboards to street facing façade

The dwelling has undergone a series of modifications, some of which are considered to be intrusive on the character of the place. The site has moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1881

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The dwelling on site was built late in 1881 for Mary Ann Harrison, most likely by her husband Edward Harrison who was a carpenter. She had bought the land for 50 pounds in May 1880. A mortgage in August 1881 for 100 pounds helped to cover the cost of building the dwelling. In December 1881 she sold the house and land for 230 pounds to John Scarborough, a local identity who later sat on the first Granville Council. Scarborough sold the house to Lucien Grimwood in December 1884, another local identity who sat on the first council. In 1885 it was let to a storekeeper. It is possible that the brick shop adjacent to the dwelling (located at 2A Walter Street) was possibly used as the store.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Unfinished timber brackets to awning posts should be replaced with painted brackets in a more suitable style and colour.
- The timber post (on the left) should be replaced with a new post, on a like-for-like basis with the other examples on site.

Curtilage Map

Statement of Significance

The cottage at 10 Walter Street, Granville is of local significance for its historic and associative values. The cottage was home of John Finnigan, an Alderman of Granville Council between 1890 and 1901. Built c.1885, it forms part of the early building stock of the area that developed with the relocation of large industrial activities to the area. It has additional significance as part of the Granville Conservation Area – Residential Precinct with similarities in age, design, use and materials with other historic buildings on the street, though its individual aesthetic significance and contribution to the overall streetscape character of the Conservation Area has been impacted by modifications to the front elevation. The cottage has additional value as part of a group of cottages of similar age, design, use and materials, located at No. 4 and 11 Walter Street.

Criteria Assessment	
a) Historic	The item was constructed during the early residential development of Granville, which grew in response to the movement of industry away from Sydney between 1880-1930.
b) Associative	The item cottage was the home of John Finnigan, an alderman of Granville Council from 1890 to 1901.
c) Aesthetic/Technical	It has significance as part of the Granville Conservation Area – Residential Precinct with similarities in age, design, use and materials to other historic buildings on the street. It's individual aesthetic significance and contribution to the overall streetscape character of the Conservation Area has been impacted by modifications to the front elevation
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Due to heavy modifications to the front of the dwelling, the item does not meet this criterion.

Physical Description

The dwelling consists of a single story rendered brick cottage with corrugated metal gable roof and a street facing skillion verandah roof. Some early features of the cottage include stone window sills and a single rendered corbelled cap chimney. The gable ends of the roof feature fretwork scalloped barges which have been recently replaced. Other additions include masonry piers and low walls to the verandah, enclosure of the verandah ends with masonry walls fitted with fixed glass multi-paned windows and skillion roof extensions to the rear of the cottage.

A garage with a fibre cement gable roof has been constructed at the rear of the property, accessed via an asphalt driveway. The property is bound by a palisade tubular steel fence. There are no notable plantings on the property. The front yard is of grass with no notable of significant plantings.

The dwelling appears to be in good condition, having undergone works in the recent past.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extensions to cottage
- Verandah enclosure - masonry piers and low wall*
- Air-conditioning unit to the southern façade*
- Palisade tubular fence to the front*
- Scalloped barges

Due to a range of modifications over time, which have altered specific details of the front elevation, the integrity of the property is considered to be moderate. The building retains its overall form and is still recognisable as a historic cottage.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1885

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the

subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This site on which this dwelling is located was given to Mary Ann Finnigan, wife of John Finnigan an alderman and Mayor of Granville, in 1880 as part of a much larger parcel of land. The dwelling was likely built in 1885 as the house was occupied by the Finnigans from 1886 onwards. John Finnigan was a contractor at that time and probably built the house himself. He later became fuel merchant and conducted his business from the dwelling.

John Finnigan was an active Alderman of Granville from 1890 to 1901. He ran for Mayor several times however was unsuccessful, although a popular choice. In John Finnigans campaign for Mayor in 1890 he appealed to the public as a well known local who had a practical knowledge of road making and advocated for the employment of local men. Upon his retirement from the public office he received an illuminated address from the fellow Aldermen in recognition of his valued services a public servant.

The 'Cumberland Argus and Fruitgrowers Advocate' newspaper from Saturday 4 May 1907 describes how, on 2 May 1907, John Finnigan died suddenly on the kerb of Walter Street. He was walking from his house to a nearby butcher before taking ill.

This existing house is shown on street alignment plan of 1891. It was later occupied by William Ritchie who married one of Finnigans daughters. Richie was a son to one of the most important manufacturers in Granville.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The additions made to the verandah detract from the overall historic and aesthetic significance of the building, and adversely impact its contribution to the streetscape. It is recommended that these accretions be removed and the verandah be reinstated to a more heritage sensitive design and form for this type of Victorian era dwelling.

Statement of Significance

The cottage at 11 Walter Street, Granville is of local significance for its historic and aesthetic values. Built c. 1884, the dwelling relates to the late nineteenth century residential subdivision and development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. Based on the distinctive elements of the cottage, it was likely designed and built by Granville builder Horace James Melville. It has additional significance as part of the Granville Conservation Area – Residential Precinct with similarities in age, design, use and materials with other historic buildings on the street, though its individual aesthetic significance and contribution to the overall streetscape character of the Conservation Area has been adversely impacted by intrusive modifications to the front elevation. The cottage has additional value as part of a group of cottages of similar age, design, use and materials, located at No. 4 and 10 Walter Street.

Criteria Assessment	
a) Historic	The item relates to the early development of Granville in response to the movement of industry away from Sydney from the 1880s onwards. Based on the distinctive elements of the cottage, it was likely designed and built by Granville builder Horace James Melville.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	It has additional significance as part of the Granville Conservation Area – Residential Precinct with similarities in age, design, use and materials with other historic buildings on the street, though its individual aesthetic significance and contribution to the overall streetscape character of the Conservation Area has been adversely impacted by intrusive modifications to the front elevation.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Due to heavy modifications to the front of the dwelling, the item does not meet this criterion.

Physical Description

The dwelling on site consists of a single storey rendered brick Victorian cottage with simplified Italianate form and detailing. The house has an asymmetrical layout comprising of a corrugated metal hipped roof section and a three-sided faceted bay with a street facing gable. The gable end features fretwork barges and a parapet to the faceted bay which has double hung sashes to each face. The cottage has been rendered with rough cast cement. The dwelling has been altered to include brick piers, fibre cement enclosure and skillion roof to the verandah. A weatherboard skillion roof addition to the rear of the house is also visible from its driveway.

A low rendered brick fence with cyclone metal gate has been provided to the front of the property. This frames a grassed front yard area with a central concrete footpath leading to the front door and a series of recent plantings. There are some mature trees to the rear of the dwelling.

Overall, the building is in fair condition with some minor maintenance and repair works required.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Verandah brick piers to the verandah*
- Fibro cement and window enclosure to the verandah*
- Low concrete rendered brick fence with metal gate to street front*
- Airconditioning unit and junction box to north façade*
- Roof sheeting replaced

Due to a range of modifications over time, which have altered key elements of the front elevation, the integrity of the property is considered to be moderate. The building retains its overall form and is still recognisable as a historic cottage.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1884

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the

appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The parcel of land on which the cottage is situated was sold to John Henry Cannon, an ironmonger of Marrickville in April 1884 for £125. He mortgaged the land in July 1884 for £350 to erect this cottage. John Henry Cannon, by then a carpenter, was listed as living at the dwelling in Fuller's 1885 Directory. Based on the distinctive elements of the cottage, it was likely designed and built by Granville builder Horace James Melville. Melville never owned this site so it would appear that he built this dwelling under contract for Cannon. The building remains in use as a private residence.

Recommendations

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The additions made to the verandah detract from the overall historic and aesthetic significance of the building, and therefore adversely impact its contribution to the Granville Conservation Area – Residential Precinct. It is recommended that these accretions be removed and the verandah be reinstated to a more heritage sensitive design and form for a Victorian era dwelling.

- The front boundary fence is not in keeping with the character of the conservation area or dwelling. It is recommended that a new boundary fence be provided in a more heritage sensitive design and form for a Victorian era dwelling.

Curtilage Map

Statement of Significance

The cottage at 26 Walter Street, Granville is of local significance for its historic and aesthetic values, and as a representative example of a Federation period dwelling in the area. Built c. 1910, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area from the nineteenth century. It has aesthetic significance as a modest but well-kept Federation dwelling with a simple form and classic timber detailing. It has additional aesthetic significance as part of the Granville Conservation Area – Residential Precinct, as it contributes positively to the overall streetscape character of the conservation area. This is enhanced by its similarities in age, design, use and materials to dwellings located along the street, in particular at No. 28 which was built by the same owner.

Criteria Assessment	
a) Historic	Built c. 1910, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area from the nineteenth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	It has aesthetic significance as a modest but well-kept Federation dwelling with a simple form and classic timber detailing. It has additional aesthetic significance as part of the Granville Conservation Area – Residential Precinct, as it contributes positively to the overall streetscape character of the conservation area. This is enhanced by the similarities in age, design, use and materials to dwellings located along the street, in particular at No. 28 which was built by the same owner.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a Federation period dwelling.

Physical Description

The dwelling on site consists of a single storey Federation cottage with a hip and valley corrugated metal roof. The front and northern sections of the cottage have block weatherboard and feather edge weatherboard cladding respectively, with brickwork to the rest of the building. The street facing façade of the cottage has a timber and rough cast plaster gable end with a timber awning over a set of three casement windows, and a recessed front entrance accessed by a corrugated metal bullnose porch. There are three corbelled brick chimneys, each with two flues and chimney pots. The dwelling has been extended to the rear with a hipped roof structure. The dwelling has a name plaque stating 'Kaleigh' – this cannot be historically linked to any specific person or family.

The property is bound by a recent timber picket and palisade fence and gate, painted to match the dwelling. There is a large palm tree in the front yard. Other plantings include hedges which are recent.

The dwelling has been well maintained over time and is in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extension in keeping with the roof style and height of the building
- Timber palisade fence and gate to the front

Changes to the exterior of the dwelling have been sympathetic and the dwelling retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1910

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

This land on which this dwelling is located was sold to James Herbert Dawes in October 1903. It remained in his hands until his death in the 1950s and then passed to other members of the Dawes family. This dwelling can be traced back as far as 1911 in the Sands Directory. It appears to have been built c. 1910 in conjunction with No. 28 Walter Street which was also owned by Dawes. The building remains in use as a private residence.

Statement of Significance

The cottage at 28 Walter Street, Granville is of local significance for its historic and aesthetic values, and as a representative example of a Federation period dwelling. Built c. 1910, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area from the nineteenth century. It has aesthetic significance as a modest but well-kept Federation dwelling with a simple form and classic timber detailing. It has additional aesthetic significance as part of the Granville Conservation Area – Residential Precinct, as it contributes positively to the overall streetscape character of the conservation area. This is enhanced by the similarities in age, design, use and materials to dwellings located along the street, in particular at No. 26 which was built by the same owner.

Criteria Assessment	
a) Historic	Built c. 1910, the dwelling relates to the early twentieth century development of Granville which continued to be driven by industrial activity in the wider area from the nineteenth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	It has aesthetic significance as a modest but well-kept Federation dwelling with a simple form and classic timber detailing. It has additional aesthetic significance as part of the Granville Conservation Area – Residential Precinct, as it contributes positively to the overall streetscape character of the conservation area. This is enhanced by the similarities in age, design, use and materials to dwellings located along the street, in particular at No. 26 which was built by the same owner.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a Federation period dwelling.

Physical Description

The building on site is a single storey brick Federation cottage with a corrugated metal hipped roof and bullnose front verandah. The verandah has a timber deck with timber fretwork and timber posts. The front façade has a set of three casement windows with an arched entry to a recessed front door. There are two corbelled brick chimneys, with a metal cap to the chimney that is visible from the street. The dwelling has been sympathetically extended to the rear with a brick skillion structure.

The front of the property is bound by a recent timber picket and palisade fence and gate, painted to match the dwelling. An unpainted timber fence is located along the southern boundary. There are several large trees in the front yard, including two palm trees. Other plantings are recent. The landscape setting screens some views of the property from the street.

The dwelling is in good condition although there is some cracking in the brickwork and deteriorated timber to the awning.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Timber palisade fence along front boundary
- Unpainted timber fence along southern boundary
- Rear extension in brick

Overall, the changes to the exterior of the dwelling have been sympathetic and the dwelling retains a high level of integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Curtilage Map

Statement of Significance

The dwelling at 30 Walter Street, Granville is of local significance for its historic, aesthetic and associative values. Built c.1886, the Victorian cottage is associated with William Cambridge, a known builder of early Granville. It also relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries nearby. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes to the overall streetscape character of the Conservation Area, although its aesthetic value has been impacted by the provision of a pressed metal tile roof. The significance of the dwelling is enhanced by the similarities in age, design, use and materials to the dwellings located along the street, in particular at No. 32 which was built by the same owner.

Criteria Assessment	
a) Historic	The item relates to the early development of Granville in response to the movement of industry away from Sydney from the 1880s onwards.
b) Associative	The item is associated with William Cambridge, a known builder of early Granville.
c) Aesthetic/Technical	The item contributes to the overall streetscape character of the Granville Conservation Area – Residential Precinct, although it aesthetic value has been impacted by the provision of a pressed metal tile roof.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	Due to several key changes to the fabric of the building, the item does not meet this criterion.

Physical Description

The building is a single storey Victorian period residence with a gable roof clad in pressed metal tiles. Notable features of the building include its tuck pointed light speckled brick walls with dark brick quoins around windows and doors, open work cast iron verandah posts to the verandah, and the gable ends of the roof which feature carved timber barge boards. The building has been altered to include a skillion awning, metal pressed tiles to the roof and skillion awning, a skillion extension to the rear, installation of timber latticework privacy screens to the verandah ends and tiled flooring to the verandah.

The front of the property is bound by a cyclone fence. There are several low-lying plantings within the front setback, and the site does not contain any significant plantings.

The condition of the building is considered good and presents well-maintained fabric.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear skillion style extension
- Removal of chimneys*
- Pressed metal tiling of gable and skillion roofs to the building and verandah*
- Tiled flooring to verandah*
- Security grills to the windows and doors*
- Cyclone fence to the front*
- Air-conditioning unit to northern façade*

Due the range of modifications to the building, the item is considered to have moderate integrity. It retains its overall form.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1886

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling is located was purchased on 16 April 1886 by William Cambridge, a builder of Granville. Cambridge was noted as one of the key nineteenth century builders in Granville. He built this cottage immediately after buying the land and was living there by 1887. On November 1891, he was shown as owner-occupier on a survey plan. The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the front boundary fence should be removed and replaced with a sympathetic design solution.
- Should the opportunity arise, a more sympathetic roof cladding should be investigated and reinstated. This could include either corrugated iron or terracotta tiles.

Statement of Significance

The cottage at 32 Walter Street is of local significance for its historic, aesthetic, associative and representative values. Built c.1886, the cottage is associated with William Cambridge, a known builder of early Granville. It also relates to the late nineteenth century development of Granville when industrial activities such as Clyde engineering railway works sparked residential development. The dwelling has aesthetic significance for its form and Victorian era detailing. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes positively to the overall streetscape character of the Conservation Area. The significance of the dwelling is enhanced by the similarities in age, design, use and materials with the dwellings located along the street, in particular at No. 30 which was built by the same owner. The item demonstrates representative qualities as an intact Victorian period residence in the Granville area.

Criteria Assessment	
a) Historic	The item relates to the early development of Granville in response to the movement of industry away from Sydney, in particular the establishment of the Clyde engineering railway works.
b) Associative	The item is associated with William Cambridge, a known builder of early Granville.
c) Aesthetic/Technical	The dwelling has aesthetic significance for its form and Victorian era detailing. The item contributes to the overall streetscape character of the Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item is a representative example of Victorian period residence in the area.

Physical Description

The building is a single storey Victorian period residence with a steeply pitched, corrugated metal gable roof. Notable features of the building include its tuck pointed light speckled brick walls with dark brick quoins around windows and doors, the sandstone edging verandah which is covered by a skillion and historic corrugated metal roof supported by open work cast iron verandah posts. The gable ends of the roof feature carved timber barge boards. There are two brick chimneys with corbelled caps and terracotta chimney cowls. The building has been extended to the rear with a weatherboard, flat roof single storey structure. Other changes include the partial enclosing of the northern side of the verandah with fibre cement panels as well as the timber palisade fence to the front of the property.

The front setback contains several mature plantings, though they are not noted to have any heritage significance.

Overall, the condition of the dwelling is fair with some deteriorated timber elements and a corroded corrugated iron roof.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear extension with a weatherboard, single-storey flat roof structure
- Partial enclosure of verandah on northern side*
- Security grills to the windows and doors
- Palisade fence to front of the property

While there have been some modifications to the site, it largely retains its heritage integrity as a Victorian period residence.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1886

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was constructed was purchased on 16 April 1886 by William Cambridge, a builder of Granville. Cambridge was noted as one of the key nineteenth century builders in Granville. He built this cottage immediately after buying the land and was living there by 1887. On November 1891, Cambridge was shown as owner-occupier on a survey plan. The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.	X	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The corrugated iron roof should be retained, if possible, and treated to protect it from further corrosion.
- Should the opportunity arise, the privacy screen to the verandah should be removed.

Heritage Inventory Sheet

Item Name	Kerbs and Guttering		
Recommended Name	Walter Street Kerb and Guttering		
Site Image			
Address	Walter Street (between Spring Street and Daniel Street), Granville NSW 2142		
Lot/Section/DP	-	-	-
Current LEP ID	I115 (Cumberland LEP)		
Former LEP ID	I204 (Parramatta LEP),		
Heritage Conservation Area	Included, Granville Conservation Area – Residential Precinct		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Utilities – Drainage	

Curtilage Map

Revised curtilage recommended – refer below.

Statement of Significance

The sandstone kerb and gutter along Walter Street is of local significance for its historic and aesthetic values and is representative of the high-quality municipal infrastructure works of the former municipality of Granville. Dating to c.1882, the item forms part of a wider development of the streetscape surrounding the site. The kerbs and guttering form an integral part of the overall streetscape character of the Granville Conservation Area – Residential Precinct along Walter Street.

Criteria Assessment	
a) Historic	The item relates to early municipal infrastructure works, in particular the provision of drainage.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item forms an integral part of the overall streetscape character of the Granville Conservation Area – Residential Precinct along Walter Street.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of the high-quality municipal infrastructure works of the former municipality of Granville.

Physical Description

The kerb and street gutters of cut sandstone are located on both sides of Walter Street. The street gutters are comprised of two courses of cut sandstone blocks. Some sandstone blocks appear to come from different quarries, indicating that sections were likely replaced over time. Driveways, stormwater drains and street corners have all been replaced or provided in poured concrete.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Concrete driveways
- Concrete infill kerbing on street corners

As there have been sections of the kerbing removed and modified to allow for new stormwater drainage the overall integrity of the kerbing is moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1882

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

Walter Street was established by 1882, appearing on the 'The Meadows' subdivision map. It also appears that in 1889 there was a call for a tender to kerb the south side of Spring-Garden Street which Walter Street intersects. It is likely that the kerbing for Spring-Garden Street, which is no longer extant, was constructed at the same time as that on Walter Street.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The current LEP listings covers the kerbing between Spring Garden Street and Hewlett Street on Walter Street. With evidence of extant sandstone kerbing along other portions of the street, the listing curtilage should be expanded to include remaining length of Walter Street where intersects with Daniel Street. See the plan below for a proposed curtilage.
- Should the revised curtilage be adopted, this listing sheet does not reflect the current Lot/DP which will need to be altered.

Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built, Moveable/Collection	
	Level 2	Monument/Memorial	

Curtilage Map

Statement of Significance

The memorial monuments within the Granville RSL is locally significant for its associative and social values. The memorial is significant for its association with Frank Ashton, a prominent community member. The memorial monuments are socially significant to the local community for their connection to the soldiers the monuments commemorate. They are of additional significance for their connection to the Granville RSL itself.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item is significant for its association with Frank Ashton, a prominent community member and with its association to Granville RSL.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The memorial monuments are also socially significant to the local community for their connection to the soldiers the monuments commemorate.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The memorial monuments are a war memorial located within the centre of the Granville RSL, in an area referred to as the Frank Ashton B.E.M. Memorial Courtyard. While the courtyard features a variety of memorials, the area specifically commemorates Frank Ashton for his services to the Extremely Disabled War Veterans Association of New South Wales, the Granville RSL Sub-branch and club, and the Granville Community.

A bronze plaque fixed to the wall reads:
'FRANK ASHTON B.E.M. MEMORIAL COURTYARD
This area is dedicated in honour of the late Frank Ashton B.E.M for his tireless service over many years to the Extremely Disabled War Veterans Association NSW, Granville RSL Sub-branch, local community and the Granville RSL club Ltd'.

The walls are further adorned with small rectangular bronze plaques, with a name and poppy attached. The plaques flank a large timber honour board. The board is flanked with three curved stepped panels with a simple timber sill and bracket. The honour board reads the names of RSL Life Members, Presidents, Hon. Secretary, Treasurer, Meritorious Medal, Welfare Officer, Pension Officer and Women's Auxiliary Life Members.

A bronze plaque below the honour board reads:
The eternal flame and other memorial fittings in this courtyard were donated by the Women's Auxiliary of the Granville RSL Sub-branch.

Below the plaque and honour board is a large timber ledge with ornamental carvings and the words 'Lest we forget' at the centre.

Several stone memorials are also located within garden beds at the entrance of the RSL. Within the garden bed a stone care honour roll commemorates men lost in World War I. Another features a plaque that reads:
This stone was laid by Mr L.A. Robb C.M.C. State President. 4th April 1936. R. Frederick President. GS. Brocklehurst. Secretary.

The monuments are generally in a good condition. The memorial courtyard was initially an open-air area that was later enclosed with a roof. The protection from weather and location in an area with a controlled temperature is a benefit to the memorial. The monuments in the garden are naturally more weathered, however are still in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Courtyard enclosed 2017-2018

The monuments have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	Post 1964

Construction for the Granville RSL Club began in 1961 and was opened on 22 September 1964, though the official opening date was 14 November 1964. The building was designed by architect Frank Fox and was dubbed the "Opera House of the western suburbs" by Fox himself and as the most contemporary RSL building constructed in Australia.

The unique, circular three-storey structure was estimated to cost £100,000. The new RSL located on William Street was to replace the club's existing premise in Blaxcell Street. The central courtyard formed an important aspect of the buildings original design, as it was always intended to commemorate Australian soldiers. The building was refurbished between 2017 and 2018 in which the internal courtyard was enclosed with a roof.

Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

'Evesham' is of local significance for its historic, associative, aesthetic, rarity and representative values. Historically, the building relates to the Drainwell Estate and John Nobbs subdivision of Evesham Estate. The item is an early single storey Victorian villa which formed a part of the first major subdivisions associated with the early residential development of Granville. Through this, the item has local associative significance for its association with Garnham Blaxcell in the subdivision of Drainwell Estate, and John Nobbs who was the original landowner of Evesham and first Mayor of Granville. The item has additional historical associative significance as the home of John Nobbs for many years. The item presents an intact example of early Victorian villa with an established landscape setting that contributes to the aesthetic values of the site and the heritage character of Granville. While the item is significant for its ability to demonstrate representative qualities of an intact Victorian villa, the item is also a rare example of its type within the Granville. The item is a rare surviving example of a Victorian residence built in the early 1881 as part of the initial subdivision of the Blaxcell's Drainwell Estate.

Criteria Assessment	
a) Historic	Historically, the building relates to the Drainwell Estate and John Nobbs subdivision of Evesham Estate. The item is an early single storey Victorian villa which formed a part of the first major subdivisions associated with the early residential development of Granville in the 1880s.
b) Associative	The item has local associative significance for its association with Garnham Blaxcell in the subdivision of Drainwell Estate, and John Nobbs who was the original landowner of Evesham and first Mayor of Granville. This dwelling was Nobbs' home for many years.

c) Aesthetic/Technical	The item has aesthetic significance as a highly intact single storey Victorian villa and garden landscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is a rare surviving example of a Victorian residence built in the early 1881 as part of the initial subdivision of the Blaxcell's Drainwell Estate.
g) Representativeness	The item demonstrates representative qualities of an intact Victorian villa, built c.1881.

Physical Description

Evesham is a single storey brick Victorian villa with a corrugated iron roof and walls of speckled brick in Flemish bond. The roof is hipped with a projecting pyramid faceted bay addition. There are three tall speckled brick chimneys with sandstone cornice detailing and one short brick chimney at rear. There are two octagonal glazed terracotta pots to each chimney. The verandah is a hipped ogee roof also clad in corrugated iron. The verandah roof extends from the projecting hip along the north elevation to the west elevation. The verandah features a sandstone floor and decorated cast iron elements. These include posts in a diamond design, cast iron spandrels, frieze, valance and brackets. Windows are casement, with soldier brick flat arch and sandstone sills. Exterior doors have transom lights over French doors with simple mould panels below and glazed panels above. The front door has a transom light above a Victorian timber four panel door with stencilled glazed upper panels and timber simple moulded panels below lock rail. The properties boundary fence is two tiered with fleur de lis palisade wrought iron panels set on a dwarf sandstone wall between large sandstone posts. Other features include two-storey brick stables and a barn, with an upper level originally used for accommodation of servants.

The dwelling features a deep setback with a significant landscaped frontage addressing William Street. The mature garden with Norfolk pines and palms contributes to the overall setting, however, it reduces the visibility of the dwelling from streetscape.

The overall condition of the building is considered to be fair, although there is some evidence of structural movement with cracking around the bay window and to the base of the structure. Further, the boundary fence along William Street is highly impacted by the established root systems of nearby trees within the landscapes garden.

Condition	Good	**Fair**	Poor

Alterations and Additions

- The building features a temporary fabric sheet operating as a privacy screen along the hipped ogee verandah*

The integrity of the dwelling is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1881

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

Evesham originally formed part of the Drainwell Estate, granted to Garnham Blaxcell. Blaxcell was the largest landowner in the Granville area. Blaxcell first built a simple six-bedroom colonial cottage with a shingled roof. This structure was added to in 1865. This property was bought by John Nobbs in 1876.

John Nobbs bought this land along William Street in 1876. On 29 January 1878 he mortgaged the land for £500 probably to commence building. The Evesham residence was completed by 19 March 1881 and is shown on the subdivision of Nobbs' 'Evesham' estate. Nobbs occupied the house for many years. He was the first Mayor of Granville. He was also elected to that position on later occasions. He was the member of parliament for the area until unseated by Jack Lang in 1913. The item remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	

4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Repair front boundary fence through sympathetic conservation repairs to sandstone plinth and wrought iron palisade inserts.

Curtilage Map

Statement of Significance

The Federation Timber Cottage Group is of local significance for its historic and aesthetic values, and as a representative example of prefabricated Federation Period cottages which were supplied by Hudson and Son's. The building group is historically linked to the residential development of Granville that followed the appearance of small industries, shops and businesses from 1880 and 1930. The group makes a notable contribution to the streetscape due to their similarities in age, design and materials.

Criteria Assessment	
a) Historic	This item is historically significant as a group of prefabricated cottages supplied by George Hudson & Sons Company and associated with the residential development of Granville that followed the appearance of small industries.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	This item is aesthetically significant as an intact example of prefabricated Federation cottages. The group makes a notable contribution to the streetscape due to their similarities in age, design and materials.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	This item is representative of early Federation period cottages.

Physical Description

The item consists of a group of three single storey double fronted weatherboard cottages with hip and gambrel roofs that are clad with corrugated iron.

No.115
The roof construction for No.115 is gambrel hipped with a projecting gable and a simple ladder gable screen. The roof features two tall brick chimneys with terracotta cowl. The verandah consists of a skillion corrugated iron roof with hip corners across the front to a projecting gable, with timber flooring containing early pattern ceramic tile risers. The verandah is supported on timber posts, stop chamfered with timber scrolled brackets. The windows have corniced rendered brick sills. The front doors are Federation style five panelled doors, with upper panels containing colour-glazing.

No.117
The roof construction for No.117 is gambrel hipped with a weatherboard gable infill. The roof features a single tall brick chimney with brick strap work. The verandah consists of a skillion corrugated iron roof with hip corners across the front to a projecting gable, as well as timber flooring. The verandah is supported on timber posts, stop chamfered with a timber open scrolled valance and timber ladder balustrade. The windows have decorated timber sills. The front window also features a skillion awning with timber ladder brackets. The front doors are Federation five panelled doors, with upper panels that are colour-glazed. No. 117 also features side lights.

No.119
The roof construction for No.119 is gambrel hipped with a projecting gable front containing a louvered ventilator in gable. The timber floor verandah consists of a skillion corrugated iron roof with hip corners across front to a projecting gable. The verandah is supported on timber posts with a timber ladder balustrade as well as with timber brackets with incised tulip decoration. The windows are detailed with timber sills. The front window also features a skillion awning with timber ladder brackets. The front doors are Federation five panelled doors, with upper panels colour-glazed.

No.115, 117 and 119 feature small informal gardens spaces with a painted timber picket fence and gate. There is one substantial tree in the rear yard of No. 117. They have a consistent setback from the street which adds to their overall streetscape setting.

Overall the condition of the items is considered good. Some repainting of timberwork is required on the timber valance and gable of No.115.

Condition	**Good**	Fair	Poor

Alterations and Additions

- A modern carport is attached to both No.115 and No.119*
- Fencing along No.119 is replaced with cyclone wire mesh fencing*

While some of the dwellings have modern accretions, they retain a high level of integrity overall.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1905-1915

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The timber cottages were built between 1905 and 1915. The cottages appear to be prefabricated cottages, supplied by George Hudson & Sons. The company formed part of the firm 'Hudson Brothers', who were carriage builders contracted to the NSW Government Railways. The firm operated timber mills and retail yards. The company was eventually split into two separate businesses between the family. The elder Hudson brothers continued the carriage building section, which came to be known as Clyde Engineering Company Limited. In 1890, George Hudson formed the company 'George Hudson & Sons Pty Ltd'. Hudson & Sons were pioneers of the industry and were the first to commence ready-cut cottages, parquetry floors and dowel doors. The company continued to operate throughout the early twentieth century and was known to have been in operation into the late 1970s.

No. 117 is very similar to design number 16 in the Hudson catalogue.

The dwellings remain in use as private residences.

Curtilage Map

Statement of Significance

The house at 123 William Street, Granville is of local significance for its historic and aesthetic values, and as a representative example of a high-quality Victorian Italianate style residence in the area. Built c.1884, the dwelling relates to the 1880s residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries nearby. It has additional significance as part of the Granville Conservation Area – Residential Precinct as it contributes positively to the overall streetscape character of the conservation area. This is enhanced by the similarities in age, design, use and materials to other houses along the street.

Criteria Assessment	
a) Historic	The dwelling relates to the 1880s residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries nearby.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item contributes positively to the overall streetscape character of the Granville Conservation Area – Residential Precinct.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a high-quality Victorian Italianate style residence in the area.

Physical Description

The single storey Victorian Italianate style residence has an asymmetrical layout comprising of a steeply pitched hipped roof with a projecting gable end and an ogee roof verandah to the front. Notable features of the house include a dormer to its east elevation, a circular brick chimney, a faceted window with parapeted roof to the projecting gable end, decorative fretwork barge boards, and a roughcast render masonry fence comprising masonry piers, low walls and metal rails. The house has a mix of double hung sash windows and recently installed multi-paned windows. There are skillion extensions to the rear of the property.

The former listing notes the following:

The verandah is…with concrete floor and timber posts on rendered balustrade and posts with terracotta moulded coping", and the building was "originally of spatterdash brick across front and painted brick walls along side elevations…The roof, originally slate with iron ridge capping…Windows have timber gabled lintel above windows and corniced rendered brick sills. Front door has transom lights and sidelights flanking timber, five panelled door with three upper panes glazed.

The building has been restored considerably since the former listing sheet was prepared and the existing details are not visible from the street as the hedge above the masonry fence effectively blocks views to the building. This description has therefore not been updated.

The rear yard contains a pool and a garage to the end of the driveway which has a recently installed timber palisade gate. The site is bound by a rendered masonry fence and a substantial hedge.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Verandah roof replaced
- Multi-paned windows
- Rear skillion extension
- Air conditioning unit to the eastern façade*
- Timber palisade gate to driveway
- Hedge to fence
- Garage
- Pool in the rear yard

Alterations and additions have been undertaken in keeping with the character of the heritage item, and therefore the integrity of the site is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1884

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the

establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling was constructed was purchased early in 1884 by William James Thackeray, a mason of Granville. He appears to have been the son of William Thackeray, who was the builder of No. 58 The Avenue, Granville. The land was mortgaged in February 1884 to build this cottage and Mr Thackeray was in occupation in 1885. In February it was offered for sale. By February 1886 it was occupied by Chapman, an assistant station master. In July 1886 it was sold to John Raynor who became one of the major speculators and promoters of Granville in the 1880s. The building remains in use as a private residence.

Curtilage Map

Statement of Significance

Granville Public School is of local significance for its historic, social and representative values. The site and buildings are historically associated with the provision of public education since 1880 in Granville and have a wide appreciation and associations within the local community. The complex includes a set of buildings, with a number of structures indicative of the standard design of educational facilities in NSW at the time of their creation. The main building is particularly representative of late Victorian period school buildings.

Criteria Assessment	
a) Historic	The site and buildings are historically associated with provision of public education since 1880 in Granville.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The site has a wide appreciation and associations in the local community as an educational facility.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The site contains a number of structures that are indicative of the standard design of Federation era educational facilities in NSW and the main building is representative of late Victorian period school buildings.

Physical Description

The site contains a Victorian Rustic Gothic red brick school building with a Flemish bond brick pattern, as well as a steep gabled roof with timber ladder trim and decorative timber finials and pendants in gable screen. The roof is now covered with corrugated iron. The building also features sandstone trim and tall roughcast rendered chimneys with corniced tops and squat terracotta pots. Windows are multi-paned sashed with sandstone sloping brick sills and red soldier brick flat arches.

The rest of the site contains several 1970s and 1980s style red brick buildings, as well as three demountables and a red brick 1930s style school building.

The school yard is largely grassed and interspersed with large trees, some of which appear to be native. The site is bound by a modern steel palisade fence.

The building is situated on a large block which is bound by William Street to the south, Florrie Street to the west, Daniel Street to the north and Lena Street to the east.

The condition of the Victorian Rustic Gothic school building, as viewed from the street, was noted as good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- The majority of alterations and additions to the site were not clear from the site visit
- Modern steel boundary fence
- Modern signage
- Three demountable buildings*

As viewed from the street, the historic buildings appear to have high integrity. However, as is the nature of school buildings, they are subject to change overtime and it is likely that the interiors and some elevations are of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1880-1892

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

Education in the Granville area was initiated with an application submitted to the Council of Education on 24 September 1974 by a committee of prominent local gentlemen of the Granville area. They consisted of Messrs Morris Asher, John George Lackey, John Bergan, John Nobbs, W Bernett and John Raynor. They submitted the application with 70 signatures from parents and a list of 212 children aged between one and 17 years old. In 1878 it was reported that there were 600 permanent residences living in the area, and this was increasing.

The public school was approved in January 1879, and by December the Government Architect, G Allen Mansfield called for tenders. Samuel Lydyard Carrel won the construction contract for £1777, which

later increased to £1809. Carrel built the school from sandstock bricks from the Junction Brickworks and terracotta tiles used were from the Sherwood Tile Works in Holroyd. The school was probably the first public school to use such roofing materials. This was completed by 1880. As attendance number continued to grow throughout the 1880s and 1890s, various extensions were made to cater to the increased attendance including a section by Herbert Coates. The school was briefly made a superior public school until 1919.

The site remains in use as a public school.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the Development Application should be accompanied by a detailed heritage assessment and fabric analysis to understand which buildings are significant and how to manage change.
- Should any new buildings be proposed for the site, the architecture of the new buildings should not detract or adversely impact upon the heritage items and respect the heritage character.

Curtilage Map

Statement of Significance

The dwelling at 152 William Street, Granville is locally significant for its historic and aesthetic values. The item is a representative example of quality early Federation Bungalow-style houses in the area. Built in 1914, the dwelling relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. The dwelling was constructed by, and was the residence for, a prominent local builder named Charles Glasson. Glasson was one of the most active builders in Granville during the early twentieth century, particularly along William Street. The item is of high aesthetic significance as an intact and quality example of an early Federation Bungalow, and it is architecturally distinct for its central 'widows walk'.

Criteria Assessment	
a) Historic	Built in 1914, the dwelling is historically linked to the residential growth of Granville that occurred in conjunction with the industrial and commercial development of the area.
b) Associative	The item is associated with builder Charles Glasson, one of the most active builders in Granville during the early twentieth century.
c) Aesthetic/Technical	The item is of aesthetic significance as a largely intact quality example of an early Federation Bungalow, architecturally distinct for its 'widows walk'.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of quality early Federation Bungalow-style houses in the area.

Physical Description

The dwelling in a single storey red brick Federation bungalow with an enclosed "widow's walk" that forms a major feature of this building. The roof construction is hip with projecting gables to the street front and side elevations and is clad in slate tiles with terracotta ridge capping. The gables feature timber fretwork barge boards with spatterdash in the gables. The roof features two tall brick chimneys with spatterdash detailing and terracotta corniced tops. The base of the chimney appears to be rebuilt. The verandah roof is an extension of the slate main roof and is supported on paired timber posts set on brick piers and brick balustrade. The widow's walk features a flat roof and louvred windows.

The facade makes use of dark brick with tuck pointed stretcher bond and red brick string lines above and below the window level. Windows along the prominent elevations feature rendered brick corniced sills with bracket decoration and slated skillion awnings. The windows under the gables have arched tops. All windows are timber framed casements windows.

The boundary fence is constructed from contemporary yellow bricks and is stepped with a wrought iron gate. An established hedge runs along the fence. A concrete driveway is located along the western boundary of the fence.

The house features a deep setback and retains a prominent position within the landscape. The landscape no longer retains two mature Norfolk Pines in the front yard, however other plantings contribute to the setting.

The condition of the building is considered to be fair with some fabric in a poorer state than others. Most notably, the eaves, guttering and slate roof require urgent repairs. The eaves and guttering along the front façade are dilapidated and not operational. Similarly, the slate roof tiles are in a highly deteriorated state and require urgent repairs. Not only are some tiles broken and unfixed, they also feature biological growth. Overall, the brickwork appears to be in a sound condition with some repointing of mortar joints required in sections. The timber elements although quite weathered appear in a sound condition and only require minor paint repairs.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Brick boundary fence*
- Base of chimney rebuilt
- Construction of concrete driveway

Although the boundary fence is not a sympathetic addition to the site, the building retains much of its original and significant heritage fabric. The integrity of the building is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall significance of the place*

Historical Notes

Construction years	1914

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-

class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which the property sits forms part of the land subdivided under John Nobbs re-subdivision of Want's Estate. The land was purchased in July 1913 by Mary Ann Glasson, the wife of Charles Glasson. Charles Glasson was a local builder of Granville. In order to finance the construction of the dwelling the land was mortgaged in August 1914. A Family notice in the Sydney Morning Herald refers to the residence at 152 William Street as 'Tarrangower'. Upon its completion it was highly regarded in the area and was one of the dwellings chosen to represent the houses of Granville in the 1915 Progressive Granville volume published by the Granville Brotherhood. The Brotherhood was a social group for men working and living in Granville.

The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.	**X**		

Other recommendations and/or comments:

- Should the opportunity arise the yellow brick boundary fence should be replaced with a sympathetic design solution such as liverbrick with wrought iron inserts or timber picket.
- It is strongly advised that elements identified as being in a poor state (i.e. slate roof, eaves and guttering) are repaired to ensure the significance of the entire built element is not compromised by the condition of the roof.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Statement of Significance

The William Street Group is locally significant for its historic, associative and representative values. Built in 1908, the group is historically linked to the residential growth of Granville that occurred in conjunction with the industrial and commercial development of the area. The dwellings are associated with builder Charles Glasson, one of the most active builders in Granville during the early twentieth century. The ability to interpret this history is enhanced by the presence of five dwellings of same date, style and original detail.

Criteria Assessment	
a) Historic	Built in 1908, the group is historically linked to the residential growth of Granville that occurred in conjunction with the industrial and commercial development of the area.
b) Associative	The dwellings are associated with builder Charles Glasson, one of the most active builders in Granville during the early twentieth century.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	They are representative of Federation period cottages built in weatherboard, though this has been diminished by unsympathetic alterations and additions.

Physical Description

No. 170
No. 170 is a single storey timber framed weatherboard cottage of asymmetrical plan under a transverse gable roof with a front gable to the eastern side. The corrugated iron roof has an elaborate fret-bargeboard to the front and a simple scallop barge to side. All elevations, except for the front façade, have bevelled boards set on a painted brick base. One double hung sash window is present on the front elevation under the verandah, in addition to three matching windows on the side elevation. The front gable features a double hung window with two decorative side lights and a galvanised awning on timber brackets over the window. The verandah consists of a red and white painted bullnose verandah set on simple timber posts with a timber balustrade and floor. The verandah is entered via modern concrete steps. The dwelling has been extended to the rear with a skillion style structure. The front boundary fence is rendered brick which is in poor condition. Landscaping is minimal and ad hoc in nature, with some mature plantings throughout.

No. 172
No. 172 is a single storey timber framed weatherboard cottage of asymmetrical plan under a transverse gable roof with a front gable containing a section of metal cladding to the eastern side. The corrugated iron roof has an elaborate fret-bargeboard to the front, a simple scallop barge to the side and solar panels. All elevations, except for the front façade, have bevelled boards set on a painted brick base. Original windows, including the primary façade window, have been replaced by new aluminium sliding windows. The verandah awning has been replaced with a tiled skillion awning which runs continuously from the roof plane. The awning over the window has also been replaced with a skillion style corrugated sheet on what appear to be original timber brackets. A spindle balustrade of timber handrail to verandah may be original though it is difficult to tell due to a privacy screen. The brick base below the verandah has been cut out for car space. The verandah is entered via painted concrete steps. The dwelling has been extended to the rear with a skillion style structure. The front boundary fence is weldmesh. Landscaping is minimal being restricted to a low-scale front garden below the gable end window.

No. 174
No. 174 is a single storey timber framed weatherboard cottage of asymmetrical plan under a transverse gable roof with a front gable to the eastern side. The Colorbond roof has an elaborate fret-bargeboard to the front, a simple scallop barge to side and a rendered and moulded chimney. All elevations, except for the front façade, have bevelled boards set on a painted brick base. The window under the verandah has been replaced with an aluminium frame. The front gable features a double hung timber window with two decorative side lights. The verandah awning has been replaced with a Colorbond skillion awning which is runs continuously from the roof plane. The awning over the window has also been replaced with a skillion style sheet metal, on what appear to be original timber brackets. The verandah awning is set on modern face brick piers set into the brick base of the dwelling. The verandah floor is timber and is entered by a set of modern painted concrete steps. The brick base below the verandah has been cut out for car space. The dwelling has been extended to the rear with a skillion style structure. The front boundary fence is face brick to match the verandah piers, with a timber gate provided at the entry to the concrete footpath and stair. Landscaping is minimal, with some recent plantings provided in the front setback under the gable end window.

No. 176
No. 176 is a single storey timber framed weatherboard cottage of asymmetrical plan under a transverse gable roof with a front gable to the eastern side. The new corrugated steel roof has an elaborate fret-bargeboard to the front and a simple scallop barge to side. All elevations, except for the front façade, have bevelled boards set on a painted brick base. All windows have been replaced with aluminium. The verandah has been enclosed with weatherboard. Due the heavy vegetation, other details of the building itself were unclear during the site inspection. The landscaping consists of a concrete footpath and stair, with a recent timber balustrade. The front boundary fence is cut bamboo with a metal loop gate attached to two timber posts. Vegetation is dense, with a series of palm trees.

No. 178
No. 178 is a single storey timber framed weatherboard cottage of asymmetrical plan under a transverse gable roof with a front gable to the eastern side. The "Decramastic" metal tile roof has an elaborate

fret-bargeboard to the front, a simple scallop barge to side and a moulded chimney. All elevations, except for the front façade, have bevelled boards set on a painted brick base. All windows have been replaced with aluminium. The front door has also been replaced with a simple timber door. The verandah consists of a modern green Colorbond bullnose verandah set on a brick pier which extends into an enclosed brick balustrade. The verandah is entered via a paved walkway leading to painted concrete steps. The dwelling has been extended to the rear with a skillion style structure. The front boundary fence consists of a later timber fence which consists of picket elements, lattice work and large timber posts. It is in poor condition and is highly intrusive towards the character of the dwelling. There are some mature plantings in the front landscape area, though these do not consist of any notable historic plantings.

Together, the dwellings create a consistent 'look and feel' to the streetscape through setback, scale and materiality. The removal of intrusive elements would allow these buildings to be read better as a group.

While front boundary fences show signs of deterioration in some instances, the dwellings themselves are all in good condition.

Condition	Good	Fair	Poor

Alterations and Additions

No. 170

- Rendered brick front boundary fence*
- Rear extension with skillion roof
- Concrete stair to entry

No. 172

- Aluminium windows*
- Verandah awning has been replaced with a tiled skillion awning
- Window awning replaced with a skillion style in corrugated iron*
- Solar panels
- Front fence replaced with a weldmesh fence*
- Carport created under dwelling
- Rear extension with skillion roof
- Metal cladding on gable end*
- Painted concrete stairs to entry

No. 174

- Roof replaced
- Window awning replaced with a skillion style in sheet metal*
- Verandah awning replaced with Colorbond in a skillion style*
- Aluminium window frames*
- Previous wrought iron gate replaced with timber
- Brick piers to verandah*
- Brick boundary fence
- Rear extension with skillion roof
- Carport created under dwelling
- Concrete stair to entry

No. 176

- Verandah enclosed with weatherboard
- Aluminium windows*
- New corrugated steel roof
- Concrete entry path and stair
- Bamboo fence*

No. 178

- "Decramastic" metal tiled roof*
- Colorbond bullnose verandah

- New timber door
- Window awning replaced with a skillion style in tile*
- Corrugated steel roof replaced with red tiles
- Rear extension with skillion roof
- Timber boundary fence*
- Paved walkway and concrete stair
- Aluminium windows*
- Brick pier and verandah

As a whole, the buildings are considered to have moderate integrity due to a series of alterations and additions undertaken at each property. It should be noted that some dwellings are more intact than others.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1908

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The entire frontage between Grimwood Street (then called Parramatta Street) and Illalong Street was purchased by builder Charles Glasson in July 1907. Glasson was one of the most active builders in Granville during the early twentieth century. He mortgaged this site to erect five identical cottages which are now known as 170 – 178 William Street. They were shown in this position in the Sands Directory for 1909. Glasson did not sell the cottages, instead renting them to tenants until his death in 1936. He was buried in Rookwood Cemetery.

Today, the dwellings all remain in use as private residences.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**

4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise:
  - Fences to all properties should be removed and a consistent timber fence provided.
  - The dwellings should have applied a consistent or similar historic paint scheme based on a detailed paint analysis to create further.
  - Aluminium windows should be replaced with timber windows.
  - Enclosed verandahs should be re-opened.

Curtilage Map

Statement of Significance

The cottage at 183 William Street is of local heritage significance for its historic, aesthetic and representative values. Built c. 1891, the Victorian dwelling relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. The dwelling has aesthetic significance as a well-kept Victorian residence which retains many original features, including tuck-pointing. It is a representative example of early houses on the area, in particular Victorian dwellings, and is easily identifiable as part of the historic building stock.

Criteria Assessment	
a) Historic	Built c. 1891, the Victorian dwelling relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a well-kept Victorian residence which retains many original features, including tuck-pointing.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	It is a representative example of early houses on the area, in particular Victorian dwellings.

Physical Description

The site consists of a single storey brick cottage with gabled corrugated iron roof. The walls are of speckled tuck-pointed brick across the front, with rendered side walls. Roof has scalloped timber barge boards, a whirly bird to the rear roof plane, and an external brick chimney with step and string line at the rear. The verandah has convex hip corrugated iron roof which stretches across front of the dwelling. The verandah also has a concrete floor, timber stop chamfered rectangular posts, and cast-iron decorative brackets and frieze work. Timber windows have painted rendered sills and rendered brick arches with keystone elements. Front door is four-panelled, with rounded tops of upper panes, and transom light. The fence is a modern, curved top timber picket fence.

The site does not contain any notable landscaping. A Colorbond fence has been installed to the east of the dwelling.

The condition of the dwelling is good, with no signs of deterioration.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Whirly bird to rear roof plane
- Timber picket fence
- Colourbond fence to the east of the dwelling*

As the dwelling has been well-kept and retains many of its original features and form, the dwelling has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1891

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. Curtilage Map

Statement of Significance

The cottage at 15 Woodville Road is locally significant for its historic, aesthetic and associative values. Built 1883-1884, the Victorian dwelling relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area. Furthermore, this house is presumed to be the most intact surviving example of the work of H. J. Melville, a builder who was very active in Parramatta and Granville in the late nineteenth century. The dwelling has some aesthetic significance as a modest Victorian dwelling which retains its key decorative features and its overall form. It is readily identifiable as part of the historic building stock in the area and makes a positive contribution to the streetscape.

Criteria Assessment	
a) Historic	Built 1883-1884, the Victorian dwelling relates to the late nineteenth century residential development of Granville that occurred in conjunction with the relocation of large manufacturing industries to the area.
b) Associative	This house is presumed to be the most intact surviving example of the work of H. J. Melville, a builder who was very active in Parramatta and Granville in the late nineteenth century.
c) Aesthetic/Technical	The dwelling has some aesthetic significance as a modest Victorian dwelling which retains its key decorative features and its overall form. It is readily identifiable as part of the historic building stock in the area and makes a positive contribution to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item does not meet this criterion.

Physical Description

The site contains a single storey Victorian cottage constructed of sandstock bricks laid in the English bond pattern. The corrugated iron roof is set on garden bond, sandstock brick walls across the front with a steep hip and a projecting gable and faceted bay below. The roof also features a gable end which has a timber finial, plaster decoration, and three tall brick chimneys with steps and hooded terracotta cowls. The ogee verandah roof is supported on elegantly curved cast iron posts with Taylor & Wearing cast iron lacework. The verandah floor is of tessellated tiles in two colours. The windows are timber framed casement windows with rendered corniced brick sills and bracket decoration. Below there are recessed niches below sills. They also have Victorian label mould arches and decorative stops above (also above door arch). The front door has a transom light and sidelights flanking a four-panelled door with rounded tops of upper panes. The front fence is timber picket, with flat tops on a brick plinth. The dwelling has been extended in a skillion style to the rear and a driveway to the rear is accessed by aluminium double swing gates that have detailed lacework.

Landscaping is limited to a mature vine which has grown along the verandah awning.

Overall, the dwelling appears to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Possible roof replacement
- Skillion addition to the rear
- Aluminium double swing gates

Changes to the dwelling have been highly sympathetic, maintaining the overall integrity of the site.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1883-1884

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the workers and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there remains a predominance of buildings dating to the 1880s – 1930s.

The dwelling was originally located on land purchased in October 1882 by Horace James Melville, a highly active builder of Granville during the 1880s. The land was mortgaged to build this house in September 1883 for £550. Melville had moved into this house by 1885. In August 1886, he sold the house whilst still mortgaged to William Hart Jnr, a timber merchant of Parramatta.

Today, the dwelling remains in use as a private residence.

Statement of Significance

The dwelling at 2 Lisgar Street, Granville is locally significant for its historic, associative, aesthetic and representative values. Built c.1880s, the Victorian cottage relates to the sale of the Lisgar Estate by the Cumberland Building, Land and Investment Co Ltd. The dwelling may have been one of four Cumberland Building, Land and Investment Co Ltd owned residences which were designed with architects Hill and Smith and made available as part of the Lisgar Estate sale. Although partially modified, the dwelling is a good example of a Victorian Italianate cottage with fine detailing. The house is readily identifiable as part of the historic building stock of Granville and contributes positively towards the streetscape character. Although partially modified, the dwelling is a representative example of a Victorian Italianate cottage in the area.

Criteria Assessment	
a) Historic	Built c.1880s, the Victorian cottage relates to the sale of the Lisgar Estate by the Cumberland Building, Land and Investment Co Ltd. The dwelling may have been one of four Cumberland Building, Land and Investment Co Ltd owned residences which were designed with architects Hill and Smith and made available as part of the Lisgar Estate sale.
b) Associative	The dwelling may have been associated with Cumberland Building, Land and Investment Co Ltd.
c) Aesthetic/Technical	Although partially modified, the dwelling is a good example of a Victorian Italianate cottage with fine detailing. The house is readily identifiable as part of the historic building stock of Granville and contributes positively towards the streetscape character.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Although partially modified, the dwelling is a representative example of a Victorian Italianate cottage in the area.

Physical Description

The dwelling is a single storey, double fronted cottage of rendered brick with a gabled roof. The roof has a projecting gable with a simple timber barge board, fibro sheet to the gable end and a faceted bay below. The roof is now clad with red Marseilles tiles. The faceted bay contains three double-hung sash windows framed with rendered brick corniced sills with bracket decoration below, and Victorian label moulds above arches. The verandah stretches across the front of the dwelling to connect with the projecting gable. It is sheltered by a striped fabric and aluminium awning which replaces the original awning. The porch is concrete. The front door has a transom light above a Victorian timber four panel door with beaded panels and a central doorknob. The front window is aluminium with a security grill. The dwelling has been extended to the rear with a single-storey, flat roof addition.

An open carport has been attached to the western side of the dwelling. A freestanding garage with a roller door has been provided at the rear of the property.

The front fence is a later addition of rendered brick, with pyramid topped piers and art deco style metal inserts between the piers. The footpath gate is in keeping with the fence design. The driveway gate is a recent steel addition with a design that matches the window security grills. There is no landscaping as the front setback has been set with concrete.

The dwelling is in good condition overall, though the roof tiles have biological growth.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extension
- Carport to western elevation
- Concrete landscaping*
- Front fence and gates
- Aluminium window to front elevation*
- Security grills*
- Fabric and aluminium awning*

The building has undergone some modifications to the front facade. As a result, the integrity of the overall form and style is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1880s

Granville was originally part of the land grant known as Drainwell Estate, given in 1806 to Garnham Blaxcell. This grant consisted of 1,125 acres which was used as collateral for Blaxcell's commercial enterprises. The estate was then mortgaged to Sir John Jamison, who took it over when Blaxcell fled the colony in 1817. The land was largely undeveloped until the 1860s when it was subdivided. Many of the first buyers were orchardists and farmers, although there were also some men who built middle-

class villas. In the 1880s, the area became known as 'Granville', in honour of the British Foreign Minister, Lord Granville and in 1885 the Municipality of Granville was declared.

The formation of Granville was largely determined by development between the 1880s – 1930s which was driven by the relocation of several large manufacturing industries close to the railway, such as the Hudson Brothers locomotive engineering works at Clyde. For the 25 years that followed the establishment of the Clyde Engineering, Granville experienced a great period of development with the appearance of new small industries, housing, shops and businesses. New houses were built for the worker's and substantial residences were built for the managers and factory owners. Today, the subdivision pattern of this era is still evident and there is still a predominance of buildings dating to the 1880s – 1930s.

The land on which this dwelling is located was auctioned as the 'Lisgar Estate' by the Cumberland Building, Land and Investment Co Ltd on 20 February 1886. The land included four cottages designed by architects Hill and Smith, of Sydney and Parramatta. The dwelling at 2 Lisgar Street, Granville may have been one of these company cottages. It is shown on the Water Board plan of October 1919. The dwelling remains in use as a residence.

Recommendations

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the concrete landscaping should be removed and replaced with permeable paving or garden landscaping to ensure that water can drain away from the building appropriately. The concrete surrounds are likely to trapping water around the building, causing rising damp.

Curtilage Map

Statement of Significance

The former Hoyts Crest Theatre is of State significance for its historic, associative, aesthetic/technical, scientific, social rarity, and representative values. The Crest Theatre is the only intact Quonset cinema of two built in New South Wales. It is also one of few cinemas built in the 1940s and incorporates the pre-fabricated Quonset structural system creatively adapted to civilian use. The building is associated with architects Cowper, Murphy and Associates, who built both Quonset cinemas, as well as builder A. W. Edwards.

The interior of the Crest Theatre reflects the cinema designs of the late 1930s continued into the post-World War II period in a simplified manner and, as such, is rare in New South Wales. The interior features intact decorative plasterwork, light fittings, drapery, candy bar and entry foyer, all largely intact. The interiors have high aesthetic significance and their style is unique among the cinemas of New South Wales.

The theatre's distinctive facades, original signage and corner location make it a prominent landmark in the locality. This building has social significance, as a local cinema from 1948 until 1963, and since then has been adapted for use as a public hall for social and entertainment purposes.

Criteria Assessment	
a) Historic	The item is highly significant in demonstrating the history of cinema in New South Wales, particularly the construction of cinemas in the 1940s as a leisure activity.
b) Associative	The Crest Theatre has associative significance with the following: ▪ Cowper, Murphy and Associates – Architect

	▪ A. W. Edwards Pty Ltd – Builder ▪ Hoyts' Western Suburbs Cinemas - Owner ▪ Miss Ruby Coulson who played the electric organ in the early years of the cinema. ▪ Mr L (Nobby) Clark, who was the cinema's first manager (1948-1956).
c) Aesthetic/Technical	The Crest Theatre is of State significance as a rare example of interior cinema design from the 1940s and post-World War II. The theatre's distinctive facades, original signage and corner location make it a prominent landmark in the locality. The interior is aesthetically distinctive and features original decorative plasterwork, light fittings, drapery, and original candy bar. According to the Movie Theatre Heritage Register for NSW prepared by Professor Ross Thorne in 1996, the interior of the Crest Theatre is almost totally intact and its original features and decorative plasterwork are unique in New South Wales. The cinema was rated as Category 1 building for its originality and intactness.
d) Social	The Crest Theatre is of local social significance to the local community as a cinema from 1948 until 1963 and as a venue for local entertainment following adaptation for use as a public hall for social and entertaining purposes.
e) Scientific	The Crest Theatre is unlikely to display archaeological potential relating to former uses. It does display research potential in relation to surviving prefabricated wartime structures (ie Nissen and Quonset huts), their re-use for civilian purposes, and in relation to cinema design and decoration. It is also one of few cinemas built in the 1940s and incorporates the pre-fabricated Quonset structural system creatively adapted to civilian use.
f) Rarity	The Crest Theatre is of State significance for being one of two surviving Quonset style cinemas in New South Wales, and the only one which survives intact. Its intact interior decorative scheme is unique in New South Wales. The cinema is therefore a rare, surviving intact example of a wartime era cinema.
g) Representativeness	The Crest Theatre is a representative example of a 1940s suburban theatre and one of two surviving examples of Quonset style cinema in New South Wales. It is a good example of an ex-military Quonset hut creatively adapted to civilian use.

Physical Description

The cinema's architectural style and period is post-Art Deco, post-Modern eclecticism. The Crest is of Quonset design with one level, vaulted ceiling auditorium, using steel frame construction and with a vestibule/amenity block running parallel to the theatre on the Redfern Street side of the block.

The exterior walls are of concrete with stucco finish. The corner entrance to the cinema has two facades at ninety degrees, which are lower than the main Blaxcell Street stepped façade. The junction of the corner facades is accented with a tapered vertical pier with an art deco motive above the façade below the tip of the pier. On either side of the pier is the name 'Crest' in script style large neon lettering. Between the lower and taller Blaxcell Street facades is a large, prominent, triangular concrete pier with five protruding circles which originally contained the letters H - O -Y - T - S. This was replaced with the letters B - I - N - G – O, which was later replaced with the letters B – L – O – U – Z - A.

The corner facades have a curved, cantilevered awning, which featured the word "Crest" at the corner in the same lettering style as the neon signs. A row of small light bulbs outlined the bottom edge of the awning.

Below the awning at the street frontage a display board is situated on the splayed corner below the tapered pier. A bank of six glass-paned, wooden-panelled doors is sited on either side of the splayed corner with a small marquee sign above each bank of doors. These doors open onto the tiled-floor vestibule with the box-office on the inner wall directly behind the entrance doors. There are two entrances to the main theatre, the first beside the box-office and the second at the mid-point of the theatre. Both entrances have their original deep red velvet curtains. The vestibule is painted in a light colour and around a mirror behind the splayed corner, above the doors, box-office windows and along the walls at the two-metre mark is very decorative lighter coloured plasterwork in art-nouveau style. The plasterwork partially overlaps the top of the door entrances. The architrave plasterwork is simpler in style and the ceiling lighting has banks of four circular lights, each in a diamond pattern, edged with decorative plaster applique and separated by pairs of fluorescent tubes.

As the interior of the property was not accessed, the following interior description is based on the State Heritage Register listing sheet for the item.

> *The original candy bar is sited on a higher level at the rear of the vestibule with two doors on the rear wall giving access to the toilets. The Crest and the Castle at Granville were the first to be permitted to use stainless steel flat back urinal stalls, the use of which the Water Board had not previously approved.*
>
> *The auditorium floor was sloped to accommodate the stalls seating, and has a stepped platform gallery towards the rear, with the projection box behind this 'lounge' section. In recent years, the sloped floor was removed and replaced with a flat floor. The curved proscenium splay walls swept up to the curve of the acoustic ceiling, following the line of the roof arch. Shell-like light fittings are arranged one above the other on either side of the stage opening, from ceiling to floor. The front of the stage is edged with polished wooden panelling and at its centre is a protruding alcove in which the Hammond organ was originally installed. On either side of the organ is a curved stairway of six steps narrowing at the stage level. Between each of the steps and the proscenium are curved stage projections forming an edging to the steps.*
>
> *Exit doorways on the angled proscenium wings have elaborate art nouveau plasterwork particularly around the circular ventilators above the doors. The proscenium wings do not extend to the ceiling and their top edge which curves downwards to the side walls is accented with large plasterwork decoration which projects into the space above each wing. This plasterwork extends along each wall to the rear of the theatre with semicircular decoration above each doorway. There is an exterior door on the opposite side of the theatre to the vestibule and this door opens onto the grassed area beside the cinema.*
>
> *The main curved acoustic ceiling has an elaborate plaster pseudo latticework decoration reminiscent of the theatre ceilings of the early 1920s. On the lower curve above the walls this breaks into bands of different styles of plasterwork in vertical panels with the higher panels in a pink colour. Plasterwork extends over and incorporates air vents on the sidewalls.*
>
> *The cinema's original pelmet drapes in deep crimson and outlined in gold brocade are still in position. The proscenium arch is highly decorated in large art nouveau style plasterwork. The main theatre auditorium lighting is provided by two rows of five chandeliers along each edge of the main curved ceiling. At the rear of the auditorium along each side wall is a thirteen-step stairway to the upper gallery, edged in polished timber and with the original "Hoyts" carpet still in position.*

The Crest is currently in good condition with some elements in a fair condition. The majority of its interior and exterior decoration is fairly intact from the late 1940s. Overall it is in a good condition.

Condition	Good	Fair	Poor

Alterations and Additions

Major alterations and additions:

- The removal of the raked flooring in the auditorium.
- Minor exterior signage changes along the prominent, triangular concrete pier with five protruding circles which originally contained the letters - H - O -Y - T – S was replaced with the letters B - I - N - G – O in the 1990s and with B-L-O-U-Z-A in the 2000s.
- In the early 1990s, the exterior was repainted, new Colourbond roofing was installed and the lavatories modernised.

Minor alterations and additions:

- Commercial signage situated on the upper façade fronting Redfern Street*.
- The carpark has been concreted and features contemporary metal fences and gate.
- The awing features contemporary energy efficient light bulbs along the trim.
- AC units along Blaxcell Street.

Overall the integrity of the building is considered to be high. All modifications have been sympathetic and do not detract from the significance of the item.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1947-1948

The first purpose-built cinema building in the western suburbs was the Granville Picture Palace which opened on Saturday 3rd September 1910, on land adjacent to the old Post Office in Railway Parade. In 1911, Alfred James Beszant organised screenings of films at Granville Town Hall on Tuesday and Thursday evenings. In 1919, Beszant became the sub-lessee of the Picture Palace. The Queen's Theatre, Auburn soon followed in 1913 and was built from fibreboard and timber and opened on 21 November 1913. In February 1914, Alfred James Beszant also took over as manager of this cinema. By 1920, Beszant had gained control of the Queens Cinema which became part of his Parramatta Cinema Ltd chain. Beszant came to be the principal stakeholder of several other cinemas within the area.

In 1923, Granville Cinema Ltd was formed with the principal shareholder Alfred James Beszant of the Avenue, Granville. This company took over the operations of both the Castle and Picture Palace. This company built the Granville Cinema on the corner of Parramatta Road and Good Street, which opened on 28th April 1924 and which has since been demolished.

By 1934, Beszant had founded the company 'Western Suburbs Cinemas Ltd', which controlled suburban theatres in Western Sydney. Theatres were constructed in Auburn, Parramatta, Burwood and Granville. By 1937, it was reported the company had a chain of fourteen theatres. The Western Suburbs Cinemas were known for being continually built or upgraded to include the latest technological advancements in sound and picture quality.

In March 1944, it was reported that the chain Hoyts Theatres Ltd had acquired a shareholding in the Western Sydney Cinemas. This saw the formation of Hoyts' Western Suburbs Cinemas. Granville Hoyts Castle was the first of two Quonset cinemas built by Hoyts' Western Suburbs Cinemas. This opened on 26 December 1947 and was built on the site of the original 1911 Castle Theatre. The Crest Theatre followed in 1948.

The Granville South Crest cinema was built by Hoyts' Western Suburbs Cinemas Ltd on land leased at the corner of Blaxcell and Redfern Streets from its owners, the Roman Catholic Church. The Crest Theatre was the second of two Quonset cinemas built in Granville by Western Suburbs Cinemas, the first being the Granville Hoyts Castle in South Street which opened on 26th December 1947 and was built on the site of the original 1911 Castle Theatre.

The Crest opened on Easter Saturday, 27th March 1948, with 'The Swordsman' and 'Dangerous Years.' Both theatres were designed by Cowper, Murphy and Associates and built by A. W. Edwards Pty Ltd. The Crest was a large cinema and could seat 852 guests. Mr L. (Nobby) Clark was the Crest's first manager and he stayed until 1956.

A Hammond electric organ was installed in front of the stage and, for a time in its early years, Miss Ruby Coulson (well-known in the Auburn area) played at picture screenings. In the early 1960s, the Crest operated only on Saturdays before screening its final programme on Saturday 24th August, 1963. The theatre then reverted to its previous owner, the Roman Catholic Church. At this time the raked floor was rebuilt as a flat floor and the theatre was converted into a ballroom and used for a variety of social functions, particularly as a Bingo centre. The original projection equipment was removed when Hoyts vacated the building.

In the early 1990s, the exterior was repainted and the asbestos roofing was replaced with new Colorbond roofing, the interior ceiling was repaired and the lavatories were modernised. The five circle 'Hoyts' lettering on the facade's vertical concrete triangular plane was also replaced during this period with five letters making up the word 'Bingo'. In late 2001, Bingo ceased to be played at the former Crest Theatre. The concrete triangular plane now features the letters 'Blouza'.

In more recent past the Crest has been the venue for the annual Cointreau Ball, the Annual General Meeting of the Australian Cinema & Theatre Society and was featured in Anthony Buckley's television series of Poor Man's Orange (adapted from the novel by Ruth Park) and more recently the movie 'Ladies in Black' adapted from the bestselling novel by Madeleine St John in 2018.

At present, the building is used by the Australian Blouza Association as a community and conference centre.

Recommendations

Statement of Significance

The Granville Town Hall is of State significance as a rare and intact example of a Victorian Free Classical government building. It is thought to be one of only two intact nineteenth-century council chamber buildings extant in Sydney's west. It demonstrates aspects of the history of Granville and the Parramatta locality in the late nineteenth century. Built in 1888 following the incorporation of Granville in 1885, it is an important symbol of the growth of Granville and its sense of identity. Although the seat of local government has since moved to Parramatta, the building is a well-known local landmark and continues to be used as a major venue for community events and activities.

Criteria Assessment	
a) Historic	The Granville Town Hall is of State significance in demonstrating the development of Granville and nearby Parramatta in the late nineteenth century following the opening of the railway in 1855. The building of the Town Hall in 1888 followed closely after the incorporation of Granville as a local government district in 1885. It is an important symbol of the growth of the Granville locality and the rapid development of its sense of identity, from a minor settlement to a fully-fledged local community complete with its own local government authority and its own Town Hall.
b) Associative	The Granville Town Hall is locally significant for its associations with the following people of note: CHARLES ASSINDER HARDING: was born and trained as an architect in England before arriving in Sydney in 1876. He initially

	worked for Thomas Rowe preparing the drawings for the new Sydney Hospital in Macquarie Street. He left in 1880 to set up his own business as an architect and building surveyor. Examples of his private work include the Grand Central Coffee Palace, the Victoria Arcade, aquariums in Bondi and Manly, the Kiama Hospital and the Granville Council Chambers (1888). Between 1890 and 1904 he was an architect in the Harbours and Rivers Branch of the Department of Public Works and examples of his public work include four new lighthouses, buildings on Garden, Spectacle and Cockatoo Islands, cottages at Trial Bay Prison, government cargo stores, and additions to the pilot stations on the Macleay, Clarence and Manning Rivers. JAMES WHITMORE HILL: was born and educated in Melbourne, and joined the Victorian Public Works Department at the time it was managed by William Wardell. In 1881, he moved to Sydney and opened an office in Elizabeth Street, then another office in Parramatta where he also lived for the rest of his life. He was active in the life of Parramatta and served as an alderman on the Council. He was a successful and prolific architect, and responsible for many domestic and commercial buildings in Parramatta and surrounding districts. Examples of his work include: the Jubilee Hall addition to Parramatta Town Hall; the Convent of the Sisters of Mercy, Parramatta; the Blacktown Council Chambers; Parramatta Primary High School (now the Arthur Phillip High School) and the main auditorium addition to the Granville Council Chambers in 1900. According to the 1907 Cyclopedia of NSW, even though domestic work formed the major part of his practice, he was also responsible for over 100 business premises, four theatres and public halls, and 11 churches and convents. JOHN NOBBS: the first mayor and “Father of Granville”, who was instrumental in the development of Granville and the construction of the Town Hall.
c) Aesthetic/Technical	The Granville Town Hall is of State significance as a rare and intact example of a Victorian Free Classical government building. Its size, prominence and classical details indicate its public status as the seat of local government, and its façade is a confidently executed example of the Italianate Civic Palace style. It is thought to be one of only two intact nineteenth-century council chamber buildings extant in Sydney's west. The original 1888 Council Chambers building is a fine example of local government building which uses stucco in a decorative manner to provide a veneer of respectability to a brick building. The building has undergone extension and minor alterations during the twentieth century, and internally there is an eclectic mix of styles and fashions that reflect the growth of the building over time. Although not in public view, the auditorium has an unusual ceiling of ripple iron with decorative ventilation domes. The decorative use of ripple iron in a large auditorium is considered rare and unusual. The Granville Town Hall is also a well-known local landmark in Granville.
d) Social	Granville Town Hall is of high local significance to the Granville community. It has been used throughout its history as the venue for many major functions and festive occasions in the Granville area. Such activities have included regular meetings for social and cultural

	activities and these uses are ongoing. Dancing was, and still is, a regular activity held within the auditorium. The significance of the Granville Town Hall for the wider Sydney and NSW community is reflected in its listing in the following heritage schedules: the Parramatta City Council LEP, the Register of the National Estate and the Register of the National Trust of Australia (NSW). It has been the subject of conservation work by Parramatta City Council since 2000, reflecting the community's high regard for the building.
e) Scientific	The auditorium of the Granville Town Hall has some technical significance as an early example of extant ripple iron ceiling combining ventilation domes and exhaust cowls to provide air circulation. The archaeological potential of the site is considered to be low. This is due to the Town Hall being the first building on the site and occupying the whole site.
f) Rarity	Granville Town Hall is of State significance in being a rare example of a Victorian Free Classical government building built in the nineteenth century. It is thought to be one of only two intact nineteenth-century council chamber buildings extant in Sydney's west. The building is an almost intact, although extended, government building. It has retained its original character and nearly all its fabric, both internally and externally. The decorative use of ripple iron in a large auditorium is considered rare and unusual.
g) Representativeness	Granville Town Hall is of State significance as a largely intact example of a council chambers building (1888) with an early auditorium (1900). Few such buildings were built and it is thought to be one of only two left in Sydney's west.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage, State Heritage Register listing sheet for 'Granville Town Hall'. As the description is comprehensive, no addition assessment has been undertaken aside from a condition assessment as viewed from the street.

The Granville Town Hall is a largely intact example of a Victorian Free Classical local government building.

The original 1888 section is a two-storey, rendered brick building on an almost square plan with a hipped corrugated iron roof. The faade to Carlton Street is designed in the Italianate manner and features a two-storey projecting port and flanking piers with second-storey paired pilasters. Fenestration is bi-partite on the ground floor and tri-partite on the upper floor. The interior consists of offices and the original Council Chamber. Of interest is the timber joinery, especially the elaborate architraves and the timber Honour Boards in the Council Chamber. The auditorium or hall, added in 1900, is a plain painted brick gabled structure running westward behind the front section. Internally the large hall is distinguished by restrained Doric pilasters supporting a panelled vault ceiling. Restoration work undertaken in early 2003 by architect Graham Edds involved removing the modern plaster covering the walls and ceiling of the auditorium, and revealing an unusual ripple iron ceiling, painted pale blue with gold stars, and three large decorative ventilation domes (Parramatta Advertiser 26/03/03). To the south of the front section of the town hall there is a former council workers office, now used by the Granville Historical Society. This is a Federation brick building, with the stretcher brick bond tuck pointed on the northern and eastern sides. It has a gabled Marseilles tiled roof and exposed beams in the eaves. It has two equal sized rooms. On the west and south-western sides of the hall there is a variety of non-significant skillion roof structures.

The current allotment covers an area of 2739.4 sqm and is located on a gentle sloping site fronting Carlton Street, Granville. Today it is bounded along the northern side by a laneway leading to the library carpark. To the south and west of the property now abuts residential development. A driveway from Carlton Street located south of the Town Hall and between it and the former council workers office provides limited on-site vehicular access and carparking.

The site contains the: former Council Chambers / Town Hall complex, former council officer's building, now used by the Granville Historical Society, galvanised storage shed and additional toilet.

Overall, the exterior of the building is in fair condition. The building shows signs of severe deterioration to the decorative elements as a result of damp salt attack.

Condition	Good	**Fair**	Poor

Alterations and Additions

The following list of modifications have been quoted from the NSW Office of Environment and Heritage, State Heritage Register listing sheet for 'Granville Town Hall'.

1888 construction of the Town Hall commenced.
There have been 5 main stages of construction (more detailed information is included in the Conservation Management Plan).

Phase 1 (1888 - 1889):
The original Council Chambers (designed by Charles A Harding) comprised four offices for staff and library on the ground floor, and the Council Chambers and Mayor's Room on the first floor with a balcony located over the entrance porch.

Phase 2 (1900 - 1921):
In 1900 a main Hall or auditorium (designed by James Whitmore Hill) including a gallery, stage and two 'retiring rooms' on one side with lavatory accommodation was constructed. The upstairs gallery was accessed by a new door opening cut into the former external western wall. A timber external fire stair was constructed to provide fire egress from the gallery.

Phase 3 (1922-1927):
A separate building was added to provide offices for the council engineer and health inspector. It is the thought that additional toilets were added during this period. In 1923 the iron palisade railings to the flower beds fronting Carlton Street were removed.

Phase 4 (1928 - 1929):
This phase involved major additions to the western end of the main auditorium with the relocation of the stage and the two dressing rooms. The auditorium ceiling was underclad with decorative fibrous plaster replicating the panelled vaulted from of the original ceiling. This ceiling with a latticed plaster grill obscured from view the original domed ventilators. The 1928 works also included the infilling of the area beneath the gallery to extend the hall and create new toilets and a strong room. The earlier toilets were converted to a kitchen.

Phase 5 (1930 - 2000):
This phase did not involve major additions, only minor alterations. The dance floor and some floor joists to the auditorium were replaced in 1934. In 1938 the flooring of the Council Chambers was upgraded.

1948:
With the amalgamation of Granville within the Parramatta City area, the Town Hall became a community hall and a place for lease, although some Council staff were still located in the offices. It is probable that at this time that two ground-floor rooms were amalgamated into one large roon to provide additional library space. The conversion probably involved the removal of two walls, renewal of the

flooring and the ceiling and the insertion of a large steel-framed window and narrow door and two windows. Internally these changes are supported with the walls revealing that the original fireplace and window openings have been bricked up and evidence of foundation walling beneath the floor.

Further works prior to 2000 included:

Suspended ceilings were installed in three ground-floor rooms and a plasterboard ceiling in another. The walls of some ground-floor rooms were offset clad with timber lining, presumably to cover damage from rising damp as well as provide another decoration phase although considered unsympathetic.
- The walls above the dado line in the main auditorium were clad with plasterboard and the original ventilator shafts were 'vandalised' during electrical works.
- A room was converted for use as a bar, and the room presently used as a kitchenette and the small downstairs meeting room, are thought to be later alterations.
- The kitchen has been recently upgraded to meet current health standards with stainless steel benches and tiled splashback and floors.
- Electrical services have been upgraded and modern facilities, phone, computers etc have been installed to some areas. A smoke detector system and security system has been installed.
- The galvanised steel shed and the detached WC located in the north-western corner of the site and the commercial grease arrester are intrusive elements and their removal at a future date should be considered.

In 2000 a Conservation Management Plan was prepared and has guided subsequent conservation works:
- The removal of the unsympathetic suspended ceilings, wall panelling within the original Council Chambers and the restoration and reinstallment of finishes and joinery and fireplace details.
- Repairs to the external parapet and wall claddings and membrane painting of the former Council Chambers.

In early 2000 urgent repair works including re-roofing and installing damp-proof course commenced. Since 2000, conservation works on the Council Chambers involving both interior and exterior painting (Form, 2016 (2), 15).

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1888

The following history has been quoted from the NSW Office of Environment and Heritage, State Heritage Register listing sheet for 'Granville Town Hall', dated 2012. As the history is comprehensive, no addition research has been undertaken.

The territory of the Dharug (or Sydney language grouping of) Aborginal people is thought to have stretched from the narrow neck of land between Sydney Harbour and Botany Bay, spreading in a widening arc towards and through the Blue Mountains. Within the Dharug language area were two distinct sub-groups who differed both in language and culture. One comprised those who lived by the coast and harbour, whose main food supply was fish and other types of seafood - called the "katungal" group (also known as the Eora). The other Dharug sub-group included all those who lived inland - the "paiendra", who used stone tomahawks to hunt possums in the trees (Flynn, 1995b, 10).

The Aboriginal people of Parramatta ("the place where the eels sit down") were the Burramattagal. Their land marked the border between the two Dharug cultures of the harbour and the inland (Flynn, 1995a, 7). It is uncertain as to which which Dharug grouping they belonged, but the evidence suggests that they were the westernmost Katungal clan. The early colonial commentator Watkin Tench states that the Aboriginal people of Parramatta spoke the coastal dialect. Yet, although the Burramattagal fished in the Parramatta River at the narrow western extremity of the harbour, like the Katungal, it

seems likely that they derived most of their food from land and freshwater sources, like the paiendra. "Theirs was undoubtedly a borderline culture" (Flynn, 1995b, 10).

Thomas Fowlie's unpublished "History of Granville", 1918, incorporated his own observations from living in the district since 1886 as well as oral history testament from elderly residents of the area, whose memories stretched back to the first half of the nineteenth century. Fowlie described middens along Clay Cliff Creek, Duck River and the Parramatta River, suggesting that for thousands of years the Buttamattagal economy incorproated fish and shellfish. He also mentioned two significant Aboriginal camping and ceremonial sites in the area: one on the corner of Union Street and Woodville Road, Granville, just a few blocks from the current loation of the Granville Town Hall; the other within the Elizabeth Farm Estate. He noted that:

"The whole of the district and surrounding country was covered with a dense large timbered forest. Granville was especially noted for its fine trees, which were a source of wealth for years afterwards to the timber getters. . . The district being well watered and heavily timbered was naturally a great resort of native fauna. . . I have been assured by old Colonists of the vast numbers of wild ducks and other water frequenting fowls that disported in the river and creeks in the early days" (Flynn, 1995a, 162-3).

Fowlie also noted that "in those early days" of the colony, Aboriginal people camped in their preferred two sites when they visited the district to receive their allocation of blankets:

"During those visits they indulged in great revelry and held corrobborees nightly. They were patronised and visited by many of the youth of Parramatta till they became a public nuisance and had to be moved on. Those yearly visits of aborigines gradually became less in numbers . . . Till by the close of the seventies they had ceased to come" (Flynn, 1995a, 164).

When Europeans first explored the Parramatta and Duck rivers in 1788, the area now known as Granville was covered in a dense forest of stringybark, blackbutt, box and ironbark trees. The junction of the two rivers (site of the suburbs of Camellia and Rosehill) was a significant meeting place for the Cadigal from the east and western Dharug peoples, such as the Wategora, Burramattagal and Bidjigal. An Aboriginal forest track also connected the coast and the headwaters of the main river feeding the harbour, and it appears that colonial authorities adopted it to build the road connecting the settlements at Sydney Cove and Rose Hill (Parramatta). This road - the colony's major artery - ran through what is now Granville (Dictionary of Sydney staff writer, 2008).

The 10th Governor of NSW, Charles FitzRoy, set up a hunt club in Granville in the late 1840s to pursue the wild dogs that infested the area. The main road in the area was called Dog Trap Road until 1879 when it was renamed Woodville Road (Parramatta Sun, 16/9/2010). Another pest of the highway (Parramatta Road/Great Western Highway) was the bushranger, preying upon settlers. The first industry in Granville was timber-getting, with the surrounding country heavily covered with gum, box and ironbark trees. The timber, cut by pit-sawyers, was used in many Parramatta district buildings and quantities were also transported to Sydney via the Duck and Parramatta Rivers. Charcoal burners were also active in the early years, providing fuel for householders and blacksmiths' forges (Pollen & Healy, 1988, 114).

The township developed following the construction of the railway in 1855 from Sydney to Granville, which was originally called Parramatta Junction. It was initially a fruit-growing area for the colonists and well-known for its oranges and other citrus fruit (Graham Edds & Associates, 2000).

Subdivision of the area began after the railway came through in 1855, and from 1862 the (Garnham Blaxcell's) Drainwell estate was being subdivided (Pollen & Healy, 1988). By the mid-1870s Granville had become a popular site for the erection of "gentlemen's villas". John Nobbs was a major figure among the early group of gentlemen, tradesmen and workers who settled at Granville (Graham Edds & Associates, 2000).

In 1878 the locality received its own post office, which was then part of the station master's house. In 1880 the population was 372, of which 172 were male. In this era German settlers Joseph Klein and P.W. Merkell tried to establish vineyards in the area, but eventually found the land was not suited for

this type of agriculture. More farmers discovered the limitations of the local soil and fruit growers complained about damage from flying foxes (bats). The only practical use for the grasslands, which replaced the original bushland, was for dairy cattle. The township retained the name of Parramatta Junction until 1880 when public meetings voted to change the name to Granville, in honour of the Earl of Granville, a former colonial secretary (Parramatta Sun, 16/9/10)/ in honour of the then British Foreign Minister, Lord Granville (Dictionary of Sydney staff writer, 2008).

A significant boost to the area came with the establishment in 1881 of the Hudson Brothers engineering works nearby at Clyde. A workforce had to be recruited and housed. On 12 February 1884, a petition calling for incorporation of the area was published in the Government Gazette, and in January 1885, Granville was officially gazetted and incorporated as a municipality. John Nobbs was elected the first Mayor and enjoyed a reputation as the "Father of Granville". Council meetings were initially held in the School of Arts building in Good Street, north of the railway line.

In 1888 Granville Council decided to erect its own Town Hall to celebrate the centenary of European settlement in Sydney. Architect Charles A. Harding of Sydney designed the Town Hall, and Banks and Whitehurst were selected to complete the building. The foundation stone was laid by John Nobbs on 5 September 1888.

In his speech at the ceremony, John Nobbs as Mayor referred to the rapid growth of Granville over the decade. From 12 or 13 houses, it had grown to 900 buildings including 760 houses, 60 shops, two banks, three public halls including a School of Arts, seven churches, two public schools and 13 factories, of which, two were the largest in the colony: Hudson Brothers and Brunton's (Flour) Mills.

The official opening of Granville Council Chambers was held on 16 January 1889. The opening ceremony was held in the Council Chamber which was lit by two chandeliers. According to the press report, the Council Chamber was built on "true Australian lines in the matter of ventilation freely afforded by windows all around the room." It was reported that the site had cost 600 pounds, and the building's contract price was 1090 pounds without fittings. Offices for the Council Clerk, Engineer, Overseer, Inspector of Nuisances, and library were on the ground floor. A spacious staircase led to the first floor where the Council Chamber was located, 11m x 9m and Mayor's Room. A balcony, 3m x 1.5m was erected over the porch.

The auditorium (I.e. the main hall) was added in 1900, designed by James Whitmore Hill, a Parramatta-based architect. For later development and additions to the Town Hall, see the description under 'Modifications and dates'.

In 1949 Granville was incorporated into Parramatta City Council. The Granville Town Hall, though no longer a seat of local government, has continued to be a municipal facility and is used for local events and ceremonies.

Its interiors were viewed globally as the location for dancing scenes in "Strictly Ballroom", the internationally acclaimed Australian feature film released in 1992 (Parramatta Advertiser, 26/03/03).

(Note: Except where other texts are quoted, this historical summary is taken from the Granville Town Hall Conservation Management Plan, prepared by Graham Edds & Associates, 2000).

Granville Town Hall site has been used and maintained for local government and community use since 1889. Over the last 10 years the Town Hall has undergone considerable conservation works (Form, 2016 (2), 17).

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.	**X**	**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The building shows evidence of damp and salt attack. This should be treated to mitigate further deterioration of the decorative elements.
- Update the existing Conservation Management Plan.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Statement of Significance

The item at 15 Bayfield Road, Greystanes is of local heritage significance for its historic and aesthetic values. The house has aesthetic significance as a fine and largely intact example of a Late Victorian suburban cottage with only minor external modifications. The building's aesthetic value is enhanced by the intact nature of its built architectural form and period detailing, despite the weatherboard cladding having been replaced by aluminium cladding. The item retains a prominent position within the residential character of the area and makes a striking contribution to the streetscape. It has historical significance as a representative example of the type of residence which was common within the outer suburban and rural areas of Holroyd during the latter decades of the 1800s. The item is a contributory element reflecting the growth and development of the district in the latter part of the nineteenth century.

Criteria Assessment	
a) Historic	It has historic significance as a representative example of the type of residence which was common within the outer suburban and rural areas of Holroyd during the latter decades of the 1800s. The item is a contributory element reflecting the growth and development of the district in the latter part of the nineteenth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The house has aesthetic significance as a fine and largely intact example of a Victorian suburban cottage with only minor external modifications. The building's aesthetic value is enhanced by the intact nature of its built architectural form and period detailing, despite the weatherboard cladding having been replaced by aluminium. The item

	retains a prominent position within the residential character of the area and makes a striking contribution to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of a Late Victorian cottage built c.1897.

Physical Description

The item is a single storey cottage dating from the late Victorian period. It has a single steeply pitched hipped roof of corrugated iron, which continues on a shallower pitch over the encircling verandah, which has been infilled on three sides. The original chimney has been removed and a small metal flue to rear has been provided in its place. The façade is symmetrical around the central entrance doorway, with a timber window on either side of the door. The wall cladding has been replaced with a textured aluminium panelling resembling weatherboard. The front verandah is supported by a square timber and rendered masonry piers, with a decorative timber valance which appears to be non-original. The verandah has a battened fibro ceiling and timber decking, both non-original. The panelled timber front door is obscured by an aluminium security screen. There is a four-paned double-hung sash window on either side of the front door, with decorative timber architraves and sills.

A single garage at the rear is of battened fibro and corrugated iron. The opening to Hoad Place has been bricked in. Adjacent to the garage is timber pergola with corrugated fibreglass roofing and some lace detailing.

Located on a reasonable sized corner block, the original curtilage appears to have been reduced. The property is enclosed by a new timber picket fence to front and halfway around sides, with a high powder-coated fence to rear. There is a patterned concrete path around that wraps around the front verandah and to the side of the house. There are several large established trees in the front yard which add to the character of the site. There are two small palm trees and an inground pool in the rear yard.

The building appears to be in a good condition and well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New aluminium weatherboard-look façade cladding*
- Modern roof cladding
- Modern verandah elements
- Modern landscaping elements (footpaths, fencing)
- Inground pool to rear
- Modern garage and out-structures to rear

While the item has undergone some significant modifications and upgrades, particularly in terms of the replacement of original fabric, the original architectural form is still the dominant feature, as the modern elements are mostly complimentary and sympathetic to the original building.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1897

Greystanes began as a rural suburb in the 1850s and remained so until the 1880s. The suburb was occupied mainly by large estates designed as rural retreats for gentlemen farmers, including Charles Whalan and Nelson Lawson. Greystanes is named after the home of Nelson Lawson, son of William Lawson who built 'Greystanes Estate' on the western side of Prospect Hill.

Grazing was a major area of land use in Greystanes, but some owners diversified into orchards and vineyards. It remained sparsely populated until the twentieth century and only few clusters of settlement developed around industrial sites, new railway stations and on the Western Road.

Greystanes was recognised as a suburb in 1922. Prior to World War I, there was a predominately British and Irish community in the area, however, after 1912 there was an increased European migrant community settling in the area. Gozo Road, Greystanes, named after the second largest Island in Malta, recognises the Maltese influence in the area, and as early as the 1930s, Greystanes was dubbed the 'Little Malta'. Greystanes has remained predominately residential suburb with its first shopping centre opening in September 1970 on a 6-acre site at the junction Merrylands and Braeside Roads.

The site formed part of Portion 198 of 700 acres granted to Charles Whalan in January 1818. In 1893, John Booth purchased over 300 acres of land including part of the Whalan "Macquarie Park" Estate. In 1897 the land was transferred, and by 1904 by virtue of foreclosure of the mortgage on the former Booth estate it was subdivided and sold.

Charles Ernest Byrnes, a prominent Parramatta citizen, purchased lots 7-27 in 1911. The property formed part of Lot 25. This was subsequently transferred to John Kelly in 1913 who also purchased Lot 26 at this time. In the following year Kelly sold Lot 26 retaining Lot 25 until 1923 when it was transferred to William Smith. Lot 25, over two acres in size with street frontage to Macquarie Parade, was not subdivided until 1965. It seems that Macquarie Parade changed to Bayfield Street sometime between 1965 and 1968 by which time the parcel of land had been subdivided into five allotments all with street frontage.

Lot 3, including the cottage, remained the largest allotment at over one acre in size and T-shaped. By 1975 Lot 3 had also been subdivided and a road and cul-de-sac created to access the rear allotments. The cottage allotment, Lot 3, remained at the corner of Bayfield Road and Hoad Place. In 1975 work was carried out to the cottage. In 1982 the property was transferred, and a pool and garage were added to the rear yard area in 1983 and 1984. The cottage remains in use as a private residence.

Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Landscape	
	Level 2	Parks, Gardens and Trees	

Curtilage Map

Statement of Significance

The Gallard Reserve Woodland Park is locally significant for its scientific, rarity and representative values. The park retains valuable stands of native vegetation of the Cumberland Plain bushland that has been extensively cleared since European settlement. The park is an extant, tangible reminder of the former landscape. The Gallard Reserve is an important ecological resource that assists the conservation of threatened species and ecological communities crucial to maintaining the unique biodiversity of the Cumberland Plain. The park contains a number of species of flora typical of the Cumberland Shale-Plains Woodland, one of the six indigenous forest communities in Sydney, and provides food, shelter and nesting sites for local wildlife.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item provides an important ecological resource for the community and for local wildlife.
f) Rarity	The item is a rare protected area of an identified endangered ecological community.
g) Representativeness	The item is representative of the Cumberland Shale-Plains Woodland ecology, which is typified by certain flora such as Forest Red Gum and Grey Box.

Physical Description

The Gallard Reserve Woodland is a small collection of plants and shrubs, mostly Forest Red Gum *(E. teraticornis)* and Grey Box *(E. Moluccana)*. It has been preserved from regular mowing and urban development for its purpose as an ecological resource to the local wildlife, as well as to preserve a rare endangered ecological community.

The Woodland is located at the centre of a community park, otherwise known as Gallard Reserve, which is bordered on all sides by urban residential development. Apart from the central preservation area which contains the remnant Cumberland Plain Woodland, the reserve is a predominately grassed area with some other established Eucalypts located throughout and with a contemporary play equipment area. The local park is used as a community park and playground.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Removal of buildings evident in a c.1943 aerial, unknown date.
- Inclusion of play equipment to the southeast of the reserve, post 2000s.
- Remnant vegetation of the Cumberland Plain bushland.

The landscape of Gallard Reserve is regularly maintained. The central portion of the reserve, the preservation area, is restricted from mowing and other activities and is a highly intact portion of Cumberland Plain bushland.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Pre 1788

The Cumberland Shale Plains Woodland is one of the six indigenous forest communities in Sydney, consisting mostly of dry sclerophyll woodlands and forests. Currently, less than 6% of the Woodlands remain in small parts distributed across the western suburbs of Sydney, totalling only around 6400 hectares. Specifically, the Cumberland Shale Plains Woodland features a soft topography, an open grassy woodland mainly containing Grey Boxes, forest Red Gums and Ironbarks. It also contains a thin to reasonable cover of shrubs and a high cover of grasses and forbs.

In 1877, Cumberland Plain Woodlands covered 107,000 hectares and filled around 30% of the Sydney Basin. At the time of European settlement, the Cumberland Plain contained 1,070 km² of woodlands and forests. The westward expansion of Sydney over the plain has placed enormous pressure on the woodlands and other local ecological communities.

Greystanes has been significantly altered since European colonisation, resulting in the loss of the large majority of this natural habitat. The Gallard Reserve Woodland is an extant, tangible reminder of the former landscape.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Consider physical delineation of preservation area from general reserve area with fencing, if there is an increased/greater risk of harm to the preservation and conservation of the remnant bushland.

Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Farming and Grazing	

Curtilage Map

Statement of Significance

The site at 2 Hyland Road, Greystanes is locally significant for its historic, social and rarity values. The item is significant as an early, intact farm group which appears on a plan dated 1897, and is rare as the only current farm group surveyed in the area. The item also demonstrates the former dairying industry in the area. The item is socially significant for its former functions within the local community, as a post office and inn. It also has social significance as an intact farm group demonstrating dairying, an important industry of the local area.

Criteria Assessment	
a) Historic	The item has historic significance for its former uses as the local post office and inn. The development onsite demonstrates the layering of functions that was common in rural areas where community facilities were limited. The item also demonstrates the former dairying industry in the area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item is socially significant for its former functions within the local community, as a post office and inn. It also has social significance as an intact farm group demonstrating dairying, an important industry of the local area.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item is rare as the only intact farm group in the area.
g) Representativeness	The item does not meet this criterion.

Physical Description

The subject site is a large agricultural property, which is uncommon for the highly suburbanised area. The site contains a weatherboard residence fronting Hyland Road. The house has a modern replacement corrugated steel roof and has been fully reclad in new weatherboard. There is a wrap-around verandah on all sides of the house with a corrugated steel sheet roof at the same pitch as the main roof, and timber deck which also appears to be replacement material. The verandah is supported by simple timber posts. The southern corner of the house is raised on an enclosed masonry base. There are a number of modern accretions evident on the façade including security screens, a modern balustrade fixed to the verandah timber posts, electrical boxes, lighting, etc. The house has a detached demountable building to rear east corner connected via the verandah.

To the south is a brick gabled outbuilding with an attached gable-roofed extension, possibly a dairy with milking shed. Additional farm equipment can also be found to the south of shed. There is a tennis court in the rear southeast corner of the site.

There is a sign at the front corner of the site, identifying it as 'West Cumberland Mens Shed'.

Former elements such as a timber water tank stand have since been removed.

The condition of the built elements on site is fair overall.

Condition	**Good**	**Fair**	Poor

Alterations and Additions

- Detached demountable building to rear corner of building*
- Various modern accretions to the façade
- Tennis court*
- Chicken wire boundary fence*

Much of the original fabric of the residence appears to have been upgraded/replaced, however the main architectural form of the building is intact.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	Pre 1897

Greystanes began as a rural suburb in the 1850s and remained so until the 1880s. The suburb was occupied mainly by large estates designed as rural retreats for gentlemen farmers, including Charles Whalan and Nelson Lawson. Greystanes is named after the home of Nelson Lawson, son of William Lawson who built 'Greystanes Estate' on the western side of Prospect Hill.

Grazing was a major area of land use in Greystanes, but some owners diversified into orchards and vineyards. It remained sparsely populated until the twentieth century and only few clusters of settlement developed around industrial sites, new railway stations and on the Western Road.

Greystanes was recognised as a suburb in 1922. Prior to World War I, there was a predominately British and Irish community in the area, however, after 1912 there was an increased European migrant community settling in the area. Gozo Road, Greystanes, named after the second largest Island in Malta, recognises the Maltese influence in the area, and as early as the 1930s, Greystanes was dubbed the 'Little Malta'. Greystanes has remained predominately residential suburb with its first shopping centre opening in September 1970 on a 6-acre site at the junction Merrylands and Braeside Roads.

The site was formerly known as Hylands Inn, in the 1880s. The Inn which was run by Luke Hyland, later became the family home and dairy farm. It was one of the five inns built to cater to the workers of the Prospect Reservoir. The Inn later came to be known as 'Prospect Inn', kept by Mrs Smith, following the death of Mr Hyland.

While the subject site is identified on an 1897 NSW Waterboard map, labelled as "Prospect Hotel". Another plan calls it a Post Office. The building is shown in the present location in the 1950s Robinsons Map of Holroyd. After falling into disrepair, was building was acquired by the then Holroyd City Council, who restored the building in 1995. The building was used as a youth centre. Currently the building is used by a community groups such as the 'Men's Shed'.

Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Education	

Curtilage Map

Statement of Significance

Ringrose Primary School is of local heritage significance for its historic, associative and social values. The item is historically significant as the first public school for the Greystanes area at the time of its construction in 1962, servicing residents around the newly developing suburb of Greystanes and neighbouring areas in South Wentworthville and Prospect. On its opening, it had the first appointed female Principal of a co-educational school in the Parramatta district, Miss Linda Sheridan. The item is socially significant as the first school in the Greystanes area.

Criteria Assessment	
a) Historic	The item is significant as the first public school for the Greystanes are at the time of its construction in 1962, servicing residents around the newly developing suburb of Greystanes and neighbouring areas in South Wentworthville and Prospect.
b) Associative	The item is associated with first appointed female Principal of a co-educational school in the Parramatta district, Miss Linda Sheridan.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item is socially significant as the first school in the Greystanes area.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The school contains a number of typical 1960s brick veneer school buildings, with simple, long rectangular footprints with gable ends and long aluminium windows. They are laid out around the edges of the property facing inwards to a central playground. In amongst the brick buildings are a number of more recent school buildings.

The school has a steel powder-coated palisade fence along its perimeter. The school buildings are localised to the northwest portion of the school lot. The south, east and northeast portion of the lot consists of a large grassed playground with established gum trees throughout. There are many established trees located along Damien Avenue and Ringrose Avenue that contribute to the formerly rural character of the area.

In general, the school appears to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Buildings extended in 1964, 1974 and c.2016.

In general, the school building appears to retain a high level of integrity and is quite intact, as viewed from the streetscape. However, it is likely that due to the continued use of the building, the interiors have a lower integrity grading, owing to the likely upgrade of amenities for operational needs.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1962

Greystanes
Greystanes began as a rural suburb in the 1850s and remained so until the 1880s. The suburb was occupied mainly by large estates designed as rural retreats for gentlemen farmers, including Charles Whalan and Nelson Lawson. Greystanes is named after the home of Nelson Lawson, son of William Lawson who built 'Greystanes Estate' on the western side of Prospect Hill.

Grazing was a major area of land use in Greystanes, but some owners diversified into orchards and vineyards. It remained sparsely populated until the twentieth century and only few clusters of settlement developed around industrial sites, new railway stations and on the Western Road.

Greystanes was recognised as a suburb in 1922. Prior to World War I, there was a predominately British and Irish community in the area, however, after 1912 there was an increased European migrant community settling in the area. Gozo Road, Greystanes, named after the second largest Island in Malta, recognises the Maltese influence in the area, and as early as the 1930s, Greystanes was dubbed the 'Little Malta'. Greystanes has remained predominately residential suburb with its first shopping centre opening in September 1970 on a 6-acre site at the junction Merrylands and Braeside Roads.

Ringrose Primary School
Provisions for a new public school was gazetted on 10 July 1961, at Ringrose Avenue, Merrylands West. A grant of £80,000 was allocated for the construction of the new school, which was to consist of six classrooms, toilets, office, staffrooms and clinic. It was opened in May 1962 even though construction was not yet complete. At the time, it was the first school in the local area of Greystanes which was still a developing suburb. As such, it was receiving students from neighbouring areas including Wentworthville South and Prospect. The school was extended again in 1964 with the inclusion five new brick veneer classrooms. The school had the first appointed female Principal of a

co-educational public school in the Parramatta District, Miss Linda Sheridan, who was formerly the headmistress at Fairfield Girls School. Close to completion, it is claimed to have had fourteen classrooms and accepted Infants children from kindergarten to grade six.

In 1974, a contract for $275,000 was awarded for the construction of a two-storey block containing five classrooms as well as additions to the library and administration block. The works were awarded to C.H Webb Brothers Pty Ltd of Parramatta.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	**X**
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the Development Application should be accompanied by a detailed heritage assessment and fabric analysis to understand which buildings are significant and how to manage change.

Curtilage Map

Statement of Significance

The building at 48 Albert Street, Guilford, is of local significance for its historic and aesthetic values. Built in 1888, the item historically relates to the 1884 land subdivision of Sherwood Estate, which was granted to William Sherwin in 1831, and came to be known as the Sherwood Heights. The residence is one of the earliest remaining houses in Albert Street. The item has aesthetic significance as a fine and largely intact example of a Victorian cottage built in the late nineteenth century and the quality of its detailing which makes a strong contribution to the character of the streetscape. The item is a representative example of a Victorian cottage.

Criteria Assessment	
a) Historic	Built in 1888, the property historically relates to the 1884 land subdivision of Sherwood Estate, which was granted to William Sherwin in 1831. The subdivision of the Sherwood Estate from 1884 to 1887 came to be known as the Sherwood Heights. The residence is one of the earliest remaining houses in Albert Street.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as a fine and largely intact example of a Victorian cottage built in the late nineteenth century and the quality of its detailing which makes a strong contribution to the character of the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a Victorian cottage.

Physical Description

The item is a symmetrical brick Victorian cottage with Georgian features. The dwelling has a hipped roof clad in painted corrugated steel cladding to three sides, with a bullnose verandah to the street (north) and western side. The roof also features two rendered brick chimneys with cornice detailing and two glazed terracotta chimney pots on each. At the rear are two hipped wings, flanking a skillion verandah. At the south-eastern corner are the former stables which have a wide gabled roof. It appears the house is presently divided into two residences, with access either from the front or rear.

The walls are painted brick set in an English bond on a rendered masonry base. The front verandah has simple timber posts, beam and posted balustrade and modern Colorbond cladding. It appears the verandah has been modified at an early stage from four equal bays to five bays and has been partially infilled along the western side with fibro sheet cladding. The verandah is addressed by splayed concrete steps which lead to a central door with top and leadlight or mottled glass sidelights. The main door is not visible behind an intrusive metal security door. On either side is a single set of French doors, also hidden behind intrusive metal security doors with top lights. The window and door openings have segmental arched heads.

The site is bound to the north by Albert Street and to the south by Frank Street, which cuts across at a diagonal. There is a white aluminium loop top fence along the north and west boundary of the property that replaces a timber picket fence which still frames the eastern and rear boundaries. The residence features a deep setback with some plantings. There are two mature trees to Albert Street, and a row of three similar trees to Frank street. The verandah is fronted by a garden bed with three frangipani trees that are not significant. It appears the curtilage to this house has been reduced with later subdivisions.

The house generally appears in fair condition. There is some cracking to the base of the verandah and steps and flaking of paintwork. Timber verandah elements show signs of age and wear. The roof appears in good condition, as do the chimneys.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Fibro infill to front verandah along western elevation*
- Painted masonry infill footing and masonry access stairs possibly added during the 1920s/30s.
- Replaced roof cladding.
- Security screens have been added to door openings to the front elevation*
- Altered door and window openings at the rear (i.e. conversion of door to window opening).
- Replaced timber picket fence along the north and west boundary with white aluminium loop top fence*

Although the building has been modified, it retains much of the earlier form and character. The integrity of the item is reduced by later intrusive elements such as the security screen doors, infill of the western portion of the verandah and the contemporary fence. Overall, the item is considered to have moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1888

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and, in 1871, a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886, Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century, the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject property forms a part of 1165 acres of land known as the 'Sherwood Estate' that was granted to William Sherwin in June 1831. In 1884, William Joyce Hobbs purchased Lot 28 and part lots 18,19 & 29 of Sherwood Estate which amounted to over 185 acres of land. In April 1885, Albert Elkington and Andrew McCullock purchased a little over 131 acres of the Hobbs estate and subdivided this parcel, known as Lots 1 & 2 of Section 16 to Elizabeth Bedford in June 1885. It seems that the National Permanent Building Land Investment Co Ltd took over Lots 1 & 2 in 1887 and incorporated it into the "Sherwood Heights" subdivision.

It appears the house was constructed c.1888, as the Sands Directory lists the Bedford's at "Gracemere" from 1989 to 1892. In 1892, the site was transferred to Robert Walker, listed in the Sands Directory from 1892, and in 1901 to his widow, who sold the lots to Frances Thompson in 1904. The site changed hands a number of times by 1913, when it was purchased by Jane Jones who consolidated lots 1 and 2 with adjoining lots 3, 12, 13 and 14. In 1928, Lot 12 was purchased by the Metropolitan Water Sewerage and Drainage Board (MWSDB) and the residue was sold to Daniel Wakeley who retained ownership until 1943.

By 1954, the site was again subdivided and lots sold. The current site, lot 6 spans diagonally from Albert Street to Franks Street and was purchased by Joseph Podricks. Since that time, the site has been sold a number of times. In 1968, an application was made for the construction of a garage. The property remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Consideration should be given to the removal of the fibre cement infill to the verandah.
- The window and door openings, particularly in the front façade, should not be enlarged or filled in.
- There should be no roof additions or dormers allowed in the roofline visible from the street.
- Consideration should be given to the reinstatement of a timber picket fence along the north and west boundary of the property.
- Consideration should be given to the removal of intrusive additions, such as white security screen doors for the inclusion of more sympathetic door options.

Curtilage Map

Statement of Significance

The dwelling at 12 Amherst Street, Guildford is locally significant for its historic, aesthetic and representative values. Built c.1914, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision. The dwelling was constructed during a time when the area was still considered a 'tiny village', just prior to a building boom in the 1920s. The dwelling is a largely intact Federation style residence, which represents the prevalent style of construction in the area at the turn of the century. Though, it is also notable for its Queen Anne decorative motifs. The building is located on a prominent corner site on Amherst Street, with an unusual setback from Bangor Street in comparison to other structures along this road. The dwelling is visually balanced out by an identical residence located on the opposite corner at 25 Berwick Street. Both buildings appear to mark a gateway to the Church and School Estate subdivision. The cottage is readily identifiable as part of the historic building stock and contributes positively to the streetscape character.

Criteria Assessment	
a) Historic	Built in 1914 on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision, the Federation dwelling was constructed during a time when the area was still considered a 'tiny village', just prior to a building boom in the 1920s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling is a largely intact Federation style residence which represents the prevalent style of construction in the area at the turn of the century. Though, it is also notable for its Queen Anne decorative motifs. The building is located on a prominent corner site, with an unusual setback from Bangor Street in comparison to other structures

	along this road. The dwelling is visually balanced out by an identical residence located on the opposite corner. Both buildings appear to mark a gateway to the Church and School Estate subdivision. The house is readily identifiable as part of the historic building stock and contributes positively to the streetscape character.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The dwelling is a largely intact Federation style residence.

Physical Description

The dwelling is a small T-shaped weatherboard cottage set on brick piers, with an intersecting gabled main roof clad in corrugated iron. The front of the house features a small hipped roof over an entrance portico and a shallow bullnose roof supported by pairs of decorative timber posts with arched timber frieze. The main roof end gables have battened fibro ends and simple timber barge boards and finial. Each gable end features a pair of double hung sash windows with decorative sills as well as carved timber and pressed metal fixed awnings above. The entry portico has a pair of timber framed casement windows with small panes at the top and bottom. The house appears to have retained its original weatherboard cladding and timber detail. A skillion lean-to features on the secondary street frontage (Bangor Street). It has weatherboard walls flush with the gable end and a similar fixed awning over a double hung window. There is a single painted brick chimney to the skillion lean-to.

The dwelling is located on a large corner block and the building is set close to the street edges, allowing for a large yard to the east and south. The landscaping is unkept and informal, with some mature plantings located along the secondary street frontage (Bangor Street). The front boundary (Amherst Street) does not have a boundary fence. The western boundary (Bangor Street) has an unpainted timber fence in extremely poor condition.

Opposite Amherst Street at 25 Berwick Street a cottage has similar characteristics however has been heavily modified, including new terracotta roof tiles and an addition on the eastern side.

Overall, the condition of the dwelling is considered to be good with no signs of deterioration. Unkept landscaping around the base of the building may lead to deterioration of timber elements at the base of the structure over time. The timber fence is in poor condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Timber fence along Bangor Street boundary
- Skillion lean-to addition
- New paint scheme

The building is largely intact with minor alterations and additions. All alterations have respected the buildings heritage values and follow the principle of replacing heritage fabric on a like-for-like basis. The buildings integrity is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1914

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject site is located on one of the oldest subdivisions in Guildford. Originally granted in 1825, the 1000 acre Church and School Estate was located on Dog Trap Road (present Woodville Road) south of Parramatta. Much of this land was initially let during the 1830-40s to local landowners and probably used for grazing. Although Guildford had residents from 1799, it was not until the subdivision of this estate from 1871 and the opening of the first railway station in the district in 1876 that much development occurred.

In 1874, James Henderson purchased the land portion on which this site is located. In 1881 he sold this to Thomas Issac Boyd and George Kennedy King who began to subdivide it during the next year into small narrow allotments. William Mundy purchased a number of lots and in early 1914 they were sold by his widow to John Nelson, a builder. The house may have been constructed at this time and in December of the same year the property was sold to Arthur Henderon. In 1920 the Sands Directory lists Curby Herber as residing at this property but it is not until 1943 that he purchased the property. In 1963 the property was passed to Vincent Monson.

The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The timber boundary fence is in poor condition. Should the opportunity arise, this should be replaced with a low timber picket fence which surrounds the property boundary on each street frontage.

Curtilage Map

Statement of Significance

Guildford Public School is locally significant for its historic, aesthetic and representative values. The school has served as a public educational institution for the local community since 1915. The most significant building on the site, the 1929 Infants' School building, provides evidence of the major population boom of the Inter-War period in Guildford when residential development and associated civic infrastructure grew at pace. It also reflects the educational and social policies of the State Government's Dept of Education of the period, specifically with regards to the provision of new schools throughout the State. The Infants' School building has aesthetic significance as a well detailed and, from the exterior, substantially intact example of "Inter-War Mediterranean" architecture, which is a style not particularly common within this area of Sydney. The siting of the building and the integrity of its aesthetic qualities also make it a notable and attractive landmark in its local area.

Criteria Assessment	
a) Historic	The school is historically significant for its role as an educational institution for the community since 1915. The most significant building on the site, the 1929 Infants' School, provides evidence of the major population boom of the Inter-War period in Guildford when residential development and associated civic infrastructure grew at pace. It also reflects the educational and social policies of the State Government's Dept of Education of the period, specifically with regards to the provision of new schools throughout the State.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The Infants' School building has aesthetic significance as a well detailed and, from the exterior, substantially intact example of "Inter-

	War Mediterranean" architecture, which is a style not particularly common within this area of Sydney. The siting of the building and the integrity of its aesthetic qualities also make it a notable and attractive landmark in its local area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The Infants' School building is a representative example of Inter-War Mediterranean" architecture.

Physical Description

The Guildford Public School complex comprises of a number of one, two and three storey buildings, constructed in various styles and materiality. They are situated around large asphalt outdoor play areas and yards. A large arched canopy sits adjacent to the Infants' School building.

The historic Infants' School building is a single storeyed with a symmetrical front elevation, featuring hip-roofed wings projecting at either end, a central gable roofed wing with curved pedimented end (similar to a "Dutch gable") and flat roofed connecting wings in between. Windows to front elevation are multi-paned timber framed, double hung sashes with half-round heads. Recessed porches in the end wings have arched doorways. The basecourse is face brickwork.

The school contains several mature trees of varying species scattered throughout the play areas. There appear to be a few eucalyptus trees. The school is fenced off by a palisade style steel fence painted black.

As viewed from the street, the historic building appears to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Air-conditioning units*
- Covered play area canopy adjacent to the Infants' School building

As viewed from the street, the historic building appears to have high integrity. Though, as is the nature of school buildings, they are subject to incremental change overtime and it is likely that the interiors and some elevations are of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1915

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Curtilage Map

Statement of Significance

The dwelling at 67 Berwick Street, Guildford is locally significant for its historic, aesthetic and representativeness values. Historically, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision. Built between c.1901-1911, the Federation Bungalow was constructed in a time when the area was still considered a 'tiny village', just prior to a building boom in the 1920s. It is a contributory element that reflects the growth and development of the district throughout the early decades of the twentieth century. The house has aesthetic significance as a well-kept and early example of a small-scale suburban Federation Bungalow in the area which contributes positively towards the streetscape. The item is representative of the Federation Bungalow type common to the Guildford area during the early decades of the 1900s.

Criteria Assessment	
a) Historic	Built between c.1901-1911 on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision, the Federation Bungalow was constructed in a time when the area was still considered a 'tiny village', just prior to a building boom in the 1920s. It is a contributory element reflecting the growth and development of the district throughout the early decades of the twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The house has aesthetic significance as a well-kept and early example of a small-scale suburban Federation Bungalow in the area which contributes positively towards the streetscape.
d) Social	The item does not meet this criterion.

e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of the Federation Bungalow type common to the Guildford area during the early decades of the 1900s.

Physical Description

The dwelling is of face brick construction, supported on a brick base, tuck pointed, set in a stretcher bond and painted with a red ochre. The hipped roof with a projecting gable roof has slate tiles with terracotta ridge caps and decorative end pieces. The roof extends over the front verandah. Two chimneys are stucco rendered and have brick tops and single terracotta pots. The gable end features stucco rendered infill with radial sun motif and a central square bay window with a flat roof. The bay window has three casement windows featuring multi-paned coloured glass top lights. The front verandah features decorative timber posts, frieze and balustrade, supported on face brick piers. The front door is obscured by a modern aluminium security screen and has a lead lighted top and side light. Adjacent to the door is a pair of timber framed double hung windows with painted sills and thin steel security grilles. Window and door openings have segmental arched heads. The rear section of the dwelling has a shallow hipped roof of zincalume. At the rear of the dwelling is a timber framed and clad lean-to with modern sliding windows.

The dwelling has a consistent setback with other dwellings along the street and has retained its original subdivision boundary. The front setback is landscaped with grass, a medium sized wattle tree and a hedge near the front door. A recently documented tree has been removed. A concrete pathway leads from the street to the front porch. The dwelling is bound by a low face brick fence with an art deco iron gate to what would have originally been a northern driveway. The rear yard contains a large mature tree.

The dwelling is framed by medium density development to the south and east.

While the timber barge board and timber elements to the verandah show signs of water damage, the dwelling is in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Timber lean-to addition at the rear
- Modern landscaping to front yard
- Driveway removed and re-landscaped as grass

The building is largely intact with minor alterations and additions. The integrity is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1901-1911

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The site is located on land granted (Lots 7 and 8 of Section 10) to James Henderson, awarded in May 1874 and formerly part of the 1871 Church and Schools Estate. In 1881 Sarah Henderson sold the parcel to Thomas Boyd and George Kennedy King who subsequently subdivided the land and began to sell various allotments. In 1883 Robert Napier purchased Lots 7, 8, 24 and 25 of Section 10 of the subdivision. In 1901 the site was transferred to William Hobson who sold to William and Florence Fussell in 1911.

Based on the style of the dwelling, it is likely that it was constructed between 1901 – 1911. The Sands Directory does not list the Fussells until 1918. In 1928 Frederick Napier Hobson purchased the property and is listed in the Sands from 1929. Frederick Hobson retained ownership until 1977 when the property was transferred to Keith Frederick Hobson and Ellen McNeil. In the following year Keith Hobson became the sole proprietor of Lots 24 and 25, thus dividing the property. Hobson remained as joint tenant of Lots 7 and 8 until 1985 when the present owners purchased the property. The dwelling remains in use as a private residence.

Statement of Significance

The dwelling at 77 Berwick Street, Guildford is locally significant for its historic, aesthetic and representative values. Built c.1914, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision, and is a contributory element reflecting the growth and development of the district throughout the early decades of the twentieth century. The building has aesthetic and representative significance as a good example of a small-scale suburban Federation Bungalow. The building fabric and detailing is in good condition and the building presents well within the street as part of the historic building stock. It has significance as a reflection of the type of residence that was common to the Guildford area during the early decades of the 1900s.

Criteria Assessment	
a) Historic	Built c.1914, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision, and is a contributory element reflecting the growth and development of the district throughout the early decades of the twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building has aesthetic and representative significance as a good example of a small-scale suburban Federation Bungalow. The building fabric and detailing is in good condition and the building presents well within the street as part of the historic building stock. It has significance as a reflection of the type of residence that was common to the Guildford area during the early decades of the 1900s.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The building is a good example of a small-scale Federation Bungalow.

Physical Description

The dwelling on site is a single storey face brick residence in the Federation Bungalow style. The face brick front facade has been painted with a red oxide and tuck pointed. There are polychromatic quoins to the corners. The main roof is half gabled, with a gabled protrusion extending towards the street. The roof is clad with terracotta tiles and features profiled ends and exposed timber rafters. The gable end features a stucco rendered detail with a geometric pattern and brick string course. The broken back verandah is supported by decorative timber posts grouped in pairs on face brick piers and features a decorative timber frieze and brackets. The verandah extends around the gable end with similar detailing and a flat metal roof, which is possibly a later addition. A double chimney on the southern side of the dwelling is face brick and stepped at the top, with two terracotta chimney pots. The main door is timber and glass panelled, with similar top and side lights. Windows are grouped in pairs to the front façade and are timber framed double hung sash. Windows have segmental arched heads and decorative rendered sills.

The front of the house has a small cottage style garden, with non-significant plantings across the front of the verandah as well as a grassed area. The dwelling is bound by a 1m high stone boundary wall with capped piers. A cyclone fence style gate has replaced an earlier gate. The boundary wall is lined with a neat hedge, placed behind the boundary wall. The sandstone wall and hedge contribute positively towards the heritage character of the place. A small set of painted brick stairs has been provided between the driveway and the yard. A concrete driveway along the northern boundary leads past the house to a fibro garage at the rear.

The property appears to retain its original subdivision boundaries, though there is no consistency in setback between the contemporary and historic buildings.

Although the verandah posts and timber awning over the window have peeling paint, the remainder of the building appears to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Flat roofed verandah extension to the front*
- Lean-to addition to the rear
- Cyclone fence gate

The verandah has been extended over the gable end on the front façade. Therefore, the overall integrity of the building is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1914

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject site is located on one of the oldest subdivisions in Guildford. Originally granted in 1825, the 1000 acre Church and School Estate was located on Dog Trap Road (present Woodville Road) south of Parramatta. Much of this land was initially let during the 1830-40s to local landowners and probably used for grazing. Although Guildford had residents from 1799, it was not until the subdivision of this estate from 1871 and the opening of the first railway station in the district in 1876 that much development occurred.

The site, Lots 31 and 32 Section 5, is located on land granted to James Henderson in February 1875. In 1881 Sarah Henderson sold to Thomas Boyd and George Kennedy King who subsequently subdivided the land and began to sell various allotments. In May 1883 David Sands purchased over 1 acre being the whole of Section 5. David Sands then began to sell sections thereafter. In December 1885 George Parker Jones purchased Lots 31 and 32. The Parker Jones family retained ownership until 1915 when property was transferred to William Fisk. In 1918 it was passed to his widow Ella Fisk who retained ownership until 1945 when it was sold to William and Eileen Yates. The Sands Directory indicates that the Yates had occupied the property since 1928. An application was made in 1951 for a laundry addition. Some work was carried out to the property in the early 1970s. In 1991 the property was transferred twice, finally to its current owners at the end of that year.

The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**

Statement of Significance

The Guildford School of Arts is of local significance for its historic, social and representative values. The building is important for the community's sense of place, having provided educational community services since the 1920s. The Guildford School of Arts was established as an institution dedicated to the "progress" of both individuals and the local community. Originally aimed at providing "education" and "access to high culture" for the working classes, Schools of Arts like the one in Guildford provided venues for educational lectures, trade courses and cultural activities. The rapid growth of residential development in the area in the Interwar period and the perceived needs of this new population are clearly evidenced in the construction of the School of Arts, as its changing functions have also reflected new demands. Architecturally the building is a relatively intact and modest representative example of a scaled "Inter-War Domestic" suburban hall. The site also has historic and social significance for its relation to the returned servicemen, having been renamed the "Soldiers Memorial School of Arts" in 1933, which was followed by the inclusion of a sandstone World War I memorial. The war memorial remains extant on site today. This memorial was later adapted to include an honour role for World War II.

Criteria Assessment	
a) Historic	The Guildford School of Arts established as an institution dedicated to the "progress" of both individuals and the local community. Originally aimed at providing education and "access to high culture" for the working classes to create better citizens, Schools of Arts like the one in Guildford provided venues for educational lectures, trade courses and cultural activities. The rapid growth of residential development in the area in the Interwar period and the perceived needs of this new

	population are clearly evidenced in the construction of the School of Arts, as its changing functions have also reflected new demands. The site also has historic and social significance for its relation to the returned servicemen, having been renamed the “Soldiers Memorial School of Arts” in 1933, followed by the inclusion of a sandstone World War I memorial which is extant on site today. This memorial was later adapted to include an honour role for World War II.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The building is important for the community’s sense of place, having provided community services since the 1920s. The Guildford School of Arts established as an institution dedicated to the "progress" of both individuals and the local community.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Architecturally the building is a relatively intact and modest representative example of a scaled "Inter-War Domestic" suburban hall.

Physical Description

The community building is a single storey face brick structure with "T" shaped layout. One wing of the building, which addresses the main street frontage, is set slightly higher at right angles than the rest of the building. The building has gambrel (half-gabled) red rile roofs with sheet-metal ventilators to the ridge of main wing (known as the hall). All windows to major elevations are timber-framed, double-hung sash with margin-bar glazing detail to the top & bottom sashes (i.e. small square & rectangular panes along edges). All windows have flyscreens. There is a fanlight above the main entry door. Memorials in recessed "porch" centred in front elevation of lower wing.

There is no significant landscaping, although the building has a prominent position within the wider landscape due to its sitting within the street. The building is set against several sections of concrete and an asphalted driveway along the Calliope Street side of the building.

In the front setback of the site, along Calliope Street, there is a sandstone World War I war memorial which inscribes in the centre plaque “In memoriam: the Guildford district soldiers who made the supreme sacrifice in the great war 1914-1918.Their memory is ever green”. The war memorial also includes a tribute to World War II on either side of the main plaque. The war memorial is in good condition.

The building is well-kept, showing no signs of deterioration from the exterior.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Flyscreens to all windows
- Sections of concrete around the base of the building*
- Asphalt around the front of the building
- World War I memorial added c.1933
- Green low-scale fence around war memorial

The building is highly intact as viewed from the street, with minor alterations which are reversible.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1920s

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

During the nineteenth and early twentieth centuries, about 140 schools of arts or mechanics' institutes were established in Sydney, sometimes also known as literary, railway or workingmen's institutes. In many inner-city and interwar suburbs, the buildings remain, prominently located on the main street or near the train station. Most have now been taken over by local councils, or the properties sold to private interests. But they were originally established by volunteers as independent community organisations, assisted by a small government subsidy, and they thrived as centres of local community life. Today, their legacy in Sydney is more than just the surviving buildings. Out of these humble voluntary operations developed the local public library, the modern community or neighbourhood centre, and formal systems of adult and technical education.

The Guildford School of Arts was built in the 1920s. The building was used regularly by the local RSL and also contained a public library.

The building was named the "Soldiers Memorial School of Arts" in 1933. On the 3rd of June 1933, a stone war memorial was also laid by MW. Milligan Esq.J.P and Senator Major-General Charles Frederisk Cox. At this time, the School of Arts commemorated the fallen of World War II. The memorial included the Honour Roll which is located in a sandstone column in the front of the building. The memorial was officially dedicated on Wednesday the 4th of October 1933. At a later stage, the memorial was expanded to include an honour role dedicated to those who dies in service or were killed in action during World War II.

The Sydney Morning Herald, 9 October 1933 described the official opening of the Soldiers Memorial School of Arts:

> *There was a large crowd at the official opening of the Guildford Soldiers' Memorial School of Arts on Saturday including 100 ex-servicemen and six officers and 50 men of the 4/3 battalion of the militia, together with the battalion`s band.*
>
> *Commissioner Mackenzie ("Fighting Mac") in unveiling a fine honour roll erected outside the building and containing the names of 27 men from Guildford who were killed in the Great War, said the sacrifices of the dead had not been in vain. He urged the returned men to stick together*

in the same spirit that had manifest itself in war, and to give one another the same help in days of peace as they had in days of war.

Major- General Chas. Cox officially opened the building and unveiled an honour roll erected inside upon which were 175 names of men from the district who had enlisted appeared. He praised the work of Mr. W. Milligan in bringing the building into existence. Representatives of religious bodies and civic bodies attended. The building, which is a large hall, a well-stocked library, and billiard-room, is of brick, and cost approximately £2000.

Statement of Significance

The Electricity Substation at 83 Cardigan Street, Guildford is locally significant for its historic, technical and representative values. Built in 1928, the substation was an important building in the supply of electricity in the early twenthieth century for the Guildford area. It illustrates the early twenthieth century technology utilised in the generation and distribution of electricity supply in the area. This type of technology is now redundant; however, this substation is one of a small group of remaining intact industrial infrastructure items representing a specific function for the community.

Criteria Assessment	
a) Historic	Built in 1928, the substation was an important building in the supply of electricity in the the early twenthieth century for the Guildford area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The substation illustrates the early twenthieth century technology utilised in the generation and distribution of electricity supply in the area. This type of technology is now redundant.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	This type of technology is now redundant; however, this substation is one of a small group of remaining intact industrial infrastructure items representing a specific function for the community.
g) Representativeness	The item is representative of a simple Federation style suburban substation.

Physical Description

The substation is a single-storey face brick structure with a gable roof. The roof features red tiles and timber eaves, and has a simple timber barge board on each end painted white. The primary (eastern) elevation features the words 'ELECTRICAL SUPPLY 1928' and a geometric pattern set into the gable end relief. The building is entered on the primary elevation via a set of large metal doors with a large concrete lintel to the top. The doors have been marked with graffiti. The footpath leading up to the building is concrete.

The building is set within a small grassed park area which sits between Cardigan Street and Stimson Street. A footpath connects to the two roadways.

The building appears to have undergone recent restoration and painting works to the brickwork and timber elements. The building is in very good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Recent restoration works to the building.
- Removal of transformer yard.

The building itself has high integrity, though the former transformer yard to the side and rear has been converted into a green space.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Guildford
Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

Electrical Supply

The Sydney Municipal Council's Electric Lighting Bill was passed in October 1896 and a power station was built in Pyrmont in 1900. Meanwhile, the NSW Railways and Tramways had commenced generating power at Ultimo in 1899. Both organisations quickly moved into supplying electrical power in bulk to local councils, for local reticulation. However, many local councils established municipal electrical supplies and Parramatta and Granville Electrical Supply Company commenced operation in 1913. It ceased generating for itself after 1917, taking bulk supply from the Sydney Municipal Council via a substation at Merrylands. It later swapped to supply from the Railways and was purchased by the ELPSC in the 1940s, with supply then provided from Balmain.

In the eastern part of Cumberland, supply was generally acquired from the Sydney Municipal Council and several substations were constructed in Auburn, Lidcombe, Guildford, Wentworthville, Merrylands and Westmead to a standardised design.

These supply arrangements changed very little when the Electricity Commission was formed in 1950 and took control of all generation facilities. The comission became the bulk supplier to county councils and municipalities. The supply from individual generation authorities ceased and supply was acquired from the NSW State electricity grid.

The former Holroyd local government commenced supplying electricity to its municipality in 1923. The local authority purchased its supply in bulk from the Sydney Municipal Council at 5.5kV. The State Heritage Register listed substation located in Auburn (No. 167) was the former bulk supply receiving station. The number of substations constructed in the Sydney region exploded from the late 1920s, with dozens of substations being constructed to cope with the expanding demand. While in the early years of network construction many substations had unique characteristics and were sited in response to demand. However, from the late 1920s onwards a standardised design was employed, and expansion was based on the need to establish and expand the electricity grid rather than in response to localised or site-specific issues.

The substation at 83 Cardigan Street is one of many built during this period to service the expanding population of the district and shares a similar design, size, and construction to other electrical substations provided in the former Holroyd municipality during the 1920s. The building has been decommissioned and is no longer in use.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	

4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the timber barge board should be painted to match the existing colour scheme of the building.
- As this area is a public park/walkway, it would be beneficial to implement heritage interpretation on the history and significance of the building for the area and its context within the wider history of Sydney's electricity supply.

Curtilage Map

Statement of Significance

The dwelling at 138 Fowler Road, Guildford has local significance for its historic, aesthetic values. Built c.1918, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision, and is a contributory element reflecting the growth and development of the district throughout the early decades of the twentieth century. The building has aesthetic significance as an early, although slightly modified, example of a small-scale suburban Federation cottage with some Queen Anne detailing. The building fabric and detailing is well maintained, and the building presents well within the street as part of the historic building stock of Guildford. It is a representative example of a Federation period cottage.

Criteria Assessment	
a) Historic	Built c.1918, the item has historic significance as a contributory element reflecting the growth and development of the district throughout the early decades of the twentieth century, particularly the land within the Church and Schools Estate subdivision.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building has aesthetic significance as an early, although modified, example of a small-scale suburban Federation Queen Anne cottage. The building fabric and detailing is well maintained, and the building presents well within the street as part of the historic building stock.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	It is a representative example of a Federation period cottage.

Physical Description

The dwelling is a single storey timber framed weatherboard cottage with wider boards to the front than the sides. The main roof is hipped with a gabled breakfront extending towards the street. The roof has concrete tiles with terracotta ridge caps and profiled trims. The gable end is stucco rendered and the timber rafters are exposed at the boarded eaves. There is a single stucco rendered chimney with two terracotta chimney pots. The roof extends over the front verandah, supported by decorative timber posts and brackets grouped in pairs on a stucco rendered base to waist height. The front door is timber and glass panelled and has a modern aluminium security grille door. Windows to the front elevation are 2x2 pane double-hung, featuring timber architraves and sills. Windows feature under the verandah and to the gable end. There is a decorative fixed timber and metal awning over the gable end window. A weatherboard lean-to addition and timber framed, skillion style roof cover has been added to the rear, integrating timber detailing in a sympathetic style.

The rear yard contains a large timber board shed with a Colorbond roof, in a light green/blue colour. A gabled carport projects from the northern side of the shed, connecting to a concrete driveway from Donnelly Street.

The front garden consists of tall hedges that heavily screen the front of the building. A palm tree is evident in the rear yard. The property is fronted by a low timber picket fence painted to match the dwelling. The side boundaries contain a taller Klip Lok fence in cream with bottle green framing.

The subject property is located on a corner block and appears to retain its original subdivision boundaries.

While the dwelling is not highly visible from the public domain, the building appears to be in good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Weatherboard lean-to addition with a timber framed verandah
- Klip Lok boundary fence
- Shed and gabled carport to the rear yard
- Creation of separate driveway entrance to the shed

While the dwelling is not highly visible from the public domain, the integrity of the building appears to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1918

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the

adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject site is located on one of the oldest subdivisions in Guildford. Originally granted in 1825, the 1000 acre Church and School Estate was located on Dog Trap Road (present Woodville Road) south of Parramatta. Much of this land was initially let during the 1830-40s to local landowners and probably used for grazing. Although Guildford had residents from 1799, it was not until the subdivision of this estate from 1871 and the opening of the first railway station in the district in 1876 that much development occurred.

The dwelling at 138 Fowler Road, Guildford sits on land originally granted to John Hodgson in July 1872. It was subsequently passed to John Booth Jones and Charles Smith Jones who sold Lots 12, 9 and part lots 8 and 5 to Josephine Janetta McCredie in January 1890. In 1900, part of the land was resumed by the Minister of Public Works and it seems that part of the remaining land was leased for Market Gardening shortly after. In 1916, the property was transferred to Margaret Agatha Veron. It appears that the property was subdivided after 1916 and from 1918 the various lots were sold. In 1918, Lot 43 was purchased by John Lewis Spencer Ellis and it is assumed that the cottage was constructed at this time. The property was subsequently transferred in 1938, 1942, 1946, 1947, 1948, 1960 and in 1973, when the current owners purchased the site. In 1998, an application was made for the erection of a garage and pergola. The dwelling remains in use as a private residence.

Curtilage Map

Statement of Significance

The dwelling at 379 Guilford Road, Guilford is locally significant for its historic and aesthetic values. Built in 1898, the dwelling is one of the earliest remaining and most intact dwellings along the main thoroughfare of Guilford Road. The site marked the subdivision boundary of one of the oldest subdivisions in Guildford, known as the Church and School Estate. It was an early dwelling associated with this 1871 subdivision, being one of only seven properties along the street when it was constructed. Later, the property was used as a local police station between 1926-1933, during which time it was given the name 'Hazeldene'. The dwelling has aesthetic significance as an early Federation style dwelling which is largely intact. The building is a prominent heritage feature within the streetscape as it is set amongst a group of twentieth century shops and offices of varying styles.

Criteria Assessment	
a) Historic	Built in 1898, the dwelling is one of the earliest remaining and most intact dwellings along the main thoroughfare of Guilford Road West. The site marked the subdivision boundary of one of the oldest subdivisions in Guildford, known as the Church and School Estate. It was an early dwelling associated with this 1871 subdivision, being one of only seven properties along the street when it was constructed. Later, the property was used as a local police station between 1926-1933, during which time it was given the name 'Hazeldene'.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as an early Federation style dwelling which is largely intact. The building is a prominent heritage

	feature within the streetscape as it is set amongst a group of twentieth century shops and offices of varying styles.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The subject building is a single storey face brick house in the Federation style. It features polychromatic brick detail at the corners, as well as to window and door openings. The roof is hipped with a gabled breakfront extending towards the street. The gable end features a simple timber barge board painted white. The roof consists of painted corrugated iron. Three sets of chimneys are stucco rendered and have terra cotta chimney pots. The front verandah, which is a later addition, is flat roofed and supported by metal posts. The front door is timber and glass panelled, with glazed top and side lights. Windows are generally timber framed double hung and all openings feature segmental arched heads in polychromatic brickwork. A brick lean-to at the rear appears to be original or close to the original construction.

The property appears to have retained its original subdivision boundaries. A driveway along the eastern boundary leads to a fibro garage at the rear, and on the western boundary a high chicken wire fence separates the property from the neighbouring industrial driveway. The property is bound to the front by a low timber picket fence which is overgrown with vines, and the front setback contains some moderately sized plantings of no heritage significance.

The subject building is the only house set amongst a group of shops and offices on busy Guildford Road West. Shop buildings are typically one or two storey structures with cantilevered awnings over wide footpaths, and large shop front windows. The dwelling is a rare built element within this streetscape.

The condition of the building is good overall, although some areas of the building requires repointing work and the stucco render on both chimneys show signs of water and pollution damage.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Addition of front verandah
- Chicken wire fence*
- Painted roof and new sheet metal

Although the verandah is not original, it is in keeping with the character of this style of dwelling. Taking into consideration the painted roof and the verandah addition, the integrity of the building is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1898

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject site is located on one of the oldest subdivisions in Guildford. Originally granted in 1825, the 1000 acre Church and School Estate was located on Dog Trap Road (present Woodville Road) south of Parramatta. Much of this land was initially let during the 1830-40s to local landowners and probably used for grazing. Although Guildford had residents from 1799, it was not until the subdivision of this estate from 1871 and the opening of the first railway station in the district in 1876 that much development occurred.

The subject site formed one part of several allotments purchased by James Henderson in 1871. From the Sands Directory it would appear the house was constructed for George Alexander, a storekeeper, in 1898, which is consistent with the architectural style of the building. At this time there were only seven properties noted on the street. Alexander remained at the property until 1921 and between 1922-25 RH Morris is noted in occupation. The property is first noted as 'Hazeldene' in 1926 and appears to have been used as a police station between 1926-1933 before going back into private residential occupation. By 1962, the adjacent shop buildings had been constructed.

The dwelling remains in use as a private residence.

Curtilage Map

Statement of Significance

The George McCredie Memorial Church is locally significant for its associative, aesthetic, social and representative values. Built in 1905, the Church was constructed as a memorial to prominent local architect George McCredie who was Mayor of Prospect in 1892 and Member for Central Cumberland in 1893. Donated by his wife, the Church has aesthetic significance as an intact example of a Federation Gothic style church that retains significant original fabric. It is a representative example of the style of church that was constructed during the developing period of Guildford. The Church has social significance as a community building which has been used for religious activities since its construction.

Criteria Assessment	
a) Historic	The item does not meet this criterion.
b) Associative	Built in 1905, the church was constructed as a memorial after the death of architect George McCredie who was Mayor of Prospect in 1892 and Member for Central Cumberland in 1893.
c) Aesthetic/Technical	The church has aesthetic significance as a good example of a Federation Gothic style church that is largely intact and retains significant original fabric.
d) Social	The building has social significance as a community building which has been used for religious activities since its construction.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The Church is a good example of a Federation Gothic style church. It is a representative example of the style of church that was constructed during the developing period of Guildford.

Physical Description

The George McCredie Memorial Church site includes three church buildings; the Federation Gothic church, an L-shaped weatherboard hall and the Hewitt House Neighbourhood Centre (former parsonage). The church itself is the most dominant and significant feature on the site.

George McCredie Memorial Church
The church is of face brick construction, set in a stretcher bond on a Flemish bond base. The roof is corrugated iron, formed by a single gable of slate tiles with terracotta ridge caps and three sheet metal air vents. There is a parapet at the front and skillion section at the rear. The parapet features a triple lancet window, sandstone and brick details and a triangular pediment. Two gabled bays flank a recessed entrance at the front. These gables have sandstone parapets and single lancet window openings with sandstone label moulds and sills, and painted heads in red oxide. The stepped parapet above the entrance has a pointed arched opening and a rendered plaque inscribed 'George McCredie Memorial' above it. Brickwork to the front elevation has been tuck pointed, and there is a red oxide string course at 3/4 height up the facade. Entrance doors are timber panelled. The church is divided into three equal sized bays by stepped buttresses. Each bay, and the rear skillion section, contains pair of lancet windows with similar detail to those at the front, and are generally timber framed with a central awning panel. Western wall of the church has been painted, and at the rear is a timber framed fibro lean-to. The church is entered via a wide coloured concrete footpath framed by low-scale, ad hoc plantings and timber footpath edging.

Hall
The weatherboard hall is a single-storey building, constructed post 1943 (SIX Maps) but more likely between the 1950s or 1960s. The L-shaped building is set on a face brick base, with horizontal weatherboard walls. The gabled roof has Colourbond sheet metal. The building has two wide, timber board and brace style doors which are entered via sets of brick stairs. Windows are aluminium.

Hewitt House Neighbourhood Centre (former parsonage)
The former parsonage is a single-storey, 1960s era red face brick and tile building. The building has a concrete tiled hipped roof with tile ridge capping, and two projecting hipped sections which create a U-shaped structure overall. Windows are aluminium in sets of two panes, and the door is covered with a modern security screen. There is one air-conditioning unit in one window to the façade. The building is bound by a low brick wall with concrete stairs and a steel handrail leading to the front entrance.

Landscape
The buildings are located on a wedge-shaped block. The property appears to have retained its original subdivision boundaries. The Sydney Water pipelines (S170 heritage item 4570097) forms the southern boundary of the property.

A number of mature gum trees form the street boundary, and a single pine tree and small gravel carpark are located to the northeast of the site. Other plantings are ad hoc and non-significant.

The church is visible along the length of Chetwynd Road, which runs perpendicular to Guildford Road and is directly opposite the property.

The condition of each structure is as follows:

- Church – fair, there is severe cracking around the whole structure, generally to the front parapet, above window and door openings, and adjacent to the buttresses and front bays. There are also patches of severe mortar deterioration. Water ingress is likely occurring from the roof drainage and surrounding mature trees.
- Hall - good
- Parsonage – good

Condition	Good	Fair	Poor

Alterations and Additions

- Church:
  - Painting of the eastern side wall
  - Addition of the timber framed fibro lean-to at the rear
  - The front parapet and bays have been tuck pointed in the last 10 years
  - Reroofing of brick construction on the rear skillion
- Hall:
  - None
- Parsonage:
  - Air-conditioning unit in window*

The integrity of each building is high, in particular the Church.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1905

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The George McCredie Memorial Church formed part of 36 acres, 1 rood and 18 perches, bound by the present Guildford Road on the north and the Great Western Railway on the east. This area was originally granted to Henry Whitaker in 1875. Whitaker was the first granted land in Guildford in 1842, which he farmed. His property, known as "Orchardleigh', was subdivided in 1876 after the opening of a nearby railway station. The land was subdivided and progressively sold from 1889, and the present boundaries were formed at this time. The triangular property was purchased by architect Susan McCredie, wife of George McCredie, in 1901. George and Susan McCredie constructed the State Heritage Register listed Linnwood (SHR item I01661) property, of which the house is a notable feature. After McCredie's death in 1905, the property was donated to the Trustees of the Presbyterian Church, and the George McCredie Memorial Church was constructed.

McCredie was mayor of Prospect in 1892, voted into parliament as Member for Central Cumberland in 1893, and was appointed to organise and administer quarantine and cleansing operations in Sydney slums during the bubonic plague in 1900. He established Presbyterian services in 1894 in the schoolroom of his property 'Linnwood' at Guildford. A timber church "Linnwood Hall' was constructed on that property soon after. During the 1890s to early 1900s, many churches were constructed in the Guildford area in the wake of subdivisions and slow population growth. The site remains in use for religious activities.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained. 3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Given the cracking evident in the Church building, it should be assessed for its overall structural stability and investigated for sources of water ingress to remediate rising or falling damp issues. Following this, the building should undergo mortar repointing work.
- A Conservation Management Plan should be prepared for this site to understand in greater detail the history and significance of the place, as well as how to manage change and monitor conditions of the site.

Statement of Significance

The dwelling at 128 Harris Street, Guildford is of local significance for its historic and aesthetic values. Most likely built at the turn of the century, the site has significance as part of the early pattern of subdivision and residential development of Guildford in response to the coming of the railway in 1891. The property formed part of the land granted to Arthur Holroyd in 1873 following the major subdivision of the Church and School Estate. The house has aesthetic significance as a well-kept and intact Federation cottage with some Victorian detailing. It is an important historic element in the streetscape and contributes strongly to the heritage character of the area.

Criteria Assessment	
a) Historic	Most likely built at the turn of the century, the site has significance as part of the early pattern of subdivision and residential development of Guildford in response to the coming of the railway in 1891. The property formed part of the land granted to Arthur Holroyd in 1873 following the major subdivision of the Church and School Estate.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The house has aesthetic significance as a well-kept, intact Federation cottage with some Victorian detailing. It is an important historic element in the streetscape and contributes strongly to the heritage character of the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The dwelling is a single-storey weatherboard cottage, set on a brick base with a hipped roof and projecting gable end. The roof has replaced Colourbond sheet metal and guttering/downpipes, and includes a profiled face brick chimney with a terracotta chimney cowl. The gable end features a simple timber barge board and decorative finial. The bullnose verandah, replaced in 1992, is of Colourbond sheet, extending across the front of the property to intersect with the projecting gable. The verandah floor is concrete slab and is supported on three timber posts with decorative timber brackets. The front façade consists of a panelled timber door with a four-pane door light. Windows are double hung sash with sets of three coloured glass panels at the base. Timber window sills have a decorative moulding below. The pair of windows on the gable end are sheltered by a timber window awning clad with mini orb corrugated sheet. The dwelling has a weatherboard rear extension.

A modern carport has been added on the northern side of the dwelling, provided in a Federation style towards the end of the concrete and paved driveway. The carport is built of timber with matching timber brackets and finial to the dwelling. The carport was likely added at the same time as the verandah in 1992. A large streel gate encloses the carport from the street.

The front boundary fence is a painted timber picket fence with arrow head post tops and square structural posts. There is one large mature tree in the front yard which has some landscape significance and several evident in the rear yard. The dwelling has a deep setback which is consistent with neighbouring dwellings. The site appears to have retained its original subdivision boundary.

The dwelling appears as a neat and well-kept residence. It is in good condition, having undergone roof replacement works and repainting works in the recent past.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Roof sheeting, guttering and downpipes replaced
- Bullnose verandah replaced in 1992
- Verandah floor replaced with concrete*
- Carport added in a ‘Federation’ style, c.1992
- Weatherboard rear extension
- Timber picket fence replaced

The house generally retains its scale, form and some original decorative detailing, although it has been modified. On the most part, significant fabric has been replaced on a like for like basis conserving the built heritage values of the item.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1893 - 1912

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

Although Guildford had residents from 1799, it was not until the advent of the subdivision of the Church and School Estate and the opening of the first railway station in the district in 1876 that there was much development. The subject property formed part of two 16 acre grants originally granted to Arthur Holroyd in 1873. Holroyd was a member of Parliament in the mid to late 19th century, and the first mayor of the municipality.

The subject property formed part of 18 acres purchased by Philip Holdsworth and John Henty in 1881. It appears Holdsworth and Henty subdivided and progressively sold the land from 1881. An allotment of 36 perches on Wright Street (present Harris Street) was purchased by fruiterer John Scholl in 1893, and the present boundaries were formed at this time. It appears the house may have been constructed for the Scholl's, who resided at the property until 1912, when it was purchased by Margaret Lewis. In 1942, the property passed to Thomas Carson. Upon his death in 1977 it was then passed to widow Elsie Carson. Ownership passed to Joseph Culican in 1984.

The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Curtilage Map

Statement of Significance

Guildford Railway Station, first opened in 1876, played a critical role in the early development boom of Guildford, transforming the area from a 'Tiny Village' to an area of residential expansion. Original structures included an 1876 platform and station building, a 1891 platform, the purchase of a Station Masters Residence in 1924 and a 1937 timber station building. However, all structures and remnants relating to this early station development have now been removed. The remaining structures on site date from c.1970, c.2002 and 2016-2017, and have no heritage value. The overall loss of historical fabric including all the original and early platform buildings greatly reduces the significance of the railway station.

Criteria Assessment	
a) Historic	Guildford Railway Station has limited historic fabric to demonstrate its associations as one of the early railway stations built on the Main South Line from Granville Junction to Goulburn.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The modern platform buildings, canopies, footbridge and lifts at the railway station are a common example of this type of building in the Sydney metropolitan area. Therefore Guildford Railway Station does not fulfil this criterion.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The following physical description has been quoted from the NSW Office of Environment and Heritage State Heritage Inventory listing sheet for 'Guildford Railway Station', dated 2008. As the description features a comprehensive physical description of both external and internal station elements, only minor amendments were made with regards to recent station upgrades.

PLATFORM BUILDING- Platform 1 (c1970s)
External: A long rectangular skillion roofed building consisting of a Booking Office, Station Manager's Room and Staff facilities in the southern half and Male, Female and equitable access toilets at the northern end. The external walls are a combination of painted concrete block and aluminium panels set in expressed aluminium mullions. The windows are fixed and sliding aluminium set high in the walls. On the Military Road elevation the southern end is characterised by a projecting section of wall which is sandstone clad in random rubble fashion. A smaller concrete block concessionaire is separated from the main building by a short flight of access steps from the Military Road footpath. The skillion roof which rises gently to the platform side cantilevers to provide weather protection, and is finished with a 400mm high metal fascia.

Internal: The interior walls and ceilings are finished in plasterboard with a small coved cornice. Except for the toilets, which are finished in ceramic tiles, the floors are carpet finished.

FOOTBRIDGE (c2002)
The footbridge spans the railway lines about midway along the platforms, slightly south of the concessionaire on Platform 1. The main span consists of precast concrete planks supported on circular concrete piers with squared haunches. An easy access lift is located at each end of the footbridge, where the structure terminates with a second circular pier. Full height glass encloses the footbridge beneath a skillion metal deck roof, with this enclosure continuing down each platform access stair. Each glazed lift shaft is topped with a louvred motor room which rises above the surrounding bridge structure.

PLATFORMS (unknown)
Platform 1 has an asphalt surface, with a concrete edge supported on a flush faced concrete retaining wall. Platform 2 has an asphalt surface and retains the original brick edge and facing for the length of the platform. Both platforms have been reconstructed since the first timber ones of 1891.

CANOPIES (2000-2003)
On Platform 2 a modern open steel framed flat roofed canopy extends from the bottom of the footbridge access stairs for some 25 metres north along the platform. On Platform 1 a similar canopy extends from the side of the footbridge stair and abuts with the platform building roof. Light framed steel canopies continue into the streets on each side of the station complex.

SUBWAY (c1975)
A concrete walled pedestrian subway connects Military Road to Railway Terrace near the northern end of the platforms. The walls of the subway have been painted with natural bush scenes, while the floor finish is asphalt.

As all station elements and buildings are contemporary, their condition is good.

Condition	**Good**	Fair	Poor

Alterations and Additions

- 1891: New timber Up and Down platforms constructed with the duplication of the line
- 1892: Standard Lamp Room built on Platform 1
- 1900: Awnings provided over platform buildings.
- 1911: Platforms extended.
- 1920: Improved office accommodation and cover over signal frame.
- 1924: House for SM purchased
- 1929: Railway electrified.
- 1937: New timber platform building on Platform 2
- c1975: Subway between Military Road and Railway Terrace constructed
- c2000: Platform canopies added to toilets and adjacent to kiosk on Platform 1
- c2002: Easy Access lifts including new footbridge, stair access and toilets converted on Platform

Note: there is no date for the removal of the 1930s timber building.

As all historic elements and buildings have been removed, the integrity of the station is **NIL**.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1876 - 1937

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

After completion of the initial rail line from Sydney to Parramatta, work soon proceeded on the Main South line from Granville Junction to Goulburn. The first section from Granville to Liverpool was constructed quickly over easy terrain and was opened on 26 September 1856. Campbelltown was reached in 1858, that section opening on 17 May 1858. The line was duplicated in 1891. This line was constructed as a rural railway and had no suburban purpose until well into the twentieth century. Its stations served what were then rural settlements and only later were adapted as commuter stations.

Guildford Station was opened in April 1876. In 1891 new side platform buildings were constructed with new platform buildings for duplication of the line. In 1924 a house was purchased for use as a Station

Master's residence. A number of changes have been made to the station since construction including the addition of a new timber station building in 1937 (now demolished).

All structures and remnants relating to this early station development were gradually modified or removed from 1970 onwards. The remaining structures on site date from c.1970, and c.2002. The site remains in use as a railway station.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.		**6.** Original fabric is highly significant and should be maintained.		**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	
3. Consider delisting as an individual item from the LEP.	**X**	**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).			
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).			
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As all historic evidence has been removed from the site, it no longer meets any of the NSW heritage criteria. This site should be de-listed as part of the review for the Cumberland City Council LEP.

- NSW Office of Environment and Heritage, S170 Heritage and Conservation Register listing sheet for 'Guildford Railway Station', https://www.environment.nsw.gov.au/heritageapp/ViewHeritageItemDetails.aspx?ID=4801065

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The dwelling at 11 O'Connor Street, Guildford is of local significance for its historic values. The site has significance as part of the early twentieth century development of Guildford, which was supported by the coming of the railway in 1891. The dwelling was constructed in a time when the area was still considered a 'tiny village', prior to a building boom in the 1920s. While the building retains its overall form, it has been heavily modified with mid-twentieth century fabric and is therefore not a representative example of early twentieth century residences for the area. It has some aesthetic significance within the streetscape as a neat cottage which retains its overall form and an established informal landscape.

Criteria Assessment	
a) Historic	The site has significance as part of the early twentieth century development of Guildford, which was supported by the coming of the railway in 1891. The dwelling was constructed in a time when the area was still considered a 'tiny village', prior to a building boom in the 1920s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item does not meet this criterion.
d) Social	The item has some aesthetic significance within the streetscape as a neat cottage which retains its overall form.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	While the building retains its overall form, it has been heavily modified with mid-twentieth century fabric and is therefore not a representative

	example of early twentieth century residences for the area. The item does not meet this criterion.

Physical Description

The building is a single-storey cottage set on brick piers with a corrugated iron hipped roof painted green, modern guttering, a face brick chimney and a corrugated iron bullnose verandah. The dwelling has a yellow and green colour scheme. The building was originally constructed in weatherboard but has since had large sections of wall neatly re-clad in fibro sheeting. This has occurred along the side elevations, above a section of remaining weatherboard, as well as around the verandah in place for a balustrade. The verandah roof is supported on simple timber posts. Windows are timber sash, painted cream with a row of three small panes at the bottom of each. The architraves are simple timber elements painted green. The front door is covered with a modern screen door. The dwelling has been extended to the rear with a fibro skillion structure.

There is no front boundary fence for the property. Instead, the front setback consists of various European plantings including conifers informally spread across the yard, and a large grassed area. There are large mature trees in the rear yard as well. A concrete footpath leads along the eastern boundary, from the yard to the side of the verandah.

The dwelling has been well maintained and is in good condition overall.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Walls reclad with fibro sheeting*
- Replacement of bullnose verandah, including widening from original shorter form (see SIX Maps, 1943 aerial)
- Roof sheeting and guttering replaced
- Concrete footpath added to front setback landscaping
- Skillion fibro extension to the rear
- Modern screen door*

While the overall form of the dwelling has remained largely the same, the building has been altered significantly through the use of fibro sheeting. The dwelling therefore has moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1900s

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school

being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

Although Guildford had residents from 1799 it was not until the advent of the subdivision of the Church and School Estate and the opening of the first railway station in the district in 1876 that there was much development. The subject property formed part of 23 acres 1 rood originally granted to John Hodgson in 1872. Ownership of the grant changed hands a number of times, until 1876, when it was purchased by John Murphy. Murphy subdivided and subsequently sold the land off in parcels. While the exact construction date of the dwelling is unclear, the architectural form indicates that it was most likely constructed in the 1900s. It appears that the dwelling underwent modifications in the 1950s to include fibro sheeting. The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	1**2.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		

		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the fibro sheeting should be removed and replaced with a more appropriate material and finish. Specifically, the walls should be reclad with weatherboard and timber to the verandah balustrade.

Statement of Significance

This dwelling at 45 O'Neill Street, Guildford is locally significant for its historic and aesthetic values. Built in c.1883, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision. The dwelling was constructed in a time when the area was still considered a 'tiny village', prior to a building boom in the 1920s. Although modified from its original Victorian form, the dwelling has aesthetic significance as a striking heritage building that exhibits a notable form and detailing. The dwelling appears to have had a 'Federation' style verandah added. The building is an important historic element and a strong contributor to the heritage character of the street.

Criteria Assessment	
a) Historic	Built in c.1883, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision. The dwelling was constructed in a time when the area was still considered a 'tiny village', prior to a building boom in the 1920s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Although modified from its original Victorian form, the dwelling has aesthetic significance as a striking heritage building that exhibits a notable form and detailing. The dwelling appears to have had a 'Federation' style verandah added. The building is an important historic element and a strong contributor to the streetscape character.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The house is a single storey timber framed weatherboard cottage with a steep hipped roof of painted corrugated iron construction and modern PVC pipes. There is a double brick chimney on the southern side. The front facade is symmetrical around a central timber panelled front door with a top light above. It is covered by a screen door. Single timber framed double hung windows are located on either side of the door and a name plate adjacent to the door reads 'Myrnaville'. A timber framed verandah across the front facade has been enlarged and a second skillion roof now steps down from the original. As part of the verandah modifications, Federation style detailing was also added to include timber brackets, frieze and slated balustrade. Lattice enclosures on both ends have been removed. The verandah has a timber boarded floor and painted corrugated iron roof. All timber elements to the dwelling have been recently repainted.

The property appears to retain its original subdivision boundaries and the dwelling itself is set back significantly from the street compared to other dwellings. A landscaped garden occupies the front setback, including a mature palm tree. A gravel driveway is located on the northern boundary of the dwelling. The front boundary is lined with a painted timber picket fence which was added in 1989.

While there are signs of wear and tear, the dwelling is in good condition overall. The iron roof requires repainting.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Verandah enlarged, 'Federation' style timber detailing added and addition of a second skillion roof.
- All timber has been recently repainted
- Downpipes replaced with modern PVC
- Lattice removed from each end of the verandah
- New fence constructed in 1989

The house retains its scale and form, however it has been modified from its original Victorian style with the addition of Federation style elements. The building has moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1883

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886

Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

Although Guildford had residents from 1799, it was not until the advent of the subdivision of the Church and School Estate and the opening of the first railway station in the district in 1876 that there was much development. The subject property formed part of 17 acres originally granted to Arthur Holroyd in 1874. Holroyd was a member of Parliament in the mid to late 19th century, and the first mayor of the municipality. Holroyd subsequently subdivided and the present property boundaries were formed. In 1883, four allotments were purchased by Charles Coffer, a brick worker. O'Neill Street was known as 'The Parade' at this time.

The subject cottage was constructed over two allotments. Based on the architectural style, it appears to have been constructed in 1883 for Charles Coffer. In 1904 the property was transferred to Emily Collins, and then to Hermann Otto Bentlin in 1913. Bentlin is noted in residence at 'Myrnaville' between 1913-1933 in the Sands Directory. Upon his death in 1979, the property passed to Hermann Herbets Bentlin, most likely his son, and then to Juan Conzales in 1988. The property remains in use as a private residence.

Curtilage Map

Revised curtilage recommended – refer below.

Statement of Significance

The dwelling at 63 O'Neill Street, Guildford has local heritage significance for its historic value and some significance for its aesthetic value. Built in 1896, the dwelling is an early construction in the area which is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision. The dwelling was constructed in a time when the area was still considered a 'tiny village', prior to a building boom in the 1920s, and is a reflection of the type of property constructed in the area at the time. While the building has some aesthetic significance as a timber cottage with notable features such as the hipped corrugated iron roof and wrap around verandah, the dwelling has been poorly modified over time which has led to a reduction of its aesthetic value.

Criteria Assessment	
a) Historic	Built in 1896, the dwelling is an early construction in the area which is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision. The dwelling was constructed in a time when the area was still considered a 'tiny village', prior to a building boom in the 1920s, and is a reflection of the type of property constructed in the area at the time.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	While the building has some aesthetic significance as a timber cottage with notable features such as the hipped corrugated iron roof and wrap around verandah, the dwelling has been poorly modified over time which has led to a reduction of its aesthetic value.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The site has a single storey weatherboard cottage with a corrugated iron hipped roof. The roof has a gable wing extending towards Grove Street. The hipped roof extends at the rear to from a verandah and an original single brick chimney is located at the rear. A broken back verandah wraps around the front, northern and southern sides of the dwelling, with simple timber posts and boarded floor on a brick base. The O'Neill Street main elevation is symmetrical, with a central timber and glass panelled door and single timber 2x2 pane double hung windows. Window and door openings have profiled timber architraves and sills, and aluminium security grilles. A small gable to the verandah over front entrance has battened fibro sheeting. A single timber door on north elevation has multi-paned coloured glass infill panel. A section of the northern verandah has been enclosed with fibro sheeting. A pair of French doors open out onto the verandah on the Grove Street elevation. The gable end to Grove Street is half timbered and stucco rendered, with deep timber barge board and single window with fixed timber shingle awning above. Windows on the western side of the gable have a smaller, simpler fixed awning. The second entrance from the verandah through the gable end is marked by a slatted valance. The rear verandah is partially infilled with fibro sheeting to form a bathroom.

The dwelling has a large rear yard which contains a single weatherboard garage, built in 1949, which is accessed off Grove Street. A modern timber and Colorbond enclosed carport was added to the north of the building between 2014-2017 and is accessed off O'Neill Street. The boundary fencing is predominantly an open steel loop fence, with taller timber boarded fence at the rear. There are two moderately sized but young trees in the front yard. A concrete footpath leads from O'Neill Street to the primary elevation.

The dwelling was once located on a large corner block. The property has not retained its original subdivision boundaries, having had a new dwelling constructed on the site to the west in 2014. The dwelling retains its frontage to both O'Neill and Grove Streets.

The condition of the building is fair overall, with signs of wear and tear over time in the roof sheeting and timber detailing. Sections of the weatherboards are warping, pulling away, cracking and chipping, caused by age and low maintenance. Guttering is also rusting.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Steel loop fence*
- Modern dwelling constructed on size in 2014*
- Modern carport added to the northern side of the dwelling, added between 2014-2017
- Infill to verandah on the northern side*
- Second entrance door created from the verandah
- Rear verandah infill to create a bathroom*
- Garage added in 1949

The house retains its scale and form but has been modified in a several locations, seeing the removal and alteration of key elements on the wrap around verandah. These modifications are considered to be reversible. The dwelling has moderate integrity overall.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1896

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

Although Guildford had residents from 1799 it was not until the advent of the subdivision of the Church and School Estate and the opening of the first railway station in the district in 1876 that there was much development. The subject property formed part of 17 acres 30 perches originally granted to Arthur Holroyd in 1874, who subsequently subdivided. Holroyd was member of Parliament in the mid to late 19th century, and the first mayor of the municipality. The subject property formed part of over 1 acre (4 allotments) purchased by John Fowler in 1879. Fowler also acquired other allotments on The Parade (O'Neill Street) and The Esplanade at this time.

The property was purchased by Charles Shipton in 1893, and it appears the house was constructed for Shipton in 1896, as it first appears in the Sands in 1897. Only two properties are listed on the street at this time. Shipton resided at the property until 1913. Eaton Hume is briefly listed in residence between 1916-19. Goodwin Packer between 1920-25, and M J Harwood between 1926-33. The residence is first noted as 'Montrose' in 1924. The site was subdivided, and a new dwelling built on the second lot in 2014. The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, intrusive infill works to the verandah should be reversed to expose the entire wrap around verandah and appropriate timber detailing reinstated. This work would assist in increasing and reinstating the aesthetic significance of the item which has been adversely impacted by these incremental changes.
- As the western portion of the current site includes a modern dwelling (dated 2014) of no heritage value, the heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland LEP.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the current Lot/DP and will need to be altered.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Revised curtilage recommended - refer below.

Statement of Significance

The Victorian residence, 'Maringa', at 9A Tennyson Parade, Guildford, is of local significance for its historic and aesthetic values and as a representative example of an early Victorian Residence. Built in 1893, the item is historically linked to the 1885 'Sherwood Heights' subdivision of William Sherwin's 1831 estate. The dwelling would appear to be one of the earlier houses constructed in this residential subdivision of Sherwood Heights. The building is of high aesthetic significance as a largely intact Victorian residence that retains much of its original fabric, detailing and landscaping elements. The aesthetic value is enhanced by the unique architectural style of the front gabled portico, the siting of the building and the surrounding landscape, which make a strong contribution to the streetscape. The residence has landmark qualities and is a rare architectural expression of a Victorian residence in the local Guildford area and more broadly in the Cumberland LGA.

Criteria Assessment	
a) Historic	Built in 1893, the item is historically linked to the 1885 'Sherwood Heights' subdivision of William Sherwin's 1831 estate. The dwelling would appear to be one of the earlier houses constructed in this residential subdivision of Sherwood Heights.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of high aesthetic significance as a largely intact Victorian residence that retains much of its original fabric, detailing and landscaping elements. The aesthetic value is enhanced by the unique architectural style of the front gabled portico, the siting of the building and the surrounding landscape, which make a strong contribution to the streetscape.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The residence has landmark qualities and is a rare architectural expression of a Victorian residence in the local Guildford area and more broadly in the Cumberland LGA.
g) Representativeness	The item is representative of the Victorian residences constructed in Guildford during the late nineteenth century.

Physical Description

The residence at 9A Tennyson Parade, Guildford, is a single storey, symmetrical, Victorian residence. The dwelling is constructed of painted brick walls and has a hipped roof clad in corrugated steel. The roofscape features replaced roof sheeting, solar panels and whirly bird and retains three tall brick chimneys with string course detailing. Two of the tall chimneys retain a painted metal cowl.

The front façade features a gabled roof portico with half round arch over main entrance extended from the main roofline. The gable features a timber bargeboard and finial, while the gable end features timber battens with fibro sheet panel infill above a face brick elevation laid in the Flemish bond pattern and decorated with shallow string mouldings. A replaced sandstone keystone, cartouche and sandstone course are located on this elevation of the portico.

A recessed verandah extends along the north, south and east elevations. The verandah roof is an extension of the main roof and is supported on stop chamfered timber posts and a shallow arched timber valance. The window openings are generally timber framed double hung sash windows fronted by contemporary flyscreens and with a rendered brick sill. The front door features a toplight and is fronted by a contemporary security screen door. A set of French doors are located either side of the front door.

The dwelling features a deep setback with a formal garden setting. There are two established palms, a large gum tree and a central rose garden that are significant landscape features. The property is bounded by a front fence which is constructed of rendered brick piers with pipe and mesh panels. A paved brick and gravel driveway encircle the property and front garden creating two entrances to the property. The northernmost entrance leads to a sympathetically designed garage with a gabled roof clad in Colorbond sheeting atop rendered walls. The southernmost entrance is a driveway that leads to a rear subdivision and development. The rear development consists of approximately eight town houses with a similar roof form to the residence.

Overall, the condition of the building is considered good. It appears the building has undergone recent conservation works.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Subdivision of the former allotment in conjunction with a substantial rear development, c.2006s.
- Replaced roof sheeting.
- Solar panels added to roof c.2016.
- Painted timber verandah elements.
- Altered portico entrance – render removed, structural bars installed, replaced sandstone elements.

The residence is highly intact and is considered to have high integrity. Although the rear of the property is redeveloped, the development has been carefully designed to be as minimally invasive as possible. This is achieved through respectful height, form, scale and materiality.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1893

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s, many of these larger estates were subdivided for the first time and, in 1871, a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886, Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century, the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject property forms a part of 1165 acres of land known as the 'Sherwood Estate' that was granted to William Sherwin in June 1831. In 1884, the Sherwood Estate was subdivided and became known as 'Sherwood Heights'. The property was constructed in 1893 and became known as 'Maringa' in Sands Directory from 1911 onwards. It was occupied by W.F Mason from 1911-14. Tennyson Parade was known as Sherwood Parade at this time. The property passed between several hands before it was occupied by John Harwin from 1920 to 1930.

The property was sold again in 2014, where it remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.	**X**	**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the rear of the property has been subdivided for the new development, the heritage curtilage should be considered for reduction to exclude non-significant elements. The below curtilage should be considered for the new Cumberland LEP to reflect the current Lot and DP of the item.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the current Lot/DP and will need to be altered.

	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The Inter-war bungalow at 33 Tennyson Parade, Guildford, is of local significance for its historic and aesthetic values, and as a representative example of an Inter-War bungalow in the Guildford area. The item is located on land that originally formed William Sherwin's Estate, which was subdivided in 1885 as part of the Sherwood Heights subdivision. Built in 1926, the dwelling relates to the residential development of Guildford that followed the building boom in 1920. The item is of aesthetic significance as a highly intact Inter-War bungalow that retains much of its original fabric and detail.

Criteria Assessment	
a) Historic	The item is located on land that originally formed William Sherwin's Estate, that was subdivided in 1885 as part of the Sherwood Heights subdivision. Built in 1926, the dwelling relates to the residential development of Guildford that followed the building boom in the area in 1920.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as a highly intact Inter-war bungalow that retains much of its original fabric and detail.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a good representative example of an Inter-War bungalow built in the Cumberland LGA. It retains its key architectural features, giving it good integrity.

Physical Description

The item is a single storey brick bungalow with a gable and hipped roof clad in terracotta tiles. The roofscape features a rendered chimney and exposed timber rafters. The front facade features a prominent gable with decorative timber beams. Large rendered masonry columns and a colonnaded balustrade bounds the verandah area which features a chequered mosaic tile border to the floor and two sets of double doors with multipaned glass and screens. This is largely obscured by a passionfruit vine and various other plantings. There is a defined entry platform to the east. The front façade features a timber framed casement window with three multipaned sashes and flat timber hood over.

The building is set back from the front boundary, which is marked with a painted brick fence with lattice infill. A gravel driveway extending from the street sweeps past the house to the side and rear. The front area also features a number of mature trees and formals plantings that obscure views to the house.

The building's external condition appears to be good. Minor repairs to the timber gable screen are required as paint is starting to peel and a timber panel from the ladder infill is missing.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Gutters and terracotta tiles have been replaced.
- New Fence

The building appears to have high integrity as an intact Inter-War bungalow.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1926

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and, in 1871, a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886, Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. Curtilage Map

Revised curtilage recommended – refer below

Statement of Significance

The dwelling at 20A The Esplanade, Guildford is locally significant for its historic and aesthetic values. Built c.1906, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision. The dwelling is a timber Federation residence which represents the prevalent style of construction in the area during a period of subdivision at the turn of the century with the coming of the railway in 1891. The dwelling has aesthetic significance as a well-kept, well-presented timber Federation dwelling with elaborate Victorian style decorative timberwork. The house is readily identifiable as part of the historic building stock and strongly contributes to the streetscape character.

Criteria Assessment	
a) Historic	Built c.1906, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Church and School Estate subdivision. The dwelling is timber Federation residence which represents the prevalent style of construction in the area during a period of subdivision at the turn of the century with the coming of the railway in 1891.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a well-kept, well-presented timber Federation dwelling with elaborate Victorian style decorative timberwork. The house is readily identifiable as part of the historic building stock and strongly contributes to the streetscape character.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item does not meet this criterion.

Physical Description

The subject building is a small L-shaped weatherboard cottage which features intersecting gable roofs clad in corrugated iron and a verandah to the south of a projecting gable roofed wing. The gable ends have projecting decorative barge boards and finials, and the front gable also features timber shingle cladding. The main roof extends over the front verandah and is supported on simple timber posts with capitals supporting arched frieze. The posts appear to be original. The verandah also features modern flooring. The front facade of the cottage has a panelled door with a toplight. The door is covered by a stained timber screen door. The façade also features two pairs of casement windows with decorative framing and sections of coloured glass. The window in the projecting wing also features a simple timber bracketed hood. Two different weatherboard profiles are visible on the side facades. The rear of the building has a skillion roofed extension.

A new carport has been added to the eastern side of the dwelling in recent years, constructed in a style which is highly sympathetic towards the aesthetic of the dwelling. This work includes the form of the timberwork, integration of small openings to match the windows panels and a replication of the roof pitch in the skillion.

The front boundary has a timber picket fence and a driveway have been provided along the southern boundary. A number of mature trees are located on the south side of the house, in the open backyard and to the front. While significant in size, these appear to be contemporary plantings which were not on the site in 1992 during the previous assessment.

The property has not retained its original subdivision boundaries, having had a new dwelling constructed at the rear in recent years. The building retains its setting and setback from the street, though there is now an additional concrete driveway which occupies the southern boundary.

The dwelling has been renovated in recent years, showing a big improvement to the overall condition from the previous heritage assessment of the place.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Skillion extension to the rear
- Demolition of former fibro clad garage
- Demolition of weatherboard out-building on the southern side of the dwelling
- Refurbishment of timber elements and repainting
- Addition of new carport to eastern side of the dwelling
- Addition of timber picket fence post 1992
- Subdivision of site into battle-axe formation and construction of modern dwelling constructed at the rear

While the building was renovated in recent years, the work was undertaken on a like-for-like basis and sought to retain fabric where possible. As a result, the integrity of the building is high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1906

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

A large section of the suburb of Guildford is located on the Church and School Estate, first offered for sale from 1871, and progressively re-subdivided after the opening of the first railway station in the district in 1876. The site formed part of approximately 18 acres purchased by Arthur Holroyd in 1875, who also acquired other sections of the first subdivision of the Church and School Estate at this time. Holroyd was Member for Parliament from 1861, and the first Mayor of the Municipality in 1872. Holroyd subsequently subdivided and the site formed part of 7 acres purchased by Henry William Jackson in 1882. Lots 44 & 45 of the subdivision were purchased in 1906 by William Henry Wright, and the present property boundaries were formed.

The cottage dates from the early 20th century, on one of the early subdivisions in Guilford. It was possibly constructed for Wright shortly after 1906. Wright is listed in the Sands in residence on The Esplanade as early as 1898. The early narrow fronted allotment subdivision pattern remains unchanged since 1906. The location of the cottage, close to Guilford Station serves as a reminder of the early influence of the railway line on the development of Guildford. The property changed hands a further 9 times until 1973, when it was purchased by the present owners. The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- As the eastern portion of the current site includes a modern dwelling of no heritage value, the heritage curtilage shown below should be considered as a revised curtilage for the new Cumberland LEP. Note: the curtilage follows the boundary of 20A vs the strata lot.
- Should a revised curtilage be adopted, this listing sheet will no longer reflect the current Lot/DP and will need to be altered.

Statement of Significance

The cottage 'Glencoe' is of local significance for its historic and aesthetic values as a representative example of a Federation workers cottage. Built in 1910, the cottage was constructed for the maintenance workers who maintained the nearby water supply pipeline. The building retains its aesthetic significance through its form, although this is reduced by the fibro sheet cladding.

Criteria Assessment	
a) Historic	The cottage is historically significant as a Federation era dwelling constructed in 1910 as accommodation for the maintenance workers who maintained the water supply pipeline.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The building retains its aesthetic significance through its form, however, this is reduced by the fibro sheet cladding.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of a Federation period workers cottage built c.1910.

Physical Description

The item is a single storey Federation workers cottage built in c.1910. The cottage is clad in fibro sheet (possibly with weatherboards underneath). The gabled roof is clad in galvanised steel with a skillion roof at the rear. The front verandah is also a skillion roof clad in galvanised steel and supported on squared timber posts. Window openings are generally timber framed double hung sash windows with contemporary flyscreens. Two contemporary carports with sheet metal roofs supported on metal posts are located to the north of the property. The carports front a weatherboard clad garage with a gabled roof located at the rear of the property. There is another large carport located along the east elevation.

The house is a small four-room cottage sited adjacent to the water pipeline. This cottage is the only house in the vicinity. The property features a highly vegetated and informal landscape with several established trees along the southern boundary and in the northwest corner of the property that are of some significance. A timber picket fence that fronts the property along Barbers Road is impacted by this vegetation growth. The water pipeline from Pipehead to Lidcombe (where it goes underground to Crown Street Reservoir) forms the rear boundary of the property.

Overall, the cottage is in a fair condition. The timber verandah elements require repairs to treat peeling paint, timber rot, and warped galvanised iron.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Several rear skillion extensions
- Carports added post-1943
- Flyscreens
- Replaced weatherboard cladding with fibro sheeting*

Overall, the integrity of the item appears to be moderate. The cottage appears to retain some original fabric, however, this is in a deteriorated state and if left unaddressed the item is at risk of reduced integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1910

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s, many of these larger estates were subdivided for the first time and, in 1871, a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886, Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject cottage is located on land which had previously formed part of John T. Campbell's 1000-acre land grant, gazetted in 1881. In 1902, the land was resumed for the purposes of City Water Supply. The workers cottage was built in 1910. Due to the item's location and proximity to the water pipeline, it appears the cottage was a Water Board cottage for maintenance men looking after the water pipeline. The property is no longer the property of the Water Board but it is in use as a private residence. The building appears to have been refurbished, however, it is unknown when.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.	**X**		

Other recommendations and/or comments:

- Should the opportunity arise, consideration should be given to reinstate the weatherboard cladding.
- The verandah is in need of conservation repairs, this should be undertaken in conjunction with the principles of the Burra Charter and by a suitably qualified heritage trades person.

Curtilage Map

Statement of Significance

The dwelling at 36 Bolton Street, Guildford is locally significant for its historic, aesthetic, associative and representative values. Historically, the dwelling is located on one of the oldest subdivisions in Guildford, known as the Lackey Estate. Built between c.1912-1915, the dwelling relates to the early development of Guildford when the area was still considered a 'tiny village' prior to the building boom in the 1920s. The dwelling is a contributory element that reflects the growth and development of the district throughout the early decades of the twentieth century. The dwelling has additional associative significance as the house built for William Thomas Swift. Swift was the one-time Mayor of Granville in 1921 and a prominent local resident in Guildford known for investing in local property and building the commercial buildings at the corner of Guildford Road and Railway Street known as 'Swift's Buildings'. The dwelling is of aesthetic significance as a well-kept Federation cottage with Victorian influences. The house is readily identifiable as part of the historic building stock of the area and makes a strong contribution to the streetscape. The dwelling is a representative example of a quality Federation period house.

Criteria Assessment	
a) Historic	Historically, the item is located on one of the oldest subdivisions in Guildford known as the Lackey Estate. Built between c.1912-1915, the dwelling relates to the early development of Guildford when the area was still considered a 'tiny village' prior to the building boom in the 1920s. The dwelling is a contributory element that reflects the growth and development of the district throughout the early decades of the twentieth century.

b) Associative	The item was the house built for William Thomas Swift. Swift was a one time Mayor of Granville in 1921 and a prominent local resident in Guildford known for investing in local property and building the commercial buildings at the corner of Guildford Road and Railway Street known as 'Swift's Buildings'.
c) Aesthetic/Technical	The item is of aesthetic significance as a well-presented Federation Cottage with Victorian influences. The house is readily identifiable as part of the historic building stock of the area, and makes a strong contribution to the streetscape
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of quality Federation period houses in the local area.

Physical Description

The item is a single storey brick Federation cottage which originally had some Victorian influences in the detailing of the building and in its central siting within the landscape. The prominent elevations appear to have been painted with a red oxide and the brickwork tuck pointed. The roof features a pyramid hipped roof and bullnose verandah with hip corners that extend along the both side elevations. The roof, which was originally slate, is now clad with concrete tiles retains a rendered brick chimney with corniced decoration and Chinese lanterns. The guttering and downpipes have also been replaced. The verandah supports were originally cast-iron columns, with cast iron lacework brackets and frieze. The verandah is now supported on turned timber posts with painted detailing and a simple timber valance. Windows are generally timber framed casements in sets of three with colours top lights and sloping brick sills. The front entry has a transom light above the sidelight and a five-panelled door with two small glazed panes above a large square glazed pane, with two timber bolection mould panels below lock rail. The rear of the building features two phased extensions, a brick addition followed by a skillion weatherboard addition. The rear additions terminate with a rear bullnose verandah. Window openings at the rear contain aluminium framed sliding windows. The building appears to have undergone a refresh with a new picket fence and posts at front and side, replaced verandah roof sheeting, and new timber floorboards to verandah.

The dwelling is located on the corner of Bolton Street and Rhodes Avenue. Although it has a deep setback, it retains a prominent position within the landscape. The boundary of the property features a variety of established trees that shield the building from the streetscape and contribute to the sites aesthetic.

The building appears to be in good condition having undergone a refresh in the recent past including replacing roof sheeting, guttering, verandah posts and brackets, as well as a fresh coat of paint.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New roof sheeting with concrete tiles, c.2017-18
- New Colorbond verandah roof, c.2017-18
- Replaced timber floorboards to verandah
- Removal of cast iron columns with cast iron lacework brackets and frieze
- Rear additions
- Replaced picket fence

Although the building has had some modifications the building retains a moderate level of integrity. The replacement of fabric is sympathetic the built form and aesthetic values.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1912-15

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject property was situated on land subdivided in the Lackey's Estate in c. 1904. The house was built c. 1912-15 for William Thomas Swift, a retired grazier from Burrinjuck. Swift became an alderman on Granville Council and Mayor in 1921. Although unknown if he lived here, Swift is known to have invested in local property and built the shops at the corner of Guildford Road and Railway Street, known as Swift's Buildings. The property remains in use as a private residence.

Curtilage Map

Statement of Significance

The Bolton Street Group of Federation cottages in Guildford is of local heritage significance for its historic and aesthetic values. Built between 1910 and 1920, the dwellings relate to the c. 1906 Avisford Heights subdivision which further subdivided the Stimson's subdivision of 1884. The Group makes a notable contribution to the streetscape due to similarities in age, design, use and materials of the buildings.

Criteria Assessment	
a) Historic	Built between 1910 and 1920, the group relates to the c1906 Avisford Heights subdivision of Guildford.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The group has some aesthetic significance for its similarities in age, design, use and materials of the buildings.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The Bolton Street Group consists of three Federation style houses. The dwellings present a consistent setback in the streetscape and present a homogenous group of Federation period cottages, although slightly modified. They retain their original subdivision plans.

No. 45
The dwelling at No. 45 is a single storey weatherboard Federation cottage with a gabled roof clad in pressed metal sheeting that replaces an earlier galvanised iron cladding system. The rusticated weatherboards sit atop brick foundations. The roof has a projecting gable to the front and side, a gablet roof and two rendered brick chimneys with a single terracotta chimney pot on each. The replaced roof sheeting extends to include the verandah and has altered the original form. The verandah's form, originally bullnose, is now a skillion extension from the main roof. The verandah roof is supported on chamfered timber posts with Art Nouveau brackets and exposed eaves, atop a concrete floor.

The windows along the main elevations are timber framed casement windows in sets of four. They feature multipaned coloured glass along the bottom, as well as top lights. The windowsill is a simple timber cornice with decorative timber undersill. The front door has a transom light above a timber door with a large glazed pane above the lock rail. This is fronted by an aluminium screen door. The front boundary fence is a steel palisade fence with a spear head.

The dwelling has a rear addition that extends along the rear elevation. The roof is gabled and clad in Colorbond sheeting.

A concrete driveway leads to a double fronted garage along the northern boundary. The garage is clad in fibro and features a low-pitched roof clad in pressed sheet metal. The front yard features some established plantings in an informal landscaped area.

No.47
The dwelling at No. 47 is a single storey weatherboard Federation cottage with a corrugated iron roof. The rusticated weatherboards sit atop brick foundations. The hipped roof has a projecting gable to the front and a central gablet, with two brick chimneys with a rendered course and stepped cornice. The roof sheeting appears to have been replaced. A verandah extends along the north, east and west elevations. The return verandah retains a bullnosed verandah roof and is supported on stop chamfered timber posts with timber floorboards.

The windows are two paned timber framed double hung sash windows. They are fronted by aluminium flyscreens. The front door has a transom light and is fronted by a security screen door.

The dwelling has a rear addition which extends from the southwest corner of the western elevation. A concrete strip driveway leads to a paved area at the rear. The front boundary fence is a timber picket fence. There is no formal landscaping, however there are some contemporary plantings in the front yard and at the rear.

No.49
The dwelling at No. 49 is a brick Federation cottage with a hipped roof clad in Marseille tiles. The hipped roof has a central gablet and with a brick chimney with a stepped brick course and chimney pot. A return verandah under the main roof has terracotta tiles, paired timber posts set on brick piers, with brick balustrade and timber ladder valance. The façade appears to be repointed, however no longer shows signs of its former red tuck-pointing. The brickwork is laid in the stretcher bond pattern.

The dwelling features notable leadlight windows on the front elevation, they are contained in a timber framed casement windows in sets of two. This window has a simple timber sill with a brick cornice and a skillion awning on decorative timber brackets. The window along the recessed verandah has a sloping brick sill and roller shutter. The exterior front door has a transom light and half sidelight. The door is a contemporary security screen.

A red concrete driveway extends the length of the northern boundary and leads to a fibro clad garage at the rear of the property. A large contemporary Colorbond steel carport fronts the garage. A Colorbond fence and gate with horizontal panels replaces a timber picket fence at the front. The landscape contains some planting beneath the brick balustrade of the verandah and one established tree to the south. There appears to be more established plantings at the rear of the property.

Condition
Overall the condition of the buildings is considered good. The dwellings appear to be well maintained and have undergone various forms of repair and maintenance.

Condition	**Good**	Fair	Poor

Alterations and Additions

45 Bolton Street
- Replaced roof cladding (pressed metal sheeting) and verandah form
- Replaced palisade fence
- New garage door
- Security screen door
- Rear extension

47 Bolton Street
- New roof sheeting
- New timber posts
- New paint scheme
- Replaced fence
- Rear extension

49 Bolton Street
- Brickwork repointed,
- Non-original roof form*
- Roller shutters
- New fence
- New carport

The integrity of the Bolton Street Group is considered Moderate. It is evident a number of modifications have occurred which have changed the roof form and massing of the item.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c1910-1920

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school

being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The land was auctioned as Stimson's Subdivision in November 1884 as lots 45 and 47. The land was again subdivided as part of Avisford Heights subdivision, c. 1906 (No. 49). All houses are shown on the Water Board plan of February 1938.

The dwellings remain in use as private residences.

Recommendations

Statement of Significance

The electricity substation is of significance for historic, aesthetic, technical and representative reasons. The item illustrates the early-mid twentieth century technology utilised in the generation and distribution of electricity supply in the area by the former Parramatta & Granville Electricity Supply Co. The item is an intact and representative example of the standardised electricity substations constructed in the inter-war period, designed and built to harmonise with surrounding houses.

Criteria Assessment	
a) Historic	The item illustrates the early-mid twentieth century technology utilised in the generation and distribution of electricity supply in the area by the former Parramatta & Granville Electricity Supply Co.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact example of a standardised electricity substation constructed in the Inter-War period, designed and built to harmonise with surrounding houses.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is an intact and representative example of the standardised electricity substations constructed in the Inter-War period.

Physical Description

The item is a single storey electricity substation with rendered brick walls atop a brick base with a hipped roof clad in pressed metal and boxed eaves. The side elevations feature expressed brick piers and recessed window openings. The front façade features a face brick entrance that steps out and extends to include a square parapet with letters that read 'P.& G. E. S. Co. Ltd SUB-STATION'. A central timber tongue and groove door features a concrete slab awning above.

The substation is elevated on a concrete slab. The concrete slab is framed by a low brick retaining wall with a cyclone wire mesh fence with barbed wire atop to enclose the item. The item fronts Robertson Street, Guildford and is situated within a park. The item is a prominent feature in the streetscape.

Although the building is no longer operational, the building appears to be in a fair condition. The pressed metal roof is discoloured and possibly corroding, the timber fascia and soffits feature paint peeling and the cyclone wire fence requires a repair to mend the gap in the panel. There appears to be some small cracking due to structural movement.

Condition	Good	**Fair**	Poor

Alterations and Additions

- New guttering
- New paint scheme

The integrity of the building is considered to be high.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1950

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

In 1938, the Parramatta and Granville Electricity Supply Co Ltd stated in their advertising that "Substations [were] built to harmonise with surrounding houses." This policy is evident in the attempt to design a pleasant sub-station on this site with the building's form, scale and proportions typical of domestic buildings. This is enhanced by the hipped roof, and the use of brick and fibro sheeting.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.		**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- The building is at risk of vandalism, efforts to reduce that risk should be employed.

Curtilage Map

Statement of Significance

The Federation Arts and Crafts residence at 10 Cross Street, Guildford is of local significance for its historic, aesthetic, associative and representative values. Built in 1914, the house is historically linked to the early development of Guildford when the area was still considered a 'tiny village' prior to the building boom in the 1920s. The house is associated with William Carthew, who served as an alderman on Granville Municipal Council from 1914 to 1918. The building has aesthetic significance as an intact and well-presented Federation Arts and Crafts dwelling. The item, although partially obscured by an established hedge, is readily identifiable as part of the historic building stock of the area and makes a strong contribution to the streetscape. Further, the item is a representative example of quality Federation period Arts and Crafts style house built in Guildford, c.1914.

Criteria Assessment	
a) Historic	Built in 1914, the house is historically linked to the early development of Guildford when the area was still considered a 'tiny village' prior to the building boom in the 1920s.
b) Associative	The item is associated with William Carthew, who served as an alderman on Granville Municipal Council from 1914 to 1918.
c) Aesthetic/Technical	The item has aesthetic significance as an intact and well-presented Federation Arts and Crafts dwelling. The item, although partially obscured by an established hedge, is readily identifiable as part of the historic building stock of the area and makes a strong contribution to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of a highly intact Federation period Arts and Crafts residence built in Guildford c.1914.

Physical Description

The dwelling at 10 Cross Street, Guildford is a large single storey brick Federation Arts and Crafts dwelling built of brick. The item has a hipped roof clad in Marseilles tiles with a projecting gable to north and west and a central gablet. The roofscape has three tall polychrome brick chimneys with brick arched cowl, polychrome bricks and roughcast render. The walls make extensive use of polychrome patterning in the brickwork as additional decorative features of the facade.

A return verandah is located along the north and west elevations. The verandah roof is an extension of the main roof, however, it features a gable entrance on the northwest corner. The verandah roof is supported on stop chamfered timber posts with timber brackets and extensively decorated timber ladder valance and balustrade. The verandah also features tessellated tiled floor and slate steps. A decorative timber arch and finial are located beneath verandah gable.

The windows on the west gable have label moulds above segmented soldier brick arches and rendered cornice sills. The windows are timber framed casement in sets of four with tops lights. The front doors have transom lights and sidelights with glazed upper panels.

The building appears to have a rear skillion extension with a roof clad in Colorbond sheeting. The property features a concrete strip driveway that encircles the residence along the southern and eastern elevations. This leads to a large garage/shed located at the northeast corner of the property.

The grounds retain a large hedge along Cross Street which has overgrown the boundary fence that was a solid brick fence with brick coping and brick posts connected by galvanised pipe. A wrought iron gate remains. There are some mature large trees along the item's perimeter.

The building appears to be in a fair condition. There are some deteriorated timber elements along the verandah that require repainting.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Rear skillion extension,
- Garage

Although modified with the inclusion of a rear extension, the extension is a discrete addition to the dwelling that does not represent an adverse impact to the integrity of the item. The item is considered to have high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The property is located on land auctioned as Stimson's Estate in December 1876. The allotment was transferred to William Carthew, a local engineer in Guildford, in April 1908.Carthew later served as an alderman on Granville Municipal Council from 1914 to 1918.

In January 1913, Carthew took out a mortgage to build the house at 10 Cross Street. The Sands Directory lists Carthew as occupant from 1914 to the 1930s. The dwelling remains in use as a private residence.

Curtilage Map

Statement of Significance

The Federation cottage, 'Wingello' at 55 Cross Street, Guildford is of local significance for its historic, aesthetic and representative values. Historically, the dwelling is associated with significant land subdivisions that facilitated the development of Guildford, notably the Guildford Farm subdivision in 1876. Wingello was built in c.1905, for Edgar Charles Friend, a prominent schoolmaster of Guildford. Later subdivisions established Wingello Street, named after the dwelling. The house is aesthetically significant as an intact Federation cottage which is enhanced by its recent conservation works which have restored original elements. The house is indicative of the original streetscape and makes a strong contribution to the character of Guildford. The item demonstrates representative qualities of an intact Federation-period cottage built in Guildford, c.1905.

Criteria Assessment	
a) Historic	The dwelling is associated with significant land subdivisions that facilitated the development of Guildford, notably the Guildford Farm subdivision in 1876. Wingello was constructed in 1905 and is historically significant as it is the house of Edgar Charles Friend, a prominent schoolmaster of Guildford.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as a highly intact Federation style cottage that retains its original deep setback. It is indicative of the original streetscape of the area and is significant in the heritage character of the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.

f) Rarity	The item does not meet this criterion.
g) Representativeness	Wingello is representative of the high quality Federation period houses characteristic of the Guildford area, built c.1905.

Physical Description

Wingello is a single storey Federation style, weatherboard cottage. The cottage has a projecting gable and return verandah with a roof clad in galvanised iron. The gable end features a timber bargeboard and circular timber finial. The roof has two tall brick chimneys with stepped courses. The verandah is bullnosed, with hip corner across front and returning to one side. The verandah roof is supported on turned timber posts with decorative fretted timber brackets and timber floorboards. The windows have coloured glass and decorative undersills. Exterior doors have transom light above French doors with bolection mould panels below and glazed panels above. Front door has transom lights and sidelights flanking timber door with upper panel glazed and white screen door. A modern black aluminium fence surrounds the front of the cottage.

The cottage retains its deep setback and is surrounded at the western and rear elevations by medium sized hedges and mature trees. The building is been surrounded by a concrete driveway lined by a brick fence which provides access to the property and the large apartment complex to the rear. The property is consequently subject to large development pressures particularly towards the rear and side elevations.

Overall, the condition of the building is good as it has been well maintained and recently restored.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Aluminium black metal fence surrounds the façade*
- New galvanized roof and bullnose verandah roof
- Relandscaped block for the construction a mltistorey residential complex at the rear
- Concrete driveway surrounding building
- Brick fence lining driveway and streetscape*
- White front screen door
- Repainting

The house generally retains its scale and form, although has been significally modified. Although it has undergone some sympathetic alterations and additions, the complete relandscaping of the item for the construction of a multistorey residential complex at the rear, a concrete driveway lined with a brick retaining wall and modern fence encircling the building detract from the overall heritage value. The integrity of the building is moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1905

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the

adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject property was part Lieutenant Samuel North's 640 acres which appears to have been later subdivided as part of Guildford Farms in 1876. The house appears to have been built c. 1905 for Edgar Charles Friend, schoolmaster, of Guildford which is shown on Water Board plan of February 1938. Part of the grounds of the house were subdivided later when Wingello Street, named after the subject property was constructed through the area in c.1930s.

This cottage continued to change hands and remains in use as a private dwelling. A large apartment building has been constructed towards the rear of the property.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, a more sympathetic fencing treatment and landscaped setting be reinstated.

Heritage Inventory Sheet

Item Name	Cottage		
Recommended Name	'Oswald' - Inter-War Bungalow		
Site Image			
Address	66 Cross Street, Guildford, NSW 2161		
Lot/Section/DP	3	–	4907
Current LEP ID	I154 (Cumberland LEP)		
Former LEP ID	I226 (Parramatta LEP)		
Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The Inter-War bungalow at 66 Cross Street is of local significance for its historic, associative, aesthetic and representative values. Built c. 1920, the dwelling is historically associated with several individuals of the local area, such as John Olive and Leslie McDougall. The cottage has some aesthetic significance such as the geometric Japanese-influenced valence detail to verandah. However, as it has been extensively modified and many of its significant elements such as the corrugated iron roof and rusticated weatherboard dado have been removed it has lost much of its former aesthetic value. While the item has been modified, it still retains its overall form and some of the modifications can be reversed. However, at present, the site is not architecturally representative of Inter-War bungalows in the local area.

Criteria Assessment	
a) Historic	Built c. 1920, the item historically relates to the twentieth century development of Guildford.
b) Associative	The dwelling is historically associated with several individuals of the local area, such as John Olive and Leslie McDougall.
c) Aesthetic/Technical	The bungalow has been significantly modified and many elements have been removed or altered. It has some aesthetic significance such as the geometric Japanese-influenced valence detail to verandah. However, as it has been extensively modified and many of its significant elements such as the corrugated iron roof and rusticated weatherboard dado have been removed it has lost much of its aesthetic significance. The current paint scheme is a significantly detracting element.

d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	While the item has some representative significance as vernacular architecture common in Post-War suburbia, it is not an exemplary Inter-War bungalow.

Physical Description

The listing sheet for 'Cottage' from the Office of Environment and Heritage dated to 2004 describes the item as:

> *Single storey timber framed bungalow cottage with corrugated iron roof. It has asymmetrical gable to front and roof sweeping down over verandah, with no change in pitch. Upper wall is sheeted with fibro which has been rough cast rendered, above a rusticated weatherboard dado of broad Edwardian-style boards. Leadlight glazed casement sash windows in board multi-sash window assemblies. 1910s style glass with blown medallions. Geometric Japanese-influenced valence detail to verandah with short latticed posts set upon shaped roughcast piers, integral with the rendered brick balustrade to verandah. Fibro gable panel. Originally, house had a front door with a leadlight assembly, and the property fence was timber framed cyclone mesh fence.*

Presently, the Inter-War bungalow has been significantly modified for its adaptive reuse as a childcare centre. It has been rendered and repainted in multi-colours that do not align with the item's heritage values. The weatherboard dado has been removed, and there does not appear to be any fibro sheeting or weatherboards remaining. The roof has been replaced, as have the original leadlight glazed casement windows. The original geometric Japanese-influenced valence detail to verandah has been painted yellow. There is a new concrete framed timber fence that replaces the cyclone mesh fence. A large addition extends from the rear of the building and shade cloth sails have been added to the rear and northern side. The majority of the property has been paved with concrete. The property is bounded by contemporary fence consisting of rendered concrete piers with aluminium panel infill.

The building is a good condition given the nature of the buildings use and extensive renovation for the buildings adaptive reuse as a childcare centre which occurred c.2013.

Condition	**Good**	Fair	Poor

Alterations and Additions

- New fencing and signage- adapted to preschool
- Cottage rendered and repainted*
- Significant rear extension
- Concrete driveway*
- Landscape of front yard substantially altered with original vegetation cleared*
- Windows and sills and awnings removed and replaced*
- Fibro gable panels removed*
- Timber weatherboard around base of house removed*
- New roof
- New shade cloth sails added to the northern extension
- New contemporary fence*
- Contemporary paint scheme*

The cottage has been extensively modified and no longer retains much of its original fabric. The items extensive modifications and external paint scheme detract from the overall cultural significance of the item. The item is considered to have low integrity.

Integrity	High	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1920

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The 66 Cross Street allotment plus two others adjacent were transferred to John Olive, manager of a woollen mill and Leslie McDougall, a bank manager in January 1911. In January 1918, this allotment was sold for £66 to George Brenton, a carpenter from Kempsey who probably erected the cottage. It was named "Oswald" in 1924.

The building remained in use as a private residence until c.2013. The building is currently occupied by 'Baby Beginners Learning Centre' for which the property was extensively renovated in 2013.

Recommendations

3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- In its current form the dwelling is not a highly significant local item. While the dwelling has some historic and representative significance, it is not an exemplary example of its type, of which there are many examples. In order to conserve the cultural value and significance of the item, the building should have its original features reinstated. This should include reinstating original cladding material (weatherboard and fibro sheeting), and window features (leadlight glazed casement sash windows in board multi-sash window assemblies, and timber sills).
- At present the paint scheme is highly intrusive. A sympathetic and appropriate paint scheme should be employed.

Statement of Significance

St Marys Anglican Church is of local significance for its historic, aesthetic, social and representative values. Built in 1937, the church replaced an earlier timber church hall which was constructed in c.1903. The church is historically linked with the suburban development of Guildford in the twentieth century. The Church is of aesthetic significance as an Inter-War Gothic church. Although modified, the building still makes an important contribution to the streetscape and presents a local landmark when viewed from the Bolton Street and Guildford Road. The church site has some social significance having served as local community church from 1903 and from 1938 in the Inter-War Gothic church. The church demonstrates representative qualities of an intact Inter-War Gothic church, built c.1937.

Criteria Assessment	
a) Historic	Built in 1937, the church replaced a wooden church hall from c.1903. The Church is historically linked with the suburban development of Guildford in the twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The Church is aesthetically significance as an Inter-War Gothic church. Although modified the building still makes an important contribution to the streetscape and presents a local landmark when viewed from the Bolton Street and Guildford Road.
d) Social	The item has some social significance having served as local community church from 1903, and from 1938
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The item is representative of Gothic Inter-War period church buildings built c.1937.

Physical Description

The St Marys Anglican Church is an Inter-War Gothic style church built of light-coloured bricks in Flemish bond pattern with parapeted gables and Marseilles-tiled roof. The windows feature ornate tracery of moulded stone and diagonal lattice lead lighting.

The church makes use of expressed brick for façade decoration. Features of note include the simple expressed brick detailing along the gable, an expressed brick arch and the stepped, sloped brick sills. Each window section along the north elevation is separated by stepped brick buttress. Within each buttress is a garden bed with a single sandstone retaining wall. The east elevation features a wall constructed of sheet metal with a narrow window along the elevation. The brick buttress located on the corner of the west elevation features a bricked pinnacle.

The southern elevation features a later entrance. The new entrance is constructed of red brick. The structure has a gabled roof clad in Marseille tiles and makes use of the Gothic detailing of the main building including a small brick buttress, expressed brick detailing along the gable and a brick arch over the new entrance way.

The building has a c.1970s addition at eastern elevation and to the south of the main church hall that are not significant. The 1970s addition adjoins the eastern elevation of the Church hall with a flat roofed section constructed of brick with the flat roof hidden behind an aluminium weatherboard printed rectangular parapet. The parapet consists of three courses of these weatherboard-like panels. The eastern end of the 1970s addition terminates in an A-frame structure. The structure features a tall angular roof form clad in Marseille ties on a brick base with exposed timber eaves and recessed windows and door openings. This design is a typical church form from the modernist movement, however rather than using the tall angular form for natural light, the east and west elevations have been cladded in sheet metal.

The property allotment has a low brick fence with brick coping. The church is surrounded by a garden bed with a carpark located at the centre of the allotment to the south of the church. A concrete path with three concrete steps from Bolton Street is framed by a small stone retaining wall.

The church appears to be in a fair condition. There is some cracking at the peak of the brick arch along the west elevation that may be a result of structural movement. It should be closely monitored that the garden beds do not impact on the building, physically or in terms of water and drainage.

Condition	Good	**Fair**	Poor

Alterations and Additions

- 1970s addition to the east elevation and to the south
- New brick entrance on the southern elevation
- Carpark

Although the church features a modified eastern elevation and addition, the newer structures are carefully designed to ensure the visual curtilage of the church is not adversely impact and the main building remains the main focal point within the streetscape. Overall the church hall appears to be relatively intact, the integrity is considered to be moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1937

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickwork, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The site of the church transferred to the church's trustees on 18 Dec 1902 and in 1903 a mission hall was built on this site. The site became a separate parish in 1912. The foundation stone of the present church was laid by H. W. K. Mowll, on 17 April 1937. The Church is shown on a Water Board plan of January 1938 as complete. The brick church replaced an earlier timber church, which became the parish hall.

The church underwent modifications in the 1970s to cope with the increase use of the Church. A large rear extension was constructed. It appears the original timber church building (later used as a parish hall) was removed and a new parish hall constructed.

At present the church hall remains used for Church services. The 1970s extension is a childcare centre.

Curtilage Map

Statement of Significance

Guildford Fire Station is of local significance for its historic, aesthetic and representative values. The original fire station, built in 1915 at 287 Guildford Road, Guildford provides evidence of the suburban development of Guildford's town centre with the provision of fire and emergency services to the area. The current station opened in August 1928. The station's design is associated with William McNiven, architect to the Board of Fire Commissioners. The structure is of aesthetic significance as an intact Inter-War period fire station, that makes an important contribution to the streetscape and presents one of the local area landmarks. The item readily demonstrates representative qualities of a fire station built in the Inter-War free classical architectural style, c.1928.

Criteria Assessment	
a) Historic	The fire station provides evidence for the suburban and industrial growth of Guildford during the twentieth century. Built in 1928, this fire station is historically linked to the Board of Fire Commissioners.
b) Associative	The item is associated with William McNiven, architect to the Board of Fire Commissioners, who designed the fire station.
c) Aesthetic/Technical	The item is of aesthetic significance as an intact interwar period fire station, that makes an important contribution to the streetscape and presents one of the local area landmarks
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of the Inter-War Free Classical style.

Physical Description

The fire station is built in Inter-War Free Classical style. The two-storey structure is constructed of dark brick with expressed brick piers and a hipped roof. The hipped roof is clad with Marseilles tiles and has a projecting gable to the front which houses the engine bay. There are two brick chimneys with stepped string courses on the eastern side of the roof. The engine bay originally had a timber tongue and groove double doors to engine garage; however, this is replaced with a modern roller door. The gable end features a wide timber barge and finial and a boxed timber eave. The windows are timber framed double hung sash windows with sloped brick sills and brick lintel. The window openings on the lower façade are fronted by security screens, while the upper storey features aluminium flyscreens. Semi-circular windows are located along the eastern elevation of the building.

The building retains some external fittings associated with its earlier operations. The fire station sign appears to be c.1940s/50s and has an old fire alarm.

The building is built to the street alignment. The surrounding landscape is bare and largely consists of a concrete slab driveway and asphalt front area. A grassed area and established tree are located at the rear.

The building is considered to be in fair condition. It appears the brickwork is damp in which some sections which will, in time, require repointing. The damp may be associated with the draining of water away from the building. The surrounding concrete and asphalt may be exacerbating the deterioration.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Replaced fire door
- Security screens and flyscreens added to windows
- Airconditioning units along western elevation

The integrity of the item is considered to be moderate. A series of modifications, such as the replaced engine bay door are in line with operational standards. This modification does not reduce the significance of the item as the building retains many other intact features.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1928

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. Curtilage Map

Statement of Significance

The Guildford Road Shop Group is of local significance for its historic, associative, aesthetic and representative values. Historically, the group of shops are some of the earliest commercial developments in Guildford, as a result of the coming of the railway. Built c.1910-1920, they are also associated with former Mayor of Granville, William Thomas Swift, for whom Swift's Buildings (at No. 347-351) were constructed. The shops are aesthetically significant as a relatively intact commercial shopfront which makes a notable contribution to the streetscape of Guildford Road. The shops are relatively intact and represent a collection of Inter-War period commercial buildings in the Guildford area and more widely in the Cumberland LGA.

Criteria Assessment	
a) Historic	Guildford Road Shop Group are some of the earliest commercial developments in Guildford as a result of the coming of the railway.

	They are also associated with former Mayor of Granville, William Thomas Swift, for whom Swift's Buildings were constructed.
b) Associative	The group of shops are associated with former Mayor William Thomas Swift.
c) Aesthetic/Technical	The shops are aesthetically significant as a relatively intact commercial shopfront which makes a notable contribution to the streetscape of Guildford Road.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The shops are relatively intact and represent a collection of Inter-War period commercial buildings in the Guildford area and more widely in the Cumberland LGA.

Physical Description

The Guildford Road Shop Group consists of 8 Inter-War style freestanding shop fronts that date from c.1910-1920. The buildings were constructed at a similar time and are an intact representation of some of the earliest commercial buildings built in Guildford. Collectively, the group have a strong visual rhythm along this part of the street which is assisted by their architectural detailing, form and height. The majority of the buildings feature corrugated iron roofs on red brick walls. Some are rendered and feature stepped parapets. No. 343 -351 are rendered and have a parapet with incised oval niches above brick plastered building.

No. 317
The shop at No. 317 is a two-storey brick Inter-War shop front with a flat roof hidden behind a stepped parapet. The upper façade and parapet have been roughly rendered and painted, with no decorative features. The upper façade features three aluminium framed windows that are a later alteration. The shop front features a cantilevered awning with contemporary signage that relates to the current occupancy, a small supermarket and grocer.

No. 323
The shop at No. 323 is a two-storey, free-standing, Inter-War Free Classical style building with a symmetrical facade. The building has a three-sectioned parapet which obscures a flat roof clad with Colorbond sheeting. The façade is a rendered brick building with two classical columns that extend up the façade to the parapet on either side of the front door and central window. The window openings have been modified to include aluminium framed windows with glazed windowpanes. A cartouche is located above the side window openings, with a decorative rendered spandrel below. There is a cantilevered awning with pressed metal fascia and contemporary signage. The building, a former bank, has been adaptively re-used for a gym.

The lower façade is slightly more modified with a darker paint scheme along the base and an ATM machine embedded in the façade which is addressed by a low scale ramp with steel rail. The entrance to the gym is addressed by three steps with a steel handrail.

No.327
The shop at No.327 is a single-storey brick building. The flat corrugated iron roof is hidden behind a simple square parapet of painted brick. The shop front features a cantilevered awning with contemporary signage along the fascia. A butchery and grocer occupy the premises. The façade appears to be highly modified with modern window openings and contemporary stained timber cladding.

No. 329-331
The shop at No 329 -331 is a two-storey brick Federation building with a wide pitched parapet capped with concrete. The parapet features a recessed rendered name plate that reads 'RUSTS BUILDINGS' with the year 1922 above. There are two window openings on the upper façade that feature segmented arches and sloped brick sills. One window appears to retain the original timber framed double hung

sash windows with coloured multipaned windows along the upper sash and flyscreen attached to the lower façade. The window opening above the No. 329 shopfront features a contemporary aluminium slide window with a toplight.
The commercial building features a cantilevered awning with contemporary signage along the fascia. The lower façade is highly modified and occupied by two cafes. The awning of No.331 is corroded. The awning from No 329 has been replaced with a flat roof.

No. 333
The shop at No.333 is a single storey commercial building with a flat roof hidden behind a square parapet. The parapet appears to be rendered brick with contemporary signage affixed to the parapet and extending above at the centre. The commercial building features a cantilevered awning with contemporary signage affixed to the fascia. The lower façade is a highly modified shop front, occupied by a chemist.

No. 335-337
The shop at No.335 is a brick two-storey Inter-War commercial building with a stepped parapet. The parapet features blue painted capping and fins. The main body of the façade is rendered, primarily painted yellow with the bakery name also painted on the façade which reads 'Guildford's Hot Bread'. The shop has a cantilevered awning with a simple metal fascia. The lower façade features a modified shopfront occupied by a bakery. The lower façade walls are clad with rectangular tiles.

No. 345
The shop at No.345 is a two storey Federation Free Style brick building with a square parapet and narrow expressed columns separated by square recessed sections with roughcast render. A rendered string course runs below. This design is repeated below the rendered string course and above the windows. The windows are aluminium framed sliding windows. The entire façade is painted white. The lower façade has a cantilevered awning with a simple metal fascia with contemporary signage affixed. The lower façade features a highly modified shop front occupied by a nail salon and barber.

No. 347-351: Swift's Building
Swift's Building is located on the corner of Railway Street and Guildford Road. The building is two-storey Federation Free Style commercial building with a high parapet. The parapet reads 'Swift's Building' and is dated 1915. The curved parapet features rendered cornices with roughcast rendered middle sections. Timber framed windows are double hung sash with a rendered architrave and sill surrounded by a roughcast render. The window sections are divided by brick piers with darker bricks along the edge. The corner façade contains painted brickwork, with a narrow semi-circular window with a narrow face brick arch. The parapet features a decorative rendered motif, inset to the parapet. The building features a cantilevered awning with a simple metal fascia with contemporary signage affixed along the lower façade. The building contains three shops along the lower façade.

Condition
Overall, the buildings appear to be in a fair condition. Generally, the brickwork is sound with some discolouration along facades to the brick. Elements that will require some repairs are largely restricted to the cantilevered awnings along the lower facades of the building that show signs of corrosion.

Condition	Good	**Fair**	Poor

Alterations and Additions

No. 317
- Lower façade is a modified commercial premise operating as a supermarket. Features associated signage along lower cantilevered awning
- Façade and parapet rendered
- New aluminium framed windows*

No. 323
- New contemporary paint scheme*

- Contemporary door*
- An ATM in-built into front façade*
- Contemporary signage
- Windows replaced with aluminium framed windows*
- Contemporary steel handrail

No.327
- Contemporary shopfront*
- Contemporary signage
- Contemporary paint scheme*

No.329 - 331
- Modified lower façade for shopfront*
- Contemporary signage
- Modified windowpane
- Modified awning roof*
- Air conditioning unit*

No.333
- Contemporary signage
- Modified lower façade for contemporary shopfront*

No. 347-351 Swift's Building
- Right side window and awning removed*
- Air conditioning units*

The building group features individual items of varying levels of integrity and intactness due to their continued use. Some items have been better adaptively re-used and sympathetically altered. Modifications are generally associated with their use by new commercial premises, which include modern signage and contemporary paint schemes. Collectively the building group retains its form and scale. It is considered the item has moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1910 - 1920

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The Guildford Road Shop Group along Guildford Road was subdivided as Stimson's Estate and the Shrewsbury Estate in the 1880s. The existing shops were largely constructed between 1910 and into the 1920s. In particular, Swift's Buildings were built for William Thomas Swift a retired grazier who became Mayor of Granville in 1921. Almost all the buildings are shown on the December 1937 Water Board plan.

The shops along Guildford Road remain in use as a strip of commercial shops that service the suburb of Guildford. The shops contain a barber, gym, chemist, nail salon, café and grocer.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**

Curtilage Map

Statement of Significance

The cottage at 73 Milner Street is of local significance for its historic and aesthetic values and as a representative example of early (Inter-War) fibre cement and weatherboard cottages in the local area. Built in c.1923, the dwelling has local historic significance as one of the earliest houses constructed on Milner Road after the subdivision of the Lackey Estates in 1904. It has aesthetic significance as a neat example of a weatherboard and fibre cement house and makes an aesthetic contribution to the streetscape. While the item has been modified, it still retains its overall form and appearance and some of the modifications can be reversed. It is therefore a representative example of early Inter-War fibre ement and weatherboard cottages in the Guildford area.

Criteria Assessment	
a) Historic	The dwelling has local historic significance as one of the earliest houses constructed on Milner Road after the subdivision of the Lackey Estates.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has aesthetic significance as a stylish example of a weatherboard and fibre cement house. It makes an aesthetic contribution to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	While the item has been modified, it still retains its overall form and appearance and some of the modifications can be reversed. It is

	therefore a representative example of early Inter-War fibre cement and weatherboard cottages in the Guildford area.

Physical Description

The building is a single storey house of weatherboard and fibre cement construction set on a brick base, with a galvanised iron hipped roof with projecting gables to front and side. The verandah has a skillion, galvanised iron roof, extending from main roof, supported by stop chamfered timber posts with timber fretwork. The floor tile, balustrade and steps are a later addition to the verandah. Windows are timber framed, casement and painted green. A simple skillion awning sits above the front and side windows. The front door is timber framed and has a transom light and sidelight. The front gable has a timber louvred ventilator. The dwelling has a yellow and green colour scheme.

There is an extensive aluminium front boundary fence around the property and a ramp added for side access to the building. A large fibre cement extension with a gabled roof has been added to the rear and a concrete driveway encompasses the front of the building. The landscape has been significantly modified and consists of new plantings to the front of the driveway.

The dwelling has been well-maintained and is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Brick steps leading to front entrance removed
- Modern fencing added to front façade*
- Additional signage- dwelling adapted to preschool*
- Verandah has new floor tile, balustrade and steps*
- Concrete driveway to front*
- Roof sheeting replaced
- Fibre cement extension with gabled roof
- Side accessibility ramp added with aluminium fencing*
- Landscaping altered- trees and plantings removed and replaced*
- Brick base has been repainted in red*
- Decorative windows sills removed
- Repainting of roof guttering

The overall form of the dwelling has been significantly modified, and the later additions of modern aluminium fencing, concrete driveway, the modifications to the verandah and the removal of landscaping elements detract from the integrity of the building. However, the rear fibre cement extension to the dwelling is a sympathetic addition that does not adversely impact the heritage values of the site. It is considered to have moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his

forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject property was constructed on land that was originally granted to William Lackey and was subdivided as Lackey's Estate in c. 1904. The subject dwelling appears to have been constructed c.1923 when it first appears in the Sands Directory. It is one of the earliest houses constructed on the west side of Milner Road. From 1923 the Sands Directory lists that the property was occupied by Albert and Rose Willingham. They lived here until their deaths in 1946. It is shown on the Water Board plan of April 1938 to be named 'Wahroonga'. Since 1946, the property changed hands several times and the dwelling has been used as a preschool since 2014.

Curtilage Map

Statement of Significance

The former bakery at 332 Railway Terrace is of local significance for its historic and aesthetic values. The façade has historic significance as it provides evidence of early commercial development around Guildford in association with the development of Guildford Railway Station. While the building has aesthetic significance as a streetscape element and for its intact display window with multi-coloured display lights, the aesthetic value of the building has been reduced due to the removal of significant signage and original elements.

Criteria Assessment	
a) Historic	This item has historic significance as it provides evidence of early commercial development around Guildford facilitated by the development of Guildford Railway Station and in association with building boom that occurred in 1915.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item has some aesthetic significance for its intact display window with multi-coloured display lights and as a streetscape element. However, the value of the building has been reduced due to significant modifications and removal of significant signage such as the 'Bakery 1917' signage on the front parapet.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item does not meet this criterion.

Physical Description

The former bakery at 332 Railway Terrace is a two-storey brick Federation shop and dwelling. The building is a painted pink brick building with a parapet of raised brick that has been enclosed to form a flat roof. It shares a wall with a contemporary two-storey brick building with a lower parapet and ground floor clad in green glazed tiles. This represents a later modification to the original building and is not evident in the 1943 aerial of Guildford.

The former bakery at ground level features a shop façade constructed of brick clad with red glazed tiles and has a timber panelled door with leadlight glazing. Fixed display windows encompass the door on either side which have glazed lead lights above. A distinctive feature is the cantilevered awning over original shop display window. Above the awning is a timber-framed oriel window with fibro infill supported by timber brackets, covered by a small hipped roof constructed of diamond shingles and terracotta hip flashing. It is painted in a pink and yellow colour scheme. There is a blank white aluminium signage inset into the parapet. The lower parapet with a curved centre features two large modern aluminium framed windows.

To the rear, there is a modern extension to the property and a large brick outbuilding. The outbuilding is located atop land that formerly contained several outbuildings, presumably associated with the operation of the bakery. The building does not contain any significant landscape elements having been enclosed by urban development with a modern paved, pedestrian footpath along the front elevation and the construction of a large concrete driveway to the side of the property leads to the rear.

Although, the shop has been highly modified, due to its current use the building has been well-maintained. There is some a minor damage to the glass on the oriel window on the upper floor. Overall the item is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Brick façade rendered and repainted to a pink colour scheme
- Repainting of oriel window to a pink and yellow colour scheme
- Oriel window is likely to be an early modification to verandah
- Signage "Bakery 1917" removed from front parapet
- Removal of signage on side elevation- "Railway Refreshment" and "Kirk's Guildford Radio Service"
- Modern signage covered with white paint on parapet*
- Large grilled vent to side of building
- Concrete driveway leading to rear of building
- Rear extension
- Skillion roof and parapet modified to flat roof
- Construction of adjoining front façade*

While the building still retains the form of its façade and the oriel window, it has been subject to many alterations and some significant historic signage has been removed. While the lower façade is more intact, the item is considered to have low integrity overall.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	1917

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The former bakery is situated on land auctioned as Stimson's Estate in December 1876. The land was purchased by William Thomas Swift, retired grazier, who built this shop in 1917 and shortly after sold it to William Manks, who operated it briefly in partnership with a Mr Adams. The shop was then operated briefly by a Mr Short. In 1921, the shop was sold to Henry Coleman who operated it as a bakery for many years. Henry Coleman lived nearby at 346 Guildford Road, another residence that is still present in the landscape today.

The building has remained a commercial premise and is now used as a funeral service.

Curtilage Map

Statement of Significance

The dwelling at 346 Railway Terrace, Guildford is of local significance for its historic, aesthetic, and representative values. Built c.1920, the site is associated with significant land subdivisions that occurred with coming of the railway to Guildford, notably the Guildford Farm subdivision in 1876. It is also associated with prominent Guildford resident, H.C. Coleman, who operated a bakery on Railway Terrace. The dwelling has aesthetic significance for its deep setback and large allotment and as a well-maintained Federation style residence. The dwelling makes a positive visual impact to the streetscape along Railway Terrace and is demonstrative of a good well-kept example of a Federation-style residence.

Criteria Assessment	
a) Historic	The house, built c. 1920, is associated with significant land subdivisions that occurred with coming of the railway to Guildford, notably the Guildford Farm subdivision in 1876. It is also associated with prominent Guildford resident H.C. Coleman who operated a bakery further along Railway Terrace.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance for its deep setback and large allotment and as a well-maintained Federation style residence.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	The dwelling makes a significant impact to the streetscape along Guildford Road and is a good well-kept example of a Federation-style residence.

Physical Description

The item is a single storey Federation style dwelling, weatherboard house with three rough cast chimneys with terracotta pots. The house has a narrow projecting roof clad in galvanised iron with an encircling verandah extending from the main roof. The verandah extends along the front and sides of the dwelling, which sits on paired timber posts at the entrance and on corners with single posts between decorative timber brackets. The verandah has timber floorboards and a new aluminium balustrade. There is a breakfront gable with intact timber bargeboards and imitation half-timbering fronts the verandah. The house sits on an exposed brick base and has a rendered brick staircase and balustrade with half-sphere ball shaped mouldings which lead to front door. The front door is a timber panelled door with glazed multi-coloured lights and half-glazed sidelights. Two French doors sit on either side of the front door and have a transom lights with bolection mould panels below and glazed multi-coloured panels above. The French door windows are framed with decorative timber sills which likewise frame the front door sidelights. There are two sets of identical French doors on each side elevation of the building. The dwelling has a green and white colour scheme.

The dwelling retains its deep setback from the street and has a large allotment that assists the building in retaining a sense of its former setting. The context of the area s at present undergoing urban change with the construction of high, multi-storeyed developments in the vicinity. A green aluminium solid gate extends across the southern elevation of the building. There is a concrete path leading up to the property and there is no significant landscaping.

Overall the building has been well-maintained and is in a good condition, apart from the concrete pathway which has extensive cracking.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Repainted in a green and white colour scheme
- Aluminium balustrade added to verandah*
- Concrete footpath leading to front steps

Overall, the dwelling has been well-maintained, and most modifications have had minimal impact on the heritage values of the building. Alterations are largely sympathetic to the overall cultural significance of the place. The dwelling therefore has high integrity.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1920

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the

adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject property was part Lieutenant Samuel North's 640 acres which appears to have been later subdivided as part of Guildford Farms in 1876. The Sands Directory indicates that from 1920 a H. C. Coleman resided at the dwelling. Coleman was a prominent baker in Guildford and operated the nearby bakery further along Guildford Road. Coleman was also a well-known tennis player who with his wife lived at the property until his death in 1942. The dwelling was known as 'Aircourt', perhaps due to the Tennis Court which can be seen in the 1943 aerial photography of the property.

A portion of the property has been further subdivided at some point and thus the property is situated within an unusual L-shaped allotment. Although the dwelling has continued to change hands, the dwelling remains in use as a private dwelling.

Curtilage Map

Statement of Significance

The cottage at 39 Rosebery Street, Guildford is of local significance for its historic and aesthetic values and as a representative example of Federation period houses in the Guildford area. Built c.1910, the cottage has historic significance as a part of the early pattern of subdivision and residential development in the Guildford area in response to the coming of the railway. It was amongst some the earliest houses built to the east of Guildford Railway Station as part of the Lackey Estate subdivisions in the early twentieth century. This cottage has aesthetic significance as a well-kept, intact triple fronted cottage which is an unusual architectural form present in Guildford. The cottage retains a deep setback and makes a strong contribution to the streetscape. Although it has been modified, the cottages' unusual triple fronted form remains a good representative example of Federation period houses built in Guildford, particularly within the Lackey Estate subdivision.

Criteria Assessment	
a) Historic	Built c.1910, the item has historic significance as a as part of the early pattern of subdivision and residential development in the Guildford area in response to the coming of the railway. It was amongst some of the early houses built along the eastern side of Guildford Railway station as part of the Lackey Estate subdivisions in the early twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	This cottage has aesthetic significance as a well-kept, intact triple fronted cottage. It maintains its deep setback from the street and contributes to the heritage character of the area.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.

g) Representativeness	Although modified, the cottage, although unusual in its form (triple fronted) remains a good representative example of the Federation period houses built in the Guildford area, particularly within the Lackey Estate subdivisions.

Physical Description

The dwelling at 39 Rosebery Road is a triple-fronted Federation timber cottage of uncommon plan form and presentation to street with double front-facing gables and linking transverse gable roof. The roof is of corrugated galvanised iron above rusticated broad weatherboards which are set on a roughly rendered brick base with plain bevelled boards to side walls. Both front facing gables have identical timber framed double hung sash windows and are covered by an awning of corrugated iron that stretches across all three faces of the cottage. This awning forms a short central verandah and is possibly an alteration, as are the brick piers and balustrade. Another central double hung sash window sits beside a timber-framed glass panelled door with aluminium flyscreen. Other features include an intact bargeboard to front facing gables and a single brick chimney. There is a weldmesh fence to street and solid metal fence to the rear yard.

The cottage has a deep setback from the streetscape. This area contains some contemporary landscaping which is not of heritage significance.

While there is some deterioration to the timber bargeboards, timber weatherboards and timber fascia the cottage is generally in a fair condition.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Central brick verandah and extended awning are a possible addition
- New paint scheme- blue weatherboards with yellow roof and barge boards
- Large rear extension to cottage
- New weldmesh metal fence leading to rear yard*
- New aluminium handrail on front left gable
- In-built swimming pool

Although the cottage has had some modifications, in particular the central brick verandah, the building still retains its overall form scale and appearance including original glass panelled door and timber-framed windows. It is of moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1910

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The land surrounding the subject property was a part of William Lackey's original land grant and was first subdivided in 1900 as part of the Lackeys Estate. In 1909, the two allotments of land here were transferred to Catherine Lundie, wife of Hamilton Lundie, a labourer in Guildford. By 1911, she was listed in this position in Sands Directory. In April 1913, she transferred the northern allotment, which was then vacant to a relative, William Scattergood for £15. Catherine Lundie and her husband continued to be listed at this address in the Directories until 1929 when Robert Lorimer is listed at the property. The cottage has changed hands several times since and remains in use as a private residence.

Curtilage Map

Statement of Significance

The cottage, known as 'Catherine' at 55 Rosebery Road is of local significance for its historic and aesthetic values. The dwelling, built c. 1915, is readily identifiable as part of historic building stock in the area constructed as part of Lackey's Estate subdivision. The dwelling has some aesthetic significance within the streetscape as a neat Georgian revival cottage with bullnose verandah. However, the building has been heavily modified as such the item is not a good representative example of an Inter-War Georgian revival timber cottages of its kind in the Guildford area.

Criteria Assessment	
a) Historic	The site has historic significance as one of the original dwellings built as a part of Lackeys Estate subdivisions in the early twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance within the streetscape as a stylish Inter-war Georgian revival period cottage.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item has been heavily modified, and as such does not constitute a good representative example of an Inter-War Georgian revival timber cottages built in the Guildford area.

Physical Description

Single storey weatherboard cottage, with bullnose verandah to front on new timber posts and tiled floor. It has a colorbond hipped skillion roof with whirly bird, and a modern extension clad in fibro cement weatherboards. Double hung sashed windows are on either side of central front door, with broad architraves to windows and aluminium flyscreens. Front door is timber framed with transom light and aluminium sceen door. A single brick chimney survives.

A new rear development with concrete garage constructed to the rear and side of the property.The landscape has been hedge planted and the original landscaping including brick base of original fence have been removed.

The dwelling requires some maintenance. The tiled verandah floor has loose tiles, and the verandah posts have an additional supporting post indicating possible structural issues. The brick foundations to the front of the dwelling also appear unstable. The building is in a fair condition overall.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Replaced timber verandah posts*
- New tiled verandah floor likely replacing original timber floorboards*
- Aluminium framed flyscreens*
- Significant hedge planting- previous landscaping significantly altered*
- Rear garage converted into rear dwelling
- Roof features a whirly bird
- Replaced window architraves*

While the overall form of the dwelling remains, the building has been significantly modified and a new dwelling has been constructed at the rear. Furthermore, the rear addition, tiled verandah floor and stairs, verandah posts and screen door are unsympathetic additions to the building. The dwelling is considered to have low integrity.

Integrity	High	Moderate	**Low**

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1915-

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The land surrounding the subject property was a part of William Lackey's original land grant and was subdivided in 1900 as part of the Lackeys Estate. In May 1910, this allotment was purchased by Arthur Harrison, a wood worker of South Granville. This cottage appears to have been built about 1915-16. A cottage was first listed in this position in the Sands Directory in 1917 although it was not occupied by Harrison. In March 1918, it was transferred to Harriett Duncan for £450, and she lived at this address for some years until she sold the cottage.

The building remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.		**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should the opportunity arise, the original verandah floor should be reinstated as the tiled verandah floor is not a sympathetic alteration. It is recommended that they be removed to expose the original steps and base of the property.
- It is recommended the verandah posts be painted to an appropriate paint scheme that enhances the aesthetic values of the building.
- The structure of the verandah and posts should be assessed. The brick foundations appear unsteady and not sound.
- Rear garage should be repainted in colours sympathetic to the original fabric of the building.

Curtilage Map

Statement of Significance

The Inter-War bungalow at 77 Rosebery Street, Guildford is of local significance for its historic and aesthetic values, and as a representative example of an Inter-War Bungalow in the local area. The dwelling was in c.1929 and has some historic significance as an early War Service Home in the Guildford area. The dwelling demonstrates some aesthetic significance as an intact Inter-War bungalow with unusually large brick piers that support a transverse gable roof to the front of the property. The property is well-maintained and demonstrates representative qualities of an intact Inter-War bungalow built in Guildford, c.1929 that makes an important contribution to the streetscape.

Criteria Assessment	
a) Historic	Constructed c.1929 the dwelling has some historic significance as an early War Service Home in the Guildford area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The dwelling has aesthetic significance as an Inter-War bungalow with usually large brick piers that support a front gable. The item makes an important contribution to the streetscape.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The residence demonstrates representative qualities of an intact Inter-War bungalow built in Guildford c.1929.

Physical Description

The residence at 77 Rosebery Road is a substantial single storey brick and tile face Inter-War bungalow. It has a transverse gable roof with lower front gable that sits on unusually large brick piers. The lower gable has latticed shingles and features timber boarded eaves painted green and a barge board with battening painted yellow. There is a single brick chimney. The dwelling consists of two pane casements to front with multi-pane double hung sash windows at side. There are rendered lintels to the windows which are painted green. A recent carport was added to the front garden, with lattice panel to gable that is painted yellow and green. The boundary fence is a new timber picket fence, painted yellow. The front facade has been painted with a red oxide to the brickwork and tuck pointed.

The landscape has been significantly modified, with new hedging and plantings along the façade that are not of any heritage value.

The dwelling has been well-maintained and is in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Timber picket fence painted yellow
- Concrete paved driveway- significant cracking to front*
- Aluminium side gate*
- Pepper Tree removed*
- Significant landscape and hedging along façade and driveway
- Front bay window removed*

While the dwelling has been significantly modified with the inclusion of a carport, driveway and picket fence and the landscaping has been greatly altered, these modifications are sympathetic and do not adversely impact the heritage values of the item. It has moderate integrity.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1929

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The land surrounding the subject property was a part of William Lackey's original land grant and was subdivided in 1900 as part of the Lackeys Estate. The eastern side of this allotment facing Rosebery Road was transferred to Arthur Rutherford, a carter of Marrickville in April 1929. In August 1929, builders Enticknap Brothers applied to Granville Council on his behalf to erect a brick cottage worth £825 on this allotment. He took out two mortgages from the War Service Homes Commission to erect this dwelling. He was first listed in the Sands Directory as living at 77 Rosebery Road in 1931.

The property continues to be used as a private residence.

Curtilage Map

Statement of Significance

The cottage at 29 Salisbury Road is of local significance for its historic, aesthetic, rarity and representative values. Historically, the cottage is associated with significant land subdivisions that facilitated the development of Guildford, notably the Lackey's Estate subdivisions. The land was purchased in 1908 by George Friend, a dairyman of South Granville and by 1912 the small cottage had been constructed. This cottage is aesthetically significant as a small, intact Federation workers cottage which is enhanced by its intact weatherboards and early rear extension dating to 1925. The building makes an important contribution to the streetscape character and is a representative and rare example of modest Federation-style cottages in the Guildford area.

Criteria Assessment	
a) Historic	The cottage is associated with significant land subdivisions that facilitated the development of Guildford, notably the Lackey's Estates subdivisions. The land was purchased in 1908 by George Friend, a dairyman of South Granville and by 1912 the small cottage had been constructed.
b) Associative	The item does not meet this criterion
c) Aesthetic/Technical	The cottage has aesthetic significance as a small, intact Federation worker's cottage which is enhanced by its intact weatherboards and early rear extension dating to 1925.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The cottage is a rare, intact example of an early workers cottage and is one of the last remaining of its kind in the area.

g) Representativeness	This cottage is a representative and rare example of modest Federation-style cottages in the Guildford area.

Physical Description

The dwelling is a single storey Federation cottage that is timber-framed with bevelled weatherboard cladding and a new Colorbond roof. The roof is a transverse hipped roof with rear skillion extension and a brick chimney. A simple bullnose verandah with timber posts extends across the front elevation. The verandah floor is replaced with fibro cement sheet. The central front door is timber framed with transom light and has a new aluminium flyscreen door. Two casement windows are positioned on either side of the front door and consist of two panes with top and bottom margins of three small multi-coloured panes per sash on either side. The windows to the side elevations consist of new sliding windows that vary in size and alignment with each other.

To the rear, there is an extended verandah with skillion roof on timber posts. There is a modern garage with carport to the rear.

The landscape has been significantly altered with a new paved cement path to front and a double driveway. The landscaping is not significant.

Overall, the building is in a fair condition as there are some elements that require maintenance but generally the building has been well-maintained. Notably, there is paint chipping on the side weatherboards of the cottage and the timber verandah floor is exposed and tiling requires some maintenance.

Condition	Good	**Fair**	Poor

Alterations and Additions

- Concrete double driveway
- Garage at rear
- New verandah with skillion roof to rear
- Cottage repainted white - (previously green and yellow)
- New Colorbond roof and bullnose verandah
- New flyscreen aluminium door
- Weldmesh fence removed

Overall the integrity of the building is moderate. The garage and extension of verandah to the rear, and the new Colorbond roof are a discrete addition to the dwelling which does not detract from the overall significance of the item. The double concrete driveway and path however detracts from the overall integrity of the building as they have altered the landscaping. The integrity of the building is moderate.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c.1912

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The subject cottage was constructed on land that was originally granted to William Lackey and was subdivided as Lackey's Estate in c. 1904. In 1908, George Friend, dairyman of South Granville, purchased 3 allotments which included this particular allotment and a house had been built on allotment 38 by c.1912. In the 1913 Sands Directory, it was shown as being occupied by Norman C. Mulligan who bought the house for £225 of 22 March 1913. The cottage was transferred to him in August 1917. In August 1925, Granville Council approved additions to this cottage worth £46. The cottage was then owned by Joseph Robinson from 1924-1933. It was during Robinson's ownership that the cottage was first shown with the name "Cloverdale" in the Sands Directory (1925).

This cottage continued to change hands and remains in use as a private dwelling.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**

Curtilage Map

Statement of Significance

The Federation cottage at 45 Station Street, Guildford is of local significance for its historic, aesthetic, and representative values. Built c.1915, the building relates to the suburban development of Guildford that followed the residential growth of the area in the early twentieth century. The cottage has aesthetic significance as an intact and well-kept Federation cottage that makes a strong contribution to the streetscape. The item demonstrates representative qualities of an intact and modest Federation cottage built in Guildford, c.1915.

Criteria Assessment	
a) Historic	The item is historically linked to the suburban development of Guildford that followed the residential growth of the area in the twentieth century.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as an intact and well-kept Federation cottage.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item demonstrates representative qualities of an intact, modest Federation cottage built in Guildford, c.1915.

Physical Description

The item is a single storey Federation cottage with rusticated weatherboard cladding and a corrugated iron roof. The roof is hipped with a projecting gable to the side and front, with a brick chimney with steps and squat terracotta pots. The gable ends are wide and infilled with spatterdash render. A bullnose verandah extends across the front northeast elevations between the gables. The verandah is clad in corrugated iron and supported on turned timber columns with timber floorboards. The verandah also features a low concrete infilled balustrade in a poor condition, which is a later addition. The windows are single paned double hung sash windows with decorative timber under sills. The windows beneath the gable have a skillion roofed awning clad in corrugated iron with decorative timber brackets. The front door has timber glazed square upper panes with three recessed vertical panels below lock rail.

The dwelling has a rear weatherboard extension on brick foundations with a flat roof. A driveway along the northern boundary leads to a garage at the rear of the property. The front fence is marked by a low brick fence. There is a low retaining wall along the yard boundary and along a garden bed fronting the east elevation of the verandah. In the centre of the yard is an established tree as well as along front gable. The item retains its original subdivision boundaries.

Overall the condition of the building is good, however, there are elements in a fair to poor condition. There is substantial cracking in the brick retaining walls and infilled verandah balustrade. This appears to be as a result of the established tree root system. It should be carefully monitored to ensure that this does not impact the main building.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear extension
- Brick boundary fence
- Concrete infilled balustrade*

Overall, the integrity of the building is moderate. The rear extension is a discrete addition to the dwelling that does not adversely impact the significance of the item. The low concrete infilled verandah balustrade, however, is not a sympathetic addition to the building. The element is intrusive and should be removed.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	c. 1915

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and

residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The land on which this dwelling is located was subdivided in November 1884 as part of Stimson's Estate. Stimson was an active member in Guildford, known to have championed for the establishment of a local public school and was instrumental in obtaining the duplication of the railway line between Granville and Fairfield in 1891. The dwelling is shown on a Water Board Plan of February 1938 as No. 47. The dwelling remains in use as a private residence.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	X	**6.** Original fabric is highly significant and should be maintained.	X	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	X
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	X	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	X	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	X		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	X		
		11. The condition of this item is poor. Condition and maintenance should be monitored.	X		

Other recommendations and/or comments:

- The low concrete infilled verandah balustrade is an intrusive element that should be removed given it is in a poor condition and detracts from the cultural significance of the property. A more sympathetic balustrade utilising appropriate materials should be reinstated.
- The root system of the mature tree to the front of the building should be monitored to ensure the building is not compromised as a result.

Curtilage Map

Statement of Significance

The Talbot Road Group is of local heritage significance for its historic, aesthetic and representative values. Built in between c.1920-1930, the dwellings are historically related to the c.1881 land subdivision known as the Shrewsbury Estate and form an intact example of that land subdivision. Collectively, the fourteen dwellings form a representative example of various Federation period styles built in Guildford. Due to their similarities in age, design and materials, they make a strong contribution to the streetscape and are an aesthetically significant group. Together, these houses make the most consistent streetscape in Guildford.

Criteria Assessment	
a) Historic	Built in c.1925, the dwellings are historically related to the c.1881 land subdivision known as the Shrewsbury Estate and form an intact example of that land subdivision.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	Due to their similarities in age, design and materials, they make strong contribution to the streetscape and are an aesthetically significant. Together, these houses make the most consistent streetscape in Guildford.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	Collectively, the dwellings form a representative example of various Federation and Inter-War period residences built in Guildford.

Physical Description

The Talbot Street Group consist of six Federations and eight Inter-War period dwelling. The properties share the same subdivision boundaries and are an intact representation of early subdivision patterns in Guildford.

11 Talbot Road, Guildford
The house at No. 11 Talbot Road is a Federation bungalow with a hipped roof clad with Marseille tiles with exposed rafters on tuck pointed brick walls which sit on rendered foundations. The roof also has a projecting gable to the front, terracotta ridge tiles and ram's horn finials along roof capping, a tall brick chimney with step and terracotta squat pots. The gable end features a sunrise motif in gable spatterdash render and has wide barge boards.

The verandah roof is an extension of the main roof to projecting gable. The verandah is supported by decorative timber posts and brackets set on brick piers and a balustrade with rendered coping. The verandah floor is of tessellated tiles.

The front windows are three-part casement windows with leadlight glazing and cantilevered timber sills. The window below the projecting gable has an awning on exposed rafters and decorative brackets. The front door has a transom light and sidelight. Beside front door is a plaque which states "Ariadne". The front fence is low brick wall with brick piers on both sides of metal gate and painted dark green.

The building has a rear brick extension with a flat Colorbond roof and timber framed casement windows with a single pane of glass. A concrete slab driveway is located along the northern boundary.

The building retains its original subdivision boundaries. The dwelling features a moderate set back with formal garden landscaping.

Condition
Overall the condition of No.11 is good. The dwelling appears to be well-maintained with evidence for repointing in sections and a maintained landscape, however, there is some paint peeling from timber verandah elements and cracking in the brick retaining wall. While it appears to be in a good condition

at present, the concrete and garden beds along the front façade may result in poor water drainage and water ingress.

12 Talbot Road, Guildford
The house at No. 12 Talbot Road is a Federation bungalow with dark red brick walls laid in the stretcher bond pattern atop a rendered brick foundation. The roof is hipped with a projecting gable to the front and to the side. The roof is clad with terracotta tiles and retains two brick chimneys with step and terracotta pots. Both gable ends have wide barge boards and spatterdash render.

The verandah has a flat metal roof with exposed rafters and is supported on decorative timber posts set on brick piers with decorative timber brackets. The verandah is enclosed by a brick balustrade with rendered coping. The decorative timber posts are paired in sets of two and three. The brick piers and balustrade are inset with spatterdash render. The brick steps with high brick balustrade and timber decorative posts form entry porch and lead to the elevated verandah.

Below the front projecting gable is a projecting bay with timber framed four-part casement window. This window has leadlight glazing and cantilevered timber sill dentils below a tiled hipped awning on exposed rafters. The side projecting gable also has a projecting bay with timber framed three-part casement window with leadlight glazing and flat metal awning on exposed rafters. The exterior timber door is flanked with two windows with leadlight glazing and is under very shallow awning on exposed rafters. The front door has a transom light and sidelights, with a shallow awning on exposed rafters. A modern contemporary security screen door fronts the timber door. The front fence is brick dwarf wall with metal pipes between brick piers with rendered coping.

The building retains its original subdivision boundaries, featuring a moderate set back with a manicured garden framing a central brick footpath.

Condition
The dwelling is in a good condition and appears to have been repainted in the recent past and had the guttering replaced.

13 Talbot Road, Guildford
The house No.13 Talbot Road is a Federation bungalow with a gabled roof clad with Marseille tiles atop rendered spatterdash brick walls. The gable roof has projecting gables to the side and front elevation and a brick chimney has a flat cowl. A timber lattice ventilator is in the apex of gable with a timber shingle skirting below. A flat roof porch is located on the southern elevation (the side main entrance).

Windows on the eastern and southern elevations are timber framed three-part casement windows with a timer sill, timber shingle clad bays below and flat metal awning with exposed rafters above. The exterior door is a timber tongue and groove door. The front fence is a contemporary metal spearhead fence and gate. A concrete driveway is located along the southern boundary and leads to a contemporary garage.

The building retains its original subdivision boundaries, however, features a deeper setback than the neighbouring residents. The front yard contains a manicured garden with hedged conifers and garden beds.

Condition
The dwelling is in a good condition and appears to have been repainted in the recent past and had the guttering replaced.

14 Talbot Road, Guildford
The house at No. 14 Talbot Road is a Federation bungalow with tuck pointed brick walls on rendered foundations. The gabled roof is clad with Marseille tiles and has two asymmetrical gables to the front elevation. The roof also retains a tall brick chimney is with step and steel chimney pots. The main gable end features a timber shingled skirting while the smaller gables have lattice strap work. All gables have wide barge boards.

The large front gable extends over verandah and front entrance. The verandah is supported on short posts set on tall brick piers and balustrade. The floor is of tessellated tiles. The window openings have sloped brick sills and painted concrete lintels across windows and door. The front window below front gable is a multi-part casement window with leadlight glazing and skillion awning on exposed rafters and decorative timber brackets. The front door features transom lights and sidelights.

The dwelling contains a small rear skillion roofed extension with walls clad in fibro-sheeting.

The building retains its original subdivision boundaries and featuring a moderate setback with an established garden setting along the side boundary fences. A concrete tile footpath runs through the centre of the front yard. The front fence consists of a dwarf brick wall and metal pipes between brick piers with rendered pyramidal coping.

Condition
The dwelling is in a good condition, it appears the gables have been recently repainted. There are some signs of deterioration on the barge boards and awning.

15 Talbot Road, Guildford
The house at No. 15 Talbot Road is a Federation bungalow with a gabled hip roof clad with Marseille tiled atop rusticated weatherboard walls on brick foundations. The roof has a projecting gable with a simple timber barge board and a weatherboard lattice infill at its apex. A scalloped weatherboard infill extends from the below the lattice work and extends as an awning over the front windows. This awning features scalloped weatherboards, imitating shingled skirting, decorative timber brackets and Colorbond guttering. The roof retains a tall brick chimney with step and terracotta squat pots. The main entrance is located on the southeast elevation and is fronted by a flat roofed porch. The flat roof is supported by short timber post on a tall brick pier. The windows on the main façade (east elevation) consists of two sets of timber framed three-part casement windows with leadlight glazing, timber sills and painted concrete lintels. The front fence is an aluminium spearhead palisade fence and gate. Contemporary plantings are situated along the fence. A concrete footpath leads to the main entrance. A concrete driveway along the northern boundary leads to a garage. The garage has a gabled roof, fibro sheet walls and a timber panel door.

The building retains its original subdivision boundaries and features a moderate setback.

Condition
The building appears to be in a good condition.

16 Talbot Road, Guildford
The house at No. 16 Talbot Road a symmetrical brick Inter-War dwelling. The walls are constructed of yellow bricks laid in the stretcher bond pattern with expressed brick courses. The roof is hipped and clad with Marseille tiles and has a skylight. The front façade features a curved verandah with a flat metal roof and solid brick balustrade. The verandah roof is supported by two brick piers with stepped brick detailing. Two front doors open onto the verandah and feature brass lettering that reads ‘Chequers’. The verandah is framed either side by large rectangular aluminium framed sash windows with a skillion metal roof on metal brackets.

The front fence is low brick wall with stepped brick piers matching the buildings. A concrete driveway runs along the northern boundary. The front yard features minimal landscaping. The building retains its original subdivision boundaries and features a moderate setback.

Condition
The building appears to be in a good condition.

17 Talbot Road, Guildford
The house at No. 17 Talbot Road is an Inter-War dwelling with a hipped roof clad with Marseille tiles atop walls constructed of weatherboard walls and fibro sheeting. The dwelling has a symmetrical façade with a central verandah with a flat cantilevered roof. The verandah roof has boxed eaves and

a fibro sheet ceiling. The verandah is addressed by concentric rectangular brick steps. The steps feature a small garden bed either side with a planted dwarf conifer. Windows either side have a timber sill and timber framed double hung sash windows with horizontal glazing. Below the windows are multi-coloured ceramic shingles.

A concrete slab driveway extends along the southern boundary to a rear garage. A low brick retaining wall is located along Talbot Road. The brick retaining wall has been physically impacted by a motor vehicle and is a pile of rubble to the southeast. The front yard is not landscaped however, has an established palm. The building retains its original subdivision boundaries.

Condition
The building appears to be in a good condition however there are some elements in a poorer condition. The timber sills below the windows require repainting and the boundary wall requires repairs.

18 Talbot Road, Guildford
The house at No.18 Talbot Road is a highly modified weatherboard clad Federation cottage. The house has a hipped roof clad in Marseille tiles, with a projecting hip to the street. The front façade has a modified verandah and front porch. The verandah has a flat roof clad with Colorbond sheeting, supported on painted brick piers with high fibro sheet infill. This is fronted by a steel gate. The flat roof of the verandah extends over the window on the projecting hip. The window is fronted by a roller shutter. A blue paved driveway is located along the northern boundary extends the length of the property and leads to a granny flat at the rear of the property. The house also features a rear extension. The front yard features contemporary formal landscaping with established Dragon trees and other low-lying shrubs. The property is bounded by a steel panel fence that matches the gate. The building retains its original subdivision boundaries.

Condition
The building appears to be in good condition.

19 Talbot Road, Guildford
The house at No.19 Talbot Road is a single storey dark brick Inter-War bungalow. The building has a hipped roof clad with Marseille tiles with a projecting hip to the street. The recessed verandah is supported on brick piers with a brick balustrade set on sandstone capping. The verandah has boxed eaves and fibro sheeting ceiling. The window under the projecting hip is fronted by a roller door. The window on the front elevation is a faceted bay window with a simple timber sill. The window consists of four timber framed double hung sash windows with leadlight glass infill.

A concrete slab driveway is located along the northern boundary. The front yard features an established lemon tree and some plants in pots along the front elevation. The building retains its original subdivision boundaries.

Condition
The building appears to be in a good condition.

20 Talbot Road, Guildford
The house at No.20 Talbot Road is a single storey dark brick Inter-War bungalow. The building has a hipped roof clad with Marseille tiles with a projecting hip to the street. The recessed verandah is supported on brick piers with rendered posts a steel balustrade. The verandah roof has boxed eaves and fibro sheeting ceiling. The window under the projecting hip is a faceted bay window with a simple timber sill. The window consists of four timber framed double hung sash windows with leadlight glass infill. The dwelling has two door openings within the verandah space, both featuring a rendered lintel and are fronted by security screen doors.

A concrete slab driveway extends the length of the northern boundary. The fence is constructed of brick and consists of brick piers, with a rendered cap infilled with a low brick balustrade and steel bar. An informal garden bed with a variety of established plants is located along the front façade. The building retains its original subdivision boundaries.

Condition
The building appears to be in a good condition.

21 Talbot Road, Guildford
The house at No.21 Talbot Road is a single storey brick Inter-War bungalow. The roof is hipped and clad in Marseille tiles with a projecting hip. The brickwork is multi-coloured. The verandah is a highly modified infilled space. The verandah flat roof is supported on brick piers with sandstone capping and a brick balustrade, infilled with a large aluminium framed window and fibro sheeting. The window on the projecting hip features a faceted bay window with three double hung windows with horizontal glazing and a flat roofed awning. The window features a sandstone sill.

A concrete slab driveway is located along the northern boundary. The fence is a steel triangular loop top. The front yard features some informal garden bed with some plantings. The building retains its original subdivision boundaries.

Condition
The building appears to be in in a fair condition. The brickwork shows signs of efflorescence and the timberwork on the front elevation are deteriorated with paint peeling.

22 Talbot Road, Guildford
The house at No.22 Talbot Road is a single storey weatherboard clad Inter-War California Bungalow. The house has rusticated weatherboards and a roughcast rendered foundation. The roof is gabled and clad in concrete tiles with a projecting gable to the street. The gable ends feature fibro sheet infill and wide barge boards. The verandah is supported on roughcast rendered piers with timber posts. The floor is coated in pebblecrete and there is no balustrade. The verandah is address by three steps covered in pebblecrete. The all window openings are timber framed casement. Along the front façade, the single paned window is grouped in sets of four and two. The front door has two side lights and security screen.

The landscape consists of two dwarf conifers framing a concrete footpath. The fence is an arrow top steel palisade fence and gate, painted white. The entire house features a new paint scheme. The building retains its original subdivision boundaries.

Condition
The building appears to be in a good condition, however some of the roughcast render is starting to peel.

23 Talbot Road, Guildford
The house at No.23 Talbot Road is a single storey rendered brick T-shaped Inter-War bungalow. The bungalow has a hipped roof clad in Marseille tiles with a projecting hip at the centre. The dwelling has rendered brick walls on a rendered brick base. The windows are generally timber framed double hung sash windows grouped in pairs with simple timber sills. The front door has a security screen and two sidelights. The verandah features a curved roof supported on two rendered columns on a rendered brick base and balustrade. The verandah floor has terracotta tiles. A concrete slab driveway is located along the northern boundary. A stepped rendered concrete retaining wall with steel gate. This is located along the southern edge of the driveway and is framed on by an established garden bed.

The landscape contains many established trees along the front fence and driveway. There two plantings that directly front and possibly impact the dwelling. The building retains its original subdivision boundaries.

Condition
The building appears to be in a good condition, however some of the roughcast render is starting to crack and there is a hole in the front façade.

24 Talbot Road, Guildford
The house at No.24 Talbot Road is a single storey brick Inter-War bungalow. The rood is hipped and clad in Marseille tiles with a projecting gable to street and side. A return verandah is located along the

north and west elevations. This is supported on brick piers with rendered posts and a brick balustrade and rendered base. The building appears to have been recently tuck pointed. The windows along the front façade are timber framed casement windows with leadlight glazing, in sets of three and have sloped brick sills.

A concrete strip driveway extends along the northern boundary and leads to a fibro garage with a carport fronting it. The dwelling appears to have a rear addition clad in weatherboard with a skillion roof. The front yard is well manicured with a garden bed located along the projecting gable and southern boundary. A large wattle tree is located in the front. The building retains its original subdivision boundaries.

Condition
The building appears to be in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

11 Talbot Road, Guildford
- Rear addition
- Concrete slab driveway

12 Talbot Road, Guildford
- Concrete slab driveway
- Repainted in heritage paint scheme
- Replaced guttering

13 Talbot Road, Guildford
- Contemporary front metal spearhead fence and gate.
- Contemporary garage
- Replaced guttering

14 Talbot Road, Guildford
- Rear addition
- Repainted with heritage colour scheme

15 Talbot Road, Guildford
- Contemporary aluminium spearhead palisade fence and gate.
- Contemporary plantings along fence

18 Talbot Road, Guildford
- Modified verandah and front porch - verandah has a flat roof clad with Colorbond sheeting, supported on painted brick piers with high fibro sheet infill*
- Roller shutter over window openings*
- Blue paved driveway
- Rear extension
- Garage converted into granny flat
- Front yard feature contemporary landscaping

21 Talbot Road, Guildford
- Infilled verandah with with a large aluminium framed window and fibro sheeting*

22 Talbot Road, Guildford
- Repainted white*

23 Talbot Road, Guildford
- Contemporary front security screen

24 Talbot Road, Guildford

- Recently repointed
- Rear addition

Overall the integrity of the group is high, though some dwellings exhibit moderate integrity. Generally, the dwellings retain their original subdivision boundary and have been sympathetically repaired and repainted.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes	
Construction years	c.1920 - 1930

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s many of these larger estates were subdivided for the first time and in 1871 a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as a brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

Land subdivided c.1881 as the Shrewsbury Estate (DP683). The Shrewsbury Estate sold half acre allotments for £21 per month and was further marketed for its close proximity to Granville and the new water supply. The condition of sale within the Shrewsbury Estate stated no house to be built at a value less than £200. Within the Shrewsbury Estate, the property was located on land acquired by William Stimson.

Stimson used the land for fruit growing and wood sawing as well as other industries. Stimson was an active member in Guildford, known to have championed for the establishment of a local public school and was instrumental in obtaining the duplication of the railway line between Granville and Fairfield in 1891.

The Water Board plan of December 1937 shows Nos. 15 to 23 and 10 to 14 and 18 to 24 as present.

Recommendations					
Heritage Management		**Existing Built and Landscape Elements**		**Future Development and Planning**	
1. Maintain this item's heritage listing on the LEP.	**X**	**6.** Original fabric is highly significant and should be maintained.	**X**	**12.** Alterations and additions should respond to the existing pattern of development, with careful consideration of the setting (form, scale, bulk, setback and height).	**X**
2. Maintain this item's listing as part of the Heritage Conservation Area.		**7.** Unsympathetic alterations that detract from the cultural significance of the item should be removed.	**X**	**13.** New alterations and additions should respect the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**
3. Consider delisting as an individual item from the LEP.		**8.** Maintain heritage landscape elements and schemes.	**X**	**14.** Future uses for this item should be compatible with its historical functions/ associations.	
4. Consider additional research to nominate this item for the State Heritage Register.		**9.** Maintain the existing setting of the heritage item, informed by the historic pattern of neighbouring development (form, scale, bulk, setback and height).	**X**		
5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Where facades been repainted with a contemporary paint scheme, a more sympathetic and appropriate heritage paint scheme investigated and implemented, should the opportunity arise.
- Retain the original subdivision pattern through the retention of the dwelling setback and allotment.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Heritage Conservation Area	Not included		
Date Updated	March 2020		
Significance Level	LOCAL		
Site Type	Level 1	Built	
	Level 2	Residential buildings (private)	

Curtilage Map

Statement of Significance

The cottage at 27 Woodstock Street, Guildford is of local significance for historic and aesthetic values and as a representative example of a late Victorian cottage. Built c.1890, the item is located on one of the oldest estates in Guildford, known as the Church and School Estate, and was later subdivided in 1882 as part of the Woodstock Estate subdivision. The house is aesthetically significant as a relatively intact Victorian cottage and the dwelling makes a positive contribution to the streetscape.

Criteria Assessment	
a) Historic	Built c.1890, the item is located on one of the oldest estates in Guildford, known as the Church and School Estate, and was later subdivided in 1882 as part of the Woodstock Estate subdivision.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as a relatively intact Victorian cottage. The dwelling makes a positive contribution to the streetscape
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is a representative example of a late Victorian cottage, built c.1890.

Physical Description

The item is a single storey, double fronted brick Victorian cottage. The dwelling has a new galvanised steel roof and guttering that replaced a slate roof with a terracotta ridge capping atop painted brick walls. The cottage has a hipped roof with a projecting gable that features a simple timber bargeboard, finial and decorative timber bracket. The roofscape retains four tall brick chimneys (formerly rendered) with moulded brick and plaster decoration and solar panels at the rear. The verandah has a convex galvanised steel hip roof across the front facade to the projecting gable. The verandah roof is supported by timber columns and decorated with cast iron frieze and spandrels. A cast iron gothic arch is between paired columns in the centre. The windows are timber framed double hung sash windows with rendered brick sills and label mould with decorative stops above windows. The windows feature contemporary glazing. The windows along the side elevation are narrow casement windows. The front door has three glazed panels above lock rail with bolection mould panels below.

The property has a rear extension clad in weatherboard with a flat roof.

The dwelling features a highly vegetated front garden that is informal in nature and consists of a mix of native trees and plants. The front garden is an aesthetic contribution to the dwelling. The front fence is a timber picket fence replacing weldmesh panels attached to pipe posts. A carport was added to front of dwelling; however, this is now replaced with a garden.

At present, the building appears to be under renovation and due to the nature of the works, the building appears to be in a good condition.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Replaced roof and guttering
- Render removed from chimney base
- New paint scheme
- Removed carport
- Rear flat roof extension
- Established front garden

Although modified, the building retains a moderate level of integrity. Although the roof fabric is replaced the building retains its overall form and significant detailing along the façade.

Integrity	High	**Moderate**	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Curtilage Map

Statement of Significance

Granville South Public School is of local significance for its historic and aesthetic values and as a representative example of late Victorian period school buildings. Founded in 1889, the site and buildings are associated with the provision of public education to the growing population of the local area. The complex includes a set of buildings, with a number of structures indicative of the standard design of educational facilities in NSW at the time of their creation. The established plantings along Woodville Road and Oxford Street enhance the aesthetic significance of the school and are also historically significant as they relate to the school's extension in 1902.

Criteria Assessment	
a) Historic	Founded in 1889, the site and buildings are historically associated with the provision of public education to the growing population of the local area.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The complex includes a set of buildings, with a number of structures indicative of the standard design of educational facilities in NSW at the time of their creation. The established plantings along Woodville Road and Oxford Street enhance the aesthetic significance of the school and

	are also historically significant as they relate to the school's extension in 1902.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The complex is representative of late Victorian period school buildings.

Physical Description

The original school building is a single storey brick school building located on the corner of Oxford Street and Woodville Road, as shown in the main photograph. A 1902, brick extension adjoins the main building along Oxford Street. A later brick extension along the east elevation fronting Woodville Road now gives the two early school buildings its current U shape. The structure now presents as a large U-shaped building with a gabled roof clad in galvanised steel atop both painted and face brick walls. The gable end is decorated with timber bargeboards and a timber lattice screen. The roof retains tall brick chimneys with stepped course detailing. The windows are timber framed double hung sash windows with multipaned windows and painted sandstone sills. The main building also features a side addition clad in weatherboard with a skillion roof to enclose the original doorways. The front door is a timber tongue and groove door.

Within the school grounds are a range of contemporary departmental school buildings that are of low significance. The school landscape is quite modified with the inclusion of asphalt surfaces, sporting fields and the steel security palisade fencing that extends along the perimeter of the site. The school does however retain the ornamental plantings from c.1902 located along Woodville Road and Oxford Street.

The Granville South Public School buildings appear to be in a good condition and well maintained.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Rear additional school buildings, c.2009, c.2015 – 2016.
- Asphalt paving.
- Carpark.
- New boundary fence.
- New roof sheeting on main building.

Overall, the integrity of the building is quite high. The first school hall retains much of its original detail and fabric. Although the landscape has substantially changed, the new buildings have been carefully designed to ensure they do not adversely impact on the significance of the original buildings. It is likely however, that due to the continued use of the site as a public school the interiors are likely to be of a lower integrity grading.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1889 and 1902

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his

forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s, many of these larger estates were subdivided for the first time and, in 1871, a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886, Guildford was described as a 'busy though not populous fruit growing district'.

Into the 20th century, the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

The school was founded in 1889. It was located on the 150-acre land grant received by John Bowman. Later subdivisions in c.1900 saw the land owned by W.J. Baker. Soon after the school was established, an additional building was required to accommodate 100 more students. In 1902, the school celebrated the opening with the planting of a number of ornamental trees in the school grounds. Mr John Nobbs played a vital role in persuading the Department of Education of the need to construct another building. The school house and the new addition could now seat 300 students. This was constructed by Mr A.E Gould of Parramatta.

The school continued to expand throughout the twentieth century and has been continually added to with several new buildings. The two wings of the main building were extended again in 1929 with the need for additional space for larger classrooms. The increased attendance required two new classrooms. This was built to correspond with the earlier 1902 extension. The extension included alterations to the lavatories and verandah spaces. The building design was specified by the Education Departments architect and cost £996.

During the 1940s, with the construction of several Housing Commission homes in the area the 1940s, the school's attendance rapidly expanded. In 1948, a block of land at the rear of the present main building was selected as the site for a new Infants school promised by the Education Department. It is unlikely that the infants school building has been retained.

Many school buildings, built to the rear of the historic school building are later developments, likely post-1960. Additional school buildings were provided in 2009 and again in 2016 along the northern boundary.

The site remains in use as a public school.

5. The heritage curtilage for this item should be revised/reduced.		**10.** Maintain the historic aesthetic/character of the item and area (e.g. paint scheme, materiality, style, landscape elements).	**X**		
		11. The condition of this item is poor. Condition and maintenance should be monitored.			

Other recommendations and/or comments:

- Should new development be proposed for the site, the application should be accompanied by a detailed building assessment and fabric analysis to understand which buildings are significant and how to manage change.

Limitations

1. Access to all heritage items was limited to a visual inspection from the public domain. The interiors of buildings and inaccessible areas such as rear gardens were not assessed as part of this heritage study.

2. Condition and site modification assessment was limited to a visual inspection undertaken from the public domain.

3. Unless additional research was required, historical research for all heritage items was based on an assessment of previous LGA heritage studies, the Thematic History (prepared by Extent Heritage, 2019) and existing information in former heritage listing sheets.

Curtilage Map

Statement of Significance

The Guildford Road electricity substation is of local significance for historic, aesthetic, technical and representative reasons. The substation illustrates the mid twentieth century technology utilised in the generation and distribution of electricity supply in the area by the former Parramatta & Granville Electricity Supply Co. The building is an intact and representative example of the standardised electricity substations constructed in the Inter-War period, designed and built to harmonise with surrounding houses.

Criteria Assessment	
a) Historic	The item is historically linked to the distribution of electricity supply in the area by the former Parramatta & Granville Electricity Supply Co. in 1950s.
b) Associative	The item does not meet this criterion.
c) Aesthetic/Technical	The item is aesthetically significant as an intact and representative example of the standardised electricity substations constructed in the Inter-War period, designed and built to harmonise with surrounding houses. The substation illustrates the mid twentieth century technology utilised in the generation and distribution of electricity supply.
d) Social	The item does not meet this criterion.
e) Scientific	The item does not meet this criterion.
f) Rarity	The item does not meet this criterion.
g) Representativeness	The item is representative of the standardised electricity substations constructed in the Inter-War period.

Physical Description

The item is a single storey face brick substation building in the architectural style of austerity modern. The substation has a gabled roof clad with terracotta tiles hidden behind a stepped square parapet. A central timber tongue and groove door is framed on either side by fin walls with a concrete slab awning. The letters "P & G E S Co Ltd SUB-STATION No 18" are inscribed above the entrance. Fixed glass louvre vent windows are located along the east and west elevations. The allotment is enclosed by a cyclone mesh fence with barbed wire along the north, east and west boundary. The street boundary features a low brick retaining wall and concrete driveway.

The building's condition appears to be good, although there is some discolouration of the upper course of brickwork.

Condition	**Good**	Fair	Poor

Alterations and Additions

- Fence along Guildford Road removed
- Contemporary electrical box in the southeast corner of the property

Overall, the condition of the building is quite good. It appears the building is still operational and intact.

Integrity	**High**	Moderate	Low

** element detracts from the overall cultural significance of the place*

Historical Notes

Construction years	1950

Settlement around the suburb of Guildford began in the 1820s and 1830s when land was granted in the surrounding area to individuals such as Henry Whittaker, Lieutenant Samuel North, William Sherwin and the Lackey Family. The suburb of Guildford is named after the estate of ex-military officer and civil servant Lieutenant Samuel North who received 640 acres in 1837. He named it Guildford after his relative the Earl of Guildford, but made no change to the land there, remaining an absentee owner. In contrast, Henry Whittaker, a free-settler arriving to the colony in 1829, cleared and cultivated his forty-acre grant, Orchardleigh, (received in 1842) producing fruit and grapes. He later added part of the adjoining Guildford Estate and the result was subdivided in 1876 to capitalise on the newly opened railway station.

Throughout the 1860s and 1870s, many of these larger estates were subdivided for the first time and, in 1871, a provisional school was constructed in what is now Old Guildford, with the permanent school being constructed in 1876. With the opening of Guildford Railway Station in 1876, business and residences were slowly drawn away from Dog Trap Road (Woodville Road) to the railway. In 1886 Guildford was described as a 'busy though not populous fruit growing district'. It was at this time that Linnwood, owned and designed by George McCredie, was built. The McCredie's (of A.L. (Arthur) & G. McCredie and Sons, Architects and Consulting Engineers) promptly proceeded to become involved in all facets of life in Guildford, such as setting up a Presbyterian Church on their property in 1894.

Into the 20th century, the area was still described as a 'tiny village' and 'almost unknown' but in the second decade of the century a building boom took place. In 1915, a police station, a fire station, and industry such as brickworks, all came to the area of Guildford as it grew into a busy suburb with new residences, shops and citizens.

In 1913, Parramatta & Granville Electricity and Supply Co commenced operation for to supply electricity for the local area including Guildford. In 1938, the company stated in their advertising that it promised substations to be built to harmonise with surrounding houses.

This particular electricity substation was constructed in 1950 and was supplied electricity by the Parramatta & Granville Electricity Supply Co.

Curtilage Map

Statement of Significance

Linnwood Estate, including its associated buildings and landscape, is of State significance as a welfare site that was in operation and use for over 80 years. Since 1917, the site was continually adapted and developed specifically for various welfare uses such as housing and educating state wards. Of particular significance is the use of Linnwood Estate as the first and only Truant School that was in existence in NSW between 1917 and 1936 and was later used by the Department of Welfare as a Girls Home Science Domestic School for state wards.

Linnwood Estate is also significant as an example of a prominent and wealthy city businessman's country retreat that was constructed on a large estate beyond the then outskirts of Sydney in the late 19th century. The size and fine detail of this late Victorian residence demonstrates the wealth, aspirations and lifestyle of this class in society.

Specifically, Linnwood Estate is in part representative of its original designer and occupier George McCredie. George McCredie was prominent for a time in the local community through his involvement in the political arena and in community activities. On a broader level George McCredie is known historically for his role in conducting the cleansing of The Rocks following the outbreak of the bubonic plague in 1900, and the building activities of his family firm A.L. & G. McCredie and Sons. The remnants of Linnwood Estate can still demonstrate by its scale within its urban setting the former extent of the land holdings of Susan McCredie, who was also a prominent local figure in her own right.

Criteria Assessment	
a) Historic	Linnwood Estate is significant as a late 19th century country retreat constructed by a prosperous city businessman demonstrating a
