### We create amazing places

At SJB we believe that the future of the city is in generating a rich urban experience through the delivery of density and activity, facilitated by land uses, at various scales, designed for everyone.

# 1

#### 1.1 Executive summary

The NSW Land and Housing Corporation (LAHC) has prepared a proposed planning scheme for 792-794 Botany Road & 33-37 Henry Kendall Crescent.

The proposed scheme complies with Council's existing land zoning and FSR controls. It seeks to balance the unique contextual requirements of the site. This includes significant setbacks on all sides to accommodate deep soils and retention of the existing native street trees. The scheme proposes an increase in height above Council's existing controls, and does not include active frontages along Botany Road. The additional height will enable a lean and elegant built form, and dwellings that open out at street level and landscaped setbacks that will have a strong visual appeal for passing pedestrians.

A draft planning proposal for the subject site was previously prepared in December 2017, with preliminary feedback provided by Council in January 2018. The Land and Housing Corporation (LAHC) NSW has accounted for this feedback in the revised planning proposal scheme.

Visualisation - View North down Botany Road

|         | 28% (1615 sqm)  |   |
|         |                 |   |

#### 1.2 Scheme comparison

The following section provides a detailed comparison of the existing planning controls vs the 2017 planning scheme submission, and the current planning proposal scheme. The comparison demonstrates the evolution and benefits from the previous planning proposal scheme, to an improved outcome that is compliant with the existing FSR control for the site

Previous Planning Proposal Submission (2017) FSR - 2.5:1 Height - 8 Storeys (28m) Deep Soil - 22% of overall site

#### Key Elements

- · Seeks additional height and FSR.
- · Corridor strategy was justification for density and assumed uplift in wider context without appropriate study.
- There is a street wall of 6 storeys
- $\cdot$  Trees will be lost due to the lack of setback at street level and there will be very little gain in amenity for pedestrians.
- · Lacks sensitivity to low density residential areas on Henry Kendall Crescent.

**Existing Planning Controls** FSR - 2:1 Height - 4 Storeys (14m) Deep Soil - 11% of overall site

#### **Key Elements**

- Does not change LEP controls
- In order to achieve the desired FSR and allow for adequate building separation there is minimal setbacks to the street edge and there is a significant provision of commercial due to a higher rate of building efficiency.
- · This option will result in the loss of significant street trees and not provide wider paths.
- · A two storey street wall with a setback to the upper levels will provide a relationship in scale to neighbouring heritage elements.

**Proposed Planning Scheme** FSR - 2:1 Height - 8 Storeys (28m) Deep Soil provision - 28% of overall site

#### Key Elements:

- · This scheme proposes additional maximum building height to achieve a better built form outcome for the existing FSR controls of 2:1
- The design ensures the protection of the existing street trees which will minimise the impact of the overall scale from street level.
- · On Henry Kendall Crescent, an additional 14m upper level setback has been incorporated into the building fronting the corner of Coward Street, reducing the impact of visual bulk on Henry Kendall Crescent. The proposed building further north establishes a three storey built form with a
- ground level setback that parallels the neighbouring development. · Provision of increased landscaped area and deep soil zone, as well as a
- through-site link from Henry Kendall Crescent to Botany Road

#### 1.3 The site and its setting

The site is located at the corner of Botany Road and Henry Kendall Crescent, within 800m of Mascot Train Station to the west. Its context is comprised of a primarily low density residential character, with scattered pockets of mixed-use and commercial activity in its immediate surroundings. Mascot Town Centre and the Botany Road Local Centre are two consolidated areas of retail and commercial offerings that contribute to the amenity of the local areas, located to the west and south of the site respectively.

The site and its setting

### 1.4 The site and its setting

Heritage items opposite the site on Botany Road

Large mature trees line Botany Road on both sides

Existing buildings are set back from the south-east and south-west corners of the site

#### Urban Design Study

Large trees along Botany Road

Mascot Memorial Park opposite the site to the south

Existing two storey development is located behing layered street planting

## **Strategic and Policy Review**

#### 2.1 A Metropolis of Three Cities and Eastern City District Plan

The Eastern City District Plan is a 20-year plan to manage growth in the context of economic, social and environmental matters to achieve the 40-year vision for Greater Sydney. It contains the planning priorities and actions for implementing the Greater Sydney Region Plan - *A Metropolis of Three Cities*- at a district level, bridging between regional and local planning.

A review of the Greater Sydney Region Plan, Eastern City District Plan and Future Transport 2056 have identified key issues for planning for the future of Bayside's housing:

- Housing targets -The Plan sets the district-wide planning framework for the Bayside LGA. It requires Bayside to provide 10,150 additional dwellings between 2016 and 2021 and the development of medium and long term housing target to contribute to accommodating 157,500 additional dwellings across the Eastern City District between 2016 and 2036.
- Greater housing diversity and choice is required to cater to the changing needs of the local community, allowing people to stay in the same area as their circumstances change.
- The Plan recognises the increasing unaffordability of housing and the need to provide more housing which is affordable to people on a variety of incomes.
- Strategic documents support the creation of a 30 minute city, which would require housing growth focused around public transport nodes as well as improved public transport to existing housing.
- Mixed use redevelopment in commercial centres is encouraged, providing greater housing density close to services and generating greater activity and vibrancy within centres.
- Infill development and the need for additional urban land close to centres, jobs, public transport and infrastructure.

Extract from Eastern City District Plan (pg11)

#### **Strategic and Policy Review**

#### 2.2 Design excellence

The policies referenced below have been prepared by the Government Architect of NSW to guide and improve the design process from the outset. Both the overriding intent and the specific principles within them have been considered for the proposal for the site.

by the Government Architect of NSW. It establishes seven criteria which define a 'good built environment'

Implementing Good Design is the complementary policy to Better Placed and outlines the approach for measuring places and spaces to assess whether they meet the expectations and requirements of GANSW policy. The draft Greener Places policy outlines the importance of green spaces in towns and cities and the approach to integrating them into broader connected networks which support recreation for people and biodiversity in the urban environment.

The Design Guide for Heritage is a guideline for preserving, restoring and integrating heritage into spaces, buildings and precincts. Formulated in collaboration with the Heritage Council of NSW it defines heritage places and thematically unpacks key practical considerations for design. The Good Urban Design Guidance note builds on the Draft Urban Design Guide which is currently being updated. It builds on the objectives in Better Placed and focuses on the strategic scale and design process for running masterplanning projects.

Aligning Movement and Place seeks to outlay the functional, aesthetic and communal importance of roads and streets. It has been produced in collaboration with Transport for NSW and provides advice and a toolkit for approaching transit oriented development at many scales.

#### **Strategic and Policy Review**

#### 2.3 Place and local character

Consideration of place and local character are integral to achieving the appropriate design response for the site. The proposed building envelope responds to environmental, economic and social elements of this area and proposes a development that prioritises street trees and local amenity. The proposal also reflects the values of the landowner (LAHC) and their commitment to community wellbeing and social resilience by providing housing to the most vulnerable in our community.

#### Design and Place SEPP (2021)

In collaboration with the Department of Planning, Industry and Environment, the Government Architect of NSW is proposing a principle-based approach to the design and assessment of new development proposals of all scales.

- Principle 1: Design places with beauty and character that people feel proud to belong to.
- Principle 2: Design inviting public spaces to support engaged communities.
- Principle 3: Develop productive and connected places to enable thriving communities.
- Principle 4: Design sustainable and greener places for the wellbeing of people and the environment.
- Principle 5: Design resilient and diverse places for enduring communities.

The principle-based approach to design assessment will be supported by a set of design and planning considerations, providing a consistent framework for the development of contextual design responses. Proponents will also need to demonstrate how these principles and considerations have been met.

The objectives of the Design and Place SEPP are as follows:

- Start with Country as a foundation for place-based design and planning
- Deliver healthy and prosperous places that support the wellbeing of people, community and country
- Enable the delivery of quality design, integrated outcomes and meaningful innovation for people and places in NSW
- Create a strong and consistent framework for the design of the NSW built environment
- Focus on sustainability and resilience standardise methods to evaluate good design, and consolidate the State's approach to design review

#### Local Character and Place Guideline (February 2019)

The Local Character and Place Guideline was released by the NSW Department of Planning, Industry and Environment in February 2019. The guideline is intended to be a tool for councils, designers and planners to assess the place and character identity of localities.

Taking a place and character led approach secures the identity of the area and allows for change that is contextually appropriate. The guideline is split into three different determinants of local character; Social, Economic, and Environmental - within these categories, the guideline encourages its users to looks closely at an array of markers within these categories.

The document argues that local character continues to influence and be influenced by a holistic, plan-led system of strategic and statutory documents that traverse even beyond a regional and district level. These Plans provide a starting point for the shaping of local character through a long-term direction for a specific region, setting the stage for for housing, jobs, infrastructure, and targets for a healthy environment. The proceeding District plans subsequently bridge the gap between regional and local planning, accounting for a district's infrastructure, liveability, productivity, and sustainability.

The preparation of community strategic plans, local strategic planning statements and other documents allow these strategic directions to be translated at a local level, establishing an areas's future direction through visions for land uses and scale of development, implications for housing and the development controls that help to deliver this.

#### 2.4 Local Strategic Policy

#### Future Bayside Local Strategic Planning Statement

The Local Strategic Planning Statement for Bayside focuses on the vision and priorities for land use in the LGA. It builds on the previously adopted Bayside Community Strategic Plan 2030, gives effect to the Eastern City District Plan and reflects the input from the local community. The LSPS recognises the need to ensure that land use planning controls in the LGA are able to encourage a mix of dwelling types and increase the amount of affordable housing to meet the changing the needs of the community.

Mascot (along Botany Road and part of O'Riordan Street) has been identified as an area that contains capacity for growth without the need for rezoning. Dwellings in these areas have been outlined has mainly being apartments, however will need to ensure housing diversity. In planning for more growth, the LSPS highlights a series of criteria that should be met

- · Accessible to jobs and services
- Near railway lines and other public transport services to achieve the aspiration of a 30-minute city
- · Pleasant to walk around, with services and shops within a reasonable walking distance
- Near significant infrastructure investment which creates opportunities for housing redevelopment
- · Have access to open space, recreational facilities and community facilities, either existing or planned

The community also had the following inputs in relation to housing:

- Housing growth needs to be supported by infrastructure
- · Concerned with transport congestion associated with increased density
- · Development should be close to public transport, centres and employment opportunities
- More housing choice is required to accommodate families. multi-generational households and an ageing population

FUTURE BAYSIDE

### **Local Strategic** Planning Statement

A land-use vision to 2036

Bayside Council Local Strategic Planning Statement

### Bayside Council

#### Draft Bayside Local Housing Strategy 2020-2036

The Bayside Local Housing Strategy sets a framework and vision for housing in the Bayside LGA, planning for residential growth until 2036. This includes a set of priorities required to make housing more affordable, diverse and matched to the changing needs of the local community. The priorites include the improvement of housing diversity and affordability in the LGA, with relatively affordable housing protected and additional affordable rental housing provided.

The Strategy outlines a framework to achieve these objectives, including the following:

- Advocacy & partnerships with both NSW Land & Housing Corporation (LAHC) and Community Housing Providers, recognising the limited role that local government can play in direct affordable housing provision, while considering the use of Council land resources in partnership projects with community housing providers.
- Limiting redevelopment to protect parts of the LGA which contain concentrations of relatively affordable housing and limit displacement of existing residents.
- Facilitating a diverse range of housing supply, including medium density housing opportunities within
- walkable distance of local centres with good public transport accessibility. This will provide a broader range of housing choices at different price points, with medium density housing providing a more affordable Torrens-titled alternative to detached housing

Bayside Council Draft Local Housing Strategy

#### Botany Bay Development Control Plan 2013

#### Part 8 - Character Precincts

The Botany Bay Development Control Plan 2013 (DCP) divides the LGA into several Character Precincts. The site sits within the Mascot Character Precinct, which abuts the Airport and is linked to the major regional and State road networks.

The DCP highlights various characteristics as part of its Desired Future Character for each Character Precinct under a variety of categories. The key outcomes sought for the Mascot Precinct can be summarised as follows:

#### Function and Diversity:

- Enhance the public domain and streetscapes within the Precinct
- Retain the Precinct as a residential area with a dominance of high rise residential in the Mascot Station Town Centre and Mascot Local Centre, in which retail activity will be focused
- · Enhance neighbourhood amenity and pedestrian comfort
- · Ensure there is consistent streetscape through the use of front setbacks, fencing and landscaping.
- Promote site linkages (visual and pedestrian)

#### Public Domain and Environment

- Encourage developments located in the vicinity of open space to have a relationship with the open space or features through elements such as view corridors and pedestrian linkages
- · Encourage landscaping and vegetation planting within both the public and private domain of the precinct
- Encourage landscaping to be incorporated within the development and site layout to soften the built form

#### **Development Control Plan**

Former City of Botany Bay DCP Part 8 - Character Precincts

Former City of Botany Bay DCP Part 5 - Business Centres

#### Part 5 - Business Centres

Further to the Character Precincts, the Botany Bay Development Control Plan 2013 (DCP) details additional character statements for Business Centres within the LGA. The site is located within the dual-portioned Roseberry Neighbourhood Centre, which encompassess sections along Gardeners Road and Botany Road.

The objectives and controls for the Desired Future Character for the Centre is concentrated highly on the Gardeners Road portion, suggesting a focus on commercial and retail activity in this section of the Centre. The duality of the two sections is further evident in the built form description of the centre, which emphasise the shop-top housing fronting Gardeners Road as the main typology:

"The building stock around Rosebery Neighbourhood Centre is represented by mainly detached residential dwelling houses. It is a "garden" suburb with most dwellings having reasonable amenity. Rosebery Neighbourhood Centre comprises a long row of inter-war (predominantly) two-storey shop-top housing. The shop-top buildings are all built to the street alignment with continuous awnings and parapets"

Additionally, the substantial number of heritage items located along the Botany Road portion of the Neighbourhood Centre is also identified, suggesting a greater sensitivity and the need to preserve the prevailing character along Botany Road.

Roseberry Neighbourhood Centre boundary (extract from Part 5- Business Centres pg5)

### 2.5 Bayside LEP (2021) Maps

R3 Medium Density Residential

R4 High Density Residential

MU1 Mixed Use

B5 Business Development

B6 Enterprise Corridor Unzoned Land

15 metres

The site is situated opposite several heritage items of local significance that range in

are a set of two dwelling that are two storey Victorian terraces.

is a narrow art deco style warehouse, it is approximately twice the height of

· I31: Former National Bank of Australasia at 1005 Botany Road (cnr Botany Rd

is a Victorian era corner institutional, commercial building that is presently

· I32: Coronation Hall at 1007 Botany Rd (cnr Coward St and Botany Rd); is a community space that was built in the 1960s or 70s. It is a modernist building with light brown bricks and a very few windows or doors onto the street.

is a row of Victorian era shop fronts with dwellings on the upper level.

168: Memorial Park at 814 Botany Road and 149A Coward Street; is a local park with an ANZAC memorial in the North-East corner. There is also a playground, tennis courts and passive recreation space.

#### 3.1 Strategic location

The site is strategically located to access a range of amenities in the area including Mascot Station and Town Centre, Botany Road Local Centre, public primary and secondary schools, employment opportunities and ample public open space.

In Council's words, "The sites location has been identified in the Eastern City District Plan within the Green Square-Mascot district. Given the sites location on the boundary of the district, it's positioning on Botany Road and its proximity to the Mascot Town Centre, the site has strategic merit to be developed as a transition site between the intensity and density of the Mascot Town Centre and the low density of the surrounding residential fabric." (Botany Council's advice to LAHC on the previous scheme, 2017)

There has been significant urban renewal in the local area, although none directly adjacent to the site. As part of the Bayside Comprehensive LEP, bonus provisions were applied to the site on the other side of Botany Road at 10-12 Middlemiss Street which allow for 22m/0.65:1, noting that the site has no frontage to a main road. This indicates that the context is currently changing and the strategic position on Botany Road and the proximity to many amenities justifies a residential building of some scale on the site.

#### 3.2 Local LAHC owned sites

The study area is situated in close proximity to several other sites that are also owned by LAHC. This includes:

| No. | Property Address   | Current<br>FSR | Current<br>Height |
|-----|--|----------------|-------------------|
| 1.  | 70 Macintosh Street  | 1.65:1         | 22m               |
| 2.  | 26 Carinya Avenue  | 0.55:1         | 9m                |
| 3.  | 792-794 Botany Road<br>and 33-37 Henry Kendall<br>Crescent | 2:1            | 14m               |
| 4.  | 106 Coward Street and<br>12 Middlemiss Street              | 1.65:1         | 22m               |

LAHC presently have plans to redevelop these sites due to their size and strategic location.

#### 3.3 Streetscape, open space and tree canopy

The adjacent diagram indicates the extent of tree canopy in the local region. Much of the street planting in the area is sparse, with a more distinct consistency within a 400m radius of the site, concentrated around Mascot Memorial Park.

According to the GSC the Eastern City region performs the poorest from a street canopy perspective. According to the Bayside LGA Urban Tree Canopy Cover Heat Map developed by the state government, Mascot has an extremely low coverage rate of less than ten percent (<10%). Earlier this month Bayside Council launched their engagement process for the development of an Urban Forest Strategy - clearly demonstrating their commitment to preserving and enhancing the tree canopy throughout the LGA.

A small network of open space surrounds the site, each with varying level of amenity. Mascot Memorial Park is situated directly south of the site, offering extensive tree canopy, walking paths and informal seating. Further west, Lionel Bowen Park offers a larger recreational space, with an oval and playground facilities, as well as shaded seating areas.

#### 3.4 Streetscape, open space and tree canopy - site context

The neighbourhood surrounding the site feels like a leafy green neighbourhood, rather than the urbanised centres to the south and west, where tree canopy is considerably more sparse.

The tree canopy in proximity to the site is some of the most mature and broad in the local area. This section of Botany Road is lined by native tree species. It is unique to the character of the area and important to local biodiversity.

Tree canopy calculation is taken from the centreline of the surrounding streets and calculated as a percentage of the overall area. The subject site performs particularly well with more than 40% coverage in its present state.

The proposed outcome will maintain approximatetly 30% tree canopy cover. This is in line with the Greater Sydney Commission (GSC) target for Greater Sydney and also significantly exceeds the 25% canopy cover target for medium and high density residential areas in the NSW Government Architect Draft Urban Tree Canopy Guide 2018.

#### 3.5 Arborist input

Preliminary arboricultural advice was sought from Arterra to understand the species, scale and value of surrounding street trees. To inform design testing, they have provided some preliminary guidance around potential built form setbacks which may enable the retention of key street trees surrounding the site. These are informed by an analysis of potential encroachments to the largest tree protection zones (TPZ) of the following surrounding trees:

- Tree 6 (Henry Kendall Crescent): Broad Leafed Paperbark
- Tree 10 (Coward Street): Broad Leafed Paperbark
- Tree 18 (Botany Road): Flooded Gum

As noted within their report: "Encroachments of up to 10% of the TPZ area may be normally accepted within the TPZ as long as it is outside of the Structural Root Zone (SRZ). This is known as a "minor encroachment". Encroachments greater than this, known as "major encroachments" will only be accepted with additional specific evidence that the tree will not be unduly impacted."

All significant trees to be retained in proposed scheme, maintaining approximately 30% tree canopy cover.

#### 3.6 Transport and movement

The site is well-positioned in terms of vehicular and public transport connectivity. It is surrounded by a network of predominantly quiet, local streets, linked by a number of primary vehicular routes, namely Botany Road immediately to the east, Gardeners Road to the north and O'Riordan Street to the west. The site is also well-connected in terms of public transport, located within a 800m radius of Mascot Station which is situated to the west. Numerous bus stops can be found along Botany Road in close proximity to the site, offering services to the CBD.

#### 3.7 Active frontages

- Active frontages along Botany Road are proposed for the site through the Bayside LEP 2021. It is located neither within Mascot Station Town Centre nor Mascot Town Centre
- The site is located at the centre of a 500m stretch along the western edge of Botany Road which has not yet delivered active frontages, or is unable to contribute to such amenity e.g. Mascot Memorial Park. Looking south towards Mascot Town Centre, the active frontages on the western frontage are further interrupted by Mascot Public School
- Delivery of active frontages on the subject site will only seek to present an even more fractured active frontage along Botany Road and pull focus from Mascot Town Centre in the south and Mascot Station Town Centre in the east
- Considering the increased building setbacks required to retain existing mature trees along Botany Road, commercial or retail development at ground would not be consistent with the existing character along Botany Road and Coward Street which features little to no setback to the street.
- Mascot Station Town Centre has several locations where recent development has not complied with the active frontage control or provides a poor example of a retail space. The retail spaces that are included are often obstructed and have poor amenity.

#### 3.8 Frontage analysis - Botany Road (East)

Frontages along the eastern edge of Botany Road are a disjointed mix, displaying a combination of retail, commercial, residential and other uses. Fine-grain retail shopfronts and/ or commercial buildings can be found on most corner lots, however are often standalone, with their frontages interrupted by other uses, often residential uses of varying typologies. The small collection of Victorian shop-top housing beginning at 999 Botany Road are the one exception, presenting a brief consistency in character to the south of the site. Tree canopy is also sparse in and around these frontages, with the exception of the community centre at Coronation Hall, which is surrounded by distinctive mature trees.

Commercial frontage and residential flat building adjacent to Mascot Police Station

Residential terraces surrounding the heritage substation, with commercial activity on the corner

Community space at Coronation Hall adjacent to Victorian shophouses

#### 3.9 Frontage analysis - Botany Road (West)

Frontages along the western edge of Botany Road have a greater consistency in residential character, however with a variety of typologies and setback conditions. Low density, single detached dwellings are prominent to the north of the site, transitioning to 2 storey residential flat buildings. Pockets of single detached dwellings also surround Mascot Memorial Park to the south of the site. Retail and commercial frontages begin to appear south of the park, however once again displaying minimal consistency in character, with a variety of heights, typologies and setback conditions, presenting a disjointed interface with the street.

Low density residential transitioning to 2 storey residential flat buildings, with a church building in between

Single detached dwellings adajcent to Mascot Memorial Park

Urban Design Study

#### 3.10 Existing street interface

Section AA illustrates a generous setback to development site This quality of the street is improved by mature street trees and commercial development built to boundary on the east side of Botany Road.

that contribute to the leafy character of the surrounding suburban areas. The width and the quality of the pavement could is poor.

Some parts of Botany Road exhibit a more consistent tree canopy, with street planting found on the verges flanking both sides of Botany Road. The consistency in tree canopy is

supported by generous setbacks to commercial development. Mature trees offer a visual shield and buffer to the traffic along Botany Road for residential development, creating an intimate street character.

BB - East side of Botany road

Towards the south of the site, tree canopy becomes limited to retail and commercial activity can once again be found, with space such as Mascot Memorial Park. Varying degrees of

one side of Botany Road, supplementing areas of public open some awnings present alongside some of the finer-grain retail developments.

Section DD indicates the typical interface along Botany Road within the local centres and/or areas where retail activity is more established. Tree canopy in these areas is sparse,

with consistent awnings lining the footpaths on either side of Botany Road.

CC - West side of Botany road

DD - West side of Botany road

CC

DD - East side of Botany road

#### 3.11 Neighbourhood 'place based' references

The local character of the surrounding area is diverse and lacks any overall consistency. Development activity in the local area has changed the look and feel of Mascot in the past two decades. The place character of the suburb has and continues to evolve as the land uses change and sites are redeveloped.

Each of the streets that interface with the site has a different, unique identity that are very disparate from each other.

- Botany Road is a busy street with four to six lanes of traffic. This is a challenge to the viability of retail, as the amenity is impacted, existing local commercial is destinational rather than reliant on passing foot traffic. A front fence to the housing estate defines the boundary, however buildings are setback a significant distance and do not interface with the street. The significant trees continue north along Botany Road with the low scale individual dwellings and community church facility.
- Opposite the site are several heritage items that vary from Victorian era shop top housing, an old substation building, a Victorian era commercial building and a 1960s brown brick community centre. Between these items there is very little consistency in character.
- The Coward Street interface looks out onto the Memorial Park. The park is a passive green space with a ANZAC memorial and a box hedge garden. Significant trees along Coward Street offset from the boundary by approximately 6m allowing a generous verge of 6.4m from kerb to boundary. The built form also consists of stand alone two storey walk-up apartments.
- Henry Kendall Crescent has a suburban neighbourhood feel. The landscape setback allows for significant planting in front gardens - which are well tended by the residents. The street scale is up to two storeys on both sides of the street, dwellings are mostly low quality, 1970s red brick. The traffic volume is very low given the closed loop of the crescent.

#### 3.12 Site constraints

- <u>Retention of mature street trees:</u> A significant proportion of the site cannot be developed to maintain tree protection zones for the existing street trees.
- 2. <u>Transition to adjacent low density residential areas:</u> Neighbouring built form lacks consistency and varies in height. Some of the dwellings that interface with the site are low density (one or two storeys tall). It is important that height transition is addressed. The alignment of the building setback will also be important to providing a contextual response to the site, in line with some of the well-landscaped setbacks of the existing low density residences.
- 3. <u>Heritage considerations:</u> There are several heritage items that interface with the site of local significance. They vary in height, materiality and the era in which they were built.
- 4. <u>Overshadowing impact to Mascot Memorial Park:</u> It will important to consider minimising the overshadowing of the park and ensuring that items, such as the ANZAC memorial are not impacted.

#### 3.13 Site opportunities

- 1. <u>Retention of mature trees:</u> There are significant street trees located around the periphery of the site. These are very important to the amenity and shielding of the built form. They require significant setbacks to enable tree protection.
- 2. <u>Site access from Henry Kendall Crescent and Botany</u> <u>Road</u>:

There are multiple opportunities for vehicle entry to an underground car park. This will be optimal for future traffic studies.

- Indicative through-site link: The site could provide residents of Henry Kendall Crescent with a shortcut to Botany Road. A through site link will also break up built form and site length
- 4. <u>Multiple frontages:</u> The building will activate the area with residential uses that provide passive surveillance and safety to the street neighbouring open spaces.
- 5. <u>Proximity to public transport options:</u> The site is within a short walk of a train station and multiple bus stops.
- 6. <u>Prominent corner site:</u>

The site is situated on a key corner along Botany Road where a development on the site could offer a sense of address/a landmark.

31

#### 4.1 Vision

The proposed planning scheme will deliver a residential development that will be an ideal place to live for all sections of the community. The social diversity of Mascot will be reflected in the development with a range of housing options. Diversity in dwelling size and tenure within the proposed development will create a vibrant social mix.

Residents will have ample access to local schools, public open space, Mascot community centre and other amenities within 400m of the site. A short walk further will provide access to Mascot Town Centre and the Mascot Train Station. The area has a range of employment prospects within short walk and Sydney CBD is accessible through a range of public transport modes.

Future residents will enjoy an attractive landscape setting with ample public open space, mature trees and shared communal areas. Improvements to the streetscape will make the interfacing streets places where people want to linger and enjoy the verdant green landscaped environs.

The built form will complement the surrounding context by celebrating the proximate heritage elements and addressing the scale of neighbouring built form. The building materials and design quality will make the proposed development a place where any urban dweller would desire to live.

#### 4.2 Design qualities

#### Landscape character

Key to the landscape quality of the development will be the setback at street level for deep soil around the perimeter of the development on all frontages. This will support the retention of the mature street trees. Additional planting along the street edge will contribute to local biodiversity and create visual interest for passing pedestrians.

The spaces between buildings will have the potential to be greened with the purpose of adding screening between the building separation. Two potential through site links connecting Kendall Avenue with Botany Road will add permeability and opportunities for further public greening.

#### Interfaces

The interface with the street will be vibrant and active with residential entrances to dwellings and lobbies directly onto the street. The built form will be setback at ground level to allow for an area of deep soil and with a verdant green landscape setting. The setback of the building will enable the spread of the tree canopy to be maintained so the pedestrian feels a sense of enclosure and protection as they walk along Botany Road.

The amenity for residents at on the ground floor will be enhanced by the street level setbacks and minimise the impact of busy roads that interface with the site.

The interface creates visual interest and activation along street edges, in manner that is more sustainable and attractive than isolated commercial or retail uses that often do not thrive in this type of location.

#### Built form and scale

The site will vary in building scale across the site with a form that complements the neighbouring development and retained. The tree canopy will minimise the scale and visual broader context.

Ranging from three storeys on Henry Kendall Crescent to eight storeys interfacing with the Mascot Memorial Park on Coward Street and the corner of Botany Road. The built form will complement the local area with podium heights that parallel the shop top buildings on the opposite side of Botany Road and a setback to upper levels.

The street level setback will enable the street trees to be impact of the built form.

The three buildings will have a unique character and materiality the complements their context and the character of the street that it interfaces with.

#### Heritage and character

The future redevelopment of the site will be sensitive to local character and the draw upon the place character of the local area.

The development can take its cues from the heritage items at the lower levels to establish the street wall. A particular tone and character that is carried through the form of the tower also takes its cues from the materiality of local dwellings and the buildings that will be demolished. The street setback along Henry Kendall Crescent will parallel

neighbouring residents to fit in with the local context and a low fence holding the property boundary will mirror the local development.

doorstep.

Street planting, street interfaces and terraces will form a vibrant street character that creates an intimate scale at street level. The interface with Memorial Park will add to the amenity and character of the development, as well as providing residents with access to open space at their

#### 4.3 Design considerations

#### Setbacks due to tree protection zone

There are a number of mature trees around the site which have high to moderate value. To enable their retention, a preliminary setback has been established. This supports the aspiration to "Enhance the public domain and streetscapes within the Precinct, outlined in the Botany DCP 2012," Mascot Precinct Desired Future Character (p48).

Key

#### Site linkages and vehicular access

Considering the scale of the site, opportunities to break up the length of b should be explored to reduce the impact of visual bulk, provide opportunit landscape and views. This supports the aspiration to "Promote site linkage and pedestrian)" outlined in the Botany DCP 2012, Mascot Precinct Desire Character (p48).

Aboricultural advice has highlighted two main opportunities for vehicular access from Henry Kendall Crescent and Botany Road. There are however a number of existing vehicular entries from all three frontages.

#### Key

|                       | Site boundary                       |
|-----------------------|-------------------------------------|
|                       | Preliminary aboricultural setback   |
| $\rightarrow$         | Indicative site links               |
|                       | Break between buildings             |
| $\longleftrightarrow$ | Built form length along Botany Road |
|                       | Vehicular entries                   |
|                       | Park                                |
| $\bigcirc$            | Trees                               |
|                       |                                     |

Street walls established across the site should respond to the scale and rhythm of buildings on adjacent streets. A lower street wall should be established along Henry Kendall Crescent. There is an opportunity for higher street walls along Coward Street and Botany Road, which respond to the scale of adjacent built form and the visual prominence of the corner.

Considering the surrounding context, height should be stepped back from the street and transition down to residential areas to the west and north. Existing mature street trees on the site provide a level of visual shielding when viewed from the street.

|                       | Site boundary           |
|-----------------------|-------------------------|
|                       | Built form              |
|                       | Above podium built form |
|                       | Break between buildings |
| $\longleftrightarrow$ | Transition              |
|                       | Park                    |
| $\bigcirc$            | Trees                   |

### Overshadowing

Overshadowing to Mascot Memorial Park to the south should be minimised when designing for the site. Potential overshadowing from the proposed built form is explored in more detail later in this report.

### Landscape and greening

Building upon the existing mature trees along adjacent streets, there is an opportunity to bring landscape into the site to support residents amenity, outlook and mitigate urban heat.

### Key

## 4.5 Proposed planning scheme (2:1 FSR)

The proposed planning scheme seeks to balance the unique contextual requirements of the site with the delivery of apartment buildings on the site. The proposed scheme maintains consistency with Council's existing land zoning and FSR controls. The scheme proposes to increase the maximum building height limit from 14m to 28m and remove the active frontages control from the LEP.

| Current permissible height       | 14m (4 storeys) |  |  |  |
|----------------------------------|-----------------|--|--|--|
| Current permissible FSR          | 2:1             |  |  |  |
| Proposed height                  | 28m (8 storeys) |  |  |  |
| Proposed FSR                     | 2:1             |  |  |  |
| Potential dwelling yield         | 152             |  |  |  |
| Deep soil                        | 28% (1615 sqm)  |  |  |  |
| Ground floor communal open space | 25% (1420 sqm)  |  |  |  |
| Canopy cover                     | ~30%            |  |  |  |
|                                  |                 |  |  |  |

## 5.1 Site sections

Section AA

### Section BB

### 5.2 Residential amenity to Botany Road

Section CC - Detailed interface with Building 3 Botany Road

The interface with Botany Road will be designed to protect the dwellings at ground floor. Large setbacks shield development from the traffic and noise impacts from Botany Road, aided by mature tree planting.

The experience for pedestrians will be improved by the ability to provide a softer edge to the boundary of the site with landscaping and opportunities to rest if desired.

Precedent images

Landscaping provides amenity and visual interest for pedestrians on the street.

Landscaping and trees protect residents at ground floor and provide privacy to the residents at ground floor.

## 5.3 Built form transition across Henry Kendall Crescent

The interface with Henry Kendall Crescent will respect the residential nature of the area. A significant street setback will protect the existing street trees and maintain consistency with the setback established along the street.

The development is sympathetic to the low density neighbourhood, with a three storey building proposed along this edge.

### Precedent images

### 6.1 Scheme comparison

The following section provides a detailed comparison of the existing planning controls vs the 2017 planning scheme submission, and the current planning proposal scheme. The comparison demonstraties the evolution and benefits from the previous planning proposal scheme, to an improved outcome that is compliant with the existing FSR control for the site

Previous Planning Proposal Submission (2017) FSR - 2.5:1 Height - 8 Storeys (28m)

Deep Soil - 22% of overall site

### Key Elements

- · Seeks additional height and FSR.
- Corridor strategy was justification for density and assumed uplift in wider context without appropriate study.
- There is a street wall of 6 storeys
- Trees will be lost due to the lack of setback at street level and there will be very little gain in amenity for pedestrians.
- · Lacks sensitivity to low density residential areas on Henry Kendall Crescent.

## **Existing Planning Controls** FSR - 2:1 Height - 4 Storeys (14m) Deep Soil - 11% of overall site

### Key Elements

- · Does not change LEP controls
- In order to achieve the desired FSR and allow for adequate building separation there is minimal setbacks to the street edge and there is a significant provision of commercial due to a higher rate of building efficiency.
- This option will result in the loss of significant street trees and not provide wider paths.
- · A two storey street wall with a setback to the upper levels will provide a relationship in scale to neighbouring heritage elements.

Proposed Planning Scheme FSR - 2:1 Height - 8 Storeys (28m) Deep Soil provision - 28% of overall site

### Key Elements:

- · Provision of increased landscaped area and deep soil zone, as well as a through-site link from Henry Kendall Crescent to Botany Road

- This scheme proposes additional maximum building height to achieve a better built form outcome for the existing FSR controls of 2:1
- The design ensures the protection of the existing street trees which will minimise the impact of the overall scale from street level.
- On Henry Kendall Crescent, an additional 14m upper level setback has been incorporated into the building fronting the corner of Coward Street, reducing the impact of visual bulk on Henry Kendall Crescent. The
- proposed building further north establishes a three storey built form with a ground level setback that parallels the neighbouring development.

### 6.2 Scheme comparison - council advice on previous scheme

This snapshot demonstrates how LAHC has addressed Council's feedback on the previous Planning Proposal Scheme from December 2017, and the improved outcomes of the Proposed Planning Scheme.

### eme dback

additional height to achieve a better design FSR control of 2:1, based on the strategic merit ther than comprehensive uplift in the whole area.

ng Henry Kendall Crescent with ground level e neighbouring dwellings.

reys on the corner of Coward Street with upper n additional 9m from Henry Kendall Crescent.

s supplied in the schedule and a full test fit will be submission.

qm) will be deep soil provision. or area will be communal open space (1420 sqm).

oment on all sides permit the widening of of the street trees and a landscaped interface with

ateriality will reference the heritage items in the a street wall and height will be softened by tree

### 6.3 Previous planning scheme (December 2017)

### FSR - 2.5:1

Height - 8 Storeys (28m) Deep Soil - 22% of overall site

### **Key Elements**

- Seeks additional height and FSR.
- Corridor strategy was justification for density and assumed uplift in wider context without appropriate study.
- There is a street wall of 6 storeys
- Trees will be lost due to the lack of setback at street level and there will be very little gain in amenity for pedestrians.
- Lacks sensitivity to low density residential areas on Henry Kendall Crescent.

The proposed scheme improves upon the previous submission in many ways including:

- A significant setback provided on all sides of the proposed scheme.
- Retention of the mature street trees.
- Potential through site links.
- · Three separated building envelopes.
- · Shorter street frontages.
- · Increased upper level setback above 4th floor.
- Three storey building on Henry Kendall Crescent.

### Urban Design Study

 $\bigotimes$ 

Loss of significant street trees due to no street setback

Isolated retail provision - unlikely to be successful

Minimal deep soil provision

Setback above six storeys above street level

A single 'L' shaped building full length of Coward Street and Botany Road

5 Storeys interfacing with single storey residential development on Henry Kendall Crescent

Built to boundary on the northern edge of lot

Deep soil retained at centre of the site

Provides active frontages

### 6.4 Existing planning controls scheme

### FSR - 2:1

Height - 4 Storeys (14m) Deep Soil - 11% of overall site

### Key Elements

- Does not change LEP controls
- In order to achieve the desired FSR and allow for adequate building separation there is minimal setbacks to the street edge and there is a significant provision of commercial do to a higher rate of building efficiency.
- There is no provision of through site link and minimal deep soils.
- This option will result in the loss of significant street trees and not provide wider paths.
- A two storey street wall with a setback to the upper levels will provide a relationship in scale to neighbouring heritage elements.

The proposed planning scheme provides an improved design outcome by providing:

- A significant setback provided on all sides of the development to enable the retention on the trees.
- · Potential locations for through site links.
- Shorter building lengths on Botany road.
- · Increased upper level setbacks.
- Three storey building on Henry Kendall Crescent.
- Absence of commercial areas that are unlikely to be viable in this location.

- Loss of significant street trees due to no setback
- Isolated retail/commercial provision unlikely to be successful
- Minimal deep soil provision
- Interface with Henry Kendall Crescent is not scaled down for residential development
- Very minimal deep soil provision
- Long uninterrupted street interface with Botany Road
- Very large floor plates Commercial and residential

- Compliant with current planning controls
- No overshadowing of park
- Podium edge is two storeys on Botany Road

### 6.5 Proposed planning scheme

### FSR - 2:1

Height - 8 Storeys (28m)

Deep Soil provision - 28%

### Key Elements:

- This scheme proposes additional maximum building height to achieve a better built form outcome for the existing FSR controls of 2:1
- The design ensures the protection of the existing street trees which will minimise the impact of the overall scale from street level.
- On Henry Kendall Crescent, an additional 14m upper level setback has been incorporated into the building fronting the corner of Coward Street, reducing the impact of visual bulk on Henry Kendall Crescent. The proposed building further north establishes a three storey built form with a ground level setback that parallels the neighbouring development.
- Provision of increased landscaped area and deep soil zone, as well as a through-site link from Henry Kendall Crescent to Botany Road

The outcomes of the design improve upon the base scheme and the previous design scheme in multiple ways:

- A significant setback provided on all sides of the development to enable the retention on the trees.
- · Potential locations for through site links.
- Shorter building lengths on all sides with adequate building separation.
- · Increased upper level setbacks.
- · A three storey building on Henry Kendall Crescent.
- Absence of commercial areas that are unlikely to be viable.
- Increased deep soil zone and ground floor communal open space

Consistent with existing LEP land zoning and FSR controls

Significant street trees retained

Building height will be screened by maintained street tree canopy

Strategic location for housing

Visual interest through landscape setback

Increased deep soil provision

Potential for a through site link

Minimal overshadowing of Mascot Memorial Reserve

Setback on northern boundary
