1. Executive Summary

CSH Consulting Pty Ltd were engaged by IPG Invest Projects to carry out additional sampling of soils at the property at 407 Crookwell Rd, Kingsdale. The sampling is to support the previous sampling conducted for the Detailed Site Investigation Report (DSI reference No DSI2022-18) to support the rezoning and development application.

The objective of this report is to provide more detailed and definitive information to evaluate the likelihood of contamination on the land.

Soil samples were collected on 26/07/2023 with the sampling carried in areas that were determined to be potential areas of concern and to evaluate the likelihood of contamination on the land.

The house, garage and sheds were not sampled as the buildings are still being occupied by the owners and will be surveyed and sampled as a pre-demolition survey as per the remedial action plan.

Based on the analysis report No 329032 by Envirolab, all values reported are below the relevant criteria set by NEPM, meets the requirements for ENM as per the *NSW EPA Excavated natural material order* and can be classified as general solid waste (GSW) as determined by the *NSW EPA Waste Classification Guidelines Part 1: Classifying waste*.

Due to the age of the house, it is presumed to contain asbestos.

The two areas of concern identified in the DSI, the house and garage (PAEC01) and the sheds north of the house (PAEC06), and the potential contaminants area assumed to be present. Soil sampling around the sheds and house were completed, see figure 1 for sampling locations, and indicate there is low risk to human and environmental health.

Section 7 in the remediation action plan (reference No RAP2023-218, dated 7 March 2023) developed for the sampling, management of the demolition of house, garage and sheds and the removal of contaminated waste is to be followed to ensure the minimalization of contamination during the demolition process and the sampling to validate the areas are free from contaminants.

Overall, based on the analysis of the soil, reported values were below the relevant criteria and the likelihood of contamination of that land is low. As a result, the site is deemed suitable for rezoning and development on the basis that remediation action plan is followed.

2. Introduction

CSH Consulting Pty Ltd were engaged by IPG Invest Projects to carry out additional sampling of soils at the property at 407 Crookwell Rd, Kingsdale. The sampling is to support the Detailed Site Investigation Report (DSI reference No DSI2022-218 dated 24 November 2022) to support the rezoning and development application.

The objective of this report is to provide more detailed and definitive information to evaluate the likelihood of contamination on the land.

3. Scope of works

This report is written to supplement the Detailed Site Investigation Report (DSI2022-218-01) to satisfy the requirements from the Ordinary Council Meeting Agenda, 16.2 Planning proposal – zoning and minimum lot size amendment to 407 & 457 Crookwell Rd, Kingsdale, Recommendation point 4.a. dated 18 July 2023 (Appendix A).

This report covers the additional sampling of soils, the analysis results and conclusions and recommendations based on the site visit, analysis results and review of previous information in the DSI.

4. Sampling and analysis quality plan and sampling methodology

Soil samples were collected on 26/07/2023 with the sampling carried out in areas that were determined to be potential areas of concern and to evaluate the likelihood of contamination on the land. Sampling locations are shown in Figure 1 below.

Soils were collected using a stainless-steel shovel cleaned after every sample, and contained in virgin high strength plastic sample bags, 250 mL virgin glass jar with Teflon sealed screw caps. All samples were labelled at the time they were taken. Samples were immediately stored in cooled storage bins prior to being delivered to the environmental laboratory under strict Chain-of-Custody conditions.

The house, garage and sheds were not sampled as the buildings are still being occupied by the owners and will be surveyed and sampled as a pre-demolition survey as per the remedial action plan.

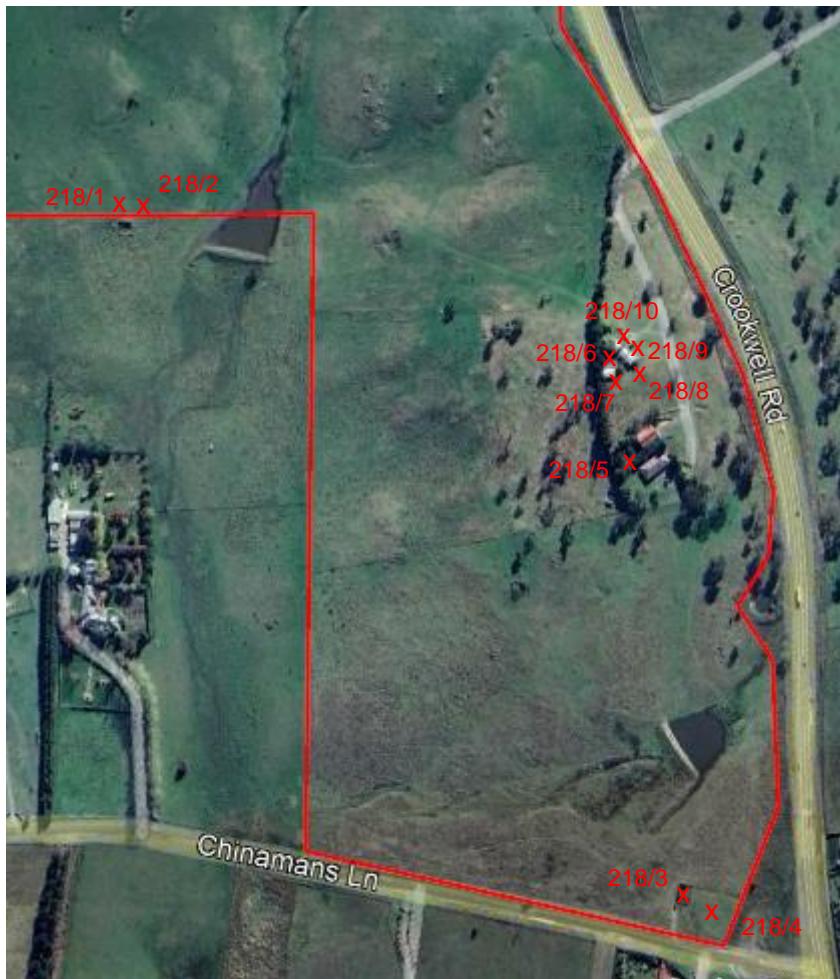

Figure 1: sampling locations

5. Results

The analysis results for the soil samples collected were compared to Health investigation levels (HIL), HIL A (residential); Health Screening Levels (HSL), HSL A & HSL B (Low – high density residential); and Ecological Investigation levels (EILs); set by NEPM; Specific contaminant concentration (SCC) and toxicity characteristics leaching procedure (TCLP) test values in *NSW EPA Waste Classification Guidelines Part 1: Classifying waste*; and the chemical concentrations stipulated in the *NSW EPA Excavated natural material order*.

Based on the analysis report No 329032 by Envirolab, all values reported are below the relevant criteria set by NEPM, meets the requirements for ENM as per the *NSW EPA Excavated natural material order* and can be classified as general solid waste (GSW) as determined by the *NSW EPA Waste Classification Guidelines Part 1: Classifying waste*.

A summary of results in comparison to the assessment/investigation criteria can be found in Appendix B. The Analysis results for Report No 329032 can be found in Appendix C.

Due to the information obtained from the PSI, DSI and age of the house, it is presumed the house contains asbestos and paint to contain lead.

6. Conclusions and recommendations

Based on the results from the chemical analysis of the soil samples collected from the various locations, as indicated in figure 1, on 407 Crookwell Rd, Kingsdale, there is a low risk to human and environmental health.

The two areas of concern identified in the DSI, the house and garage (PAEC01) and the sheds north of the house (PAEC06), and the potential contaminants area assumed to be present. Soil sampling around the sheds and house were completed, see figure 1 for sampling locations, and indicate there is low risk to human and environmental health.

Section 7 in the remediation action plan (reference No RAP2023-218, dated 7 March 2023) developed for the sampling, management of the demolition of house, garage and sheds and the removal of contaminated waste is to be followed to ensure the minimalization of contamination during the demolition process and the sampling to validate the areas are free from contaminants.

Overall, based on the analysis of the soil, reported values were below the relevant criteria and the likelihood of contamination of that land is low. As a result, the site is deemed suitable for rezoning and development on the basis that remediation action plan is followed.

8. Limitations

This investigation consisted of a visual survey of the site and sampling of soils in selected areas. The house, garage and sheds have not been surveyed as the survey will be completed as a pre-demolition survey.

Any person acting or relying on this report, in whole or in part, does so subject to the limitations expressed in this report and at their own risk.

All work is conducted in a conscientious and professional manner, with due diligence and appropriate care. However due to the disproportionate cost of potential damages or liability relative to the cost of our services, CSH Consulting Pty Ltd cannot offer any guarantee that all hazards have been identified. Liability to the client or any other party resulting from the performance or non-performance of the service, whether under contract law, tort law or otherwise, is limited by law.

CSH Consulting Pty Ltd reports are not to be reproduced or reviewed except in full. All reports are prepared for a particular client's objective, and therefore should not be used by any third party as a basis for future decision-making.

The Executive Summary must not be read in isolation, but should be read in conjunction with all sections of this report.

9.Council Meeting Agenda

16.2 PLANNING PROPOSAL - ZONING AND MINIMUM LOT SIZE AMENDMENT TO 407 & 457 CROOKWELL ROAD KINGSDALE

Author: Senior Strategic Planner
Director Planning & Environment

Authoriser: Marina Hollands, Acting Chief Executive Officer

Attachments: 1. Planning Proposal Form
2. Concept Subdivision Design
3. Urban and Fringe Housing Strategy Sooley Precinct

Reference to LSPS:	Planning Priority 4: Housing – Vision 2040 - A range and diversity in housing type, which is contextual and affordable and is primarily centred around Goulburn and Marulan.
Address:	Lot 70, 73 & 77 DP 1006688, 407 & 457 Crookwell Road Kingsdale

RECOMMENDATION

That:

1. The report from the Senior Strategic Planner regarding the proposed zoning and minimum lot size amendment to Goulburn Mulwaree Local Environmental Plan 2009 be received.
2. Council prepare a Planning Proposal to amend the Goulburn Mulwaree Local Environmental Plan 2009 to rezone Lot 70, 73 & 77 DP 1006688 from RU6 Transition to R5 Large Lot Residential, R2 Low Density Residential, part C2 Environmental Conservation and RE1 Public Recreation, and to amend the minimum lot size from 10 hectares to 700m² (for the proposed R2 zone), and 4,000m² and 2 hectares (for the proposed R5 zone), with the C2 and RE1 zone having no minimum lot size.
3. Council amend the Goulburn Mulwaree Local Environmental Plan 2009 to include Lot 70, 73 & 77 DP 1006688, 407 & 457 Crookwell Road Kingsdale as an Urban Release Area (URA).
4. The development proponent is required to submit to Council, the following additional information, prior to the Planning Proposal being submitted to the Department of Planning and Environment for a gateway determination:
 - a. An updated Detailed Site Investigation (DSI) that further considers and evaluates the likelihood of contamination on the land, and makes conclusions and recommendations as to whether or not the site is capable of accommodating future residential uses.
 - b. An amended Water Cycle Management Study to address the requirement for unserviced future Large Lot Residential zoned land as applicable.
 - c. An amended Traffic and Parking Assessment report to address the requirements of Transport for NSW.
 - d. An amended Strategic Bushfire Study to address the impacts of potential road alterations to reflect an updated concept plan for road/access and staging and limitation of reticulated water servicing to south of the High Pressure Gas Pipeline.
 - e. A revised concept layout and staging plan that addresses the concerns raised by Transport for NSW, relating to limiting new access points to Crookwell Road and providing internal road connections between this Planning Proposal and the Planning Proposal to the north (515 Crookwell Road, Kingsdale). The revised concept layout shall also incorporate revisions required because of the need to achieve compliance with Ministerial Directions relating to bushfire protection and water quality.
5. The Planning Proposal is to be forwarded to the NSW Department of Planning and

Environment for a gateway determination, with further community and government consultation undertaken in accordance with the directions of the gateway determination.

6. Council requests that the NSW Department of Planning and Environment make Council the delegated plan making authority for this Planning Proposal.
7. Council prepares a Precinct specific Chapter to the Goulburn Mulwaree Development Control Plan 2009 for the Sooley Precinct and place it on public exhibition with the Planning Proposal for a minimum of 28 days.
8. Council amends the Goulburn Mulwaree Development Control Plan (DCP) 2009 to include Urban Release Area (URA) provisions for the Sooley Precinct that address the relevant requirements of Part 6 of the Goulburn Mulwaree Local Environmental Plan (LEP) 2009.

Section 375A of the *Local Government Act 1993* requires General Managers to record which Councillors vote for and against each planning decision of the Council, and to make this information publicly available.

INTRODUCTION

This report considers a Planning Proposal for No's 407 & 457 Crookwell Road, Kingsdale, submitted to Council via the Planning Portal on the 2 March 2023. The Planning Portal reference is PP-2023-414 and Council's reference is REZ/0001/2223.

The Planning Proposal is seeking an amendment of the *Goulburn Mulwaree Local Environmental Plan (LEP) 2009* as follows:

- Rezoning part of the land identified within the Goulburn and Marulan *Urban Fringe Housing Strategy* (the Strategy) within the Sooley Precinct (the southern portion), from RU6 Transition to part R5 Large Lot Residential and R2 Low Density Residential; and
- Amendment to the Minimum Lot Size maps, from 10 hectares to part 3,500m² and 2 ha (for the proposed R5 zone) and 700m² (for the proposed R2 zone).

A copy of the submitted Planning Proposal document is in **Attachment 1**.

The subject site comprises three lots (Lots 70, 73 & 77 DP 1006688) with a total area of 52.9 hectares and is located on the corner of Chinaman's Lane and Crookwell Road, immediately north of the urban fringe. The land contains an established dwelling house and ancillary development at the Crookwell Road frontage. Most of the land is used for the grazing of livestock and contains ancillary buildings to cater for the agricultural use of the land. A copy of the aerial image of the site is shown below in **Figure 1**.

CERTIFICATE OF ANALYSIS 329032

Client Details

Client	CSH Consulting Pty Ltd
Attention	Kevin King
Address	3 Pass Ave, Thirroul, NSW, 2515

Sample Details

Your Reference	<u>218</u>
Number of Samples	10 Soil
Date samples received	27/07/2023
Date completed instructions received	27/07/2023

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.
 Samples were analysed as received from the client. Results relate specifically to the samples as received.
 Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Report Details

Date results requested by	28/07/2023
Date of Issue	28/07/2023
NATA Accreditation Number 2901. This document shall not be reproduced except in full.	
Accredited for compliance with ISO/IEC 17025 - Testing. Tests not covered by NATA are denoted with *

Method ID	Methodology Summary
ASB-001	Asbestos ID - Qualitative identification of asbestos in bulk samples using Polarised Light Microscopy and Dispersion Staining Techniques including Synthetic Mineral Fibre and Organic Fibre as per Australian Standard 4964-2004.
Inorg-001	pH - Measured using pH meter and electrode in accordance with APHA latest edition, 4500-H+. Please note that the results for water analyses are indicative only, as analysis outside of the APHA storage times.
Inorg-002	Conductivity and Salinity - measured using a conductivity cell at 25°C in accordance with APHA latest edition 2510 and Rayment & Lyons.
Inorg-004	Toxicity Characteristic Leaching Procedure (TCLP) using AS 4439 and USEPA 1311. Please note that the mass used may be scaled down from default based on sample mass available. Samples are stored at 2-6oC before and after leachate preparation.
Inorg-008	Moisture content determined by heating at 105+-5 °C for a minimum of 12 hours.
Inorg-080	This method is based on RTA T276 and as per NSW DECC Resource Recovery Exemption Guidelines. RTA T276 requires at least 6kg of sample for this test. Where foreign materials are found, more details may be available on the types and/or quantities in the Comments section of the report.
Metals-020	Determination of various metals by ICP-AES.
Metals-020	Determination of various metals by ICP-AES following buffer determination as per USEPA 1311 and hence AS 4439.3. Extraction Fluid 1 refers to the pH 5.0 buffer and Extraction Fluid 2 is the pH 2.9 buffer.
Metals-021	Determination of Mercury by Cold Vapour AAS.
Metals-021	Determination of Mercury by Cold Vapour AAS following buffer determination as per USEPA 1311 and hence AS 4439.3. Extraction Fluid 1 refers to the pH 5.0 buffer and Extraction Fluid 2 is the pH 2.9 buffer.
Org-020	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis.

Method ID	Methodology Summary
Org-020	<p>Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID.</p> <p>F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis.</p> <p>Note, the Total +ve TRH PQL is reflective of the lowest individual PQL and is therefore "Total +ve TRH" is simply a sum of the positive individual TRH fractions (>C10-C40).</p>
Org-021	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD.
Org-021	<p>Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD.</p> <p>Note, the Total +ve PCBs PQL is reflective of the lowest individual PQL and is therefore "Total +ve PCBs" is simply a sum of the positive individual PCBs.</p>
Org-022/025	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS/GC-MSMS.
Org-022/025	<p>Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-MS/GC-MSMS.</p> <p>Note, the Total +ve reported DDD+DDE+DDT PQL is reflective of the lowest individual PQL and is therefore simply a sum of the positive individually report DDD+DDE+DDT.</p>
Org-022/025	Leachates are extracted with Dichloromethane and analysed by GC-MS/GC-MSMS.
Org-022/025	<p>Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS and/or GC-MS/MS. Benzo(a)pyrene TEQ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater - 2013.</p> <p>For soil results:-</p> <ol style="list-style-type: none"> 1. 'EQ PQL' values are assuming all contributing PAHs reported as <PQL are actually at the PQL. This is the most conservative approach and can give false positive TEQs given that PAHs that contribute to the TEQ calculation may not be present. 2. 'EQ zero' values are assuming all contributing PAHs reported as <PQL are zero. This is the least conservative approach and is more susceptible to false negative TEQs when PAHs that contribute to the TEQ calculation are present but below PQL. 3. 'EQ half PQL' values are assuming all contributing PAHs reported as <PQL are half the stipulated PQL. Hence a mid-point between the most and least conservative approaches above. <p>Note, the Total +ve PAHs PQL is reflective of the lowest individual PQL and is therefore "Total +ve PAHs" is simply a sum of the positive individual PAHs.</p>
Org-023	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS.
Org-023	<p>Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater.</p>
Org-023	<p>Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater.</p> <p>Note, the Total +ve Xylene PQL is reflective of the lowest individual PQL and is therefore "Total +ve Xylenes" is simply a sum of the positive individual Xylenes.</p>

Result Definitions

NT	Not tested
NA	Test not required
INS	Insufficient sample for this test
PQL	Practical Quantitation Limit
<	Less than
>	Greater than
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
NS	Not specified
NEPM	National Environmental Protection Measure
NR	Not Reported

Quality Control Definitions

Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.
Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.	
The recommended maximums for analytes in urine are taken from "2018 TLVs and BEIs", as published by ACGIH (where available). Limit provided for Nickel is a precautionary guideline as per Position Paper prepared by AIOP Exposure Standards Committee, 2016.	
Guideline limits for Rinse Water Quality reported as per analytical requirements and specifications of AS 4187, Amdt 2 2019, Table 7.2	

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals (not SPOCAS); 60-140% for organics/SPOCAS (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Where matrix spike recoveries fall below the lower limit of the acceptance criteria (e.g. for non-labile or standard Organics <60%), positive result(s) in the parent sample will subsequently have a higher than typical estimated uncertainty (MU estimates supplied on request) and in these circumstances the sample result is likely biased significantly low.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Samples for Microbiological analysis (not Amoeba forms) received outside of the 2-8°C temperature range do not meet the ideal cooling conditions as stated in AS2031-2012.
