**RE: Catholic Healthcare Site, Croydon – Clarification with Regards to Validation  
of the Identified “Hot Spot” Affected Area  
CES120209-CHC-L030412**

Dear Kylie,

Further to the recent discussions between Consulting Earth Scientists Pty Ltd (CES) and Zoic Environmental Pty Ltd, we hereby provide the following clarification regarding Item 22 of CES letter referenced CES120209-CHC-L260312 dated 26 March 2012, regarding validation of the hot-spot affected area.

- Prior to bulk excavation of the soil in the vicinity of the identified hot spot, the area within a 10m diameter of TP3 will be excavated and the surface validated to confirm that the hot spot has been remediated in accordance with the site acceptance criteria. The hot spot excavated material will be sampled and tested to confirm classification as General Solid Waste.

We trust that the above clarifies this matter, if you require any further information, please contact the undersigned or Duncan Lowe.

For and on behalf of Consulting Earth Scientists Pty Ltd

**David Johnson**

Principal Environmental Scientist
