Dear Jeff

Re: 25 Martin Road Badgerys Creek - Revised Proposal - Full Enclosure

Wilkinson Murray conducted a Noise Impact Assessment (NIA) for the proposed Resource Recovery Facility at 25 Martin Road, Badgerys Creek (Wilkinson Murray Report No. 13351 Version B). The NIA addressed the Secretary's Environmental Assessment Requirements (SEARs) for the project, as was conducted in general accordance with the *NSW Industrial Noise Policy* (INP).

Following input from the NSW Environment Protection Authority (EPA) and the Joint Regional Planning Panel (JRPP), a revised project was developed, whereby the majority of site operations were to be enclosed by noise walls on northern, southern and western sides of the site. A revised NIA was prepared (Wilkinson Murray Letter PP04112015_Ltr_JW) and concluded that noise emissions from the revised site would comply with the established noise criteria at all receivers.

The design of the site has been refined further, and the part of the site previously proposed to be enclosed by sail cloth is now proposed to be enclosed, with metal cladding. The metal roof is to remain.

Operational noise impact from the latest design of the project would be within the range of impacts presented for the previous project design (per Wilkinson Murray Letter PP04112015_Ltr_JW) and therefore, noise emissions from the site would comply with the established noise criteria at all receivers.

I trust this information is sufficient. Please contact us if you have any further queries.

Yours faithfully

WILKINSON MURRAY

Nic Hall
Manager (Newcastle)
