Dear Ms Tasdarian,

**Re: Traffic Operational Plan of Management to support approval of development application for upgrades to Grima Environmental Services Resource Recovery Facility, 88 Redfern St, Wetherill Park (DA786.1-2016)**

Thank you for your advice received by our planner, Jackson Environment and Planning Pty Ltd in relation to our development application to upgrade our Resource Recovery Facility, located at 88 Redfern St, Wetherill Park (DA786.1-2016).

We understand that Council has assessed the updated Traffic Impact Assessment from our traffic engineer, Jacobs, to consider the traffic impacts associated with upgrades to our site which would limit the maximum tonnage of paper, cardboard and plastic film for baling to 75,000 tonnes per annum (report 'Final Rev 3 dated 19 January 2018).

It is further understood that advice from Council's traffic engineers is that the maximum number of vehicles accessing the facility under the proposed development shall be limited to the following as part of the Traffic Operational Plan of Management:

- A maximum of 64 trucks visiting the site per day;
- A maximum of 2 semi-trailers for loading baled material per hour; and
- A maximum of 7 medium rigid vehicles per hour during peak periods.

On this basis, I can confirm that our company will make a commitment to manage vehicles accessing our site post development within these limits, consistent with Section 3.2 of our Traffic Operational Plan of Management by Jacobs previously submitted to Council (report 'Final Rev 3 dated 19 January 2018).

I trust this now fulfils all requirements for Council to determine our development application.

If you have any questions, please contact Dr Mark Jackson, Jackson Environment and Planning on 02 8056 1849 or [mark@jacksonenvironment.com.au](mailto:mark@jacksonenvironment.com.au).

Your sincerely,

A handwritten signature in black ink, appearing to read 'C Grima', written over a thin horizontal line.
