29 October 2020

Central Coast Council

2 Hely Street

Wyong, NSW, 2259

Attention: Nathan Burr

Dear Nathan,

Re: Stage 6-7 Warnervale Town Centre Subdivision Development Application 919/2018 Additional Information

Following the meeting on the 6th October with the Hunter & Central Coast Regional Planning Panel please see information, reports and drawings to address the items raised.

- ***Details are required to demonstrate compliance with the provisions of State Environmental Planning Policy No 55 – Remediation of Land.***

Please see attached contamination report prepared by Coffey.

The land being the subject of the current DA is not affected by nor subject to any remediation work being undertaken to the north by Council.

The subject land complies with the provisions of State Environmental Planning Policy No 55 – Remediation of Land.

- ***Details are required to clearly depict the extent of cut and fill at the boundaries of the site and the boundary treatments/conditions.***

See attached the following drawings prepared by Northrop

- SKC100.20: Cut and Fill Plan
- SKC100.30: Section Sheet 01
- SKC100.31: Section Sheet 02
- SKC100.32: Section Sheet 03

Western boundary has been designed to tie into the neighbouring subdivision which is also being undertaken by Landcorp NSW Pty Ltd and is nearing completion. Road MC02 is to tie into the existing stub off Woongarrah Road

Northern Boundary that neighbours the remediated park land features a stacked sandstone retaining wall. The retaining wall is required in order to match the existing level of MC01 and not impact the remediated park land site. The balance of the northern boundary is to tie into existing or batter into stages 8-10.

Eastern Boundary has been designed to tie into existing levels

Southern Boundary has been designed to tie into existing levels

- ***The road designs are to comply with the minimum requirements for local roads in the Wyong Development Control Plan 2013.***

The roads have been designed in accordance with the Warnervale Town Centre Development Control Plan 2012 as advised by Council.

MC01 is consistent with the Warnervale DCP, Type 6, and is consistent with the approved Stage 5 subdivision.

MC02 is consistent with the existing stubb that has been constructed off Woongarah Road

MC03 (in part) is consistent with the Warnervale DCP, Type 11

MC03 (in part) & MC12 is consistent with the Warnervale DPC, Type 12

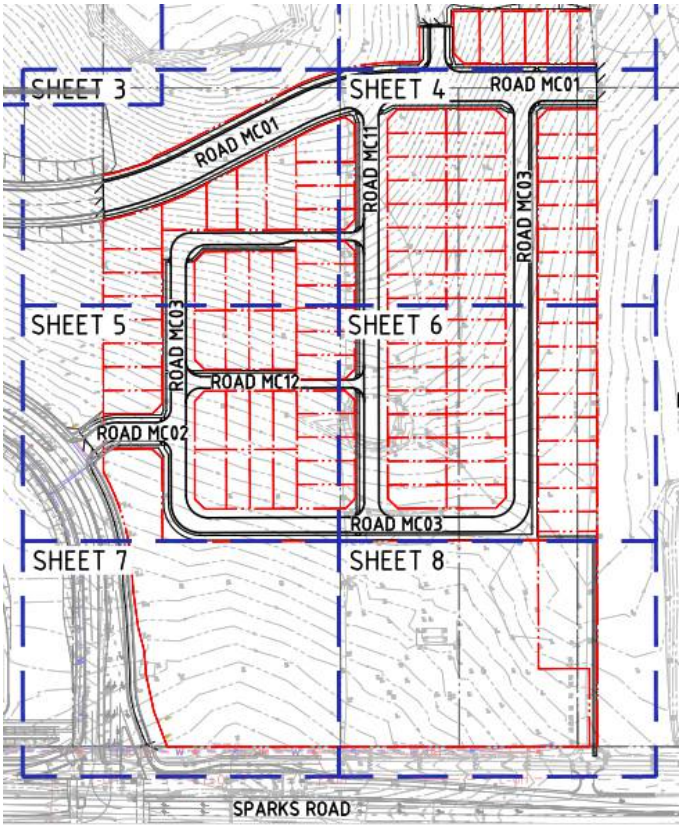
MC04 is consistent with the Warnervale DCP, Type 9

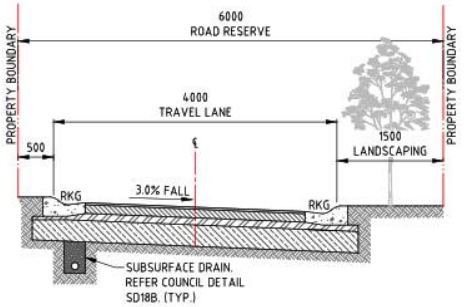
MC11 is consistent with the Warnervale DCP, Type 11

A very minor, but legally permissible variation to the DCP is proposed for the short one-way link roads between MC03 &12 and MC11, see cross section below.

This very minor variation has been provided to reduce traffic movements in this area to create a safer secluded residential zone ideal for young families. It has also been discussed to include 'residents only' signage at the intersection of MC02 and MC03 to further reduce traffic movements in this area. It also provides some variety in road design, creates a safer traffic flow, and reduces ambient noise. It enhances services facilitation, and is a much more intelligent and efficient design all round.

See also attached report prepared by Traffix that concludes the 4m wide one-way carriageways are considered supportable and appropriate from a traffic engineering perspective and is consistent with "access place" requirements outlined in the AMCORD Guidelines.





TYPICAL SECTION
ROAD MC03, CH585 – CH615 AND ROAD MC12, CH60 – CH90
(4m CARRIAGEWAY)

- **Details are required in relation to the relationship of the development to the adjoining school. Consideration to be given to larger lots and boundary treatments to reduce the potential impacts on the school associated with the future residential development on the site.**

The Site subject to this Development Application (DA) is known as Lot 1 DP 371647, Lot 1 DP 375712, Lot 1 DP 376264, Lot 41 DP 1200210, Lot 51 and 52 DP 561032 and Lot 54 and 55 DP 7527.

The applicant's eastern boundary adjoining the school (the "Boundary") runs essentially in a north-south direction, commencing at Sparks Road and running due north for approximately 335m.

The first 135m of the Boundary from Sparks Road has 3 all-weather concrete basketball courts and open playing fields with a wood vegetation zone contained immediately east of the Boundary and situated on the school land.

The vegetation zone comprises of essentially well-established mature trees and bushes up to 25 metres wide.

That wide vegetation zone provides both an acoustic and visual barrier from stage 6 across the Boundary to the school playing fields and basketball courts.

The remaining 200m northern section of the Boundary is lined, on the school side of that boundary, with a series of buildings situated on the school grounds, located 0m-8.5m from the Boundary (other than 1 specific point where there is a slight curvature away from the buildings). It is notable however that the aforesaid vegetation zone continues along the northern boundary so as to continue to create an acoustic and visual barrier , which ends abruptly where the rear (or western) walls of the buildings are situated.

It is critical to bear in mind that the first 109.5m of stages 6-7 will remain undeveloped, for the purposes of this application, comprise of a large residual lot only which is not the subject of any separate residential subdivision application or building application currently before the council or the HRCCPP.

Accordingly, for the first 109.5m of the Boundary, there is no activity and no construction plan (other than a retention basin without any structures thereon) on that parcel of land which adjoins a screened-off school play area on the other side of the wide vegetation barrier situated on the Boundary. The proposed residential lots will have rear lapped and capped timber fencing (imposed on the individual resultant lots via the s88B instrument) and immediately across the Boundary there are only rear walls of buildings and a further vegetation zone with mature established trees, bushes and plants.

Accordingly, with no activity possibly interacting with, or impacting upon, the school's adjacent playing fields, the existence of the significant vegetation corridor on the school's western boundary, and the existence of substantial buildings along most of the northern part of the Boundary, all clearly result in there being no impact or no impact of any concern, of the proposed subdivision on the adjoining school land to the east of the proposed subdivision.

We believe the above addresses the items discussed on the 6th October and would appreciate your prompt review and approval of DA919/2018

Yours faithfully

Colliers International Project Management Pty Ltd

Scott Kneller

Senior Project Manager

Re: **99-107 Sparks Road, Woongarrah**
Proposed Residential Subdivision
Supporting Statement

Dear Scott,

We refer to the subject DA for the proposed residential subdivision located at 99-107 Sparks Road, Woongarrah. TRAFFIX has been engaged to prepare advice regarding the proposed one-way roadways that connect MC03 and MC12 with MC11.

Proposal

The current subdivision layout proposes to include two (2) one-way sections of road that connect MC03 and MC12 with MC11 as shown in the attached plan presented in **Attachment 1**. The proposed one-way sections of road will permit one-way traffic movements in the eastbound direction and will provide convenient vehicle movements without the need to provide conventional turning heads/cul-de-sacs. A summary of the key geometric aspects is provided below:

- 6.0m wide road reserve;
- 4.0m wide travel lane, measured kerb face to kerb face;
- Roll type kerbs;
- 3% nominal crossfall; and
- 1.5m landscape verge on one side only.

It is noted that the proposal is a minor departure from the Warnervale Town Centre DCP 2012 in terms of road alignment and cross section geometry. Discussion on the traffic implications are discussed in detail below.

Geometric Layout

The 4.0m wide one-way carriageways are considered acceptable from a vehicle movement perspective and is consistent with "access place" requirements outlined in the AMCORD Guidelines. To provide context, the AMCORD Guideline provides the following definition for "access places":

"The access place is a street in which the residential environment is dominant, and traffic is completely subservient. The access place will generally be accessible only by one entry and exit point (such as for cul-de-sac). The low speed environment of the access place (desirably below 15 km/h) allows pedestrians and cyclists to share the carriageway and permits a reduction in carriageway and verge widths with subsequent savings in development costs."

According to AMCORD Guidelines, "access places" should have a carriageway width of 3.5-3.7m. The proposed 4.0m carriageway width meets this requirement and should accommodate general and commercial vehicle movements satisfactorily.

It is noted that no pedestrian footpath is provided along the one-way sections of road. This is considered acceptable, noting the limited number of vehicle/pedestrian movements expected and the low speed environment of "access places". Furthermore, the roadways have a straight alignment, further increasing sight distances along the roadway.

The roll kerbs and the nominal 3% crossfall is also consistent with road design principles. It should be noted that vehicle sight distances at the intersection of one-way roads and MC11 are to be verified by the civil engineer taking into consideration the proposed horizontal/vertical alignments and Austroad requirements.

Traffic Impacts

The proposed one-way connecting roadways will provide improved connectivity to the area in general and will provide residents alternative travel routes. It is expected that traffic generated by the residential lots along MC03 and MC12 will be better distributed across the local road network in comparison to a typical turning head/dead-end road arrangement. It is recommended that appropriate traffic signage/line marking be installed (can be suitably conditioned) to clearly advise drivers of the localised one-way traffic conditions.

Conclusion

On the basis of the above, the proposed one-way sections of roadway that connect MC03 and MC12 with MC11 are considered supportable from a traffic engineering perspective.

We trust the above is of assistance and request that you contact the undersigned should you have any queries or require any further information. In the event that any concerns remain, we request an opportunity to discuss these with Council officers prior to any determination being made.

Yours faithfully,

Traffix

Ben Liddell
Senior Engineer

Executive Summary

Colliers International Project Management (Colliers) engaged Coffey Services Australia Pty Ltd (Coffey) to carry out a Preliminary Contamination Assessment (PCA) for Stages 6-10 of the proposed Warnervale Town Centre development located at 111 Sparks Road, Woongarrah NSW. The proposed residential sub-division is positioned within land parcels Lot, 1 DP 376264, Lot 41 DP 1200210, Lot 51 DP 561032, Lot 52 DP 561032, Lot 54 DP7527 and Lot 55 DP7527.

The objectives of the PCA were to:

- Identify evidence of potentially contaminating activities that may be currently occurring or has historically occurred on the site;
- Identify and assess Areas of Environmental Concern (AEC's) and Chemicals of Potential Concern (COPC's) for the site, and develop a preliminary conceptual site model if required; and
- Provide recommendations for further assessment and or management, as required.

A review of historical aerial photographs for the site indicated that portions of the site had previously been used for quarrying activities along with rural residential occupancy. Significant areas of the Site have been and remain uncleared forest with dense tree and grass coverage. Rural residential dwellings were observed in the south-eastern portion of the site constructed sometime between 1965 and 1976. The rural residential buildings were demolished during the period 1996 - 2004.

The desk study and site history review also showed:

- The site was not listed on the NSW EPA Contaminated Land Register or POEO public register.
- The risk associated with nearby properties identified on the NSW EPA Contaminated Land Register or POEO public register was considered to be low.
- The site was not identified within an area of potential acid sulfate soils.
- The following areas of environmental concern were identified;
    - Illegal dumping activities across the Site and proximity to a former quarry/landfill site (across Lot 1 DP376264 and Lot 54 DP7527;
    - Weathering of potential hazardous building materials from former building structures; and
    - Potential landfill gas impact from the landfill/quarry located adjacent to the north west boundary of the site.

The site history investigation undertaken for the site has identified known or possible historical contaminating activities at or near the site. These include the quarry/landfilling operation located approximately in the centre of the proposed development, extending to the north-western boundary, potential illegal dumping and importation of fill of unknown origin onto site, weathering of hazardous building materials surrounding former residence footprint and small-scale pesticide application.

No significant subsurface fill contamination has been identified in samples collected from areas of the Site slated for future redevelopment into sub-divided Lots. Some exceedances of the lead SAC were identified historically in samples collected from the portion of the site to be retained as a riparian corridor.

Fragments of bonded asbestos were identified in various locations during the site walkover. None of the fill samples taken during this current assessment and in the samples collected historically from areas of the Site not associated with the former quarry/landfill, have shown the presence of asbestos. Future excavation works including bulk earthworks for site levelling and the installation of services should be guided by an Unexpected Finds Protocol (UFP) and Asbestos Management Plan (AMP) included as part of the Construction Environmental Management Plan (CEMP).

Landfill gases have been confirmed within the soils associated with the former quarry/landfill, an area which is currently undergoing remediation (capping and the installation of landfill gas mitigation measures). The potential for lateral migration of landfill gas following the completion of capping should be assessed either by Council, (given their retention of the former quarry/landfill) or by the

developer, to obtain assurance that the Lots to be developed in proximity to the former quarry/landfill boundary will not be impacted. The assessment should take the form of landfill gas monitoring bores placed along the boundary in proximity to the proposed Lots followed by a medium term (one year minimum) period of monitoring.

1. Introduction

1.1. General

Coffey Services Australia Pty Ltd (Coffey) was engaged by Colliers International Project Management (Colliers) to carry out a Preliminary Contamination Assessment (PCA) of the proposed Stages 6 – 10 of the Warnervale Town Centre (WTC) development located at 111 Sparks Road Woongarrah, NSW. The proposed WTC development includes the construction of 280 residential dwellings with internal roads and access roads (referred to as the 'site' in this report).

This report addresses the preliminary contamination assessment portion of the scope of work outlined in our proposal dated 13 August 2018 (754-NTLGE216908AC.Rev1 – Fee Proposal for Preliminary Lot Classification at 111 Sparks Road, Warnervale). The works proposed covered for Lot 1 DP371647, Lot 1 DP 375712, Lot 1 DP 376264, Lot 41 DP 1200210, Lots 54 and 55 DP 7527 and Lots 51 and 52 DP 561032, Sparks Road and Hakone Road, Woongarrah.

For the purpose of this report, the client provided the following construction plans and drawings:

- 'Plan of Subdivision of Lot 32, DP1198972 – Stage 5, 113 Sparks Road Woongarah, Rev G dated 14-5-2018'
- 'Plan of proposed subdivision of lot 1 DP 371647, Lot 1 DP 375712, Lot 41 DP 1200210, lot 54 & 55 DP 7527& Lots 51 & 52 DP 561032 Sparks Road and Hakone Road, Woongarrah, Rev 1 dated 31-07-2018'
- 'Drawing Schedule and Locality Plan, Warnervale Town Centre Stage 5 Residential Precinct, Rev 1 dated 09-05-2018'

This report was prepared in accordance with the relevant sections of Chapter 3 in Schedule B2, Guideline of Site Characterisation, in the National Environment Protection (Assessment of Site Contamination) Measure 1999 (2013) (NEPM 1999 (2013)). The scope of this PCA is in accordance with State Planning Policy 55 – Remediation of Land (SEPP 55).

1.2. Objectives

The objectives of the PCA were to:

- Identify evidence of potentially contaminating activities that may be currently occurring or has historically occurred on the site;
- Identify and assess Areas of Environmental Concern (AEC's) and Chemicals of Potential Concern (COPC's) for the site, and develop a preliminary conceptual site model if required; and
- Provide recommendations for further assessment and or management, as required.

1.3. Scope of works

To achieve the above objectives, the following scope of works were undertaken:

- A desk study historical review of past activities at the site with the potential to cause contamination, including:
    - Review of previous reports on this site or adjacent sites;
    - Review of published information and readily available information held in file by Coffey related to soils, geology and hydrogeology;
    - A review of previous site ownership (land titles search) for the lots comprising the site;
    - A review of selected readily available historical aerial photography imagery over the past 53 years;

- A review of the Section 10.7 Planning Certificates held by Council for the lots comprising the site;
- A review of NSW Environment Protection Authority (EPA) notices under the Contaminated Land Management Act (1997) and a search of NSW Office of Water for records for nearby registered groundwater bores; and
- Review and collation of the above information and identification of potential AECs and COPCs for the site

A site walkover to help identify AECs and potential COCs;

- Collection of twelve (12) samples for assessment of fill quality (contamination parameters) and comparison with historical data; and
- Preparation of this report.

1.4. Data Quality Objective Process

The decision that is required to be made is:

- Does soil contamination or areas of environmental concern exist on or in close proximity to the Site that requires management or remediation for the Site to be considered suitable for the intended land use?

As stated in Section 4 of the *Guidelines for the NSW Site Auditor Scheme 3rd ed.* (NSW EPA, 2017) and ASC NEPM (2013) *Schedule B2 Appendix B*, the Data Quality Objective Process (DQO) process is used to "define the type, quantity and quality of data needed to support decisions relating to the environmental condition of a site".

The DQO process adopted for this assessment is provided in Table 1-1 below:

Table 1-1 - DQO Process

DQO	Relevant Report Section
1. State the Problem	Section 1 Introduction
2. Identify the Decision	Section 1 Introduction
3. Identify Inputs to the Decision	Section 2, Site Description and Section 3, Review of Previous Investigations.
4. Define the Study Boundaries	Section 2.1, Site Location and Identification; Figure 2
5. Develop a Decision Rule	Section 6.2, Investigation Levels
6. Specify Limits on Decision Errors	Section **Error! Reference source not found.**, **Error! Reference source not found.**
7. Optimise the Design for obtaining Data	Section 6.1, Scope of works - 2018

2. Site Description

2.1. Site Location and Identification

Table 2-1 - Site Details

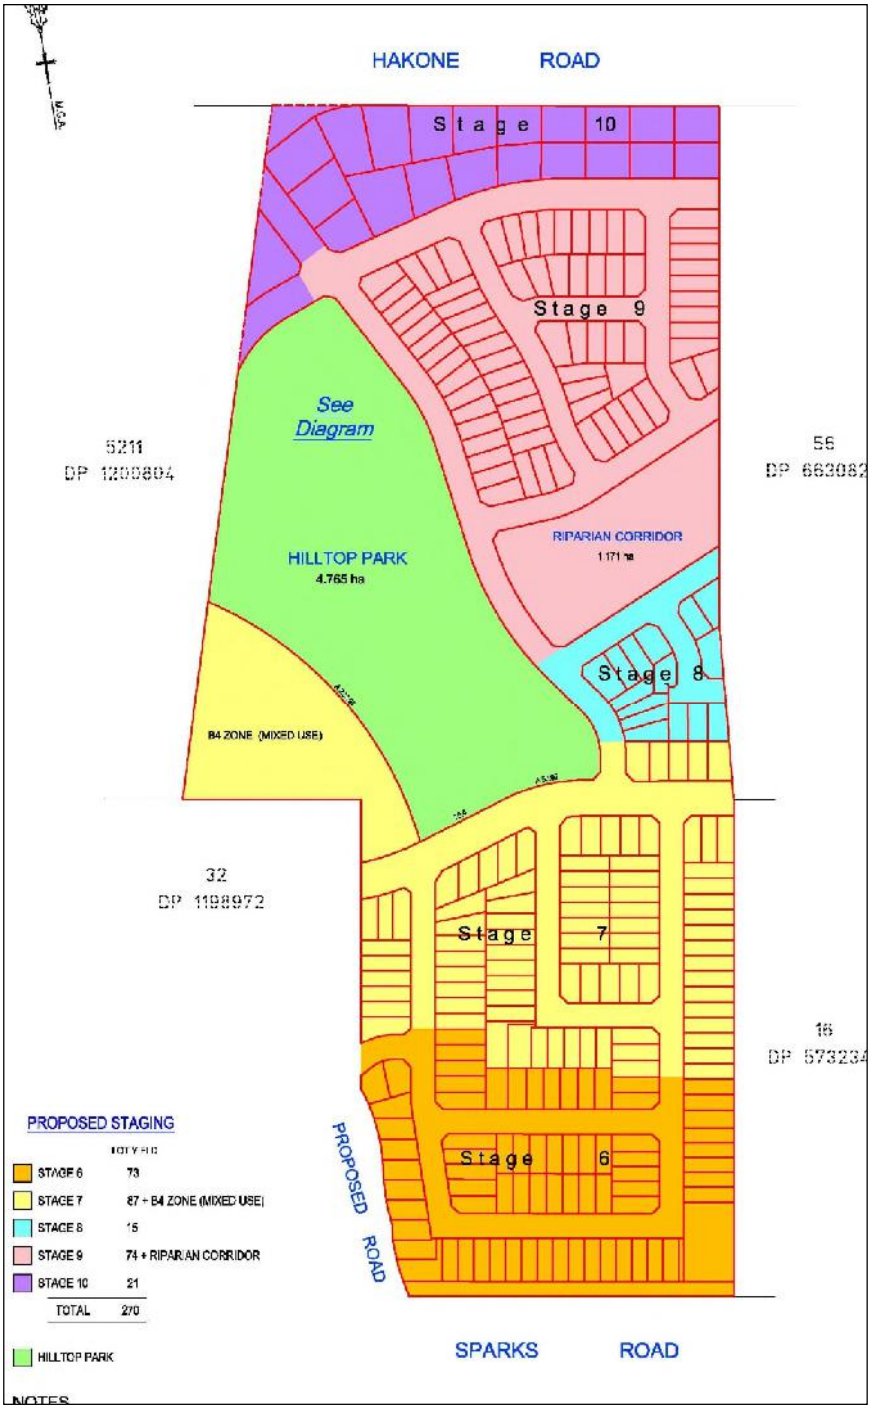
Site Address	111 - 113 Sparks Road, Woongarrah NSW
Approximate Site Area	27.6 Hectares
Title Identification Details	• Lot, 1 DP 376264; • Lot 41 DP 1200210; • Lot 51 DP 561032; • Lot 52 DP 561032; • Lot 54 DP7527 & • Lot 55 DP7527[1].
Current Land Zoning	Per the Section 10.7 Report from the Central Coast Council (CCC) the site is zoned as: • Local Centre (B2); • Mixed Use (B4); • Public Recreation (RE1); • General Residential (R1); • Environmental Conservation (E2); • Environmental Management (E3);
Current Land use	The site is currently vacant and covered by extensive native forest and vegetation. Civil remediation works are ongoing within the former quarry/landfill footprint (which will be retained and managed by Council).
Previous Land use	Parts of the site were historically used as a quarry/landfill (Lot 1 DP376264 and Lot 54 DP7527[2]) and rural residential, with the remainder of the site being vacant eucalypt forest (Mature trees/grass) and vegetation.
Proposed Land use	Proposed Warnervale Town Centre (mixed residential, commercial and open space). Coffey Services Pty Ltd understands that the former landfill is proposed to be developed as Hilltop Park by Council, which will predominately comprise open space being mostly grassed areas, with children's playground, BBQ shelters, concrete pathways and access roads. Final design specifications are yet to be confirmed. Evidence of quarrying activities were identified in the historical imagery. These areas have since been covered by vegetation.
Adjoining Site Uses	• North – Hakone Road, rural-residential properties; • South – Stages (1–4) Warnervale Town Centre, Sparks Road; • East – Vacant bushland, Mackillop Catholic College; • West – Great Northern Railway corridor, rural-residential properties.
Site Coordinates	The centre of the site is located approximately at -33.239252, 151.464647

[1] Lots 54 and 55 DP7527 are not slated for future development and will form part of a retained riparian corridor.
[2] The former quarry/landfill will be retained and managed by Council following the completion of the ongoing remediation and will be repurposed into a public park (Hilltop Park).

2.2. Investigation Area

The layout of the proposed development is shown in Figure 2-1. The investigation area included Stages 6 – 10 as labelled and excluded the proposed Hilltop Park and Riparian Corridor areas, which will be retained and managed by Council.

Figure 2-1- Layout of Proposed Development



2.1. Geology and Soils

Reference to the 1:100,000 scale Gosford-Lake Macquarie Geology Map indicates that the site is underlain by rocks and soils derived from the Narrabeen Formation and Tuggerah Subgroup comprising of laminate, claystone, siltstone and sandstone (Rnu). These rock types generally weather to sandy clayey soils.

2.2. Acid Sulfate Soils

Reference to the Wyong 1:25,000 Acid Sulfate Soil Risk Map indicates that the site is located in an area of no known occurrence of Acid Sulfate soils (ASS).

2.3. Hydrogeology

2.3.1. Groundwater

Groundwater is expected to be present within the sandstone bedrock formation and is likely to flow radially from the top of the ridgeline down parallel to the site surface. Groundwater is expected to follow the general slope of the region discharging at both Woongarrah Creek, located approximately 3km north-east of the site and Porters Creek located approximately 5km to the south-west of the site.

Perched groundwater within the former quarry/landfill area was encountered in previous investigations between approximately 1m and 3m below the ground surface (bgs). There is likely to be some vertical flow down from the perched groundwater to the regional groundwater as the landfill is unlined.

A search of the NSW Office of Water for registered groundwater bores located within a 500 m radius of the site was undertaken. The search revealed that there are nine (9) known groundwater bores registered within this radius. The details of the registered bores are summaries below in Table 2-2. A copy of the groundwater bore search is shown in Appendix E.

Table 2-2 - Summary of Groundwater Bore Data

Bore ID	Status	Purpose	Approximate Distance from Site
GW200674	Active	Monitoring Bore	250 m north
GW200673	Active	Monitoring Bore	80m North
GW200675	Active	Monitoring Bore	100m North
GW200672	Active	Monitoring Bore	80m North
GW200676	Active	Monitoring Bore	100m North
GW200677	Active	Monitoring Bore	150m North
GW200679	Active	Monitoring Bore	150m North
GW200671	Active	Monitoring Bore	200m North
GW200678	Active	Monitoring Bore	250m North

2.3.2. Surface water and drainage

Rain falling on the site is expected to infiltrate into the site soils. Excess surface water run-off is considered to follow the local topography and discharge into Woongarrah Creek located 3km to the north-east of site. Surface water is expected to also discharge in a southern direction from the top of the ridgeline and flow into the municipal stormwater system located south of the site along Sparks Road. Water collected in the stormwater drain is likely to discharge into an unnamed creek approximately 250m south of the site.

3. Review of Previous Investigations

Coffey Services Pty Ltd have previously been engaged by Wyong Shire Council to undertake environmental and geotechnical investigations on adjacent land parcels in 2008 and 2013. A contamination assessment of surrounding land parcels was further provided for Bannister and Hunter Pty Ltd in 2011. These investigations were undertaken for the proposed Warnervale Town Centre development.

3.1. Stage 2 Environmental Site Assessment 2008 (Coffey Geotechnics Pty Ltd)

A Stage 2 ESA was undertaken by Coffey Geotechnics Pty Ltd in 2008 (ref: GEOTKARI02021AA-AL). The investigation was undertaken in the former landfill/quarry footprint (Figure 3).

The scope of work of the Stage 2 ESA included:

- A desktop review of the previous environmental site assessments undertaken;
- Preparation of a Sampling and Analysis Quality Plan (SAQO) to be submitted for approval by the NSW EPA Accredited Project Auditor; and
- A Stage 2 Environmental Site Assessment (ESA) across the nominated areas including:
  - Excavation of test pits and drilling of hand augers and boreholes;
  - Installation of monitoring wells and a round of groundwater sampling;
  - Collection of targeted surface (track and gully) and stockpile soil samples;
  - Collection of discrete surface soil samples to make up 29 composites;
  - Collection of dam water samples;
  - A round of landfill gas monitoring; and
  - Laboratory soil and groundwater analyses.

The investigation included a combination of boreholes, test pits, hand augers, installation of monitoring wells and landfill gas monitoring with the following site observations, conclusions and recommendations provided below:

The following site observations were made during the site walkover undertaken in GEOKARI02021AA-AI (Stage 2 ESA. 2008) with commentary including observations made during the 2017 PCA walkover:

- A disturbed cleared area was observed to the north-western section of the site, along the ridgeline associated with the former quarry/landfill. The area was in the process of being remediated at the time of the site walkover in 2017;
- Relatively undisturbed bushland in the northern, north-eastern, eastern, and south-western portions of the Site along the former quarry margins;
- A partly disturbed and cleared area in the southern portion associated with former rural-residential dwellings.
- A single dirt and gravel/bitumen track cutting diagonally from Hakone Road South through to the top of the ridgeline (former landfill). Isolated piles of illegally dumped waste materials were observed along this track and up to the northern edge of the former landfill.

The following description of the former quarry/landfill was obtained from the Stage 2 ESA, 2008.

"The former quarry/landfill is located on Lot 1 DP376264 and Lot 54 DP7527. This portion of the investigation area is located on the crest of the ridgeline. Surface slopes are irregular, being relatively flat on the filled landfill portion, with steeper embankments (up to 27°) on fill margins. Surface slopes are to the east, south-east, south and south-west around the perimeter of the former landfill.

The former landfill can be divided into two portions. A higher relatively level bench area at RL 53mAHD in the southern and western portion, and a lower more irregular portion at RL 51m-53mAHD in the northern and north-eastern portion. These areas are delineated by a fill embankment that is aligned north-west through the landfill. In the north-eastern portion of the landfill the groundsurface drops down a series of steep embankments to the natural ground surface at RL 48mAHD. A small drainage culvert is located in this area including concrete pipe, and seep water from the base of the landfill was observed to be draining down through the culvert to a natural gully. A small, previously unidentified dam is located in that area (adjacent to EBH 15/MW3).

A dirt, gravel and bitumen access track cuts up to the former quarry/landfill from the north-east, and runs along the southern edge of the area. Numerous piles of domestic and demolition rubble were observed to be present along the southern edge of the access track in the irregular northern portion of the landfill. These include fibro-cement sheeting, steel, G.I., plastic, concrete, wood and trees. Weed vegetation is growing in this area including bananas and coral trees. Some concrete pipes are present along the remainder of the margins of the access track as it passes through the former landfill, and more illegal dumping of rubbish has occurred on the access track just to the south of the former landfill on the boundary between Lot 54 DP7527 and Lot 51 DP561032."

It is important to note that the former quarry/landfill does not form part of the Site (2017 PCA) and the proposed development. The former quarry/landfill remains an area of environmental concern given its proximity to lots proposed to the northeast, southeast and south and the potential for lateral methane gas migration following the completion of capping remediation works.

The following description of the former rural/residential area was obtained from the Stage 2 ESA, 2008.

"The former rural-residential area is located on Lots 51 and 52 DP 561032. A farm dam is located in the centre of Lot 51 along its western boundary. Except for a concrete slab on Lot 52 and remnant introduced vegetation, no remnant structures of the former buildings remain. Some benching of the groundsurface was observed downslope of the dam.

Lot 51 is mainly cleared, especially in the southern portion, and on the southern portion of Lot 52 is cleared, the remained is forested.

A dirt access track (Lot 1 DP375712 and Lot 1 SP371647) is present along the eastern margin of Lot 52, servicing the adjacent school and a residential development. This track peters out in the forested southern portion of Lot 55. No significant dumping of rubbish was observed along the margins of the track, but occasional piles of domestic refuse were observed.

A dirt access track is present between Lot 4[3] and Lot 51, and joins up with the ring track along the southern edge of the former quarry/landfill. Significant numbers of stockpiles (including additional piles placed during the period of the investigation) were observed in this area. The stockpiles mainly consisted of demolition and building waste and minor domestic refuse. Fibro cement sheeting and guttering was also observed."

The conclusions of the Stage 2 ESA, 2008 were as follows:

- Groundwater contamination, within former quarry/landfill footprint, was identified;
- It was observed that multiple points of access to the site were available, and illegal dumping of rubbish, including fibro cement sheeting was ongoing. Coffey recommended that the entire investigation area be secured to prevent further dumping and contamination of the surface of the area;
- A limited asbestos investigation was undertaken with impacts identified within fill material of the former quarry/landfill area, within illegally imported stockpile waste and on the surface of adjacent soils;

[3] Lot 4 DP77738 does not form part of the current investigation.

- Minor heavy metal impacts were identified across the site, generally adjacent to former structures or runoff; and
- Methane was recorded in air space above the standing water level in the monitoring wells, at concentrations greater than NSW EPA Guideline, in the upper flat southern portion of the former quarry/landfill. No monitoring wells were installed in the north-western portion of the former landfill. Given the concentrations of methane recorded, an explosion risk was present in gases extracted from some of the monitoring wells, and confined space entry asphyxiation risks were present by replacement or dilution of oxygen. Inhalation risks for methane were low.

Coffey provided the following recommendations

- The preparation of a Remedial Action Plan (RAP) to explore the appropriate remedial options for the identified dumped rubbish, subsurface impacts within the landfill, and surface impacts in the adjacent land parcels;
- Additional investigation to be undertaken to assess the extent of landfill gas generation across the surface of the landfill and surrounding areas. A plan of management was recommended to manage methane impacts which may include recommendations for capping and methane collection systems;
- The extent of asbestos impact could not be assessed with only limited data collected. Further investigations for asbestos were recommended.

Coffey concluded that the site (landfill/quarry), in its current condition, was not suitable for the proposed land uses (mixed, commercial, open-space and residential) without further investigation.

3.2. Asbestos Validation Report Warnervale Town Centre, Warnervale NSW 2013 (Coffey Environments Pty Ltd)

Coffey Environments Australia Pty Ltd (Coffey) was commissioned by Wyong Shire Council (Council) to undertake asbestos validation works in areas outside the former landfill at the proposed Warnervale Town Centre site. Coffey understands that Asbestos Containing Materials (ACM) were identified on the site in previous investigations undertaken by Coffey and others.

The objective of the works was to validate the areas outside the landfill previously impacted with ACM (in both areas where ACM was identified and removed by EMS, and areas not addressed previously by EMS). In order to meet the objective, Coffey undertook a review of the previous investigations undertaken at the site, a site walkover in the areas where asbestos impacts were previously observed, sampling of surface soils and ACM, laboratory analysis of samples and preparation of a validation report (Coffey Ref: ENAURHOD04424AA-R03b, May 2013)

Based on the review of previous assessments, 48 locations were identified outside the former landfill as being previously impacted with asbestos. A further two locations were identified during the current site investigations. Surface soil samples were collected from each location. Asbestos fragments were also collected at eight of these locations.

The area under discussion within the validation report included the area being assessed in the current Stage 6-10 PCA.

In order to meet the objectives of the assessment, the following works were carried out:

- Review previous investigations undertaken at the site;
- Site walkover in areas where asbestos impacts were previously observed;
- Sampling and laboratory analysis of surface soils and ACM;
- Preparation of an asbestos validation report.

The findings of the validation report were summarised as follows:

"Based on the results of this investigation, asbestos was identified to be present in eight fibre cement fragments observed to be present at eight locations on the site, including six locations where

asbestos containing materials were previously observed and remediated by EMS and two new locations observed during the current fieldwork. The fragments of ACM were sent to the laboratory following fieldwork and hence had been removed from the site. The likely source of these ACM fragments is historical illegal dumping. No evidence of new illegal dumping was observed during site work. Therefore, it is considered that there is a low likelihood of ACM fragments being present at depth in the areas outside of the former landfill. Evidence of surface soil scraping was present in the locations already remediated by EMS. However, ACM fragments were still encountered at some locations remediated by EMS. It is considered that the presence of ACM fragments at these locations was likely due to the nature of asbestos contamination, which could migrate laterally or vertically following soil erosion or rain events (not through new dumping given the randomness and scattering distribution encountered and no presence of new stockpiles observed).

Asbestos was not detected in any of the surface soil samples collected from the locations where asbestos was previously identified and removed by EMS, where asbestos was previously identified by Coffey Geotechnics, and beneath ACM fragments observed in the current fieldwork. Based on this, it is considered that remediation of soil due to fibrous asbestos is not required.

Based on the findings of the validation activities, it is considered that ACM had been remediated at the time of the field investigation at the following locations outside the former landfill at the site:

- *Locations where asbestos containing materials were identified and removed by EMS; and*
- *Locations at the site not identified/addressed by EMS for possible asbestos contamination.*

While the ACM fragments encountered on surface soil during the fieldwork had been removed during sampling, the potential of as yet identified fragments of ACM could be present at the surface soil could not be precluded, due mainly to the size of the site, random nature of the asbestos disposal at the site and the presence of dense vegetation at some locations. It is anticipated that during development the majority of site surface will be scraped to allow for development and this will remove any ACM fragments (if any). Based on this, it is considered that the site will be suitable for the proposed landuses following implementation of an unexpected finds protocol (UFP) during the construction work that outlines procedures and protocols for observation and management of unexpected potential contamination including but not limited to potential ACM.

In areas that will not be developed (such as in zonings E2 Environmental Conservation and E3 Environmental Management, it is considered possible that ACM fragments be encountered in the future. It is recommended that emu walk event(s) be conducted in the undeveloped area following development. Based on the findings of the emu walk event(s), management of asbestos in this area can be decided. "

3.3. Remedial Action Plan – Remediation/management of asbestos and landfill gas at the proposed Warnervale Town Centre, Warnervale NSW 2013 (Coffey Environments Pty Ltd)

A Remedial Action Plan was prepared by Coffey Environments Pty Ltd in 2013 outlining the remediation and management of asbestos and landfill gas within the former landfill (ref: ENAURHOD04424AA).

The overall objective of the project at the time was to render the site suitable for the proposed land uses as per the Wyong LEP 1991 and the Warnervale Town Centre DCP 2012 and Wyong Draft LEP 2012 for the Warnervale Town Centre development. Further objectives of the RAP were also to outline a plan of management for asbestos and landfill gas at the site and prepare a validation report.

To achieve the objectives of the RAP the following activities were completed:

- Review of available historical environmental investigation reports and correspondence;

- Selection of appropriate preferred remediation and/or management method from available remediation options;
- Outline of the procedures for the preferred remediation and/or management method;
- Outline of the procedures for validation, site control and occupational health and safety, as required for the remediation and/or management works;
- Review of the environmental measures to be undertaken during the remedial works to protect the health and safety of the general public and workers and the environment;
- Development of validation criteria and scope of additional works; and
- Preparation of the RAP.

The Coffey RAP identified the following for the asbestos on the site:

- Asbestos was observed within the former landfill footprint during previous investigations within the 2010 Site Audit. No further investigation within the former landfill footprint was undertaken by Coffey Environments in 2012 and 2013.
- Material from the landfill berms is likely to be suitable for placement as surface capping following removal of pockets of anthropogenic materials;
- Potential presence of asbestos in the area outside the former landfill can be managed by implementation of an unexpected finds protocol.

The Coffey RAP identified the following for the landfill gas on the site:

- At the time of the RAP there was evidence of methane being generated within the landfill, but there was no evidence of significant lateral migration of landfill gas outside the former landfill footprint. This suggested that most of the methane was being released vertically through the landfill surface. Following the capping of the landfill (either with berm material or any other compacted or impermeable material) and the site redeveloped, the opportunities for surface emission of gas should be reduced which in turn could increase the lateral migration of landfill gas. It was highlighted that the extent of lateral migration of methane was difficult to predict with a reasonable level of accuracy without landfill gas sampling (outside of the landfill) after placement of capping.

- If left unmitigated, it was considered that there would be potential landfill gas risk to future site users. Therefore, Council should adopt mitigation measure(s) to manage the risk of landfill gas.

Additional to the outcomes of the RAP review, it is further noted that the lateral migration of methane could also impact proposed lots placed close to or within the buffer zone immediately surrounding the landfill boundary.

3.3.1. Landfill Gas Mitigation

The remedial goal with respect to landfill gas was to manage landfill gas so that the site was suitable for the proposed land-uses for the Warnervale Town Centre, development following construction. These land-uses included:

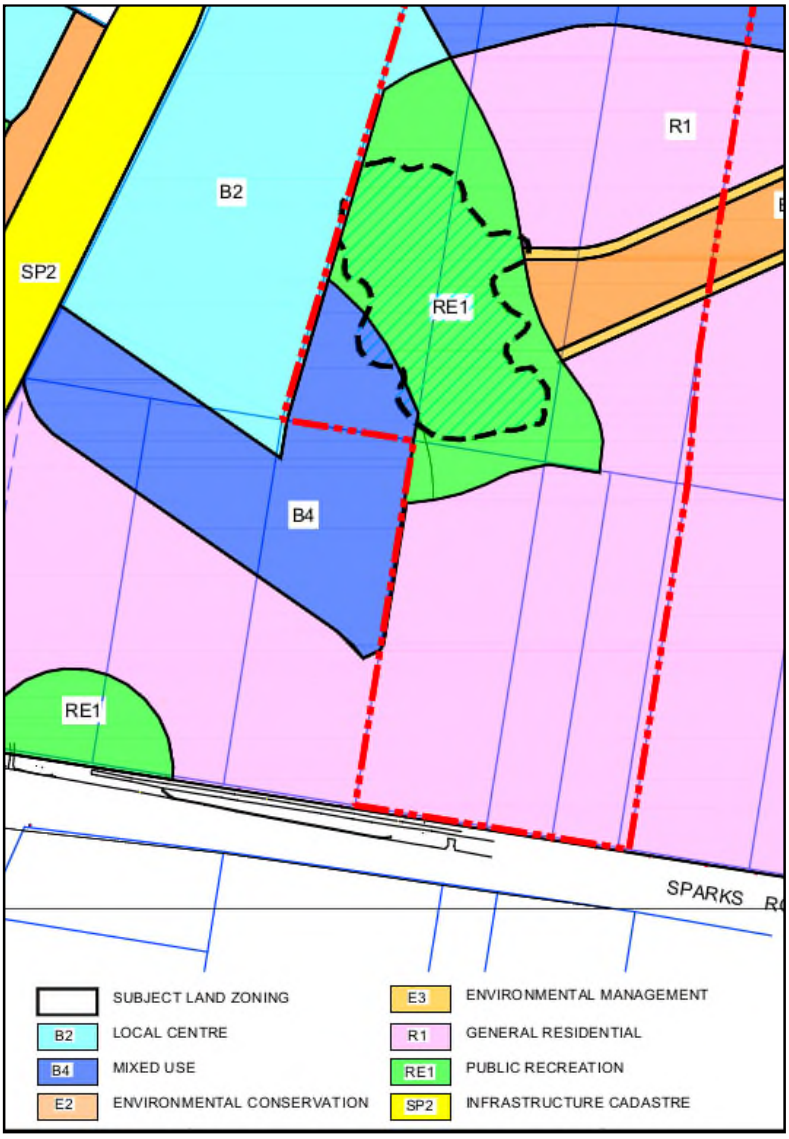
- Open Space in the area of the former landfill/quarry (zoning RE1 Public Recreation);
- Mixed residential, commercial and open space in the area outside the former landfill (zoned: B2 local centre, B4 mixed use, E2 environmental conservation, E3 environmental management, R1 residential and RE1 public recreation).

For the purpose of landfill gas management, the site was divided into the following areas (Figure 3-1).

- **Area 1** – the former landfill footprint area within proposed Public Recreation RE1 zoning;
- **Area 2** – the former landfill footprint area within Mixed Use B4 zoning; and
- **Area 3** – the area outside the former landfill footprint.

Based on previous and current investigations, landfill gas was limited to Areas 1 & 2 respectively.

Figure 3-1 - Land Zoning Intersection with Former Landfill Footprint (Source – ENAURHOD04424-R05b, Figure 23, June 2013)



3.3.2. Preferred Option/s for Landfill Gas Mitigation

Area 3 – The Area outside the Former Landfill footprint (Area 3, which includes proposed Stage 6 – 10 development)

- Based on the uncertainty of the landfill gas mitigation after placement of capping, it was considered that a landfill gas mitigation system would be required for Area 3.
- It was recommended that where possible, underground infrastructure should not traverse the former landfill. Where this was unavoidable, the design should incorporate measures to limit the creation of a preferential pathway for landfill gas migration and minimise or eliminate landfill gas accumulation within the services.
- Venting and sealing the infrastructure and encapsulation by impermeable membrane to prevent landfill gas accumulation.

3.3.3. Validation Strategy

It was proposed in the RAP that landfill gas mitigation system(s) can be validated by undertaking landfill gas measurements in the area(s) targeted for the system(s). This would include landfill gas measurement in the following areas:

- The area of former landfill footprint to assess increase/reduction in landfill gas concentrations;
- The area outside the former landfill footprint to assess potential migration of landfill gas;
- Within proposed building(s) and/or structure(s) (if remediation was not undertaken as per RAP).

The locations, frequency, and length of monitoring will depend on the proposed development and the remediation option(s) chosen. These need to be decided after the proposed development and the remediation option(s) are decided and documented in the environmental management plan for WTC.

The landfill is currently undergoing remediation and validation (undertaken by Synergy) and the outcomes remain unknown at this time. Notification of the successful completion of the remediation and validation should be sought and confirmed with Council.

4. Desktop review and site observations

A desktop study and site observations were conducted as part of the PCA, and included:

- A historical title search dating back 100 years;
- A review of aerial photography from the past 62 years;
- A review of the Section 149 Planning Certificate for the site held by Council;
- A review of NSW EPA notices applying to the site and nearby properties; and
- Site walkover and a limited sampling and laboratory analysis of selected soil samples to measure the potential contamination impact at potential areas of environmental concern and assess the current site conditions compared to historical data.

The information provided from the above reviews are summarised in the sections.

4.1. Site History Review

4.1.1. Historical Title Search

A search of historical titles for the site, (Lot 41 DP1200210, Lots 51 & 52 DP 561032, Lots 54 & 55 DP 7527 and Lot 1 DP 376264), were undertaken by Advanced Legal Searchers Pty Ltd. A list of past registered proprietors for the land parcels was obtained dating back to 1918. The results of the search are included in Appendix A and presented in Table 4-1, Table 4-2 and Table 4-3.

Table 4-1- Summary of Historical Titles (Lot 41 DP 1200120)

Conveyance Book Details	Date	Proprietor	Inferred Land Use
Portion 39 & 41 Parish Munmorah and other land – Area 3498 Acres 3 Roods 23½ Perches – CTVol 2878 Fol 191	1918 - 1923	Albert Hamlyn Warner, esquire	Private
Lot 4 DP 7738 – Area 10 Acres – CTVol 3468 Fol 155	1923 - 1958	Joseph Wilfred Fisher, Farmer	Private
	1958 - 1959	Public Trustee	Private
	1959 - 1990	Ellen Lell, Manufacturer	Private
Lot 4 DP 7738	1990 - 2002	Ellen Lell, Manufacturer	Private
	2002 - 2014	Wyong Shire Council	Commercial
Lot 41 DP 1200210	2014 – to date	Wyong Shire Council	Commercial

Table 4-2: Summary of Historical Titles (Lots 54 & 55 DP 7527 & Lot 1 DP 376264)

Conveyance Book Details	Date	Proprietor	Inferred Land Use
Portion 39 & 41 Parish Munmorah and other land – Area 3498 Acres 3 Roods 23½ Perches – CTVol 2878 Fol 191	1918 - 1946	Albert Hamlyn Warner, esquire	Private

Lot 51 DP 561032 & Lot 52 DP 561032	2003 – to date	Wyong Shire Council	Commercial

4.1.2. Aerial Photograph Review

Aerial photographs of the site were obtained from the Department of Land and Property Information and assessed by a Coffey Environmental Scientist. The results of the aerial photograph review are summarised below in Table 4-4. The aerial photographs are presented in Appendix B.

Table 4-4 - Historical Aerial Summary

Date	Site	Surrounding Land
1965	A cleared area is visible where the former quarry/landfill site was located within the northern half of the site. The quarry appears to be active. The site appears to be forested land with dense tree and grass vegetation within the surrounding areas of the site.	The Main Northern Railway is observed east of site. An unpaved Hakone Road appears to the north of site. Small farm buildings are observed to the west and south-west of site. Buildings and land clearing appear to be for rural-residential purposes.
1976	Portion of the southern area of site appears to have been cleared with buildings being constructed and now visible. A gravel access road is observed cutting diagonally from Hakone Road south through to the landfill. The remainder of the site appears to be the same, operating as an active quarry.	Vegetation clearing is observed surrounding the site with gradual development of surrounding areas for rural residential purposes observed to the south, west and north-west directions. An access track is observed providing access to the landfill from Sparks Road to the South.
1985	The quarrying or landfilling activities appear to be continuing within the site. Vegetation and tree growth has continued throughout some areas of the site.	There is a large residence with two small detached farm sheds observed to the south-east. A large dam lies further south of the residence with unpaved access provided from Sparks Road. Land clearing is evident to the east and north-east between the site and Great Northern Railway corridor. Two large residences and a large metal shed have been constructed to the north with access observed from Hakone Road. The construction of a dam east of the rail corridor is observed. To the south of the dam a residence has been developed with four large detached farm sheds.
1994	The quarrying or landfilling activities appear to have ceased with grassed vegetation covering the formerly disturbed land. The construction of a detached farm shed was observed on the site associated with the residence located within the south eastern corner. The remainder of the site appears relatively unchanged from 1985.	A small brick residence has been constructed to the south with access provided from Sparks Road. Sparks Road is observed to have been completed and covered with the construction of a dual-lane overpass over the Great Northern Railway corridor. The construction of nursery facilities (buildings and greenhouses) is observed to cover approximately one third of the land parcel (Lot 5211 DP1200804) to the east. The remainder of the site remains relatively unchanged since the time of the last photograph.

Date	Site	Surrounding Land
2006	The large brick residence along with four large detached farm sheds observed adjacent east of the rail corridor to the south have been demolished. Regeneration of grass vegetation covering the former quarry or landfill site is evident with scattered waste debris observed in the area.	The demolition of greenhouse outbuildings to the east at the former nursery facility is observed. Initial construction stages of Mackillop Christian College to the East is observed.
2018	The area of the former quarry/landfill of site is observed to have undergone major earthworks since the time of the last photograph. It appears that a capping layer of material has been placed over the quarry/landfill area.	The area to the south of the site appears to have been cleared entirely vegetation for proposed residential sub-division development purposes since the time of the last photograph. The shed and residence to the south east have been demolished and Woongarrah Road forms the southern boundary of the site. Exposed surface soils and stockpiles of removed vegetation observed scattered across the site. The construction of Woongarrah Road is completed adjacent south west with initial construction of WTC Stages 1 to 4 observed further south. The demolition of the three rural-residential properties and associated out buildings for the construction of stages 1 to 4 is evident south west of the proposed site.

4.2. Section 10.7 Planning Certificate

The section 10.7 Certificates for Lot 52 DP 561032, Lot 51 DP 561032, Lot 41 DP 1200210, Lot 54 DP 7527, Lot 55 DP 7527, Lot 1 DP 376264, Lot 1 DP 371647 and Lot 1 DP 375712 were obtained from Central Coast Council. A copy of the certificates is provided in Appendix D. Table 4-5 summarises the information contained within the certificates.

Table 4-5 - Information from section 10.7 Planning Certificates

Address/Allotment	Current Zoning	Critical Habitats	Conservation Areas	Hazard Risk Restrictions	Site Contamination Notices
99 Sparks Road, Woongarrah NSW **(Lot 52 DP 561032)**	(R1) General Residential	None	None	Biodiversity Certified Land Bushfire Prone Land	None
103 Sparks Road, Woongarrah NSW **(Lot 51 DP 561032)**	(R1) General Residential	None	None	Biodiversity Certified Land Bushfire Prone Land	None
107 Sparks Road, Woongarrah NSW **(Lot 41 DP 1200210)**	(RE1) Public Recreation (R1) General Residential (B4) Mixed Use	None	None	Biodiversity Certified Land Bushfire Prone Land	None

Address/Allotment	Current Zoning	Critical Habitats	Conservation Areas	Hazard Risk Restrictions	Site Contamination Notices
236-260 Hakone Road, Woongarrah NSW (Lot 54 DP 7527, Lot 55 DP 7527, Lot 1 DP 376264, Lot 1 DP 371647 & Lot 1 DP 375712)	(RE1) Public Recreation (B4) Mixed Use (R1) General Residential (B2) Local Centre (E3) Environmental Management (E2) Environmental Conservation	None	None	Biodiversity Certified Land Bushfire Prone Land	None

4.3. NSW EPA Records

A search of the NSW EPA database revealed that four (4) sites within the Wyong Shire (Central Coast Council) area are identified on the contaminated land register as having current and/or former notices. The four sites identified are located outside of a 1km radius buffer zone from the site and unlikely to be impacting the study site. A copy of the search is provided in Appendix F with a summary provided in Table 4-6.

Table 4-6 - Contaminated Land Register Search Results

Suburb	Address/Site name	Notices related to site	Distance from site
Bateau Bay	The Entrance Road/Former Landfill	1 current notice	27 km
Warnervale	Aldenham and Railway Roads/Former Timber Treatment Plant	3 former notices	4.0 km
Wyong	Lot 4 Warner Avenue/Drum Dump-Wyong	2 former notices	8.0 km
Wyong	16 Lucca Road /Wyong Bayer & Kemcom	3 former notices	6.5 km

4.4. Site Observations

A Coffey Environmental Scientist visited the site on two occasions, 20 September and 7 December 2018. Site photographs were taken during the visit, and are shown in Appendix C.

Observations made during the site walkover at 111 Sparks Road included Lot 1 DP 376264, Lot 54 DP 7527 and Lot 55 DP 7527 in the northern portion of the site and Lot 41 DP 1200120, Lot 51 DP 561032 and Lot 2 DP 561032 in the southern portion of the site:

Northern Portion of site: Lot 1 DP376264 Lot 54 DP7527 and Lot 55 DP7527

- Lot 1 DP376264 and Lot 54 DP7527 were observed to contain mainly dense forested and grassed vegetation in the northern extent of the Lot, with a large cleared area of the former quarry/landfill footprint located in the southern section of the lot;
- Former quarry/landfill area had a perimeter metal and wire fence with silt fencing at the base preventing unwanted site access. A ‘Danger Asbestos’ sign was observed on the exterior of the

fence. No works related to the ongoing landfill remediation was observed at the time of the walkover. However, plant and machinery for large-scale earthworks were observed, parked within the north-western portion of the fenced area. Synergy Pty Ltd are in charge of the civil remediation works at the site, (shown in photos 14 & 24);

- Synergy are responsible for ongoing civil remediation works ongoing in the former quarry/landfill area. A Synergy site office was observed at the start of the access road adjacent Hakone Road;
- A gravel access track was observed cutting diagonally from Hakone Road directly through to the top of the ridgeline (former quarry/landfill);
- Evidence of possible illegal dumping activities were observed south of the gravel track that provides access to the former quarry/landfill from Hakone Road. Excavated soils, concrete and road construction materials observed sporadically dumped;
- A gravel access track from Hakone road provided access to the former quarry/landfill from Hakone Road. Illegal dumping, including excavated soils, concrete, road construction materials and demolition wastes was observed to be present up to 30m south of the gravel access track;
- The site surface soils observed during the site walkover appeared to comprise silty gravelly sands, (shown in photos 12 & 31);
- Dense forest and grassed vegetation occupied the area to the north of the former quarry/landfill footprint. Multiple fallen/snapped trees were observed during the site walkover, (shown in photos 19, 20 & 21);
- A discarded golf cart was observed located in the forested area to the north, no oil leaks or battery wastes were observed (shown in photo 20);
- Bonded Asbestos fragments (about 40 to 50) were observed east of the former quarry/landfill within surface soil material at the time of the walkover. Surface soils impacted approximately 250m^2 grid; (shown in photos 25 – 30). ACM appears to have been washed from civil remediation works within the former quarry/landfill (surface water and sediment runoff). Material appears to be related to surface soils in an east/south-eastern direction; (shown in photos 28 – 30);
- The footprint of a former nursery (identified in Coffey, 2008 and other historical assessments) comprising concrete slabs are directly adjacent to the sites western border (not part of the Site), (shown in photo 22); and
- Two small to medium sized dams are located to the south west of the former landfill/ quarry area, a car body was present on the bank of one of the dams, (shown in photo 23).

Southern Portion of site (Lot 41 DP1200210, Lot 51 DP561032 and Lot 2 DP561032)

Lot 41 DP1200210

- Discarded household and building waste was observed illegally dumped along the southern boundary of Lot 41 DP1200210 adjacent newly constructed access road Woongarrah Road, (shown in photos 2 & 3);
- Several waste stockpiles were observed in the south west corner of the site in close proximity to access roads, these stockpiles were overgrown with vegetation at the time of the site walkover, (shown in photo 2);
- A dirt vehicle access track was observed bisecting Lot 41 and Lot 51 DP561032. The track provided access from Sparks Road before meeting the cleared area observed east of the former landfill/quarry. Multiple small piles of domestic household waste were observed along the eastern boundary of the access track, (shown in photos 7 & 11);
- The remainder of Lot 41 DP1200210 was covered in dense forested and grassed vegetation with multiple fallen/snapped trees observed during the site walkover. The southern portion of the site was densely vegetated bushland, with long grasses and small to medium sized trees, the area was generally undisturbed, (shown in photos 9 & 13);

Lots 51 & 52 DP561032

- A former rural-residential footprint was located on Lots 51 & 52 DP561032. A small field dam was observed in the centre of Lot 51 along the western boundary. No surface sheen or staining was visible at the time of the walkover, (shown in photos 8 & 10);
- An unknown mound/stockpile, covered in grassed vegetation, was observed in the centre of Lot 51 in the location of the former rural residence structure. No remnant structures of the previous residence were observed, (shown in photo 10);
- The remainder of the southern portion of the site was densely vegetated bushland, with long grasses and small to medium sized trees, the area was generally undisturbed, (shown in photo 9);
- The northern section of Lot 52 was covered in dense forested vegetation consisting of mature-age trees and low-lying shrubs. The southern extent of Lot 52 was observed to mainly consist of dense shrub and long grass, (shown in photo 13);
- A gravel vehicle access track was observed along the eastern boundary of Lot 52 DP561032 servicing the local school Mackillop Catholic College and providing access to the southern extent of Lot 55 DP7527. No domestic waste was observed along this track at the time of the walkover;

4.5. Gaps in the Site History

The following information sources were referred to for this assessment:

- NSW EPA;
- Section 10.7 Planning Certificates provided by Central Coast Council;
- Historical Land Title Searches between 1918 and 2018;
- Historical aerial photographs and Google Earth images provided for the period between 1965 and 2018;

Potential data gaps include:

- Status of the remedial works being carried out at the landfill site;
- Information related to the lateral migration of landfill gas and the potential impact at the development boundaries adjacent to the landfill.

5. Preliminary conceptual site model

Based on the site history review and site walkover, a preliminary conceptual site model (CSM) has been developed. Potential areas and chemicals of environmental concern have been summarised in Table 5-1, potentially affected media, receptors and transport mechanisms are included in Table 5-2 and the potential and complete exposure pathways are summarised in Table 5-3.

Table 5-1 - Potentially Areas and chemicals of environmental concern

AEC	Potentially Contaminating Activity	Potential COCs	Likelihood of Contamination*	Comments
1 (Former Quarry/Landfill)	Potential impact of landfill gas, leachate and movement of asbestos with surface water runoff	Methane and landfill gases	Medium to High (in areas close to landfill buffer zone)	Section of the site formerly utilised as a quarry/landfill potential for lateral migration of landfill gas following capping. Movement of asbestos associated with surface water runoff from the landfill.
2 (Entire Site)	Illegal/uncontrolled dumping activities (including asbestos)	Heavy Metals, OCP, TPH, BTEX, PAH, Phenols, PCB, Cyanide, Asbestos & Sulphate	Low to medium (Medium to high risk for presence of bonded asbestos fragments)	Illegal dumping activities observed in surrounding areas. Gravel access trails providing vehicle access from Hakone Rd (north) & Sparks Rd (south). Former quarry/landfill surrounded by densely vegetated areas.
3 (Former building structures and stockpiles of unknown origin)	Presence of fill of unknown origin and quality under and around former building structures	Heavy metals, TRH, BTEX, PAH, OCP, Asbestos	Low to medium	Fill material likely at footprint of former brick residence. Stockpile of unknown fill observed at the rear of former rural-residential residence.
4 (Former building structures)	Weathering of hazardous building materials including lead paint and asbestos and storage of fuels and oils	Heavy Metals, TRH BTEX PAH, Asbestos, OCPs, OPPs	Low to Medium	Unknown building materials used to construct pre-existing building structures.
5 (Pesticide Application)	Small scale pesticide application around former rural-residential buildings	Heavy Metals, OCPs & OPPs.	Low	Pesticide application in area surrounding former building structures in southern portion of the site.

*Notes: * = This is a qualitative assessment of the probability of contamination being detected at the potential AEC.*
Metals - Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel and Zinc; BTEX - Benzene, Toluene, Ethylbenzene and Xylenes; TRH - Total Recoverable Hydrocarbons; PAH - Polycyclic Aromatic Hydrocarbons; OCP - Organochlorine Pesticides; OPP - Organophosphorus Pesticides; PCB - Polychlorinated Biphenyls; VOC - Volatile Organic Compounds; SVOC - Semi-Volatile Organic Compounds

Table 5-2 - Potentially affected media, receptors and transport mechanisms

Consideration	Information
Potentially Affected Media	Shallow soil – fill material and upper layers of natural residual soil.
Potential Transport Mechanisms & Exposure Pathways	Direct dermal contact with contaminated soil Ingestion of contaminated soil Inhalation of airborne dusts and gases Inhalation of asbestos fibres Migration of methane through rock fractures, bedding partings and soil
Potential Receptors of Contamination	***Construction/maintenance workers*** Potential exposure via direct vapour and gas inhalation Potential exposure via dermal contact with soil and ingestion of soil. Potential exposure via secondary inhalation of airborne dusts (lead and asbestos). Potential explosion risk from build-up of landfill gas ***Future Site Users*** Potential exposure via dermal contact, and ingestion/inhalation of soil and dust. Contact with groundwater is considered unlikely due to groundwater depth anticipated to be greater than 18m bgs. Potential ingress of landfill gas into buildings and structures ***Groundwater*** It is unlikely contaminants from the site could leach from soils into groundwater due to groundwater depth anticipated to be greater than 18m bgs. Perched groundwater within the former landfill/quarry void could impact located at the crest of a ridgeline the site with with runoff from the crest of the ridgeline expected to leak vertically into regional groundwater. ***Surface Water – Porter & Woongarrah Creek*** Lateral transport of surface water and discharge at the nearest surface water receptor – Porters Creek 3km South of site & Woongarrah Creek located 3km north-east of the site.

Table 5-3 - Summary of identified key potential exposure pathways

Receptor	Exposure Pathway	Comment
Construction/ Maintenance Workers	Potentially Complete	There is a potential for workers conducting subsurface works to be exposed to soils containing potential contaminants via dermal contact, ingestion of soils and inhalation of asbestos fibres and landfill gas during earthwork activities.
Future site users	Potentially Complete	There is a potential for future site users to be exposed to soils containing potential contaminants via dermal contact, ingestion and inhalation pathways. There is a potential pathway for ingress of landfill gas into future buildings and structures
Groundwater	Incomplete	Given the depth to the regional groundwater is >15 mbgs, a complete exposure pathway probably does not exist. The landfill/quarry is located in the center of the site and the extent of the perched groundwater outside of the landfill/quarry is unknown.
Surface Water	Incomplete	Given that the distance between the site and nearest surface water body is approximately 3km, a complete exposure pathway probably does not exist.

6. Fieldwork, investigation levels and data quality objectives

Fieldwork activities were undertaken at the site on 4 & 5th October and 5 - 6th November 2018 respectively, to further assess some of the identified plausible potentially complete exposure pathways set out in Table 10.

6.1. Scope of works - 2018

The following scope of works was undertaken:

- Advancement of twelve (12) test bores by assisted by a backhoe excavator with a 300mm auger attachment to a target depth of 1.8m (bgs) across the site;
- Sixteen (16) soil samples were collected, with selected samples analysed from test bore locations (E1-E5) and TP28, TP31, TP32, TP33, TP41, TP42, TP43 and TP44 (Sample locations shown on Figure 2);
- Visual and olfactory observations were noted on field screening sheets. Soil samples were collected using a fresh pair of disposable nitrile loves to prevent cross-contamination. Soil samples were placed in clean, laboratory supplied acid washed glass jars. Samples were stored on ice in a secure cooler while on site and in transit to the analytical laboratories; and
- The soil samples were submitted selectively for laboratory analysis for identified COPC's including Heavy metals (Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel and Zinc), TRH, BTEX, PAHs, Phenols, OCP/OPP Pesticides and Asbestos in soil (presence/absence).

6.2. Investigation Levels

The screening criteria has been derived on the basis of conservative assumptions relating to land use, receptor behaviour and soil characteristics.

Soil analytical results have been compared against ASC NEPM (2013) health investigation levels (HILs) HIL- A & B 'Residential' and HIL C "open space" criteria based on exposure settings related to the proposed land use.

Discussion of results has also been compared to the ASC NEPM (2013) Health Screening Levels (HSLs) for the same land use setting, (derived from CRC CARE HSLs (CRC CARE, 2011)) for vapour intrusion to provide further evaluation of potential risks to human health resulting from intrusion of hydrocarbon vapours emanating from soil impacts at the site. HSLs have been adopted based on the potential receptors, subsurface lithology and depth from impacts to soil.

To facilitate screening against HILs and HSLs relevant to the site, the following have been included in the soil analytical data table (Table LR1 – Appendix H).

- ASC NEPM (2013) Health Investigation Levels, HIL-A and B, Residential;
- ASC NEPM (2013) Health Investigation Levels, HIL-C, Recreation/Public Open Space;
- ASC NEPM (2013) Soil HSLs for Vapour Intrusion, HSL-A/B Residential, Sand, 0 to <2m; and

The soil screening assessment criteria are for comparative purposes only and should not be regarded as "clean-up" levels.

6.2.1. Adopted Site Assessment Criteria

The site assessment criteria (SAC) adopted for this assessment are included in Table 6-1.

Table 6-1 - Site Assessment Criteria (All concentrations in mg/kg)

Contaminant of Potential Concern	HIL-A	HIL-B	HIL-C	HSL - A/B - 0 to <1m	HSL - A/B 1 to <2m
Arsenic	100	500	300		
Cadmium	20	150	90		
Chromium					
Copper	6000	30000	17000		
Lead	300	1200	600		
Mercury	40	120	80		
Nickel	400	1200	1200		
Zinc	7400	60000	30000

6.3. Asbestos in Soil

The soil investigation levels for the current assessment were established based on the following references:

- NEPC (2013) National Environment Protection (Assessment of Site Contamination) Measure (ASC NEPM 2013); and
- WA Department of Health (2009) Guidelines for the Assessment, Remediation and Management of Asbestos Contaminated Sites in Western Australia.

ASC NEPM (2013) provides assessment criteria for asbestos contaminated sites, which are based on the WA Department of Health (2009) Guidelines. The ASC NEPM Guidelines divide asbestos into three groups:

- Asbestos Containing Material (ACM) '*which is in sound condition although possibly broken or fragmented and the asbestos is bound in a matrix. This is restricted to material that cannot pass through a 7mm x 7mm sieve.'*
- Fibrous asbestos (FA) '*encompasses friable asbestos material such as severely weathered ACM, and asbestos in the form of loose fibrous material such as insulation products.'*
- Asbestos fines (AF) *'It includes free fibres of asbestos, small fibre bundles and also ACM fragments that pass through a 7mm x 7mm sieve.'*

The applicable health screening levels for asbestos contamination in soil are included in Table 6-2.

Table 6-2 - Health Screening Levels for asbestos contamination in soil

	Health Screening Level			
Form of Asbestos	Residential A	Residential B	Recreational C	Commercial/Industrial D
Bonded ACM	0.01%	0.04%	0.02%	0.05%
FA and AF (Friable Asbestos)	0.001%			
All forms of Asbestos	No visible asbestos for surface soils			

6.4. Project Data Quality Objectives

As stated in Section 4 of the *Guidelines for the NSW Site Auditor Scheme 3rd ed.* (NSW EPA. 2017) and ASC NEPM *Schedule B2 Appendix B*, the DQO process is used to "define the type, quantity and quality of data needed to support decisions relating to the environmental condition of a site".

The DQO process adopted for this assessment is provided below:

6.4.1. Step 1: State the Problem

The objectives of the PCA are to:

- Identify/establish potential contamination in soil and groundwater at the site that may be attributable to historical activities on the site and compare to data from 77 sample locations (test pits and hand auger samples) collected in previous investigations;
- Preliminarily assess the suitability if the site for the proposed future residential land use (multi-lot sub-division);
- 16 primary samples were collected from fill soils across the site and compared to data from 77 sample locations previously assessed in other investigations;
- Sample locations (PCA) were based primarily on observations made during the site walkover;

- The soil samples were tested for the following COPC's including Heavy metals (Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel and Zinc), TRH, BTEX, PAHs, Phenols, OCP/OPP Pesticides and Asbestos in soil (presence/absence).
- Will contamination, if left in place, pose an unacceptable risk to human health or the environment?

6.4.2. Step 2: Identify the Decision

- The potential site contamination is related to historic quarrying activities carried out on site and quarrying and landfill activities carried out at the proposed Hilltop Park location.
- Based on the results there is general compliance with the site assessment criteria for the COPC's assessed with the exception of some exceedances of heavy metal concentrations identified in the historical data set. No exceedances of the SAC were measured in any of the samples collected in the PCA.

6.4.3. Step 3: Identify Inputs to the Decision

The primary inputs to assessing the above include:

- A review of site history information and previous environmental assessments undertaken at the site (Refer to Section 3).
- Laboratories (primary and secondary) are both NATA accredited for the analyses undertaken and the laboratory analytical methods conform to relevant Australian and/or international methods (e.g. USEPA, APHA/AWWA etc).
- Outcome of quality assessment of relevant data (Section **Error! Reference source not found.**).
- Applicable contaminated land guidelines endorsed by NSW EPA and relevant planning guidelines (listed in Section **Error! Reference source not found.**).

6.4.4. Study Boundaries

The study boundaries are defined by the boundaries of the site as shown in Figure 2. Vertically, the site boundary will generally be to approximately 1.2mbgs to characterise the fill across the site.

6.4.5. Decision Rule

The decision rule for soil for each chemical/layer to assess the suitability of the site is as follows:

- QA/QC assessment indicates that the data is usable;
- Where contaminant concentrations for each sample are below the adopted investigation levels, then no further assessment/remediation is required with respect to that chemical/media/area; and
- Where contaminant concentrations are reported to exceed the adopted investigation levels.

6.4.6. Limits of Decision Errors

There are two types of decision errors:

- Sampling errors, which occur when the samples collected are not representative of the conditions within the investigation area; and
- Measurement errors, which occur during sample collection, handling, preparation, analysis and data reduction.

These errors may lead the decision maker to make the following errors:

- Deciding that the site is not contaminated and, therefore, the site is suitable for continued commercial/industrial use when the reverse is true; and
- Deciding that the site is contaminated and, therefore, the site is not suitable for continued commercial/industrial use when the reverse is true.
- The null hypothesis for this study is:

- Contaminant concentrations within the soil and groundwater beneath the site are more than the adopted investigation levels.

An assessment will be made as to the likelihood of a decision error being made based on the results of a QA/QC assessment and the closeness of the data to assessment criteria. Additionally, statistical assessment may be used, where applicable, such as 95% Upper Confidence Limit (UCL) calculations, to manage potential of error in decision making.

7. Analytical Results

Samples were forwarded to NATA accredited laboratories (Eurofins MGT, Oakleigh Victoria (Primary Laboratory) and ALS Environmental, Springvale Victoria (Secondary Laboratory) for the analysis requested. A total of Sixteen (16) Primary samples, including 1 Intra-lab duplicate and 2 inter-lab triplicate samples were collected for field quality assurance/quality control (QA/QC) purposes.

Samples were accompanied by Chain of Custody documentation, received and acknowledged by the laboratories. Soil samples were dispatched on ice and received by the laboratory within recommended holding times.

7.1. QA/QC Results

In order to assess field quality assurance / quality control (QA/QC) procedures, the following field duplicate samples were collected and analysed with the primary samples.

Primary Sample	Field Quality Sample(s)
E3	QC1 (Intra-Lab Duplicate)
TP43 0.2-0.3M	QC2 (Intra-Lab Duplicate (Triplicate))

The relative percentage differences (RPDs) calculated for the contaminants tested were reported within relevant acceptance limit criteria of 50% (acceptable RPD) for the applicable EQL multiplier ranges. The concentrations measured were below 10 times the EQL with many just at or above the EQL.

The laboratory conducted internal quality control using laboratory duplicates, spikes and method blanks. The laboratory internal quality control showed duplicates with laboratory acceptable ranges. The method blank results were recorded below the laboratory limit of reporting and spike recoveries within control limits.

Based on the review of the QA/QC data, it is considered that soil results are likely to be representative of conditions at the sampling locations at the time of sampling and are suitable for use in this site assessment. The results of the QA/QC analysis are provided in Table LR2 (attached).

7.2. Soil Analytical Results

Soil analytical results and comparisons to the relevant screening criteria are presented in Table LR1 (Appendix H). Analytical Laboratory reports and chain of custody (COC) documentation with analysis requests are provided in Appendix I. Concentrations of the COPC's, in each sample tested, were measured below the relevant (NEPM 2013) HIL/HSL A/B 'Residential' and HIL C 'Recreational/Public Open Space' Guidelines.

PCA data has been compared against historical data collected in previous assessments at the Site. This, in order to establish with greater certainty, the status of fill contamination at the Site (Section 7.4).

7.3. Asbestos in soil results

The analytical Laboratory Reports are included in Appendix I, and the results are summarised in Table LR1 shown in Appendix H. The presence of asbestos (as bonded ASM, AF or FA) was not recorded in the (16) sixteen samples analysed. No respirable fibres were recorded in the laboratory samples analysed.

7.4. Previous Data - Stage 2 ESA (GEOTKARI02021AA-A)

Coffey has previously undertaken a field investigation for Wyong Shire Council for the proposed Warnervale Town Centre in March 2008 - Stage 2 Environmental Site Assessment Report (ref GEOTKARI02021AA-AI).

Data from a total of 77 sample locations throughout the site have been included for comparison with the current data set generated from samples collected in this PCA. Combined sample locations are shown in Figure 3.

Analysis of the data showed that concentrations were measured below the adopted investigation levels for TRH, BTEX, PAH, OCP and PCB in the samples analysed. Heavy metals were typically recorded below the adopted SAC at most sample locations with the exception of HA21, HA23 and HA24 where concentrations of lead were found to exceed the HIL A criteria and HA21, HA23 and HA24 with HA24 also exceeding the HIL C open space criteria. It is of note that the samples were collected from the dense bushland in Lots 54 DP7527 and Lot 55 DP7527. These areas are not slated for development and will be part of a retained riparian corridor.

8. Discussion

The results of the assessments to date show the primary risk of potential contamination to be related to the historical dumping of rubbish throughout the site including identification of bonded asbestos on the surface of the soil during this PCA. The presence of surface asbestos fragments was also observed during Coffey's work in 2013 and formed the basis for the recommendation of the inclusion of an unexpected finds protocol to guide future works. The extent of the presence of asbestos fragments is currently unknown at this time.

From the investigations carried out in the past and more recently, samples of fill taken from areas outside of the former quarry/landfill did not show evidence of the presence of friable asbestos in soil. Bonded asbestos fragments were identified on the surface of soil in various locations during the current site walkover.

Given the extensive vegetation cover present on the Site it is possible that bonded asbestos is present in other subsurface fill areas, particularly those that may have been accessible in the past when the vegetation was cleared for quarrying activities and also available for illegal dumping activities.

Future excavation undertaken as part of the site preparation activities/bulk earthworks will need to proceed with an unexpected finds protocol and an asbestos management plan in place to manage contaminated finds and also manage asbestos should this be encountered. These unexpected finds will most likely occur in areas currently covered by dense bushland which may in the past have been accessible and used as part of the historic quarrying activities or used for illegal dumping activities.

The landfill gas risk to lots in close proximity to the boundary of the proposed Hilltop Park (repurposed former quarry/landfill) will need to be assessed following the completion of capping remediation works currently being carried out at the former quarry/landfill. These include lots adjacent to the east and north-east boundaries and lots adjacent to the south-east and southern boundaries of the former landfill. Following capping, it is recommended that a surface and sub-surface assessment of landfill gas be carried out on the Lots close to the quarry boundary (50-100m) as previously identified. The potential for landfill gas to migrate laterally following the completion of capping must be assessed following the expected reduction in vertical migration of gas through the capped surface. It may be prudent for the developer to obtain validation from Council on the effectiveness of the capping and that lateral migration will not impact the lots to be developed close to the boundary of the former quarry/landfill.

9. Conclusions and recommendations

Colliers International Project Management (Colliers) engaged Coffey Services Australia Pty Ltd (Coffey) to carry out a Preliminary Contamination Assessment (PCA) for Stages 6-10 of the proposed Warnervale Town Centre development located at 111 Sparks Road, Woongarrah NSW. The proposed residential sub-division is positioned within land parcels (Lot, 1 DP 376264, Lot 41 DP 1200210, Lot 51 DP 561032, Lot 52 DP 561032, Lot 54 DP7527 and Lot 55 DP7527.

The objectives of the PCA were to:

- Identify evidence of potentially contaminating activities that may be currently occurring or has historically occurred on the site;
- Identify and assess Areas of Environmental Concern (AEC's) and Chemicals of Potential Concern (COPC's) for the site, and develop a preliminary conceptual site model if required; and
- Provide recommendations for further assessment and or management, as required.

A review of historical aerial photographs for the site indicated that portions of the site had previously been used for quarrying activities along with rural residential occupancy. Significant areas of the Site have been and remain uncleared forest with dense tree and grass coverage. Rural residential dwellings were observed in the south-eastern portion of the site constructed sometime between 1965 and 1976. The rural residential buildings were demolished during the period 1996 - 2004.

The desk study and site history review also showed:

- The site was not listed on the NSW EPA Contaminated Land Register or POEO public register.
- The risk associated with nearby properties identified on the NSW EPA Contaminated Land Register or POEO public register was considered to be low.
- The site was not identified within an area of potential acid sulfate soils.
- The following areas of environmental concern were identified;
    - Illegal dumping activities across the Site and proximity to a former quarry/landfill site (across Lot 1 DP376264 and Lot 54 DP7527;
    - Weathering of potential hazardous building materials from former building structures; and
    - Potential landfill gas impact from the landfill/quarry located adjacent to the north east boundary of the site.

The site history investigation undertaken for the site identified known or possible historical contaminating activities at or near the site. These included the quarry/landfilling operation immediately to the north, potential illegal dumping and importation of fill of unknown origin onto site, weathering of hazardous building materials surrounding former residence footprint and small-scale pesticide application.

No significant subsurface fill contamination has been identified in samples collected from areas of the Site slated for future redevelopment into sub-divided Lots. Some exceedances of the lead SAC were identified historically in samples collected from the portion of the site to be retained as a riparian corridor.

Fragments of bonded asbestos were identified in various locations during the site walkover. None of the fill samples taken during this current assessment and in the samples collected historically from areas of the Site not associated with the former quarry/landfill, have shown the presence of asbestos. Future excavation works including bulk earthworks for site levelling and the installation of services should be guided by an Unexpected Finds Protocol (UFP) and Asbestos Management Plan (AMP) included as part of the Construction Environmental Management Plan (CEMP).

Landfill gases have been confirmed within the soils associated with the former quarry/landfill, an area which is currently undergoing remediation (capping and the installation of landfill gas mitigation measures). The potential for lateral migration of landfill gas following the completion of capping should be assessed, either by Council (given their retention of the former quarry/landfill) or by the

developer, to obtain assurance that the Lots to be developed in proximity to the former quarry/landfill boundary will not be impacted. The assessment should take the form of landfill gas monitoring bores placed along the boundary in proximity to the proposed Lots followed by a medium term (one year minimum) period of monitoring.

Important information about your **Coffey** Environmental Report

Introduction

This report has been prepared by Coffey for you, as Coffey's client, in accordance with our agreed purpose, scope, schedule and budget.

The report has been prepared using accepted procedures and practices of the consulting profession at the time it was prepared, and the opinions, recommendations and conclusions set out in the report are made in accordance with generally accepted principles and practices of that profession.

The report is based on information gained from environmental conditions (including assessment of some or all of soil, groundwater, vapour and surface water) and supplemented by reported data of the local area and professional experience. Assessment has been scoped with consideration to industry standards, regulations, guidelines and your specific requirements, including budget and timing. The characterisation of site conditions is an interpretation of information collected during assessment, in accordance with industry practice,

This interpretation is not a complete description of all material on or in the vicinity of the site, due to the inherent variation in spatial and temporal patterns of contaminant presence and impact in the natural environment. Coffey may have also relied on data and other information provided by you and other qualified individuals in preparing this report. Coffey has not verified the accuracy or completeness of such data or information except as otherwise stated in the report. For these reasons the report must be regarded as interpretative, in accordance with industry standards and practice, rather than being a definitive record.

Your report has been written for a specific purpose

Your report has been developed for a specific purpose as agreed by us and applies only to the site or area investigated. Unless otherwise stated in the report, this report cannot be applied to an adjacent site or area, nor can it be used when the nature of the specific purpose changes from that which we agreed.

For each purpose, a tailored approach to the assessment of potential soil and groundwater contamination is required. In most cases, a key objective is to identify, and if possible quantify, risks that both recognised and potential contamination pose in the context of the agreed purpose. Such risks may be financial (for example, clean up costs or constraints on site use) and/or physical (for example, potential health risks to users of the site or the general public).

Limitations of the Report

The work was conducted, and the report has been prepared, in response to an agreed purpose and scope, within time and budgetary constraints, and in reliance on certain data and information made available to Coffey.

The analyses, evaluations, opinions and conclusions presented in this report are based on that purpose and scope, requirements, data or information, and they could change if such requirements or data are inaccurate or incomplete.

This report is valid as of the date of preparation. The condition of the site (including subsurface conditions) and extent or nature of contamination or other environmental hazards can change over time, as a result of either natural processes or human influence. Coffey should be kept appraised of any such events and should be consulted for further investigations if any changes are noted, particularly during construction activities where excavations often reveal subsurface conditions.

In addition, advancements in professional practice regarding contaminated land and changes in applicable statues and/or guidelines may affect the validity of this report. Consequently, the currency of conclusions and recommendations in this report should be verified if you propose to use this report more than 6 months after its date of issue.

The report does not include the evaluation or assessment of potential geotechnical engineering constraints of the site.

Interpretation of factual data

Environmental site assessments identify actual conditions only at those points where samples are taken and on the date collected. Data derived from indirect field measurements, and sometimes other reports on the site, are interpreted by geologists, engineers or scientists to provide an opinion about overall site conditions, their likely impact with respect to the report purpose and recommended actions.

Variations in soil and groundwater conditions may occur between test or sample locations and actual conditions may differ from those inferred to exist. No environmental assessment program, no matter how comprehensive, can reveal all subsurface details and anomalies. Similarly, no professional, no matter how well qualified, can reveal what is hidden by earth, rock or changed through time.

The actual interface between different materials may be far more gradual or abrupt than assumed based on the facts obtained. Nothing can be done to change the actual site conditions which exist, but

steps can be taken to reduce the impact of unexpected conditions.

For this reason, parties involved with land acquisition, management and/or redevelopment should retain the services of a suitably qualified and experienced environmental consultant through the development and use of the site to identify variances, conduct additional tests if required, and recommend solutions to unexpected conditions or other unrecognised features encountered on site. Coffey would be pleased to assist with any investigation or advice in such circumstances.

Recommendations in this report

This report assumes, in accordance with industry practice, that the site conditions recognised through discrete sampling are representative of actual conditions throughout the investigation area. Recommendations are based on the resulting interpretation.

Should further data be obtained that differs from the data on which the report recommendations are based (such as through excavation or other additional assessment), then the recommendations would need to be reviewed and may need to be revised.

Report for benefit of client

Unless otherwise agreed between us, the report has been prepared for your benefit and no other party. Other parties should not rely upon the report or the accuracy or completeness of any recommendation and should make their own enquiries and obtain independent advice in relation to such matters.

Coffey assumes no responsibility and will not be liable to any other person or organisation for, or in relation to, any matter dealt with or conclusions expressed in the report, or for any loss or damage suffered by any other person or organisation arising from matters dealt with or conclusions expressed in the report.

To avoid misuse of the information presented in your report, we recommend that Coffey be consulted before the report is provided to another party who may not be familiar with the background and the purpose of the report. In particular, an environmental disclosure report for a property vendor may not be suitable for satisfying the needs of that property's purchaser. This report should not be applied for any purpose other than that stated in the report.

Interpretation by other professionals

Costly problems can occur when other professionals develop their plans based on misinterpretations of a report. To help avoid misinterpretations, a suitably qualified and experienced environmental consultant should be retained to explain the implications of the report to other professionals referring to the report and then review plans and specifications produced to see how other professionals have incorporated the report findings.

Given Coffey prepared the report and has familiarity with the site, Coffey is well placed to provide such assistance. If another party is engaged to interpret the recommendations of the report, there is a risk that the contents of the report may be misinterpreted and Coffey disowns any responsibility for such misinterpretation.

Data should not be separated from the report

The report as a whole presents the findings of the site assessment and the report should not be copied in part or altered in any way. Logs, figures, laboratory data, drawings, etc. are customarily included in our reports and are developed by scientists or engineers based on their interpretation of field logs, field testing and laboratory evaluation of samples. This information should not under any circumstances be redrawn for inclusion in other documents or separated from the report in any way.

This report should be reproduced in full. No responsibility is accepted for use of any part of this report in any other context or for any other purpose or by third parties.

Responsibility

Environmental reporting relies on interpretation of factual information using professional judgement and opinion and has a level of uncertainty attached to it, which is much less exact than other design disciplines. This has often resulted in claims being lodged against consultants, which are unfounded. As noted earlier, the recommendations and findings set out in this report should only be regarded as interpretive and should not be taken as accurate and complete information about all environmental media at all depths and locations across the site.

SECTION 10.7(2) AND (5) PLANNING CERTIFICATE

This Planning Certificate is issued on 29 November 2018 in respect to the land described below, pursuant to s.10.7 of the Environmental Planning and Assessment Act 1979

Fee paid:	$133.00
Receipt No:	13314459
Receipt Date:	29 November 2018

DESCRIPTION OF LAND
COUNTY OF NORTHUMBERLAND

Property Address:	99 Sparks Road, WOONGARRAH NSW 2259
Property Description:	Lot 52 DP 561032
Property Owner:	Central Coast Council

The information contained within this certificate relates to the land.

1 RELEVANT PLANNING INSTRUMENTS AND DEVELOPMENT CONTROL PLANS

1.1 Environmental Planning Instruments which apply to the land

Wyong Local Environmental Plan 2013

State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004
State Environmental Planning Policy No 21 – Caravan Parks
State Environmental Planning Policy No 30 – Intensive Agriculture
State Environmental Planning Policy No 36 – Manufactured Home Estates
State Environmental Planning Policy No 44 – Koala Habitat Protection
State Environmental Planning Policy No 50 – Canal Estate Development
State Environmental Planning Policy No 55 – Remediation of Land
State Environmental Planning Policy No 62 – Sustainable Aquaculture
State Environmental Planning Policy No 64 – Advertising and Signage
State Environmental Planning Policy No 65 – Design Quality of Residential Flat Development
State Environmental Planning Policy (State Significant Precincts) 2005
State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004

State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007
State Environmental Planning Policy (Infrastructure) 2007
State Environmental Planning Policy (Exempt and Complying Development Codes) 2008
State Environmental Planning Policy (Affordable Rental Housing) 2009
State Environmental Planning Policy (State and Regional Development) 2011
State Environmental Planning Policy (Miscellaneous Consent Provisions) 2007
State Environmental Planning Policy (Vegetation in Non-Rural Areas) 2017
State Environmental Planning Policy (Educational Establishments and Child Care Facilities) 2017

1.2 Proposed Environmental Planning Instruments which will apply to the land and is or has been the subject the subject of community consultation or public exhibition

The land is not subject to any Draft Local Environmental Plans.

Draft Amendment to State Environmental Planning Policy No 44 – Koala Habitat Protection
Draft State Environmental Planning Policy (Primary Production and Rural Development) 2017

1.3 Development Control Plans

Development Control Plan 2013 applies to this land.

2 ZONING AND LAND USE

a Identity of the Zone

Lot 52 DP 561032

R1 General Residential

For each of the environmental planning instruments referred to in clause 1, please refer to the attached land use table to determine (b), (c) and (d) listed below:

b development that may be carried out within the zone without the need for development consent,

c development which may not be carried out within the zone except with development consent and

d development which is prohibited within the zone

e Development Standards applying to the land

Nil

f Critical Habitat

Nil

g Conservation Area

Nil

h Environmental Heritage

Nil

2A ZONING AND LAND USE UNDER STATE ENVIRONMENTAL PLANNING POLICY (SYDNEY REGION GROWTH CENTRES) 2006

Not applicable

3 COMPLYING DEVELOPMENT

Whether or not the land is land on which complying development can be carried out under each of the codes for complying development because of the provisions of clause 1.17A (c) and (d) and 1.19 of *State Environmental Planning Policy (Exempt and Complying Development Codes) 2008?*

1. PART 3 – HOUSING CODE

   a Complying Development under the General Housing Code **may** be carried out on the land.

2. PART 3A – RURAL HOUSING CODE

   a Complying development under the Rural Housing Code **may** be carried out on the land providing the land is not less than the minimum lot size for the erection of a dwelling house under the Wyong Local Environmental Plan 2013.

3. PART 3B – LOW RISE MEDIUM HOUSING CODE

   a Complying Development under the Low Rise Medium Density Housing Code **may** be carried out on the land.

4. PART 4 – HOUSING ALTERATIONS CODE

   a Complying development under the Housing Alterations Code **may** be carried out on the land.

5. PART 4A – GENERAL DEVELOPMENT CODE

a Complying development under the General Development Code **may** be carried out on the land.

6. PART 5 – COMMERCIAL AND INDUSTRIAL ALTERATIONS CODE

a Complying development under the Commercial and Industrial Alterations Code **may** be carried out on the land.

7. PART 5A – COMMERCIAL AND INDUSTRIAL (NEW BUILDINGS AND ADDITIONS) CODE

a Complying development under the Commercial and Industrial (New Buildings and Additions) Code **may** be carried out on the land.

8. PART 5B – CONTAINER RECYCLING FACILITIES CODE

a Complying Development under the Container Recycling Facilities Code **may** be carried out on the land.

9. PART 6 – SUBDIVISIONS CODE

a Complying development under the Subdivisions Code **may** be carried out on the land.

10. PART 7 – DEMOLITION CODE

a Complying development under the Demolition code **may** be carried out on the land.

11. PART 8 – FIRE SAFETY CODE

a Complying development under the Fire Safety Code **may** be carried out on the land.

4, 4A (Repealed)

4B ANNUAL CHARGES UNDER LOCAL GOVERNMENT ACT 1993 FOR COASTAL PROTECTION SERVICES THAT RELATE TO EXISTING COASTAL PROTECTION WORKS

The owner (or any previous owner) of the land has not consented in writing to the land being subject to annual charges under section 496B of the *Local Government Act 1993* for coastal protection services that relate to existing coastal protection works.

5 MINE SUBSIDENCE

The land is not within a proclaimed Mine Subsidence District.

6 ROAD WIDENING OR ROAD ALIGNMENT

1. DIVISION 2 SECTION 25 OF THE ROADS ACT 1993

   The land is not affected by road realignment or road widening under the above.

2. ENVIRONMENTAL PLANNING INSTRUMENT

   The land is not affected by road widening or road re-alignment under the above.

3. COUNCIL RESOLUTIONS

   The land is not affected by road widening or road re-alignment under the above.

   However, it should be noted that this parcel either fronts or abuts a road under the control of the Roads and Maritime Services. For further details regarding road widening please refer to that agency.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES TO RESTRICT DEVELOPMENT DUE TO RISK

This land is **not** affected by a policy that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

7A FLOOD RELATED DEVELOPMENT CONTROLS

1. Development on this land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or senior housing) and for other purposes is **not** subject to flood related development controls.

2. Development on this land or part of the land for any other purpose is **not** subject to flood related development controls.

A word or expression used in this clause has the same meaning as it has in the *Floodplain Development Manual* (ISBN 0 7347 5476 0), published by the NSW Government in April 2005, unless it is otherwise defined in this Plan.

8 LAND RESERVED FOR ACQUISITION

The following environmental planning instruments and proposed environmental planning instruments make provisions for the acquisition of land by a public authority as referred to in Section 3.15 of the Act:

Nil

9 CONTRIBUTION PLANS

The land is subject to Section 94 Contributions Plan – Warnervale District.

The land is subject to Section 94 Development Contributions Plan – Warnervale Town Centre.

This land is subject to the Wyong Shire Section 94A Levy Development Contributions Plan.

This land is subject to the Section 94 Contributions Plan for Wyong Shire No. 11 - Shirewide Infrastructure, Services and Facilities.

9A BIODIVERSITY CERTIFIED LAND

The land **is** biodiversity certified land within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*.

10 BIOBANKING AGREEMENTS

Council has not been notified by the Director-General of the Department of Planning and Environment of an agreement issued under Part 7A of the *Threatened Species Conservation Act 1995*.

11 BUSHFIRE PRONE LAND

The information currently available to Council indicates **all** of the land is shown as bush fire prone land according to the Act.

12 PROPERTY VEGETATION PLAN

This land is not subject to a property vegetation plan under the Native Vegetation Act 2003.

NOTE: The advice provided in this section is based on notification by the Local Land Services - Greater Sydney of the approval of a plan. Further information about property vegetation plans should be obtained from that Authority.

13 ORDER UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

Council has not been notified of an Order issued under the Trees (Disputes between Neighbours) Act 2006.

NOTE: This advice is based on information provided by the Land and Environment Court.

14 DIRECTIONS UNDER PART 3A

Not Applicable

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR SENIORS HOUSING

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTUCTURE

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

17 SITE COMPATIBILITY CERTIFICATES FOR AFFORDABLE RENTAL HOUSING

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

18 PAPER SUBDIVISION INFORMATION

1. THE NAME OF ANY DEVELOPMENT PLAN ADOPTED BY A RELEVANT AUTHORITY THAT APPLIES TO THIS LAND OR THAT IS PROPOSED TO BE SUBJECT TO A CONSENT BALLOT.

   Nil

2. THE DATE OF ANY SUBDIVISION ORDER THAT APPLIES TO THIS LAND.

   Not applicable

Words and expressions used in this clause have the same meaning as they have in Part 16C of this Regulation.

19 SITE VERIFICATION CERTIFICATE

Council is not aware of a Site Verification Certificate having been issued by the Director-General of the Department of Planning and Environment in respect to this land.

Note: A site verification certificate sets out the Director-General's opinion as to whether the land concerned is or is not biophysical strategic agricultural land or critical industry cluster land—see Division 3 of Part 4AA of *State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007*.

20 LOOSE-FILL ASBESTOS INSULATION

This land does not include any residential premises (within the meaning of Division 1A of Part 8 of the *Home Building Act 1989*) that are listed on the register that is required to be maintained under that Division. That register lists residential premises that contain or have contained loose-fill asbestos insulation.

21 AFFECTED BUILDING NOTICES AND BUILDING PRODUCT RECTIFICFATION ORDERS (Building Products Safety Act 2017)

1. Is there any affected building notice of which the council is aware that is in force in respect of the land?

   No

2.a Is there any building product rectification order of which the council is aware that is in force in respect of the land and has not been fully complied with?

   No

2.b Is there any notice of intention to make a building product rectification order of which the council is aware has been given in respect of the land and is outstanding.

   No

22 CONTAMINATED LAND MANAGEMENT ACT 1997

Nil Prescribed Matters

23 ADVICE PROVIDED PURSUANT TO S.10.7(5) OF THE ENVIRONMENTAL PLANNING AND ASSESSMENT ACT 1979

23.1 Prescribed Streams

Approval of the NSW Office of Water is required before the removal of any native vegetation within 20 metres of a prescribed stream. Contact the Office of Water for details.

23.2 Special Contributions Area Order

Department of Planning document - to constitute certain land in the Central Coast Local Government area as a Special Contributions Area (enquiries to the Department of Planning and Environment).

Special Infrastructure Contributions Plan

Department of Planning document - outlines a proposal to fund the provision of sub-regional and regional infrastructure (enquiries to the Department of Planning and Environment).

*****

For any enquiries regarding this Certificate please contact Council's Customer Contact Centre on 4350 5555.

Ananya Senjuti
Signed on Behalf of Council

LAND USE TABLE

Zone R1 General Residential

Wyong Local Environmental Plan 2013

1 Objectives of zone

- To provide for the housing needs of the community.
- To provide for a variety of housing types and densities.
- To enable other land uses that provide facilities or services to meet the day to day needs of residents.
- To promote “walkable” neighbourhoods.
- To ensure development is compatible with the scale and character of the local area and complements the existing streetscape.

2 Permitted without consent

Home occupations

3 Permitted with consent

Attached dwellings; Bed and breakfast accommodation; Boarding houses; Boat launching ramps; Boat sheds; Car parks; Caravan parks; Centre-based child care facilities; Community facilities; Dual occupancies; Dwelling houses; Educational establishments; Emergency services facilities; Environmental facilities; Environmental protection works; Exhibition homes; Exhibition villages; Flood mitigation works; Group homes; Home-based child care; Home businesses; Home industries; Home occupations (sex services); Hostels; Hotel or motel accommodation; Information and education facilities; Jetties; Multi dwelling housing; Neighbourhood shops; Places of public worship; Recreation areas; Residential flat buildings; Respite day care centres; Roads; Secondary dwellings; Semi-detached dwellings; Seniors housing; Serviced apartments; Shop top housing; Signage; Water recycling facilities; Water reticulation systems; Water storage facilities

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTUCTURE

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

17 SITE COMPATIBILITY CERTIFICATES FOR AFFORDABLE RENTAL HOUSING

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

18 PAPER SUBDIVISION INFORMATION

1. THE NAME OF ANY DEVELOPMENT PLAN ADOPTED BY A RELEVANT AUTHORITY THAT APPLIES TO THIS LAND OR THAT IS PROPOSED TO BE SUBJECT TO A CONSENT BALLOT.

   Nil

2. THE DATE OF ANY SUBDIVISION ORDER THAT APPLIES TO THIS LAND.

   Not applicable

Words and expressions used in this clause have the same meaning as they have in Part 16C of this Regulation.

19 SITE VERIFICATION CERTIFICATE

Council is not aware of a Site Verification Certificate having been issued by the Director-General of the Department of Planning and Environment in respect to this land.

Note: A site verification certificate sets out the Director-General's opinion as to whether the land concerned is or is not biophysical strategic agricultural land or critical industry cluster land—see Division 3 of Part 4AA of *State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007*.

20 LOOSE-FILL ASBESTOS INSULATION

This land does not include any residential premises (within the meaning of Division 1A of Part 8 of the *Home Building Act 1989*) that are listed on the register that is required to be maintained under that Division. That register lists residential premises that contain or have contained loose-fill asbestos insulation.

21 AFFECTED BUILDING NOTICES AND BUILDING PRODUCT RECTIFICFATION ORDERS (Building Products Safety Act 2017)

1. Is there any affected building notice of which the council is aware that is in force in respect of the land?

   No

2.a Is there any building product rectification order of which the council is aware that is in force in respect of the land and has not been fully complied with?

   No

2.b Is there any notice of intention to make a building product rectification order of which the council is aware has been given in respect of the land and is outstanding.

   No

22 CONTAMINATED LAND MANAGEMENT ACT 1997

Nil Prescribed Matters

23 ADVICE PROVIDED PURSUANT TO S.10.7(5) OF THE ENVIRONMENTAL PLANNING AND ASSESSMENT ACT 1979

23.1 Prescribed Streams

Approval of the NSW Office of Water is required before the removal of any native vegetation within 20 metres of a prescribed stream. Contact the Office of Water for details.

23.2 Special Contributions Area Order

Department of Planning document - to constitute certain land in the Central Coast Local Government area as a Special Contributions Area (enquiries to the Department of Planning and Environment).

Special Infrastructure Contributions Plan

Department of Planning document - outlines a proposal to fund the provision of sub-regional and regional infrastructure (enquiries to the Department of Planning and Environment).

SECTION 10.7(2) AND (5) PLANNING CERTIFICATE

This Planning Certificate is issued on 29 November 2018 in respect to the land described below, pursuant to s.10.7 of the Environmental Planning and Assessment Act 1979

Fee paid:	$133.00
Receipt No:	13314459
Receipt Date:	29 November 2018

DESCRIPTION OF LAND
COUNTY OF NORTHUMBERLAND

Property Address:	107 Sparks Road, WOONGARRAH NSW 2259
Property Description:	Lot 41 DP 1200210
Property Owner:	Central Coast Council

The information contained within this certificate relates to the land.

1 RELEVANT PLANNING INSTRUMENTS AND DEVELOPMENT CONTROL PLANS

1.1 Environmental Planning Instruments which apply to the land

Wyong Local Environmental Plan 2013

State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004
State Environmental Planning Policy No 21 – Caravan Parks
State Environmental Planning Policy No 30 – Intensive Agriculture
State Environmental Planning Policy No 36 – Manufactured Home Estates
State Environmental Planning Policy No 44 – Koala Habitat Protection
State Environmental Planning Policy No 50 – Canal Estate Development
State Environmental Planning Policy No 55 – Remediation of Land
State Environmental Planning Policy No 62 – Sustainable Aquaculture
State Environmental Planning Policy No 64 – Advertising and Signage
State Environmental Planning Policy No 65 – Design Quality of Residential Flat Development
State Environmental Planning Policy (State Significant Precincts) 2005
State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004

State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007
State Environmental Planning Policy (Infrastructure) 2007
State Environmental Planning Policy (Exempt and Complying Development Codes) 2008
State Environmental Planning Policy (Affordable Rental Housing) 2009
State Environmental Planning Policy (State and Regional Development) 2011
State Environmental Planning Policy (Miscellaneous Consent Provisions) 2007
State Environmental Planning Policy (Vegetation in Non-Rural Areas) 2017
State Environmental Planning Policy (Educational Establishments and Child Care Facilities) 2017

1.2 Proposed Environmental Planning Instruments which will apply to the land and is or has been the subject the subject of community consultation or public exhibition

The land is not subject to any Draft Local Environmental Plans.

Draft Amendment to State Environmental Planning Policy No 44 – Koala Habitat Protection
Draft State Environmental Planning Policy (Primary Production and Rural Development) 2017

1.3 Development Control Plans

Development Control Plan 2013 applies to this land.

2 ZONING AND LAND USE

a Identity of the Zone

2A ZONING AND LAND USE UNDER STATE ENVIRONMENTAL PLANNING POLICY (SYDNEY REGION GROWTH CENTRES) 2006

Not applicable

3 COMPLYING DEVELOPMENT

Whether or not the land is land on which complying development can be carried out under each of the codes for complying development because of the provisions of clause 1.17A (c) and (d) and 1.19 of *State Environmental Planning Policy (Exempt and Complying Development Codes) 2008?*

1. PART 3 – HOUSING CODE

   a Complying Development under the General Housing Code **may** be carried out on the land.

2. PART 3A – RURAL HOUSING CODE

   a Complying development under the Rural Housing Code **may** be carried out on the land providing the land is not less than the minimum lot size for the erection of a dwelling house under the Wyong Local Environmental Plan 2013.

3. PART 3B – LOW RISE MEDIUM HOUSING CODE

   a Complying Development under the Low Rise Medium Density Housing Code **may** be carried out on the land.

4. PART 4 – HOUSING ALTERATIONS CODE

a Complying development under the Housing Alterations Code **may** be carried out on the land.

5. PART 4A – GENERAL DEVELOPMENT CODE

a Complying development under the General Development Code **may** be carried out on the land.

6. PART 5 – COMMERCIAL AND INDUSTRIAL ALTERATIONS CODE

a Complying development under the Commercial and Industrial Alterations Code **may** be carried out on the land.

7. PART 5A – COMMERCIAL AND INDUSTRIAL (NEW BUILDINGS AND ADDITIONS) CODE

a Complying development under the Commercial and Industrial (New Buildings and Additions) Code **may** be carried out on the land.

8. PART 5B – CONTAINER RECYCLING FACILITIES CODE

a Complying Development under the Container Recycling Facilities Code **may** be carried out on the land.

9. PART 6 – SUBDIVISIONS CODE

a Complying development under the Subdivisions Code **may** be carried out on the land.

10. PART 7 – DEMOLITION CODE

a Complying development under the Demolition code **may** be carried out on the land.

11. PART 8 – FIRE SAFETY CODE

a Complying development under the Fire Safety Code **may** be carried out on the land.

4, 4A (Repealed)

4B ANNUAL CHARGES UNDER LOCAL GOVERNMENT ACT 1993 FOR COASTAL PROTECTION SERVICES THAT RELATE TO EXISTING COASTAL PROTECTION WORKS

The owner (or any previous owner) of the land has not consented in writing to the land being subject to annual charges under section 496B of the *Local Government Act 1993* for coastal protection services that relate to existing coastal protection works.

5 MINE SUBSIDENCE

The land is not within a proclaimed Mine Subsidence District.

6 ROAD WIDENING OR ROAD ALIGNMENT

1. DIVISION 2 SECTION 25 OF THE ROADS ACT 1993

   The land is not affected by road realignment or road widening under the above.

2. ENVIRONMENTAL PLANNING INSTRUMENT

   The land is not affected by road widening or road re-alignment under the above.

3. COUNCIL RESOLUTIONS

   The land is not affected by road widening or road re-alignment under the above.

   However, it should be noted that this parcel either fronts or abuts a road under the control of the Roads and Maritime Services. For further details regarding road widening please refer to that agency.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES TO RESTRICT DEVELOPMENT DUE TO RISK

This land is **not** affected by a policy that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

7A FLOOD RELATED DEVELOPMENT CONTROLS

1. Development on this land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or senior housing) and for other purposes is **not** subject to flood related development controls.

2. Development on this land or part of the land for any other purpose is **not** subject to flood related development controls.

A word or expression used in this clause has the same meaning as it has in the *Floodplain Development Manual* (ISBN 0 7347 5476 0), published by the NSW Government in April 2005, unless it is otherwise defined in this Plan.

8 LAND RESERVED FOR ACQUISITION

The following environmental planning instruments and proposed environmental planning instruments make provisions for the acquisition of land by a public authority as referred to in Section 3.15 of the Act:

Nil

9 CONTRIBUTION PLANS

The land is subject to Section 94 Contributions Plan – Warnervale District.

The land is subject to Section 94 Development Contributions Plan – Warnervale Town Centre.

This land is subject to the Wyong Shire Section 94A Levy Development Contributions Plan.

This land is subject to the Section 94 Contributions Plan for Wyong Shire No. 11 - Shirewide Infrastructure, Services and Facilities.

9A BIODIVERSITY CERTIFIED LAND

The land **is** biodiversity certified land within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*.

10 BIOBANKING AGREEMENTS

Council has not been notified by the Director-General of the Department of Planning and Environment of an agreement issued under Part 7A of the *Threatened Species Conservation Act 1995*.

11 BUSHFIRE PRONE LAND

The information currently available to Council indicates **all** of the land is shown as bush fire prone land according to the Act.

12 PROPERTY VEGETATION PLAN

This land is not subject to a property vegetation plan under the Native Vegetation Act 2003.

NOTE: The advice provided in this section is based on notification by the Local Land Services - Greater Sydney of the approval of a plan. Further information about property vegetation plans should be obtained from that Authority.

13 ORDER UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

Council has not been notified of an Order issued under the Trees (Disputes between Neighbours) Act 2006.

NOTE: This advice is based on information provided by the Land and Environment Court.

14 DIRECTIONS UNDER PART 3A

Not Applicable

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR SENIORS HOUSING

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTUCTURE

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

17 SITE COMPATIBILITY CERTIFICATES FOR AFFORDABLE RENTAL HOUSING

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

18 PAPER SUBDIVISION INFORMATION

1. THE NAME OF ANY DEVELOPMENT PLAN ADOPTED BY A RELEVANT AUTHORITY THAT APPLIES TO THIS LAND OR THAT IS PROPOSED TO BE SUBJECT TO A CONSENT BALLOT.

   Nil

2. THE DATE OF ANY SUBDIVISION ORDER THAT APPLIES TO THIS LAND.

   Not applicable

Words and expressions used in this clause have the same meaning as they have in Part 16C

of this Regulation.

19 SITE VERIFICATION CERTIFICATE

Council is not aware of a Site Verification Certificate having been issued by the Director-General of the Department of Planning and Environment in respect to this land.

Note: A site verification certificate sets out the Director-General's opinion as to whether the land concerned is or is not biophysical strategic agricultural land or critical industry cluster land—see Division 3 of Part 4AA of *State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007*.

20 LOOSE-FILL ASBESTOS INSULATION

This land does not include any residential premises (within the meaning of Division 1A of Part 8 of the *Home Building Act 1989*) that are listed on the register that is required to be maintained under that Division. That register lists residential premises that contain or have contained loose-fill asbestos insulation.

21 AFFECTED BUILDING NOTICES AND BUILDING PRODUCT RECTIFICFATION ORDERS (Building Products Safety Act 2017)

1. Is there any affected building notice of which the council is aware that is in force in respect of the land?

   No

2.a Is there any building product rectification order of which the council is aware that is in force in respect of the land and has not been fully complied with?

   No

2.b Is there any notice of intention to make a building product rectification order of which the council is aware has been given in respect of the land and is outstanding.

   No

a Complying development under the Subdivisions Code **may** be carried out on the land.

8. PART 7 – DEMOLITION CODE

a Complying development under the Demolition code **may** be carried out on the land.

9. PART 8 – FIRE SAFETY CODE

a Complying development under the Fire Safety Code **may** be carried out on the land.

4B ANNUAL CHARGES UNDER LOCAL GOVERNMENT ACT 1993 FOR COASTAL PROTECTION SERVICES THAT RELATE TO EXISTING COASTAL

PROTECTION WORKS

The owner (or any previous owner) of the land has not consented in writing to the land being subject to annual charges under section 496B of the *Local Government Act 1993* for coastal protection services that relate to existing coastal protection works.

5 MINE SUBSIDENCE

The land is not within a proclaimed Mine Subsidence District.

6 ROAD WIDENING OR ROAD ALIGNMENT

1. DIVISION 2 SECTION 25 OF THE ROADS ACT 1993

   The land is not affected by road realignment or road widening under the above.

2. ENVIRONMENTAL PLANNING INSTRUMENT

   The land is not affected by road widening or road re-alignment under the above.

3. COUNCIL RESOLUTIONS

   The land is not affected by road widening or road re-alignment under the above.
   The land is not affected by road widening or road re-alignment under the above.

   However, it should be noted that this parcel either fronts or abuts a road under the control of the Roads and Maritime Services. For further details regarding road widening please refer to that agency.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES TO RESTRICT DEVELOPMENT DUE TO RISK

This land is **not** affected by a policy that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

7A FLOOD RELATED DEVELOPMENT CONTROLS

1. Development on this land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or senior housing) and for other purposes is **not** subject to flood related development controls.

2. Development on this land or part of the land for any other purpose is **not** subject to flood related development controls.

A word or expression used in this clause has the same meaning as it has in the *Floodplain Development Manual* (ISBN 0 7347 5476 0), published by the NSW Government in April 2005, unless it is otherwise defined in this Plan.

8 LAND RESERVED FOR ACQUISITION

The following environmental planning instruments and proposed environmental planning instruments make provisions for the acquisition of land by a public authority as referred to in Section 3.15 of the Act:

Nil

9 CONTRIBUTION PLANS

The land is subject to Section 94 Contributions Plan – Warnervale District.

The land is subject to Section 94 Development Contributions Plan – Warnervale Town Centre.

This land is subject to the Wyong Shire Section 94A Levy Development Contributions Plan.

This land is subject to the Section 94 Contributions Plan for Wyong Shire No. 11 - Shirewide Infrastructure, Services and Facilities.

9A BIODIVERSITY CERTIFIED LAND

The land **is** biodiversity certified land within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*.

10 BIOBANKING AGREEMENTS

Council has not been notified by the Director-General of the Department of Planning and Environment of an agreement issued under Part 7A of the *Threatened Species Conservation Act 1995*.

11 BUSHFIRE PRONE LAND

The information currently available to Council indicates **all** of the land is shown as bush fire prone land according to the Act.

12 PROPERTY VEGETATION PLAN

This land is not subject to a property vegetation plan under the Native Vegetation Act 2003.

NOTE: The advice provided in this section is based on notification by the Local Land Services - Greater Sydney of the approval of a plan. Further information about property vegetation plans should be obtained from that Authority.

13 ORDER UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

Council has not been notified of an Order issued under the Trees (Disputes between Neighbours) Act 2006.

NOTE: This advice is based on information provided by the Land and Environment Court.

Not Applicable

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR SENIORS HOUSING

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTUCTURE

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

17 SITE COMPATIBILITY CERTIFICATES FOR AFFORDABLE RENTAL HOUSING

Council is not aware of there being a valid Site Compatibility Certificate issued by the Director-General of the Department of Planning and Environment in respect of the land.

NOTE: This advice is based on information provided by the NSW Department of Planning and Environment.

18 PAPER SUBDIVISION INFORMATION

1. THE NAME OF ANY DEVELOPMENT PLAN ADOPTED BY A RELEVANT AUTHORITY THAT APPLIES TO THIS LAND OR THAT IS PROPOSED TO BE SUBJECT TO A CONSENT BALLOT.

   Nil

2. THE DATE OF ANY SUBDIVISION ORDER THAT APPLIES TO THIS LAND.

   Not applicable

Words and expressions used in this clause have the same meaning as they have in Part 16C of this Regulation.

19 SITE VERIFICATION CERTIFICATE

Council is not aware of a Site Verification Certificate having been issued by the Director-General of the Department of Planning and Environment in respect to this land.

Note: A site verification certificate sets out the Director-General's opinion as to whether the land concerned is or is not biophysical strategic agricultural land or critical industry cluster land—see Division 3 of Part 4AA of *State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007*.

20 LOOSE-FILL ASBESTOS INSULATION

This land does not include any residential premises (within the meaning of Division 1A of Part 8 of the *Home Building Act 1989*) that are listed on the register that is required to be maintained under that Division. That register lists residential premises that contain or have contained loose-fill asbestos insulation.

21 AFFECTED BUILDING NOTICES AND BUILDING PRODUCT RECTIFICFATION ORDERS (Building Products Safety Act 2017)

1. Is there any affected building notice of which the council is aware that is in force in respect of the land?

   No

2.a Is there any building product rectification order of which the council is aware that is in force in respect of the land and has not been fully complied with?

   No

2.b Is there any notice of intention to make a building product rectification order of which the council is aware has been given in respect of the land and is outstanding.

   No

22 CONTAMINATED LAND MANAGEMENT ACT 1997

Nil Prescribed Matters

23 ADVICE PROVIDED PURSUANT TO S.10.7(5) OF THE ENVIRONMENTAL PLANNING AND ASSESSMENT ACT 1979

23.1 Prescribed Streams

Approval of the NSW Office of Water is required before the removal of any native vegetation within 20 metres of a prescribed stream. Contact the Office of Water for details.

23.2 Special Contributions Area Order

Department of Planning document - to constitute certain land in the Central Coast Local Government area as a Special Contributions Area (enquiries to the Department of Planning and Environment).

Special Infrastructure Contributions Plan

Department of Planning document - outlines a proposal to fund the provision of sub-regional and regional infrastructure (enquiries to the Department of Planning and Environment).

*****

For any enquiries regarding this Certificate please contact Council's Customer Contact Centre on 4350 5555.

Tim Ennis
Signed on Behalf of Council

LAND USE TABLE

Zone RE1 Public Recreation

Wyong Local Environmental Plan 2013

1 Objectives of zone

- To enable land to be used for public open space or recreational purposes.
- To provide a range of recreational settings and activities and compatible land uses.
- To protect and enhance the natural environment for recreational purposes.
- To provide linked open space for ecosystem continuity, public access, local community recreation and waterway protection.
- To provide space for integrated stormwater treatment devices for flow and water quality management.
- To enable ancillary development that complements land zoned for recreational purposes.

2 Permitted without consent

Nil.

3 Permitted with consent

Boat launching ramps; Boat sheds; Building identification signs; Business identification signs; Camping grounds; Caravan parks; Charter and tourism boating facilities; Centre-based child care facilities; Community facilities; Eco-tourist facilities; Emergency services facilities; Entertainment facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Food and drink premises; Function centres; Information and education facilities; Jetties; Kiosks; Marinas; Markets; Mooring pens; Moorings; Public administration buildings; Recreation areas; Recreation facilities (indoor); Recreation facilities (major); Recreation facilities (outdoor); Registered clubs; Respite day care centres; Roads; Sewerage systems; Waste or resource management facilities; Water recreation structures; Water supply systems

4 Prohibited

Any development not specified in item 2 or 3

LAND USE TABLE

Zone E3 Environmental Management

Wyong Local Environmental Plan 2013

1 Objectives of zone

- To protect, manage and restore areas with special ecological, scientific, cultural or aesthetic values.
- To provide for a limited range of development that does not have an adverse effect on those values.

2 Permitted without consent

Home occupations

3 Permitted with consent

Bed and breakfast accommodation; Building identification signs; Business identification signs; Community facilities; Dual occupancies; Dwelling houses; Eco-tourist facilities; Emergency services facilities; Environmental facilities; Environmental protection works; Extensive agriculture; Farm buildings; Farm stay accommodation; Flood mitigation works; Home-based child care; Home businesses; Home industries; Horticulture; Information and education facilities; Recreation areas; Research stations; Roads; Roadside stalls; Secondary dwellings; Sewage treatment plants; Water recreation structures; Water recycling facilities; Water supply systems

4 Prohibited

Industries; Multi dwelling housing; Residential flat buildings; Retail premises; Seniors housing; Service stations; Warehouse or distribution centres; Any other development not specified in item 2 or 3.

LAND USE TABLE

Zone B4 Mixed Use
Wyong Local Environmental Plan 2013

1 Objectives of zone

- To provide a mixture of compatible land uses.
- To integrate suitable business, office, residential, retail and other development in accessible locations so as to maximise public transport patronage and encourage walking and cycling.
- To permit residential accommodation while maintaining active retail, business and other non-residential uses at street level.
- To encourage development that supports or complements the primary office and retail functions of the zone.
- To minimise conflict between land uses within the zone and land uses within adjoining zones.

2 Permitted without consent

Nil

3 Permitted with consent

Boarding houses; Centre-based child care facilities; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Function centres; Hotel or motel accommodation; Information and education facilities; Medical centres; Passenger transport facilities; Recreation facilities (indoor); Registered clubs; Residential flat buildings; Respite day care centres; Restricted premises; Roads; Seniors housing; Sewage reticulation systems; Shop top housing; Water reticulation systems; Water storage facilities; Any other development not specified in item 2 or 4.

4 Prohibited

Agriculture; Air transport facilities; Airstrips; Animal boarding or training establishments; Boat building and repair facilities; Camping grounds; Caravan parks; Cemeteries; Crematoria; Depots; Eco-tourist facilities; Electricity generating works; Exhibition homes; Exhibition villages; Extractive industries; Farm buildings; Forestry; Freight transport facilities; Heavy industrial storage establishments; Industrial retail outlets; Industrial training facilities; Industries; Marinas; Mortuaries; Open cut mining; Residential accommodation; Resource recovery facilities; Rural industries; Sewerage systems; Sex services premises; Storage premises; Transport depots; Truck depots; Vehicle body repair workshops; Vehicle repair stations; Warehouse or distribution centres; Waste disposal facilities; Water supply systems; Wharf or boating facilities; Wholesale supplies

LAND USE TABLE

Zone R1 General Residential

Wyong Local Environmental Plan 2013

1 Objectives of zone

- To provide for the housing needs of the community.
- To provide for a variety of housing types and densities.
- To enable other land uses that provide facilities or services to meet the day to day needs of residents.
- To promote “walkable” neighbourhoods.
- To ensure development is compatible with the scale and character of the local area and complements the existing streetscape.

2 Permitted without consent

Home occupations

3 Permitted with consent

Attached dwellings; Bed and breakfast accommodation; Boarding houses; Boat launching ramps; Boat sheds; Car parks; Caravan parks; Centre-based child care facilities; Community facilities; Dual occupancies; Dwelling houses; Educational establishments; Emergency services facilities; Environmental facilities; Environmental protection works; Exhibition homes; Exhibition villages; Flood mitigation works; Group homes; Home-based child care; Home businesses; Home industries; Home occupations (sex services); Hostels; Hotel or motel accommodation; Information and education facilities; Jetties; Multi dwelling housing; Neighbourhood shops; Places of public worship; Recreation areas; Residential flat buildings; Respite day care centres; Roads; Secondary dwellings; Semi-detached dwellings; Seniors housing; Serviced apartments; Shop top housing; Signage; Water recycling facilities; Water reticulation systems; Water storage facilities

4 Prohibited

Any development not specified in item 2 or 3

LAND USE TABLE

Zone E2 Environmental Conservation
Wyong Local Environmental Plan 2013

1 Objectives of zone

- To protect, manage and restore areas of high ecological, scientific, cultural or aesthetic values.
- To prevent development that could destroy, damage or otherwise have an adverse effect on those values.
- To protect endangered ecological communities, coastal wetlands and littoral rainforests.
- To enable development of public works and environmental facilities if such development would not have a detrimental impact on ecological, scientific, cultural or aesthetic values.

2 Permitted without consent

Nil.

3 Permitted with consent

Eco-tourist facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Recreation areas; Research stations; Roads; Water reticulation systems.

4 Prohibited

Business premises; Hotel or motel accommodation; Industries; Multi dwelling housing; Recreation facilities (major); Residential flat buildings; Restricted premises; Retail premises; Seniors housing; Service stations; Warehouse or distribution centres; Any other development not specified in item 2 or 3.

LAND USE TABLE

Zone B2 Local Centre

Wyong Local Environmental Plan 2013

1 Objectives of zone

- To provide a range of retail, business, entertainment and community uses that serve the needs of people who live in, work in and visit the local area.
- To encourage employment opportunities in accessible locations.
- To maximise public transport patronage and encourage walking and cycling.
- To permit residential accommodation while maintaining active retail, business and other non-residential uses at street level.
- To minimise conflict between land uses within the zone and land uses within adjoining zones.

2 Permitted without consent

Nil

3 Permitted with consent

Boarding houses; Centre-based child care facilities; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Function centres; Information and education facilities; Medical centres; Passenger transport facilities; Recreation facilities (indoor); Registered clubs; Respite day care centres; Restricted premises; Roads; Service stations; Sewage reticulation systems; Shop top housing; Tourist and visitor accommodation; Water reticulation systems; Water storage facilities; Any other development not specified in item 2 or 4

4 Prohibited

Agriculture; Air transport facilities; Airstrips; Animal boarding or training establishments; Boat building and repair facilities; Camping grounds; Caravan parks; Cemeteries; Correctional centres; Crematoria; Depots; Eco-tourist facilities; Electricity generating works; Exhibition homes; Exhibition villages; Extractive industries; Farm buildings; Forestry; Freight transport facilities; Heavy industrial storage establishments; Industrial retail outlets; Industrial training facilities; Industries; Marinas; Mortuaries; Open cut mining; Recreation facilities (outdoor); Research stations; Residential accommodation; Resource recovery facilities; Rural industries; Sewerage systems; Storage premises; Transport depots; Truck depots; Vehicle body repair workshops; Vehicle repair stations; Warehouse or distribution centres; Waste disposal facilities; Water supply systems; Wharf or boating facilities; Wholesale supplies

*RPDs have only been considered where a concentration is greater than 0 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 50 (0-10 x EQL); 30 (10-20 x EQL); 30 (> 20 x EQL))
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

% Moisture	1	%	19

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Chloride	Melbourne	Nov 10, 2018	28 Day
- Method: LTM-INO-4090 Chloride by Discrete Analyser			
Conductivity (1:5 aqueous extract at 25°C as rec.)	Melbourne	Nov 10, 2018	7 Day
- Method: LTM-INO-4030 Conductivity			
pH (1:5 Aqueous extract at 25°C as rec.)	Melbourne	Nov 15, 2018	7 Day
- Method: LTM-GEN-7090 pH in soil by ISE			
Sulphate (as SO4)	Melbourne	Nov 10, 2018	28 Day
- Method: LTM-INO-4110 Sulfate by Discrete Analyser			
% Moisture	Melbourne	Nov 09, 2018	14 Day
- Method: LTM-GEN-7080 Moisture

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	Quality Systems Manual ver 5.1 US Department of Defense
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.1 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test			Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank									
Conductivity (1:5 aqueous extract at 25°C as rec.)			uS/cm	< 10			10	Pass

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins | mgt Suite B7A			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Nov 10, 2018	14 Day

Melbourne Laboratory - NATA Site # 1254 & 14271						X	X	X
Sydney Laboratory - NATA Site # 18217								
Brisbane Laboratory - NATA Site # 20794								
Perth Laboratory - NATA Site # 23736								
10	TP43 0.2-0.3M	Nov 05, 2018		Soil	M18-No10945	X	X	X
11	TP44 0.3-0.5M	Nov 05, 2018		Soil	M18-No10946	X	X	X
Test Counts						11	11	11

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	Quality Systems Manual ver 5.1 US Department of Defense
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.1 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q15	The RPD reported passes Eurofins | mgt's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Received Date	Dec 04, 2018
Date Reported	Dec 11, 2018

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name 111 SPARKS ROAD STAGE 2-10
Project ID 754-NTLGE216908
Date Sampled Nov 06, 2018
Report 631681-AID

Client Sample ID	Eurofins | mgt Sample No.	Date Sampled	Sample Description	Result
TP28 0.1-0.2M	18-De06935	Nov 06, 2018	Approximate Sample 62g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP31 0.1-0.2M	18-De06936	Nov 06, 2018	Approximate Sample 71g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP31 0.6-0.7M	18-De06937	Nov 06, 2018	Approximate Sample 66g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP32 0.3-0.5M	18-De06938	Nov 06, 2018	Approximate Sample 85g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP32 1.0-1.2M	18-De06939	Nov 06, 2018	Approximate Sample 64g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP33 0.1-0.2M	18-De06940	Nov 06, 2018	Approximate Sample 54g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP33 0.7-0.8M	18-De06941	Nov 06, 2018	Approximate Sample 75g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP41 0.1-0.2M	18-De06942	Nov 06, 2018	Approximate Sample 82g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.

Client Sample ID	Eurofins | mgt Sample No.	Date Sampled	Sample Description	Result
TP42 0.3-0.5M	18-De06943	Nov 06, 2018	Approximate Sample 80g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP43 0.2-0.3M	18-De06944	Nov 06, 2018	Approximate Sample 66g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP44 0.3-0.5M	18-De06945	Nov 06, 2018	Approximate Sample 81g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP35 0.8-0.9M	18-De06946	Nov 06, 2018	Approximate Sample 81g Sample consisted of: Light-brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP39 0.8M	18-De06947	Nov 06, 2018	Approximate Sample 79g Sample consisted of: Light-brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP37 0.2M	18-De06948	Nov 06, 2018	Approximate Sample 80g Sample consisted of: Light-brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP38 0.5M	18-De06949	Nov 06, 2018	Approximate Sample 66g Sample consisted of: Light-brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.
TP38 1.7M	18-De06950	Nov 06, 2018	Approximate Sample 80g Sample consisted of: Light-brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No respirable fibres detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

The samples received were not collected in an approved asbestos bag and was therefore sub-sampled from the 250mL glass jar. Valid sub-sampling procedures were applied so as to ensure that the sub-samples to be analysed accurately represented the samples received.

Eurofins | mgt accreditation number 1261, corporate site 1254 and 14271 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N/A	Not applicable

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

Project	: 754-NTLGE216908-AG	Date Samples Received	: 10-Oct-2018
Order number	:	Date Analysis Commenced	: 11-Oct-2018
C-O-C number	: 34419	Issue Date	: 16-Oct-2018
Sampler	: KF		
Site	:		
Quote number	: EN/222		
No. of samples received	: 1		
No. of samples analysed	: 1		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Dilani Fernando	Senior Inorganic Chemist	Melbourne Inorganics, Springvale, VIC

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EM1816250**	Page	: 1 of 4
Client	: **COFFEY ENVIRONMENTS PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: NIMA SALIMI	Telephone	: +61-3-8549 9609
Project	: 754-NTLGE216908-AG	Date Samples Received	: 10-Oct-2018
Site	:	Issue Date	: 16-Oct-2018
Sampler	: KF	No. of samples received	: 1
Order number	:	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation
EA055: Moisture Content (Dried @ 105-110°C)

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM amended 2013.
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270D. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260B. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM amended 2013.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 8.6 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Split sample sent to requested external lab.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes
