

Monday 25th March 2019

Attention: **Chris Khoury** - Director

CK Design

Level 2/240 Church Street Parramatta NSW 2150

**WASTE MANAGEMENT PROCESS
144-146 BORONIA RD, GREENACRE NSW**

Dear Chris, I have viewed your plans and swept paths for the above site and I can confirm that WASTEWISE are able to supply ongoing waste and recycling services upon completion of this development.

Residential Waste & Recycling collection:

- **General Waste** and **Commingled Recycling** will be deposited by residents and or caretakers in accessible waste storage room in basement
- Waste Streams will be stored separately in 660 Litre Mobile Garbage Bins. Utilising 660 Litre Mobile Garbage Bins, will minimise the service time and total number of bins on site.
- The **Waste Wise MINI** rear loader (height 2.08m, length 6.4m and width of 1.7m) will enter the basement from Boronia Road in a forward motion and stop in the designated area to service the bins in a safe and timely manner as per site requirements. On completion the vehicle will proceed to exit on to Boronia Road in a forward motion, turning left.
- By utilising 660 Litre Mobile Garbage Bins we ensure that the bin is only ever raised to the same height as the truck.
- **General Waste** will be serviced twice per week or as often as required.
- WWE will endeavour to transport General Waste to the nearest and best suited licensed disposal facility. In this vicinity there are several options including SUEZ Resource Recovery Auburn, Rockdale Resource Recovery centre and Banksmeadow Transfer Terminal.
- **Commingled Recycling** will be serviced once per week or as often as required.
- WWE will endeavour to transport General Waste to the nearest and best suited licensed disposal facility. In this vicinity there are several options including VISY Recycling centre St Peters, VISY Recycling centre Smithfield and WASTEFREE Recycling at Seven Hills.
- **General Waste** bins will be green with a Red Lid
- **Recycling** bins will be green with a yellow Lid
- Separated waste streams will be serviced on different days.

Ongoing management:

An information pack provided by Waste Wise Environmental will be distributed to all occupants of the building outlining responsibilities and procedures for segregating waste streams and collection.

Posters will be displayed in notice areas and above every general waste and commingle bin in the Bin Room to ensure residents understand what waste stream goes into which colour coded bin.

Waste Wise Environmental staff will attend site meetings as required to ensure and promote the waste system and encourage recycling outcomes.

Transport Vehicles:

All Waste Wise vehicles are;

Fitted with 4 flashing "Hazard Working Lights"

Fitted with a "Reverse warning Beeper"

Fitted with reverse camera to the driver's cabin

Fitted with Emergency Stop buttons on either side of the hopper

Please click on the link below to see one of our mini rearloaders at work
