Acoustics: Response to Council RFI (428.1/2018/NK) re. the noise impact assessment for the proposed development at 115 Cowpasture Road, Wetherill Park NSW

The day in question where rain affected the noise logging data (3rd December 2017) was a Sunday. The proposed development will not be operating on a Sunday and, therefore, the noise survey is not required to establish existing environmental noise levels on this day as the development is not operating.

I note that Point 2 as referenced from Section B1.2 'Measurement Procedure' of the NPfI states "Monitor the background noise and meteorological conditions continuously for each day of the week the proposed development will be operating and over the proposed operating hours".

In light of the above, KA is satisfied that our report remains valid.

Regards,

Adam Semple, MAAS
