L	Low treatment level: <0.1 t lime
M	Medium treatment level: >0.1 to 1 t lime
Н	High treatment level: >1 to 5 t lime
VH	Very High treatment: >5 tonne lime

The tonnes (t) of pure fine lime required to fully treat the total weight/volume of acid sulfate soil can be read from the table at the intersection of the weight of disturbed soil (row) with the soil sulfur analysis (column). Where the exact weight or soil analysis figure does not appear in the heading of the row or column, use the next highest value (or calculate values exactly). Lime rates are for pure fine CaCO<sub>3</sub> using a safety factor of 1.5. A factor that accounts for Effective Neutralising Value is needed for commercial grade lime. An approximate volume (cubic m) can be obtained by dividing weight (tonne) by bulk density (t/m<sup>3</sup>).

# Attachment B – Project Description

# KINGS HILL DEVELOPMENT WATER AND WASTEWATER INFRASTRUCTURE

**Project Description** 

25 JULY 2019

# GLOSSARY

Key Terms	Description
Kings Hill URA	Kings Hill Urban Residential Area
Proposal	Water and wastewater supply pipeline and a wastewater pumping station to support the Kings Hill URA
Proposal site	The Proposal stretches about 6.7 kilometres between Raymond Terrace in the south and Kings Hill Urban Residential Area in the north

# **1 PROPOSAL DESCRIPTION**

Approval for the Proposal is sought as Designated Development under Part 4 of the *Environmental Planning and Assessment 1979* (EP&A Act).

Included within this section is a description of the built form of the Proposal, the indicative construction methodology, and the operational procedures to be implemented.

### **1.1 Proposal overview**

Water and wastewater infrastructure would be developed to service the first stage of development of Kings Hill URA. Key components of the Proposal include:

- A water pipeline approximately 6.7 kilometres in length that would connect to existing Hunter Water Corporation (HWC) infrastructure in the south and Kings Hill URA in the north
- A wastewater pipeline approximately 4.2 kilometres in length that would connect to existing HWC infrastructure in the south and the wastewater pumping station (WWPS) to be constructed within Kings Hill URA in the north
- A WWPS within Kings Hill URA, including a hardstand area for vehicular access during operation
- Temporary compound areas to be utilised during construction.

An overview of the Proposal is shown in Figure 1-1. The alignment, built form, construction and operation of the Proposal is described in detail in the following sections (1.1.1 to 1.2).

The Proposal includes the connection of the URA to the existing water and wastewater services. The proposed pipelines terminate at the south of the URA. Further development of water and wastewater infrastructure (i.e. additional or upgraded infrastructure) would be required to service Kings Hill URA as additional stages are developed. This further development of water and wastewater infrastructure does not comprise part of the Proposal, i.e. is subject to future approval.

Figure 1-1: Context of the proposal

### 1.1.1 Infrastructure alignment

In the south, the proposed watermain would connect to the existing Raymond Terrace Water Pump Station located near the intersection of Irrawang Street and William Street (Figure 1-2). The alignment of the watermain would be located in the road verge of Irrawang Street, Adelaide Street (Figure 1-3) and Rees James Road (Figure 1-4), and would pass through Council-owned land, Newbury Park, between Adelaide Street and Mount Hall Road (Figure 1-5).

The proposed wastewater rising main would be connected to the existing gravity network at a maintenance hole near Panorama Close (MH K1950). From this point, the alignment of both the watermain and wastewater rising main is shared and would be located in the verge of Rees James Road before entering HWC-owned land to the north of the end of Rees James Road.

Within the HWC-owned land, the alignment is located in proximity to the western side of the Pacific Highway and beneath an existing overhead electrical easement, from which trees and shrubs have been removed (Figure 1-6). The alignment would cross both Grahamstown Spillway (Figure 1-7), and further north, Irrawang Spillway (Figure 1-8).

North of Irrawang Spillway, the alignment deviates north-west into Kings Hill URA (Figure 1-9), where the wastewater rising main would connect to the proposed WWPS.

The alignment of the pipelines and associated infrastructure may be altered (subject to remaining within the construction footprint) during detailed design of the Proposal.

Figure 1-7 Grahamstown Spillway within HWC-owned land, and Pacific Highway bridge across the spillway

Figure 1-8 Irrawang Spillway within HWCowned land

Figure 1-9 KHD-owned land within Kings Hill URA

### **1.2 Built form**

The water and wastewater pipelines would follow the same alignment, with the pipes laid on top of and surrounded by single sized aggregate embedment material in parallel trenches approximately 600 millimetres and 900 millimetres wide, respectively. The trenches would be a maximum of six metres deep and would be situated approximately 600 millimetres apart.

Where the pipelines would intercept already existing infrastructure, the alignments may be separated by a greater distance to avoid relocation of existing infrastructure. This would be confirmed as part of detailed design.

The pipes would be buried using excavated material and topsoil retained from the trench excavation. At sections of the alignment where open trenching is not possible, underboring would be the preferred method. Locations where this would occur includes, but is not limited to:

- Irrawang Spillway
- Grahamstown Spillway
- Adelaide St.

The alternative option for crossing Irrawang and Grahamstown Spillways would be to attach the pipelines to existing above-ground spillway infrastructure or to the existing bridges where the Pacific Highway crosses the spillways. The final built-form approach (underboring or attaching to existing infrastructure) would be confirmed as part of detailed design.

This section should be read in conjunction with Figure 1-10.

### **1.2.1 Wastewater infrastructure**

Wastewater infrastructure would be designed and constructed in accordance with the requirements of *Wastewater Supply Code of Australia (WSA 03) – Hunter Water Edition.* The wastewater infrastructure included in the Proposal is discussed below.

### 1.2.1.1 WWPS

A WWPS would be designed and constructed in accordance with HWC's specifications within the south-eastern portion of Kings Hill URA.

Underground infrastructure would generally include (but not be limited to):

- An induct and educt vent pipe
- Stop valves and reflux valves
- A valve pit
- A wet well constructed of concrete with gas-tight cover
- A collecting maintenance hole and flow relief structure pipework
- Water service pipes
- Electrical conduits and connections.

Aboveground infrastructure would include:

- An induct vent cover
- An educt vent stack
- A valve pit cover
- A maintenance hole cover

- The outlet point of the flow relief structure
- A water meter
- A standpipe and yard tap
- Septicity management system
- An electrical switchboard and connection box
- A concrete hardstand area and access track
- Security fencing, gates and/or chains, as required.

A flow relief structure would be incorporated into the WWPS design as an emergency precaution due to the potential for sewer overflows to occur. The structure would ensure flow relief occurs at a planned rather than an unplanned location.

The exact location of the WWPS would be determined during detailed design. Figure 1-10 identifies the area within which a final location would be chosen.

A pump station design report would be issued to HWC for review and approval during detailed design. This report would consider multiple aspects as required by HWC guidelines, including a separate Emergency Relief Overflow Structure Report that would provide further detail on the Emergency Relief Structure (ERS).

### 1.2.1.2 Pipeline

The wastewater pipeline would be approximately 4.2 kilometres long and would convey wastewater from the WWPS within Kings Hill URA in the north, to HWC's existing network in Raymond Terrace in the south.

From the wet well within the WWPS, wastewater would be pumped through a continuous rising main, constructed of polyvinylchloride (PVC), ductile iron with concrete lining (DICL) or polyethylene (PE), before connecting to a gravity main and discharging into the existing gravity network at a maintenance hole near Panorama Close (MH K1950) in Raymond Terrace.

Ventilation stacks would be constructed to provide effective odour removal along the wastewater pipeline. A stack is already located at MH 1950 where the proposed pipeline would connect to the existing gravity network. Additional stacks would be located at the WWPS and, where required, at high points along the alignment. The exact location of the stacks would be determined during detailed design.

### 1.2.2 Water infrastructure

Water infrastructure would be designed and constructed in accordance with the requirements of *Water Supply Code of Australia WSA – 2002-2.3 Hunter Water Edition.* 

A watermain would convey potable water from HWC's existing network in Raymond Terrace in the south to Kings Hill URA in the north.

The watermain, constructed of polyvinylchloride (PVC), ductile iron with concrete lining (DICL) or polyethylene (PE), would be connected to an existing water pump station at Raymond Terrace, located near the intersection of Irrawang Street and William Street. Water would flow through the watermain about 6.7 kilometres to the south-eastern portion of Kings Hill URA.

Construction of this water infrastructure would also include adjustment to pump set points, and minor modifications to surrounding pipework at the existing water pump station at Raymond Terrace.

Hydrants and stop valves would be installed at regular intervals along the pipeline in easily accessible locations, as per HWC requirements.

Fourteen scour valves and 13 air valves would be installed along the alignment at topographic low points and high points, respectively. These would be constructed as per HWC requirements.

A chorine injection point would be required at the northern end of the pipeline adjacent to KHD. The exact location of the point would be determined during detailed design. Figure 1-10 identifies the area within which a final location would be chosen. This point would be designed as per HWC specifications.

Figure 1-10: Water and wastewater infrastructure built form features

### 1.2.3 Utilities interaction

The Proposal is designed to generally avoid interaction with existing utilities, such as power and gas lines, where practicable. The preferred option would be to lay the two pipes above the existing utilities infrastructure with minimum clearance achieved in accordance with Part 1, Table 5.5 of the *Water Supply Code of Australia (WSA 03 – 2011)* and Part 1, Table 5.4 of the *Gravity Sewerage Code of Australia (WSA 02 – 2014)*. Where interaction is unavoidable, utility providers would be consulted regarding the relocation of existing structures during detailed design. Utilities with which the Proposal would likely interact includes:

- Electrical
- NBN
- Gas
- Telstra
- Optus
- Stormwater
- Water
- Wastewater

The Proposal would connect to existing HWC infrastructure in Raymond Terrace. HWC has been consulted regarding connection to existing infrastructure and access to HWC property.

### 1.2.4 Subdivision and easements

It is not intended that subdivision would be sought as part of the Proposal. Rather, the infrastructure would be located within easements through existing lots owned by various landowners. Impacted lots are summarised in Table 1-1.

Subdivision of land within the Kings Hill URA would be considered as part of a separate assessment and is not in scope for the Proposal.

Chainage	Lot Number	DP	Description	Owner
0	1	DP1085482	Water Pumping Station	HWC
0	1	DP1226115	Area adjacent to Water Pumping Station	Council
0-800	N/A	N/A	Road Reserve Irrawang St Mount Hall Rd	Council
800-1015	35	DP259487	Newbury Park	Council
800-1015	36	DP259487	Newbury Park	Council
800-1015	38	DP259487	Newbury Park	Council
1015-4800	N/A	N/A	Road Reserve Adelaide St Rees James Rd Pacific Highway	Council / Roads and Maritime
1900-2000	175	DP251129	Road Reserve Adelaide St	Council

Table 1-1 Lots impacted by infrastructure

2000-2100	291	DP262169	Road Reserve Adelaide St Rees James Rd	Council
2150-2300	292	DP262169	Road Reserve Rees James Rd	Council
2360-2675	4	DP241685	Parkland	HWC

6120-6600	42	DP1037411	Riding for the Disabled Association NSW	Riding for the Disabled Association NSW

### **1.3 Construction**

Construction of the Proposal would be undertaken generally in accordance with HWC Standard Technical Specifications and Water Services Association of Australia (WSAA) Codes, including, but not limited to:

- Hunter Water Corporation Standard Technical Specification for Construction of Sewer Rising Mains (STS403)
- Hunter Water Corporation Standard Technical Specification for Construction of Submersible Sewage Pumping Stations (STS402)
- Hunter Water Corporation Standard Technical Specification for Chemical Storage and Delivery Systems (STS670)
- Hunter Water Corporation Standard Technical Specification for Environmental Protection Measures for Construction sites (STS900)
- Wastewater Supply Code of Australia (WSA 02-2014) Hunter Water Edition
- Water Supply Code of Australia (WSA 03 2011) Hunter Water Edition.

### 1.3.1 Scheduling and staging

Construction for the Proposal would be likely to begin in 1<sup>st</sup> quarter of 2020 and last approximately nine months. Construction would be likely to occur concurrently in multiple decentralised work zones, and as such work would be at various stages at different points within the Proposal site. Construction in the vicinity of Adelaide St between William Bailey St and the Sleepy Hill Motor Inn, as well as construction through Newbury Park, would occur between March and August only. Construction along the remainder of the alignment would occur year-round.

The final construction program would be determined prior to construction and be subject to the timing of the KHD URA development (separate approvals and market demands).

An indicative sequence of construction is provided in Table 1-2. The construction works have been divided into seven 'works stages' which are interrelated and would potentially overlap. Subject to confirmation from the construction contractor, the order and staging of these construction works periods may change.

### Table 1-2 Indicative sequencing of construction works

Works stage	Description		
1. Site establishment	Establishment of formal site access		
	<ul> <li>Establishment of construction compounds and stockpile areas</li> </ul>		
	<ul> <li>Installation of construction environmental management measures (e.g. erosion and sediment control)</li> </ul>		
	Delivery of site materials		
	Installation of site fencing		
	Survey of alignment and placement of alignment pegs.		
2. Vegetation clearing	• Tree protection areas established ("no-go" zones)		
	<ul> <li>Clearing of groundcover and vegetation within the construction footprint and compound areas</li> </ul>		
	<ul> <li>Stockpiling of topsoil in compound areas for reuse throughout construction, as discussed in Section 1.3.5.</li> </ul>		
3. Trenching and underboring	Excavation of trench		
	• Dewatering of open trench, if necessary		
	Management of acid sulphate soils		
	<ul> <li>Underboring in certain locations. This process would generally include:</li> </ul>		
	<ul> <li>Excavating launch and retrieval pits</li> </ul>		
	<ul> <li>Erect under bore rig</li> </ul>		
	<ul> <li>Pilot bore</li> </ul>		
	<ul> <li>Bore and drag the casing.</li> </ul>		
	• Excavated material and topsoil would be stockpiled for reuse or disposed of appropriately, if contaminated.		
4. Installation of water and	Bedding material placed at the bottom of the trench		
wastewater pipelines	<ul> <li>Laying of pipes</li> </ul>		
	<ul> <li>In the case of under bored areas, pipe would be fed through the casing, the annulus would be grouted, and the pipe would be connected.</li> </ul>		
5. WWPS construction	<ul> <li>Excavation of a pit and placement of appropriate foundations in the base of the pit</li> </ul>		
	Management of acid sulphate soils		
	Dewatering of pit, if necessary		
	Construction of the concrete wet well		
	<ul> <li>Mechanical installation of pumps, valves and fittings</li> </ul>		
	Installation of electrical components		
	Construction of adjacent hardstand area.		
6. Connection to existing HWC infrastructure	Commissioning of proposed pipelines     Connection to live water and wastewater systems		
	Connection to live water and wastewater systems		
7. Site restoration	<ul> <li>Backfill trench using stockpiled excavated material and topsoil</li> </ul>		
- Landscaping and restoration of surfaces to preconstruction condition where practicable
- In the case of under bored areas, backfill the launch and retrieval pits
- Removal of construction environmental management measures where not required for operation.

# 1.3.2 Plant and equipment

A range of plant and equipment would be required for the construction of the Proposal. This includes, but is not limited to:

- Excavators
- Tipper trucks
- Light vehicles
- Flat-bed delivery trucks
- Rollers
- Skid steers
- Street sweepers
- Water carts
- Boring machines
- Jackhammers
- Mobile cranes
- Backhoes
- Compactor
- Concrete agitators (or similar)
- Concrete pumps
- Concrete saws
- Air compressors
- Dozers
- Mulchers
- Piling rigs
- Forklifts
- Small earthmoving equipment
- Welder.

# 1.3.3 Construction hours and workforce

### 1.3.3.1 Construction hours

The proposed working hours for construction activities (including the delivery of plant and equipment) would be limited to recommended standard hours outlined by *Interim Construction Noise Guideline* (DECC 2009) for the majority of the works, where feasible and reasonable. These standard construction hours are:

- Monday to Friday: 7am to 6pm
- Saturday: 8am to 1pm
- Sunday and public holidays: No work.

Some additional construction works would be undertaken outside of standard daytime construction working hours. This may include:

- Cut in to existing live water and wastewater networks<sup>1</sup>
- Crossing of roads including (but not limited to) Irrawang St, Adelaide St, Tregenna St and Alton Rd, if open trenching methodology required
- Relocation of other services, if required.

In addition to the above, outside of hours works may also include:

- Any works which would not result in audible noise emissions at any nearby sensitive receptors or an outside of hours noise protocol would be prepared
- The delivery of oversized plant and/or structures that police or other authorities determine require special arrangements to transport along public roads
- Emergency work to avoid the loss of lives, property and/or to prevent environmental harm
- Maintenance and repair of public infrastructure where disruption to essential services and/or consideration of worker safety do not allow work within standard construction hours
- Public infrastructure works that shorten the length of the project and are supported by noise-sensitive receivers
- Construction works where it can be demonstrated and justified that these works are required to be undertaken outside of standard construction hours (e.g. during connection of water and wastewater infrastructure when shutdowns are necessary).

Extended hours could include the above works and any the considered suitable may be undertaken 24 hours, six days a week.

### 1.3.3.2 Construction workforce

It is anticipated that approximately 34 to 55 personnel would be required during the construction of the Proposal. The total construction workforce would include (but not be limited to) the following:

- tradespeople and construction personnel
- sub-contractor construction personnel
- engineers
- functional and administrative staff.

The construction work areas would consist of a central site shed with approximately four to five decentralised work zones in operation at any one time. Approximately four to five people would be anticipated at the site shed, and six to 10 people at each work zone. Therefore, approximately 34 to 55 people would be anticipated on site at any one time.

### 1.3.4 Earthworks

The Proposal would require the excavation of approximately 78,000 cubic metres of excavated material and topsoil during trenching and underboring. Where practicable

<sup>&</sup>lt;sup>1</sup> This may require the temporary shut-down (at night) of existing services

and subject to its suitability, excavated soil would be reused on-site for foundation preparation, levelling works, access track maintenance and backfilling of trenches and boring pits at the completion of construction. Potential construction traffic, noise and air quality related impacts associated with earthworks activities would be described in detail within the Environmental Impact Statement (EIS).

Excavated soil which is not considered suitable for re-use on site would be temporarily stockpiled within the compound area and then transferred off site. All soil to be transferred off site would be tested and deposited at a suitable collection facility based on its determined category. Fill would be imported to site as required.

### 1.3.5 Soil and water management

### 1.3.5.1 Erosion and sediment control

Temporary construction erosion and sediment control measures that would be implemented prior to construction of the Proposal include sediment fences, temporary sediment ponds, shaker grids and/or wash down areas at all vehicle access points, and sandbags (or similar) for protection of all existing stormwater infrastructure. These control measures would be constructed, monitored and maintained by the contractor in accordance with relevant guidelines.

### 1.3.5.3 Stockpiling of excavated material and topsoil

Excavated material and topsoil would be stockpiled within designated compound areas. Stockpiling may also occur in the vicinity of the trench within the construction footprint of the Proposal. The stockpiles would be temporary in nature and would be removed at the completion of construction.

### 1.3.5.4 Encountering groundwater

Interaction with groundwater is considered likely due to the depth of the pipes in certain locations. Any temporary or permanent interaction would be confirmed following geotechnical studies during detailed design. Where dewatering would be required as a result of trenching or underboring activities, it would be undertaken to limit discharge of groundwater to the environment and maintain safe construction work environment. An aquifer interference licence would be obtained in accordance with the *Water Management Act 2000*.

### 1.3.5.5 Encountering surface water

The alignment of the Proposal would cross a number of drainage lines. Construction would be undertaken during dry weather, when there is anticipated to be no water present. If water is present at the time of construction, dewatering of the drainage lines would be required and a temporary diversion would be installed with the use of a dam structure such as a low flow earth mound or coffer dam, with water pumped (mechanically) around the site. Water diversion would be undertaken in accordance with relevant guidelines and would only occur during construction. Pre-construction conditions would be re-established at the completion of construction, where practicable.

### 4.3.5.6 Encountering acid sulfate soils

The Port Stephens LEP Acid Sulfate Soils (ASS) mapping identifies the Proposal site as Class 5, the lowest probability of encountering ASS. The presence if ASS within the Proposal site is considered to be unlikely, and therefore it is not anticipated that construction activities would disturb any ASS. Notwithstanding this, in the event that ASS are encountered during construction, work would cease in the vicinity and

an environmental consultant would be engaged to advise on the appropriate course of action in accordance with relevant guidelines.

### 4.3.6 Compound areas

A minimum of five compound would be established as presented in Figure 1-1. These compound areas would be set up during the site establishment stage and would be utilised throughout the construction of the Proposal. The primary compound area would be located within KHD-owned land at the northern extent of the Proposal. Secondary compounds would be located on HWC-owned land south of Grahamstown Spillway, Rees James Road near Kuranga Avenue, land between Rees James Road and Adelaide Street and adjacent to the existing water pump station on Irrawang Street.

It is anticipated that the compound areas would generally include, but not be limited to, the following:

- Site shed (office) and amenities
- Staff parking areas
- Equipment storage
- Laydown areas for construction materials (e.g. pipes, fittings, pre-cast concrete components)
- Stockpiling of excavated materials and soil
- Bunded chemical and/or fuel storage areas.

Additional compound areas may be required during construction of the Proposal. The location of these would be determined prior to and during construction. To ensure that associated impacts are minimised, any compound areas would comply with the following criteria for site selection:

- readily available access to the local road network
- relatively level land
- greater than 50m from a watercourse
- greater than 50m from threatened species and endangered ecological communities
- greater than 100m from a residential dwelling
- no requirement to remove any native vegetation
- no impact on any heritage items (Indigenous or non-Indigenous)
- not unreasonably affect the land use of adjacent properties.

Compound areas would be temporary in nature and removed from site upon completion of the works.

### 1.3.7 Site access and traffic management

The majority of the alignment of the Proposal is on the road verge, and therefore access would be via the adjacent roads. The two locations where this would not be feasible would be:

- Hunter Water land the water and wastewater pipelines would be constructed adjacent to an existing gravel track that runs beneath existing overhead power lines. Site access to Hunter Water-owned land would be through gates at the northern end of Rees James Rd and the Riding for Disabled lot.
- KHD site the existing access track to the site would be adopted, ensuring that safe access is maintained

Traffic management would likely be required where open trenching occurs in close proximity to local roads (therefore requiring a minimum safe distance for workers from live traffic) and where underboring is proposed to occur, such as (but not limited to) under Adelaide Street in Raymond Terrace. No traffic management along the Pacific Highway is anticipated to be required.

Open trenching along the road verge in front of residential properties may result in temporary changes to property access, where open trenching intersects driveways.

Temporary pedestrian diversions would likely be required where open trenching conflicts with public footpaths.

Further details of site access and traffic management associated with the Proposal would be described and assessed in the EIS.

### 1.3.8 Commissioning of assets

The water and wastewater pipelines would be commissioned in sections as construction progresses. Commissioning would involve flushing the pipelines with potable water to remove any debris present. The water pipeline would also likely need to be disinfected, which would involve super-chlorinating the pipe until two consecutive water quality samples show no faecal coliforms present. The pipe would be dechlorinated using sodium thiosulfate (or equivalent) before water is discharged. Disinfection would not be necessary for the wastewater pipe. Hunter water protocols will be followed.

Between approximately 800 and approximately 1500 kilolitres of water would be discharged to land or adjacent waterways during pipeline commissioning. The variance in the amount of water required is due to the quantity of debris that needs to be flushed from the pipeline and the requirement to achieve safe water quality levels.

# 1.3.9 Rehabilitation

Upon construction completion, site rehabilitation works would be undertaken where practicable. This would include:

- Earthworks to reinstate previous topography
- Decommissioning of compound areas
- Stabilising disturbed soils in accordance with relevant guidelines
- · Removal of water diversion and reinstatement of flows
- Removal of erosion and sediment controls.

### **1.3.10 Construction Environmental Management Plan**

A Construction Environmental Management Plan (CEMP) would be prepared prior to the construction of the Proposal. The CEMP would provide the framework for the management of all potential environmental impacts resulting from the construction activities. The CEMP would be prepared based on the mitigation and management measures in the EIS and the conditions of approval.

# **1.4 Operation**

Table 1-3 provides a description of indicative operational works associated with the Proposal.

Table 1-3 Indicative operational works

Work stage	Description		
1. Routine delivery of water	<ul> <li>The Proposal would be expected to deliver approximately 1080 megalitres of water to Kings Hill URA per year</li> </ul>		

2. Routine pumping of wastewater	<ul> <li>The Proposal would be expected to pump approximately 1420 megalitres of wastewater away from Kings Hill URA per year</li> </ul>
3. Inspection and maintenance of water and wastewater pipelines	<ul> <li>Routine maintenance and inspections would be carried out at         <ul> <li>valve, hydrant and/or scour locations</li> </ul> </li> </ul>
4. Inspection and maintenance of chlorine injection point	<ul> <li>chlorine injection point</li> <li>the WWPS</li> <li>This would occur sporadically throughout the user are remained in the instance of fault in</li> </ul>
5. Inspection and maintenance of the WWPS	<ul> <li>year, or as required in the instance a fault is detected</li> <li>1-5 personnel expected per inspection/ maintenance activity</li> </ul>

#### Hi Ben,

Thank you for providing the information below, and for meeting with us to explain the background to the issues relating to the progress of the Kings Hill development and its sewer strategy. The detail provided gives Hunter Water confidence that the future lead in works are unlikely to extend beyond the corridor outlined in the EIS.

I can confirm that we do not require the Sewer servicing strategy to be updated to progress the EIS and the detail provided within your email (10 July 2020) is sufficient. I am happy to extend the validity of the sewer strategy until the EIS is complete, but rather than extending the life of the sewer strategy to align with the water strategy, I would prefer that new water and sewer servicing reports be developed over the coming months focusing only on development staging, reticulation layouts and lead in works for the URA. These can act as the strategic plans for assets within the URA going forward with information updated as changes occur across each development site over time. These documents will help guide the complex works design for assets within the URA, funding of growth applications (where applicable), and will help ensure all parties within the Urban Release area are working to the same plan regarding the delivery of water and sewer assets.

I trust the above is sufficient for you to progress the EIS, but please contact me should you wish to discuss further.

### Mal / Chris,

Thanks for setting up the meeting on Wednesday, I think we covered a fair bit of ground which was helpful to all involved.

As requested, I've attached a number of items that we talked through in the teleconference for your records. These include:

- Updated Preliminary Sewer and Water Alignment Drawings (Appendix K in the EIS), including cross sections at critical areas and how additional sewer mains could be incorporated in the future;
- DRAFT Internal Sewer Servicing plans for the subdivision we note that these plans are currently based on a superseded layout and will be progressed/updated once the development footprint is finalised.
- DRAFT Sewer Lead In Drawings that include preliminary long-sections for infrastructure on both sides of the Irrawang Wetland

### https://www.dropbox.com/sh/y35q9n0jyhj1eoq/AACs3wi6tu0ze1tNzZmjarGYa?dl=0

Regarding the EIS, I understand the outcomes discussed in the meeting were:

• HWC are comfortable that enough information has now been provided from an ultimate Sewer Servicing Strategy point of view that the EIS can progress. In this regard HWC do not need the High Level Sewer Servicing Strategy to be updated to progress the EIS.

Regards the validity of the current Sewer Servicing Strategy and its requirements the following was noted:

- Based on the briefing provided by Northrop, HWC recognised that a lot of work had been
  progressed in relation to the Sewer Servicing of the site, including works on the DRL and
  Servicing Report (refer DRAFT documentation above).
- Northrop noted that this work had been put on hold over the last 6-9 months due to KHD working through a Biodiversity Strategy with Council as part of the Concept DA for the site. The Biodiversity Strategy during this time has had a bearing on the overall development footprint, staging, development timing and number of lots. The Biodiversity Strategy has now progressed significantly and its expected that the Concept DA (which locks down the development footprint) will go for approval in September. This is a major step for the overall project and will give the project to progress with an increased confidence on footprint, lot layout, staging, and timing of development roll out. This information will be fed directly into updated DRL, Servicing Report and

?

modelling.

- It was noted that KHD's current expectations were that the DRL and Servicing Report would be submitted and well progressed with HWC by the end of the year with the first stage of Funding for Growth mapped out.
- To achieve the dot point above it was note that a significant amount of work is being proposed by KHD in a short period. Much of this work will be based on the SMECC Sewer Servicing Strategy and as such KHD requested that HWC reconfirm the Sewer Servicing Strategy appropriateness prior to this work commencing.
- Further to the above Northrop requested that HWC review the validity period of the Sewer Servicing Strategy based on the significant progress made by KHD as presented by Northrop and the EIS. In this regard it was suggested that there is merit in HWC bringing the Sewer Servicing Strategy approval in line with the Water Servicing Strategy as per the attached letter.

Thank you again for your time this week and we look forward to hearing from HWC regarding confirmation of the Sewer Servicing Strategy validity and in relation to the EIS.

Subject: Kings hill Sewer Strategy Discussions - Tuesday 7th July Agenda

Hi All,

Just as a bit of house keeping I've had a chat with Mal and provide the following agenda for tomorrow afternoons meeting. Any queries / comment on his please don't hesitate to contact me to discuss.

### Agenda

- 1. Current Status of Kings Hill Critical Approvals and works in the past 6-9 months lead by Adam Smith
  - a. Masterplan DA
  - b. Biodiversity Strategies
  - c. DRL and Servicing Report
  - d. Funding for growth
- 2. Confirmation of Scope of EIS and approval process going forward lead by Ben Clark / Westley Owers
  - a. Stage 1 works vs future works
  - b. Additional investigations (groundwater, heritage)
  - c. DRL and Servicing Report
  - d. HWC design process
  - e. Construction Certificate
  - f. Construction

- 3. Sewer Servicing Strategy Requirements and presentation of additional information Lach McRae
- 4. Moving Forward All

### Regards,

#### **Ben Clark**

1.0	Introductions.		
1.1	<ul> <li>Malcom Withers (Account Manager Major Development) malcolm.withers@hunterwater.com.au</li> <li>Angus Seberry (Manager Environment &amp; Sustainability) angus.seberry@hunterwater.com.au</li> <li>Annette Finegan (Senior Ecologist / Environmental Planner) annette.finegan@hunterwater.com.au</li> <li>Wesley Jones (Planning Engineer) wasley iones@hunterwater.com.au</li> </ul>		
	<ul> <li>Lach McRae (Senior Civil &amp; Environmental Engineer/ Hunter Water Accredited Designer) - <u>Imcrae@northrop.com.au</u></li> </ul>		
2.0	Project background		
2.1	<ul> <li>Water and sewer strategies approved.</li> <li>Currently reviewing lead in routes to enable survey, Geotech and environmental studies. On project critical path.</li> <li>Drawings prepared by Northrop and issued to HWC 2/11/17 with approved water and sewer routes overlying the proposed</li> </ul>	Note	
	biobanking extents and the proposed increased extent of SEPP14. Possible alternate route for sewer also shown connecting into existing gravity network on Rees James Rd near Panorama Close.		
3.0	Water and Sewer Routes		
3.1	HWC noted biobanking extents were determined by external consultant and include APZs required behind existing residential development as well as existing electrical and SW infrastructure.	Note	

3.2	• Proposed water and sewer routes to follow line of existing electrical from end of Rees James Drive to the spillway thus utilizing existing access track. HWC to review biobanking extents to ensure clear of existing access track.	HWC	
3.3	• HWC noted Riding for Disabled in on land owned by HWC. HWC requested water and sewer alignments be adjusted so they are within the Riding for Disabled lot to avoid the biobanking to the immediate south of the boundary.	Northrop	
3.4	• The approved sewer strategy route traverses large sections of the biobanking site in the areas behind the new "Potters Lane" Development as well as behind the existing rural residential lots.	Note	
3.5	• To avoid these areas of biobanking HWC support an alternative route along Rees James Rd to connect to existing gravity network near Panorama Close.	Note	
3.6	• HWC requested Northrop prepare an addendum to the waste water servicing strategy to include the alternate route. HWC noted cost estimates of the alternate route would not be required in the addendum.	Northrop	
3.7	HWC noted that preliminary review of capacity of existing sewer network has been undertaken and supported connecting into gravity network near Panorama Close. HWC to issue formal advice on capacities of existing water and sewer assets	HWC	17/11/17
3.8	• HWC noted this gravity network discharged to Raymond Terrace 4 WWPS which was due for upgrade by HWC. HWC also noted Kings Hill Development was included in HWC growth mapping and upgrades to Raymond Terrace WWTP would be undertaken by HWC to reflect the development demand.	Note	
3.9	HWC to issue GIS of existing water and sewer assets to Northrop	HWC	17/11/17
4.0	Pacific Highway Bridge / spillway crossings		
4.1	• RMS have advised that HWC own the bridge over the existing spillway and RMS approval is not required to attach sewer and water infrastructure to it. HWC to confirm with 'property' team on ownership.	HWC	24/11/17
4.2	HWC noted they are moving away from new assets being bracketed to bridges. HWC noted specific concern regarding security of supply and licensing requirements given size of development.	Note	
4.3	• HWC requested Northrop prepare a separate email to HWC with further details of proposed crossings. HWC will issue to Assets Department as well as Operations Department for feedback.	Northrop	
4.4	HWC to issue drawings of spillway	HWC	24/11/17

### Hi Westley,

As per discussions between yourself and Ryan yesterday, Council is satisfied that the nest box requirements can be achieved through conditioning a Vegetation Management Plan or Biodiversity Management Plan post-consent. This BMP/VMP would identify the number and type of nest boxes required – once final design has been determined – alongwith any ongoing/maintenance or monitoring requirements. Ownership arrangements could also be negotiated at this point. Under normal circumstances, the developer (KHD) would own the nest boxes until such time that the monitoring /maintenance period has lapsed, afterwhich the boxes would become the property of the relevant landholder.

We would obviously prefer if you could avoid impacting any existing nest boxes/hollow bearing trees wherever possible, but understand this can often be unfeasible or unavoidable. The VMP/BMP option could be prepared to ensure both this project's offsetting obligations can be achieved and the Potters Lane Development Consent offsetting obligations can be maintained.

Cheers,

# **Kimberly Baker**

Thanks Kimberly,

For clarity, under this scenario does Council own the nest boxes?

We will ensure that this is considered and appropriately addressed within the Response to Submissions.

Subject: RE: Nest boxes and hollow-bearing trees James Rees Road

Hi Kate,

Thank you for providing the data. Generally, as a rule of thumb treat nest boxes as if they were an existing hollow.

I have reviewed our records and identified that the nest boxes installed on 40 Rees James Road and within the Rees James Road reserve are compensatory nest boxes which were required to offset hollows removed by the nearby Potters Lane Subdivision. Consequently, the expectation would be that if any of these nest boxes will be removed as part of the Kings Hill Wastewater DA they will need to be re-offset within nearby areas at a ratio of 2:1, consistent with the Potters Lane Subdivision DA.

Happy to discuss if required.

Cheers,

Subject: Nest boxes and hollow-bearing trees James Rees Road

Hi Kim and Ryan

Please see attached 2 maps showing the location of the nest boxes and hollow-bearing trees on James Rees Road that were the subject of discussion in the meeting for the Kings Hill URA water and wastewater pipeline infrastructure EIS and BDAR Monday 22 June.

There are 3 hollow-bearing trees and 4 trees with nest boxes in the development footprint (5 nest boxes in total).

Photos also attached for reference.

The trees are all within the road reserve, and are adjacent to lot 2/DP1107061 which is 40 Rees James Road. An additional 6 nest boxes are located within the 40 Rees James Road property which are not marked on the map, but are mostly adjacent to the mapped nest boxes.

I believe you wanted this information to investigate the ownership of the nest boxes and any potential links to local development. Please keep us informed of your findings in this respect.

I am on leave this week, but Rachel Perry and Jane Rodd can answer questions in my absence if you need to get in touch before 13 July when I will be back at work.

Warm regards,

Kate Carroll | Senior Ecologist | BSc (Hons) Ecology, BAM Acredited Assessor | kate.carroll@arcadis.com

Hi Medina,

Thanks for clarifying Lots 12, 451 and 452 as not being within the development footprint.

Regarding RMS consent, I'm happy to run with the consent being managed through the s138 process.

See below map for Lot 5 DP 234521, being the Riding for the Disabled site. Our records do not indicate this property as being owned by KHD.

Regards,

### Ryan Falkenmire

Hi Francisco,

We are preparing the advertisement for the public exhibit this application. It is noted the following lots were not included in the application:

1. Lot: 452

DP: 852775 – I confirm that no private properties would be impacted by the proposal. The construction footprint overview was prepared specifically to demonstrate this.

2. Lot: 451 DP: 852775 – As above.

 Lot: 12: DP: 882528 – No impacts are anticipated on this lot. Please refer to figures below showing the lot boundaries against the proposed footprint.

4. Lot: 5

DP: 234251 - Couldn't track down this lot (either on SixMaps or the Planning Portal). Can you please indicate the exact location?

Lots 451 and 452 may not be impacted, however the submitted plans appear to indicate the infrastructure may go over private boundaries on these properties.

It is apparent that Lot 12 and Lot 5 are clearly within the alignment of the infrastructure. No owner's consent has been provided for these lots.

Can you also provide any update on when we can expect owners consent from HWC/RMS? – We are currently in the process of obtaining owners consent from HWC. However, it was my understanding that owners consent from RMS wasn't necessary as we submitted a s138 permit for works on their roads. Will this suffice?

Happy to discuss any of the above. Thank you.

# APPENDIX H HUNTER WATER CORPORATION SPECIFICATIONS

# HUNTER WATER CORPORATION STANDARD TECHNICAL SPECIFICATIONS

The Proposal has been designed to date in accordance with (but not limited to) the following design standard technical specifications, manuals and codes as required by Hunter Water Corporation (HWC). It is understood and acknowledged that detailed design would be required prior to construction of the Proposal and would involve further consultation with HWC and reference to these documents.

### Water Services Association of Australia codes

- Water Supply Code of Australia WSA 03-2002 Hunter Water Version 1 Amendment 3
- Gravity Sewerage Code of Australia WSA 02-2014-3.1 Hunter Water Edition Version 2

### Hunter Water Corporation manual and standard technical specifications

- Hunter Water Corporation Water and Sewer Design Manual
  - Section 4 Small to medium submersible sewage pumping stations and sewer rising mains
  - Section 5 Water pumping stations
  - Section 7 Tank / Reservoir standards
- STS101 Construction and Pipe Bedding Materials
- STS103 Valves, Hydrants and Associated Components
- STS402 Construction of submersible Sewage Pumping Stations
- STS403 Construction of Sewer Rising Mains
- STS405 Construction of water booster pumping stations
- Standard drawings display the default construction practice requirements and are to be used with the above documents. # **APPENDIX J WEED TABLE**

# Weeds identified in the Hunter Regional Strategic Management Plan (Hunter Local Land Services, 2017) recorded in the Proposal site

Scientific name	Common name	State/Regional priority	Weed management category	Outcomes to demonstrate compliance with the General Biosecurity Duty
Hyparrhenia hirta	Coolatai grass	Regional Priority Weed Objective	Asset Protection	The plant or parts of the plant are not traded, carried, grown or released into the environment
Olea europaea subsp. cuspidata	African olive	Regional Priority Weed Objective	Asset Protection	Land managers reduce impacts from the plant on priority assets
Rubus fruticosus spp. agg.	Blackberry	Regional Priority Weed Objective State Priority Weed Objective	Asset Protection	Land managers mitigate the risk of the plant being introduced to their land. Land managers prevent spread from their land, where feasible.
Asparagus aethiopicus	Asparagus weed	State Priority Weed Objective	Asset Protection	The plant must not be imported into the State or sold
Lantana camara	Lantana	State Priority Weed Objective	Asset Protection Additional Species of Concern – weed of community concern for agricultural and environmental outcomes	The plant must not be imported into the State or sold
Senecio madagascariensis	Fireweed	State Priority Weed Objective Additional Species of Concern	Asset Protection Additional Species of Concern – weed of community concern for agricultural outcomes	The plant must not be imported into the State or sold
Cinnamomum camphora	Camphor laurel	Additional Species of Concern	Additional Species of Concern – weed of community concern for agricultural and environmental outcomes	Not specified

Scientific name	Common name	State/Regional priority	Weed management category	Outcomes to demonstrate compliance with the General Biosecurity Duty
Eragrostis curvula	African lovegrass	Additional Species of Concern	Additional Species of Concern – weed of community concern for agricultural outcomes	Not specified
Rosa rubiginosa	Sweet briar	Additional Species of Concern	Additional Species of Concern – weed of community concern for agricultural outcomes	Not specified

# APPENDIX K STATEMENT OF HERITAGE IMPACTS (SOHI) ADDENDUM

21 July 2020

Rachel Perry Environmental Consultant Arcadis Level 16, 580 George Street Sydney, NSW 2000

Dear Ms Perry,

# Re: Statement of Heritage Impact (SoHI) Addendum – Kings Hill Water and Wastewater Infrastructure

Kings Hill Development Pty Ltd (KHD) is seeking approval for the development of a water and wastewater supply pipeline and a waste water pumping station (the proposal) to support the development of the Kings Hill Urban Release Area (Kings Hill URA).

A SoHI report was prepared by Artefact Heritage in 2019 to satisfy the Planning Secretary's Environmental Assessment Requirements (SEARs 1291) issued for the Proposal under Part 4 of the *Environmental Planning and Assessment 1979* (EP&A Act). The SoHI was referred to the NSW Department of Premier and Cabinet – Heritage Division – Archaeology (Heritage NSW – Archaeology) by Port Stephens Council under clause 5.10 of the Local Environmental Plan (LEP) as it is an archaeological site known as 'Irrawang Pottery Site' (Item A4).

This document is an addendum to the SoHI and provides additional information in response to a written submission from Heritage NSW – Archaeology (dated 6 April 2020) on the SoHI. A detailed background to the proposed works is provided in the 2019 SoHI.

This document has been prepared by Jenny Winnett (Principal Archaeologist, BA Hons) and Josh Symons (Principal Archaeologist, BA Hons) of Artefact Heritage on behalf of Arcadis.

# Response to Heritage NSW comments

### Clarification of the Proposal site in relationship to the site of the Irrawang Pottery complex

In response to the request from Heritage NSW, the proposal site has been mapped in relation to the archaeological features excavated by the University of Sydney between 1967 and 1976 (see Figures 1 and 2). The pottery site is located approximately 500m to the south-east of the Proposal site. Whilst there is some potential for pottery fragments produced at the site to be located within the Proposal site, it is not anticipated that structural remains associated with the pottery would be located within the Proposal site.

The Proposal site was assessed in 2019 as having potential to contain locally significant archaeological remains associated with yards and outbuildings originally associated with King's Irrawang Homestead. Mapping produced by overlaying historic plans and aerials on the current street grid suggests that the original residence overlaps the western boundary of the Proposal site. It is noted, however, that historic plans can be used as a guide only, and that the assessment of

archaeological potential included in the 2019 assessment is indicative. The primary aim of the recommended archaeological test excavation is to confirm the presence or absence of archaeology and predict its survivability across the Proposal site.

### Project justification and alternate options

The following project justification has been extracted and adapted from Chapter 3 of the Environmental Impact Statement (EIS) prepared for the Proposal in response to Heritage NSW – Archaeology's comment that the 2019 SoHI was not consistent with Heritage Council Guidelines around the consideration of alternate design options and Proposal justification.

Three options were considered to meet the objectives of the project (see Section 3.3 of the EIS):

- Option 1: Do Nothing
- Option 2: construction of Wastewater Option SE2 identified by SMEC (2014) and Water Option 3 identified by SMEC (2017)
- Option 3: construction of Water Option 3 identified by SMEC (2017) and alternate wastewater option identified by Northrop (2017).

Land at Kings Hill has been rezoned specifically to support the development of 3,500 residential dwellings and a town centre. However, given that there is currently no water and wastewater infrastructure present with the capacity to service Kings Hill URA, the provision of water and wastewater infrastructure is required to facilitate its development. Without adequate water and wastewater infrastructure, the development of the Kings Hill URA could not feasibly occur. As such, the "do nothing" option (Option 1) was not considered viable and was not considered further.

Options 2 and 3 pass through the same portion of the listed curtilage of the 'Irrawang Pottery Site' (Item A4). Due to the ecological value of the surrounding wetland vegetation communities the option to divert the pipeline around the Irrawang Pottery Site (A4) was not considered to be viable.

Following consideration of environmental constraints, topography, conflicts with existing infrastructure, the location and capacity of existing Hunter Water Corporation (HWC) assets, and the outcomes of extensive consultation with HWC, it was determined that Option 3 was the preferred option for the proposal.

The extent of the Proposal site extends east adjacent to the Pacific Highway to allow the option for the pipeline alignment to be moved away from the homestead site should it be determined during test excavations and detailed design that impact could be avoided.

It is noted that excavation methodologies for the pipeline are yet to be confirmed. Avoidance of the area of archaeological potential would be considered during detailed design, including potential for underboring, where feasible and reasonable. A program of archaeological test excavation has been recommended to identify if relics survive within the Proposal site and to identify if there is a possibility of avoiding them by moving the pipeline. As noted in the archaeology section above, the location of significant archaeological remains is subject to further investigation through archaeological test excavation. The results of that test excavation program would provide a better understanding of the location of significant archaeological remains for consideration during the detailed design stage.

### Contact archaeology and the requirement to obtain an AHIP for testing

Several secondary sources provide evidence that there was potentially contact between former residents of Irrawang and Aboriginal people in the early 19<sup>th</sup> century. Some examples have been included below:

Excerpt from the 'Obituary Mrs Catherine Lynch', *Raymond Terrace Examiner and Lower Hunter and Port Stephens Advertiser*, 8 October 1942
She was born at Irrawang on 16<sup>th</sup> September 1852... She had many vivid recollections and reminiscences of her early days.... She saw hundreds of aborigines – and for years they camped and [corroboreed] near her parents home. She then got to know many of their customs and habits. She had seen hundreds of them passing her at a time along the roads when they used to trek from one camp to another...

Excerpt from McIntrye et al "They are among the Best Workers, Learning the Ways of a Vineyard Quickly": Aboriginal People, Drinking, and Labour in the Early Australian Wine Industry' *Global Food History* 2019<sup>1</sup>

The earliest pictorial evidence of Aboriginal contact with settler wine grape vineyards is an 1830s depiction of a Hunter Valley property with vines, winery, and pottery. This etching of Irrawang (an Aboriginal word for by the water), dated circa 1838, is attributed to colonist John Carmichael... These Aboriginal people and the convict workers of Irrawang existed on opposite sides of an imagined border dividing a place that colonists perceived to be wilderness from that which was cultivated in European style... Despite the inference in the Irrawang image that Aboriginal people lived on King's property, no document exists to corroborate this, or to say that he employed Aboriginal people.

Excerpt from 'A history of Aboriginal Sydney'2

Aboriginal labour in the fledgling wine industry. Aboriginal people are working as "pullers of maize" for winegrower, George Wyndham at Dalwood in the Hunter Valley. At this early stage, there are only 10 settlers on the Hunter River growing vines. George Wyndham was one of the first. James King of Irrawang on the Williams River was another. It is highly probable that once convict transportation ceased and cheap labour was less accessible, Aboriginal people would have worked more widely in the fledgling wine industry: clearing, hoeing, ploughing, staking and pruning the vines. As Irrawang was also involved in pottery manufacture from 1832, Aboriginal people quite possible worked to produce glazed earthenware.

Due to the ambiguous nature of the above accounts, it is difficult to state conclusively whether the Proposal site has the potential to contain contact archaeology.

A meeting with Heritage NSW (formerly the Department of Planning, Industry and Environment) will be pursued by KHD prior to determination of the DA. The primary aim of the meeting will be to establish the view of the department regarding the requirement for an AHIP during archaeological testing due to the potential presence of contact archaeology.

### Recommendations

It is the opinion of Artefact Heritage that the recommendations of the 2019 SoHI partially align with the first and second recommended conditions of consent provided by Heritage NSW – Archaeology (letter dated 6 April 2020), with the following amendments or comments below. The third recommending condition of consent would not be applicable to the Proposal, as no Occupation Certificate is required:

 Prior to any ground disturbance works occurring on the site, the Applicant shall engage a suitably qualified historical archaeologist to undertake a detailed historical archaeological assessment of the site. An archaeologist familiar with significant early Colonial potters and pottery sites would be preferred. The Assessment shall comply with Heritage Council of NSW guidelines including but not limited to Assessing Significance for Historical Archaeological Sites and Relics 2009 and Archaeological Assessments 1996. This assessment should identify what relics are likely to be present, assess their significance (also considering previous archaeological studies) and consider the impacts from the proposal on the resource. A program of archaeological testing, <u>conducted in accordance with a Section</u> <u>139 exception which would be submitted to Heritage NSW under the Heritage Act 1977, as well as investigations into adjusting</u> the alignment of the pipeline away from significant archaeological relics, should form part of this program.

In regard to the experience of the authors of the 2019 SoHI, Tessa Boer-Mah has over 20 years' experience in Aboriginal and non-Indigenous heritage. Jenny Winnett is familiar with Irrawang pottery ceramics, having spoken to Annie Bickford and Judy Birmingham during cataloguing of the Thomas Ball pottery assemblage for Casey & Lowe, Archaeology & Heritage, and was part of the Casey & Lowe archaeological team at the Ball pottery waster site at 710-722 George Street, Haymarket.

- The Applicant will need to obtain an approved s140 application under the Heritage Act 1977 prior to any ground disturbing activities commencing <u>should it be determined during the s139</u> <u>exception archaeological testing that there will be impacts to relics as a result of the</u> Proposal.
- 3. Prior to issue of the occupation certificate by Council and/or the Principal Certifying Authority, the Applicant shall supply a copy of written correspondence from the Heritage Council of NSW or its delegate confirming that their requirements under any *Heritage Act 1977* approval have been satisfied. <u>This condition of consent is not applicable, as an occupation</u> <u>certificate is not required for this type of infrastructure</u>

### JENNY WINNETT PRINCIPAL, ARTEFACT HERITAGE

### Years of experience

Jenny has over 13 years' professional experience in the management of historic heritage and archaeology in Australia and the United Kingdom.

### Qualifications

 Bachelor of Arts (Archaeology, First Class Honours), University of Sydney and University of Glasgow 2007

### Professional affiliations

- Australian Archaeological Association, member
- Australian Society for Historical Archaeology, member

### Key skills and experience

Jenny specialises in historic (non-Aboriginal) heritage and is competent at undertaking an array of archaeological work including site assessments and Statements of Heritage Impact, excavation supervision and the authoring of excavation reports, artefact analysis, cataloguing and database management, project management and client advice. The projects she has worked on for both public and private sector clients include large scale residential subdivisions, targeted urban developments and major infrastructure projects.

Jenny brings a commitment to ethical archaeological practice, with a focus on positive heritage outcomes, while maintaining strong client relationships and constructive outcomes for clients and government agencies. Jenny is eligible to be nominated as an Excavation Director on permits from the NSW Heritage Division.

### Selected recent projects

- Robin Thomas Reserve Masterplan, Archaeological Assessment and Methodology Preparation 2018 (TfNSW)
- Small Parks project, provision of salvage schedules and Heritage Impact Statements for three parks in inner Sydney 2019/2020 (GroupGSA for City of Sydney)
- Former Artarmon Bowling Club Clubhouse, provision of Heritage Impact Statements, photographic archival recording and interpretation plans 2019/2020 (Willoughby City Council)
- Old Kings Oval Sportsfield Lighting, scoreboard and irrigation line, provision of Statements of Heritage Impact to support 2 x section 60 applications 2019 (Parramatta Park and Western Sydney Parklands Trusts)
- Victoria Street Station, East Maitland, provision of Heritage Impact Assessment and Archival Recording to support s60 2019/2020 (Downer on behalf of TfNSW)
- Parramatta Light Rail Enabling Works, Work Method Statements, Heritage Advice 2019 (Diona Ward Civil Joint Venture for TfNSW)
- Parramatta Light Rail, Archaeological Technical Paper Preparation for EIS 2017 (Jacobs for TfNSW)

### Professional history

- 2013-present: Artefact Heritage, Principal
- 2008-2013: Casey & Lowe Archaeology and Heritage, Senior Archaeologist
- 2009-2010: John Moore Heritage Services, Archaeological Project Supervisor
- 2008: University of Sydney, Historical Archaeology Tutor
- 2008: Urban Analysts, Lab Technician
- 2007-2008: Banksia Heritage and Archaeology, Archaeologist

# Tessa Boer-Mah Curriculum Vitae

Founder and Principal Heritage Consultant

Bachelor of Arts with Honours - Archaeology & Heritage - University of Sydney 2002 Master of Philosophy - Archaeology & Heritage - University of Sydney 2008

## Areas of Expertise

Tessa has 20 years' experience heritage consulting. She has led and delivered projects in the infrastructure, mining, residential, commercial and community land development sectors. Her expertise spans Aboriginal and non-Indigenous heritage. She has the skills and knowledge to deliver all levels of Aboriginal heritage advice including AHIPs, ACHARs and ACHMPs as well as non-Indigenous heritage advice including SoHIs, s139, s140, s57 and s60 advice. She is a peer reviewed published author and public speaker. She has acted in the role of General manager periodically, leading a multidisciplinary team of 40. Her technical expertise encompasses archaeological survey, excavation, stakeholder consultation, heritage interpretation, GIS, artefact analysis and technical reporting which is backed by a working knowledge of the legislative requirements. She achieves the right balance between regulatory requirements and project needs to deliver excellent project outcomes.

## Selected Project Experience

**Parkes Heritage Impact Statement State Heritage** – This report was project managed and written by Tessa. Her experience with previous s57 applications and supporting documents was valuable in delivering the project.

**Minmi s140 Archaeological Assessment** – Tessa co-wrote this archaeological assessment for a proposed s140 application for a late 1800s township at Back Creek Minmi. The project involved the removal of evidence relating to the domestic occupation and layout of a portion of the settlement.

**Mount Penang Statement of Heritage Impact and s60 Application** – This report was project managed and written by Tessa for proposed infrastructure within the Mount Penang State Heritage Register area. The s60 was approved for the works on the basis of the Statement of Heritage Impact.

**Port Macquarie Conservation Management Plan for Master Plan -** Tessa project managed, wrote and provided technical advice for this project. Drawing on her wealth of experience she was able to deliver a conservation management plan which addressed the complex heritage issues, while also interweaving into the Master Plan and its various staging goals.

**Newcastle Education Precinct for Master Plan** – Tessa wrote the Aboriginal and historic heritage assessments for this project which covered multiple sites and a complex Master Plan.

**Kuwumi Place – Hunter Street Newcastle –** Tessa wrote the historic archaeological and heritage advice for the redevelopment of Kuwumi Place to provide an improved park and streetscape. The heritage advice was submitted to Newcastle Council with no amendments required.

**McFarlanes Aboriginal Due Diligence Assessment Report** – As lead heritage consultant on this project, Tessa oversaw the technical details of the reporting and provided input into the fieldwork. She ensured that clear recommendations were provided with also addressed the staging requirements of the project.

**Lochinvar Aboriginal Cultural Heritage Assessment Report – Hunter Land** – Tessa project managed and oversaw the production of this assessment. A key achievement of the project was the incorporation of the necessary information for the Aboriginal Heritage Impact Permit (AHIP).

**Mount Penang Due Diligence Assessment Report (HCCDC)** – This report was project managed and written by Tessa. Her experience in working with a multi-disciplinary team and providing advice for a Review of Environmental factors ensured an excellent outcome for the project.

**Somersby Aboriginal Cultural Heritage Assessment Report – Darkinjung Local Aboriginal Land Council** – Tessa was the project manager and key consultant for this project. She led the team safely through very tough terrain and provided a comprehensive survey of the Project Area.

**Port Macquarie Aboriginal Cultural Heritage Assessment Report – Port Macquarie Airport** – As project manager and key consultant for this project, Tessa was able to ensure that the large-scale assessment for this Environmental Impact Statement (EIS) was undertaken to meet the project needs and that the landholder consultation ran smoothly.

**Port Macquarie European Heritage Assessment – Port Macquarie Airport** - As project manager and key consultant for this project, Tessa ensured that the archaeological and built heritage constraints were addressed over a large area.

## **Previous Experience**

Heritage Team Manager – RPS	2012-2018
Acting General Manager (covering leave) - RPS	2016-2018
Senior Cultural Heritage Consultant – RPS	2010-2012
Project Archaeologist – AMBS	2007-2010
Consultant Archaeologist - Freelance	2004-2007
Project Archaeologist – Susan McIntyre-Tamwoy Archaeological Consultant	2003
Consultant Archaeologist - Freelance	1999-2002

## **APPENDIX L REGISTERED ABORIGINAL PARTIES (RAPS) CONSULTATION LETTER**

14 July 2020

Dear

## Re: Water and Wastewater Infrastructure between Raymond Terrace and the Kings Hill Urban Release Area Aboriginal Heritage Assessment – Assessment update

Thank you for your registration of interest and participation in the Water and Wastewater Infrastructure project between Raymond Terrace and the Kings Hill Urban Release Area project.

As you may recall, the Aboriginal Cultural Heritage Assessment Report (ACHAR) for the project was issued for stakeholder review on the 27 September 2019 with comments requested by 25 October 2019. The ACHAR was subsequently finalised and issued as a supporting report for the project's Environmental Impact Statement (EIS).

Survey contacted as part of the assessment identified two Aboriginal sites within the assessment area. These sites have been registered as KHW01 Artefact Scatter and PAD (AHIMS ID 38-4-2023) and KHW02 PAD (AHIMS ID 38-4-2025).

The ACHAR recommended that both sites be avoided by the proposed works if possible. If avoidance was not possible, test excavation of the sites was recommended to determine the extent of each site and to support the application for an Aboriginal Heritage Impact Permit (AHIP) to impact the sites.

The EIS is currently under assessment by Port Stephen Council with the proponent currently responding to submissions raised during the exhibition phase of the designated development application.

We will keep you updated with any further developments on the proposal.

Kind Regards,

Alyce Haast Senior Heritage Consultant Artefact Heritage alyce.haast@artefact.net.au
