

Dear ...

Please refer to the email below from ...

In addition to my concerns highlighted below, I want to know how the construction noise will be minimized.

I am working night shifts and at daytime, I need to have a good sleep to continue my night shifts. Since the construction zones is with in 50 meters from where I live, it is very vital that this pressing concern is addressed.

Please advise and the measures that will be taken.

Regards

...

Dear ...

Thank you for your email.

I am unable to attend these meetings as I have work/travel commitments on that day. The reason why I am keen in this development is because I just live across the road to this proposed development.

I am worried that when the construction begins, there will be cracks appearing in my house due to the piling and etc done to construct these tall buildings.

There is a report in the news as well - <https://www.abc.net.au/news/2018-11-22/sydney-residents-say-westconnex-causing-cracked-walls/10521220>

My questions to the Planning Panels Committee are:

1. What preventative measures will be taken to prevent ANY damages to my property and surrounding areas?
2. If there are issues detected, what should I do?
3. Will it help to invite the respective staff to my property to view it now so that during the constructions, if there are damages, then there is a record of inspection done?
4. Where can I view the progress report for this project?

Can you please help to pass these concerns to the Planning Panels committee and advise on the outcome?

Regards

.....
