

The logo for PGH Environmental Planning is located on the left side of the page. It features a large, stylized 'P' in light blue and a large, stylized 'G' in light green. Below these letters, the text 'PGH' is written in a large, bold, light green font, and 'ENVIRONMENTAL PLANNING' is written in a smaller, light green font below it.

Existing Sandstone Quarry - Continuation of Extraction Operations (PPSSCC-289, DA 492/2022/HA)

Lot 1 DP 1223929

No.125 Smallwood Road, Glenorie, NSW

Prepared by: Patrick Hurley
PGH Environmental Planning

History of Consents

Date	Description
24 September 2002	(DA1887/2002/HE) Proposed Continuation of Existing Extractive Industry – Sandstone Quarry.
15 October 2020	(96/2021/HA) Extension of Time for Use of an Existing Extractive Industry.

Existing Development

- Site Area – 6.53 hectares
- Quarry Pit (Extraction Area) - 1.52 hectares
- Processing/Administration and parking area – 2.1 hectares
- Managers/Caretakers Residence.
- Total Disturbed area – 4.1 hectares.
- Current Employees – 9 -10.

Locality Plan

Site Plan

Site - view looking North East (from Smallwood Road)

Site – view looking South West (towards Smallwood Road)

Project Overview

- Remaining Resource – estimated 260,000 tonnes.
- Current Extraction – maximum 17,000t/pa.
- Proposed Extraction – 40,000t/pa – maximum 60,000t/pa.
- Life of project (Extraction) – Additional 6 years.
- Rehabilitation Phase - up to 5 years once extraction has ceased.
- No spatial expansion of existing extraction area.
- Currently approved depth of extraction (RL70) is retained.
- No change to hours of operation.
 - Monday to Saturday: 6.30am – 4.30pm.
 - Sundays/Public Holidays (closed)

Project Overview

Supporting Specialist Reports

- Soil and Water Quality.
- Air Quality (Dust).
- Noise.
- Traffic.
- Biodiversity (Flora & Fauna).
- Bush Fire.
- Quarry Environmental Management Plan.
- Rehabilitation Plan.

Main Issues Raised by Residents

Based upon initial consultation with Residents prior to Lodgement

- Continuation of quarrying activities.
- Compliance with approved Hours of operation.
- Rehabilitation of site.
- Traffic.
- Noise.
- Dust; and
- Ecology.

Summary/Conclusions

- Site has established infrastructure.
- No spatial expansion of extraction area.
- The 6 years time frame is based upon the 40,000t/pa.
- Continuation of existing site operations is considered to have significantly less impact than establishment of a new quarry of a similar capacity.
- The main issues with the potential to generate adverse impacts if not suitably managed are likely to be traffic and noise.
- The Quarry Environmental Management Plan (QEMP) has been developed to provide the necessary protection measures to mitigate potential impacts.
