Context Plan

Context

Ascham School is located in Edgecliff, in Sydney's Eastern Suburbs on the corner of Ocean Avenue and New South Head Road.

Ascham is a single campus school, situated on a 4-hectare campus which is comprised of preparatory, junior and senior schools and accompanying boarding facilities. The scope of works for the Fiona redevelopment is highlight The site is easily accessed via public transport with a train station across the road and ferry wharves in walking distance.

The site is surrounded by a variety of large, open, green spaces, and various educational and recreational facilities.

Key Ascham School | Entire Campus Ascham School | Fiona

Landscape Statement

Introduction

ASPECT Studios has been commissioned to prepare a Landscape Concept for the Ascham School Fiona Redevelopment at 188 New South Head Rd, Edgecliff. Please refer to documents by BVN for information regarding the architecture.

Scope

The redevelopment of the Fiona Wing at Ascham School comprises of architectural works to the heritage Fiona building and associated ground plane works excluding the existing carpark and playground.

Existing Site

The traditional custodians of the Woollahra district are the Gadigal people of the Eora Nation. The Gadigal people lived harmoniously in and around Warrane (Sydney Harbour) using natural resources to prepare food, medicine and sustain their lifestyles.

Ascham school lies upon Gymea Sandstone and Hawkesbury Sandstone geology. The endemic vegetation of this area was Heath and Woodland on Sandstone, with tree species such as Smooth-Barked Apple *Angophora costata* and Red Mahogany *Eucalyptus resinifera* dominating the landscape. Much of this vegetation has since been cleared with small remnant patches located across the LGA.

Ascham lies adjacent to a ridgeline, with water naturally draining to Sydney harbour. At greater detail, the site is relatively flat with a steep, narrow embankment towards the north being currently inaccessible.

The built heritage of Fiona Wing remains evident in the existing architecture and surrounding landscapes. Historical imagery depicts a landscape abundant in a formal cottage garden quality and facades which are entangled in mature vines and climbers.

Design Principles

The landscape spaces have been designed with the following principles in mind. Landscape spaces aim to:

1/ Create outdoor educational experiences of exceptional quality

2/ Integrate the intrinsic built, natural & cultural heritage Fiona School

3/ Maximise opportunities for green on built form

4/ Establish diverse spaces for both collaboration and independence which are safe and inclusive

Concept Design

Our landscape vision is to establish a new exemplar indooroutdoor learning environment, combining a unique Ascham experience that is inspirational, engaging and responsive to the built and cultural fabric.

This is addressed via providing a seamless integration between indoor and outdoor learning spaces which are ultimately determined by the intrinsic built, natural & cultural heritage of Fiona School and its surrounds.

Existing and Proposed Trees

There is a significant number of mature trees filtered throughout the site.

In order to preserve as much canopy cover on the site as possible, Trees proposed for removal are associated with building demolition only. All other trees are proposed for retention. For each tree removed, a new tree of similar or increased canopy cover is proposed.

Landscape Embankment

Key to the design is the importance of interaction with nature as an educational tool. The northern landscape embankment has been designed to encourage nature play & outdoor learning for all users of various abilities & ages.

The landscape embankment allows for a series of unique experiences in which users are able to inhabit elevated platforms & decks which allow the students to experience the densely vegetated space below.

The space is designed to be safe and inclusive for all students. The elevated platforms serve as outdoor learning rooms whilst incorporating playful elements for times of rest & leisure.

The unique forms are result of the pre-existing landscape and in particular, the strong geometries found within coastal sandstone platforms and outcrops, of the Woollahra LGA.

Additional seating and planting have been incorporated into the landscape transition between existing turf and embankment to ensure additional opportunities for the students to occupy the space.

Fiona Heritage Garden

The design creates an uplifted entry experience celebrating the intrinsic heritage of the Fiona wing. A mixture of native plants amongst flowering exotics provides a formal cottage garden atmosphere reminiscent of previous planted landscapes of Fiona.

Fernery & Internal Landscapes & Green Facade

Landscape is integrated to facades & internal courtyards reflecting the victorian heritage planting and structure of Fiona.

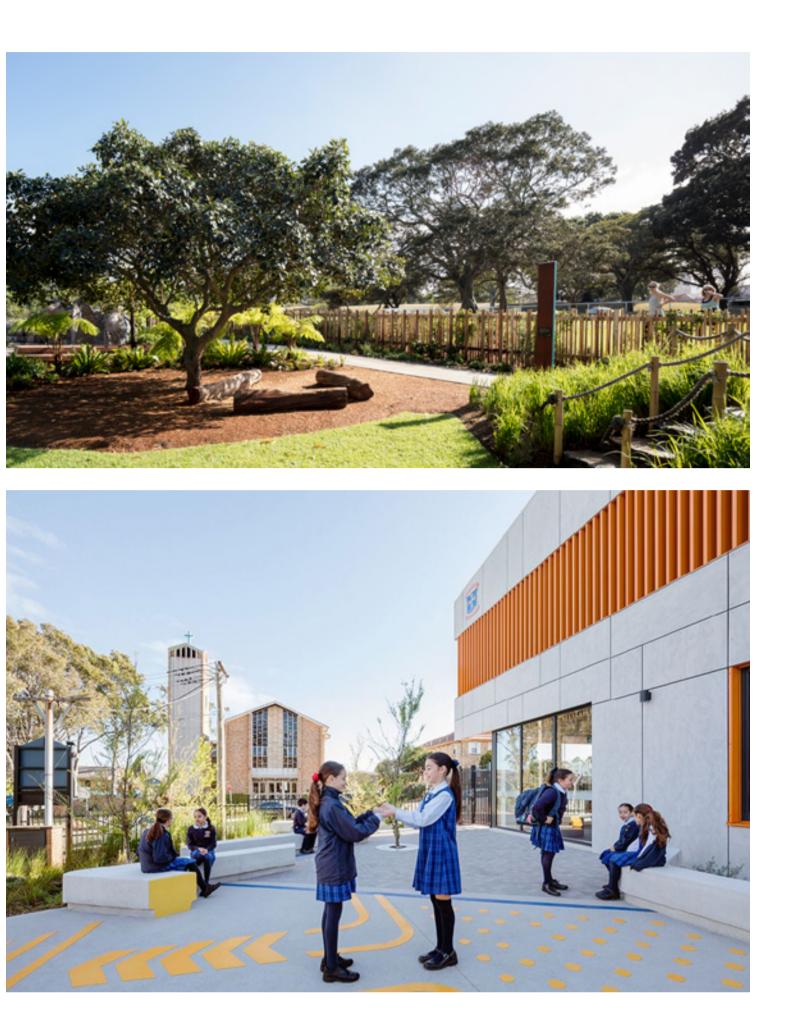

Species selection is to reflect gully & rainforest plants; reminiscent of those that would have been grown within the fernery conservatory as a part of heritage Fiona.

Landscape treatments in the form of climbing vines & an accompanying understorey are provided to the facades which hark back to Victorian architecture and reflect the modern architectural principles.

Edible Landscape

Edible plants have been incorporated into existing garden beds where possible to provide a learning environment for the students to enjoy. Seating elements are to also be incorporated within this area.

Victorian Era

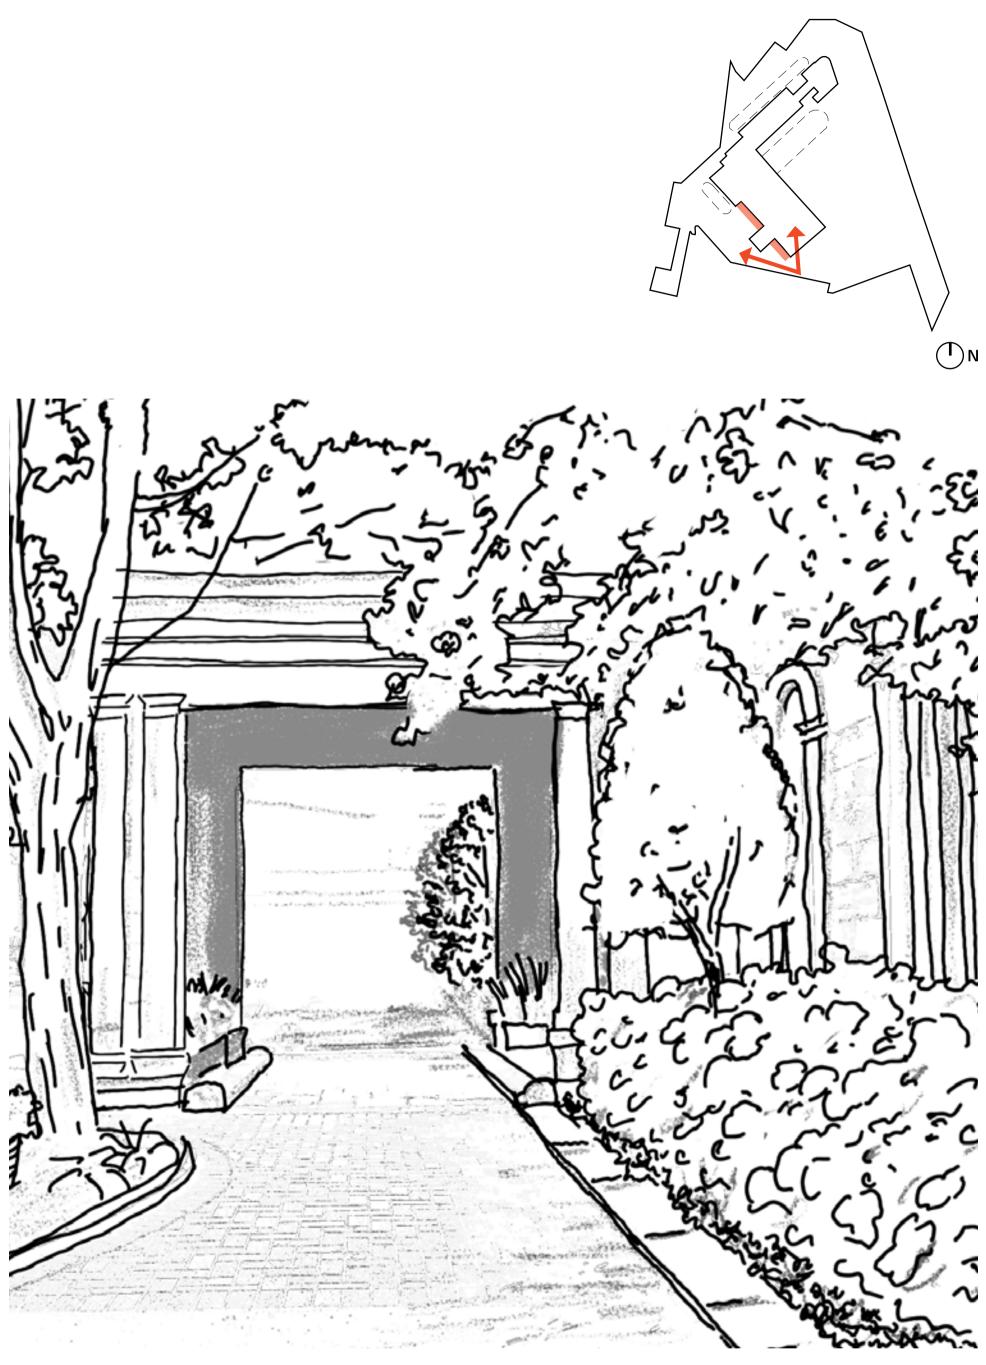

As formal entry to the Fiona building, the landscape had to match the grand sandstone features of the building and Porte Cochere. Flowering plants such as Hydrangeas and Camellias provided striking seasonal interest, and reflected the planting of the adjacent grounds. Large shrubs created a green backdrop to the house and allowed for a progressive reveal of the extensive gardens and greenhouses beyond.

Over the years, the building has dbeen transformed into classrooms and offices, and the Porte Cochere now feels back-of-house, and lacks the grandeur of the Victorian age, with carparks surrounding the entry. The landscape is a mixture of Clivias, Camellias, and Dwarf Magnolias in pots, with additional pots adding to the clutter of the space. Services, drains and downpipes also create a feature to the building facade and detract significantly from the carved sandstone and original features.

Fiona Development 188, New South Head Rd, Edgecliff Development Application

Current conditions

Future Approach

The proposed landscape sees the expansion of the existing planting, and the inclusion of flowering, cottage-garden species, reflecting the Victorian planting palette. Services and drains will be realigned an obscured through carefully selected plant specimens, and details such as garden edges will be specified to reflect the materials and forms of the heritage building. The landscape will now create an enhanced setting to celebrate and admire the Fiona Building, and showcase the facade and form, a unique and special asset for the Ascham School campus.
