WINTER SOLSTICE 10AM

WINTER SOLSTICE 12PM

WINTER SOLSTICE 12PM

ACOUSTIC LOUVRE DEMONSTRATION

The above images demonstrate the performance of the proposed facade screens/acoustic louvres to the Pacific Highway frontage

The louvres have been designed to consider noise reduction, air flow and solar access to enable the greatest possible amenity to the private spaces impacted by noise from the highway.

The screens are aluminium, with a brown paint powdercoat finish and consist of operable louvres up to the underside of the soffit. Sitting atop a 1000mm high aluminium balustrade, these louvres consists of 2mm solid aluminium which are able to be entirely closed forming a solid sound barrier across the full height of the balcony. The louvres will be sealed with an acoustic rated gasket.

The images above demonstrate solar access to corner units on the winter solstice between 9am and 12 pm (times identified by wintech in which these units receive solar access). As seen, the extent of the shadow is not impacted by the presence of the louvres demonstrating solar access even when closed.

FINISHES

All screens are finished with a brown paint powdercoated finish. See DA-02-3 - External Finishes Schedule for the louvre schedule which nominates consistent finishes throughout the proposal.
