What will happen to Uranquinty's/Australia's limited, irreplaceable 6% (or less) of arable land when it is sterilised & contaminated by lead, tellurium & selenium leaching from degraded, aged, inferior, hail fractured, broken, burnt, etc. Solar panels & filthy toxic BESS with their carcinogenic & teratogenic fire/smoke hazard risk, from Wind Turbines blades shedding toxic Bisphenol A (lethal to young children) in reliably productive FOOD BOWLS like the Riverina - now growing essential healthy food staples to sustain our/your family - such as oats for Uncle Toby's, wheat for Sanitarium, rice for SunRice, lupins, chick peas, lentils, this pictured canola for our local GOODROP Riverina canola oil (recommended by well known chef Adam Liaw,) great lamb, beef, pork & chicken etc. & bulk quantities of high quality hay & silage - relied upon throughout Australia in times of hardship??

A portion of the obnoxious Metka EGN/Mytilineos Solar - Bomen/Eunony Valley, Wagga Wagga.

If Clouds Could Talk....The Finger of God in Righteous Anger!

Hail Fractured Solar Panels - Hail Storm 31st Oct 2020. Thousands of broken panels were left in situ, as is for 10-11 months or longer. Some still remain broken subject to rain washing serious toxins from the panels more than 2 years later! What a terrible forecast for Agriculture - with large-scale Solar forced midst our most reliably productive food producing areas!

Detrimental Solar/Wind Energy Transition - Land/Water/Food Contamination Risk - Hail Fractured Solar Panels - 31st Oct 2020

This hail storm also impacted my family - their roof & car were written off by tennis ball sized hail.

The home pictured & thousands more fractured Solar panels were in the surrounding area with most of the broken Solar panels left carelessly in situ for 10-11 months - some still remain broken more than 2 years later!

What will happen to our uncontaminated FOOD BOWLS & vital WATER sources when this happens on neighbouring Solar sites?
