RE : Onsite Wastewater Management Assessment for Chelsea Gardens methodology for sizing the Effluent Management Area

Harris Environmental Consulting has been asked to review the water balance method used by SEEC to calculate the irrigation area for the proposed wastewater disposal area. I have reviewed the documents and discussed this methodology with the author and it is evident to me that they have adopted the same procedures that we and all other consultants who undertake similar work follow.

We prepare reports for a similar scaled as the subject proposal, that are not only assessed by WaterNSW, but by the Council officers for the 21 LGA's we work within. I understand that WaterNSW have approved the subject DA, and it is my experience that WaterNSW will scrutinize all aspects of a consultant's proposal and would instigate changes to their assessment criteria for commercial projects if they believed they were inappropriate.

Kind regard
