Re: Development Application for proposed Temora Solar Farm

Dear Claire,

ITP Development Pty Ltd, proponents of a solar farm on our property at the above address, have asked me to provide additional information regarding the history of the land to support the Development Application currently being assessed by Council. I understand that the Planning Panel has requested further information regarding potential contamination of the land through its historic use as an agricultural property.

I have been the owner of this property since 10/1/2016. I can confirm that during my ownership of the property, the land has only been used for grazing, and not for any intensive agricultural activity, or the cultivation of crops, and no chemicals have been used on the land.

Prior to my ownership, approximately seven years ago, a crop of wheat was sown and harvested, with the use of standard agricultural chemicals.

As far as I am aware, the land on the property has never been used for anything other than mixed agricultural uses, and there is no evidence of any structures which may historically have supported industrial or intensive agricultural land use.

Please don't hesitate to contact me if you have any questions relating to this matter.

Yours sincerely,

Philip David Smith
