### Project Summary:

This Access Compliance Report is to accompany a Development Application for the development proposed at 23-25 Lethbridge Street, St Marys

This development proposes a New Building with a total of 21 Residential units. The development is within Penrith Council LGA that requires the provision of 10% Adaptable units and therefore the development proposes 3 Adaptable units. A total of 3 Accessible parking spaces have been provided in the development.

As the development is proposed for Social Housing, it is a requirement that the remainder of the units incorporate the features of the Silver, Gold and Platinum level of the Livable Housing Guidelines as required by the client. This is outlined in the LHA section of the report.

The development has building classification as detailed below;

- Class 2 (building containing more than 2 SOUs i.e. sole-occupancy units)
- Class 7a (car park)

This Access report is based on the relevant components of;

- Building Code of Australia (BCA) 2019, Volume 1- Performance requirements of DP1, DP2, DP8, DP9, EP3.4, FP2.1 and Parts D2, D3, E3 and F2 (where applicable)
- Disability (Access to Premises-Building) Standards 2010 (henceforth referred to as APS)
- AS1428.1-2009 Part 1: General requirements for access, including any amendments
- AS1428.4.1-2009 Part 4.1: TGSIs (Tactile ground surface indicators), including any amendments
- Part 6: Off-street parking for people with disabilities. AS2890.6-2009
- AS4299-1995 Adaptable Housing
- Lifts types included in the BCA including Part 12: Facilities for persons with disabilities AS1735
- Livable Housing Australia's Livable Housing Design Guidelines- Fourth Edition

The assessment of the proposed development has been undertaken to the extent necessary to issue DA (Development application) consent under the Environmental Planning and Assessment Act. The proposal achieves the spatial requirements to provide access for people with a disability and it is assumed that assessment of the detailed requirements such as assessment of internal fit-out, details of stairs, ramps and other features will occur at CC (Construction Certificate) stage.

By compliance with the recommendation in this report, the development complies with the requirements of Access Code of Disability (Access to Premises-Building) Standards 2010, the Disability Access relevant sections of Building Code of Australia 2019, the Silver level requirements of Livable Housing Design Guidelines, and the essential criteria of AS4299-Adaptable Housing.

D	17-08-2020	Issued for DA

### Limitations and Copyright information:

This report is based on discussions with the project architect and a review of drawings and other relevant documentation provided to us. No site visit was undertaken for the purposes of this project.

This assessment is based on the provided drawings and not based on constructed works, hence the assessment will provide assurance of compliance only if all the recommendations as listed in this report are complied with and constructed in accordance with the requirements of the current BCA, AS1428.1-2009 and other latest, relevant standards and regulations applicable at the time of construction. Assessment is based on classification/use of the building. If the Class of the building changes to any other building Class, this access report will have to be updated accordingly.

Unless stated otherwise, all dimensions mentioned in the report are net (CLEAR) dimensions and are not be reduced by projecting skirting, kerbs, handrails, lights, fire safety equipment, door handles less than 900mm above FFL (finished floor level) or any other fixtures/fit out elements. When we check drawings, we assume that the dimensions noted are CLEAR dimensions and therefore the Architect / Builder is to allow for construction tolerances. Only some numerical requirements from relevant AS (Australian Standards) have been noted in the report and for further details and for construction purposes refer to the latest relevant AS.

This report and all its contents are a copyright of Vista Access Architects Pty Ltd (VAA) and can only be used for the purposes of this particular project. This document may also contain Standards Australia Ltd copyrighted material that is distributed by SAI Global on Standards Australia Ltd.'s behalf. It may be reproduced in accordance with the terms of SAI Global Ltd.'s Licence 1901c001. Standards Australia Ltd.'s material is not for resale, reproduction or distribution in whole or in part without written permission from SAI Global Ltd.

This report is does not assess compliance matters related to WHS, Structural design, Services design, Parts of DDA other than those related to APS or Parts of BCA or Parts of AS other than those directly referenced in this report. VAA gives no warranty or guarantee that this report is correct or complete and will not be liable for any loss arising from the use of this report. We will use our best judgement in regards to the LHA assessments. However, we are not to be held responsible if another licenced LHA assessor comes to a different conclusion about compliance, certification or allocation of a particular Quality mark to us as a number of items are subject to interpretation.

We have no ability to check for slip resistance of surfaces. All wet areas, parking areas, pavement markings shall have the appropriate slip resistance for the location. We also have no ability to check for wall reinforcements once the walls have already been constructed. The builder is to take full responsibility that the requirements listed in this report are met and the construction to be as per requirements of AS1428.1/AS4299/AS2890.6/AS3661/AS4586

A report issued for DA (development application) is not suitable for use for CC (construction certificate) application.

# Compliance assessment with Access related requirements of BCA and Disability (Access to Premises-Building) Standards 2010 (APS)

BCA Part D3 Access for People with a Disability

For residential use components, access is required:  From a required accessible pedestrian entrance to at least 1 floor with SOUs and till the entry of door of each SOU on that level.  To and within 1 of each type of room or space in common use.  Where floor is accessed by an AS1428.1 ramp or lift, access is required to the entry doorway of each SOU on that level and to and within all common use areas on that level.  Compliance  Complies.  Access has been provided from the main pedestrian entry doorway to the entry doors of all SOUs on all levels by means of accessible pathways and lifts.  Access has been provided to at least 1 of each common use space such as communal garden on Ground floor level.  Access has been provided to Waste Room in the basement. Note: that door automation to the roller door to access the waste room has been detailed to the plans.  Details to be verified at CC stage of works.  Compliance  Compliance  Complies.  Complies. # Requirement Where accessible pedestrian entry has Multiple doorways: - At least 1 to be accessible if 3 provided - At least 50% to be accessible, if more than 3 provided - Where doorway has multiple leaves, at least 1 leaf is to have clear opening of 850mm

# Compliance Comments

(excluding automatic doors)
Capable of compliance.

In common use areas, all single hinged doors and in case of multiple leaf doorways, at least 1 operable leaf is required to provide a clear opening of 850mm with the door circulations spaces as per AS1428.1-2009.

Note that the circulation spaces (other than doorway threshold ramp) to have a maximum floor grade of 1:40. Where there is a level difference at the door threshold, the maximum level difference can be 35mm if provided with a 1:8 doorway threshold ramp. This is achievable and the door selections are to be verified at CC stage of works.

	BCA Part D3.3 Parts of buildings required to be accessible
Requirement	<ul> <li>Every Ramp with grades steeper than 1:20 and less than or equal to 1:14 (excluding fire-isolated ramp) is to be compliant with:</li> <li>AS1428.1-2009 (including but not limited to - maximum grade of 1:14 with appropriate landings at a maximum of 9M of a flight of ramp).</li> <li>1M clear width to be provided between handrails / kerb / kerbrails.</li> <li>Handrails and kerbs to be provided on both sides with appropriate handrails extensions.</li> <li>Slip resistance of ramp and landings to comply with BCA Table D2.14</li> </ul>
Compliance	N/A
Comments	No 1:14 ramps have been identified in the development.
Requirement	<ul> <li>Step ramp if provided is to be compliant with:</li> <li>AS1428.1-2009 including max grade of 1:10, max height of 190mm, max length of 1.9M</li> <li>Slip resistance of ramp and landings to comply with BCA Table D2.14.</li> </ul>
Compliance Comments	N/A No step ramps have been identified in the development.
Requirement	<ul> <li>Kerb ramp if provided is to be compliant with:</li> <li>AS1428.1-2009 including max grade of 1:8, max height of 190mm, max length of 1.52M</li> <li>Slip resistance of ramp and landings to comply with BCA Table D2.14.</li> </ul>
Compliance Comments	N/A No kerb ramps have been identified in the development.

### Requirement

Every **Stairway** (excluding fire-isolated stairway) is to be compliant with:

- AS1428.1-2009 (including but not limited to opaque risers, handrails on both sides including appropriate handrail extensions between 1M clear width and compliant nosing strips).
- Slip resistance to comply with BCA Table D2.14 when tested in accordance with AS4586.

# Compliance Comments

Capable of compliance.

Where non-fire-isolated stairways have been provided, the features of the stairway will be assessed with the requirements of AS1428.1-2009 at the CC stage of works.

**Note:** In some cases, the stairway from the basement to the ground floor level is considered to be non-fire-isolated, in which case full compliance will be required as per AS1428.1-2009. Verify with the BCA consultant.

**Note:** For stairways with 90° to 180° turns at landings, in order for the handrails to comply with the consistent height requirement, the risers have to be offset at the mid-landings OR provided with a 300mm handrail extension, so that no vertical sections are created in the handrails. This applies to both non- fire-isolated and fire-isolated stairways.

### Requirement

Handrail cross-section – for stairways and ramps to comply with AS1428.1-2009.

- Diameter of handrails to be between 30mm-50mm and located not less than 50mm from adjacent walls with no obstructions to top 270° arc.

## Compliance Comments

Capable of compliance.

Details to be verified at CC stage of works.

### Requirement

Every **Fire-isolated Stairway** is to be compliant with AS1428.1-2009 in the following aspects:

- Handrail on one side (requirement under D2.17) with 1M clear space. Handrail
  extensions are not required however since the handrails cannot have any vertical
  sections and since handrail is required to be at a consistent height throughout the
  stairway including at landings, it may be essential to either provide handrail extensions
  or offset first riser going up at mid landings to achieve this at 90° to 180° turns.
- Nosing strips 50mm-75mm wide with minimum of 30% luminance contrast and
   Slip resistance to comply with BCA Table D2.14.

#### Compliance Comments

Capable of compliance.

Detailed features of the fire-isolated stairways will be assessed with the requirements of

AS1428.1 at the CC stage of works. **Note:** For stairways with 90° to 180° turns at landings, in order for the handrails to comply with the consistent height requirement, the risers have to be offset at the mid-landings OR provided with a 300mm handrail extension, so that no vertical sections are created in the handrails. This applies to both non-fire-isolated and fire-isolated stairways.

	BCA Part D3.4 Exemption
Requirement	Access is not required to be provided in the following areas:  - Where access would be inappropriate because of the use of the area  - Where area would pose a health and safety risk  - Any path which exclusively provides access to an exempted area
Compliance Comments	For information only.  Areas such as lift machine rooms, fire services room, commercial kitchens etc. in the development are exempted from providing access under this clause due to WHS concerns.  Where a care taker is provided in the development, the toilet provided exclusively for use by the caretaker can be excluded from providing access based on the provisions in this clause.
	BCA Part D3.5 Accessible Carparking
Requirement	Class 2  There are no Accessible carparking requirements for a Class 2 under the BCA.  If adaptable housing has been mandated by the Council, then carparking spaces for Adaptable units will be required under the requirements of AS4299- Adaptable housing.
Compliance Comments	Complies Penrith Council requires provision of 10% Adaptable units in the development. Development has total number of 26 units. 10% of 26 = 3 required Adaptable units. Therefore, 3 accessible carparking spaces are required for the residential component of the development.  3 Accessible compliant car parking spaces have been provided in development. One accessible compliant parking space is required to be allocated to each of the Adaptable units.  Detailed features of the accessible/ adaptable parking spaces are to be verified at CC stage of works.

	AS2890.6-2009 requirements for Accessible car parking space
Requirement	<ul> <li>Dedicated space 2.4Mx5.4M, Shared space 2.4Mx5.4M at the same level</li> <li>Slip resistant flooring surface with maximum fall 1:40 in any direction or maximum 1:33 if bituminous and outdoors.</li> <li>Central Bollard in shared space at 800+/-50mm from entry point.</li> <li>Pavement marking in dedicated space by means of access symbol between 800mm-1000mm high placed on a blue rectangle of maximum 1200mm and between 500mm-600mm from its entry point (marking not required where allocated to an Adaptable unit).</li> <li>Minimum headroom of 2.2M at entrances and 2.5M is required over shared zones as well as dedicated spaces.</li> <li>Non-trafficked area of the shared space to have marking strips at 45°, 150-200mm wide at 200mm-300mm spaces (not required where driveways are used as shared spaces)</li> </ul>
Compliance	Capable of compliance.
Comments	Details to be verified at the CC stage of works.
	Refer to diagrams below for requirements, especially in regards to head height requirements.
	<b>Note:</b> The pavement marking shall have the appropriate slip resistance for the location. This requirement is to be added to the project specifications to ensure compliance.

Head heights for both dedicated accessible parking space and the shared zone to be as shown above. No beams, pipes, sprinklers or any other encroachments are persmissible for the entire 5.4M width of the dedicated and shared zone as per Section shown above.

150-200 wide diagonal stripes with spaces 200-300 between stripes at 45+/- 10°

The Accessible parking, shared zones, linemarking and bollards to be as shown above. Access symbol is not to be provided when spaces are allocated to Adaptable units.

	BCA Part D3.6	Signage
Requirement	Unisex Toilet LH	Braille and Tactile signage is required to identify Accessible Sanitary facilities International sign of access is required to signage to all accessible sanitary facilities (excluding SOUs within Class 1b or Class 3) and signage is required to identify if facility is for LH (left hand transfer) or RH (right hand transfer)
Compliance Comments	signage as specified a	e. enerally take place at CC stage of works. Selection and location of above will lead to compliance. gnage to be verified at CC stage of works.
Requirement	Braille and Tactile si	gnage is required to identify Ambulant Sanitary facilities
Compliance	N/A	
Comments	No common use amb	ulant facilities have been provided in the development.

Vista Access Architects Pty Ltd ABN 82124411614, ARN 6940, ACAA 281, LHA 10032

Page 10 of 24 Project Ref: 19019

Requirement	Braille and Tactile signage is required to identify Hearing Augmentation
Compliance Comments	N/A Hearing augmentation is not provided since there is no inbuilt amplification system proposed in the development.
Requirement	Braille and Tactile signage is required to identify a Fire exit door required by E4.5 by stating the 'Exit' and 'Level', followed by either:  - The floor level number or - Floor level descriptor or - A combination of both of the above. Sign must be located on the side that faces a person seeking egress The "?" shown in image above is to be replaced with the floor level where the door is located. Image of the running person is optional.
Compliance Comments	Capable of compliance. All doors nominated as Exit doors require signage as described above. Signage selections generally take place at CC stage of works. Selection of signage as specified above will lead to compliance. Details of selected signage to be verified at CC stage of works.
Requirement	Signage is required to a non-accessible pedestrian entrance
Compliance Comments	N/A The development has only 1 entry which has been designed to be accessible.
Requirement	Signage is required where a bank of sanitary facilities is not provided with an accessible unisex sanitary facility.
Compliance Comments	N/A
Requirement	All signage is required to be as per Specification D3.6 Braille and Tactile Signs This includes location of signage, specifications in regards to braille and tactile characters, luminance contrast and lighting.
Compliance Comments	Capable of compliance. Signage selections generally take place at CC stage of works. Selection of signage as specified above will lead to compliance. Details of selected signage to be verified at CC stage of works.
	BCA Part D3.8 Tactile indicators (TGSIs)
Requirement	<ul> <li>TGSIs are required when approaching:</li> <li>Stairways other than fire-isolated stairways.</li> <li>Escalators / passenger conveyor / moving walk.</li> <li>Ramp (other than fire-isolated ramps / kerb or step or swimming pool ramps).</li> <li>Under an overhead obstruction of &lt;2M if no barrier is provided.</li> <li>When accessway meets a vehicular way adjacent to a pedestrian entry (if no kerb / kerb ramp provided at the location).</li> <li>Compliance is required with AS1428.4.1 including Luminance contrast and slip resistance requirements for all TGSIs.</li> </ul>
Compliance Comments	Capable of compliance. TGSI selections generally take place at CC stage of works. Selection of TGSIs as specified will lead to compliance and these selection details are to be verified at CC stage of works.
	BCA Part D3.11 Limitations on Ramps
Requirement	On an accessway:  - A series of connected ramps must not have a combined vertical rise of more than 3.6M;  - And a landing for a step ramp must not overlap a landing for another step ramp or ramp.
Compliance Comments	N/A  No ramps have been identified in the development.

### BCA Part D3.12 Glazing on Accessways Glazing requirements: Requirement Where there is no chair rail, handrail or transom, all frameless or fully glazed doors, sidelights and any glazing capable of being mistaken for a doorway or opening are required to have a glazing strip as per requirements of AS1428.1 Compliance Capable of compliance Comments Glazing strips are required to be provided to full length glazed areas (doors and windows) used in common use areas such as lift lobbies and common passageways. Glazing strip selections generally take place at CC stage of works. Selection of glazing strips as specified above will lead to compliance and these selection details are to be verified at CC stage of works. **BCA Part F Accessible Sanitary Facilities** BCA F2.4 Accessible sanitary facilities Requirement Accessible unisex toilet is to be provided in accessible part of building such that: It can be entered without crossing an area reserved for 1 sex only Where male and female sanitary facilities are provided at different locations, Accessible unisex toilet is only required at one of the locations Even distribution of LH and RH facilities An accessible facility is not required on a level with no lift / ramp access. Compliance Comments 1 unisex accessible toilet LH transfer WC has been provided in the development to the ground floor level. Requirement Accessible unisex toilet are to be designed in accordance with AS1428.1-2009 Compliance Capable of compliance. Detailed features of the Accessible unisex toilet will be assessed with the requirements of Comments AS1428.1-2009 at the CC stage of works. 1900 clear after finishes 450 2630 clear after finishes 850 clear . 300 425 min LH transfer toilet shown above Note: Location of door is indicative only

Requirement	Ambulant use male / female toilets are to be provided if an additional toilet to the Accessible unisex toilet is provided
Compliance	N/A
Comments	No common use ambulant sanitary facilities have been provided in the development.
Requirement	Ambulant use toilets are to be designed in accordance with AS1428.1-2009
Compliance	N/A
Comments	No common use ambulant sanitary facilities have been provided in the development.

	BCA F2.4(a) Accessible unisex sanitary compartments	
Requirement	Class 2     At least 1 unisex Accessible toilet when sanitary compartments are provided in common areas.	
Compliance Comments	Complies 1 unisex accessible toilet LH transfer WC has been provided in the development to the ground floor level.	
	DCA F2 4/b) Dequirements for Associble unique abovers	
Requirement	BCA F2.4(b) Requirements for Accessible unisex showers  Class 2	
	- At least 1 unisex Accessible shower when showers are provided in common areas.	
Compliance Comments	N/A No common use shower facilities have been identified in the development.	
	BCA Part E Lift Installations	
	BCA E3.2 Stretcher facility in lifts	
Requirement  Compliance Comments	A <b>Stretcher lift</b> is to be provided if a passenger lift is installed to serve any storey with an effective height of 12M. The space requirement is 600mm wide x 2000mm deep x 1400mm high above the floor level. Confirm this requirement with your BCA consultant. For information only.	
	BCA E3.6 Passenger lift	
Requirement	In an accessible building, <b>Every Passenger Lift</b> (excluding electric passenger lift, electrohydraulic passenger lift, inclined lift) must be subject to limitations on use and must comply with <b>Tables E3.6a and E3.6b</b>	
Compliance Comments	Capable of compliance. A certificate of compliance from the lift supplier will be required at the CC stage of works stating that the proposed lift complies with the requirements of BCA Part E3- Lift installations.	
Requirement	Limitations on use of Stairway platform lifts, Low-rise platform lift, Low-rise, low-speed constant pressure lift and small sized, low-speed automatic lift	
Compliance Comments	N/A Not identified in the development.	
Requirement	Handrail requirements for passenger lifts. Apart from stairway platform lift and low-rise lifts, a handrail is required as per AS1735.12.	
Compliance Comments	Capable of compliance.  Details to be verified at CC stage of works.	
Requirement	Lift floor dimensions (excluding stairway platform lift)  - Lifts traveling 12M or under, floor size, 1100mm wide x 1400mm deep  - Lifts travelling more than 12M, floor size 1400mm wide x 1600mm deep	
Compliance Comments	Capable of compliance Details to be verified at CC stage of works. Additional lift car size may apply if stretcher lift is required under the BCA.	
Requirement	Minimum <b>Door opening size</b> complying with AS1735.12, not less than 900mm clear (excluding stairway platform lift).	
Compliance Comments	Capable of compliance Details to be verified at CC stage of works.	
Requirement	All lifts with a power operated door are required to have a <b>Passenger protection system</b> complying with AS1735.12.	
Compliance Comments	Capable of compliance Details to be verified at CC stage of works.	

Requirement	Lift landing doors to be provided at upper landing (excluding stairway platform lift).
Compliance	Capable of compliance
Comments	Details to be verified at CC stage of works.
Requirement	Lift car and landing control buttons to comply with AS1735.12 (excluding stairway
	platform lift and low-rise platform lift).
Compliance	Capable of compliance
Comments	Details to be verified at CC stage of works.
Requirement	<b>Lighting</b> (for all enclosed lift cars) to be provided in accordance with AS1735.12 and
	AS1680. Minimum illuminance of 100 lx is required at the level of the car floor and average
	of 50 lx is required on the control panel surface.
Compliance	Capable of compliance
Comments	Details to be verified at CC stage of works.
Requirement	To all lifts serving more than 2 levels, audible and visual indication to be provided as per
	AS1735.12.
Compliance	Capable of compliance.
Comments	Details to be verified at CC stage of works.
Requirement	Emergency hands free communication (excluding stairway platform lift) – provide a button
	that alerts a call centre and a light that the call has been received.
Compliance	Capable of compliance
Comments	Details to be verified at CC stage of works.

## **Additional Features required as per AS1428**

Refer to AS1428 for full list of requirements.

110101 10710	31420 for full list of requirements.
	The following accessibility requirements apply only to: - Common use areas within the residential component (including passageways leading to SOUs)
Requirement Compliance	Accessway width requirements     All Accessway widths are to be a minimum of 1M clear (measured from skirting to skirting) with vertical clearance of at least 2M     Complies.
Comments	Details to be verified at CC stage of works.
Requirement	<ul> <li>Doorway requirements</li> <li>All common use doorways in the development to be in accordance with AS1428.1</li> <li>Door thresholds are to be level or they can incorporate a Threshold ramp as per AS1428.1 i.e. max 1:8 grade, max height of 35mm and located within 20mm of door leaf.</li> <li>Distance between successive doorways in airlocks to be 1450mm which is measured when the door is in open position in case of swinging doors.</li> </ul>
Compliance Comments	Capable of compliance.  Details to be verified at CC stage of works.
Requirement	Door hardware requirements  Door hardware including door handles, door closers and the in-use indicators / snibs in accessible and ambulant toilets are required to comply with requirements of AS1428.1.
Compliance Comments	Capable of compliance. Door hardware selections generally take place at CC stage of works. Selection of door hardware as specified above will lead to compliance and these selection details are to be verified at CC stage of works.
Requirement	Luminance contrast requirements for doorways.  - All doorways to have a minimum luminance contrast of 30% provided as per AS1428.1 with the minimum width of the luminance contrast to be 50mm.
Compliance Comments	Capable of compliance. Painting schedule is generally developed at the CC stage of works. The painting schedule of walls/doors and door frames are to consider the above requirements when colours are selected. Generally a light colour door with a dark colour frame will satisfy requirements. Selection details are to be verified at CC stage of works.
Requirement	<ul> <li>Floor or ground surfaces</li> <li>Use slip-resistant surfaces. The texture of the surface is to be traversable by people who use a wheelchair and those with an ambulant or sensory disability.</li> <li>Abutment of surfaces is to have a smooth transition. Construction tolerances to be as per AS1428.1</li> <li>Grates if used in the accessible path of travel is required to comply with the requirements as per AS1428.1</li> </ul>
Compliance Comments	Capable of compliance. Floor surface selections generally take place at CC stage of works. Selection of floor surfaces as specified above will lead to compliance and these selection details are to be verified at CC stage of works.
	Switches, Controls and Lighting requirements  - All switches and controls (including controls for intercom facilities and external lift control buttons) on an accessible path of travel, Accessible SOUs and Accessible sanitary facilities to be located as per requirements of AS1428.1
Compliance Comments	Capable of compliance. Lighting fixture selections and locations generally take place at CC stage of works. Selection of lighting fixtures and locating them as specified above will lead to compliance. These selection/location details are to be verified at CC stage of works.

### AS4299.1995- Adaptable Housing

Appendix A of AS4299 schedule is a list of features to be incorporated into a housing unit for it to be termed an 'Adaptable House'.

There are 3 Classification levels for Adaptable Housing

Adaptable Class A in which all 119 essential and all desirable features are to be incorporated.

**Adaptable Class B** in which all essential and 50% of 64 available desirable features are to be incorporated **Adaptable Class C** in which all essential features are to be incorporated.

3 Adaptable units are required by the Council's DCP to a Class C level. The units designated as adaptable are unit numbers **101**, **201** and **301** 

At DA stage there is insufficient information to certify compliance with the Standard, however, in accordance with the table below, the nominated units can comply with the spatial requirements of AS4299 for Adaptable Housing.

Pre-adaptation and Post-adaptation layout shown below.

By incorporating the essential requirements listed Checklist below in the Specifications, the nominated Adaptable units can achieve full compliance with Adaptable House Class C

AS4299.1995 - Class C – Essential requirements.

 $R \square = Required;$ 

C✓ = Capable of compliance at **by adding the requirement to the project specifications** or in some cases

capable of compliance at post adaptation stage (where noted in comments).

 $\sqrt{}$ 

### Requirement

Where the location of fixtures such as WC pans, wash basins, sinks, laundry fixtures and any other fixtures are to be relocated post-adaptation to comply with AS1428.1, then the service pipes (waste and water supply pipes) have to be laid in the correct AS1428.1 specified position at pre-adaptation itself and the services to be capped off for future use.

### General recommenda tions (Advisory only / not mandatory)

- It is recommended that where balconies / outdoor areas have been provided to Adaptable units, provide the sliding doors such that the floor tracks are recessed, so level access can be provided to the balcony / outdoor areas from inside the unit.
- Sliding doors in the living areas leading to outdoor areas are to be such that opening of the door is able to provide a clear opening space of 850mm with a latch side space of 530mm.
- If the balcony is to be brought up to the same level as the unit at post-adaptation by means of decking etc. then ensure that the minimum handrail height requirements required under the BCA are complied with, considering the raised height of the balcony.
- Consideration to be given to recess the slab in the wet areas so that there is no level difference once the floor finishes are applied (i.e. flush transition from carpeted area to tiles area).

### Compliance assessment with

### Livable Housing Guidelines for Silver, Gold and Platinum level.

In addition to the adaptable units provided, as the development is for Social Housing the remaining 21 units are to comply with the table below:

By incorporating the requirements of the below Checklist in the Specifications of the project, the nominated Livable units can achieve full compliance with Livable Housing Guidelines- for Silver, Gold and Platinum Level as listed below

Design Element	<b>Requirements</b> (All dimensions noted are required to be clear of finishes as required under AS1428.1)	Compliance / Comments
Dwelling Access (Gold)	<ul> <li>(a) Provide a safe and continuous 1.1M clear width pathway from front site boundary to an entry door to the dwelling.</li> <li>(a) Path including any ramps and walkways to have no steps, even firm, slip-resistant surface, max 1:40 crossfall, max slope of 1:14 with landings of 1.2M every 9M and landings every 15M for 1:20 walkways. 1.2M clear width of ramps are required.</li> </ul>	Capable of compliance. Verify at CC
	<ul> <li>(b) Pathway may be provided via an associated car parking and where carparking is relied upon as pathway, the car parking space to be</li> <li>3800 (width) x6000 (length),</li> <li>even, firm and slip resistant, level surface of 1:40 max grade and 1:33 max grade for bitumen</li> <li>A vertical clearance over the parking space of 2.5M; and</li> <li>A covered parking space to ensure protection from the weather</li> </ul>	N/A Access is provided by the pathway.
	(c) Step ramp may be provided at an entrance doorway. The step ramp to be max 190mm height, max 1:10 grade, max 1900mm length.	N/A
	(e) Level landings of 1200mm are required exclusive of the swing of the door or gate and to be provided at the head and foot of the ramp.	N/A No gates identified on plans.
2 Dwelling entry (Gold)	<ul> <li>(a) Dwelling Entry should provide an entrance door with</li> <li>(i) min clear opening width of door to be 850mm</li> <li>(ii) Step free threshold of max 5mm with rounded or bevelled lip</li> <li>(iii) reasonable shelter from the weather</li> </ul>	Complies. Verify at CC
	<ul><li>(b) Level landing of 1350x1350mm at step-free entrance door on the arrival / external side of the entrance door.</li><li>(c) Max permissible threshold is less than 56mm where provided with a 1:8 grade threshold ramp.</li></ul>	Complies Verify at CC N/A
	(d) Entrance to be connected to a pathway (specified under Element 1)  Note: The entrance to incorporate waterproofing and termite  management requirements as specified in the NCC	Complies
Internal doors and corridors (Silver)	<ul> <li>(a) Doors to rooms on the entry level used for living, dining, bedroom, bathroom, kitchen, laundry and sanitary compartments to be</li> <li>(i) 820mm clear opening and</li> <li>(ii) provided with a level threshold of max 5mm between abutting surfaces with rounded or bevelled lip</li> </ul>	Complies. Verify at CC
	(b) Internal corridors and passageways to doorway to be min 1M clear (measured from skirting to skirting)	Capable of compliance. Verify at CC
Toilet (Silver)	<ul> <li>(a) One Toilet to be provided on the ground or entry level that provides,</li> <li>(i) Min 900mm between walls or amenities</li> <li>(ii) Min 1200mm clear space in forward of the WC pan exclusive of door swing.</li> <li>(iii) The toilet pan to be positioned in the corner of a room to enable handrails</li> </ul>	Complies. Verify at CC

<b>5</b> Shower (Gold)	<ul> <li>(a) One bathroom should feature a slip resistant, hobless shower recess. Shower screens are permitted provided they can be easily removed at a later date.</li> <li>(b) The shower recess should be located in the corner of the room to enable the installation of grabrails at a future date.</li> <li>(c) The hobless shower recess described in (a) should: <ul> <li>(i) be located in a bathroom on the ground (or entry) level;</li> <li>(ii) with dimensions of at least 900mm (width) x 900mm (length).</li> <li>(iii) dimensions of at least 1200mm(width) x1200mm (length) forward of the shower recess</li> </ul> </li> </ul>	Complies. Verify at CC
	For hobless specification please see Australian Standard AS3740-3.6. Reinforcement guidelines for walls in bathrooms and toilets are found in element 6	
Reinforcement of bathroom & toilet walls (Silver)	(a) Except for walls constructed of solid masonry or concrete, the walls around the shower, bath (if provided) and toilet should be reinforced to provide a fixing surface for the safe installation of grabrails.	Complies. Verify at CC
	<ul> <li>(b), (c) and (d) the walls around toilet, bath and shower to be via:</li> <li>(i) Noggins with a thickness of at least 25mm</li> <li>(ii) Sheeting with a thickness of at least 12mm</li> <li>Refer to diagrams provided in the Livable Housing Guideline document.</li> </ul>	Complies. Verify at CC

Kitchen space (Gold)	The kitchen space should be designed to support ease of movement and adaptation with:  (i) at least 1200mm clearance provided in front of fixed benches and appliances; and  (ii) slip resistant flooring.	Complies. Verify at CC
<b>9</b> Laundry space (Gold)	<ul> <li>(b) Where practicable, floor finishes should extend under kitchen cabinetry to enable cupboards to be removed without affecting the flooring. (Not required for flooring under fixture such as floor oven)</li> <li>The laundry space should be designed to support ease of movement and adaptation with: <ul> <li>(i) at least 1200mm clearance provided in front of fixed benches and appliances; and</li> <li>(ii) slip resistant flooring.</li> </ul> </li> </ul>	Capable of compliance. Verify at CC Complies. Verify at CC
	(b) Where practicable, floor finishes should extend under laundry cabinetry to enable cupboards to be removed without affecting the flooring.  The dwelling should feature a space (or room) on the ground (or	Capable of compliance. Verify at CC Complies.
Ground floor (or entry level) bedroom (Gold)	entry) level that:  (i) is of at least 10m² Clearance exclusive of wardrobes; skirtings and wall linings;  (ii) provides for a minimum path of travel of at least 1000mm on at least one side of the bed.	Verify at CC
Switches and powerpoints (Platinum)	(a) Light switches should be positioned in a consistent location:  (i) between 900mm – 1100mm above the finished floor level; and  (ii) horizontally aligned with the door handle at the entrance to a room.	Capable of compliance. Verify at CC
12	<ul> <li>(b) Powerpoints should be installed not lower than 300mm above the finished floor level.</li> <li>(c) Light and powerpoint switches should be rocker action, toggle or push pad in design with a recommended width of 35mm.</li> <li>(a) Doorways should feature door hardware installed at between 900mm – 1100mm above the finished floor.</li> </ul>	Capable of compliance. Verify at CC  Capable of compliance.
Door and tap hardware (Platinum)	(b) Doorways should feature lever or D-pull style door hardware as per AS1428.1; and  (c) Basins, sinks and tubs should feature lever or capstan style tap	Verify at CC  Capable of

16 Flooring (Platinum)	<ul> <li>(a) All floor coverings should:</li> <li>(i) be firm and even, slip resistant and</li> <li>(ii) feature a level transition between abutting surfaces (a maximum vertical tolerance of 5mm between abutting surfaces is allowable provided the lip is rounded or beveled).</li> </ul>	Capable of compliance. Verify at CC

### **Disability Discrimination Act**

Advisory Only

The Federal Disability Discrimination Act 1992 (DDA) provides protection for everyone in Australia against discrimination based on disability. Section 32 of the DDA focuses on the provision of equitable and dignified access to services and facilities for people with mobility, sensory and cognitive disabilities.

Disability discrimination happens when people with a disability and their relatives, friends, carers, co-workers or associates are treated less fairly than people without a disability.

Compliance with Access to Premises Standards give certainty to building certifiers, building developers and building managers that, if access to (new parts) of buildings is provided in accordance with these Standards, the provision of that access, to the extent covered by these Standards, will not be unlawful under the DDA. This however applies only to the new building or new parts of an existing building and its affected part. All areas outside the scope of these areas are still subject to the DDA. We cannot guarantee or certify for DDA compliance because DDA compliance can only be assessed by the Courts.

Scope of DDA extends beyond the building fabric and also includes furniture and fittings.

Some recommendations to address common furniture and fittings have been listed below. Non-provision of the below recommendations may not affect compliance under the BCA but may leave the building owner vulnerable to a claim under the DDA.

For new kitchens / BBQ areas in residential common use areas, it is suggested that this kitchen could be made partially accessible by providing a width of 900mm next to the sink as vacant space (without cabinetry under the bench top) and a long lever tap with spout and handle within 300mm from the front of the benchtop. The distance in between the benches to be 1550mm. 1 double GPO to be provided within 300mm from the edge of the benchtop. This would allow a person in a wheelchair to independently move within the kitchen and use basic facility, being the sink independently.

Vista Access Architects Pty Ltd ABN 82124411614, ARN 6940, ACAA 281, LHA 10032

### **Statement of Experience**

### **Farah Madon- Director**

ACAA Accredited Access Consultant, NDIS SDA Assessor, Livable Housing Assessor & Changing Places Assessor

- Accredited member of the Association of Consultants in Access Australia (ACAA).
   Membership no 281
- Architect registered with the NSW Architect's Registration Board. Reg number 6940
- Member of Australian Institute of Architects (RAIA), A+ Practice member. No 49397
- Registered Assessor of Livable Housing Australia. Licence no 10032
- Internationally Certified Access Consultant GAATES ICAC. Membership BE-02-021-20
- Registered Assessor of Changing Places Australia. Registration no CP006

#### **Farah's Educational Profile and Qualifications include:**

- Bachelor of Architecture Degree with Honours (B.Arch.)
- International Certification of Accessibility Consultants—Built Environment (ICAC-BE)
  Program, Level 2 Advanced Accessibility Consultant
- Diploma of Access Consulting CPP50711
- Accredited Specialist Disability Accommodation (SDA) Assessor's Course
- Standards Australia's course on 'Writing Australian Standards'
- OHS Construction Induction Training Certificate
- Changing Places Australia's Training for Assessors

Farah has 20 years of experience of working in the field of Architecture and Access. Farah specialises in access consultancy services, including NDIS SDA Assessments, access related advise, auditing and reporting services, performance solution assessments for access related issues under the BCA.

Farah is the lead author of the NDIS SDA Design Standard. She has been invited as an expert witness for Access related matters in the Land and Environment Court.

# Farah currently participates on the following key committees concerning access for people with disabilities, on an honorary basis:

- Committee member of ME-064 Committee of Standards Australia responsible for the AS4299 and AS1428 suite of standards.
- Community Representative Member of the Penrith City Council's Access Committee
- Member of Australian Institute of Architect's (RAIA) National Access Work Group (NAWG)
- Management Committee member of NSW Network of Access Consultants
- Livable Housing Australia's Industry Reference Group (IRG) Member

### Farah has previously held the following roles:

- Vice President of ACAA from 2016 to 2019 and Management committee member of ACAA from 2011 till 2019.
- Convener of the ACAA's Access related Practice and Advisory Notes

#### Meet our team

# Vanessa Griffin- ACAA Accredited Access Consultant, NDIS SDA Assessor, Livable Housing Assessor & Changing Places Assessor

- Accredited member of ACAA. Membership no 500
- Registered Assessor of Livable Housing Australia.
- Member of AIBS Australian Institute of Building Surveyors

### Vanessa's Educational Profile and Qualifications include:

- Diploma of Surveying and Diploma of Health and Building Surveying
- Certificate IV in Access Consulting
- OHS Construction Induction Training Certificate
- Changing Places Australia's Training for Assessors
- Accredited Specialist Disability Accommodation (SDA) Assessor's Course

### **Jenny Desai-** ACAA Accredited Access Consultant

- Accredited member of ACAA. Membership no 572 Jenny's Educational Profile and Qualifications include:
- Master of Design (M.Des) from University of Technology, Sydney
- Certificate IV in Access Consulting
- OHS Construction Induction Training Certificate
- Certificate IV in Access Consulting

Member no BE-02-021-20
