Executive Summary

Northrop Consulting Engineers (Northrop) have been engaged by HOLDMARK Property Group to prepare a Site Based Stormwater Management Plan (SBSMP) for a Development Application submission to Penrith City Council (Council). The proposed Residential & Retail Development is located at 68-80 O'Connell Street Kingswood NSW 2747.

This SBSMP addresses the stormwater management strategy for the proposed development and demonstrates that the proposed development can be constructed and operated in accordance with all stormwater objectives required for the development. The primary outcomes of this SBSMP are as follows:

Lawful Point of Discharge

The existing lawful point of discharge (stormwater channel headwall) will be exchanged for an existing kerb inlet pit downstream of the headwall due to the proposed realignment of Corr Road, with most of the site flows being captured for stormwater quantity and quality treatment prior to discharge from the site. A small portion of the development will bypass the private stormwater infrastructure and discharge towards the existing stormwater channel; however, the combined site runoff achieves all stormwater quantity and quality objectives.

Stormwater Quantity

The stormwater quantity objective was to ensure post-development site generated peak discharge was no greater than the pre-development site generated peak discharge for all storm durations under the 1% AEP and 20% AEP storm events. Ultimately, the proposed stormwater network for the development satisfies this requirement.

All catchments conveying flow to the nominated point of discharge were considered and modelled in DRAINS. This includes upstream catchments and sub-catchments internal to site boundaries.

To achieve a non-worsening impact to the downstream point of discharge, the proposed development requires a total detention volume of 584m^3, which has been achieved via underground On-Site Stormwater Detention (OSD) tanks. Three new OSD tanks have been proposed to achieve this volume. All road catchments and catchments upstream of site will bypass OSD. Additionally, an existing 177kL detention tank which currently services the adjacent Woolworths carpark is proposed to replaced with a like-for-like tank. Given the proposal is increasing pervious area in this location, it's likely that the overall stormwater flow from the western catchment (previously the Woolworths carpark) will be less.

Stormwater Quality

Stormwater Quality Improvement Devices (SQIDs) have been proposed in the design to achieve the water quality objectives specified in Penrith City Council's WSUD Technical Guidelines, namely, the removal of gross pollutants, suspended solids, nitrogen and phosphorus. The proposed treatment train was modelling using MUSIC modelling software and includes the following SQIDs:

- 29x Ocean Protect OceanGuard 200 micron filter baskets
- 20x Ocean Protect Stormfilter 690 Psorb Cartridges
- 100m^2 total Media Filtration at tree pits
- 160kL total Rainwater Tank storage

Erosion and Sediment Control

Construction phase ESCP measures are to be implemented during construction in accordance with the relevant requirements. Of these measures, an 832m^3 sediment basin is included.

1. Introduction

Northrop Consulting Engineers (Northrop) have been engaged by HOLDMARK Property Group to develop a Site Based Stormwater Management Plan (SBSMP) in support of a Development Application submission to Penrith City Council (Council) and any nominated referral agency. The proposed Residential Community is located at 68 & 80 O'Connell Street Kingswood NSW 2747 (Lot 1/DP1268507 & Lot 2/DP1268507), the full site details are summarised in below. The proposed development will deliver a Residential Community at Caddens Corner.

Table 1: Property Details

Category	Description
Site Address	68 & 80 O'Connell Street Kingswood NSW 2747
Lot Title(s)	1/DP1268507 & 2/DP1268507
Total Site Area	5.3070ha
Proposed Land Use	Residential Community

This primary objectives of this SBSMP is to define the following:

- Legal point of discharge
- Stormwater Conveyance and Flood Management
- Stormwater Quantity management strategy
- Stormwater Quality management strategy
- Erosion and Sediment Control strategy.

1.1 Related Reports and Documents

This report is to be read in conjunction with the following reference documents:

- Civil Design Drawings by Northrop. Drawings No DAC0000 to DAC6103
- Flood Study Letter

2. Site Context and Existing Characteristics

The subject site located at 68 & 80 O'Connell Street Kingswood NSW 2747 is approximately rectangular in shape and spans across Lot 1 of DP 1268507 ('Lot 1') and Lot 2 of DP 1268507 ('Lot 2'). The total site area for the proposed development is approximately 5.3070ha. The site is located within the Penrith Local Government Area (LGA).

Within Lot 2, there exists a sealed road extending from Lot 3 of DP 1268507 ('Lot 3') into Lot 1, a stormwater channel that begins at the north-western end of the lot and extends into Lot, and a stormwater culvert (inlet & outlet) located at the centre of the lot. Within Lot 1 there currently exists a retail precinct with a dedicated on-grade customer parking lot at the eastern end of the lot.

An annotated aerial image of the site is shown below in Figure 1.

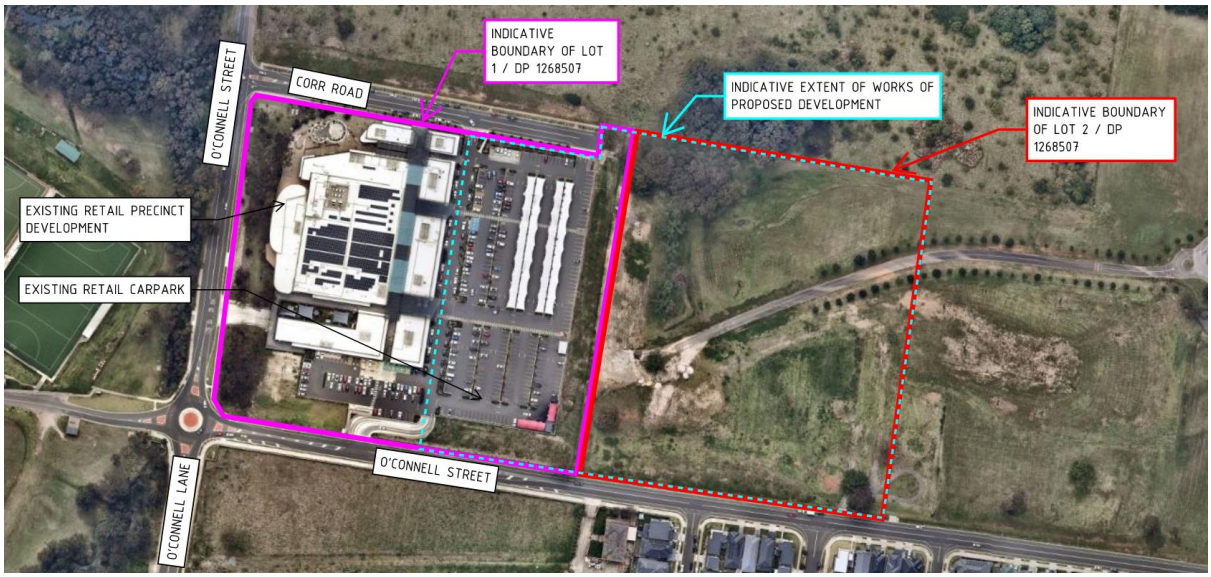

Figure 1: Site Locality (Source: Nearmap)

2.1 Existing Site Characteristics

Within Lot 2, the site generally falls North-west towards the existing stormwater channel seen in Figure 2, at an average slope of approximately 6.00%.

Within Lot 1, the existing retail on-grade carpark generals falls west at an average slope of approximately 2.00%. There also exists a batter along the shared boundary of Lot 1 and Lot 2, falling west toward Lot 1 at an average slope of approximately 30.00%.

The site is currently bound by:

- An existing retail precinct development to the west
- O'Connell Street (east-west) to the south
- Greenfield sites to the north
- Greenfield sites to the east

2.2 Existing Legal Point of Discharge

Based on site survey information prepared by Ramsay Surveyors (ref.: 8966) and the Approved for Construction civil engineering plans prepared by Wood & Grieve Engineers (ref.: 32763-4) for the adjacent retail precinct development (Development Consent: DA17/0995, Construction Certificate: CCX19/0047), the following existing stormwater infrastructure has been identified in the vicinity of the site:

- Stormwater culvert located at the centre of Lot 2, extending underneath the existing sealed road. This is shown in Figure 3.
- Stormwater channel located at the north-west end of Lot 2, adjoining a pit and pipe network (via a headwall) at Corr Road. This is shown in Figure 2.

The headwall forms the current legal point of discharge as it connects the existing stormwater channel to the pit and pipe network along Corr Road.

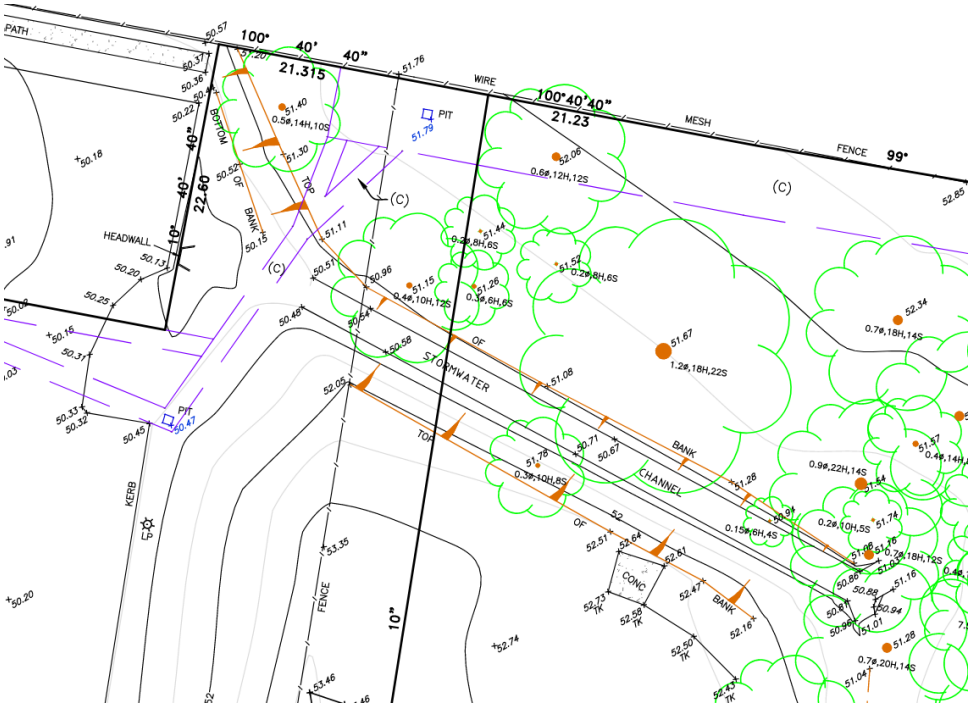

Figure 2: Existing Stormwater Channel (North-west) (Source: Ramsay Surveyors)

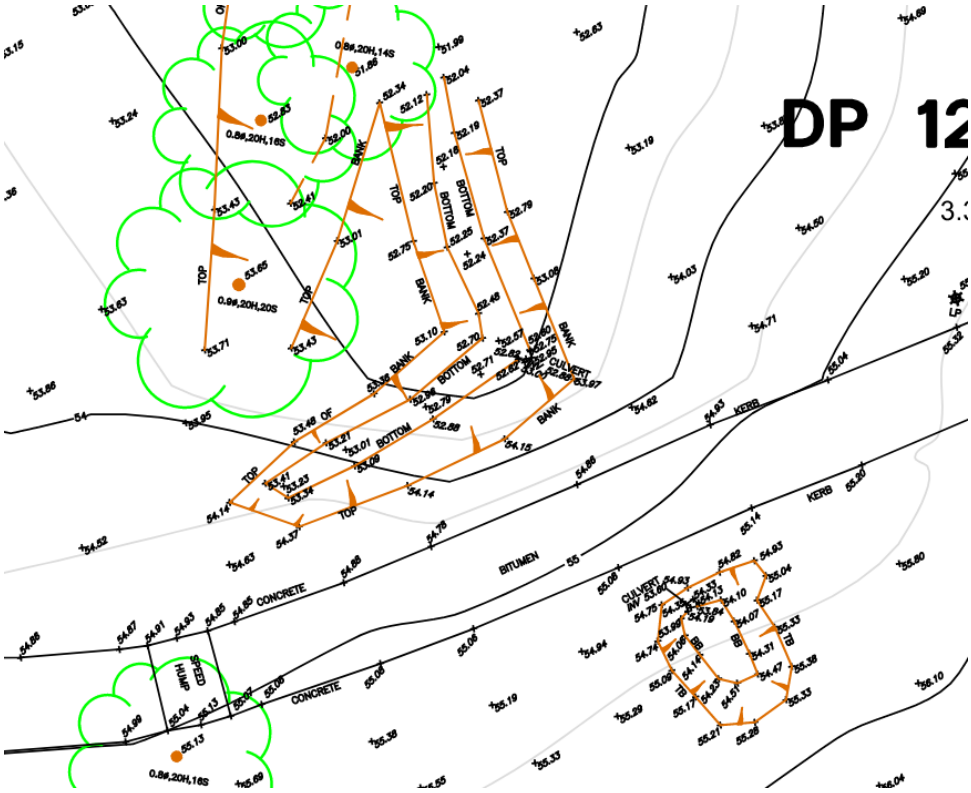

Figure 3: Existing Stormwater Culvert (Source: Ramsay Surveyors)

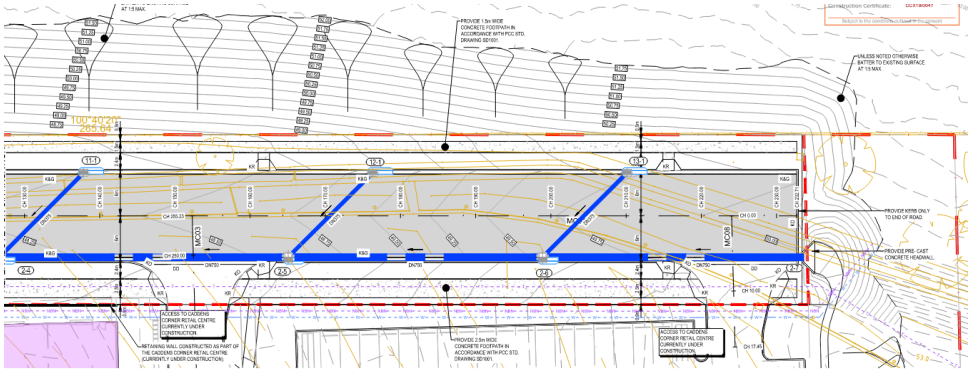

Figure 4: Pit & Pipe Network along Corr Road (Source: Wood & Grieve Engineers)

3. Proposed Development

The proposed development involves the construction of multiple multi-storey residential and retail buildings with associated landscape areas, below-ground carparking, and public road infrastructure.

The proposed architectural layout of the development prepared by Turner Architects is shown below in Figure 5. Refer to drawings prepared by Turner Architects for further information.

Figure 5: Proposed Site Plan (Source: Turner Architects)

4. Stormwater Management Objectives

4.1 Development Control Plan Objectives

Stormwater management for the proposed development has been designed in accordance with the following documents:

- *Penrith Development Control Plan 2014, Section E1 Caddens* ('DCP')
- Penrith City Council's Policy *Stormwater Drainage Guidelines for Building Developments* (dated 28 November 2016)
- Penrith City Council's *WSUD Technical Guidelines* (Version 3 – June 2015)
- Penrith City Council Development Control Plan 2014 (DCP)
- Plumbing and Drainage Code AS3500.3
- Australian Rainfall and Runoff Guidelines (ARR 2019)

Based on Council's DCP, Stormwater Management Policy and WSUD Technical Guidelines, the stormwater management objectives / requirements for the development are summarised below:

- Design an On-site Stormwater Detention (OSD) system to capture and control post-development site generated stormwater runoff flows such that the rate of stormwater runoff (both piped and overland) from the post-developed site does not exceed the rate of runoff from the pre-developed site, i.e., Permissible Site Discharge (PSD) for the following storm events:
    - All storm **durations for the 1% AEP and 20% AEP storm events.**
- The total are allowed to bypass the OSD system, which includes pervious and impervious areas, must not be greater than 15% of the total site area.
- Stormwater discharging from the site (post-development) must achieve the annual pollutant load reduction targets specified below in Table 2.

Table 2: Water Quality Objectives (Source: PCC's WSUD Technical Guidelines (Version 3 – June 2015))

Pollutant	Percent Reduction
Gross Pollutants (>5mm), GP	90%
Total Suspended Solids, TSS	80%
Total Phosphorous, TP	60%
Total Nitrogen, TN	45%

5. Stormwater Quantity Management

5.1 Stormwater Conveyance Management

The proposed stormwater management strategy aims to retain and supplement the stormwater management system currently servicing the site. The stormwater strategy proposed for the developed ensures generally the current catchment distribution towards the existing stormwater channel (legal point of discharge) will be maintained.

The proposed development will introduce sub-surface pit and pipe networks to capture site generated rainwater and stormwater runoff at each residential complex, which will be conveyed to On-Site Stormwater Detention (OSD) tanks. Following water quality treatment via proposed Stormwater Quality Improvement Devices (SQIDs), flows will be discharged to the chosen legal point of discharge, discussed in Section 5.2 of this report. Refer to Section 5.4 and Section 7 of this report for further information regarding OSD systems and SQID elements, respectively.

5.2 Proposed Legal Point of Discharge

Given the proposed realignment/extension of this road, the existing legal point of discharge is not feasible for the proposed development. Therefore, an existing stormwater pit downstream of the headwall at Corr Road has been selected as the lawful point of discharge for the proposed development.

Based on the Approved for Construction civil engineering plans prepared by Wood & Grieve Engineers (32763-4) and Work As Executed plans prepared by Frankham Engineering Surveys (ref.: 219076), the following details at this point are known:

- Pit name: 2-6 (as per drawing CI-NR-522-01 by Wood & Grieve Engineers) (refer Figure 4)
- Pit type: Grated Gully Pit, 2.4m Extended Kerb Inlet
- Inlet invert level = 47.33m AHD (as per WAE plans)
- Outlet invert level = 47.28m AHD (as per WAE plans)
- Inlet pipe diameter = 750mm (as per WAE plans)

5.3 Hydrological Modelling (DRAINS)

Hydrological modelling of the existing and developed site has been modelled using DRAINS software, with the integrated ILSAX hydrological model. The adopted model parameters are provided below in Table 3.

Table 3: ILSAX Hydrological Model Parameters

Parameter	Value
Hydrologic routing method	ILSAX
Soil Type	C
Antecedent Moisture Conditions	3
Paved Area Depression Storage	1mm
Supplementary Area Depression Storage	1mm
Grassed Area Depression Storage	5mm

IFD Data	2022 rainfall depths from ARR Data Hub using site coordinates
Time of Concentration	Kinematic Wave Equation using detailed catchment parameters

5.4 Tailwater Conditions

The tailwater conditions applied within the DRAINS model developed for the site have been derived from kerb inlet pit immediately downstream of Pit 2-6. Based on the Approved for Construction civil engineering plans prepared by Wood & Grieve Engineers (ref.: 32763-4) and Work As Executed plans prepared by Frankham Engineering Surveys (ref.: 219076), the following details at this point are known:

- Pit name: 2-5 (as per drawing CI-NR-522-01 by Wood & Grieve Engineers) (refer Figure 4)
- Pit type: Grated Gully Pit, 2.4m Extended Kerb Inlet
- Inlet pipe invert level = 46.79m AHD (as per WAE plans)
- Inlet pipe diameter = 750mm (as per WAE plans)
- Maximum HGL (100-yr ARI) = 48.58m AHD
  Maximum HGL (5-yr ARI) = 47.23m AHD

5.5 On-Site Detention (OSD) System Design

Three OSD systems have been designed to achieve the stormwater quantity management objectives listed in Section 4 of this report. The parameters corresponding to these tanks are summarised below in Table 4.

The OSD tanks have been sized to ensure post-development flows do not exceed pre-development flows for the entire catchment discharging at the current legal point of discharge, by controlling flows generated by separate sub-catchments discharging at the nominated point of discharge. These sub-catchments are shown in drawing DAC4201. The pre- and post-development flows are presented below in Table 5.

The existing OSD servicing the retail precinct carpark is to be replaced like-for-like (‘Western OSD’), replicating existing form and function to create no adverse impact to downstream point of discharge. Since the size of catchment contributing flows to the Western OSD has not been increased, the Western OSD and respective catchment have been excluded from the developed DRAINS modelling and pre-post development flow rate comparison. Generally, any existing stormwater systems currently draining to the removed OSD tank shall be diverted to the new OSD tank via a new pit and pipe system.

Engineering drawings in Appendix A provide more details on the tank arrangement and locality. The DRAINS model can be provided upon request.

Table 4: OSD Tank Parameters

OSD Parameters	Central Western OSD	Central Eastern OSD	Southern OSD	Western OSD
Minimum Required Storage Volume	195 m^3	167 m^3	222 m^3	177 m^3
Proposed Tank Base Area (min)	78 m^2	91 m^2	150 m^2	68 m^2
Max Water Depth	2590mm	1730mm	2208mm	2605mm

Table 5: Comparison of Pre and Post Development Flows

AEP (%)	Pre-developed Site Flow Rate (L/s)	Post-developed Site Flow Rate (L/s)
20 (Minor)	934	663
1 (Major)	3290	1940

6. Stormwater Quality Management - Construction Phase

6.1 Erosion and Sediment Control

Prior to construction commencing, it is the principal contractor's responsibility to ensure adequate erosion and sediment control measures are installed around the subject site to minimise disturbance and ensure the quality of runoff discharging from the site is of an acceptable standard.

An erosion and sediment control plan (ESCP) has been included in the Civil Engineering drawings in Appendix A. The ESCP has been prepared in accordance with Landcom's *Managing Urban Stormwater – Soils & Construction (2004)* (Blue Book). Erosion and sediment control techniques used for the site include:

- Sediment barriers to be installed on all entrances to stormwater inlet pits
- Construction entry and exit shakedown areas
- Sediment fences are to be installed on the downstream boundaries of the subject site
- Construction of temporary bunds at the top of all earthworks batters to ensure runoff is directed away from exposed batters
- Construction of temporary diversion drains to divert water to sediment basins and around any stockpiles
- Sediment fences to be installed on the downstream side of any stockpiles
- Stabilisation of all batters upon reaching the finished earthworks levels
- Dust control measures which include covering stockpiles, maintain site fences and watering exposed areas
- Sediment basin in accordance with the Blue Book

6.2 Sediment Basin

A basin has been sized to capture site runoff during construction and has been located towards the north-western portion of the site. A Type D basin has been adopted and has been sized in accordance with the Blue Book. Site soils were classified based on publicly available (online) geotechnical information.

To ensure the sediment basins are working effectively they are to be maintained throughout the construction works. Maintenance includes de-watering via pump to reach the minimum storage volume at the lower level of the settling zone. The settling zone will be identified by pegs to clearly show the level at which design storage capacity is available. The pumped water from the sediment basins may be reused to irrigate areas of hydro-mulch and for dust control during construction.

Below is the concept sediment basin sizing table. Refer Appendix B for Sediment Basin Sizing Calculations.

Table 6: Concept Sediment Basin Volumes

Catchment Area (Ha)	Volume Required (m^3)	Volume Provided (m^3)
4.88	832	832

7. Stormwater Quality Management - Operational Phase

7.1 Proposed Stormwater Quality Improvement Devices (SQIDs)

During the operational phase of the development, is it proposed to construct the following stormwater quality improvement devices (SQIDs) to achieve the stormwater quality objectives summarised in Section 4 of this report:

- 29x Ocean Protect OceanGuard 200 micron filter baskets
- 20x Ocean Protect Stormfilter 690 Psorb Cartridges
- 100m^2 total Media Filtration at tree pits
- 140kL total Rainwater Tank storage

Ocean Protect OceanGuard (200 micron)

The OceanGuard 200 micron filter inserts will be used as a pre-treatment for stormwater runoff to capture litter and coarse sediment surface flows on the site.

The OceanGuard filter inserts consist of a steel frame and a cage. Within the cage a screening bag is attached to capture litter, debris, sediment, and other pollutants from stormwater flows. The mesh size of the screening bag proposed for each OceanGuard within the site is 200 micro-meters. The mesh size is small enough to capture heavy metals and hydrocarbons associated with solids in the stormwater flows.

It's proposed that these pit filters are to be provided in internal stormwater pits throughout the site.

7.1.1 Ocean Protect StormFilter 690 PSorb

The Stormfilter 690 Psorb cartridges will be installed in the OSD tanks (refer to Section 5.5).

The Ocean Protect StormFilter system is a passive stormwater filter that cleans stormwater through a patented passive filtration system, effectively removing pollutants to meet the most stringent regulatory requirements. The StormFilter stormwater treatment system uses rechargeable, self-cleaning, media-filled cartridges to absorb and retain the most challenging pollutants from stormwater runoff including total suspended solids, hydrocarbons, nutrients, soluble heavy metals, and other common pollutants.

7.1.2 Media Filtration

Media filtration has been proposed at tree pits to slow and treat on-site (road) runoff. Stormwater runoff generated at the road is directed to tree pits via kerb and gutter and is filtered through a filter media layer (e.g. sandy loam) that treats stormwater through a combination of physical, chemical and biological processes as stormwater percolates downwards to a receiving underlying drainage.

The Media Filters proposed at tree pits were designed in accordance with the parameters recommended in PCC's *Technical Guidelines (Version 3 – June 2015)*, provided below in Table 7.

Table 7: Media Filtration Properties Summary

Parameter	Value
Extended Detention Depth (mm)	150
Surface Detention Area (m^2)	100
Minimum Filter Area (m^2)	100
Minimum Filter Media Depth (m)	0.5
Saturated Hydraulic Conductivity (mm/hour)	125

7.2 Stormwater Quality Modelling (MUSIC) Methodology

Stormwater quality modelling for the site was prepared using 'Model for Urban Stormwater Improvement Conceptualisation' (MUSIC) Version 6.3. The model has been built to assess the adequacy of the proposed SQIDs and to ensure that the quality of stormwater meets the WQOs for the proposed development. A diagrammatic layout of the MUSIC Model is presented below in Figure 6. A water quality treatment catchment plan is also provided below in Figure 7.

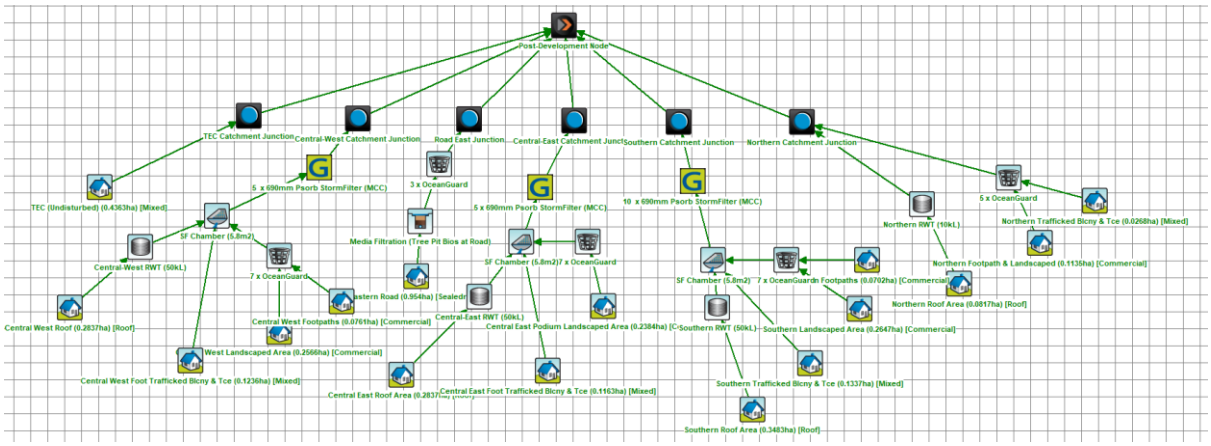

Figure 6: MUSIC Link and Node Diagram

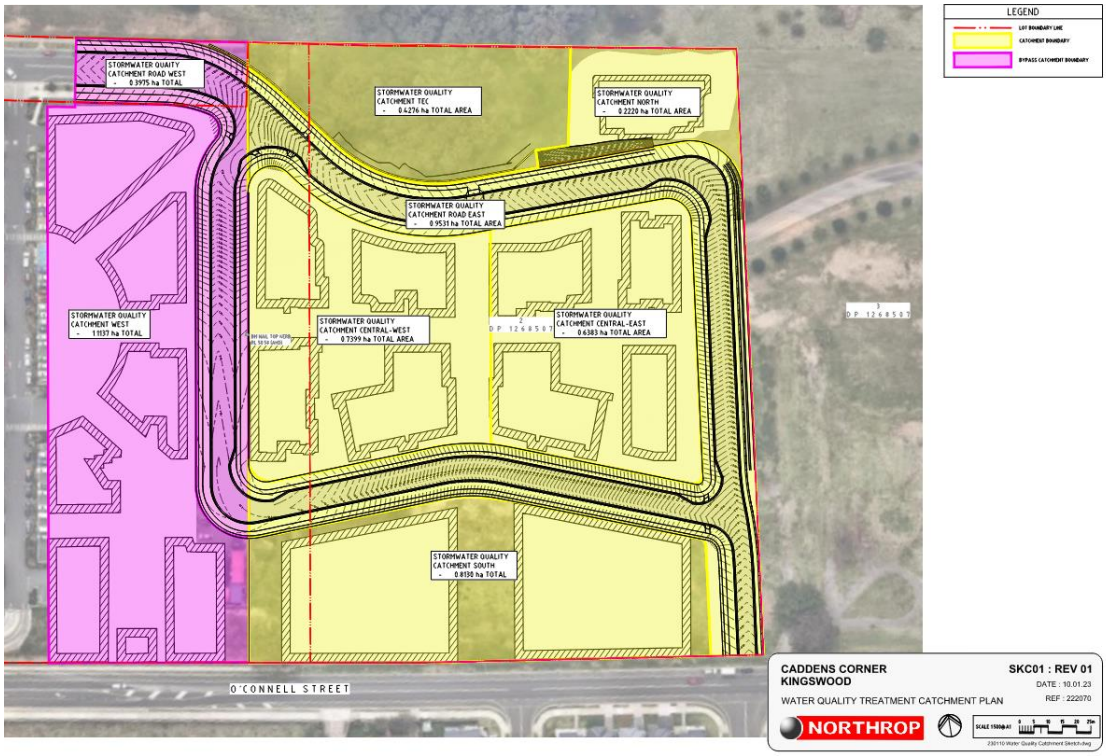

Figure 7: Water Quality Catchment Plan

For the purposes of MUSIC model analysis, the Penrith City Council (PCC) MUSIC-link was utilised, adopting the appropriate evapotranspiration and meteorological data, rainfall-runoff parameters, and source node parameters, in accordance with PCC's *WSUD Technical Guidelines (Version 3 – June 2015)*.

The western sub-catchment is proposed to bypass newly proposed water quality treatment on the basis that the proposed development within this portion of the site will generate less pollutant loads than the existing carpark. Refer to Figure 8 and

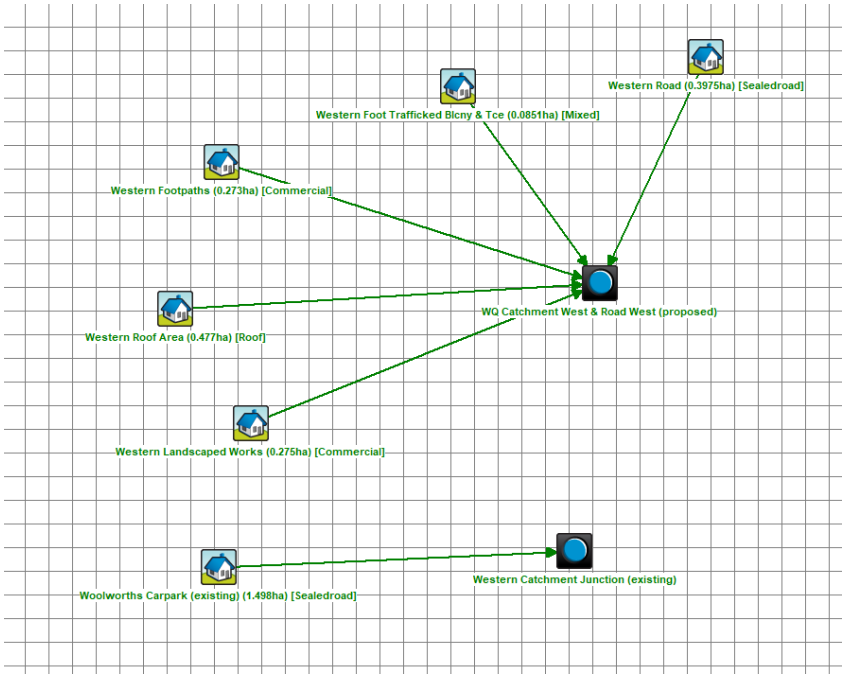

Figure 8: Diagrammatic Layout of Western Catchment (Existing & Proposed)

Table 8 for the diagrammatic layout of the corresponding MUSIC Model layout and results corresponding to this western sub-catchment, respectively.

All existing SQIDs downstream of the OSD tank conveying stormwater runoff generated at the retail precinct carpark are proposed to be maintained where feasible or otherwise replaced like-for-like, such that no adverse impacts are caused to the downstream point of discharge.

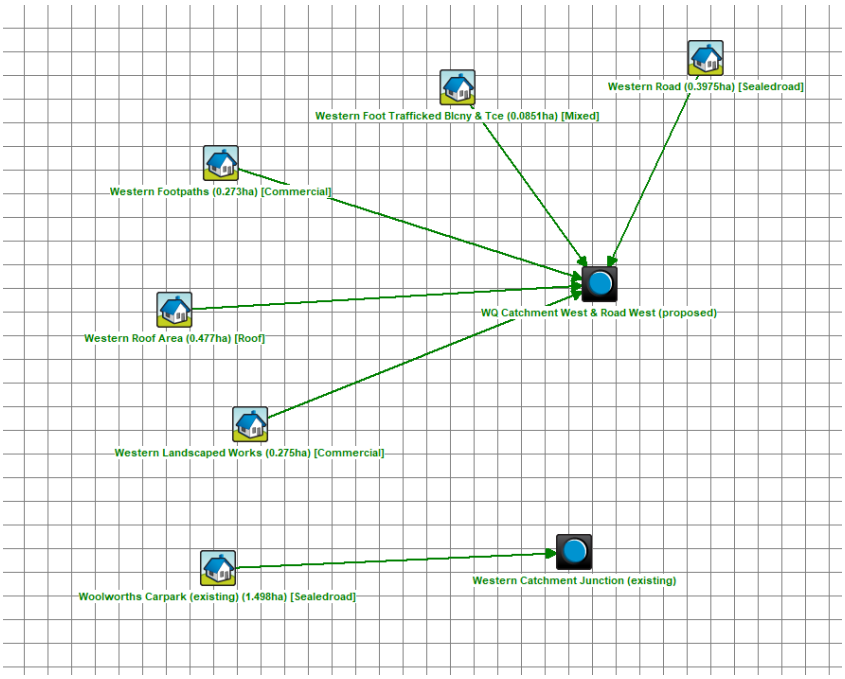

Figure 8: Diagrammatic Layout of Western Catchment (Existing & Proposed)

Table 8: Western Catchment Pollutant Loads (Pre-development & Post-development)

Pollutant Type	Pre-development	Post-development	% Reduction
Total Suspended Solids (kg/yr)	2870	1270	56
Total Phosphorus (kg/yr)	4.77	2.4	50
Total Nitrogen (kg/yr)	19.3	16.4	15
Gross Pollutants (kg/yr)	236	201	15

Table 9: MUSIC Model Results

Pollutant	Annual Loads (kg/yr)		% Reduction		Compliance
	Source	Residual	Actual	Target	
TSS	2860	425	85.2	85	OK
TP	5.36	1.57	70.8	60	OK
TN	35.9	17	52.8	45	OK
GP	422	1.87	99.6	95	OK

It's noted that the rainwater tanks provided were utilised to achieve the reduction targets in the table above. However, minimum demand in each tank was not met. Considering these tanks are already large (10kL, 30kL, 50kL and 50kL respectively), increasing these tank sizes to achieve demand was deemed impractical.

The MUSICLink report attached to this document reflects the achieved demands.

8. Conclusion

Northrop Consulting Engineers has prepared this SBSMP for the proposed Residential & Retail Development at 68-80 O'Connell Street Kingswood NSW 2747. Based on investigations, analyses, and designs, it has been demonstrated that the proposed development can be constructed and operated in accordance with all stormwater objectives listed in Section 4. The primary outcomes of this SBSMP are as follows:

- **Lawful Point of Discharge** - The existing lawful point of discharge (stormwater channel headwall) will be exchanged for an existing kerb inlet pit downstream of the headwall due to the proposed realignment of Corr Road, with most of the site flows being captured for stormwater quantity and quality treatment prior to discharge from the site. A small portion of the development will bypass the private stormwater infrastructure and discharge towards the existing stormwater channel; however, the combined site runoff achieves all stormwater quantity and quality objectives.
- **Stormwater Quantity** - To achieve a non-worsening impact to the downstream point of discharge for the 1% AEP and 20% AEP storm events, the proposed development requires a total detention volume of 578m^3, which has been achieved via underground On-Site Stormwater Detention (OSD) tanks. Three OSD tanks have been proposed to achieve this volume. All road catchments and catchments upstream of site will bypass OSD.
- **Stormwater Quality -** The proposed treatment train was modelling using MUSIC modelling software and includes the following SQIDs:
  - 29x Ocean Protect OceanGuard 200 micron filter baskets
  - 20x Ocean Protect Stormfilter 690 Psorb Cartridges
  - 100m^2 total Media Filtration at tree pits
  - 160kL total Rainwater Tank storage
- **Erosion and Sediment Control** - Construction phase ESCP measures are to be implemented during construction in accordance with the relevant requirements of the Blue Book. A 832m^3 sediment basin is proposed.

4. ALL DOWNPIPES GUTTERS TO BE DESIGNED IN ACCORDANCE WITH AS/NZS 3500.3.2 - 2003 'STORMWATER' DRAINAGE.
5. THE STORMWATER DRAINAGE DESIGN HAS BEEN CARRIED OUT IN ACCORDANCE WITH AS/NZS 3500.3.2-2003 'STORMWATER' DRAINAGE.
6. ANY VARIATIONS TO THE NOMINATED LEVELS SHALL BE REFERRED TO ENGINEER IMMEDIATELY.
7. SUBSOIL DRAINAGE SHALL BE PROVIDED TO ALL RETAINING WALLS & EMBANKMENTS, WITH THE LINES FEEDING INTO THE STORMWATER DRAINAGE SYSTEM.
8. ALL GRATES TO BE GALVANISED STEEL WITH HINGES AND CHILD PROOF LOCK.
9. ALL GRATES TO BE HEEL SAFE WITHIN AGED CARE DEVELOPMENTS.
10. THE STORMWATER DRAINAGE IS DESIGNED IN ACCORDANCE WITH COUNCILS STORMWATER CODE.

CONCEPT SOIL & WATER MANAGEMENT

1. ALL WORK IS TO BE CARRIED OUT IN ACCORDANCE WITH RELEVANT ORDINANCES AND REGULATIONS; NOTE IN PARTICULAR THE REQUIREMENTS OF LANDCOMS MANAGING URBAN STORMWATER, SOILS AND CONSTRUCTION' (THE 'BLUE BOOK'). THIS SOIL AND WATER MANAGEMENT PLAN DETAILS THE ACTIONS TO BE TAKEN FOR THE MANAGEMENT AND DEWATERING OF STORMWATER DURING CONSTRUCTION OF THE PROPOSED BUILDING.
2. INSTALL SEDIMENT PROTECTION FILTERS ON ALL NEW AND EXISTING STORMWATER INLET PITS IN ACCORDANCE WITH EITHER THE MESH AND GRAVEL INLET FILTER DETAIL SD6-11 OR THE GEOTEXTILE INLET FILTER DETAIL SD6-12 OF THE 'BLUE BOOK'.
3. ESTABLISH ALL REQUIRED SEDIMENT FENCES IN ACCORDANCE WITH DETAIL SD6-8 OF THE 'BLUE BOOK'.
4. INSTALL SEDIMENT FENCING AROUND INDIVIDUAL BUILDING ZONES/AREAS AS REQUIRED AND AS DIRECTED BY THE SUPERINTENDENT.
5. ALL TRENCHES INCLUDING ALL SERVICE TRENCHES AND SWALE EXCAVATION SHALL BE SIDE-CAST TO THE HIGH SIDE AND CLOSED AT THE END OF EACH DAYS WORK.
6. THE CONTRACTOR SHALL ENSURE THAT ALL VEGETATION (TREE, SHRUB & GROUND COVER) WHICH IS TO BE RETAINED SHALL BE PROTECTED DURING THE DURATION OF CONSTRUCTION. REFER ARCHITECTS PLANS FOR TREES TO BE KEPT.
7. ALL VEGETATION TO BE REMOVED SHALL BE MULCHED ONSITE AND SPREAD/STOCKPILED AS DIRECTED BY THE SUPERINTENDENT.
8. STRIP TOPSOIL IN AREAS DESIGNATED FOR STRIPPING AND STOCKPILE FOR RE-USE AS REQUIRED. ANY SURPLUS MATERIAL SHALL BE REMOVED FROM SITE AND DISPOSED OF IN ACCORDANCE WITH EPA GUIDELINES.
9. CONSTRUCT AND MAINTAIN ALL MATERIAL STOCKPILES IN ACCORDANCE WITH DETAIL SD4-1 OF THE 'BLUE BOOK' (INCLUDING CUT-OFF SWALES TO THE HIGH SIDE AND SEDIMENT FENCES TO THE LOW SIDE).
10. ENSURE STOCKPILES DO NOT EXCEED 2.0m HIGH. PROVIDE WIND AND RAIN EROSION PROTECTION AS REQUIRED IN ACCORDANCE WITH THE 'BLUE BOOK'.
11. PROVIDE WATER TRUCKS OR SPRINKLER DEVICES DURING CONSTRUCTION AS REQUIRED TO SUPPRESS DUST.
12. ONCE CUT/FILL OPERATIONS HAVE BEEN FINALIZED ALL DISTURBED AREAS THAT ARE NOT BEING WORKED ON SHALL BE RE-VEGETATED AS SOON AS IS PRACTICAL.
13. THE CONTRACTOR SHALL BE RESPONSIBLE FOR KEEPING A DETAILED WRITTEN RECORD OF ALL EROSION & SEDIMENT CONTROLS ON-SITE DURING THE CONSTRUCTION PERIOD. THIS RECORD SHALL BE UPDATED ON A DAILY BASIS & SHALL CONTAIN DETAILS ON THE CONDITION OF CONTROLS AND ANY/ ALL MAINTENANCE, CLEANING & BREACHES. THIS RECORD SHALL BE KEPT ON-SITE AT ALL TIMES AND SHALL BE MADE AVAILABLE FOR INSPECTION BY THE PRINCIPAL CERTIFYING AUTHORITY AND THE SUPERINTENDENT DURING NORMAL WORKING HOURS.
14. GROUNDWATER SEEPAGE RATES AND QUALITY TO BE MONITORED AND TREATED IF REQUIRED DURING CONSTRUCTION IN ACCORDANCE WITH REQUIREMENTS OF SUPERVISING GEOTECHNICAL ENGINEER.

PROJECT: CADDENS CORNER O'CONNELL STREET, CADDENS

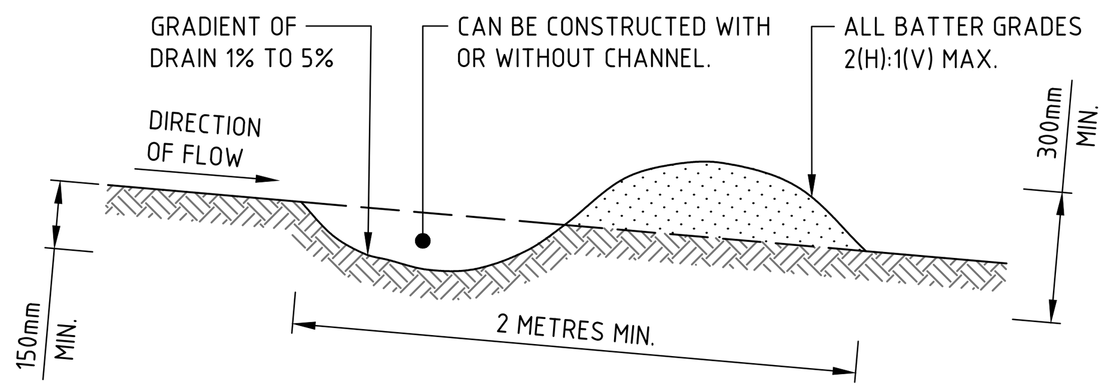
DRAWING TITLE: CIVIL ENGINEERING PACKAGE DEVELOPMENT APPLICATION
SEDIMENT AND SOIL EROSION CONTROL PLAN

JOB NUMBER: SY222070
DRAWING NUMBER: DAC1001   REVISION: 01
DRAWING SHEET SIZE = A1

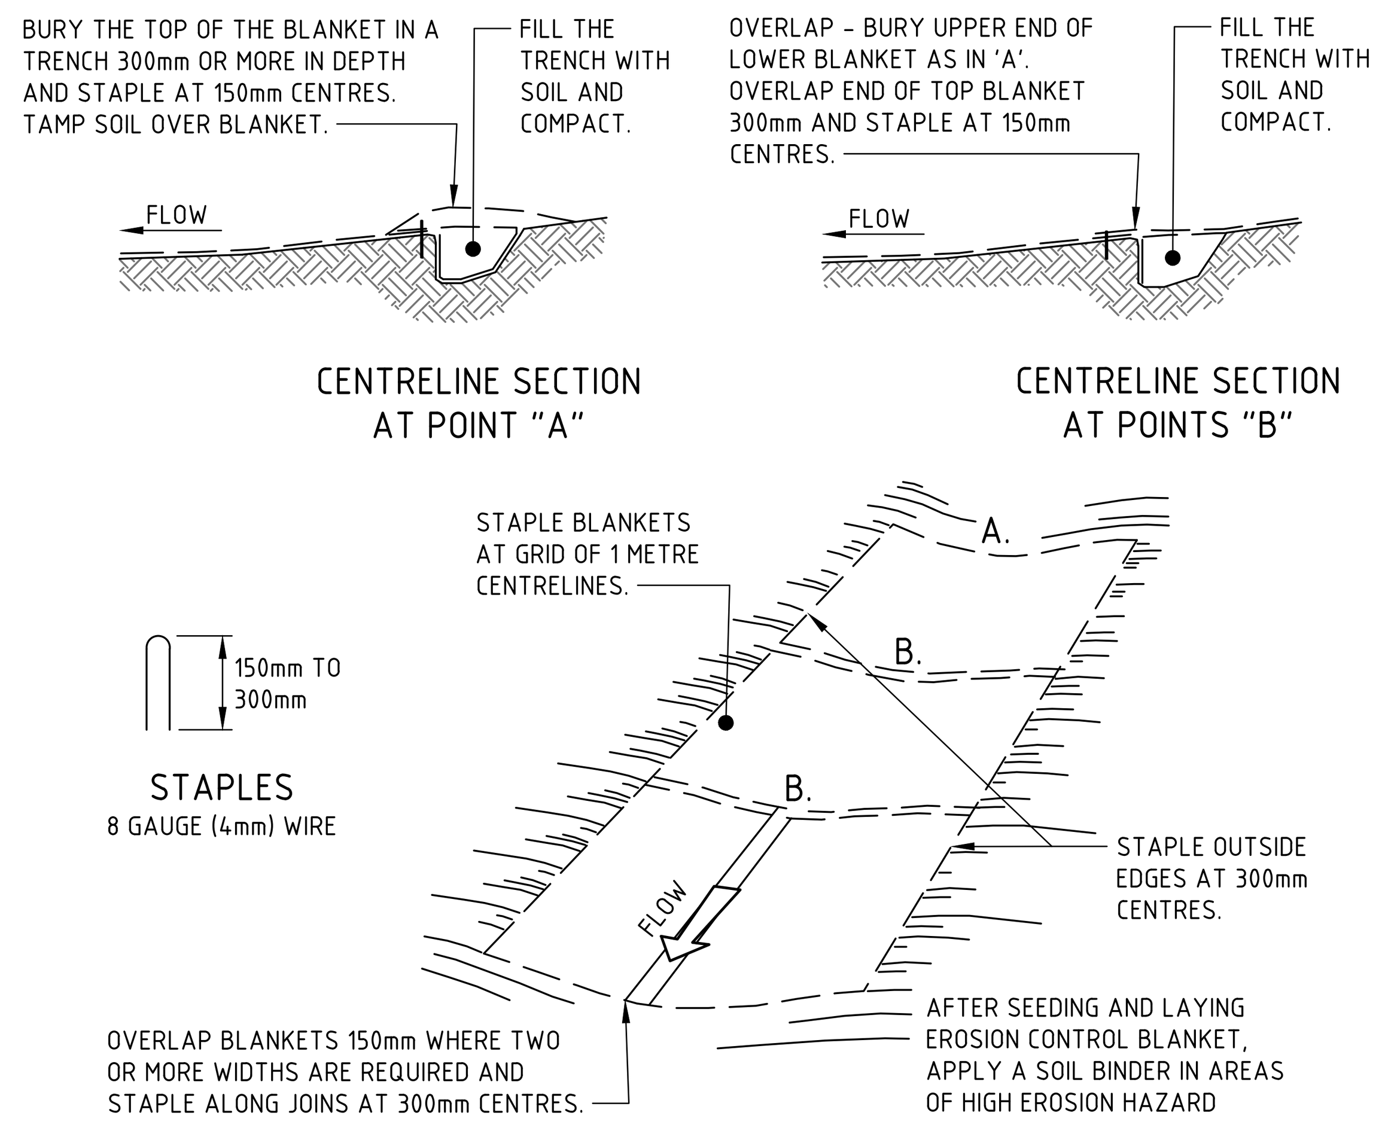


CONSTRUCTION NOTES

1. BUILD WITH GRADIENTS BETWEEN 1 AND 5 PERCENT.
2. AVOID REMOVING TREES AND SHRUBS IF POSSIBLE - WORK AROUND THEM.
3. ENSURE THE STRUCTURES ARE FREE OF PROJECTIONS OR OTHER IRREGULARITIES THAT COULD IMPEDE WATER FLOW.
4. BUILD THE DRAINS WITH CIRCULAR, PARABOLIC OR TRAPEZOIDAL CROSS SECTIONS, NOT V SHAPED.
5. ENSURE THE BANKS ARE PROPERLY COMPACTED TO PREVENT FAILURE.
6. COMPLETE PERMANENT OR TEMPORARY STABILISATION WITHIN 10 DAYS OF CONSTRUCTION.

NOTE: ONLY TO BE USED AS TEMPORARY BANK WHERE MAXIMUM UPSLOPE LENGTH IS 80 METRES.

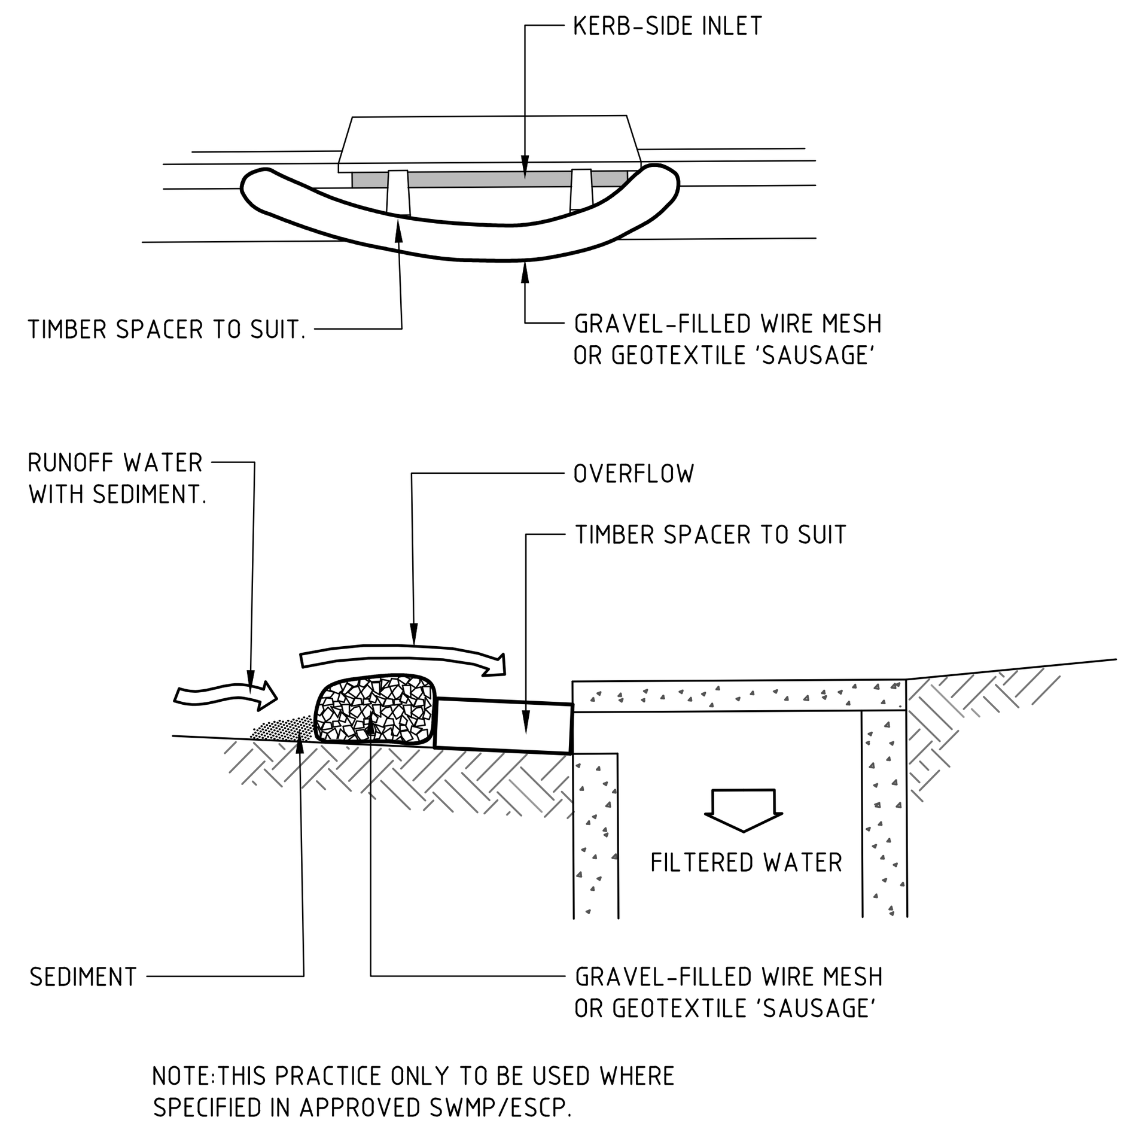
DRAINAGE SWALE - DIRTY



CONSTRUCTION NOTES

1. REMOVE ANY ROCKS, CLODS, STICKS OR GRASS FROM THE SURFACE BEFORE LAYING MATTING.
2. ENSURE THAT TOPSOIL IS AT LEAST 75mm DEEP.
3. COMPLETE FERTILISING AND SEEDING BEFORE LAYING THE MATTING.
4. ENSURE FABRIC WILL BE CONTINUOUSLY IN CONTACT WITH THE SOIL BY GRADING THE SURFACE CAREFULLY FIRST.
5. LAY THE FABRIC IN "SHINGLE-FASHION", WITH THE END OF EACH UPSTREAM ROLL OVERLAPPING THOSE DOWNSTREAM. ENSURE EACH ROLL IS ANCHORED PROPERLY AT ITS UPSLOPE END (STANDARD DRAWING 5-7B).
6. ENSURE THAT THE FULL WIDTH OF FLOW IN THE CHANNEL IS COVERED BY THE MATTING UP TO THE DESIGN STORM EVENT, USUALLY IN THE 10-YEAR ARI TIME OF CONCENTRATION STORM EVENT.
7. DIVERT WATER FROM THE STRUCTURE UNTIL VEGETATION IS STABILISED PROPERLY.

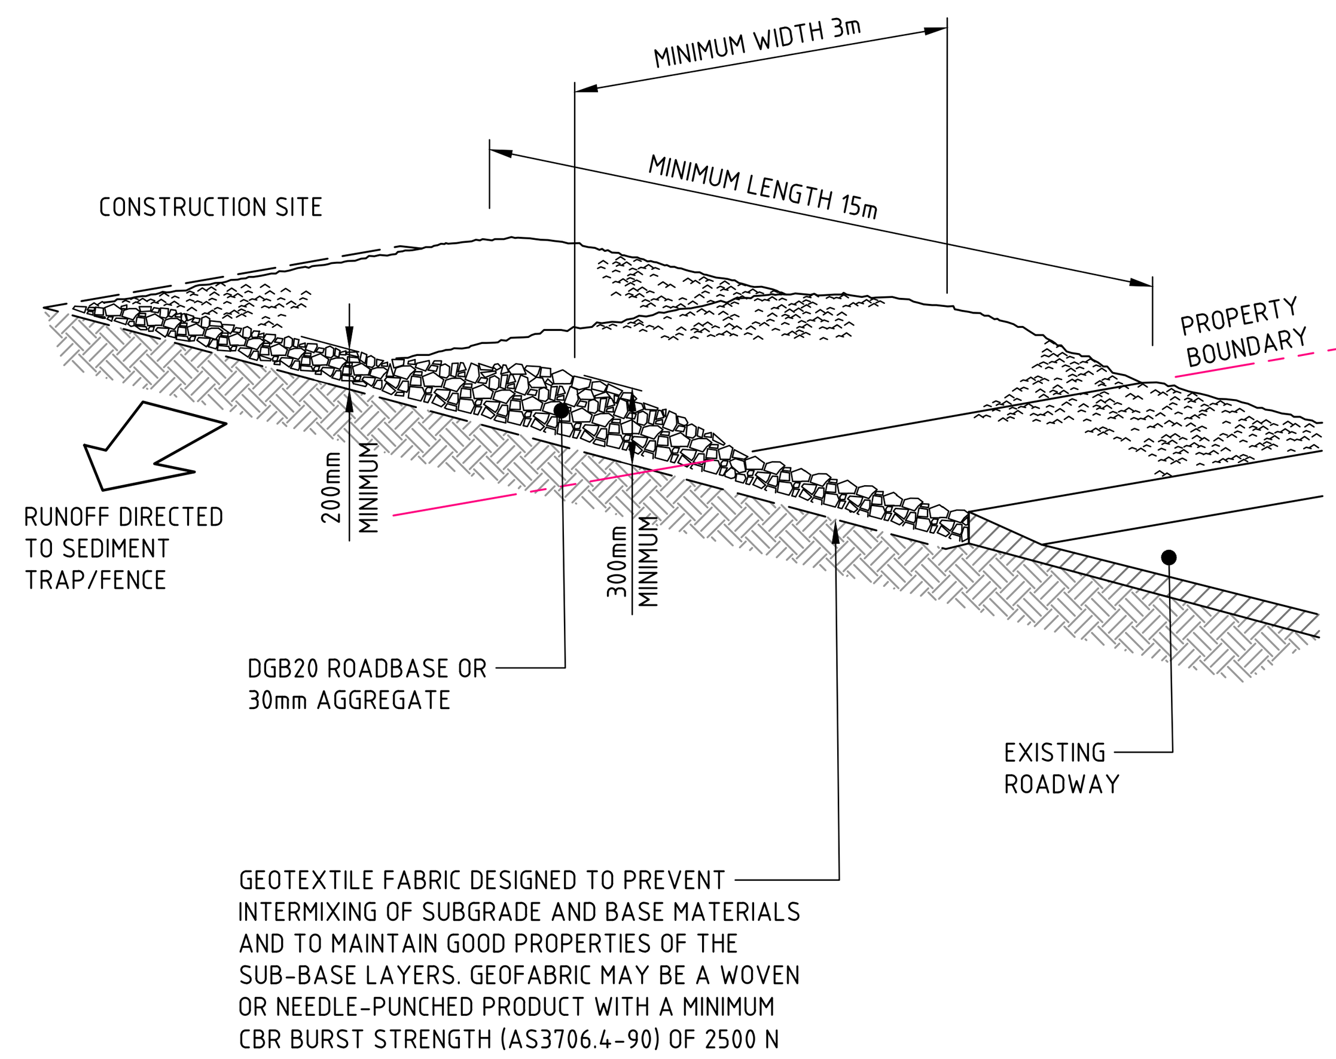
DRAINAGE SWALE - CLEAN



CONSTRUCTION NOTES

1. INSTALL FILTERS TO KERB INLETS ONLY AT SAG POINTS.
2. FABRICATE A SLEEVE MADE FROM GEOTEXTILE OR WIRE MESH LONGER THAN THE LENGTH OF THE INLET PIT AND FILL IT WITH 25mm TO 50mm GRAVEL.
3. FORM AN ELLIPTICAL CROSS-SECTION ABOUT 150mm HIGH x 400mm WIDE.
4. PLACE THE FILTER AT THE OPENING LEAVING AT LEAST A 100mm SPACE BETWEEN IT AND THE KERB INLET. MAINTAIN THE OPENING WITH SPACER BLOCKS.
5. FORM A SEAL WITH THE KERB TO PREVENT SEDIMENT BYPASSING THE FILTER.
6. SANDBAGS FILLED WITH GRAVEL CAN SUBSTITUTE FOR THE MESH OR GEOTEXTILE PROVIDING THEY ARE PLACED SO THAT THEY FIRMLY ABUT EACH OTHER AND SEDIMENT-LADEN WATERS CANNOT PASS BETWEEN.

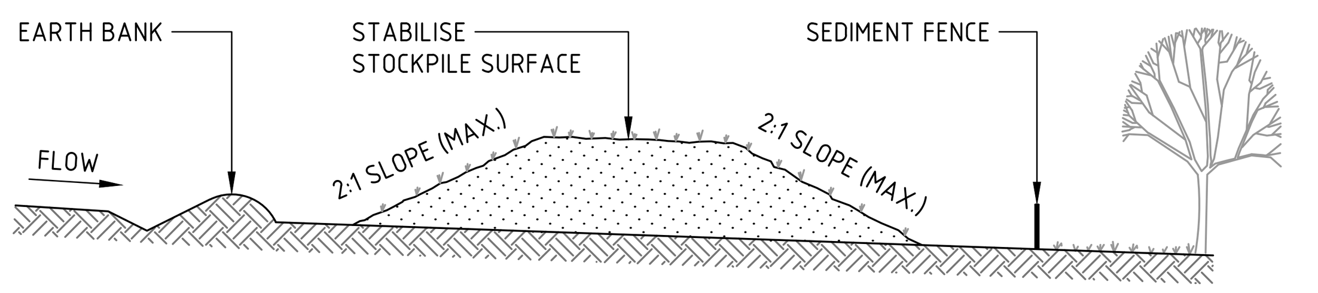
WIRE MESH AND GRAVEL SEDIMENT FILTER



CONSTRUCTION NOTES

1. STRIP THE TOPSOIL, LEVEL THE SITE AND COMPACT THE SUBGRADE.
2. COVER THE AREA WITH NEEDLE-PUNCHED GEOTEXTILE.
3. CONSTRUCT A 200mm THICK PAD OVER THE GEOTEXTILE USING ROAD BASE OR 30mm AGGREGATE.
4. ENSURE THE STRUCTURE IS AT LEAST 15 METRES LONG OR TO BUILDING ALIGNMENT AND AT LEAST 3 METRES WIDE.
5. WHERE A SEDIMENT FENCE JOINS ONTO THE STABILISED ACCESS, CONSTRUCT A HUMP IN THE STABILISED ACCESS TO DIVERT WATER TO THE SEDIMENT FENCE.

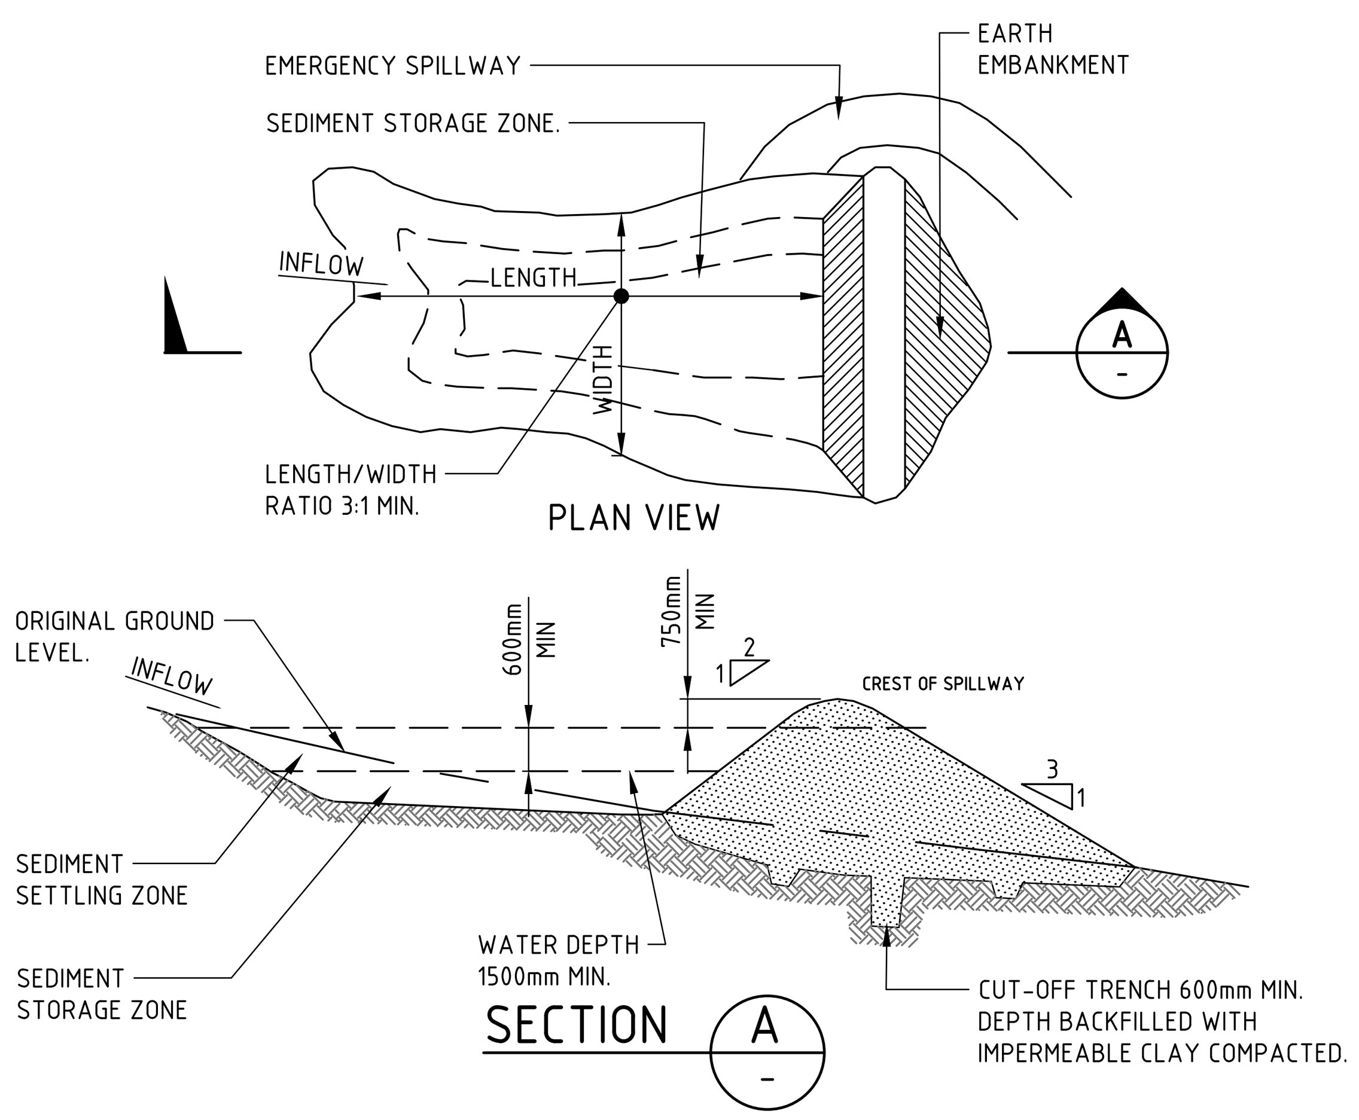
STABILISED SITE ACCESS



CONSTRUCTION NOTES

1. PLACE STOCKPILES MORE THAN 2m (PREFERABLY 5m) FROM EXISTING VEGETATION, CONCENTRATED WATER FLOW, ROADS AND HAZARD AREAS.
2. CONSTRUCT ON THE CONTOUR AS LOW, FLAT, ELONGATED MOUNDS.
3. WHERE THERE IS SUFFICIENT AREA, TOPSOIL STOCKPILES SHALL BE LESS THAN 2m IN HEIGHT.
4. WHERE THEY ARE TO BE IN PLACE FOR MORE THAN 10 DAYS, STABILISE FOLLOWING THE APPROVED ESCP OR SWMP TO REDUCE THE C-FACTOR TO LESS THAN 0.10.
5. CONSTRUCT EARTH BANKS (STANDARD DRAWING 5-5) ON THE UPSLOPE SIDE TO DIVERT WATER AROUND STOCKPILES AND SEDIMENT FENCES (STANDARD DRAWING 6-8) 1 TO 2m DOWNSLOPE.

STOCKPILE

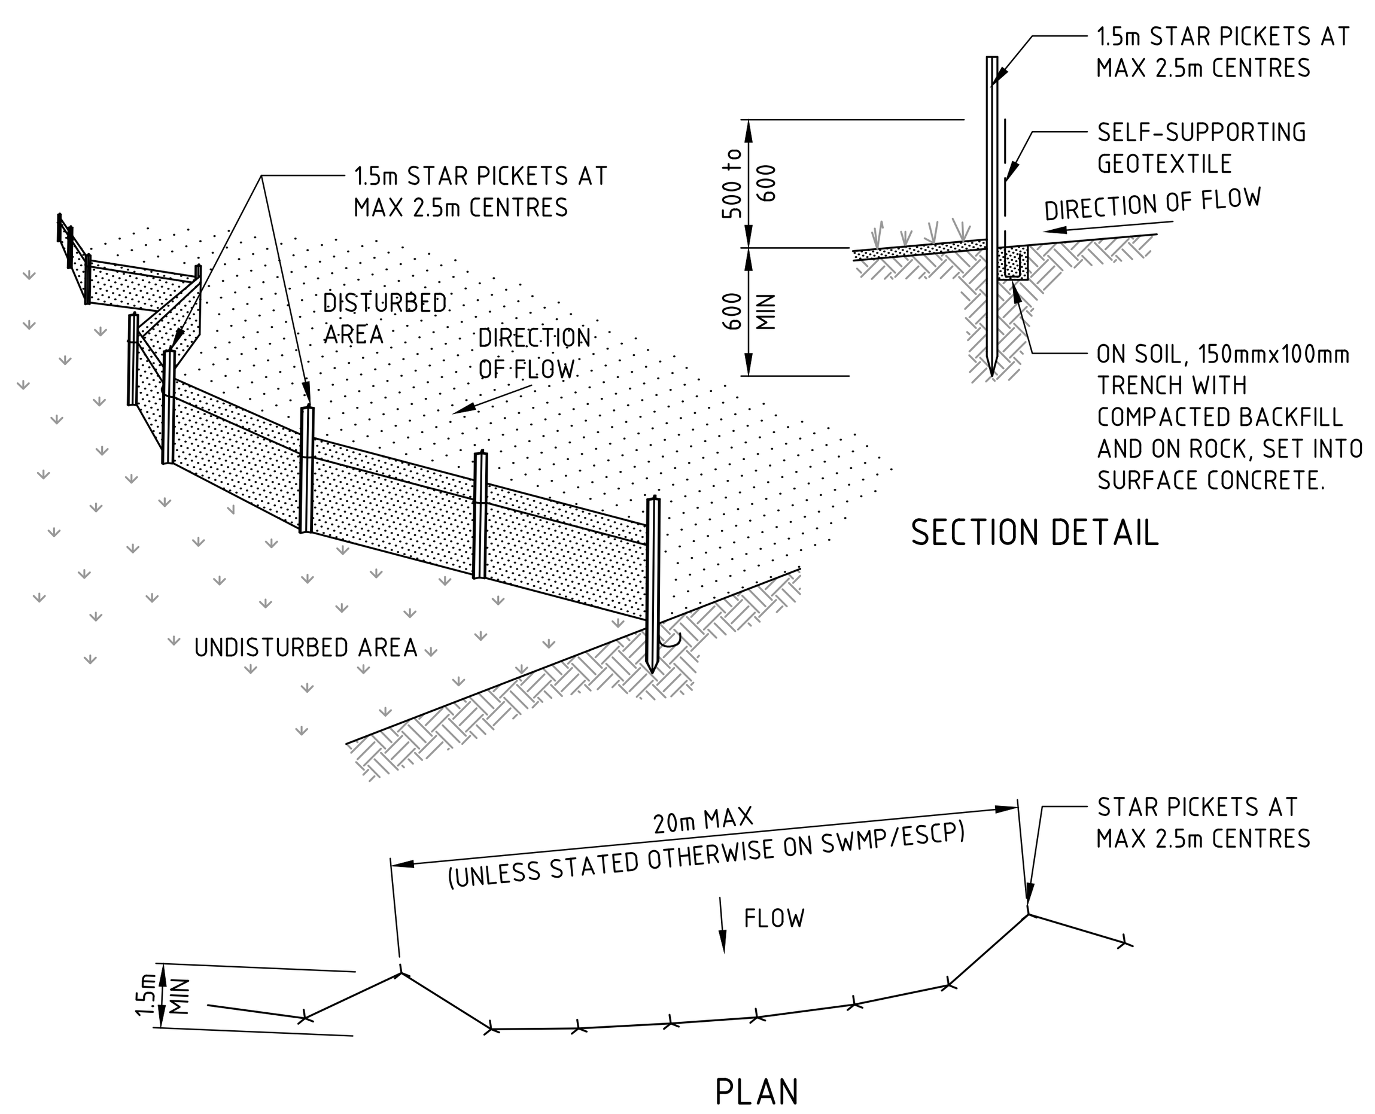


CONSTRUCTION NOTES

1. REMOVE ALL VEGETATION AND TOPSOIL FROM UNDER THE DAM WALL AND FROM WITHIN THE STORAGE AREA.
2. CONSTRUCT A CUT-OFF TRENCH 500mm DEEP AND 1200mm WIDE ALONG THE CENTRELINE OF THE EMBANKMENT EXTENDING TO A POINT ON THE GULLY WALL LEVEL WITH THE RISER CREST.
3. MAINTAIN THE TRENCH FREE OF WATER AND RECOMPACT THE MATERIALS WITH EQUIPMENT AS SPECIFIED IN THE SWMP TO 95 PER CENT STANDARD PROCTOR DENSITY.
4. SELECT FILL FOLLOWING THE SWMP THAT IS FREE OF ROOTS, WOOD, ROCK, LARGE STONE OR FOREIGN MATERIAL.
5. PREPARE THE SITE UNDER THE EMBANKMENT BY RIPPING TO AT LEAST 100mm TO HELP BOND COMPACTED FILL TO THE EXISTING SUBSTRATE.
6. SPREAD THE FILL IN 100mm TO 150mm LAYERS AND COMPACT IT AT OPTIMUM MOISTURE CONTENT FOLLOWING THE SWMP.
7. CONSTRUCT THE EMERGENCY SPILLWAY.
8. REHABILITATE THE STRUCTURE FOLLOWING THE SWMP.

(APPLIES TO 'TYPE D' AND 'TYPE F' SOILS ONLY)

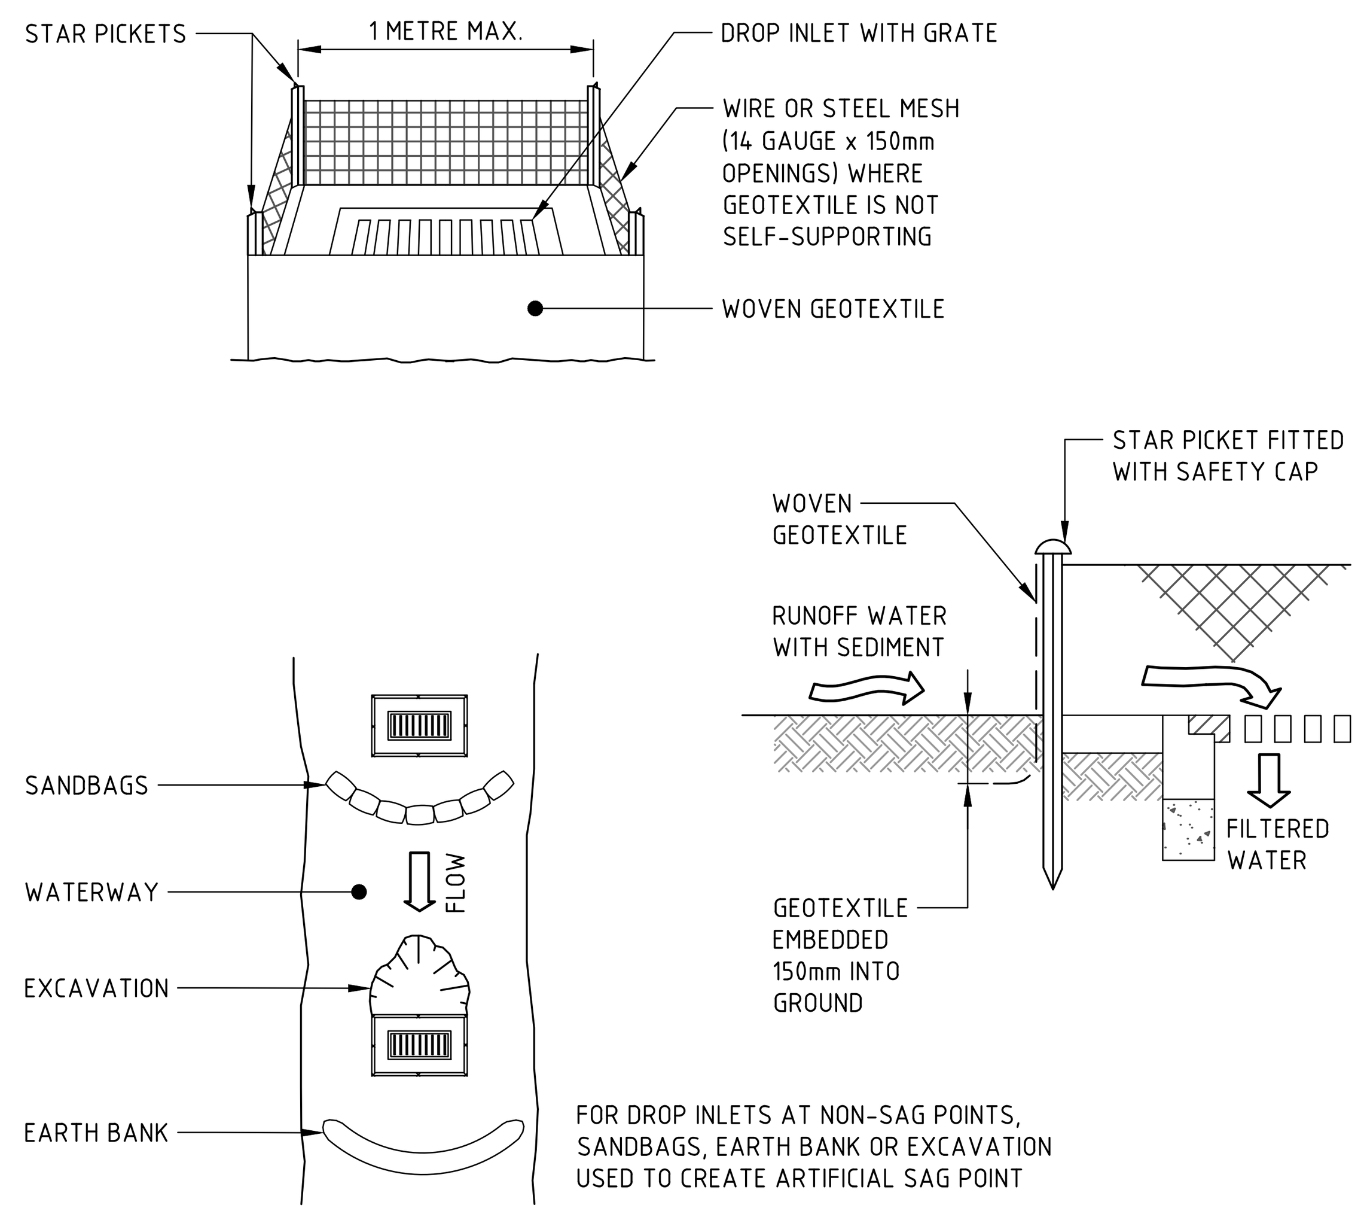
EARTH SEDIMENT BASIN - WET



CONSTRUCTION NOTES

1. CONSTRUCT SEDIMENT FENCES AS CLOSE AS POSSIBLE TO BEING PARALLEL TO THE CONTOURS OF THE SITE, BUT WITH SMALL RETURNS AS SHOWN IN THE DRAWING TO LIMIT THE CATCHMENT AREA OF ANY ONE SECTION. THE CATCHMENT AREA SHOULD BE SMALL ENOUGH TO LIMIT WATER FLOW IF CONCENTRATED AT ONE POINT TO 50 LITRES PER SECOND IN THE DESIGN STORM EVENT, USUALLY THE 10-YEAR EVENT.
2. CUT A 150mm DEEP TRENCH ALONG THE UPSLOPE LINE OF THE FENCE FOR THE BOTTOM OF THE FABRIC TO BE ENTRENCHED.
3. DRIVE 1.5 METRE LONG STAR PICKETS INTO GROUND AT 2.5 METRE INTERVALS (MAX) AT THE DOWNSLOPE EDGE OF THE TRENCH. ENSURE ANY STAR PICKETS ARE FITTED WITH SAFETY CAPS.
4. FIX SELF-SUPPORTING GEOTEXTILE TO THE UPSLOPE SIDE OF THE POSTS ENSURING IT GOES TO THE BASE OF THE TRENCH. FIX THE GEOTEXTILE WITH WIRE TIES OR AS RECOMMENDED BY THE MANUFACTURER. ONLY USE GEOTEXTILE SPECIFICALLY PRODUCED FOR SEDIMENT FENCING. THE USE OF SHADE CLOTH FOR THIS PURPOSE IS NOT SATISFACTORY.
5. JOIN SECTIONS OF FABRIC AT A SUPPORT POST WITH A 150mm OVERLAP.
6. BACKFILL THE TRENCH OVER THE BASE OF THE FABRIC AND COMPACT IT THOROUGHLY OVER THE GEOTEXTILE.

SEDIMENT FENCE



CONSTRUCTION NOTES

1. FABRICATE A SEDIMENT BARRIER MADE FROM GEOTEXTILE OR STRAW BALES.
2. FOLLOW STANDARD DRAWING 6-7 AND STANDARD DRAWING 6-8 FOR INSTALLATION PROCEDURES FOR THE STRAW BALES OR GEOFABRIC. REDUCE THE PICKET SPACING TO 1 METRE CENTRES.
3. IN WATERWAYS, ARTIFICIAL SAG POINTS CAN BE CREATED WITH SANDBAGS OR EARTH BANKS AS SHOWN IN THE DRAWING.
4. DO NOT COVER THE INLET WITH GEOTEXTILE UNLESS THE DESIGN IS ADEQUATE TO ALLOW FOR ALL WATERS TO BYPASS IT.

GEOTEXTILE INLET FILTER TRAPS

GENERAL NOTES:

1. ALL WORKS TO BE CARRIED OUT IN ACCORDANCE WITH COUNCIL / RELEVANT AUTHORITY SPECIFICATIONS AND DETAILS.
2. CAD FILES / DTM FILES TO BE SUPPLIED IN AUTOCAD FORMAT FOR SETOUT PURPOSES (UPON REQUEST).
3. STRIP EXISTING TOPSOIL IN CONSULTATION WITH THE GEOTECHNICAL ENGINEER / REPORT. FOR THE PURPOSES OF EARTHWORKS CALCULATIONS A GROUND SLAB DEPTH OF 200mm HAS BEEN ASSUMED WHERE REQUIRED.
4. NO ALLOWANCE HAS BEEN MADE FOR BULKING FACTORS. NOTE ALL VOLUMES DEPICTED ARE SOLID VOLUMES ONLY AND MAY NOT REFLECT DETAILED EARTHWORKS.
5. NO ALLOWANCE HAS BEEN MADE FOR DETAILED EARTHWORKS; ie SERVICE TRENCHING, DETAILED EXCAVATION, FOOTINGS, RETAINING WALLS AND THE LIKE. CONTRACTOR IS TO ALLOW FOR REMOVAL OF ALL EXCESS MATERIAL GENERATED BY THE WORKS.
6. THE CONTRACTOR SHALL USE FINAL SURFACE LEVELS AND TYPICAL PAVEMENT DETAILS FOR ACTUAL EARTHWORKS LEVELS.
7. APPROXIMATE BULK EARTHWORK VALUES AS FOLLOWS;
   - 7.1. CUT 155,548 m^3
   - 7.2. FILL 22,701 m^3
   - 7.3. BALANCE 132,847 m^3 (EXCESS)
   - 7.4. NOTE: SITE STRIPPING VOLUMES HAVE NOT BEEN INCLUDED IN ABOVE CALCULATIONS.
8. TEMPORARY 1:1 SLOPES FOR EXCAVATIONS HAVE BEEN ADOPTED (UNO). CONTRACTOR TO CONFIRM ADEQUACY WITH GEOTECHNICAL ENGINEER. SHORING WALLS TO BE PROVIDED AT STEEPER SLOPES IN ACCORDANCE WITH STRUCTURAL ENGINEER'S DETAILS.

LEGEND

- LOT BOUNDARY LINE
- CATCHMENT BOUNDARY
- OSD BYPASS CATCHMENT BOUNDARY
- EXISTING DRAINAGE STRUCTURE
- NEW DRAINAGE STRUCTURE
- OSD — ON-SITE DETENTION TANK

STORMWATER SUMMARY

STORMWATER QUANTITY

- STORMWATER QUANTITY MODELLING WAS PERFORMED USING SOFTWARE 'DRAINS' FOR STORMWATER EVENTS FROM THE 20% AEP (MINOR EVENT) TO THE 1% AEP (MAJOR EVENT).
- A TOTAL OF 584kL DETENTION STORAGE WAS DETERMINED TO RESTRICT POST-DEVELOPED FLOWS TO PRE-DEVELOPED FLOWS FOR THE EVENTS MENTIONED ABOVE. THIS DOES NOT INCLUDE THE LIKE-FOR-LIKE DETENTION OF THE WESTERN CATCHMENT.
- DETENTION STORAGE/TANKS TO BE PROVIDED AT BASEMENT-LEVEL OR BELOW GROUND AT LANDSCAPED AREAS.
- ALL ROAD AND UPSTREAM CATCHMENTS TO BYPASS OSD.

Appendix B – Sediment Basin Sizing Calculations

1. Erosion Hazard and Sediment Basins

Site Name: Caddens Corner

Site Location: O'Connell Street, Kingswood

Precinct/Stage: N/A

Other Details: For Development Application Approval

Site area	Sub-catchment or Name of Structure						Notes
	Type D Sed						
Total catchment area (ha)	4.88						
Disturbed catchment area (ha)	4.88						

Soil analysis (enter sediment type if known, or laboratory particle size data)

Sediment Type (C, F or D) if known:	D						From Appendix C (if known)
% sand (fraction 0.02 to 2.00 mm)							Enter the percentage of each soil fraction. E.g. enter 10 for 10%
% silt (fraction 0.002 to 0.02 mm)							
% clay (fraction finer than 0.002 mm)							
Dispersion percentage							E.g. enter 10 for dispersion of 10%
% of whole soil dispersible							See Section 6.3.3(e). Auto-calculated
Soil Texture Group	D						Automatic calculation from above

Rainfall data

Design rainfall depth (no of days)	5						See Section 6.3.4 and, particularly, Table 6.3 on pages 6-24 and 6-25.
Design rainfall depth (percentile)	80						
x-day, y-percentile rainfall event (mm)	27.4						
Rainfall R-factor (if known)							Only need to enter one or the other here
IFD: 2-year, 6-hour storm (if known)	9.53						

RUSLE Factors

Rainfall erosivity (*R*-factor)	2030						Auto-filled from above
Soil erodibility (*K*-factor)	0.075						RUSLE LS factor calculated for a high rill/interrill ratio.
Slope length (m)	300						
Slope gradient (%)	4.5						
Length/gradient (*LS*-factor)	2.18						
Erosion control practice (*P*-factor)	1.3	1.3	1.3	1.3	1.3	1.3	
Ground cover (*C*-factor)	1	1	1	1	1	1	

Sediment Basin Design Criteria (for Type D/F basins only. Leave blank for Type C basins)

Storage (soil) zone design (no of months)	2	2	2	2	2	2	Minimum is generally 2 months
Cv (Volumetric runoff coefficient)	0.42						See Table F2, page F-4 in Appendix F

Calculations and Type D/F Sediment Basin Volumes

Soil loss (t/ha/yr)	431						
Soil Loss Class	4						See Table 4.2, page 4-13
Soil loss (m^3/ha/yr)	332						Conversion to cubic metres
Sediment basin storage (soil) volume (m^3)	270						See Sections 6.3.4(i) for calculations
Sediment basin settling (water) volume (m^3)	562						See Sections 6.3.4(i) for calculations

Sediment basin total volume (m^3)	832

Marvin Huang

HOLDMARK Property Group Pty Ltd
Suite 2/2-4 Giffnock Avenue
Macquarie Park NSW 2113

Dear Marvin,

Re: Caddens Corner – Flood Desktop Study

Northrop Consulting Engineers have undertaken a flood study for the proposed residential development at Caddens Corner, 68-80 O'Connell Street, Kingswood NSW 2747 (Lots 1 and 2, DP 1268507). As part of this flood study, relevant flood data was investigated with reference to the following resources:

- Penrith Development Control Plan 2014 (DCP)
- College, Orth and Werrington Creeks Catchment Overland Flow Flood Study 2017
- College, Orth and Werrington Creek Catchment Flood Risk Management Study and Plan 2021

It should be noted that the flood studies utilised do not account for the new Woolworths development to the proposed site's west (referenced DA17/0995 and CCX19/0047). The Woolworth's development included a new piped system to replace a portion of the existing channel to the site's north, and redirected sheet flow from the site's east via a swale system.
The proposed development proposes a similar approach by capturing off-site flows and directing into the Woolworth's pipe system. Flows from the north to be captured by the existing creek and directed into the Woolworth's pipe system via a new pit and pipe. Flows from the east are proposed to captured and conveyed within the road reserve and street stormwater network. Modelling of this approach suggests 1% AEP flows from the east are wholly contained within the roadway.

The existing studies indicate that a portion of the development site lies within the Flood Planning Area (see attached drawings). As such, the following information was gathered to identify the flood levels, classifications and hazards, and associated site-specific planning controls identified in the DCP.

The gathered information is summarised in the table below.

	Description
1% AEP Flood Level	The maximum 1% AEP flood level is estimated at **RL 53.00m AHD**, as specified by "Figure 20.1: Peak Floodwater Levels for the 1% AEP Flood" of the *College, Orth and Werrington Creek Catchment Flood Risk Management Study – Final Report; Volume 2 of 2: Figures (October 2021)*.

PMF Flood Level	The maximum PMF flood level is estimated at **RL 55.00m AHD**, as specified by "Figure 23.1: Peak Floodwater Levels for the PMF " of the of the *College, Orth and Werrington Creek Catchment Flood Risk Management Study – Final Report; Volume 2 of 2: Figures (October 2021)*.
1% Flood Hazard Category	"Figure 34.1: Flood Hazard for the 1% AEP Flood" of the *College, Orth and Werrington Creek Catchment Flood Risk Management Study – Final Report; Volume 2 of 2: Figures (October 2021)* specifies the flood hazard category for the 1% AEP case. The maximum hazard category on the development site is "H5 – Unsafe for people and vehicles" at the northern end of the site within the existing channel. The existing scenario maximum hazard category within the proposed building footprint is an isolated area of "H3 – Unsafe for vehicles, children and elderly." These flows arise from the existing creek which is to be infilled. We note the new development proposes to capture and convey upstream flows from the east through the street network, bypassing the existing creek. The modeling completed by Northrop Engineers suggest flows are contained within the road reserve and Velocity Depth ratios are below 0.4. As such, it is not expected that the development will be within a flood hazard zone following construction.
PMF Flood Hazard Level	"Figure 37.1: Flood Hazard for the PMF" of the *College, Orth and Werrington Creek Catchment Flood Risk Management Study – Final Report; Volume 2 of 2: Figures (October 2021)* specifies the flood hazard levels for the PMF. The maximum hazard category on the lot is "H6 – Unsafe for people and vehicles. All buildings vulnerable to failure" at the northern end of the lot within the existing channel (outside the development footprint). The existing scenario maximum hazard category within the proposed building footprint is "H4 – unsafe for people and vehicles." These flows arise from areas of the existing creek to be infilled. We note the new development proposes to capture and convey upstream flows from the east through the street network and bypassing this creek. The modeling completed by Northrop Engineers suggest flows are contained within the road reserve and velocity-depth ratios are below 0.4. As such, it is not expected that the development will be within a flood hazard zone.
Hydraulic Category 1% AEP	"Figure 39.1: Hydraulic Categories for the 1% AEP Flood" of the *College, Orth and Werrington Creek Catchment Flood Risk Management Study – Final Report; Volume 2 of 2: Figures (October 2021)* specifies the hydraulic categorisation for the 1% AEP case. The existing channel to the site's north is classified as "**Floodway"**, with a portion of the building footprint site within the "**Flood Storage" and "Flood Fringe"** zones (i.e. within the existing channel). However, the

	new development proposes to capture and convey upstream flows from the east through the street network, bypassing the existing creek. Additionally, modeling completed by Northrop Engineers suggest 1% AEP flows from the east are contained within the road reserve. As such, it's expected that the flood zonings above are not applicable to this development.
Hydraulic Category PMF Event	"Figure 42.1: Hydraulic Categories for the PMF Flood" of the *College, Orth and Werrington Creek Catchment Flood Risk Management Study – Final Report; Volume 2 of 2: Figures (October 2021)* specifies the hydraulic categorisation for the PMF case. The existing channel, which extends partially into the development site is classified as **"Floodway"** during the PMF event. However, flows from the east are proposed to bypass the creek following development, and are expected to be contained within the road reserve.
Minimum Habitable Level	"Section 3.5 Flood Planning" of "Part C3 Water Management" of the Penrith Development Control Plan 2014 stipulates a 0.5m freeboard is to be applied to the 1% AEP (100-year ARI) flood event level. Given the 1% AEP flood level is 53.00m, the estimated minimum habitable level is **RL 53.50m AHD** within the flood planning zone.

In summary, the proposed development lies over the top end of an existing channel classified as 'flood fringe' and 'flood storage' in the 1% AEP event (as reported in the referenced flood studies) for the pre-developed site. The proposed development proposes to capture off-site flows from the east and direct to the point of discharge via the road network and associated stormwater system. Modelling suggests 1% flows through the site are wholly maintained within the road reserve. Existing flows from the north are to generally maintain their existing flow path before being captured by the stormwater system and directed into the existing Woolworth's culvert. Considering this approach, the development is expected to be situated outside the flood affected area following construction.

Additionally to the above, the flows from the developed site are restricted via on-site detention tanks (refer the attached Stormwater Report). Flows generated are considerably lower than the pre-developed scenario. As such, it's expected less stormwater will discharge form the site post-development. Therefore, it is not expected that the existing channel flows and flood levels will be increased due to the proposed development.

Yours faithfully,

Jamie Carroll

MUSIC-*link* Report

Project Details		Company Details	
Project:	Caddens Corner	**Company:**	Northrop Consulting Engineers
Report Export Date:	7/03/2023	**Contact:**	Jamie Carroll
Catchment Name:	SY222070_DA_MUSIC_HG	**Address:**	345 George Street, Sydney, NSW 2000
Catchment Area:	3.809ha	**Phone:**	0423 399 559
Impervious Area*:	65.20%	**Email:**	jcarroll@northrop.com.au
Rainfall Station:	67113 PENRITH		
Modelling Time-step:	6 Minutes		
Modelling Period:	1/01/1999 - 31/12/2008 11:54:00 PM		
Mean Annual Rainfall:	691mm		
Evapotranspiration:	1158mm		
MUSIC Version:	6.3.0		
MUSIC-link data Version:	6.34		
Study Area:	Penrith		
Scenario:	Penrith Development		

* takes into account area from all source nodes that link to the chosen reporting node, excluding Import Data Nodes

Treatment Train Effectiveness

Node: Post-Development Node	Reduction
Flow	22%
TSS	85.2%
TP	70.8%
TN	52.8%
GP	99.6%

Treatment Nodes

Node Type	Number
Media Filtration Node	1
Rain Water Tank Node	4
Sedimentation Basin Node	3
Generic Node	3
GPT Node	5

Source Nodes

Node Type	Number
Urban Source Node	22

Comments

Reuse demands not met - high volumes of demand cannot sustainably be provided for such a development (already large reuse volumes).

OceanProtect proprietary product utilised for the SF Chambers resulting in failed results.
