Dear Natalia,

**Re: 23-25 Charles Street, Liverpool**

The building has been designed using orthogonal geometry with some expressive elements being placed on the angle to improve bulk, scale, articulation, and the play of light across the façade. Orthogonal geometry was adopted to achieve an improved structural rigour that is required for the building to achieve efficient and cost-effective construction methodologies. The introduction of alternative geometries would, in our opinion, be counter to the original design intent.

Also, the structure has been meticulously resolved and has no room for further adjustments without compromising on headroom clearances with deeper slabs etc.

Yours Faithfully,  
Stanton Dahl Architects
