**KEY ISSUES DISCUSSED:**

The Panel noted that the location of the proposed Solar Farm has changed since the development application was originally lodged and that all relevant documentation does not clearly reflect this change.

The Panel requires a complete set of documents to reflect the change in location. This set of documents should have plan numbers that distinguish the plans from other plans so that these plans can be included in any development consent, if granted by the Panel. For example, the type of road construction proposed for access through the Graincorp site. Specialist reports should relate to the amended location rather than the original location by way of a new report or an addendum to the original report, if possible.
