RE: [Sealark Road, Callala Bay \(Lot 5 DP 1225356\)](#)  
Preliminary Site Investigation (Desk Top)

Dear Patrick

Please find enclosed our Preliminary Site Investigation ('PSI') report for the proposed residential development of Sealark Road, Callala Bay (Lot 5 DP 1225356), NSW (hereafter referred to as the Site). This report should be read in conjunction with the attached document 'About Your Report' provided as Appendix A.

### **EXECUTIVE SUMMARY**

#### **Objectives**

The objectives of the PSI were to assess whether Site contamination exists at the Site (where Site contamination is defined within Section 5 of the *Contaminated Land Management Act 1997* (CLM Act)) and if present, to assess the requirement for any particular contaminated land site management.

#### **The Site**

Lot 5 DP 1225356, Sealark Road Callala Bay is a large undeveloped property to the east of Callala Bay. It is understood the western part of the property is proposed to be rezoned and subdivided for residential development (this area is hereafter referred to as the Site).

The Site mainly consists of open grassland with some bushland towards the east and southern parts of the site. The site is surrounded by urban development to the south and west, and national park and Wowly Gully to the north and east respectively.

The site is currently zoned for Environmental Management (E3). It is proposed to re-zone the western part of the site to allow residential development. This includes the installation of stormwater management facilities. It is also proposed to rezone the eastern part of the site to allow inclusion of this lower lying area within the existing Jervis Bay National Park, which is located to the north and east of the site.

The site is near level to gently sloping. Slopes generally fall to the north east or towards drainage depressions which are located within the southern part of the site. These drainage depressions were installed post the late 1980's and drain stormwater, which originates from residential development to west of Sealark Road, towards Wowly Gully. It is proposed to divert these surface stormwater drains into a sedimentation basin to the south-east of the site which will then overflows into Wowly Gully.

## Conclusions

Based on the study of publicly available information, a Lot Search report for the site, and site observations, the following conclusions are made:

- The historical aerial imagery indicates that minimal human related activity has occurred on the site other than passive recreational activities. The Site has been vacant and undeveloped since the mid 1930's.
- There are several drainage depressions visible on the site. These drainage depressions were excavated between the 1980s and 1990s, accompanying the urban developments to the south and west of the Site.
- The Site is mostly comprised of an alluvial plain covered with grassland and some bushland. The denser bushland is typically located within the south-western corner of the site and adjacent to drainage depressions.
- Geotechnical investigations for an acid sulfate soil investigation (ref TeERRA19258 Rep 1 Rev 1) indicate weathered siltstone underlies the site at relatively shallow depth (eg within ~2m).
- Publicly available information for the Site, information from a Lot Search Report for the Site, and observations of the Site, indicate that the following potentially contaminating activities may have occurred on or near the Site:
  - Potential use of herbicides around drainage depressions on the site.
  - Potential for illegal dumping of material, in particular, on the south-western which is unfenced and well vegetated.
  - Runoff from urban development to the south and south west of the site flowing into the drainage depressions on site.
- Drainage depression associated with the historical use of herbicides and ongoing use as stormwater drains have been defined as a potential Area of Environmental Concern 1 (AEC1). Areas associated with the potential for illegal dumping have been defined as a potential Area of Environmental Concern 2 (AEC2).
- The findings of the PSI indicate there is a low risk of contaminants, within AEC 1 and AEC 2, impacting on the site at levels which would preclude consideration of the site for residential development.

## Recommendations

The following recommendations are made:

- Limited soil sampling within AEC 1 is recommended to allow waste classification to facilitate off-site disposal of the natural soils within this area and to establish if this area is impacted by:
  - Any residue from the historical use of pesticides to manage vegetation along the drainage channels;
  - low level hydrocarbon, BTEX, PAH or PCB contamination due to the use of these drainage depression to manage stormwater from the residential developments to the west of Sealark Road.
- Limited soil sampling across the remainder of the site is recommended to allow waste classification of the near surface soils for off-site disposal (if required). THs should be undertaken post removal of any inert debris found on the Site.
- An unexpected finds protocol should be established for the site.

Should you have any questions please contact the undersigned.

## 1 Introduction

At the request of PRM Architects & Town Planners (the client), Terra Insight Pty Ltd (Terra) has carried out a Preliminary Site (Contamination) Investigation (PSI) of Lot. 5 Sealark Road, Callala Bay (hereafter referred to as the Property). It is understood the proposal for the Property includes the following:

- rezoning of the western part of the Property currently zoned as E3 (environmental management) to R2 Low Density Residential and/or R3 Medium Density Residential Zones and RE1 Public Recreation and/or RE2 Private Recreation Zone to allow residential development.
- Rezoning of the remaining land currently zoned as E3 to E1 National Parks and Nature Reserves Zone with this dedicated to the state of NSW as an addition to the Jervis Bay National Park.

The proposed urban development for the south-western portion of the property (hereafter referred to as the Site) includes a residential subdivision comprised of thirteen lots with supporting infrastructure such as new roads, and stormwater drains with a stormwater detention pond (refer Appendix B for proposed development plans).

## 2 Objective

The objective of this assessment was to:

- provide advice on the potential for Site contamination (as defined in Section 5 of the *Contaminated Land Management Act, 1997*) to be present on the Site due to historical and current Site use; and
- assess whether this contamination will impact on the proposed use of the Site and whether further investigation or remediation of the Site is required.

We note that the *Contaminated Lands Management Act 1997*, defines the contamination of land as the presence (in, on, or under the land) of a substance at a concentration above the concentration at which the substance is normally present (in, on, or under the land respectively in the same locality), being a presence that presents a risk of harm to human health or any other aspects of the environment. However, land is not, for the purposes of this Act, contaminated land:

- Merely because in any surface water standing or running through the land, a substance is present in such concentration, or
- Merely because of the presence of a substance prescribed by the regulations, or
- In circumstances prescribed by regulations.

It is understood that the findings and conclusions of this PSI assessment will be used by Council to determine the need for any particular Site management to occur. It is noted that if land is contaminated but this contamination is not determined to be 'significant enough to warrant regulation' then the *Contaminated Land Management Act 1997* does not apply. In such cases, the provisions within the planning legislation and/or the *Protection of the Environment Operations Act 1997* may be the appropriate mechanism for management of such contamination.

## 3 Scope of work

The scope of work for a PSI is typically comprised of a desk study and a site walkover. For the Site, this included the following:

- Review of the following:
  - information available for the Site including topography, soil landscapes, and geology.
  - historical aerial photography;
  - Review of Lotsearch reports covering the site; and
  - specific historical information for assessing the likelihood of potential contamination to exist at the Site including publicly available information maintained by council, the department of land registry, and the New South Wales Environment Protection Authority (NSW EPA).
- A Site walkover by a principal geo-environmental engineer to visually identify and observe:

- topography, noting visual evidence of filling;
  - nearby sensitive environments;
  - potential areas of environmental concern (APECs) and chemicals of potential concern (COPC) associated with potentially contaminating activities on or near the Site.
- Report on activities above in relation to the objective outlined in Section 2.

The assessment is undertaken in accordance with consultants' guide / requirements 2011 (NSW) and ASC NEPM Schedule B2.

## 4 Desktop Study Findings

### 4.1 Site description

A summary of key Site details is provided in Table 4.1.

Table 4-1: Summary of Site identification, ownership and use information

Road Address	Sealark Road, Callala Bay	
Title Identifiers	Lot 5 DP 1225356	
Site Ownership	Angeloni, Pintabona and Sirolli	
Site Description	The Site is located approximately 0.6 km north east of Callala Bay town centre as shown on Figure 1. The area of the property is approximately 6.3ha. The area of the proposed subdivision (the Site) is approximately 1 ha. The property is bounded by Sealark Road on the western boundary, Monarch Place on the southern boundary, Wowly Gully (estuary) on the eastern boundary.	
District/Division Name	Callala Bay	
Current Zoning	Environmental Management Zone (E3)	
Current Site Use	Underdeveloped	
Proposed Site Use	The site is to be reasoned to be used for residential and recreational purposes. It is noted that the remainder of the Property not rezoned for residential development will be rezoned as National Park (E1).	
Surrounding Land Use	North	Jervis Bay National Park
	East	Jervis Bay National Park and Wowly Gully
	South	Residential area, and Jervis Bay to the south east.
	West	Urbanised area of Callala Bay, consisting of residential and commercial development.
Council	Shoalhaven City Council (WCC)	

### 4.2 General Geology

The 1:250,000 geology sheet for Wollongong indicates the site is underlain by Wandrawandian Siltstone of the Shoalhaven Group, consisting of siltstone, silty sandstone and pebbly in parts.

### 4.3 Surface Topography

The elevation of the site is typically around 2 to 5.0m AHD. The surface generally slopes at near level to gentle gradients. Elevations typically fall towards the east towards Wowly Gully and two smaller drainage depression within

the site. The two smaller drainage depressions combine to form a small tributary of Wowly gully which flows eastwards through the southern part of the Site.

#### 4.4 Surface hydrology and Subsurface Hydrogeology

The water that falls on the Site will naturally follow the surface topography and drain into the drainage depressions on the site. These drainage depressions then continue to the east and into Wowly Gully.

It is expected a seasonal perched ground water table may exist on the Site at the interface of the residual soil and rock. If present, the ground water will typically follow the topography of the Site i.e. towards the north east into Wowly Gully.

#### 4.5 Groundwater

No ground water bores were identified (by NSW State online water mapping services) within 500m of the Site as shown on Image 1.

All Groundwater Site Details

#### All Groundwater Map

[bookmark this page](#)

All data times are Eastern Standard Time

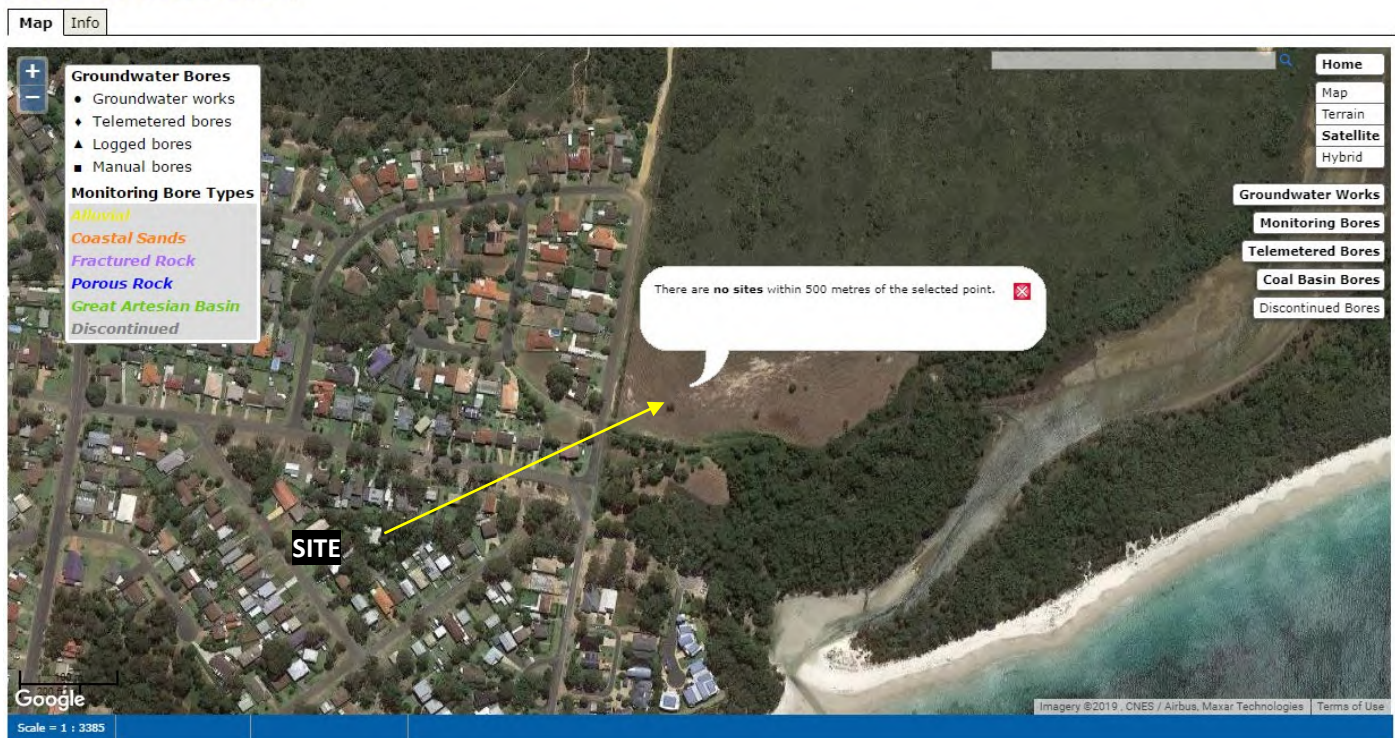

Image 1 Ground Water Map, NSW Real Time Water Data

#### 4.6 Site history data sources

Information on the Site history was obtained from:

- A search of NSW EPA register for listings of the Site and nearby sites;
- Review of historical aerial imagery;
- A lot search GIS data-base report (refer Appendix C);
- A lot search title search report (Refer Appendix D); and
- A review of Shoalhaven City Council records and planning certificates for the Site and adjacent sites.

The Site history documentation is summarised in the following sections.

#### 4.6.1 NSW EPA Contaminated Land and POEO Records

Based on an online search conducted on 15<sup>th</sup> of August 2019 and the Lot Search report, there are currently no notices for the Site (or neighbouring sites) on the NSW EPA contaminated land record (refer Image 2) or *Protection of the Environment Operations Act 1997* public register (Refer Image 3).

[Home](#) [Contaminated land](#) [Record of notices](#)

### Search results

Your search for: Suburb: CALLALA BAY

did not find any records in our database.

If a site does not appear on the record it may still be affected by contamination. For example:

- Contamination may be present but the site has not been regulated by the EPA under the Contaminated Land Management Act 1997 or the Environmentally Hazardous Chemicals Act 1985.
- The EPA may be regulating contamination at the site through a licence or notice under the Protection of the Environment Operations Act 1997 (POEO Act).
- Contamination at the site may be being managed under the [planning process](#).

More information about particular sites may be available from:

- The [POEO public register](#)
- The appropriate planning authority: for example, on a planning certificate issued by the local council under [section 149 of the Environmental Planning and Assessment Act](#).

See [What's in the record and What's not in the record](#).

If you want to know whether a specific site has been the subject of notices issued by the EPA under the CLM Act, we suggest that you search by Local Government Area only and carefully review the sites that are listed.

This public record provides information about sites regulated by the EPA under the Contaminated Land Management Act 1997, including sites currently and previously regulated under the Environmentally Hazardous Chemicals Act 1985. Your inquiry using the above search criteria has not matched any record of current or former regulation. You should consider searching again using different criteria. The fact that a site does not appear on the record does not necessarily mean that it is not affected by contamination. The site may have been notified to the EPA but not yet assessed, or contamination may be present but the site is not yet being regulated by the EPA. Further information about particular sites may be available from the appropriate planning authority, for example, on a planning certificate issued by the local council under section 149 of the Environmental Planning and Assessment Act. In addition the EPA may be regulating contamination at the site through a licence under the Protection of the Environment Operations Act 1997. You may wish to search the POEO public register. [POEO public register](#)

[Search Again](#) [Refine Search](#)

#### Search TIP

To search for a specific site, search by LGA (local government area) and carefully review all sites listed.

Image 3 Summary of EPA POEO Licenced Activities within Callala Bay

The Lot search report recovered former licensed activities under the POEO Act 1997, now revoked or surrendered. These are shown in table 4.2. These activities may have occurred within the drainage depressions on site. According to the online POEO public Search results, license number 4653 and 4838 were issued in September 2000 and Licence No 6630 was issued in November 2000. These licences refer to the historical application of herbicides along waterways for vegetation management activities with these licences now surrendered.

Table 4-2: Former Licensed Activities under the POEO Act 1997, now revoked or surrendered

Licence No	Organisation	Location	Status	Issued Date	Activity	Loc Conf	Distance	Direction
4653	LUHRMANN ENVIRONMENT MANAGEMENT PTY LTD	WATERWAYS THROUGHOUT NSW	Surrendered		Other Activities / Non Scheduled Activity - Application of Herbicides	Network of Features	0m	Onsite
4838	Robert Orchard	Various Waterways throughout New South Wales - SYDNEY NSW 2000	Surrendered		Other Activities / Non Scheduled Activity - Application of Herbicides	Network of Features	0m	Onsite
6630	SYDNEY WEED & PEST MANAGEMENT PTY LTD	WATERWAYS THROUGHOUT NSW - PROSPECT, NSW, 2148	Surrendered		Other Activities / Non Scheduled Activity - Application of Herbicides	Network of Features	0m	Onsite

© State of New South Wales through the Environment Protection Authority

### 4.6.2 Historical Aerial Imagery

Aerial imagery from the 1960's to present day was reviewed. Select historical images of the area around and including the Property/Site since the 1940's are shown on Figure 2. Table 4.2 on page 6 following presents a summary of observations made during the review.

Table 4-3: Summary of historical aerial photographs

Image Date	Observations of the site	Offsite Observations
1961	Site is vacant and undeveloped. Mostly consists of grassland, heavily vegetated along the eastern boundary.	To the west Sealark Road and Sydney Ave is present. Surrounding land is similarly undeveloped, consisting of grassland and bushland.
1984	Part of the present-day drainage channels has been excavated on the south western section of the Site, facilitating the residential development to the south west of the site. The remaining Site remains relatively unchanged.	Residential development has occurred to the south west of the Site. This development includes the construction of roads and residential dwellings. To the south bushland has been cleared and Monarch Place constructed as a dirt road.
1993	Another section of the present-day drainage channel has been excavated, facilitating the residential development to the west of the Site.	Residential development has occurred to the west of the site, including the development of paved roads and construction of dwellings.
2002	Vegetation around the drainage channels are managed. A section of ground surface near the northern boundary of the Site is exposed.	Residential development has occurred to the south of the site. Many of the previously vacant sites to the south and west now contain residential structures.
2009	There are no notable changes other than some vegetation growth.	There are no notable changes.
2018	Vegetation growth around the drainage channels.	There are no notable changes.

#### 4.6.3 Review of Lot search data base report

A Lotsearch Detailed Database search was requested for the site (refer Appendix C). This report indicates the following:

- There are no sites listed on the Contaminated Land Registry within 500m of the site;
- The site is not the subject of any publicly known PFAS investigation programmes;
- The Callala Bay area is mapped as an underground petroleum Storage system (UPSS) sensitive zone. This identifies the site as environmentally sensitive with respect to any proposed service station with underground storage tanks (USTs).
- Aerial Images show minimal disturbance on the site;
- Topographical feature maps showing the creeks currently present on the site were not present in the 1929 mapping. These creeks/drainage depression are likely to have been constructed as part of the subsequent development of Callala Bay to the west of the site.
- No businesses have been listed as trading from or within 500m of the site. This includes business such as service stations, motor garages or dry cleaners.
- The site is located south and west of the Jervis Bay National Park.
- The site is underlain by aquifers which are porous, highly productive and extensive;
- One groundwater well is located within ~1850m to the south-west of the site (GW108988). This is a private bore for domestic use.
- There is no naturally occurring asbestos identified in association with the geology that underlies the site.
- The soil landscapes are mapped as estuarine. The soil landform is mapped as flat to undulating with hard acidic yellow and yellow mottled and red soil with some iron stone gravels.
- The risk of acid sulfate soils (ASS) is mapped as Class 5%, meaning the site is located near areas with known ASS occurrence but the risk of ASS being present on the site is low. Detailed site-specific geotechnical investigations have been undertaken for the site and indicate the site is underlain by alluvial soils with low potential for sporadic and weak ASS underlain by residual soils from the Wandrawandian Siltstone which can comprise acidic rock (refer report by TerraInsight Pty Ltd TERRA19201 Rep 1 Rev 1 dated 21 August 2019). A formal ASS management plan for the site is not required.
- The site is not mapped as impacted by dry land salinity.
- The site is not mapped as impacted by mine subsidence.
- Part of the site is mapped with an ecological constraint, specifically:
  - coastal complex vegetation with mangroves within estuarine areas. These are located to the east of areas proposed for residential development within areas proposed to be rezoned to E1.
  - Deeply dissected sandstone plateaus with high potential for groundwater depended ecosystems (vegetation) to be present.

#### 4.6.4 Council and land registry records

Terra Insight made a request through LotSearch Pty Ltd for land title records for the site (refer Appendix D and Table 4.3). Terra Insight conducted a General Enquiry Search using Shoalhaven Councils online services for applications pertaining to the use of the site and surrounding properties, including building and development applications. A summary of the documentation relevant to the Site is provided in Table 4.4 on page 8 following. No copies of the relevant documentation were provided by the online search.

## 5 Summary of desktop Site history review

The following table summarises the significant activities on the Site from 1906 to the present.

Table 5-1: Summary Desktop review findings

Time Period	On Site	Off Site
<b>1870 - 2000</b>	<p>Several proprietors owned the Site during this time. Notably, St Vincent City and suburbs Limited from 1922 to 1975, then Warren Halloran from 1975 to 1998. During this time the site was created by the subdivision of larger lots.</p> <p>The drainage depressions on Site were constructed between 1984 and 1993, to service the respective urban development to the south west and south of the site.</p>	<p>Significant residential development occurred around the Site during this time. Notably in the 1980s to the south west of the site and in the 1990s.</p> <p>Land to the north and the east of the site is vacant and undeveloped, remaining relatively unchanged during this time as part of the Jervis Bay National Park.</p>
<b>2000 to present day</b>	<p>During this time the grassed areas and areas around the drainage depressions have been kept managed.</p> <p>Herbicides may have been used around the drainage depressions during this time as part of a state-wide operation undertaken by a variety of organisations.</p> <p>The site remains relatively unchanged, except for the significant vegetation growth around the drainage depression.</p>	<p>Residential development occurred to the south of the site in the early 2000s.</p> <p>Many of the previously vacant properties within the residential area to south and west of the site have been developed with residential structures.</p>

## 6 Site walkover

An experienced Terra Insight geo-environmental engineer made observations of the Site in 22 July 2019. A summary of the relevant observations made during the Site walkover is provided below with photographs provided in Appendix E. Based on the proposed development, current site use and existing drainage paths, the Site can be divided into three distinct areas as follows:

- Area 1, the northern-western portion of the site north of the drainage channels:
  - The northern-western portion of the site is generally near level with some gentle slopes. The elevations tend to fall to the south east at gentle slopes, towards drainage channels and Wowly Gully.
  - The drainage channel along the southern part of the area, carries stormwater from the residential development west of Sealark Place to Wowly Gully through the site. The area around the drainage channels is well vegetated.
  - The site is fenced off with a wire fence that is dilapidated in parts but still functioning.

- The area is predominantly vegetated with grass. The grass is bare in parts, with the near surface soils exposed (including a thin sandy topsoil layer) most likely as a result of wind erosion.
- Some old tree stumps are present throughout the area.
- Area 2, the south western portion of the site south of the drainage channels:
  - This area consists of the south west portion of the site. This area is not fenced off, bounded by the drainage channels to the north, Monarch Pl to the south and Sealark Road to the west.
  - This area is near level, vegetated with mature trees, bushes and grass.
  - Some litter was observed in this area, including plastic and glass bottles, tin drink cans and plastic bags.
- Area 3, the eastern portion of the site not proposed for development:
  - This area is densely vegetated with bushland, located on the eastern side of the site.
- There were no observations of loose asbestos containing materials on the ground within areas 1 or 2. There were no observation indicative of historical illegal dumping of waste materials (car bodies, building materials etc) other than some house hold rubbish (Glass and plastic bottles, plastic bags and tin cans).
- There were no olfactory observations made;

## 7 Preliminary Assessment Findings

### 7.1 Potential areas of environmental concern

Historical information for the Site and observations of the Site indicate that potentially contaminating activities may have occurred across the Site. These activities are typically associated with historical use of site and include the following:

- Potential use of herbicides around drainage depressions on the site; and
- Potential for illegally fly tipped material

Offsite sources of potential contaminants include the following:

- Runoff from urban development to the south and south west of the site which flow into the drainage depressions on the Site.

It is noted that an acid sulfate soil investigation has been undertaken for the Site. This site did not identify the presence of fill materials on the site.

### 7.2 Potential Contaminants of Concern (CoCs)

The potential contaminants of concern associated with the Site activities detailed in section 6.1 include the following:

- **Pesticides:**

The term pesticide covers a wide range of compounds including insecticides, fungicides, herbicides, rodenticides, molluscicides, nematocides, plant growth regulators and others. Among these, organochlorine (OC) insecticides (used successfully in controlling a number of diseases, such as malaria and typhus) were banned or restricted after the 1960s. This was followed by the introduction of synthetic insecticides including organophosphate (OP) insecticides in the 1960s, carbamates in 1970s and pyrethroids in 1980s. Pesticides are likely to have been used on the Site to manage vegetation along the creek lines. When sprayed it is likely to have been blown by the wind to other areas. They can also flow with rain water into nearby streams or can seep through the soil into ground water. Pesticides differ according to their effects on various organisms. Selective pesticides are toxic only to the target pests (eg termite treatment underneath proposed dwellings). Their persistent in the environment is dependent on each individual chemical's composition and the environment in which they are used. Typically, persistence is less than 5 years, with DDT and copper-based pesticides being a few of the exceptions.
- **Total recoverable hydrocarbons (TRH) and BTEX:**

TRH and BTEX (benzene, toluene, ethylbenzene, and xylene) are not considered to be persistent in the environment due to their volatile nature These contaminants may potentially exist if fuel or oil was spilled accidentally onto the Site when vehicle are passing through the site or undertaking maintenance on the site.

There was no evidence of filling on the site. Heavy metals, such as lead, may also be associated with historical fuels spills;

- PAHs (poly aromatic Hydrocarbons) and PCBs (Polychlorinated Biphenyl's):**  
 These contaminants are typically used in oils. Hot spots may occur because of spills. PCBs are generally non-soluble in water, non-volatile and resistant to flame, thermal and chemical degradation. PCBs are therefore relatively persistent in the environment and can bio-accumulate. PAHs are relatively persistent in the environment, due to their chemical composition, however in aerobic environments, bacteria can degrade PAHs.
- Asbestos:**  
 This material was used in construction of buildings prior to the 1990's. No buildings are known to have been present on the Site. However, such material may be associated with historical illegal dumping on the site.

Although asbestos can enter the environment through the breakdown of natural deposits, the presence of asbestos on Site is mainly via the deterioration of manufactured asbestos products. Asbestos fibres do not breakdown in air or dissolve in water, and so they have the potential to be suspended or re-suspended and to travel large distances (by air and/or water) before settling. The larger fibres tend to settle more readily. Asbestos fibres do not readily move through the soil, and in general do not breakdown to other compounds, and therefore persist in the environment;

### 7.3 Potential receptors of concern

Review of historical aerial photographs and surrounding land uses indicates the following potential receptors of concern:

Table 6-1: Potential contamination-based pathways and receptors

Sources	Pathway	Receptor
Asbestos impacted soils	Inhalation of fugitive dust / airborne fibres	Construction/Maintenance Workers
		Current site occupiers
		Future Site occupiers
		Current fauna
Petroleum hydrocarbons, PAH, TPH, pesticides and BTEX	Inhalation of vapours	Construction/Maintenance Workers
		Current site occupiers
		Future Site occupiers
	Ingestion and absorption by direct contact	Future Site occupiers
		Current site occupiers
	Migration by surface run-off	Surface waters
	Migration by liquid flow	Surface waters
		Aquatic systems
Plant uptake	Local flora	
	Ingestion of home-grown vegetables	

### 7.4 Conceptual Site model

The conceptual Site Model (CSM) detailed herein defines:

- the potential contaminants which may be present on the site from current and historical site uses,
- the potential areas these contaminants may be present;
- the receptors that may be impacted by these contaminants; and
- the potential pathways through which these receptors may be impacted.

In this Conceptual Site model (CSM), a contaminant can be any substance, which is in, on or under the land and which has the potential to cause harm or to cause pollution of controlled waters. A pathway is defined as one or more routes or means by, or through, which a receptor is being or can be exposed to, or affected by, a contaminant.

The CSM also provides an assessment of the risk associated with these potential contaminants on the site to allow for the identification and prioritisation of areas for further assessment.

Locations of Areas of Potential Environmental Concern are given in Figure 3. Table 6.2 summarises the following in a conceptual Site model (CSM) for the Site, specifically:

- The potential area of environmental concern (AEC) identified on the Site,
- The potential contaminating activities which are associated with the AEC identified on the Site;
- The potential contaminants of concern associated with the AEC identified on the Site; and
- The likelihood of contamination.

Table 6-2: Conceptual Site Model

APEC	Potentially Contaminating Activity/Source	Sub Component / Description	Potential Areas of Environmental Concern (See also Figure 8)	Likelihood of Contamination impacting on proposed site use	Potential Chemicals of Concern
AEC 1	Runoff from urban areas.	Runoff from urban to the south and south west areas carrying potential contaminants onto the site via drainage channels.	Drainage channels and adjacent areas.	<b>Low</b> likelihood of potential soil contamination in this area impacting on proposed site use. Run off which flows in these drainage depressions is from surface runoff along road corridors and residential properties to the west of the site post the late 1980's. The land around the drainage channels is not proposed for residential development and will remain as a drainage easement.	Heavy metals (lead), Pesticides, TRH, BTEX, PAHs, PCBs
	Potential use of herbicides and pesticides.	Potential historic spraying of herbicides/pesticides adjacent to drainage channels for vegetation control.	Areas adjacent and within the drainage channels.	<b>LOW</b> likelihood of potential soil contamination as use of herbicides along the drainage areas has ceased and any historical pesticide use would have been biologically degraded with time. The exception to this would be DDT which is unlikely to have been used in such a sensitive environment.	Pesticides, herbicides
AEC 2	Illegal fly tipping	Potential illegal fly tipping near easily accessible points on the site.	Mainly Area 2 which is open for public access and is well vegetated. However, historically could have occurred as isolated events of fly tipping anywhere on the site.	<b>LOW</b> likelihood of potential soil contamination on the site as there was no evidence of a history of large-scale illegal dumping of waste material on the site. Some localised area of isolated house hold rubbish (Drink bottles and cans and plastic bags) were only observed in Area 2.	Foreign materials (mainly inert), Asbestos.

## 8 Conclusions

The following conclusions are made:

- The site is currently zoned for Environmental Management. It is proposed to re-zone the western part of the site to allow residential development and installation of stormwater drainage facilities. The eastern part of the site is to be rezoned to areas of the site adjacent to waterways to be included within the existing Jervis Bay National Park which is located to the north and east of the site.
- The site is near level to gently sloping. Slopes generally fall to the north east or towards drainage depressions which are located within the southern part of the site. These drainage depressions were installed post the late 1980's and drain stormwater from residential development to west of Sealark Road to the east, through the site and towards Wowly Gully. It is proposed to drain these depressions into a sedimentation basin to the south-east of the site, and then into Wowly Gully.
- The Site has been vacant and undeveloped since the mid 1930's. It is comprised mostly of grassland with some bushland since the 1960s. The bushland is typically associated with the drainage depressions.
- Minimal site activity on the site is visible in historical aerial imagery. The drainage depressions on Site were excavated between the 1980s and 1990s, accompanying the urban developments to the south and west of the Site.
- Vegetation within and around the drainage depressions was maintained, for a period, using herbicides.
- Publicly available information for the Site, information from a Lot Search Report for the Site, and observations of the Site, indicate that potentially contaminating activities which may have occurred on the Site as follows:
  - Potential use of herbicides around drainage depressions on the site.
  - Potential for illegal dumping of material, in particular, on the south-western unfenced and well vegetated part of the site.
  - Runoff from urban development to the south and south west of the site flowing into the drainage depressions on site.
- The findings of the PSI indicate there is a low risk of contaminants being present on the site as a result of previous and current site uses.

## 9 Recommendations

The following recommendations are made:

- Limited soil sampling within AEC 1 is recommended to allow waste classification to facilitate off-site disposal of the natural soils within this area and to establish if this area is impacted by:
  - Any residue from the historical use of pesticides to manage vegetation along the drainage channels;
  - low level hydrocarbon, BTEX, PAH or PCB contamination due to the use of these drainage depression to manage stormwater from the residential developments to the west of Sealark Road.
- Limited soil sampling across the remainder of the site is recommended to allow waste classification of the near surface soils for off-site disposal (if required). THs should be undertaken post removal of any inert debris found on the Site.
- An unexpected finds protocol should be established for the site.

## 10 Limitations

The findings contained in this report are the result of discrete/ specific methodologies used in accordance with normal practices and standards and in accordance with the agreed scope of works. Under no circumstances can it be considered that these findings represent the actual state of the Site at all points. The subsurface conditions may vary significantly across the Site, particularly where no nearby sampling and testing work has been carried out. This report has been prepared based on the understanding that following the design and construction of the building, this document is passed onto the owner of the property, and that it is that person's obligation to ensure that the document is passed onto future owners.

## Appendix A: Your Report

**These notes have been prepared to help you understand the advice provided in Your Report and its limitations.**

## Your Report is based on what you tell us

---

Your Report has been developed based on the information you have provided such as the scope and size of your project. It applies only to the site investigated. If there are changes to the proposed works, then the advice provided within Your Report may need to be reviewed

## Your Report is written with your needs in mind

---

The advice provided within Your Report is also not relevant to another purpose other than that originally specified at the time the report was issued. Please seek advice from Terra Insight before you share Your Report with another third party – except for the purpose for which the report was written.

Terra Insight assumes no responsibility and will not be liable to any other person or organisation for, or in relation to, any matter dealt with or conclusions expressed in the report, or for any loss or damage suffered by any other person or organisation arising from matters dealt with or conclusions expressed in Your Report.

## Your Report is based on what we observed

---

The advice provided within Your Report assumes that the site conditions, revealed through selective point sampling (undertaken in accordance with normal practices and standards) at a particular point in time, are indicative of the actual conditions on your site. However, the nature of the materials underlying your site is affected by natural processes and the activity of man. Under no circumstances can it be considered that these findings represent the actual state at all points. The subsurface conditions may vary significantly on the other parts of the site, particularly where no nearby sampling and testing work has been carried out.

As a result conditions on your site can change with time; they can also vary spatially. As a result, the actual conditions encountered may differ from those detailed within Your Report. Although nothing can be done to change the actual site conditions which exist, steps can be taken to gain a better understanding of the subsurface conditions underlying your site and reduce the potential for unexpected conditions to be encountered

The advice within Your Report also relies on interpretation of factual information based on judgement and opinion and has a level of uncertainty attached to it. Only Terra Insight is fully familiar with the background information needed to assess whether or not the report's recommendations are valid and whether or not changes should be considered as the project develops. If the details of your project have changed, the site conditions have changed or a significant amount of time has elapsed since our report was written, the advice provided within Your Report may need to be reviewed.

## Your Report has been written by a Professional

---

The report has been prepared using accepted procedures and practices of the consulting profession at the time it was prepared, and the opinions, recommendations and conclusions set out in the report are made in accordance with generally accepted principles and practices of that profession.

## Your Report is better when it is kept together

---

Your Report presents all the findings of the site assessment and should not be copied in part or altered in any way. Keeping Your Report intact reduces the potential for yourself or other design professionals to misinterpret the report.

## Your Geo-Environmental Report

---

If Your Report is for geotechnical purposes only, it will not relate any findings, conclusions, or recommendations about the potential for hazardous materials to exist at the site unless you have specifically asked us to do so. If your report is written for Geo-Environmental purposes the following should be noted in addition to the above:

- Advancements in professional practice regarding contaminated land and changes in applicable statutes and/or guidelines may affect the validity of this report. Consequently, the currency of conclusions and recommendations in Your Report should be verified if you propose to use this report more than 6 months after its date of issue;
- Your Report is based on information gained from environmental conditions (including assessment of some or all of soil, groundwater, vapour and surface water) and supplemented by reported data of the local area and professional experience. The assessment has been scoped with consideration to industry standards, regulations, guidelines and your specific requirements, which includes budget and timing;
- The characterisation of site conditions is an interpretation of information collected during assessment, in accordance with industry practice. Any interpretation in Your Report is not a complete description of all material on or in the vicinity of the site, due to the inherent variation in spatial and temporal patterns of contaminant presence and impact in the natural environment.
- We may have relied on data and other information provided by you and other qualified individuals in preparing Your Report. We have not verified the accuracy or completeness of such data or information except as otherwise stated in Your Report. For these reasons Your Report must be regarded as interpretative, in accordance with industry standards and practice, rather than being a definitive record.
- For each purpose, a tailored approach to the assessment of potential soil and groundwater contamination is required. In most cases, a key objective is to identify, and if possible quantify, risks that both recognised and potential contamination posed in the context of the agreed purpose. If the proposed use of the site changes, the assessment may no longer be valid and will need to be reviewed.

\* For further information on this aspect reference should be made to "Guidelines for the Provision of Geotechnical information in Construction Contracts" published by the Institution of Engineers Australia, National headquarters, Canberra, 1987.

## Location Confidences

Where Lotsearch has had to georeference features from supplied addresses, a location confidence has been assigned to the data record. This indicates a confidence to the positional accuracy of the feature. Where applicable, a code is given under the field heading “LC” or “LocConf”. These codes lookup to the following location confidences:

LC Code	Location Confidence
Premise match	Georeferenced to the site location / premise or part of site
General area or suburb match	Georeferenced with the confidence of the general/approximate area
Road match	Georeferenced to the road or rail
Road intersection	Georeferenced to the road intersection
Feature is a buffered point	Feature is a buffered point
Land adjacent to geocoded site	Land adjacent to Georeferenced Site
Network of features	Georeferenced to a network of features

# Contaminated Land & Waste Management Facilities

Lot 5 Sealark Road, Callala Bay, NSW 2540

## List of NSW contaminated sites notified to EPA

Records from the NSW EPA Contaminated Land list within the dataset buffer:

Map Id	Site	Address	Suburb	Activity	Management Class	Status	Location Confidence	Dist (m)	Direction
N/A	No records in buffer								

The values within the EPA site management class in the table above, are given more detailed explanations in the table below:

EPA site management class	Explanation
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the Environmental Planning and Assessment Act 1979 (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record of Notices.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the Protection of the Environment Operations Act 1997 (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the Protection of the Environment Operations Act 1997 (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the Environmental Planning and Assessment Act 1979 (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the Contaminated Land Management Act 1997 (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record of Notices.
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997. A regulatory approach is being finalised.
Regulation under the CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the Contaminated Land Management Act 1997 is not required.
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or Protection of the Environment Operations Act 1997. Alternatively, the EPA may require information via a notice issued under s77 of the Contaminated Land Management Act 1997 or issue a Preliminary Investigation Order.

## PFAS Investigation Sites

Lot 5 Sealark Road, Callala Bay, NSW 2540

### EPA PFAS Investigation Program

Sites that are part of the EPA PFAS investigation program, within the dataset buffer:

Id	Site	Address	Loc Conf	Dist	Dir
N/A	No records in buffer				

EPA PFAS Investigation Program: Environment Protection Authority  
© State of New South Wales through the Environment Protection Authority

### Defence PFAS Investigation & Management Program

Sites being investigated or managed by the Department of Defence for PFAS contamination within the dataset buffer:

Map ID	Base Name	Address	Loc Conf	Dist	Dir
N/A	No records in buffer				

Defence PFAS Investigation & Management Program Data Custodian: Department of Defence, Australian Government

### Airservices Australia National PFAS Management Program

Sites being investigated or managed by Airservices Australia for PFAS contamination within the dataset buffer:

Map ID	Site Name	Impacts	Loc Conf	Dist	Dir
N/A	No records in buffer				

Airservices Australia National PFAS Management Program Data Custodian: Airservices Australia

## Defence Sites

Lot 5 Sealark Road, Callala Bay, NSW 2540

### Defence 3 Year Regional Contamination Investigation Program

Sites which have been assessed as part of the Defence 3 Year Regional Contamination Investigation Program within the dataset buffer:

Property ID	Base Name	Address	Known Contamination	Loc Conf	Dist	Dir
N/A	No records in buffer					

Defence 3 Year Regional Contamination Investigation Program, Data Custodian: Department of Defence, Australian Government

## EPA Other Sites with Contamination Issues

Lot 5 Sealark Road, Callala Bay, NSW 2540

### EPA Other Sites with Contamination Issues

This dataset contains other sites identified on the EPA website as having contamination issues. This dataset currently includes:

- James Hardie asbestos manufacturing and waste disposal sites
- Radiological investigation sites in Hunter's Hill
- Pasminco Lead Abatement Strategy Area

Sites within the dataset buffer:

Site Id	Site Name	Site Address	Dataset	Comments	Location Confidence	Distance	Direction
N/A	No records in buffer						

EPA Other Sites with Contamination Issues: Environment Protection Authority  
© State of New South Wales through the Environment Protection Authority

## EPA Activities

Lot 5 Sealark Road, Callala Bay, NSW 2540

## Licensed Activities under the POEO Act 1997

Licensed activities under the Protection of the Environment Operations Act 1997, within the dataset buffer:

EPL	Organisation	Name	Address	Suburb	Activity	Loc Conf	Distance	Direction
N/A	No records in buffer							

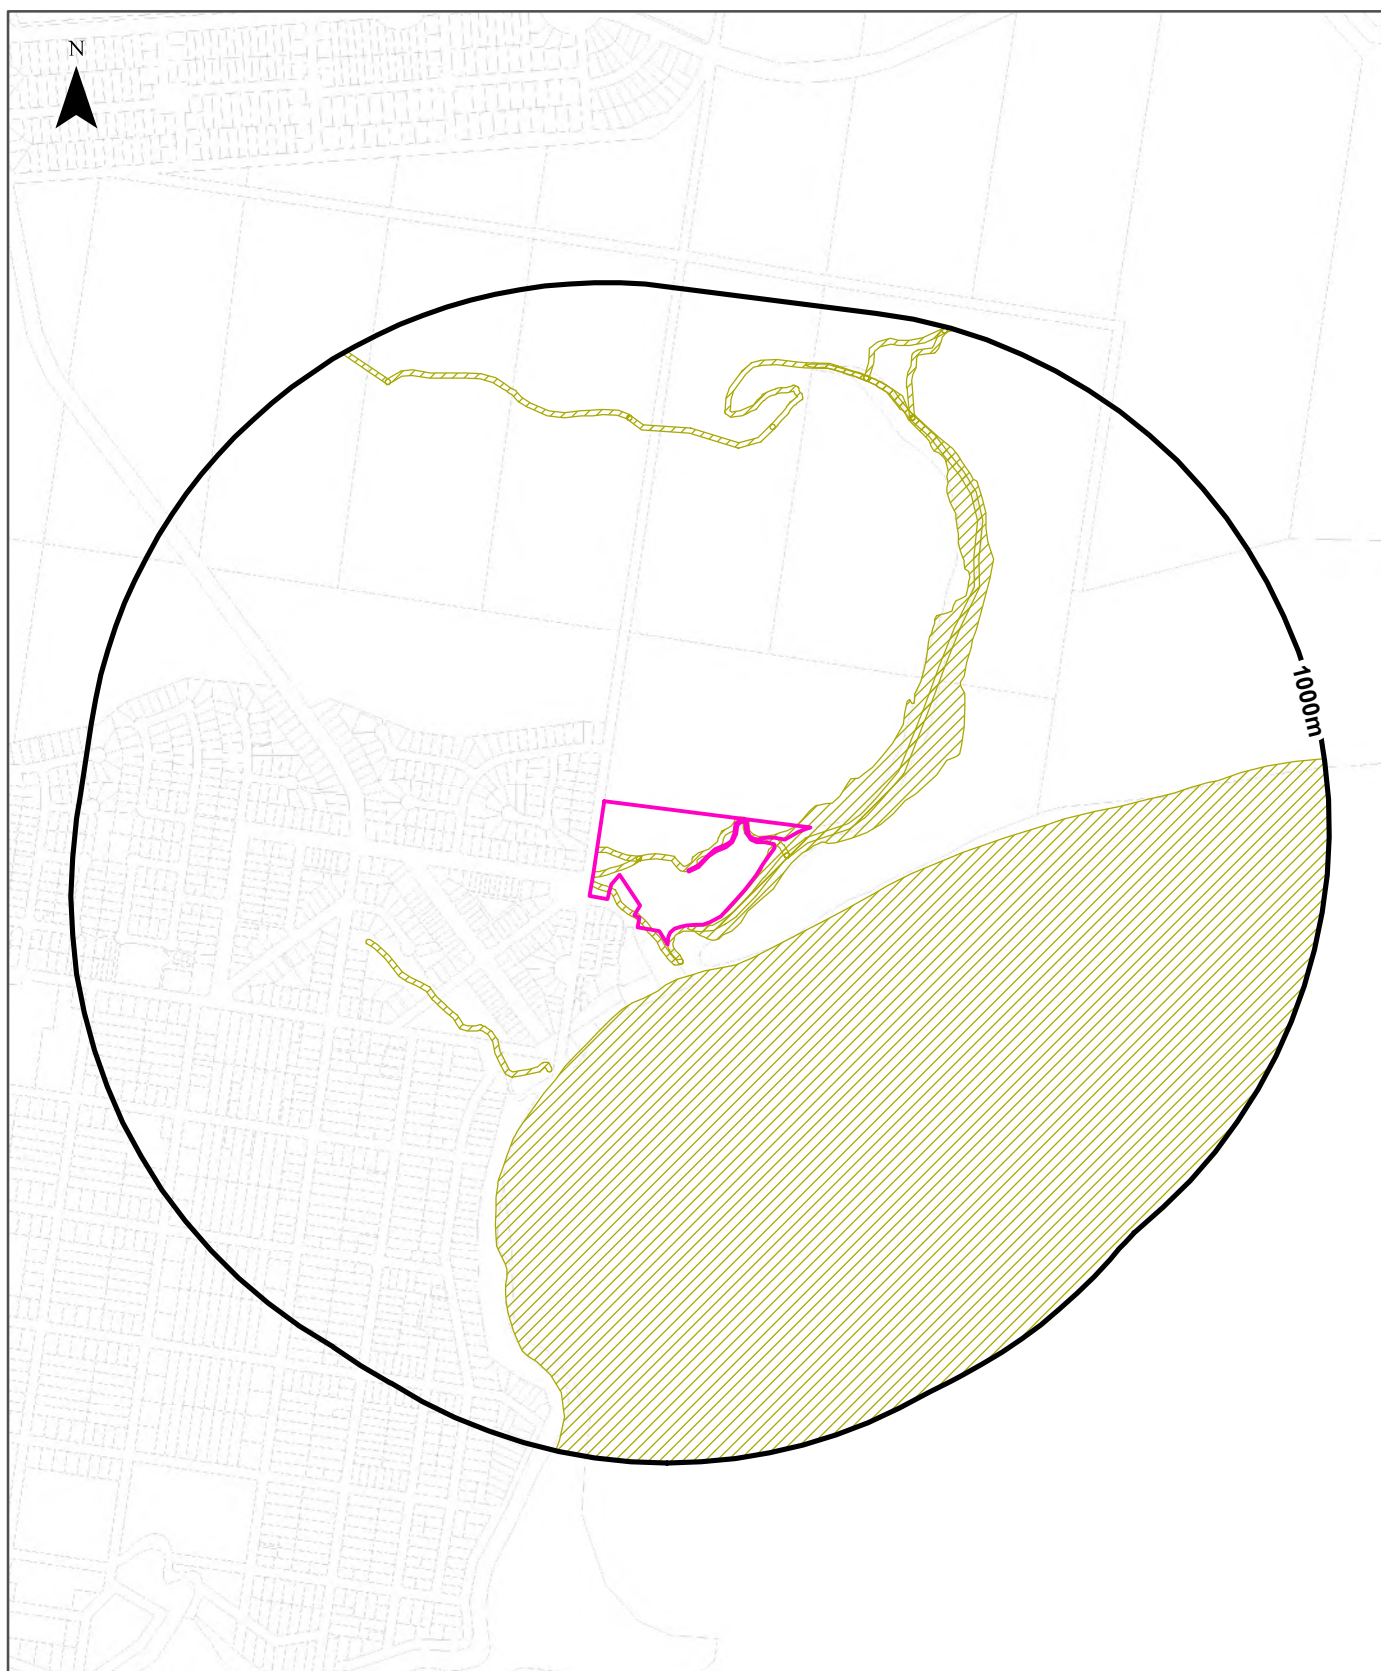

POEO Licence Data Source: Environment Protection Authority

# UPSS Sensitive Zones

Lot 5 Sealark Road, Callala Bay, NSW 2540

## Historical Business Directories

Lot 5 Sealark Road, Callala Bay, NSW 2540

### 1991 Business to Business Directory Records Premise or Road Intersection Matches

Records from the 1991 UBD Business to Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Property Boundary or Road Intersection	Direction
	No records in buffer					

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

### 1991 Business to Business Directory Records Road or Area Matches

Records from the 1991 UBD Business to Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

## Historical Business Directories

Lot 5 Sealark Road, Callala Bay, NSW 2540

### 1982 Business Directory Records Premise or Road Intersection Matches

Records from the 1982 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Property Boundary or Road Intersection	Direction
	No records in buffer					

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

### 1982 Business Directory Records Road or Area Matches

Records from the 1982 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

## Historical Business Directories

Lot 5 Sealark Road, Callala Bay, NSW 2540

### 1970 Business Directory Records Premise or Road Intersection Matches

Records from the 1970 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Property Boundary or Road Intersection	Direction
	No records in buffer					

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

### 1970 Business Directory Records Road or Area Matches

Records from the 1970 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

## Historical Business Directories

Lot 5 Sealark Road, Callala Bay, NSW 2540

### 1961 Business Directory Records Premise or Road Intersection Matches

Records from the 1961 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Property Boundary or Road Intersection	Direction
	No records in buffer					

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

### 1961 Business Directory Records Road or Area Matches

Records from the 1961 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

## Historical Business Directories

Lot 5 Sealark Road, Callala Bay, NSW 2540

### 1950 Business Directory Records Premise or Road Intersection Matches

Records from the 1950 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Property Boundary or Road Intersection	Direction
	No records in buffer					

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

### 1950 Business Directory Records Road or Area Matches

Records from the 1950 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Map Id	Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

## Historical Business Directories

Lot 5 Sealark Road, Callala Bay, NSW 2540

### Dry Cleaners, Motor Garages & Service Stations Premise or Road Intersection Matches

Dry Cleaners, Motor Garages & Service Stations from UBD Business Directories, mapped to a premise or road intersection, within the dataset buffer.

Map Id	Business Activity	Premise	Ref No.	Year	Location Confidence	Distance to Property Boundary or Road Intersection	Direction
	No records in buffer						

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

### Dry Cleaners, Motor Garages & Service Stations Road or Area Matches

Dry Cleaners, Motor Garages & Service Stations from UBD Business Directories, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published.

Map Id	Business Activity	Premise	Ref No.	Year	Location Confidence	Distance to Road Corridor or Area
	No records in buffer

Lot 5 Sealark Road, Callala Bay, NSW 2540

**Legend**

- Elevation Contour (m AHD)
- Site Boundary
- Report Buffer
- Property Boundary

**Accuracy & Currency:** This contour data can be up to 0.4 of the contour interval out in height and must therefore not be used for any design or engineering works, but only as a general guide to topography. Gaps may occur along contour lines due to vertical topography, obscured topography in the source photography such as buildings, dense vegetation or dead ground, or the fact that original buildings have been replaced in the intervening thirty years since the original contour capture.

## USE OF REPORT - APPLICABLE TERMS

The following terms apply to any person (End User) who is given the Report by the person who purchased the Report from Lotsearch Pty Ltd (ABN: 89 600 168 018) (Lotsearch) or who otherwise has access to the Report (Terms). The contract terms that apply between Lotsearch and the purchaser of the Report are specified in the order form pursuant to which the Report was ordered and the terms set out below are of no effect as between Lotsearch and the purchaser of the Report.

1. End User acknowledges and agrees that:
  - (a) the Report is compiled from or using content (**Third Party Content**) which is comprised of:
    - (i) content provided to Lotsearch by third party content suppliers with whom Lotsearch has contractual arrangements or content which is freely available or methodologies licensed to Lotsearch by third parties with whom Lotsearch has contractual arrangements (**Third Party Content Suppliers**); and
    - (ii) content which is derived from content described in paragraph (i);
  - (b) Neither Lotsearch nor Third Party Content Suppliers takes any responsibility for or give any warranty in relation to the accuracy or completeness of any Third Party Content included in the Report including any contaminated land assessment or other assessment included as part of a Report;
  - (c) the Third Party Content Suppliers do not constitute an exhaustive set of all repositories or sources of information available in relation to the property which is the subject of the Report (**Property**) and accordingly neither Lotsearch nor Third Party Content Suppliers gives any warranty in relation to the accuracy or completeness of the Third Party Content incorporated into the report including any contaminated land assessment or other assessment included as part of a Report;
  - (d) Reports are generated at a point in time (as specified by the date/time stamp appearing on the Report) and accordingly the Report is based on the information available at that point in time and Lotsearch is not obliged to undertake any additional reporting to take into consideration any information that may become available between the point in time specified by the date/time stamp and the date on which the Report was provided by Lotsearch to the purchaser of the Report;
  - (e) Reports must be used or reproduced in their entirety and End User must not reproduce or make available to other persons only parts of the Report;
  - (f) Lotsearch has not undertaken any physical inspection of the property;
  - (g) neither Lotsearch nor Third Party Content Suppliers warrants that all land uses or features whether past or current are identified in the Report;
  - (h) the Report does not include any information relating to the actual state or condition of the Property;
  - (i) the Report should not be used or taken to indicate or exclude actual fitness or unfitness of Land or Property for any particular purpose
  - (j) the Report should not be relied upon for determining saleability or value or making any other decisions in relation to the Property and in particular should not be taken to be a rating or assessment of the desirability or market value of the property or its features; and
  - (k) the End User should undertake its own inspections of the Land or Property to satisfy itself that there are no defects or failures
2. The End User may not make the Report or any copies or extracts of the report or any part of it available to any other person. If End User wishes to provide the Report to any other person or make extracts or copies of the Report, it must contact the purchaser of the Report before doing so to ensure the proposed use is consistent with the contract terms between Lotsearch and the purchaser.
3. Neither Lotsearch (nor any of its officers, employees or agents) nor any of its Third Party Content Suppliers will have any liability to End User or any person to whom End User provides the Report and End User must not represent that Lotsearch or any of its Third Party Content Suppliers accepts liability to any such person or make any other representation to any such person on behalf of Lotsearch or any Third Party Content Supplier.
4. The End User hereby to the maximum extent permitted by law:
  - (a) acknowledges that the Lotsearch (nor any of its officers, employees or agents), nor any of its Third Party Content Supplier have any liability to it under or in connection with the

- Report or these Terms;
- (b) waives any right it may have to claim against Third Party Content Supplier in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms; and
  - (c) releases each Third Party Content Supplier from any claim it may have otherwise had in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms.
5. The End User acknowledges that any Third Party Supplier shall be entitled to plead the benefits conferred on it under clause 4, despite not being a party to these terms.
  6. End User must not remove any copyright notices, trade marks, digital rights management information, other embedded information, disclaimers or limitations from the Report or authorise any person to do so.
  7. End User acknowledges and agrees that Lotsearch and Third Party Content Suppliers retain ownership of all copyright, patent, design right (registered or unregistered), trade marks (registered or unregistered), database right or other data right, moral right or know how or any other intellectual property right in any Report or any other item, information or data included in or provided as part of a Report.
  8. To the extent permitted by law and subject to paragraph 9, all implied terms, representations and warranties whether statutory or otherwise relating to the subject matter of these Terms other than as expressly set out in these Terms are excluded.
  9. Subject to paragraph 6, Lotsearch excludes liability to End User for loss or damage of any kind, however caused, due to Lotsearch's negligence, breach of contract, breach of any law, in equity, under indemnities or otherwise, arising out of all acts, omissions and events whenever occurring.
  10. Lotsearch acknowledges that if, under applicable State, Territory or Commonwealth law, End User is a consumer certain rights may be conferred on End User which cannot be excluded, restricted or modified. If so, and if that law applies to Lotsearch, then, Lotsearch's liability is limited to the greater of an amount equal to the cost of resupplying the Report and the maximum extent permitted under applicable laws.
  11. Subject to paragraph 9, neither Lotsearch nor the End User is liable to the other for:
    - (a) any indirect, incidental, consequential, special or exemplary damages arising out of or in relation to the Report or these Terms; or
    - (b) any loss of profit, loss of revenue, loss of interest, loss of data, loss of goodwill or loss of business opportunities, business interruption arising directly or indirectly out of or in relation to the Report or these Terms,irrespective of how that liability arises including in contract or tort, liability under indemnity or for any other common law, equitable or statutory cause of action or otherwise.
  12. These Terms are subject to New South Wales law.
